TUESDAY  
1 JULY 1986SUMMARY  
OF  
BRITISH WEATHER

Virtually all districts were dry, and after a rather cloudy start in some areas there was a good deal of sunshine in most places throughout the day.

It became generally warm or very warm. However, patches of sea mist and low cloud kept a few coastal areas cooler - chiefly in the southwest, but also in the area between the Humber and the Wash. Parts of southeast England and central Scotland had a hot day.

WEDNESDAY  
2 JULY 1986

SUMMARY  
OF  
BRITISH WEATHER

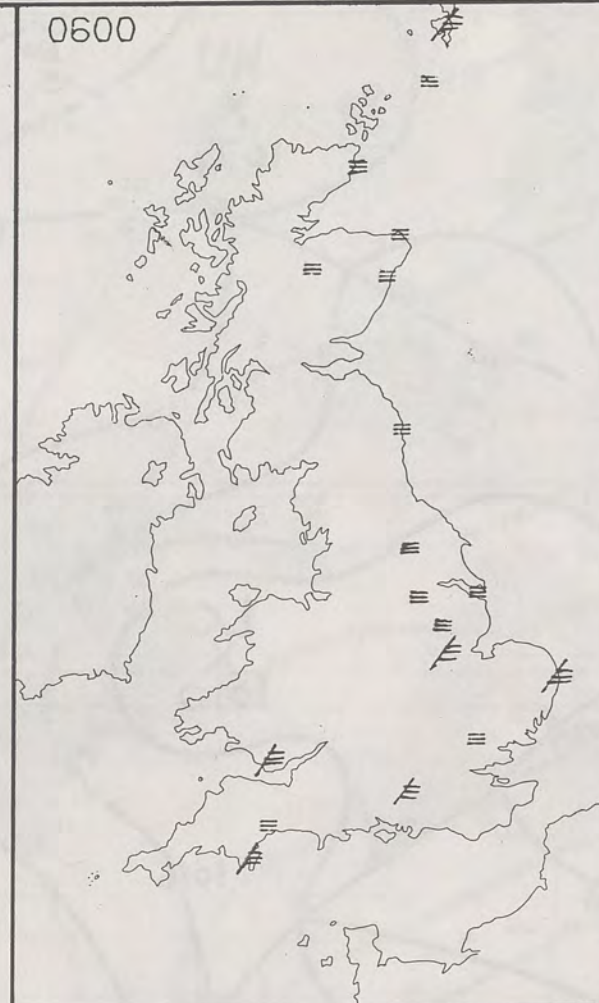

Most regions had a fine clear night but a few mist patches formed in central and eastern parts; in Northern Ireland, southwest Scotland and the extreme southwest of England there were isolated pockets of rain or drizzle.

During the day the mainly dry weather continued and most central and eastern parts of Britain had a very warm day with a good deal of sunshine. High cloud made the sun hazy at times, and some northeastern coastal regions were cool and misty. In Northern Ireland and the more western counties of Britain it was rather cloudy, some very isolated showers occurred but most places had a dry, quite warm day with some sunny intervals.

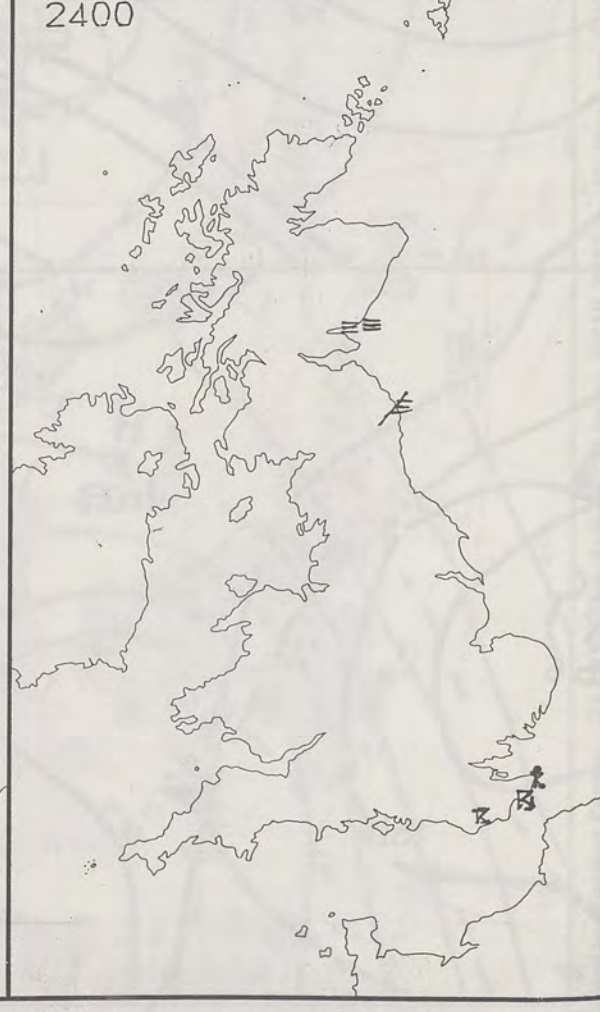

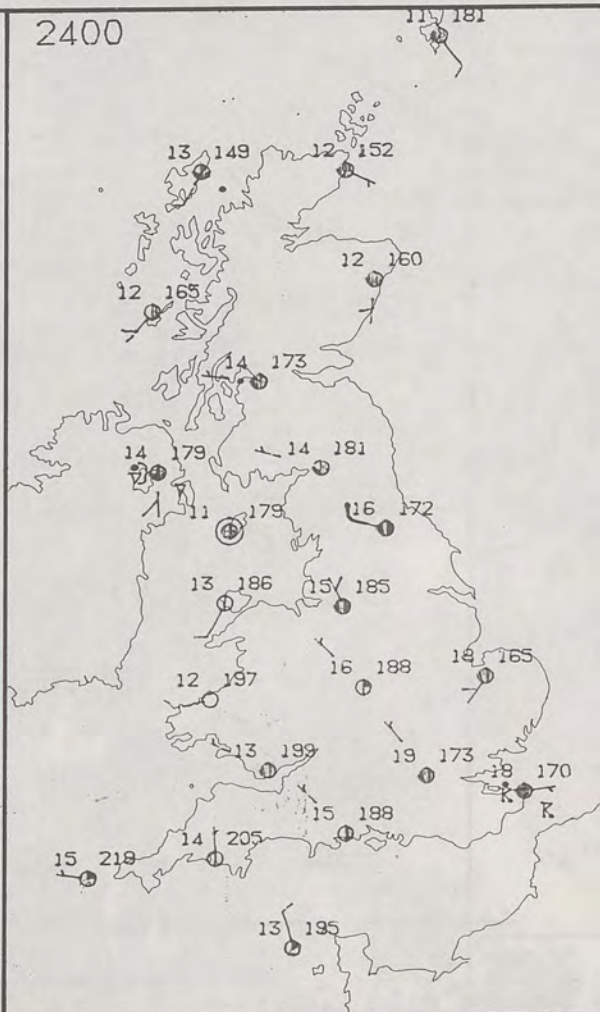

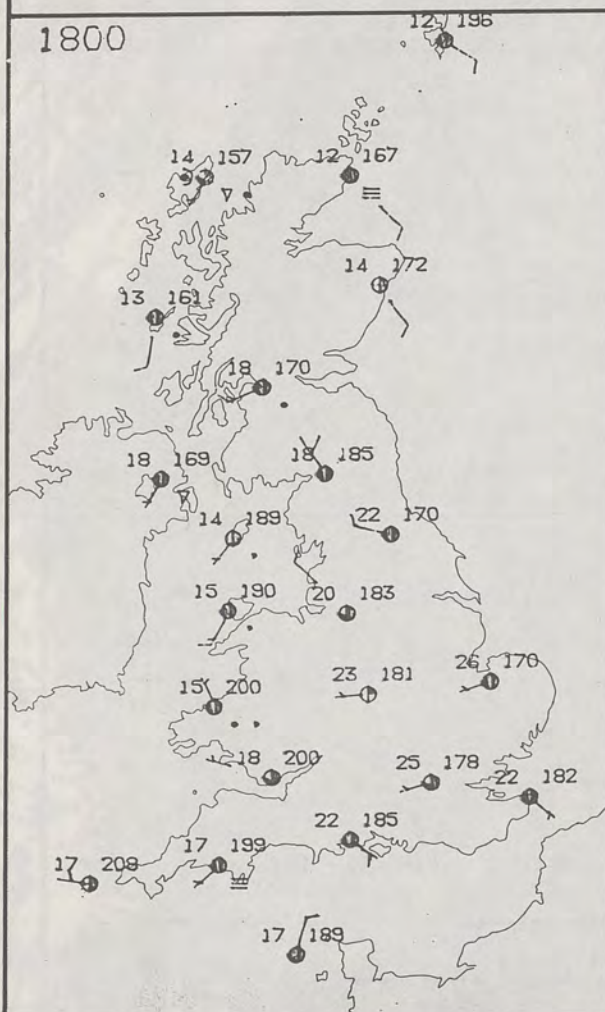

After dusk several thunderstorms moved northeast from France and crossed parts of east Sussex and Kent, where some brief heavy showers fell.

THURSDAY  
3 JULY 1986SUMMARY  
OF  
BRITISH WEATHER

In southeast England and East Anglia there were several thunderstorms in the early hours of Thursday with some locally heavy bursts of rain, but the storms cleared away by dawn or soon after and over the rest of England and Wales it was a fine night.

The day was dry with a good deal of sunshine in most places in England and Wales and it was warm or very warm in many central and eastern parts. In some western coastal areas it turned cloudy later and there were patches of drizzle in the extreme southwest of England and Wales; temperatures were near or below normal in these western parts.

In Scotland and Northern Ireland it was mostly rather cloudy with patches of light rain in places but much of the day was dry and there were some sunny intervals, especially in southern and eastern Scotland; temperatures were generally near normal.

FRIDAY  
4 JULY 1986

SUMMARY  
OF  
BRITISH WEATHER

Scotland and Northern Ireland had a spell of rain early in the night, followed by clearer weather and a few showers. Northern England and North Wales had some rain too, but for the rest of England and Wales the night was dry and clear.

During daytime there was a good deal of cloud over much of the country, though parts of southeast England had sunshine until well into the afternoon. The occasional rain over northern England and Wales made slow progress southwards during the day, reaching the extreme southeast of England and the Channel Isles by evening. Brighter drier weather followed into northern England later on.

Over Scotland and Northern Ireland there were some more showers. Skies brightened up from time to time with the best of the sunshine to be found in eastern Scotland.

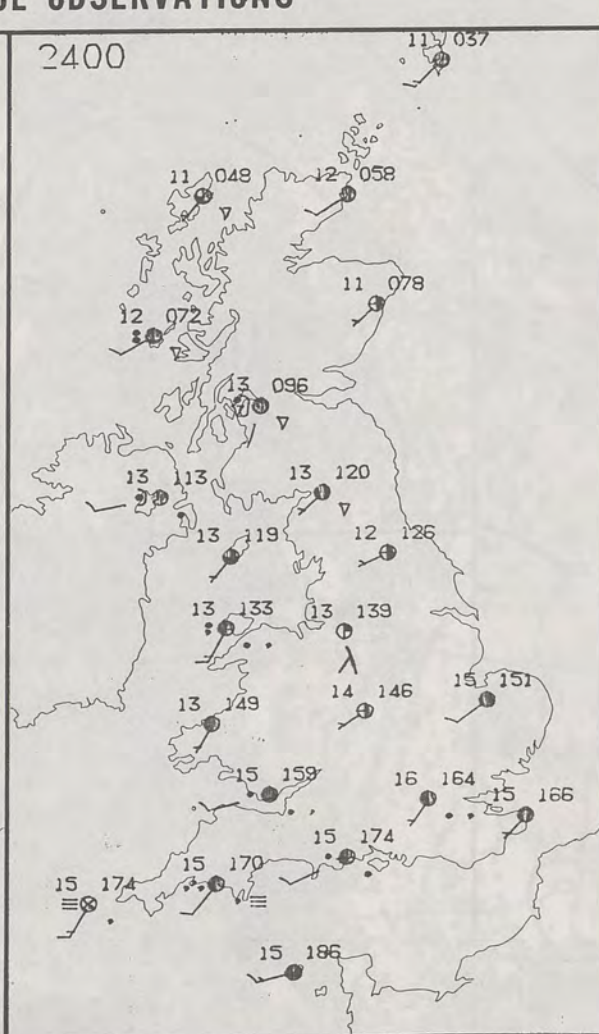

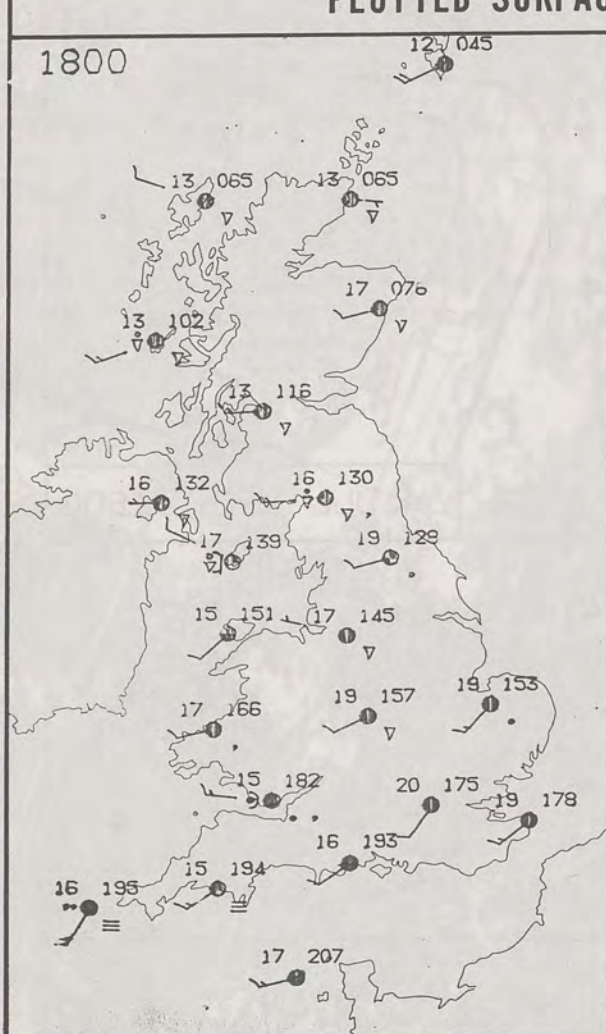

Temperatures were near average over much of Scotland and Northern Ireland, with one or two places in eastern Scotland on the warm side. Over England and Wales the story was much the same with parts of southern and eastern England having a warm day, the exceptions being found over much of Devon, Cornwall and southwest Wales, where dull misty weather made it rather cool.

SATURDAY  
5 JULY 1986

SUMMARY  
OF  
BRITISH WEATHER

Southwest England and parts of South Wales had a wet night and later the rain spread across the rest of southern England, East Anglia and the South Midlands; some of it heavy at times. Over the rest of England and Wales the night was generally dry and clear. Scotland and Northern Ireland had clear spells and some showery rain.

During the day northern England and North Wales had a lot of dry bright weather with just one or two light showers. Over the rest of England and Wales the early rain eased off during the morning turning more showery with time; but towards evening, much of southern England and East Anglia had some more heavy rain, with thunder reported in parts of East Anglia.

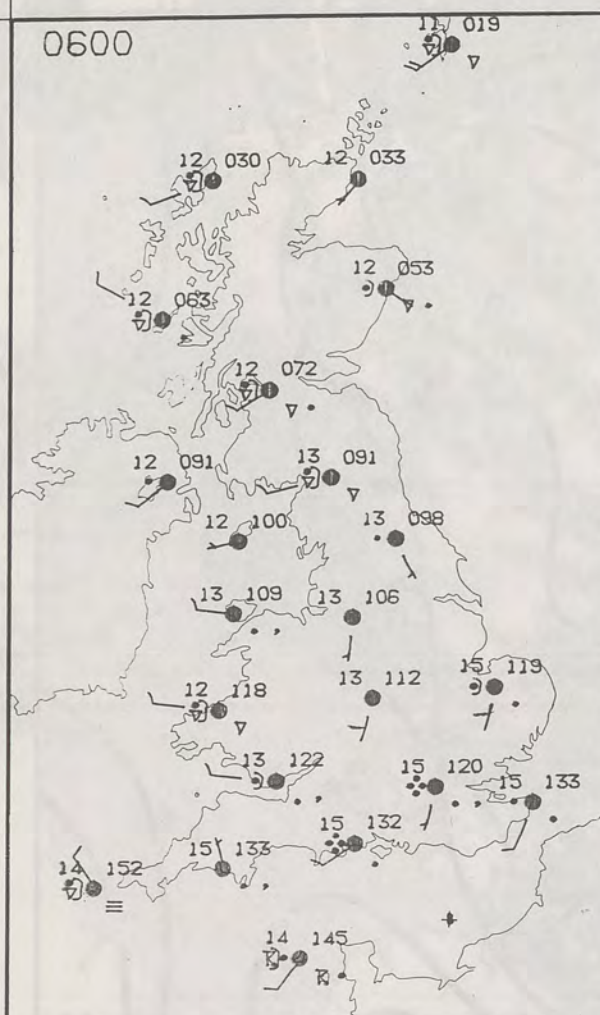

Scotland and Northern Ireland stayed showery with some bright spells - the best of the sunshine to be found in east and southeast Scotland.

Temperatures were near normal in Scotland and Northern Ireland but across much of England and Wales it was a rather cool day.

SUNDAY  
6 JULY 1986

SUMMARY  
OF  
BRITISH WEATHER

Much of Britain had a dry night but in the west and north of Scotland there were showers. Parts of Northern Ireland had a little rain but in southern England, the South Midlands and the Channel Islands it was wet for a while, with quite a lot of heavy rain in the Channel Islands.

During the day most places in England and Wales were dry with some sunshine but the weather clouded over and there were a few showers here and there. In southeast England in the late evening there were some thunderstorms.

Northern Ireland had a cloudy day with showers and in Scotland there was a lot of cloud too, although most places had some sunshine, with parts of southeastern Scotland fairly sunny and dry but much of Scotland had showers.

Temperatures were close to or a little below normal.

### SUMMARY OF BRITISH WEATHER

Most places were dry overnight, but there were showers most of them in northern and western Scotland. In parts of northern Britain it was a cold night.

During the day there was some sunshine everywhere with parts of eastern and northern England and eastern Scotland having a dry, fairly sunny day. In northern and western Scotland there were quite a few showers and over England too there were some showers especially in the Midlands and southern England.

Northern Ireland and Wales had a dry morning and afternoon with some sunshine but the weather clouded over and in the evening there was some rain in Northern Ireland.

Over much of Britain temperatures were near or rather below normal.

TUESDAY  
8 JULY 1986SUMMARY  
OF  
BRITISH WEATHER

Mostly cloudy weather with patchy rain spread across the country overnight, although central Scotland had a clear, cold night.

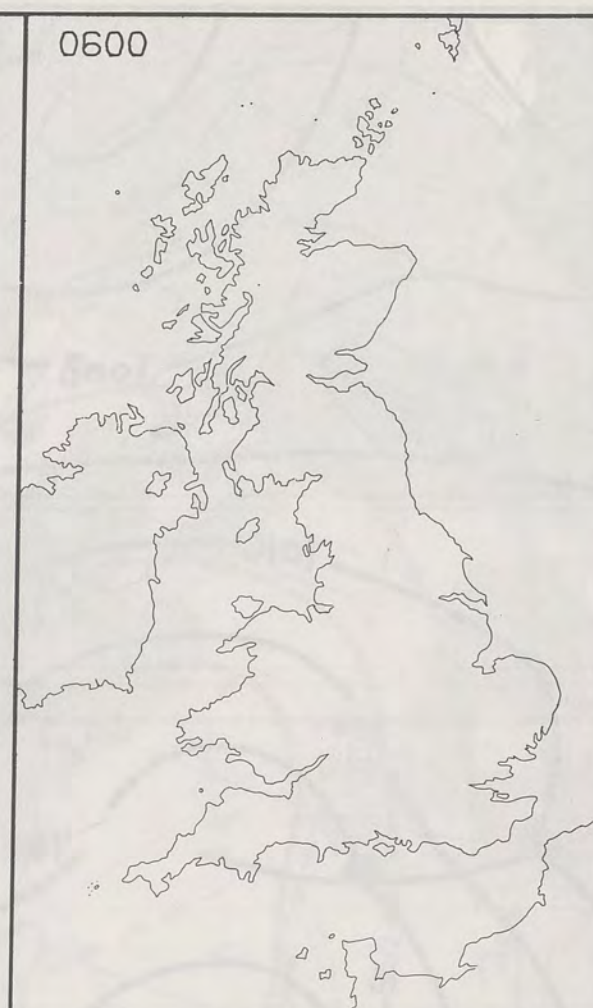

During the morning the cloud became more broken generally, with sunny spells developing; the best of the sunshine was over Scotland. There were still some showers, however, and during the afternoon quite a few heavy showers and scattered thunderstorms developed over central, eastern and southern England. Some very heavy downpours occurred locally, and flooding was reported in the Maidstone area of Kent. Most places became fine during the evening.

It was rather cool in the north, but temperatures were near normal in the south.

WEDNESDAY  
9 JULY 1986SUMMARY  
OF  
BRITISH WEATHER

There was some thick fog in East Anglia at first, but most places had a clear, chilly night. Cloudy weather spread across Northern Ireland and western Scotland by morning, with a little rain in places.

During the day this cloud spread on steadily southeastwards, with some mostly light rain, chiefly in the west and north. However, much of southern and particularly southwest England had sunshine for most of the day, and most other eastern and southern districts were bright for some time.

Many places were rather cool or cool, though temperatures reached the seasonal normal in the sunny south.

# THURSDAY 10 JULY 1986

## SUMMARY OF BRITISH WEATHER

Northern Ireland had a little rain early in the night, followed by clear weather. Over Scotland it was largely dry too with a few showers, most of them in northeast Scotland.

England and Wales had a lot of cloud overnight, with rain and drizzle here and there.

During the daytime Northern Ireland, Wales, southwest England and the Channel Islands stayed generally cloudy with some light rain in places. Over the rest of England early cloud gave way to bright or sunny spells, but later skies clouded over again with many places having a little rain by evening. Southwest Scotland had a good deal of cloud throughout the day, but for the rest of Scotland a fair amount of bright sunshine, with some showers; most of them in the Northern Isles and the far northeast.

Temperatures were near normal over central, southern and eastern England but for the rest of Britain it was a rather cool day - especially near western coasts.

FRIDAY  
11 JULY 1986

SUMMARY  
OF  
BRITISH WEATHER

Much of southern England, parts of East Anglia, the South Midlands, Wales and Northern Ireland had a spell of rain overnight. The North Midlands, northern England and Scotland stayed mostly dry and clear, though there were one or two light showers around the Scottish Islands.

Through the day the Channel Islands, southwest and central southern England, Wales and Northern Ireland kept a lot of cloud, with some light rain here and there.

Elsewhere over Britain it stayed dry with a good deal of bright or sunny weather.

Temperatures were near or a little below average over much of England, Wales and Northern Ireland; but in West Wales, southwest England, the Channel Islands and near North Sea coasts, it was a rather cool day.

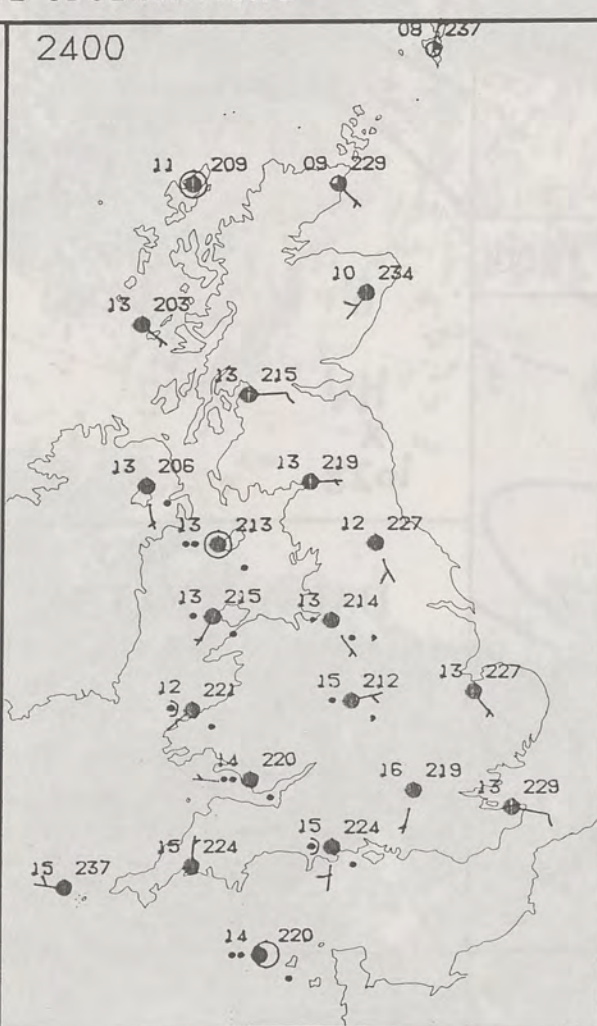

Eastern and northern Scotland had a cool day, whilst elsewhere over Scotland temperatures were near or a little below average.

SATURDAY  
12 JULY 1986

SUMMARY  
OF  
BRITISH WEATHER

There were outbreaks of rain over southern and central England, Wales and Northern Ireland overnight, with fog on high ground. The heaviest area of rain affected central and south London; it appears to have developed initially over southwest London around 2000 on Friday, and then drifted slowly northeast and expanded in area during the night. There was very little rain not far to the west and south of London. Most of Scotland and the northernmost counties of England had a dry night.

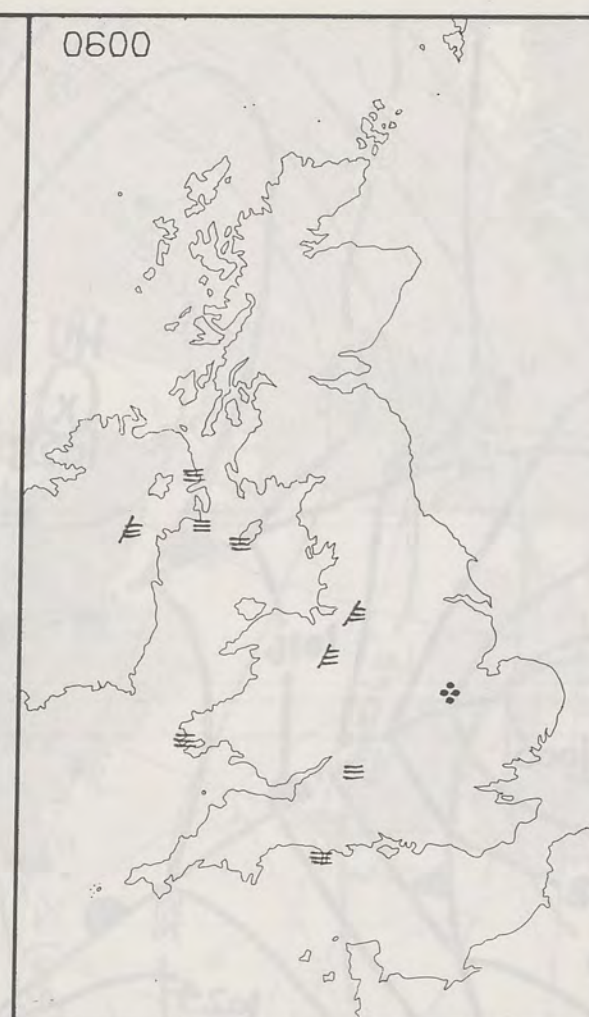

Much of eastern England had a cool, dull day with occasional rain and drizzle. Elsewhere, there was mostly a lot of cloud and it was generally rather cool.

There were some brighter areas where, locally, temperatures reached or even slightly exceeded the normal, as in Northern Ireland and parts of Scotland. There was prolonged sunshine in extreme northeast Scotland and the Northern Isles, while extreme southeast England had some sunny periods. Many places had a dry day, but there were a few showery outbreaks, with heavy showers in the London area in the evening.

PLOTTED SURFACE OBSERVATIONS

SUNDAY  
13 JULY 1986

SUMMARY  
OF  
BRITISH WEATHER

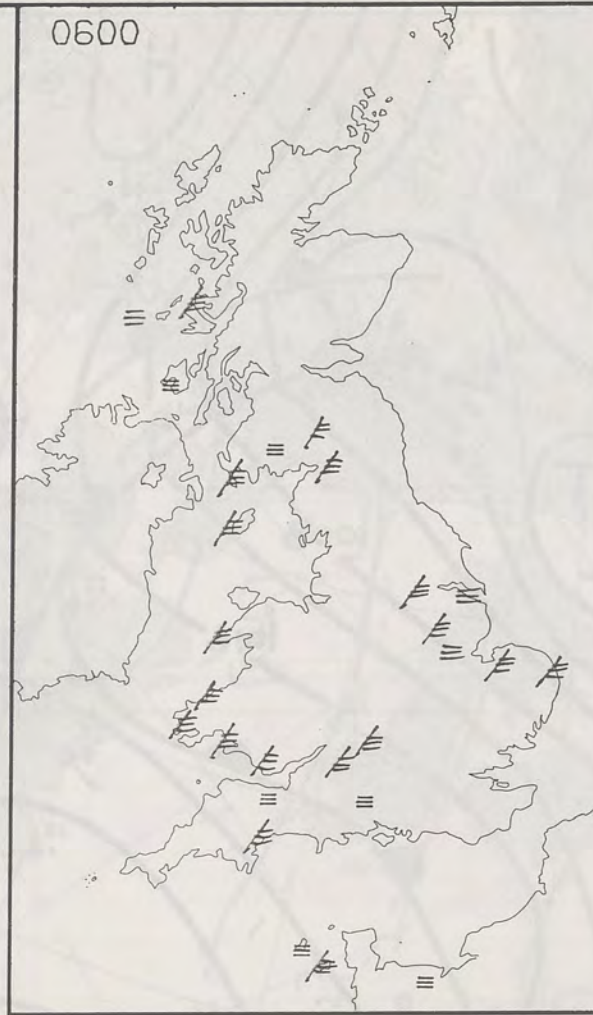

Many places were cloudy and misty at first, with some thicker fog patches and drizzle locally, especially in east and southeast England, whilst some rain also spread across parts of northwest Britain and Northern Ireland.

There was a lot of cloud across most of the country during the day. Many places stayed dry, but there were patches of light rain or drizzle, with a few heavier bursts of rain in the west and northwest. Brighter intervals also developed, and near parts of the south coast and in Shetland it was quite sunny.

Temperatures were mostly well up to normal, and parts of southern England and eastern areas of Scotland became warm.

MONDAY  
14 JULY 1986

SUMMARY  
OF  
BRITISH WEATHER

A band of patchy rain crossed western England and Wales overnight. Amounts were mostly small, but local short heavier bursts were reported, especially in the south. During the morning, this rain or drizzle petered out as it went eastwards, then the extensive cloud broke up during the day, to give sunshine in many areas especially in the northeast. During the evening, scattered showers developed in the South Midlands and central southern England, some quite heavy.

Over western and northern Scotland, and much of Northern Ireland, there were some overnight bursts of rain or drizzle, amounts mostly small. During the day, many exposed northern and western areas remained dull, with further light drizzle, but good breaks in the cloud occurred in eastern and southern Scotland. Further quite heavy rain fell in western Scotland during the evening though.

Many western coasts and hills were dull and misty throughout.

Apart from misty dull coastal areas which were rather cool, the remainder of the country had a mostly very warm or hot day, with high humidity.

## PLOTTED SURFACE OBSERVATIONS

1800

2400

TUESDAY  
15 JULY 1986SUMMARY  
OF  
BRITISH WEATHER

Northern Scotland had some light rain at first overnight, but the day was dry and bright, with a little sunshine.

Southern Scotland and Northern Ireland had a damp night, with rain, the rain lasting well into the morning. The weather dried up through the afternoon though, with some bright intervals, before more cloud and rain came along late afternoon and during the evening.

Northern England became cloudy, but remained dry overnight. A lot of cloud was left over during the morning, particularly in the northwest, where some coastal drizzle and fog occurred and a spell of more definite rain affected the Border regions during the morning. In sheltered eastern districts though there was some sunshine. The evening was cloudy, but dry.

Remaining central and southern parts of England, and most of Wales had another mainly sunny day, once any patchy fog cleared. Western coasts and hills remained dull and misty - during the afternoon and evening, well scattered showers developed over parts of eastern England, mostly dying out by midnight.

Temperatures were well above normal in Scotland and Northern Ireland, while much of England and Wales away from western coasts had a hot day.

WEDNESDAY  
16 JULY 1986

SUMMARY  
OF  
BRITISH WEATHER

Most places had a dry warm night but in Scotland there was rain. In southern England there was patchy fog and on southern and western coasts of England and Wales along with the Channel Islands and the Isle of Man there was fog too.

Much of England and Wales had a sunny day but some southern and western coasts stayed dull and misty all day. In the evening there was a little rain in Wales and the west and north of England.

Northern Ireland and Scotland were mainly cloudy and rain spread eastwards during the day followed by brighter weather with some sunshine but showers as well. It turned windy especially on the west coast of Scotland and over the hills and at Benbecula the wind gusted to 60 knots in the early evening.

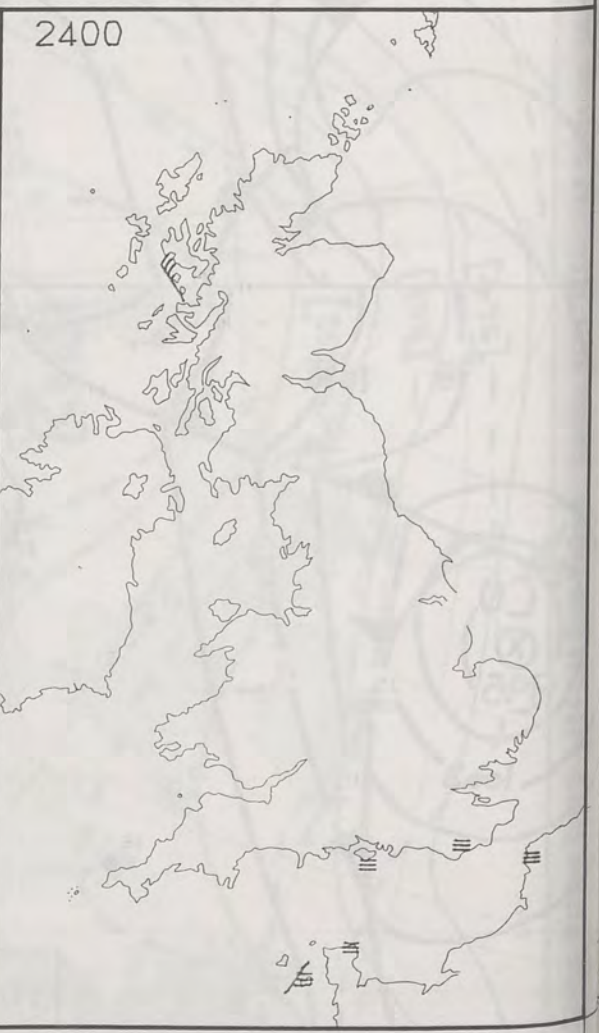

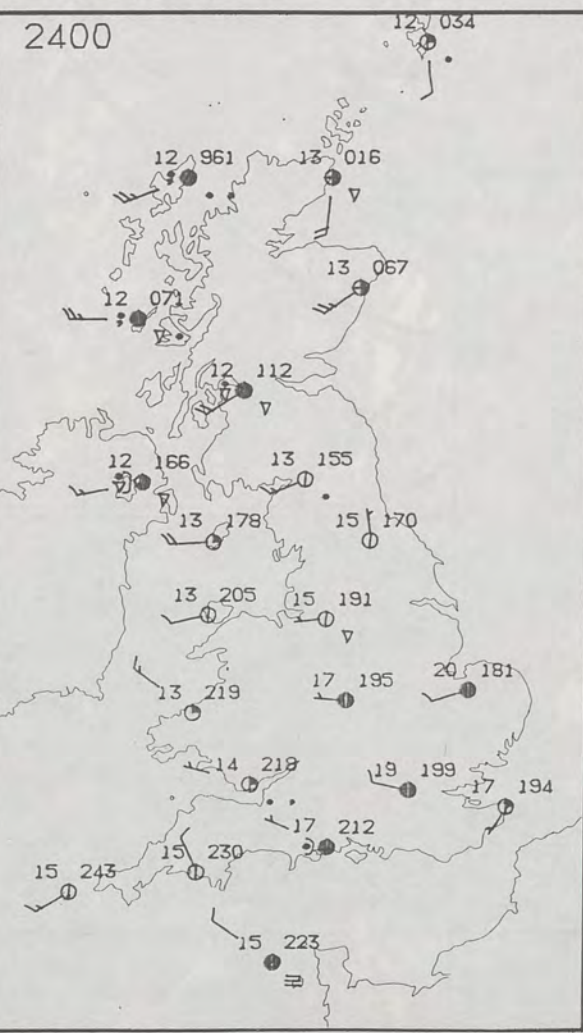

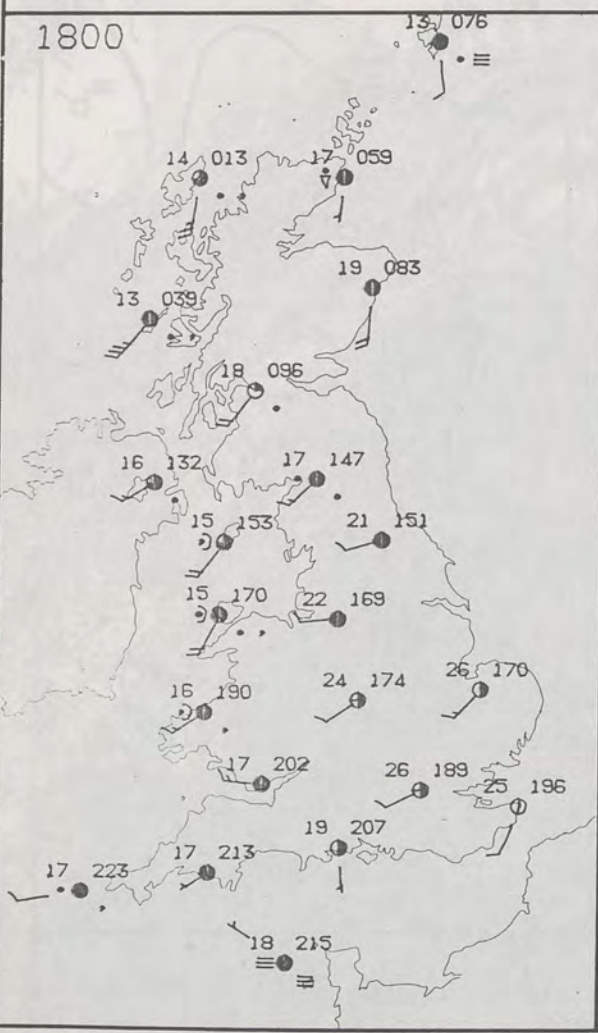

England and Wales away from the west had another hot day. Eastern Scotland was very warm while the western half of Northern Ireland had normal temperatures.

THURSDAY  
17 JULY 1986

SUMMARY  
OF  
BRITISH WEATHER

Many places in Scotland and Northern Ireland had showers overnight and in western Scotland there was a spell of more persistent rain.

Wales and much of England stayed dry but there was a little rain here and there.

During the day England and Wales were mostly sunny especially in central and southern England and in South Wales. Most places were dry but there were a few showers in the north and west. Temperatures were generally within a few degrees of normal.

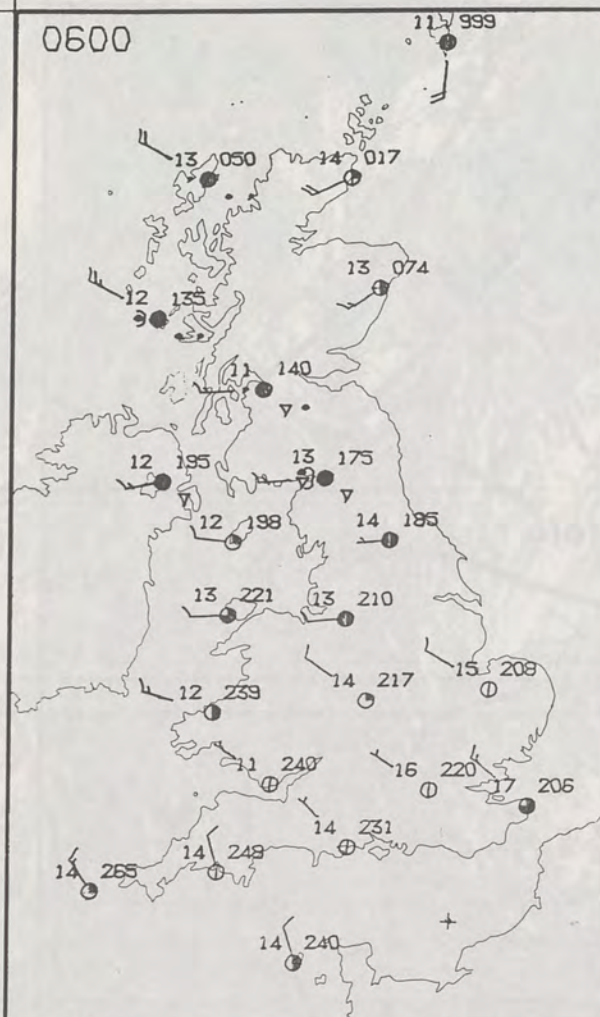

Scotland and Northern Ireland had some bright weather but there were showers in many places, most frequent in northern and western Scotland where there was more continuous rain for a time in the morning. It was a windy day with gales on Scottish coasts and hills.

Temperatures in most places were near normal.

FRIDAY  
18 JULY 1986SUMMARY  
OF  
BRITISH WEATHER

England and Wales had a dry night with clear skies in central and eastern areas. Northern Ireland and the north and west of Scotland had a few showers.

After a sunny start to the day over eastern and southern England it became increasingly cloudy as the day went on. However, the Channel Islands remained sunny all day. Most places remained dry but isolated light showers occurred over northwest England and the Midlands. Northern Britain remained rather cloudy with scattered showers, although the showers became few and far between by the end of the afternoon.

It was a rather cool or cool day generally.

SATURDAY  
19 JULY 1986

SUMMARY  
OF  
BRITISH WEATHER

Over most of England and Wales it remained dry throughout the period. Although there was a lot of cloud it did break at times to give a few sunny spells, especially in southern and eastern counties of England. In regions bordering the Irish Sea there were patches of light rain, and light rain reached other northern counties of England later in the evening.

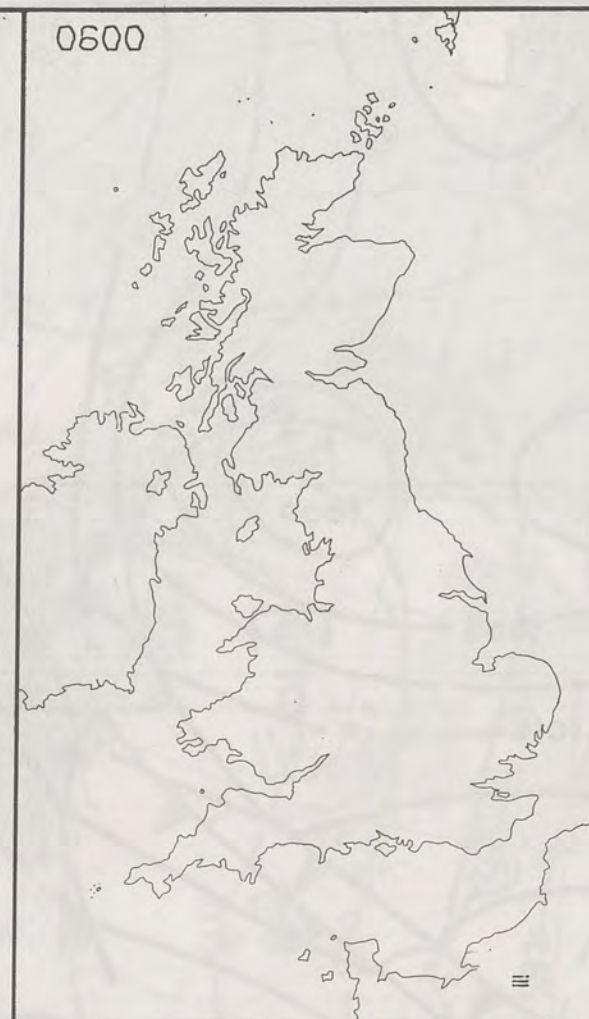

In Scotland and Northern Ireland it was mainly cloudy with rain at times. Much of the rain was light and patchy, especially in eastern Scotland where it was dry most of the time. Further west the outbreaks of rain were heavier and more frequent.

Temperatures were generally near or a little below average and Northern Ireland and northwestern coastal regions had a rather cool day.

SUNDAY  
20 JULY 1986

SUMMARY  
OF  
BRITISH WEATHER

In central and southern parts of England and Wales it was mainly cloudy at first with patches of rain or drizzle and misty conditions on hills and western coasts. Brighter weather spread steadily from the northwest to reach southeastern England by mid-afternoon. Temperatures were generally not far from normal and on the warm side in central southern England.

In North Wales and northern England there were outbreaks of rain in the early hours, and in northwestern parts it was a rather cool and cloudy day with isolated light showers. In the northwest it was dry with a good deal of sunshine and temperatures reached the late July average.

In Scotland and Northern Ireland many places had a dry day with sunny spells and in eastern Scotland it was a warm afternoon. In the west there were some light showers especially in northwest Scotland where it was mainly cloudy and rather cool.

MONDAY  
21 JULY 1986

SUMMARY  
OF  
BRITISH WEATHER

Scotland, Northern Ireland and northwestern England had a cloudy night, with some showers in the far northwest of Scotland. During the morning showers became more widespread, though still generally giving small amounts of rain, except in the far north.

Northeast England, Wales, the Midlands and East Anglia had a dry night, with well broken cloud. During the day many places were dry, with some sunny intervals. A few well scattered showers occurred later in the day.

In southwest England cloud increased through the night and there were outbreaks of rain or drizzle, with extensive hill and coastal mist. The damp weather lingered into the morning but the weather turned drier and brighter in the afternoon, with some sunshine.

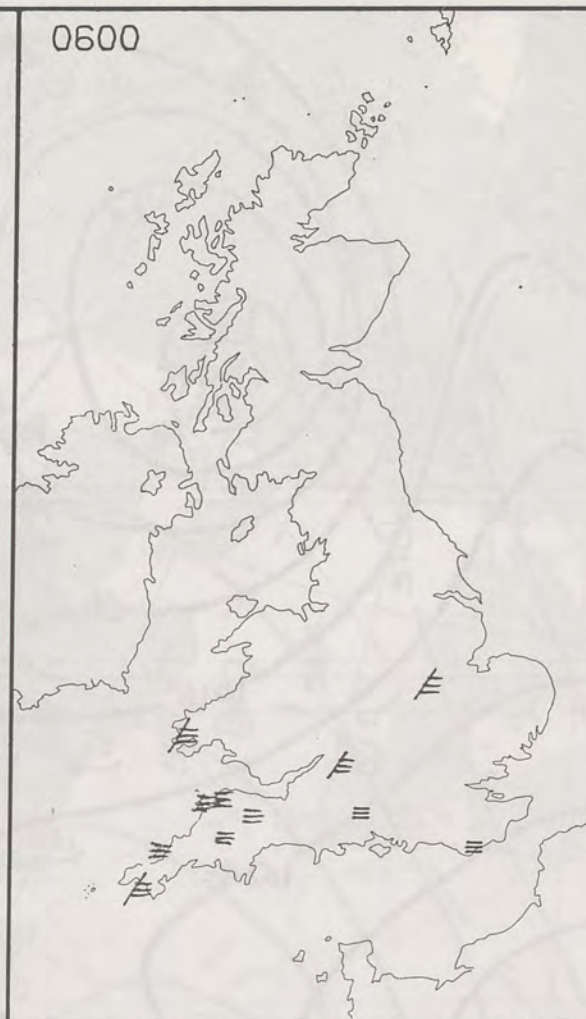

Southeast and central southern England had a dry night with well broken cloud. After a dry and sunny morning cloud increased during the afternoon, with pockets of mainly light rain, though during the evening cells of quite heavy rain developed in some southeastern areas.

Temperatures were generally near or rather below normal.

TUESDAY  
22 JULY 1986SUMMARY  
OF  
BRITISH WEATHER

Much of Scotland and Northern Ireland had a dry night, with only a few showers in the far north and northwest. During the day showers became more widespread, some of them heavy, and these showers lasted well into the evening.

Some heavy rain fell in parts of southeast England, including the London area overnight, but by dawn this had mostly moved away. A few showers occurred in parts of the Midlands and the north of England as well, which lingered into the morning. For most of England and Wales the day was dry; rather cloudy in the north but brighter with sunshine in the south. South Wales, southwest and central southern England had a mainly sunny day. A few showers developed in northern England and parts of North Wales and the North Midlands during the evening, and a small group of showers occurred near the East Anglian coast.

It was generally rather cool, even cool in some places in the north.

SUMMARY  
OF  
BRITISH WEATHER

Much of Britain had showers overnight but most places in Wales and the south of England stayed dry. In central and southern England it was quite a chilly night.

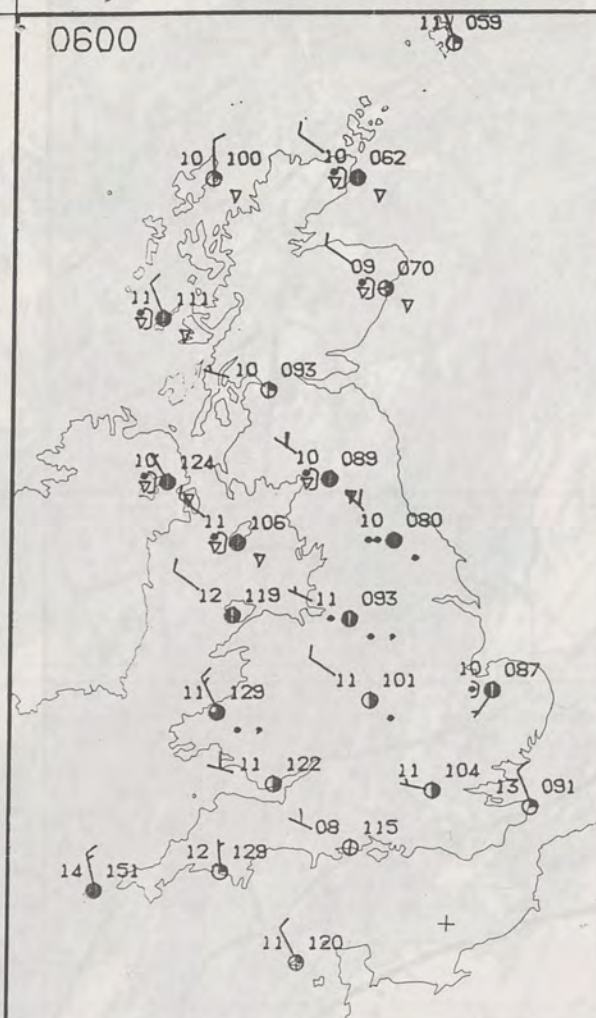

During the day most places were cool and there were showers nearly everywhere some of them heavy with hail, and over much of England quite a few thunderstorm. In southern Scotland too there were one or two thunderstorms.

Most places had sunny periods and in the afternoon Scotland became mainly dry and sunny. In the evening Northern Ireland, Wales and the west of England were mostly sunny as well.

THURSDAY  
24 JULY 1986SUMMARY  
OF  
BRITISH WEATHER

Much of Britain had a clear chilly night and in Scotland there was ground frost in a few places. On the west coast of Wales and the east coast of England there were one or two showers. Before morning Northern Ireland and the Western Isles of Scotland had clouded over and there was a little rain here and there.

Most places dawned dry and bright, and England, Wales and eastern Scotland had a sunny morning and in East Anglia, southeast England and the Channel Islands it stayed sunny into the evening. The cloud and rain spread eastwards during the day reaching most places by the end of the afternoon. In Scotland there were some heavier bursts of rain especially in the north and west.

The sunnier central and eastern areas had temperatures close to normal but in the cloudy west and north it was rather cool.

FRIDAY  
25 JULY 1986

SUMMARY  
OF  
BRITISH WEATHER

Patchy rain crossed the country overnight with the heaviest and most persistent rain being over the North Midlands, East Anglia and the Northern Isles.

Scotland and Northern Ireland had a bright and breezy day with a fair amount of sunshine in south-east Scotland. There were some showers, especially in the north and west, but many places became dry by the end of the afternoon.

The northern half of England and Wales began the day mostly dry but cloudy with the remnants of the earlier rain dying out from the southeast during the morning. Most places had some sunny intervals but the Channel Islands and the extreme southwest of England remained overcast and misty with occasional drizzle.

Temperatures were about average for late July in the south but in the north it was mainly rather cool.

SATURDAY  
26 JULY 1986

SUMMARY  
OF  
BRITISH WEATHER

Much of England and Wales had a fine, warm night but there were patches of drizzle around the Bristol Channel and in other southern counties. Northern Ireland and western Scotland had some rain but clearer skies had reached the far west by dawn.

Patchy rain or drizzle moved across the rest of Scotland in the morning with brighter weather quickly following. Thickening cloud returned to Northern Ireland and the west of Scotland later in the afternoon with occasional rain by evening.

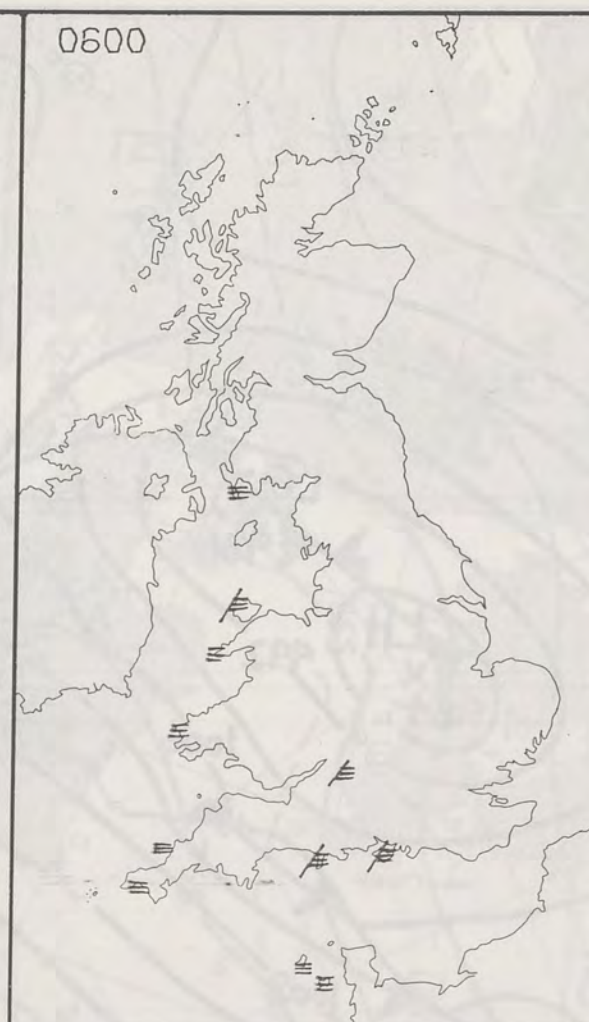

England and Wales had a rather cloudy morning with a little rain or drizzle and coastal fog in the southwest but sunny periods developed in the afternoon.

It was a warm and humid day in central and eastern England, parts of eastern Scotland were also warm while remaining areas of Britain were mostly rather cool.

SUNDAY  
27 JULY 1986

SUMMARY  
OF  
BRITISH WEATHER

Over most of England and Wales dry weather continued with cloud either thin or well broken at times, especially in central and eastern regions where there was quite a lot of sunshine. In western counties cloud was more persistent and patches of drizzle extended from Cornwall to most of southwest and parts of central southern England during the late afternoon and evening. In Cumbria and the Isle of Man there was a little light rain in places.

PLOTTED SURFACE OBSERVATIONS

1800

2400

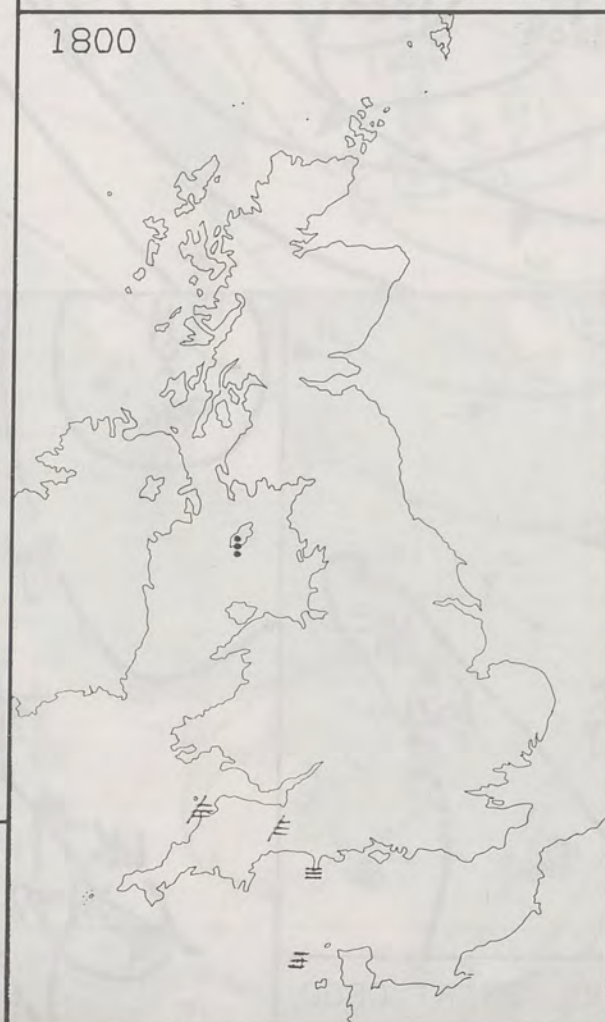

In Scotland and Northern Ireland rain spread eastwards to most parts overnight and in western Scotland the rain was heavy at times. During the day brighter weather spread southeastwards to most parts but in southern Scotland it remained cloudy with patches of light rain.

Temperatures were mostly near the late July average.

MONDAY  
28 JULY 1986

SUMMARY  
OF  
BRITISH WEATHER

In the Northern Isles and parts of northern and western Scotland it was a mainly dry day with sunny periods and only isolated showers. Over the rest of Britain it was a cloudy day with outbreaks of rain in most places. The rain was heavy at times in southwest England, Wales, northwest England and southern Scotland. In eastern areas much of the rain was light and very patchy, especially in East Anglia, southeastern England and the Channel Islands where most of the day was dry. In the southeast of England there were some heavier bursts of rain in the evening. In southwest England and South Wales dry weather returned during the evening.

Thunder was heard in the Edinburgh area late in the afternoon.

Temperatures were mostly near normal but parts of eastern England were warm.

TUESDAY  
29 JULY 1986

SUMMARY  
OF  
BRITISH WEATHER

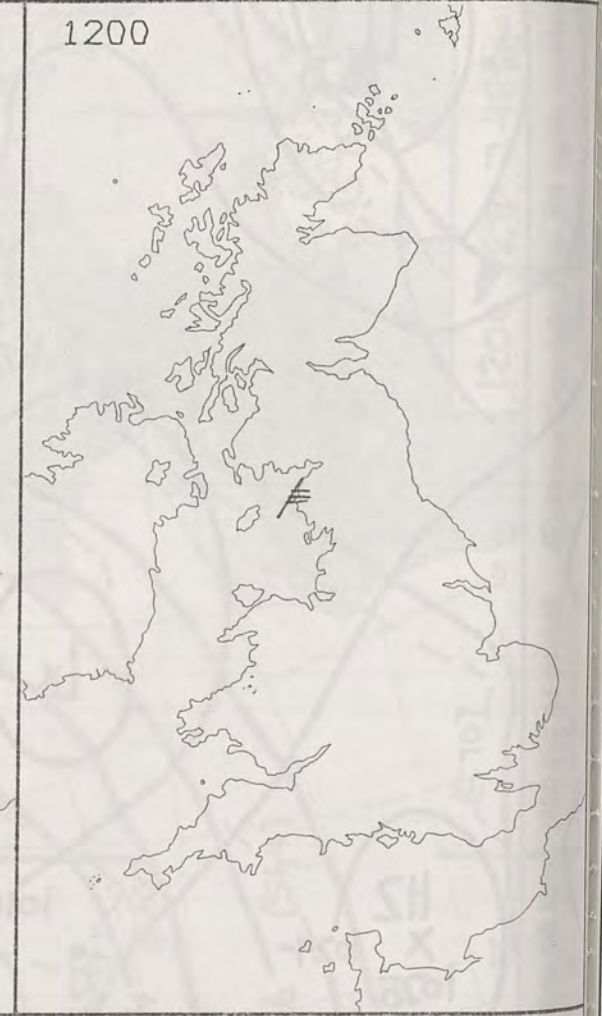

The depression moving northeast across central Britain in the early hours was accompanied by a good deal of rain over southern Scotland and northernmost counties of England. Northwest Scotland had a dry night, and drier weather over southern Britain pushed slowly north. However, an area of cloud and mostly quite light rain swung southeastwards around the western and southern flanks of the depression from Northern Ireland into northern England by morning.

During the day, outbreaks of rain over eastern Scotland and northern England gradually cleared away to the northeast, though it was very late in the day before many places brightened up. Most of the rest of the British Isles had a dry, quite bright day with just the odd shower.

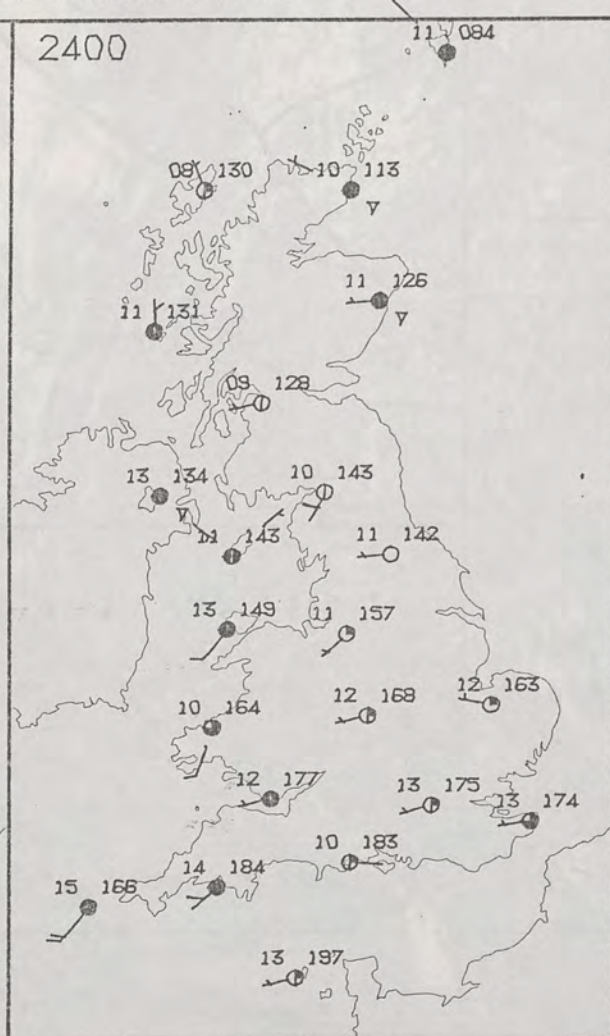

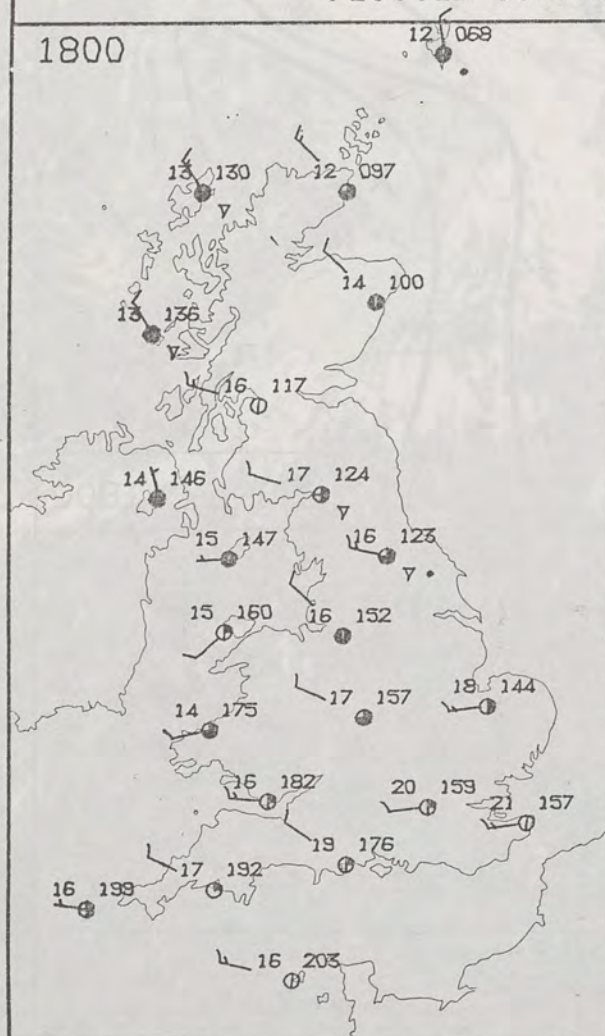

Temperatures were near or rather below normal, and some western and northern areas were cool. It was quite windy, too.

## PLOTTED SURFACE OBSERVATIONS

1800

2400

THURSDAY  
31 JULY 1986SUMMARY  
OF  
BRITISH WEATHER

Most of Scotland had a wet night. In northeast Scotland the rain was heavy at times and there was some rain over Northern Ireland too. Early in the night south-east England and East Anglia had a short spell of rain, whilst elsewhere over England and in Wales there were one or two showers, chiefly in the west.

Through the day most of England, Wales and Northern Ireland had sunny spells and showers, the best of the sunshine to be found in southern England, whilst northwest England had no more than a few glimpses of the sun.

Over Scotland, rain in the Northern Isles and far northeast of the mainland persisted for much of the day. Elsewhere, early rain gradually turned more showery, with some sunny spells later on, especially in the far west.

Temperatures were near average over southeast England and East Anglia, whilst elsewhere over Britain it was cool or rather cool and decidedly cool in parts of central and northern Scotland.
