SIGNIFICANT WEATHER

0600 GMT 01 FEBRUARY 2011 SIG WEATHER	1200 GMT 01 FEBRUARY 2011 SIG WEATHER	<p>Summary of UK Weather for Tuesday 01 February 2011. A band of rain spread down from Scotland and Northern Ireland, into Wales and northern England by daylight. Some of the rain was heavy on upslopes of Cumbria and western Scotland. Heavy showers followed into western Scotland. It was dry and cold ahead of the rain over much of England and Wales, with reports of rain falling on frozen surfaces in north Lincolnshire around dawn. During the day the weakening band of rain spread southwards across England and Wales, then it turned brighter in all parts. A few heavy and thundery showers spread to western and northern parts of Scotland during the day. A few showers also affected Northern Ireland during the afternoon, but most other parts had a dry afternoon in the mild westerly winds. Apart from a few showers in western and northern Scotland during the evening, most parts stayed dry and cold with some fog forming, especially in the south.</p>

SIGNIFICANT WEATHER

0600 GMT 02 FEBRUARY 2011 SIG WEATHER	1200 GMT 02 FEBRUARY 2011 SIG WEATHER	<p>Summary of UK Weather for Wednesday 02 February 2011. In the early hours Scotland and Northern Ireland stayed cloudy and windy with some rain. This was heavy on western hills of Scotland, as well as Cumbria.</p> <p>The rest of England and Wales stayed largely dry in the early hours, with fog and low cloud in the south. Freezing fog was reported at Gatwick, Hurn and Exeter, with temperatures falling several degrees below freezing.</p> <p>During the day in was cloudy in many areas, and outbreaks of rain in the north moved south-eastwards across Wales and central England, and then south-west England through the afternoon and evening. A few light outbreaks reached south-east England later.</p> <p>With the rain band clearing from the north, thundery showers moved into Scotland in the evening, these turned wintry over high ground into the night.</p>
1800 GMT 02 FEBRUARY 2011 SIG WEATHER	0000 GMT 03 FEBRUARY 2011 SIG WEATHER	<p>EXTREMES Highest Maximum: 12.3 Aboyne No 2, Aberdeenshire Lowest Maximum: 7.3 Loch Glascarnoch, Ross & Cromarty Lowest Minimum: -3.8 Hurn, Dorset Lowest Grass Minimum: -6.6 Hurn, Dorset Most Rain: 17.0 Tulloch Bridge, Inverness-Shire Most Sun: 1.1 Ronaldsway, Isle of Man</p>

DAILY WEATHER SUMMARY

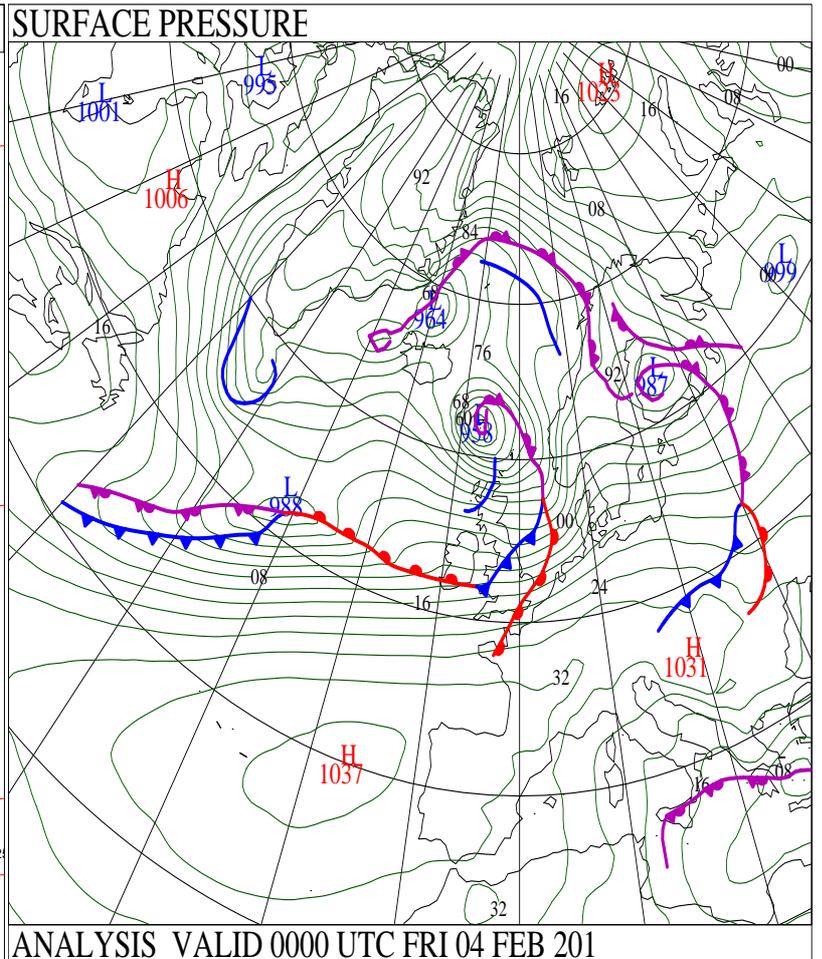

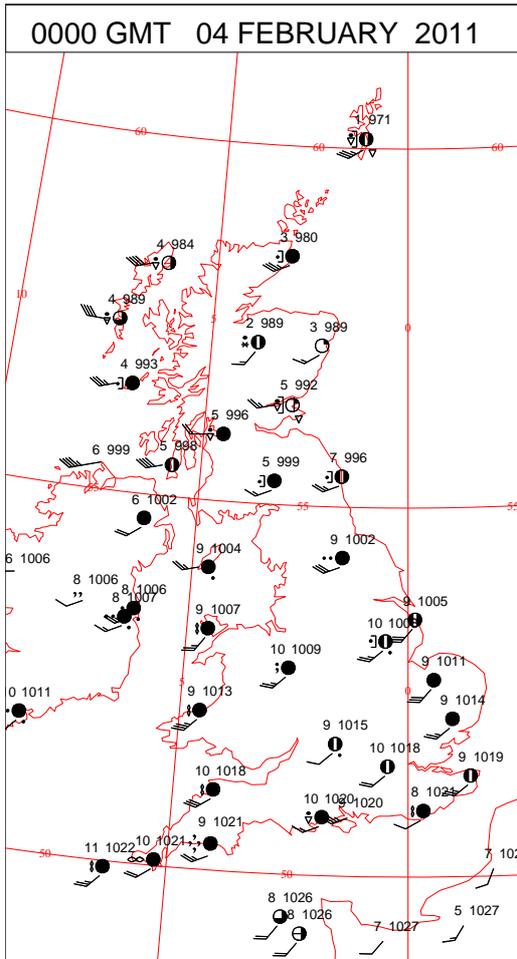

SIGNIFICANT WEATHER

0600 GMT 03 FEBRUARY 2011 SIG WEATHER	1200 GMT 03 FEBRUARY 2011 SIG WEATHER	<p>Summary of UK Weather for Thursday 03 February 2011. It was a reasonably chilly night across the U.K., and mostly dry with clear spells over England and Wales, with some grass frost developing. Further north, frequent heavy and thundery wintry showers moved across Scotland and Northern Ireland, with some heavy snow over the higher ground. Temperatures quickly picked up with some morning sunshine across England and Wales. Meanwhile the showers across Scotland eased ahead of a large weather system in the Atlantic which moved rapidly across the north of the U.K. during the afternoon, bringing increasingly strong gale force winds and heavy rain. It remained mainly dry and bright towards the south of the U.K. though until after dusk. Strong winds and heavy rain continued into the evening for much of the country, but it remained mainly dry towards the south and east of England.</p>
		
1800 GMT 03 FEBRUARY 2011 SIG WEATHER	0000 GMT 04 FEBRUARY 2011 SIG WEATHER	<p>It also started to turn colder again across northern Scotland as colder, wintry weather made a return here. Temperatures across the country picked up during the day after a chilly start, becoming above average for the time of year.</p>
		
		<p>EXTREMES Highest Maximum: 12.9 Coningsby, Lincolnshire Lowest Maximum: 4.5 Aviemore, Inverness-Shire Lowest Minimum: -1.2 Aviemore, Inverness-Shire Lowest Grass Minimum: -5.0 Hurn, Dorset Most Rain: 38.6 Bingley No 2, West Yorkshire Most Sun: 6.7 Manston, Kent</p>

SIGNIFICANT WEATHER

0600 GMT 06 FEBRUARY 2011 SIG WEATHER	1200 GMT 06 FEBRUARY 2011 SIG WEATHER	<p>Summary of UK Weather for Sunday 06 February 2011. Outbreaks of rain affected mainly Wales, northern England and southern Scotland. This rain was fairly persistent, and locally heavy, with Shap having over 25 mm in just 12 hours (0600-1800 UTC). This rain eventually eased and cleared eastwards, leaving many parts dry, except for some light rain and drizzle, mainly affecting western up slopes.</p> <p>Southern parts were generally cloudy, whereas the north was somewhat brighter, although showers continued in western Scotland.</p> <p>South-westerly winds remained strong across England and Wales, particularly in exposure, e.g. 68 knots at Great Dun Fell. Lower level gusts were also strong, particularly to the lee of high ground, with Bramham near Leeds, recording a gust of 47 knots. Winds across Scotland and Northern Ireland were much lighter.</p> <p>It was another mild day over much of England and Wales, with temperatures reaching 12 or 13 Celsius in most places.</p> <p>Rain continued over parts of northern England, mainly the north-west, during the evening, with rain also spreading across Northern Ireland and south-west Scotland.</p>

0600 GMT 07 FEBRUARY 2011 SIG WEATHER	1200 GMT 07 FEBRUARY 2011 SIG WEATHER	<p>Summary of UK Weather for Sunday 06 February 2011. It remained windy and very mild across much of England and Wales overnight with some occasional drizzle. Heavy rain across northern England pushed into Scotland and Northern Ireland by the end of the night.</p> <p>The day was very unsettled across the UK, with widespread gales. It was a very wet day in the north, and some of the rain fell as snow over parts of Scotland, especially higher ground in Stirlingshire, where up to 10 cm fell. Snow also briefly affected some parts of Northern Ireland.</p> <p>Very strong south-westerly, and then westerly winds affected all areas, apart from northern Scotland. Great Dun Fell recorded a gust of 77 knots and Aberdaron recorded a gust of 73 knots, both at 1000 UTC.</p> <p>Many places became drier and much brighter during the afternoon, although frequent blustery showers continued to affect northern and western areas and these continued into the evening. Winds slowly eased by the evening with most inland places becoming dry.</p> <p>Temperatures were above average for England and Wales, but near the average for Scotland and Northern Ireland.</p>

SIGNIFICANT WEATHER

0600 GMT 08 FEBRUARY 2011 SIG WEATHER	1200 GMT 08 FEBRUARY 2011 SIG WEATHER	<p>Summary of UK Weather for Tuesday 08 February 2011. A much quieter day over the country, with considerably lighter winds. Largely clear skies overnight allowed a fairly widespread frost to develop, as well as patchy fog in south-west England and Wales. However, most places in England and Wales, dawned dry and mainly sunny, however further north in Scotland and Northern Ireland skies were bright, rather than sunny, and with much more in the way of high cloud.</p> <p>Fog patches were locally slow to clear in the south, but most lifted by midday.</p> <p>During the afternoon, cloudier skies and strengthening south-easterly winds moved into south-west England, with outbreaks of light to moderate rain. These conditions moved north-eastwards during the evening, affecting Wales, Northern Ireland and western England, and later south-western Scotland.</p> <p>Further north and east, clearer skies allowed temperatures to fall to freezing in a few places during the evening, with isolated fog patches in East Anglia.</p> <p>Daytime temperatures in most places were around or just above the average for early February.</p>

SURFACE REPORTS

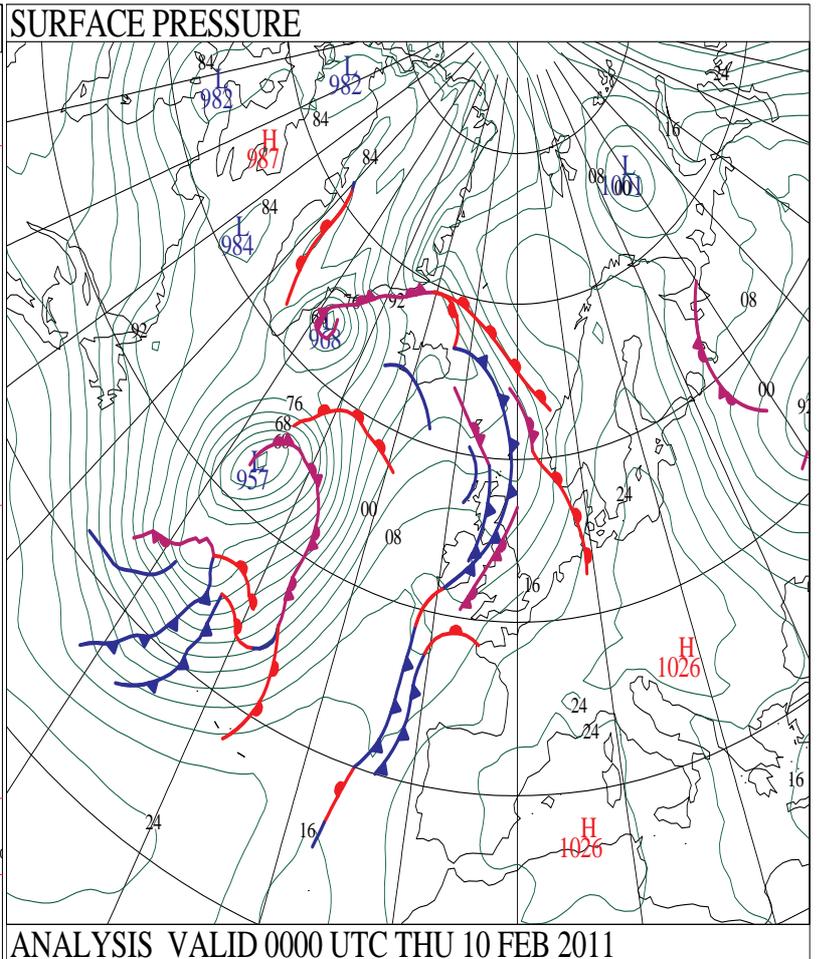

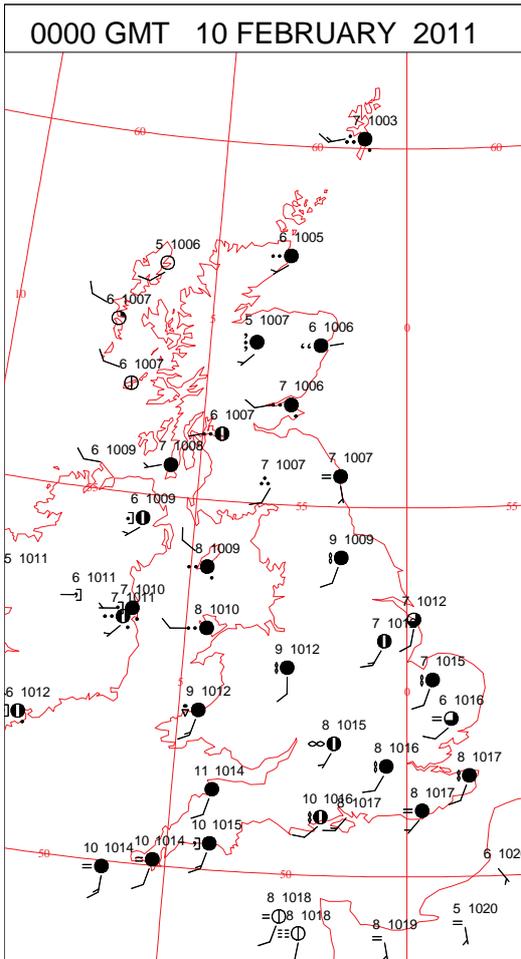

SIGNIFICANT WEATHER

0600 GMT 10 FEBRUARY 2011 SIG WEATHER	1200 GMT 10 FEBRUARY 2011 SIG WEATHER	<p>Summary of UK Weather for Thursday 10 February 2011. Cloud and spells of rain tracked eastwards across England and Wales overnight, with Scotland and Northern Ireland becoming mostly clear, dry and chilly with a frost. By dawn most of the rain was across the Midlands and southwards, which then became slow-moving with spells of heavy rain affecting southern and eastern England throughout the day. Meanwhile it was a bright, chilly and largely dry start further north with a fine and bright day thereafter. The rain started to clear south-west England and Wales during the afternoon, but only to be replaced by cloudy and misty conditions, especially around coastal areas. Most of the rain then eased across the Midlands during the evening, but it too remained cloudy and misty here. Clear skies further north led to an early frost into the evening, but Northern Ireland started to cloud over with the onset of the next Atlantic weather system. Temperatures were above average in the cloudy and rainy south, and close to the average in the clearer, fresher north.</p>

SIGNIFICANT WEATHER

0600 GMT 11 FEBRUARY 2011 SIG WEATHER	1200 GMT 11 FEBRUARY 2011 SIG WEATHER	<p>Summary of UK Weather for Friday 11 February 2011. Low cloud and mist affected much of England and Wales during the early hours, with rain and drizzle mainly affecting Northern Ireland, northern England and also the far south of England. This kept things mild here, whilst clearer skies across northern and eastern Scotland allowed for colder temperatures and a frost.</p> <p>During the morning, outbreaks of light rain moved north-eastwards across Scotland with a recovery in temperature.</p> <p>Elsewhere, it remained mostly cloudy with further rain or drizzle at times. It was also fairly misty with widespread hill fog. By afternoon, however, some bright or sunny spells developed across some central and southern areas, and here it became mild in the sunshine.</p> <p>Thereafter, further cloud and rain spread across most western areas by the evening. The rain also became heavier and more persistent across Scotland and northern England after dusk, with some snow over the Scottish hills.</p> <p>Temperatures were above average for most, especially in the bright spells towards the south, but close to average across Scotland with the colder start.</p>

SIGNIFICANT WEATHER

0600 GMT 12 FEBRUARY 2011 SIG WEATHER	1200 GMT 12 FEBRUARY 2011 SIG WEATHER	<p>Summary of UK Weather for Saturday 12 February 2011. Persistent rain edged across Scotland and northern and eastern England overnight, with clearer conditions and a few showers affecting the west. Persistent wet snow fell over high ground north of the central belt of Scotland. It was a bright and sunny start to the day in Wales, Devon and Cornwall and Northern Ireland; other parts of the U.K. were cloudier, with the rain continuing to move eastwards to clear all but the far eastern coast by midday. The clear and sunny conditions followed to most areas, though a few showers developed in the west and also spread eastwards. By the early evening, the next set of fronts was already bringing rain into Northern Ireland, with this also reaching western parts of the mainland by the end of the day. Maximum temperatures were mild to very mild across most of England and Wales, but closer to the average in Scotland and Northern Ireland.</p>

SIGNIFICANT WEATHER

0600 GMT 14 FEBRUARY 2011 SIG WEATHER	1200 GMT 14 FEBRUARY 2011 SIG WEATHER	<p>Summary of UK Weather for Monday 14 February 2011. Outbreaks of rain in eastern areas cleared away from eastern England during the night, but lingered in the north-east of Scotland. Most of central and southern England became dry, but further north and west there were some showers, some of which were heavy over Northern Ireland and southern Scotland, and also wintry on the higher ground. Temperatures fell close to freezing in places. Most of southern and eastern England had plenty of sunshine during the day, especially during the morning, and here there were only a few showers around later on, with most places remaining dry throughout. Further north and west though showers continued through the day, turning thundery with hail at times, and falling as sleet or snow in places in Scotland. The showers tended to ease through the evening, although some continued over northern Scotland and southern England. There were severe gale force south-easterly winds in Shetland, with gusts of 60 knots recorded at Sella Ness at 1400 UTC. The afternoon temperatures were generally fairly close to the February average.</p>

SIGNIFICANT WEATHER

0600 GMT 15 FEBRUARY 2011 SIG WEATHER	1200 GMT 15 FEBRUARY 2011 SIG WEATHER	<p>Summary of UK Weather for Tuesday 15 February 2011. It was a largely dry start across much of the U.K., with temperatures locally below freezing in parts of northern England and Scotland, with some icy stretches in these parts also. However rain, heavy at times, slowly encroached into south-west England through the morning. As the day progressed this rain spread across the country, eventually reaching Scotland by the end of the day, where it also turned to snow over the higher ground. This rain was quickly followed by a mix of sunshine and fairly frequent fast-moving showers, some of which were also heavy at times. Winds were fairly brisk across much of the U.K., but particularly across parts of the far north, locally reaching close to gale force. The highest temperatures during the day were generally recorded across western and southern parts of the U.K.</p>

0600 GMT 16 FEBRUARY 2011 SIG WEATHER	1200 GMT 16 FEBRUARY 2011 SIG WEATHER	<p>Summary of UK Weather for Wednesday 16 February 2011. Much of the south of the U.K. was dry overnight, with a little frost felt in places, particularly around the Welsh Marches at dawn. Further north, a band of rain and hill snow that had affected the south on the previous day, continued its progression north-eastwards across northern England and Scotland. From dawn, a band of heavy rain and brisk south-easterly winds moved into the south-west of the U.K. This eased and moved northwards into Wales as the day progressed. The rain over the north-east of the country slowed, and became confined to eastern Scotland during the afternoon, largely easing, with just occasional light outbreaks by dusk. Aside from a little early mist in south-eastern England, much of the rest of the country saw a dry day with variable cloud in a light south-easterly breeze. Temperatures were generally a little above average in all but the north-east, where they were cold for mid February.</p>

SIGNIFICANT WEATHER

0600 GMT 17 FEBRUARY 2011 SIG WEATHER	1200 GMT 17 FEBRUARY 2011 SIG WEATHER	<p>Summary of UK Weather for Thursday 17 February 2011. There were spells of rain in some western parts before dawn, with most other parts of the U.K. staying dry. A slight frost was felt in some northern parts, and with widespread areas of fog forming across the central belt of Scotland and much of eastern England, particularly the south-east. During the morning, rain in the west steadily moved northwards, into areas around the Irish Sea, and later south-western Scotland, as fog in the east slowly stirred and lifted to low cloud. During the afternoon, much of the U.K. saw some sunny spells, with a light south-easterly breeze picking up. Large areas of central and eastern England retained some low cloud and mist, with fog persisting in parts of the Fens. Most parts remained dry, although cloud thickened again through the evening, with the rain around the Irish Sea continuing to spread north-eastwards across Scotland. It was a mild day for most, although lingering fog in the central belt of Scotland suppressed temperatures here to low single figures Celsius, in what was a significantly colder day.</p>

SIGNIFICANT WEATHER

0600 GMT 18 FEBRUARY 2011 SIG WEATHER	1200 GMT 18 FEBRUARY 2011 SIG WEATHER	<p>Summary of UK Weather for Friday 18 February 2011. Much of the U.K. was dry but cloudy overnight, although Scotland saw the odd clearer interval with local frost, as well as a few outbreaks of showery rain. With this wetter weather moving away to the north-east towards dawn, most areas had a grey and murky morning, with a blanket of low cloud covering the vast majority of the country.</p> <p>In spite of the cloud-cover, it was generally dry, although a few areas saw a little light rain and drizzle at times.</p> <p>The best cloud breaks and brighter spells came in northern Scotland, with the majority of the country seeing little improvement, as the overcast skies and mist remained into the afternoon.</p> <p>As the day progressed, a brisk south-easterly wind developed ahead of a band of persistent rain moving into the western reaches of the U.K., reaching the far south-west of England and the west of Northern Ireland before nightfall.</p> <p>Temperatures were largely unchanged under the cloud all day, being mild in the south and west but nearer average in the north and east.</p> <p>After dusk, the east continued cloudy, with rain spreading across the west.</p>

SIGNIFICANT WEATHER

0600 GMT 19 FEBRUARY 2011 SIG WEATHER	1200 GMT 19 FEBRUARY 2011 SIG WEATHER	<p>Summary of UK Weather for Saturday 19 February 2011. It was a wet night for many, with persistent and often heavy rain spreading steadily eastwards across the country during the early morning, with a brisk south-easterly wind accompanying the rain. Significant rainfall was felt for a time in parts of Northern Ireland, Wales and south-western England, before moving north during the small hours. As it did so, this began to fall as snow over hillier parts of northern England, as well as parts of Scotland. The rain and snow eased during the early afternoon with most areas becoming dry, but it did linger on the east coast well into the evening. After the rain and snow, most areas had another grey and cloudy day, with misty conditions persisting in many parts throughout. The south-west of England and south Wales were generally brighter, with some good spells of sunshine, and the odd light shower in the afternoon. Temperatures were a little above average in the south and west, with the north and east again seeing a rather chilly day, particularly where the snow had settled in upland parts of the north.</p>

SIGNIFICANT WEATHER

0600 GMT 20 FEBRUARY 2011 SIG WEATHER	1200 GMT 20 FEBRUARY 2011 SIG WEATHER	<p>Summary of UK Weather for Sunday 20 February 2011. The south of the U.K. had a cloudy and misty morning with low cloud and poor visibility almost everywhere, and a chill easterly wind. By contrast many parts of Scotland had brighter weather with less cloud (which had allowed a frost to form in some sheltered areas). More northern east coasts of both Scotland and England, exposed to the damp, cloudy airstream off the North Sea, saw occasional drizzle. Through the day many parts of the far west of England and Wales gradually improved with periods of brightness, but although the low cloud often cleared, a veil of cirrus cloud above made the sunshine rather hazy. However, later in the afternoon, a band of rain moved into Cornwall. During the evening this crept further west into Devon, south Wales, and across Northern Ireland. Temperatures were average across the south, but a little below in the north and east.</p>

SIGNIFICANT WEATHER

0600 GMT 22 FEBRUARY 2011 SIG WEATHER	1200 GMT 22 FEBRUARY 2011 SIG WEATHER	<p>Summary of UK Weather for Tuesday 22 February 2011. It was another fairly dull day with low cloud, mist and fog affecting most parts of the U.K. early in the morning. It remained cloudy through the day in many parts, with patches of mist persisting in places, particularly in the south-east of England. However, the far north-east of Scotland enjoyed some long spells of sunshine well into the afternoon. Light showers affected some eastern areas in the morning, which fell as light snow in parts of East Anglia. Rain showers pushed east across Northern Ireland and central Scotland during the afternoon, with light drizzle affecting parts of England and Wales. More persistent rain affected the far south-west of England through much of the day, moving slowly east across Northern Ireland and into the far west of the U.K. during the evening. Daytime temperatures were around average or mild in western areas, although were cold in some eastern parts of the U.K. The warmest parts of the country were across south-west England.</p>

SIGNIFICANT WEATHER

0600 GMT 24 FEBRUARY 2011 SIG WEATHER	1200 GMT 24 FEBRUARY 2011 SIG WEATHER	<p>Summary of UK Weather for Thursday 24 February 2011. Overnight, persistent rain affected north-western parts of Scotland, where it turned persistent and heavy at times, with outbreaks also affecting Cumbria. Later in the night, this spread to eastern Scotland and north-eastern England, as a weather front pushed across northern areas. The south remained mainly dry. Through the day light rain cleared from eastern areas, and most of the country experienced plenty of sunshine. It was rather more misty over exposed western coasts with some low cloud and occasional light drizzle at times. Into the evening, thick cloud started to move gradually further east. Winds were generally light, although were stronger in northern areas. It was a very mild day for the time of year in most parts, with the highest temperatures so far this year in the south of England, and also around the Moray Firth.</p>

DAILY CLIMATE DATA

DAILY WEATHER SUMMARY

SIGNIFICANT WEATHER

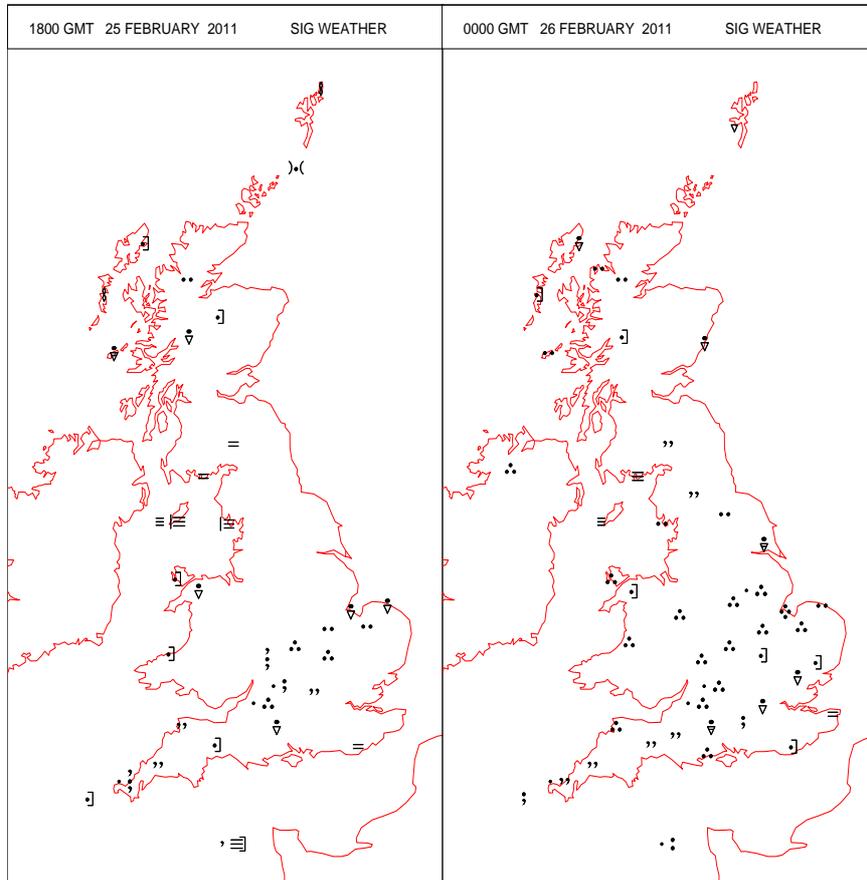

Summary of UK Weather for Friday 25 February 2011.

Overnight a weather front moved from the north-west bringing persistent rain into Scotland and Northern Ireland. Ahead of this it was a mainly dry night across England and Wales, with low cloud in places, although some places stayed largely clear.

As the front moved south-east through the day it weakened, with rain dissipating for a time, before it re-intensified during the afternoon. A new wave of persistent rain developed over southern Wales and south-west England, introducing more widespread rain to central England and Wales into the evening period.

Heavy, thundery showers affected western Scotland throughout the day, with blustery south-westerly winds across much of the north. It remained cloudy with some drizzle in northern England.

Temperatures were generally mild, although in western areas temperatures were generally closer to the average. Sunny spells in the south-east allowed temperatures to become very mild in places, with the highest temperatures this year recorded for the second consecutive day.

EXTREMES

Highest Maximum:

15.3 Shoeburyness, Essex

Lowest Maximum:

8.3 St Bees Head No 2, Cumbria

Lowest Minimum:

2.7 South Farnborough, Hampshire

Lowest Grass Minimum:

-0.8 Leuchars, Fife

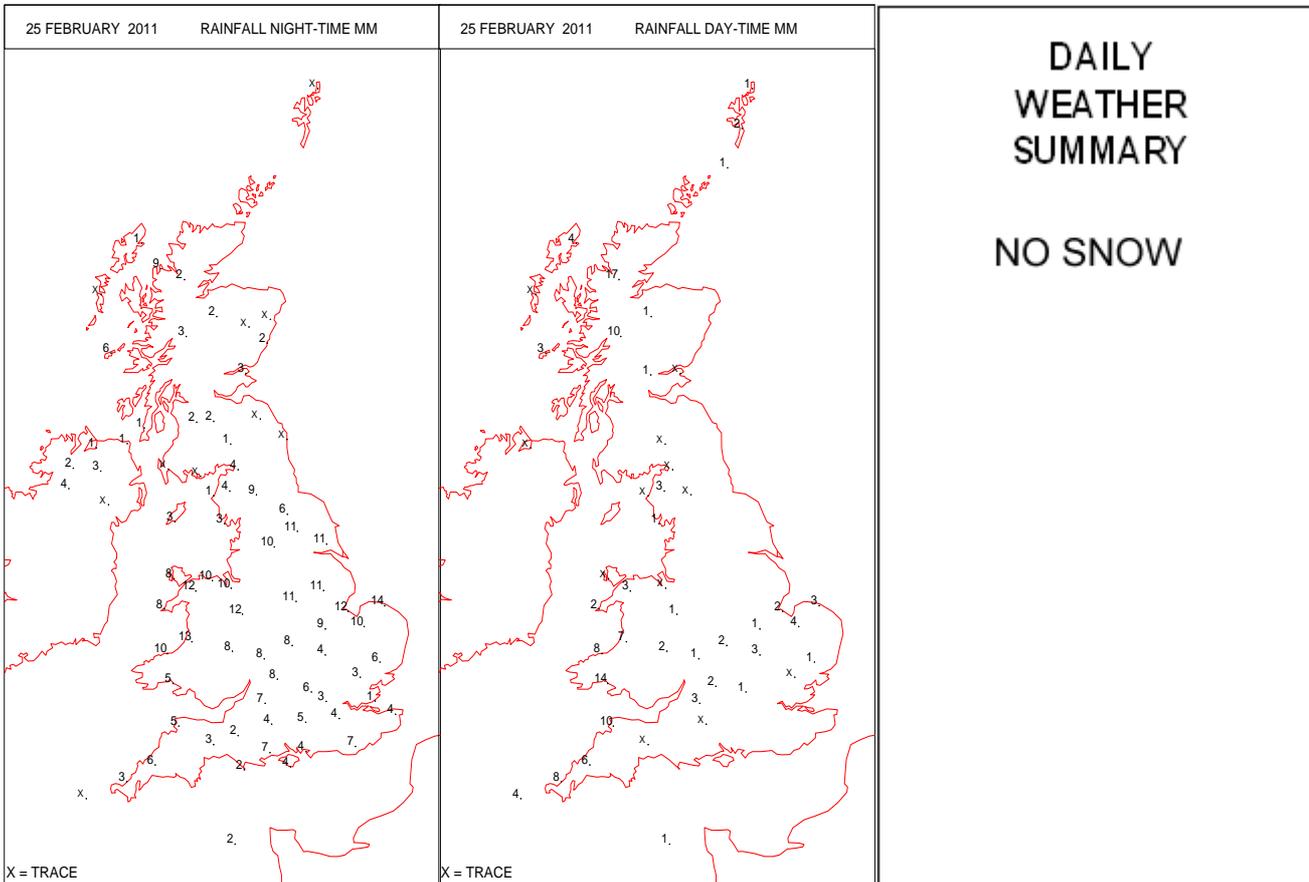

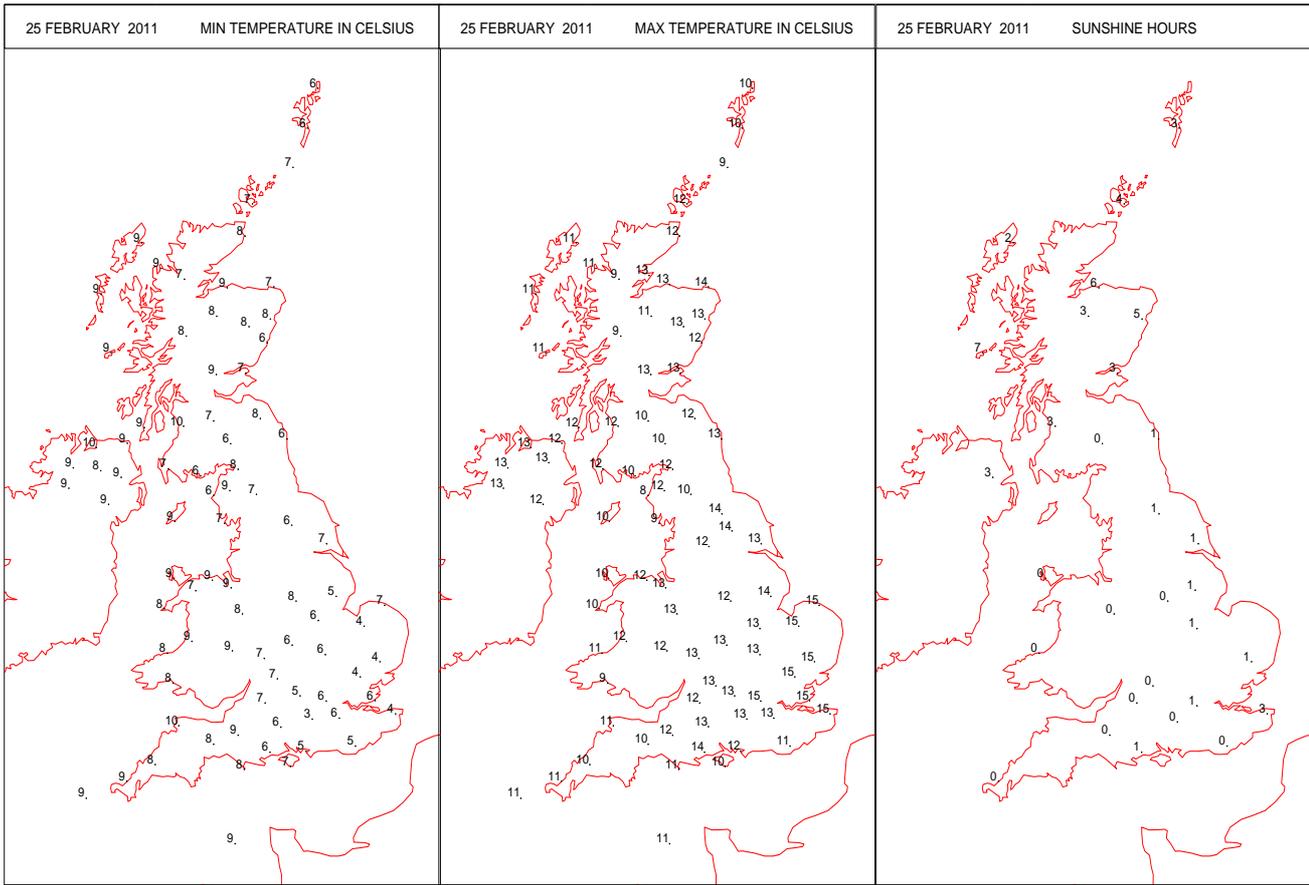

Most Rain:

19.8 Trawsgoed, Dyfed

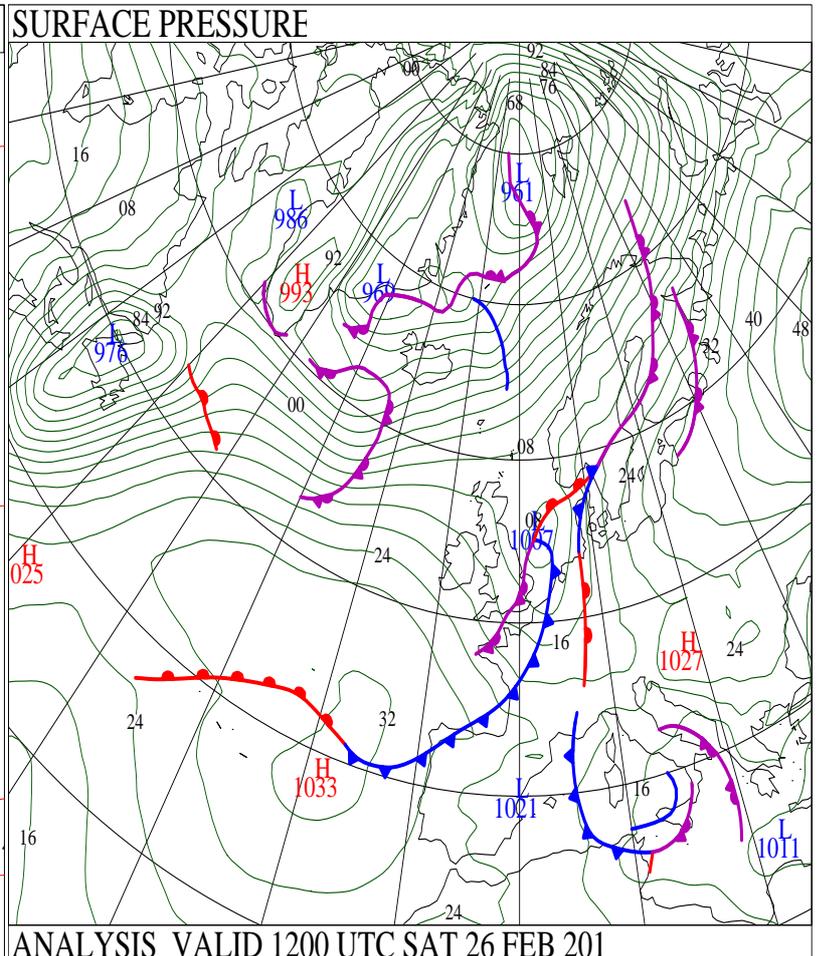

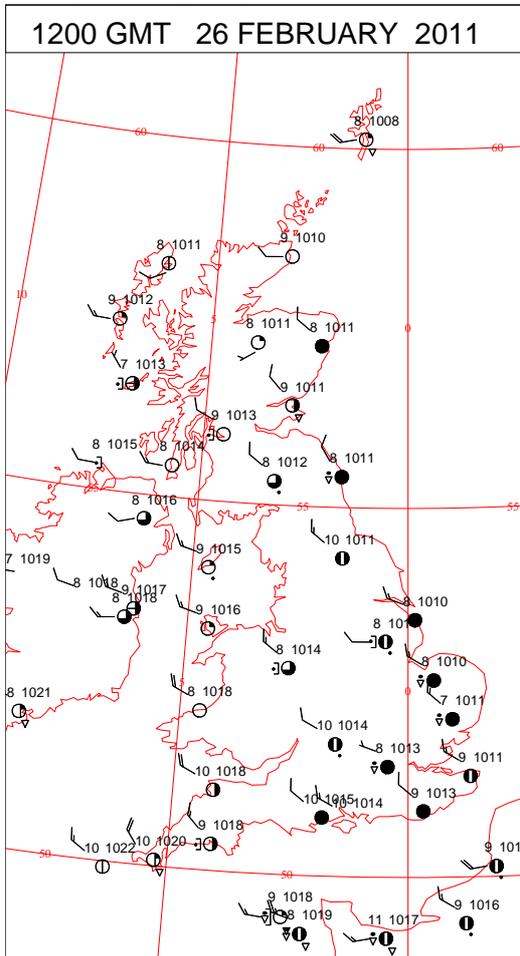

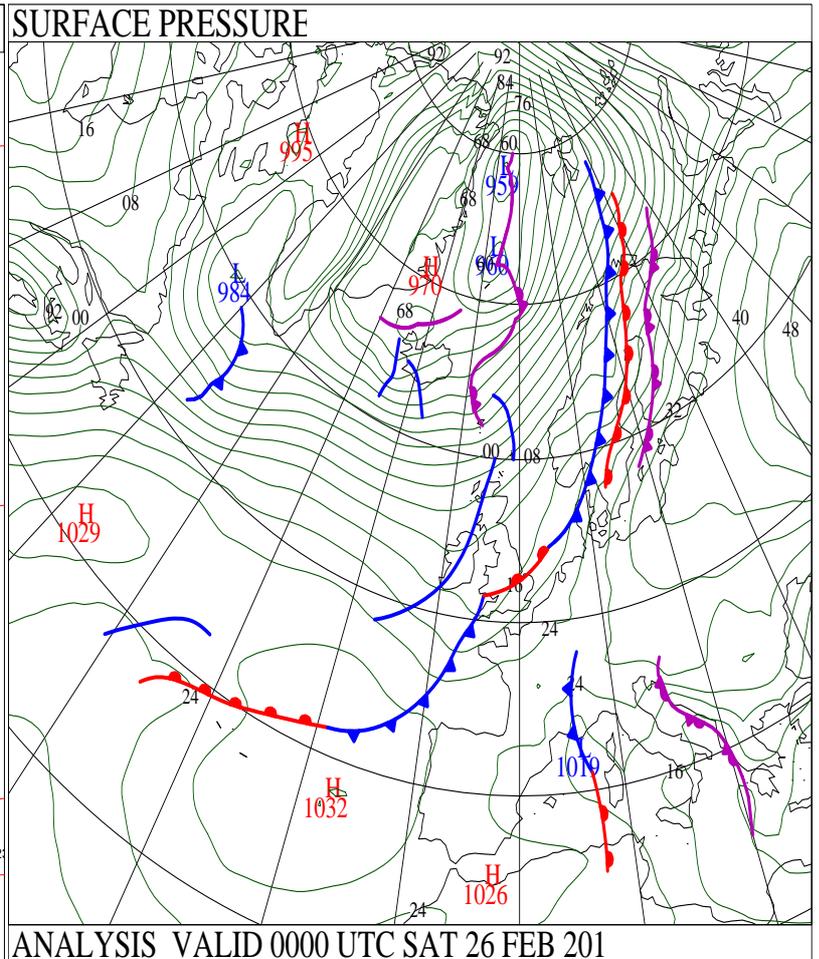

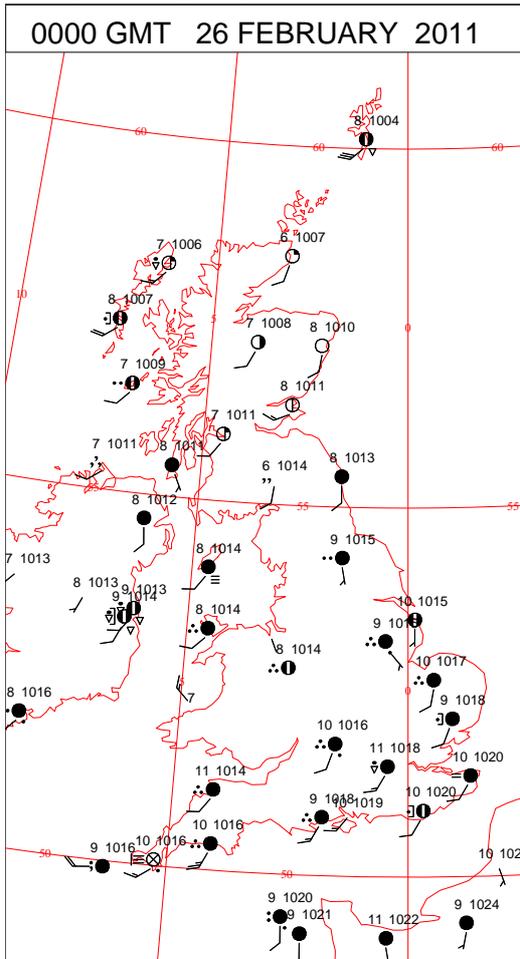

Most Sun:

6.8 Tiree, Argyll

SIGNIFICANT WEATHER

0600 GMT 26 FEBRUARY 2011 SIG WEATHER	1200 GMT 26 FEBRUARY 2011 SIG WEATHER	<p>Summary of UK Weather for Saturday 26 February 2011. An active weather system ran eastwards across England and Wales overnight, which brought occasionally heavy spells of rain and drizzle. Meanwhile rather showery conditions were experienced over Scotland and Northern Ireland.</p> <p>The persistent rain continued its progress eastwards during the day, with an increasingly strong and fresh north-westerly wind developing behind it, along with sunshine and scattered heavy showers. The showers were locally thundery in the south of England for a time during the morning.</p> <p>During the afternoon the rain was slow to clear eastern England, but further north and west the showers became more isolated and lighter, with more in the way of sunshine to end the day.</p> <p>Most of the showers across the U.K. died out after dusk, with the persistent rain in the east also managing to clear away, leaving a dry and settled evening period for most.</p> <p>The weather system marked a change from the relatively mild conditions experienced over the past few days, to cooler, fresher air, with temperatures returning to near-average across the U.K. by the end of the day.</p>

SIGNIFICANT WEATHER

0600 GMT 27 FEBRUARY 2011 SIG WEATHER	1200 GMT 27 FEBRUARY 2011 SIG WEATHER	<p>Summary of UK Weather for Sunday 27 February 2011. It was a chilly start across some southern and eastern parts of England, and also the north-east of Scotland, with a local air frost, but a bright and dry start with some sunshine. A band of showery rain in the west quickly spread across northern and western England and Wales during the morning, with brighter conditions following behind. Only isolated showers occurred for much of the day across Northern Ireland and western Scotland, with most parts here staying dry with a good deal of sunshine, but cool in a fresh north-westerly breeze. Showery rain made it to the Midlands and southern England into the afternoon, with reports of small hail quite widely in the heavier showers. A stiff north-westerly breeze developed across Wales and the south-west. The showers eased into the evening period, with most places becoming dry and clear, but it became more cloudy and cooler in East Anglia towards midnight, with some drizzly rain coming off the North Sea. Daytime temperatures were mostly close to the average for the time of year.</p>

SURFACE REPORTS

SIGNIFICANT WEATHER

0600 GMT 28 FEBRUARY 2011 SIG WEATHER	1200 GMT 28 FEBRUARY 2011 SIG WEATHER	<p>Summary of UK Weather for Monday 28 February 2011. It was a day of contrast for the U.K., with cloudy, dull and cold conditions across much of England and Wales, but bright and sunny weather across Scotland and Northern Ireland. In the south, only western Wales and the far south-west of England escaped the cloud spreading off the North Sea. Where the cloud was thicker across central and southern England there were some showers or outbreaks of light rain, and these spread further west at times, before becoming much more sporadic in the evening. High cloud also began to move over north-western parts during the afternoon, spreading to most of Northern Ireland, the Western Isles and parts of west Highland and Argyll by nightfall, and bringing some intermittent light rain to these areas. Maximum temperatures displayed a similar contrast; while much of Scotland and Northern Ireland was mild, the majority of England and Wales was rather cold or cold, with only some sites in the far west reaching average temperatures for late February.</p>
