SUMMARY  
OF  
BRITISH WEATHER

Most places had a cloudy night and there were showers in Scotland and a little rain in south Wales, the Midlands and East Anglia. In northern England, and southern Scotland there was some fog in places.

Over Scotland, Northern Ireland and northern England there was some sunshine everywhere, with some places having a sunny day, but there were showers as well, some heavy, with a few thunderstorms in southeast Scotland and northeast England.

Much of Wales had a cloudy day with rain now and again, but many places in the west and north brightened up during the afternoon.

Central and southern areas of England had a lot of cloud and in East Anglia and the Midlands there was a little rain here and there, but in many places it was fairly bright with some sunshine.

Temperatures were generally a little below normal.

SUMMARY  
OF  
BRITISH WEATHER

Overnight many places stayed dry, although there were showers here and there and there was some mist and patchy fog as well.

During the day there was some sunshine in Scotland, but there were showers in many places and a few thunderstorms and in the late afternoon and evening more persistent and at times heavy rain in northern Scotland.

Northern Ireland was sunny at times, but there were showers, especially in the afternoon. In the evening the weather clouded over.

Much of Wales had a cloudy morning but the north and west were sunny and there was some sunshine everywhere in the afternoon and evening. Many places had a dry day, no more than a few showers in eastern districts.

In the north and southwest of England many places were sunny, but central and eastern areas in particular had a lot of cloud with heavy showers in the afternoon and evening and several thunderstorms.

Temperatures were generally on the cool side.

3 AUGUST 1988

SUMMARY  
OF  
BRITISH WEATHER

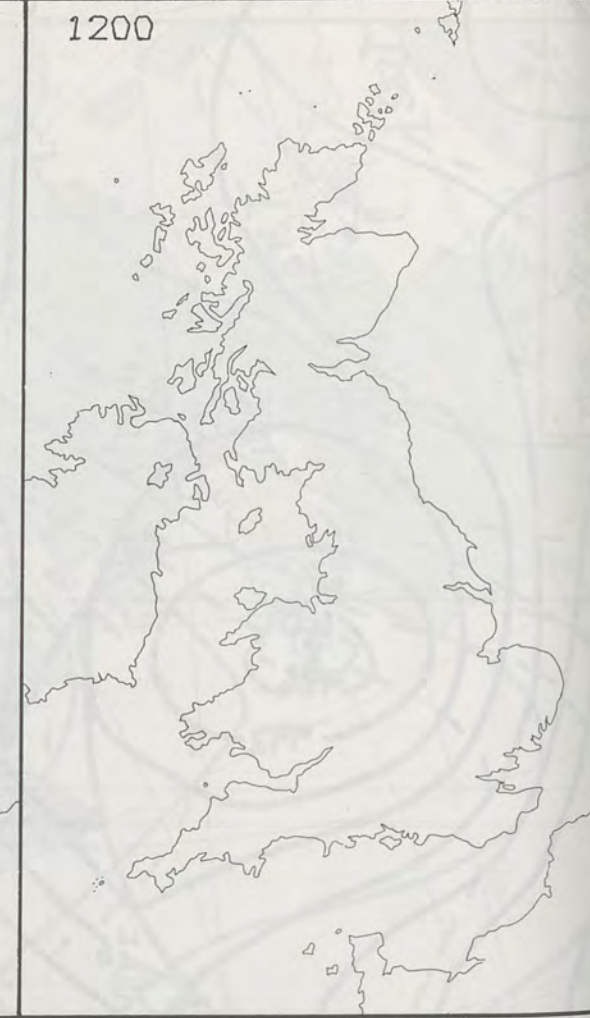

Scotland and Northern Ireland had a mostly cloudy day with some light rain or drizzle at times but by the end of the afternoon the rain and drizzle became rather patchy and confined to western areas with bright or sunny intervals in eastern Scotland.

England and Wales had a dry night with long clear spells over central and southern England. Cloud increased in the northwest and over Wales during the later part of the night but southern England had a bright or sunny start to the morning.

PLOTTED SURFACE OBSERVATIONS

1800

2400

During the day central and northern parts of England and Wales were rather cloudy and some patchy light rain or drizzle affected northwestern coast areas. Cloud became more variable over southern parts with sunny periods continuing, the best of the sunshine being along the south coast of England.

Temperatures were generally near or a little below normal but it became rather warm in some parts of northeastern Scotland.

THURSDAY  
4 AUGUST 1988SUMMARY  
OF  
BRITISH WEATHER

Overnight the weather turned cloudy everywhere, but much of the United Kingdom stayed dry, although there was some rain and drizzle, especially in Northern Ireland while in northern Scotland there were a few showers.

During the day parts of eastern Scotland were mainly dry and quite sunny, but the west clouded over in the afternoon and evening with rain and drizzle.

Northern Ireland was cloudy with rain and drizzle and Wales too was mostly cloudy, but here there was only a little rain or drizzle in a few places.

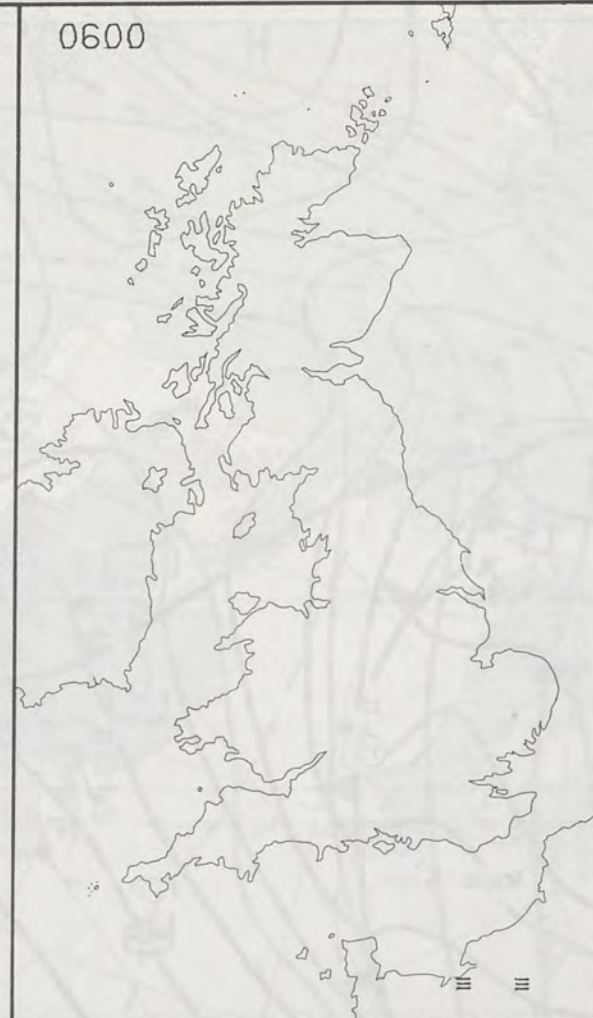

There was a lot of cloud over England, but there was at least a little sunshine nearly everywhere and indeed parts of the northeast fared well for sunshine, most places were dry, but there was a little rain and drizzle, mainly in the west.

Temperatures were generally close to normal, but in the rather cool category along western coasts.

FRIDAY  
5 AUGUST 1988

SUMMARY  
OF  
BRITISH WEATHER

Over England and Wales, apart from a little hill and coast drizzle in western districts, it was a dry day. The overnight cloud cover broke up well in most places, especially in eastern and central regions, but took longer to disperse in the west, and locally in central southern England. Bright sunshine in eastern parts caused temperatures to rise well above normal, but remained somewhat below in the cloudier west.

Much of Scotland and Northern Ireland had dry weather, but a cold front produced periods of rain in the far north and west of Scotland, and in some areas of Northern Ireland for a time. Further east and south across Scotland and Northern Ireland, the day was largely dry, with some breaks in the cloud, and sheltered areas became quite warm. The cloudier districts had afternoon temperatures near normal.

SATURDAY  
6 AUGUST 1988

SUMMARY  
OF  
BRITISH WEATHER

After some early morning fog patches in the south, England and Wales had a dry and very warm day with unbroken sunshine, and just a few patches of cloud over the west of Wales, Cumbria and Northumberland. It was cooler around many coasts. Some places became hot.

Scotland and Northern Ireland were mostly cloudy with some rain in many places overnight and during the morning. It became mostly dry in the afternoon with some sunshine, especially in the northwest of Scotland. It was warm in eastern Scotland and near normal over the rest of Scotland and Northern Ireland.

7 AUGUST 1988

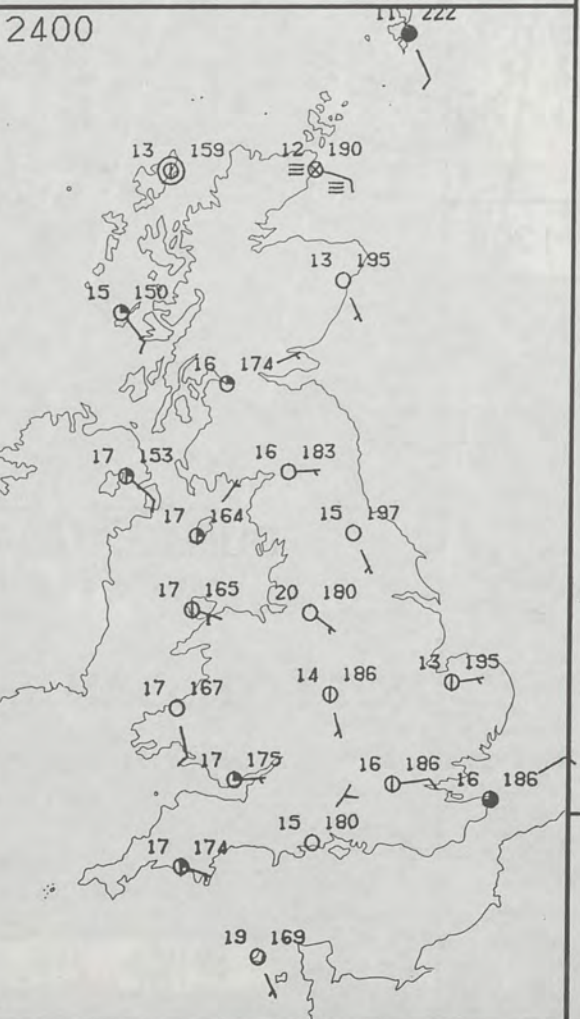

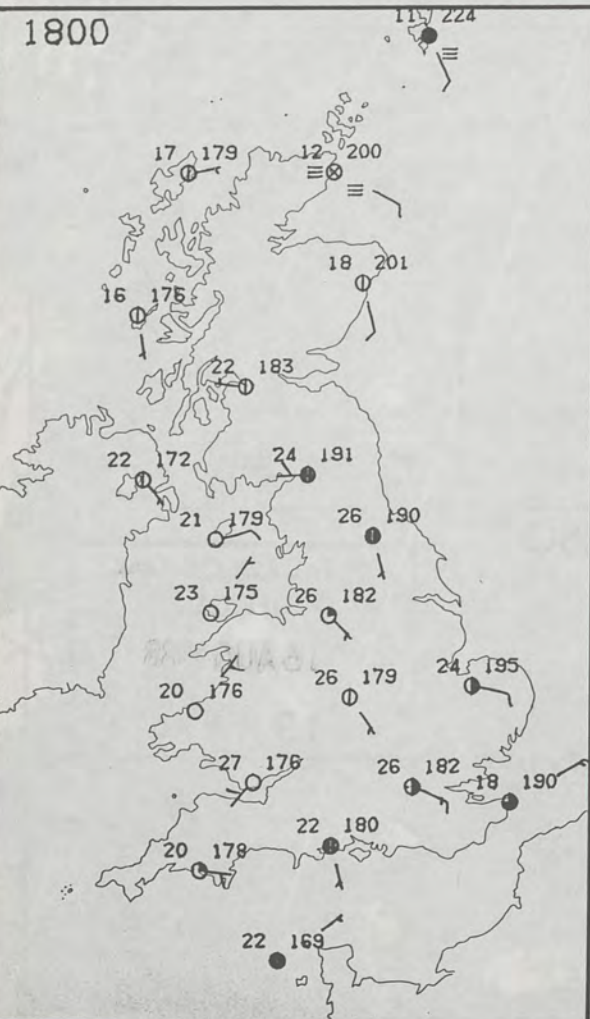

SUMMARY  
OF  
BRITISH WEATHER

After some early morning fog patches, England and Wales had a day of near continuous sunshine interrupted only by some patchy high-level cloud. It became hot in most inland regions but the east coast was cooler with sea fog affecting the East Anglian coast at times.

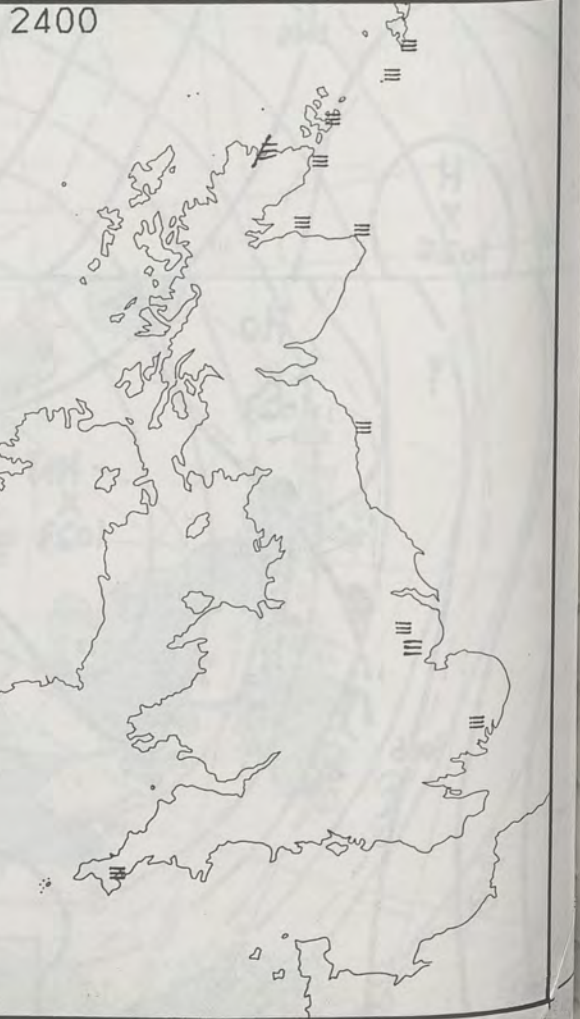

Northern Ireland and much of Scotland had a dry, warm day with sunny periods but the Western Isles were cloudy in the morning with some drizzle. The far northeast of mainland Scotland and the Northern Isles were mostly dull and foggy.

### PLOTTED SURFACE

A map of Great Britain and Ireland with 25 numbered locations marked by dots. The locations are distributed across the country, with a higher concentration in the south and west. The numbers are: 18, 051, 14, 119, 15, 055, 14, 136, 23, 087, 16, 069, 23, 101, 15, 091, 20, 126, 16, 102, 23, 107, 16, 105, 23, 111, 24, 139, 21, 122, 25, 129, 18, 143, 17, 135, 19, 142, 19, 147, and 13, 156 (in the top right corner, possibly representing a separate island or a specific region).

MONDAY 8 AUGUST 1988
-------------------------

# SUMMARY OF BRITISH WEATHER

It was dry overnight nearly everywhere, but eastern areas of both England and Scotland turned cloudy and misty, with quite a lot of fog and a little drizzle here and there. In Northern Ireland, too, the weather turned more cloudy before morning.

In the east the dull, misty weather lasted for much of the morning and indeed some places stayed dull and misty all day, but most places brightened up and over England, Wales and Scotland there was a lot of sunshine and it was very warm and quite humid, **EVEN HOT IN MANY PLACES.**

Northern Ireland had a cloudy day and heavy rain spread eastwards during the afternoon, this heavy rain reaching West Wales and the Western Isles of Scotland in the late afternoon and then all of Wales, northwest England and much of Scotland in the evening, although some western areas cleared up again during the evening. In southwest England there was just a little rain and drizzle.

0600

The map displays the distribution of two symbols across the British Isles. The 'F' symbol, which is a stylized 'F' or '7' shape, is primarily located in the eastern part of England, with a high concentration in the area around London and the East of England. The 'III' symbol, consisting of three horizontal lines, is distributed across the entire country, including Wales, Scotland, and Ireland. The map shows the coastline of the British Isles and the surrounding seas.

1200

This map illustrates the distribution of the 'E' symbol in the year 1200. The symbol is primarily located in the south of England, with a high concentration in the Wessex and Kent regions. It is also found in the south of Wales and the south coast of Ireland. The symbol is represented by a stylized 'E' with a horizontal bar above it.

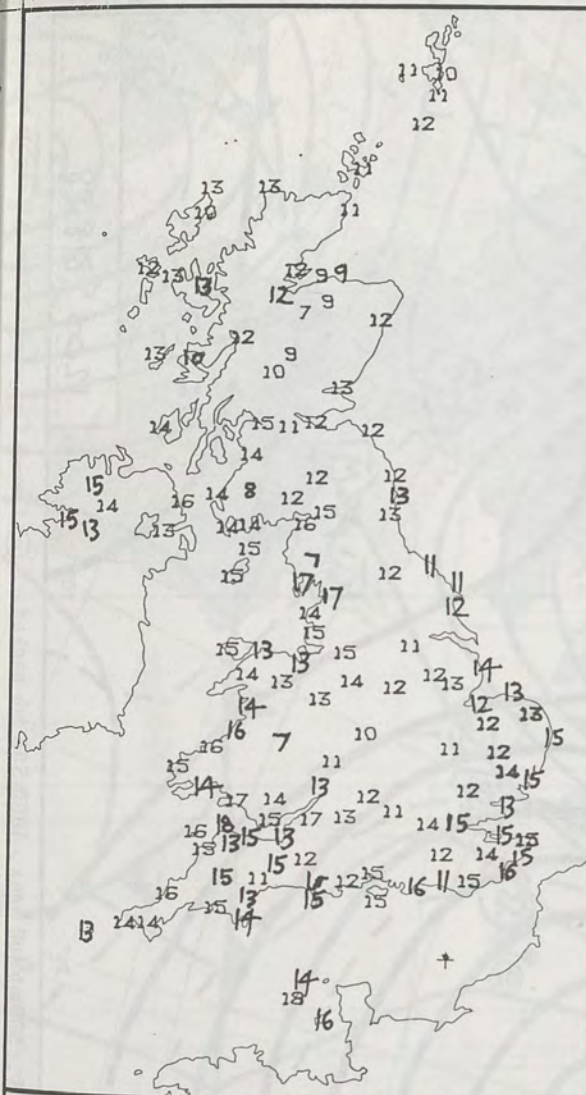

## SIGNIFICANT W

1800

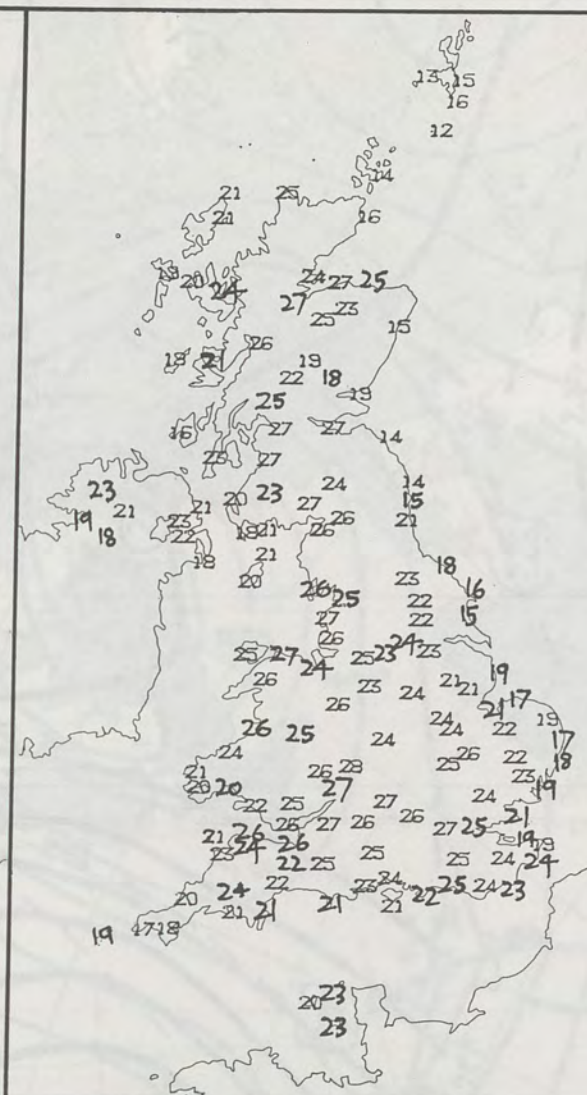

This map shows the British Isles with various wind direction symbols. The symbols include single vertical lines, double vertical lines, and groups of three vertical lines, which correspond to the wind direction categories defined in the legend. The symbols are distributed across the map, with notable concentrations in the north and west.

TUESDAY  
9 AUGUST 1988

SUMMARY  
OF  
BRITISH WEATHER

Northern Ireland, western Scotland and much of Wales were clear overnight, but rain heavy at times in the north spread eastwards across central and eastern Scotland and much of England, although most places were clearer before daybreak.

The rain and drizzle in southeast England, East Anglia and parts of northeast Scotland cleared away during the morning. Over England, Wales and Scotland there was a lot of dry, sunny weather, although in northern Scotland there were a few showers. Shetland, however, clouded over during the morning and there was rain and drizzle here in the afternoon and evening and some fog as well.

Northern Ireland had a cloudy morning with rain now and again. The afternoon was a little brighter, although there were showers but then in the evening the weather clouded over again with some rain.

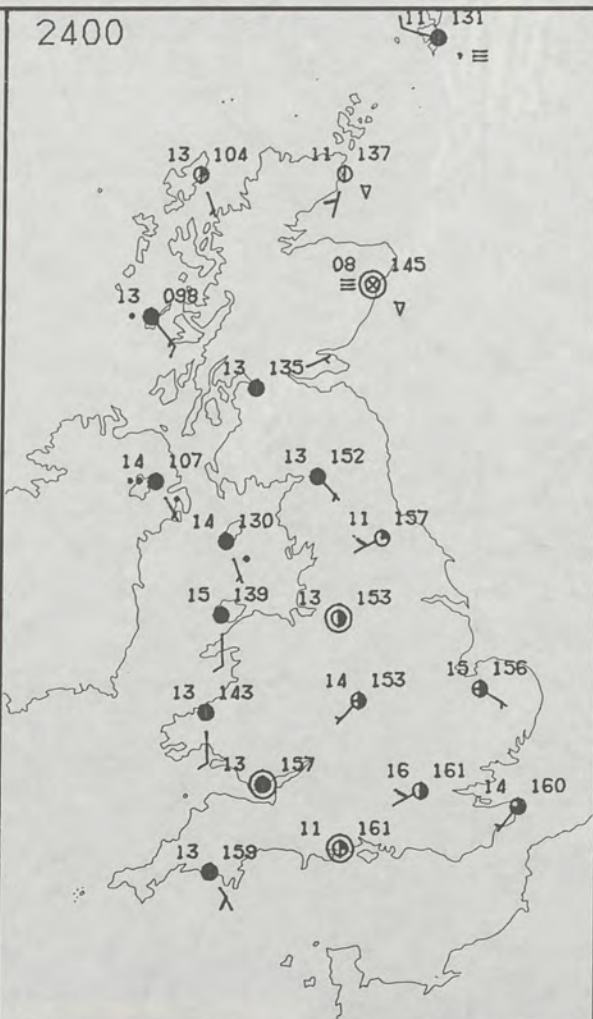

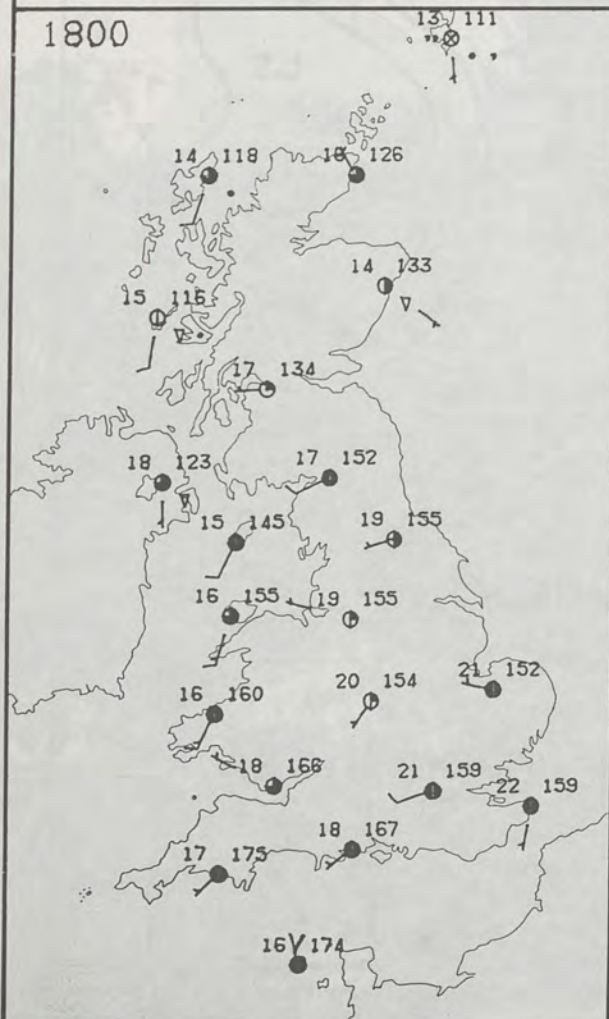

Western areas, Northern Ireland and much of Scotland had temperatures close to normal, but much of England and Wales had another warm day, very warm in parts of east and southeast England.

WEDNESDAY  
10 AUGUST 1988

SUMMARY  
OF  
BRITISH WEATHER

England and Wales had a dry night, though a fair amount of cloud spread across from the west. A few spots of rain reached the extreme west early in the morning, and during the afternoon there was some heavier rain in western parts. Most regions of England and Wales saw at least the odd spot of rain during the day, though parts of the east coast were quite bright. During the evening most of the rain spread eastwards across Northern Ireland, with just odd spots of rain in the south. Clearer weather followed in from the west.

0600

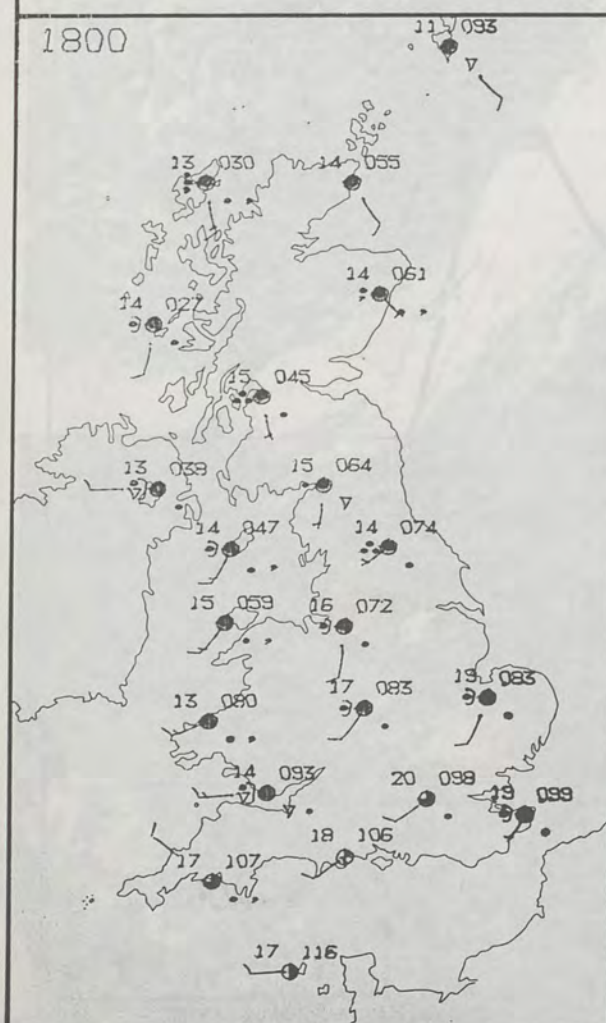

1200

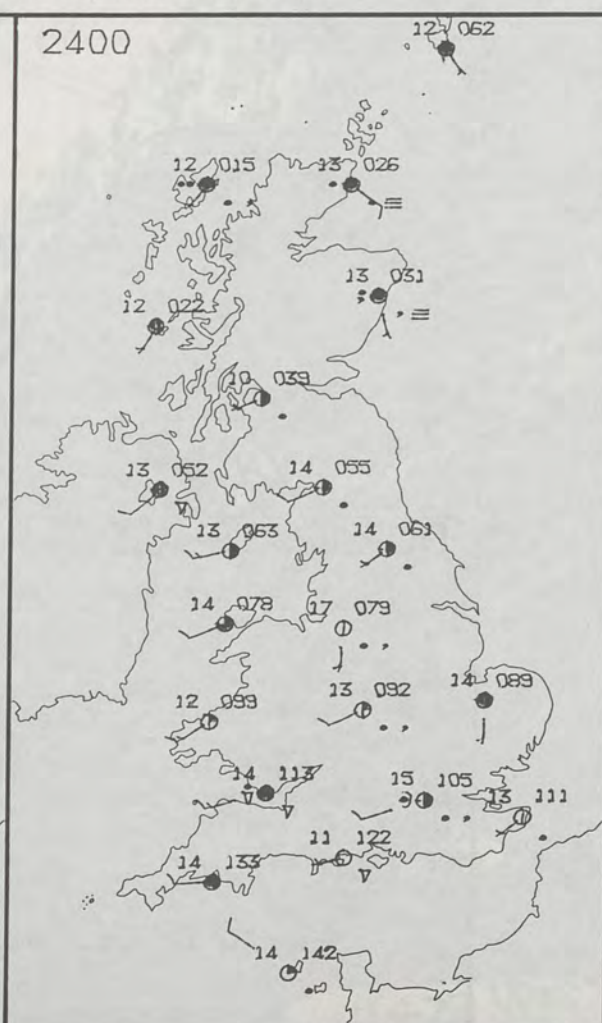

PLOTTED SURFACE OBSERVATIONS

1800

2400

Northern Ireland had a few spots of rain during the night then a rather wet morning. During the afternoon and evening there were further showers.

Scotland started the night clear but became mostly cloudy by morning. During the day there were outbreaks of rain, though most of the rain was in the west. During the evening a band of heavier rain tracked northeastwards through southern and central Scotland.

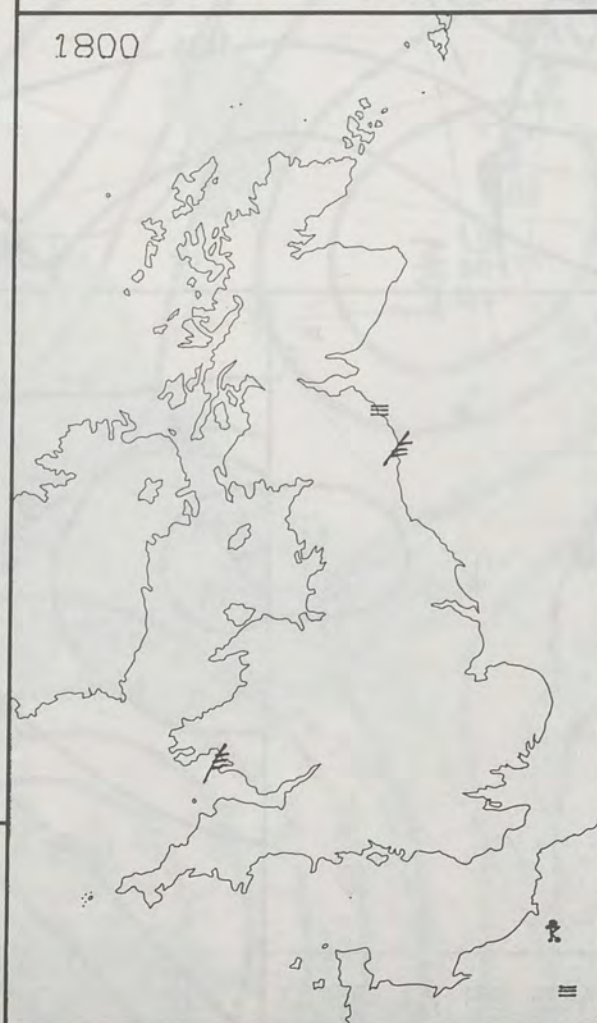

Temperatures were generally near average but it was warm in some eastern parts, especially East Anglia, and on the cool side in the far west.

11 AUGUST 1988

SUMMARY  
OF  
BRITISH WEATHER

Overnight rain cleared from main-land Scotland in the early morning but persisted for most of the day in the Northern Isles. Much of the UK then had a mostly cloudy day with some showery bursts of rain in many places, though there were some sunny spells over Scotland and in eastern parts of England.

During the evening, more general outbreaks of rain spread from the southwest over much of England and Wales.

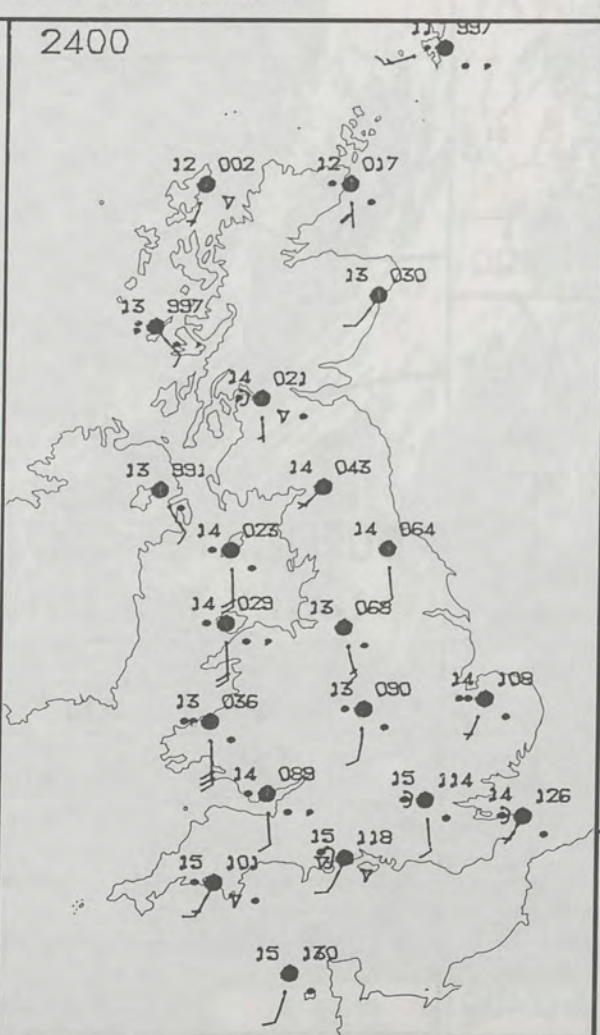

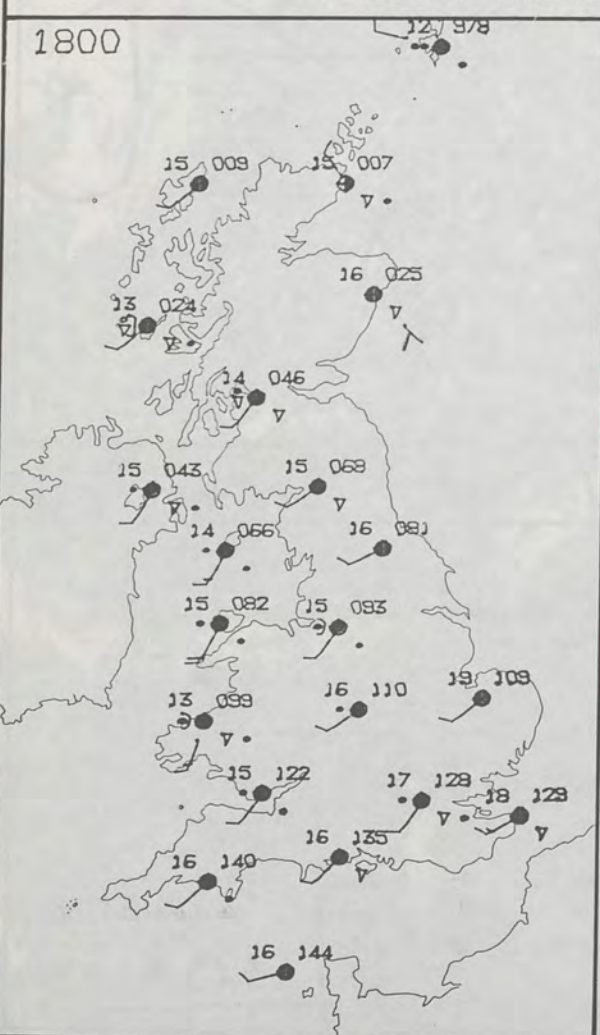

Temperatures were mostly in the rather cool category, though near normal in extreme southeast England.

FRIDAY  
12 AUGUST 1988

SUMMARY  
OF  
BRITISH WEATHER

Apart from the far north of Scotland the day started off overcast everywhere with outbreaks of rain, with some quite respectable rainfall totals over northern districts. Clearer weather soon spread across England and Wales and it was a bright and breezy day, very breezy in fact with several gusts of 50 knots reported across northern England as the centre of the depression responsible for all this activity tracked slowly eastnortheastwards across the borders. The rain area transferred northwards to give remaining parts of Scotland a wet afternoon and evening, especially over the Grampians, though the Northern Isles stayed dry.

Afternoon temperatures reached the mid-August average at many eastern and southern resorts despite the blustery winds, though it remained cool in north-eastern England and eastern Scotland, and many western coastal areas.

SATURDAY  
13 AUGUST 1988

SUMMARY  
OF  
BRITISH WEATHER

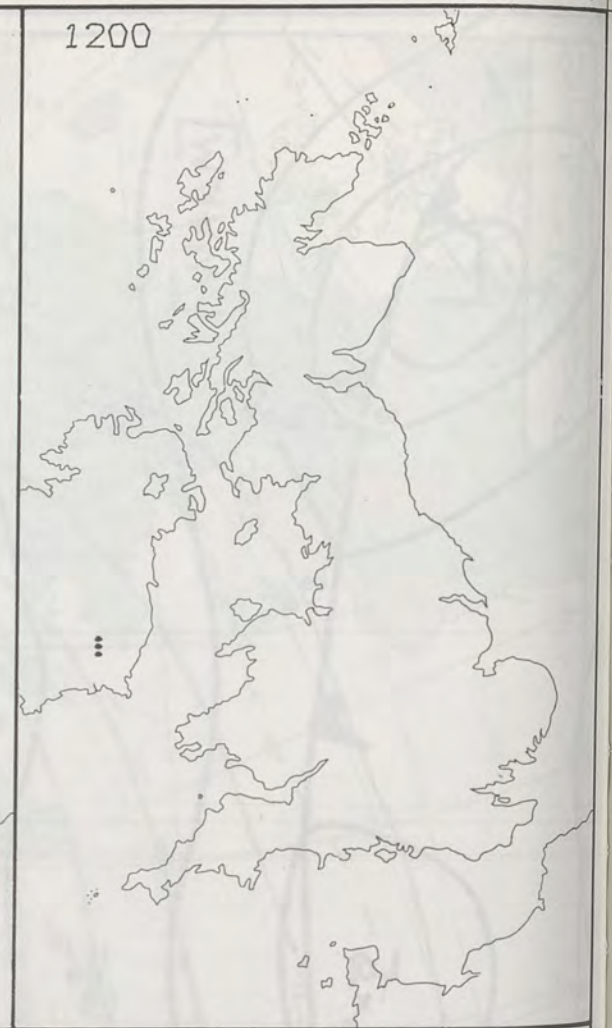

Apart from northeast Scotland still under the influence of the depression that affected the country on Friday, the day started off dry with clear skies over eastern, central and southern districts.

Thickening cloud soon returned to most districts in the moist southwesterly flow, though it remained bright in central and northern Scotland. Most western and northern districts had outbreaks of rain during the afternoon and evening with several hours of heavy rain across Wales and the Isle of Man. It became increasingly misty in the west with fog patches around Irish Sea coasts.

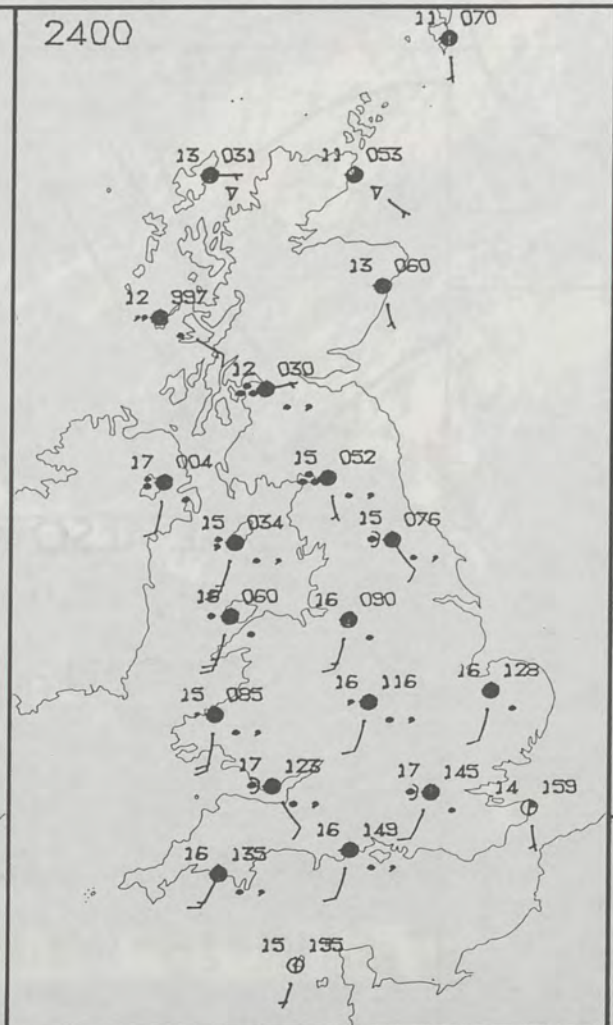

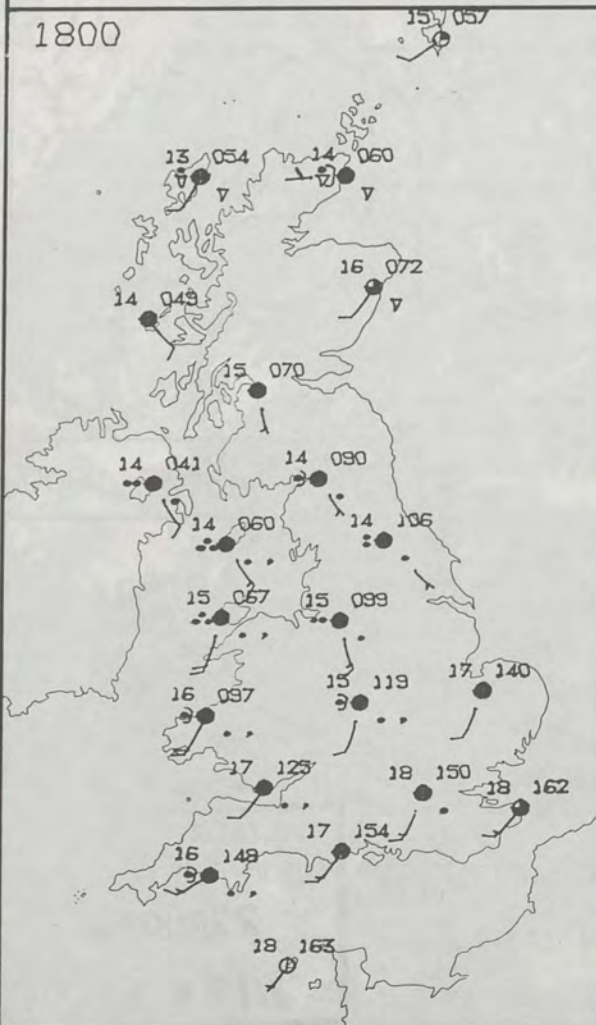

It was a cool day generally especially in the west and over Northern Ireland, though temperatures were near average across sunnier parts of East Anglia and the Channel Isles and in brighter parts of northern Scotland.

SUNDAY  
14 AUGUST 1988

SUMMARY  
OF  
BRITISH WEATHER

Scotland had a cloudy and wet night with persistent and heavy rain over southern Scotland moving north during the night. By morning though bright and showery weather extended from Northern Ireland into southwest Scotland eventually reaching the whole of Scotland by evening, some of the heavier showers were accompanied by thunder.

Northern Ireland, Wales and England were also rather showery but some more prolonged and heavier rain affected Wales and the southwest of England in the first part of the morning. In eastern England the day was mainly dry with only a few well scattered light showers during the late afternoon.

Most places had some sunshine during the day but southeast England and East Anglia had by far the best of any sun.

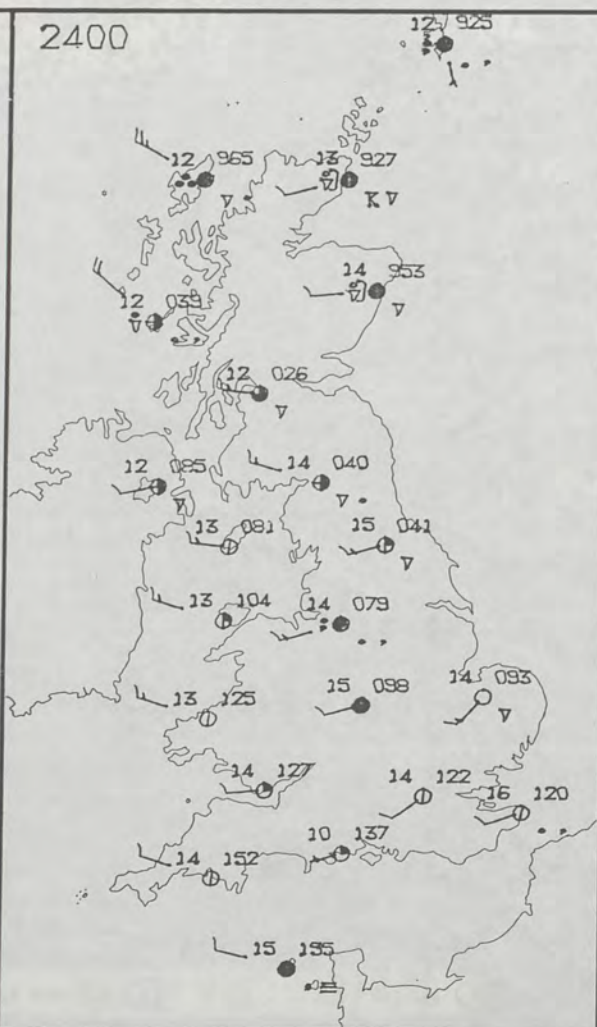

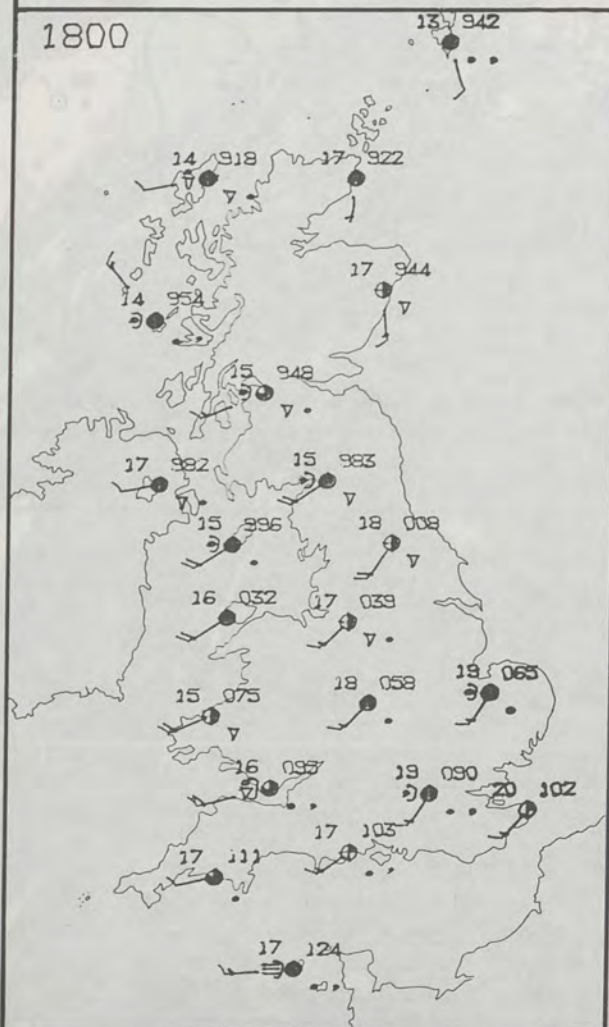

Temperatures were near or just below normal in most western areas but in eastern England and Scotland many places were warm and in East Anglia it became very warm.

MONDAY  
15 AUGUST 1988

SUMMARY  
OF  
BRITISH WEATHER

England and Wales had a mostly dry day with a good deal of sunshine although upper cloud made the sun rather hazy. Parts of northwest England though had some early morning rain.

Scotland and Northern Ireland had a windy day with the strongest winds in the north and east. Eastern parts of Scotland had a mainly dry day but Northern Ireland, the north and west of Scotland were rather cloudy at times with showers.

In the Northern Isles it stayed dull with some longer spells of rain.

Temperatures were generally near or rather below normal.

## PLOTTED SURFACE OBSERVATIONS

1800

2400

THURSDAY  
18 AUGUST 1988

Scotland, Northern Ireland, northern England, Wales and Cornwall had a mostly cloudy night with some outbreaks of rain. Most of central and southern England had a dry night, and skies were clear in many places. Clearer weather also spread into parts of northwest Scotland, but elsewhere in the north and west some lengthy, heavy spells of rain moved north-east during the night.

The south and east of Scotland, northern England, Wales and southwest England were mostly very wet during the morning. Westernmost Scotland, together with Northern Ireland, was somewhat drier, but still mostly cloudy.

The southeastern half of England and East Anglia started sunny, and quickly became hot in places, but it gradually clouded over from the west, with rain everywhere by mid-evening, heavy in places in the south.

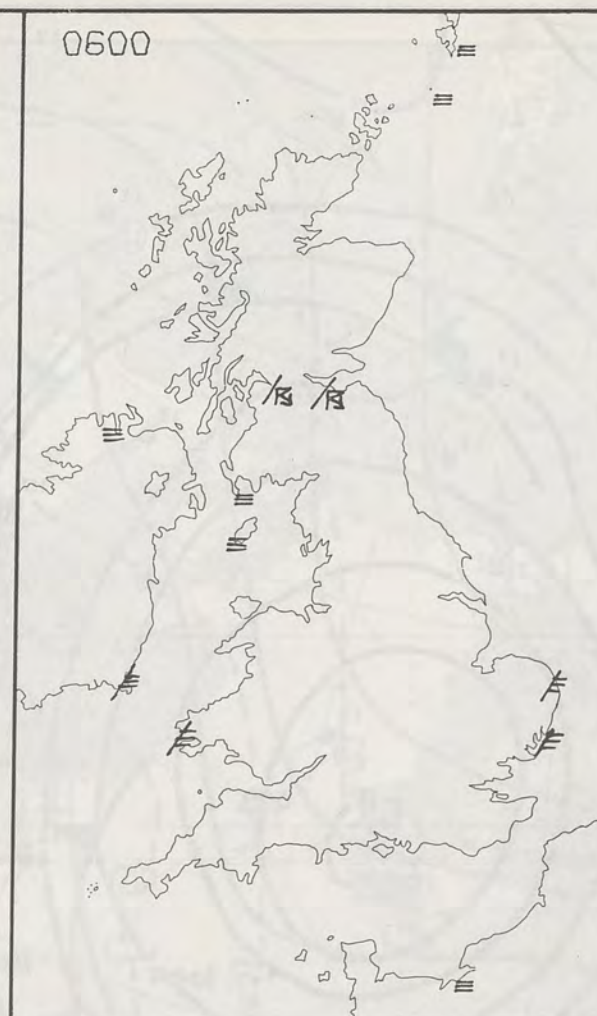

The persistent rain over southern and eastern Scotland, Wales, northern and southwest England cleared from most places during the late afternoon and evening, but there were some further bursts of rain in Northern Ireland and the Hebrides before midnight.

Away from the southeast and East Anglia temperatures were mostly near or rather below normal, but it was humid.

FRIDAY  
19 AUGUST 1988

SUMMARY  
OF  
BRITISH WEATHER

Some northeastern districts had a dry night, but there were out-breaks of rain in the south and west. Some of the rain was heavy, and some thunderstorms tracked northeast over Kent in the dawn period. It was a very warm, humid night in the south-east, but cooler, fresher air spread from the west during the morning.

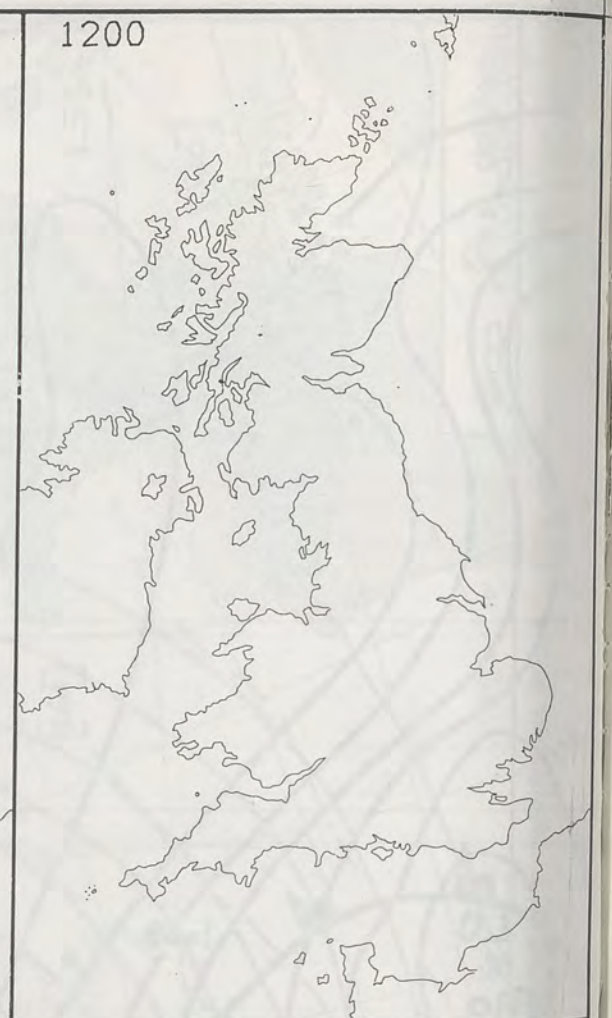

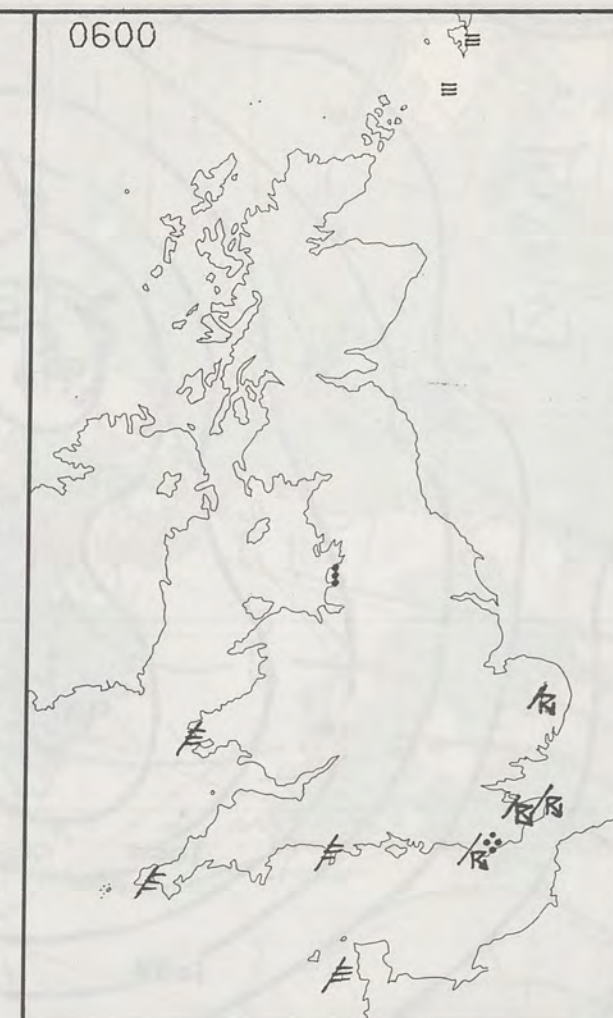

Temperatures were mostly near or below normal, and it was windy in the south.

The rain from the south and west overnight moved on across Scotland during the day. Brighter, showery weather followed across England, Wales and Northern Ireland, reaching southern Scotland in the afternoon.

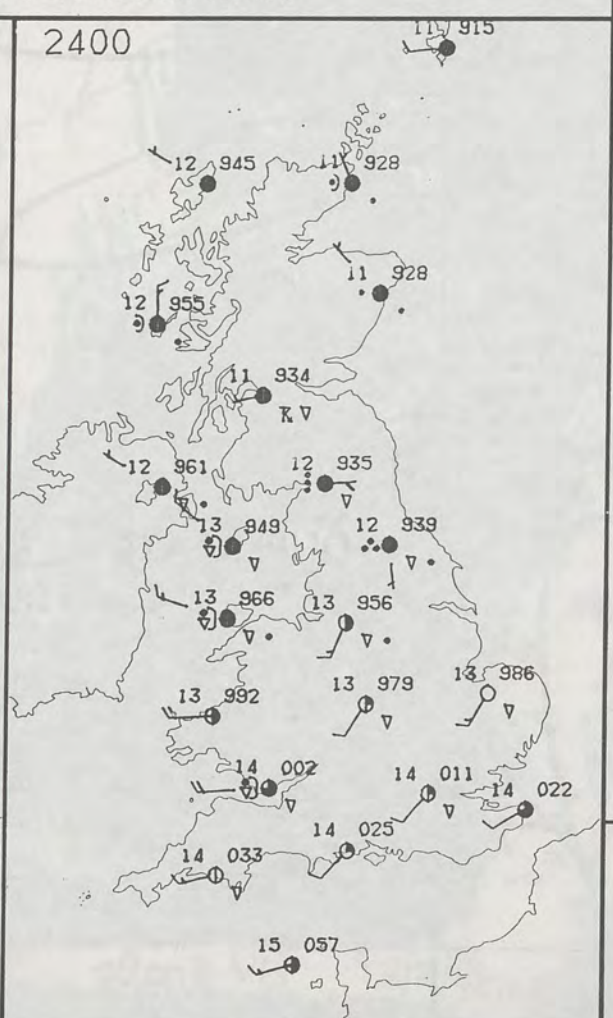

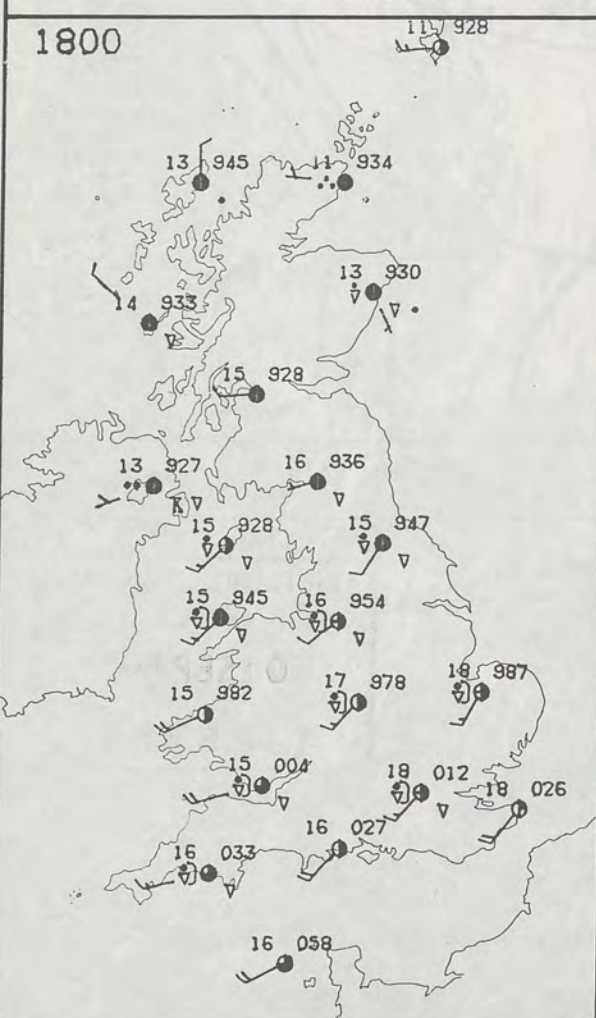

After some early showers, some places towards the south and southeast coast of England stayed dry and fairly sunny, but there were a fair number of showers elsewhere, and some were heavy. Thunder was reported over northern England and Northern Ireland.

### PLOTTED SURFACE OBSERVATIONS

SATURDAY  
20 AUGUST 1988

### SUMMARY OF BRITISH WEATHER

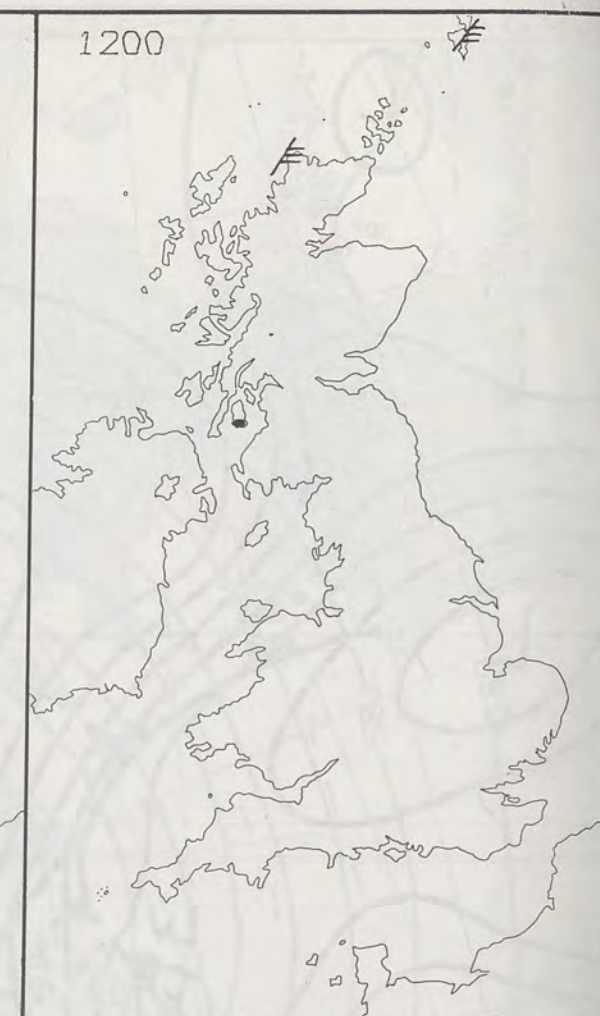

Most of the United Kingdom had a showery twenty-four hours, though the distribution of showers was very uneven. Across southern England and South Wales some locally heavy thundery showers occurred overnight. The major penetration of prolonged showery activity was across Scotland, Northern Ireland and North Wales.

During the day, longer periods of rain were reported from these areas. In remaining districts, the showers were more scattered, indeed, across southern areas of England and Wales a good part of the day was dry and quite sunny, however, a marked trough line brought further heavy and locally thundery showers from the northwest across these areas during the afternoon.

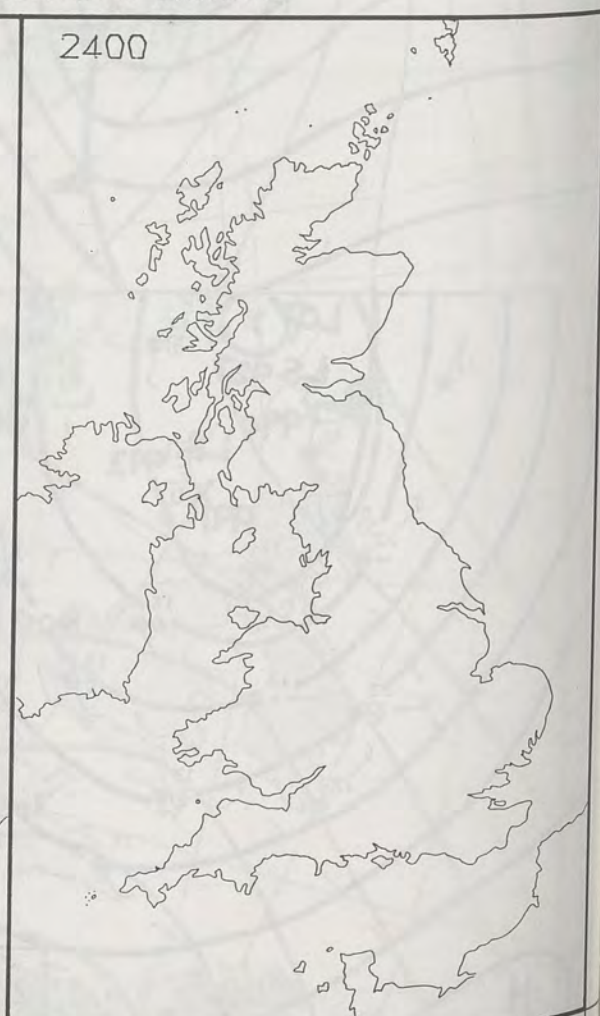

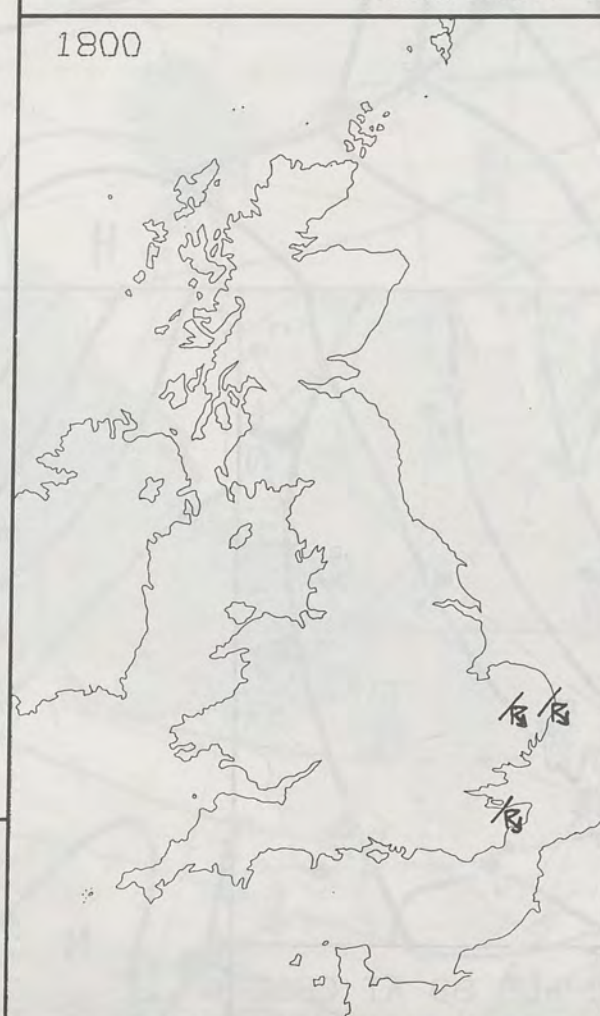

It was windy around many northern and western coastal and hilly areas, and temperatures ranged from well below normal in the cloudy, wetter northwestern regions, to just about normal in the favoured sunny south.

SUNDAY  
21 AUGUST 1988

### SUMMARY OF BRITISH WEATHER

By dawn on Sunday, most districts were cloudy, with showers, with some more persistent rain across central and eastern England.

During the morning, western and many central areas of Scotland, Northern Ireland, Wales and the southwest turned largely dry and bright, whilst remaining eastern areas stayed cloudy, with further showers. The showers were mostly light, but some sharper bursts of rain were reported near to the English east coast, and from isolated afternoon showers across East Anglia.

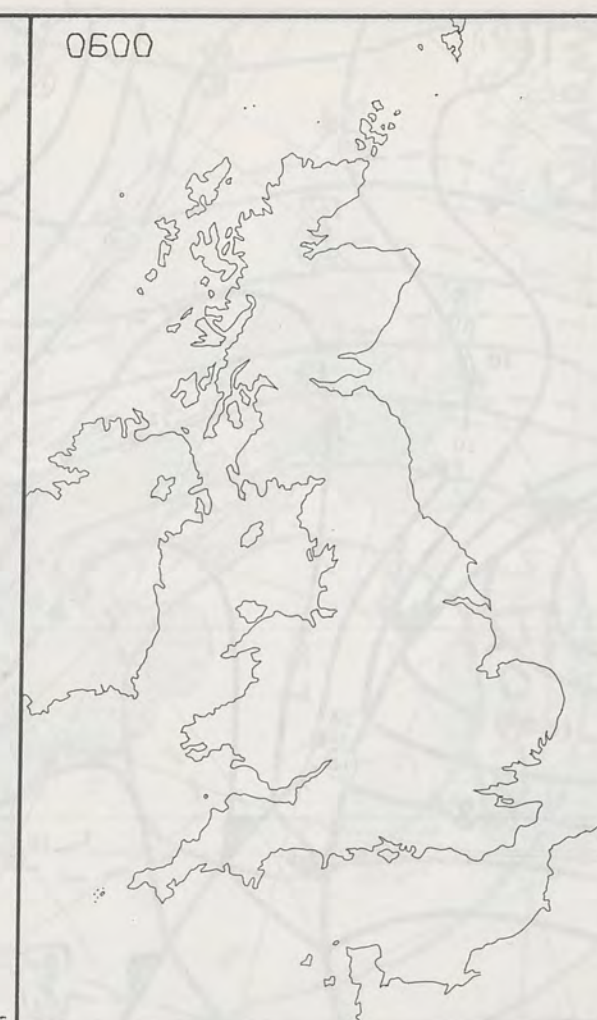

By late afternoon and early evening, as pressure continued to rise from the west, most places became dry, with thinning cloud cover, and some longer spells of late sunshine in the west.

It was a cool day, with temperatures in most places down on late August normals, reflecting the northerly origin of the air mass. Some sheltered spots did achieve average values, notably in the central lowlands of Scotland.

22 AUGUST 1988

SUMMARY  
OF  
BRITISH WEATHER

Much of the United Kingdom had a dry, clear night, but on Shetland there were a few showers and in England one or two places had a little rain.

During the day most places in England and Wales had a lot of cloud, but there was at least a little sunshine nearly everywhere and indeed a few places in central southern England had quite a sunny day. Most places stayed dry, but there were a few showers in northwest England and Norfolk, while Cornwall and Dyfed had some rain and drizzle in the afternoon and evening.

Northern Ireland was mostly cloudy and there was a little rain in the evening.

Southern and eastern Scotland were sunny for a while but on Shetland there were a few more showers. Around lunchtime rain and drizzle reached the Hebrides and then spread to most places during the afternoon and evening.

Temperatures were below normal in most places, making it a rather cool or cool day.

TUESDAY  
23 AUGUST 1988SUMMARY  
OF  
BRITISH WEATHER

Most places were cloudy and there was some rain and drizzle, especially in Scotland. Parts of eastern England had clear skies and here it was fairly cold.

In eastern England, particularly in East Anglia, there was quite a lot of warm sunshine, bringing temperatures up to normal, but most places in England and Wales were cloudy. There was a little rain and drizzle here and there, mainly on western coasts where there was also patchy fog.

Northern Ireland had a little bright weather in the morning and one or two showers as well, but much of the day was dry and cloudy, although there was some rain in the evening.

Over Scotland there was a little sunshine in a few places, although it was a mainly cloudy day. There was a lot of dry weather, but a little rain and drizzle in a few places, particularly in the Western Isles in the evening.

Temperatures were again below average over much of the United Kingdom.

WEDNESDAY  
24 AUGUST 1988

SUMMARY  
OF  
BRITISH WEATHER

Much, if not all, of the country had a cloudy night with outbreaks of chiefly light rain.

The day started cloudy still with outbreaks of rain in a good number of places. During the morning the rain in the east tended to die out and it brightened up whilst generally brighter weather with some sunshine and scattered showers spread into western parts. During the afternoon a short spell of rain, with thunder in places, moved across central and eastern areas followed by the brighter weather from further west.

Temperatures were near normal in southeast England and East Anglia but below normal elsewhere.

THURSDAY  
25 AUGUST 1988SUMMARY  
OF  
BRITISH WEATHER

Central and eastern areas had a fine and dry night. Western parts had some showers and in western Scotland in many places it was best described as wet and windy, some of this rain spreading to central and eastern areas by morning.

The day was more of the north/south split. Northern parts were very windy with a fair number of showers and a little sunshine inbetween (except for Orkney where it stayed dry and sunny). Showers were few and far between in the south and they were light in many cases. Nevertheless the sunny start gave way to quite a bit of cloud.

It was generally rather cool or cool.

FRIDAY  
26 AUGUST 1988

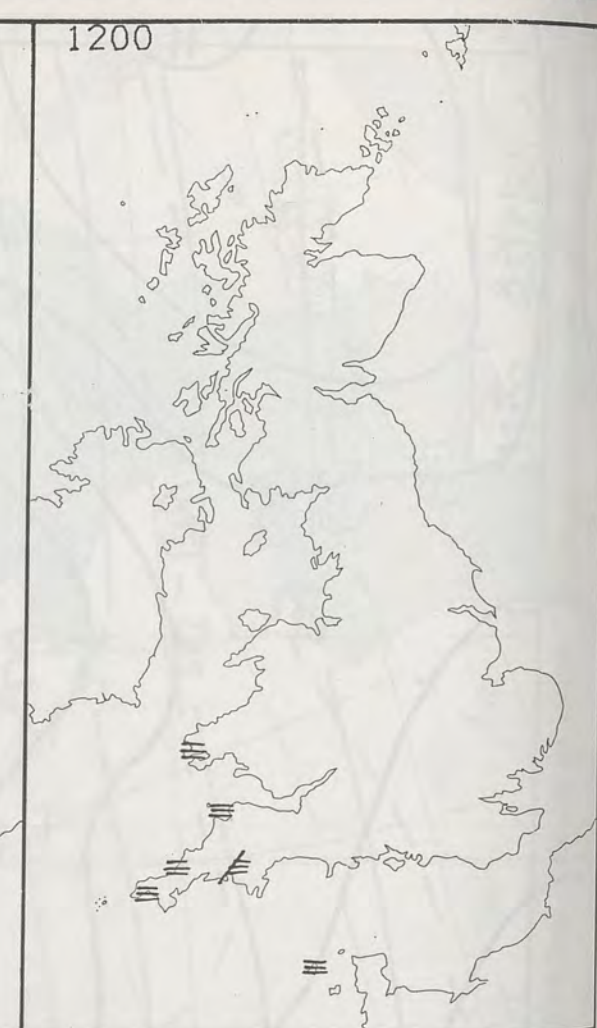

Most places had a fine night and it was a cold night in some northern districts. There were some showers near western and northern coasts and rain made slow northeastward progress into southwest Britain, with fog over southwest facing coasts and hills here as the air became very moist.

During the day, the cloudy area in the southwest continued to move northeast, but very slowly. There were patches of rain or drizzle over southern England and South Wales during the morning, and a few showers in northwest Scotland. But over many parts of the British Isles the morning was bright and dry. Indeed much of eastern and Northern England and East Anglia had a mostly sunny day and most of Scotland stayed dry and quite bright.

0600

### SIGNIFICANT WEATHER CHARTS

1800

2400

The patchy rain in the south made little northward progress during the afternoon, but during the late afternoon and evening heavier and more persistent rain moved more steadily northeast across Northern Ireland, western Scotland, Wales and northern England, whilst there was drizzle at times further south.

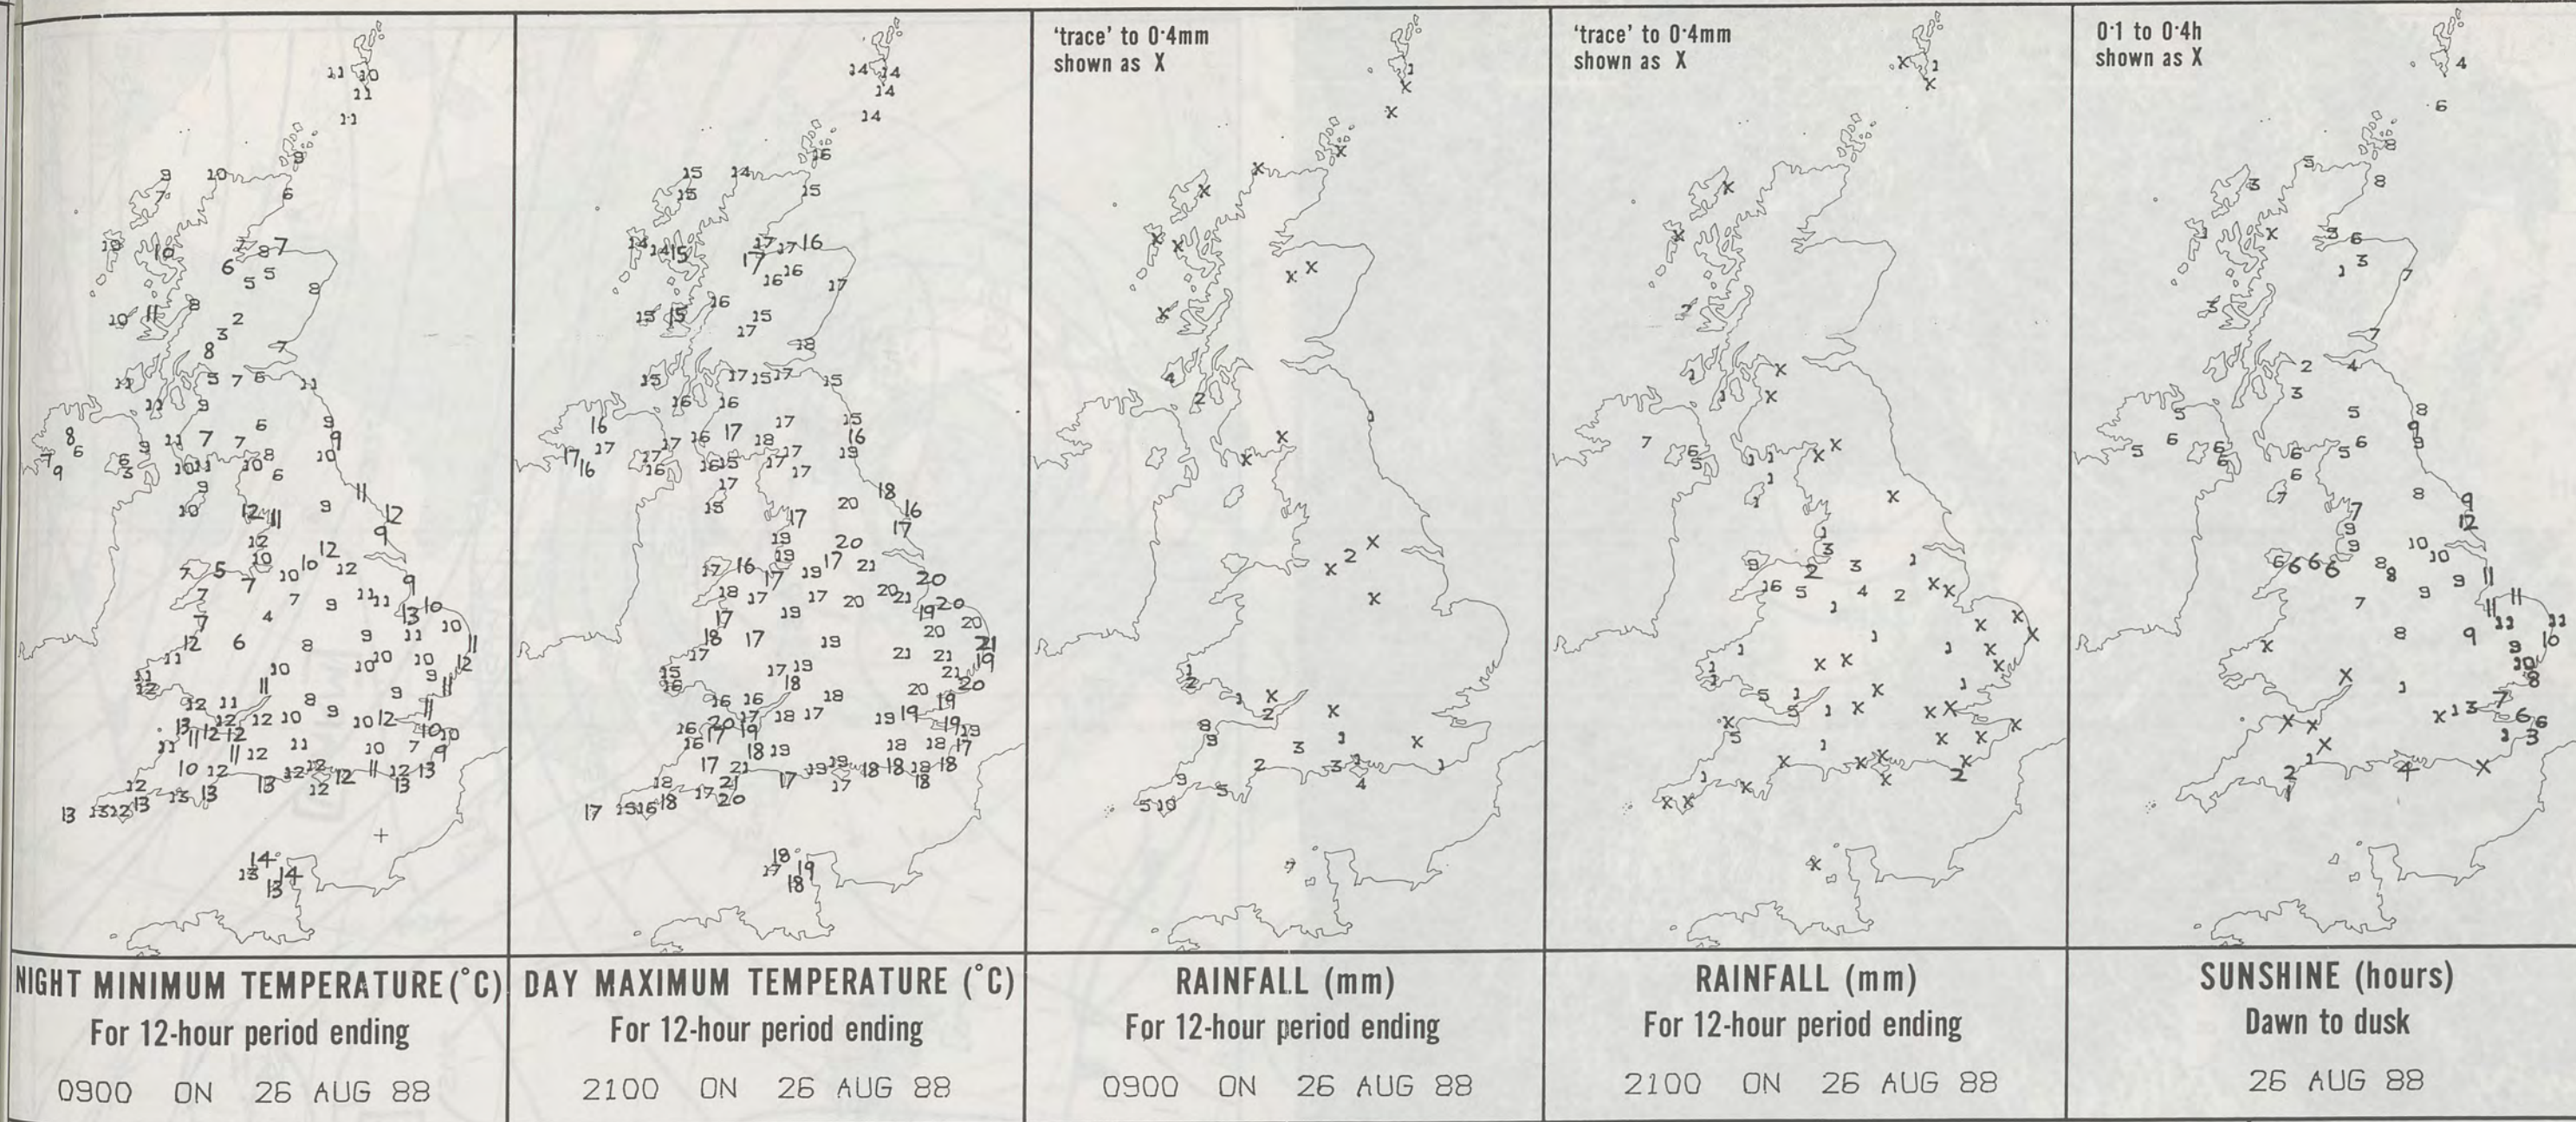

It became very humid in the south with extensive fog over southwest facing coasts and hills.

Temperatures were generally not far from the seasonal normal across the British Isles and it was a very pleasant summery day over much of eastern England.

## PLOTTED SURFACE OBSERVATIONS

1800

2400

SATURDAY  
27 AUGUST 1988SUMMARY  
OF  
BRITISH WEATHER

There was widespread, and often quite heavy, rain in the north and west overnight; central and southeast England had just a little drizzle at times, and here it was a very warm night. Fog affected southwestern coasts and hills.

Rain soon cleared Scotland and Northern Ireland in the morning leaving these areas with a bright and breezy day with some showers, chiefly in the west.

England and Wales had mostly large amounts of cloud; rain or drizzle in the more northern and western counties in the morning made some southeastward progress during the day; becoming mostly light and patchy across central and southwestern districts in the afternoon. Northern England, north and west Wales had a mostly sunny afternoon.

The southeastern corner of England stayed mostly dry, and it was bright at times. In the evening, there was some heavier rain in the southwest.

It was a rather cool day near many western coasts, but temperatures were near or rather above normal elsewhere. Many eastern districts were warm. It was humid in the south.

2400

SUNDAY  
28 AUGUST 1988

SUMMARY  
OF  
BRITISH WEATHER

Southwest England, Wales, northwestern Midland counties, and much of northern England experienced heavy rain both overnight and during the morning, accompanied in places by thunder. By midday however, brighter, showery weather had reached most of these areas.

The southeastern half of England experienced warm, humid air overnight, notably humid in the far southeast and for a while understorms were reported, though amounts of rain reported were quite small during the day. The humid air was displaced from the northwest by the cold front, which itself introduced rain for a time, followed in turn by broken cloud, and mainly dry weather.

The remaining parts of northern England, Northern Ireland and Scotland had a showery day, with well broken cloud.

Temperatures were near normal in the sheltered eastern parts of Scotland and northeastern England and in extreme southeast England, and below normal in the coastal western parts of Britain and Ulster and most remaining areas of Britain.

1800

2400

MONDAY  
29 AUGUST 1988

SUMMARY  
OF  
BRITISH WEATHER

The deep depression to the north of Scotland moved away northwards and introduced a cool, showery airstream to all parts of the country, with showers quite frequent in the north and west. It was windy too in the northwest.

In contrast, the south and east had a reasonable day of bright sunshine and only passing showers. There was more than 10 hours of sunshine at many resorts around eastern and southern coasts from Skegness to Swanage.

Some of the highest temperatures were over East Anglia and the southeast, but these were only average for late August. Most other places were in the rather cool category.

TUESDAY  
30 AUGUST 1988

SUMMARY  
OF  
BRITISH WEATHER

It was a similar day to yesterday for many eastern districts with good sunny periods in East Anglia. Further west and north it was not so pleasant; Wales had a generally cloudy day with showers and it turned into a wet evening for most districts.

Over northern England, Scotland and Northern Ireland it was a mainly cloudy day and in the west - wet. Several stations in the hills of western and southwestern Scotland reported close to an inch of rain, it was also windy in the west with southerly gales through the Irish Sea and over the Western Isles.

Temperatures were mostly near or rather below normal.

## PLOTTED SURFACE OBSERVATIONS

1800

2400

WEDNESDAY  
31 AUGUST 1988SUMMARY  
OF  
BRITISH WEATHER

Northern Ireland and much of Scotland had a dry, fairly clear night, but in Scotland there were showers, most of them in the north.

In England and Wales most places were wet for a while, with heavy rain here and there, but northern and western areas were clearer by morning.

During the day most places in Northern Ireland and Scotland were dry and sunny, but there were some showers scattered about.

Central and eastern districts of England had more heavy rain in the morning with quite a few thunderstorms, but by early afternoon the weather had brightened up here too. Over England and Wales there was a lot of dry, sunny weather, although there were some showers, mostly in the west of England and South Wales. In the evening more persistent rain reached southwest England and Wales.

Temperatures were generally close to or a little below normal.
