**PLOTTED SURFACE OBSERVATIONS**

WEDNESDAY  
1 AUGUST 1984

**SUMMARY  
OF  
BRITISH WEATHER**

Much of Britain had a dry night, with clear skies, but there were a few showers in northern and eastern Scotland and in southwest England. In southern England there was some patchy fog. In many places it was a fairly cold night.

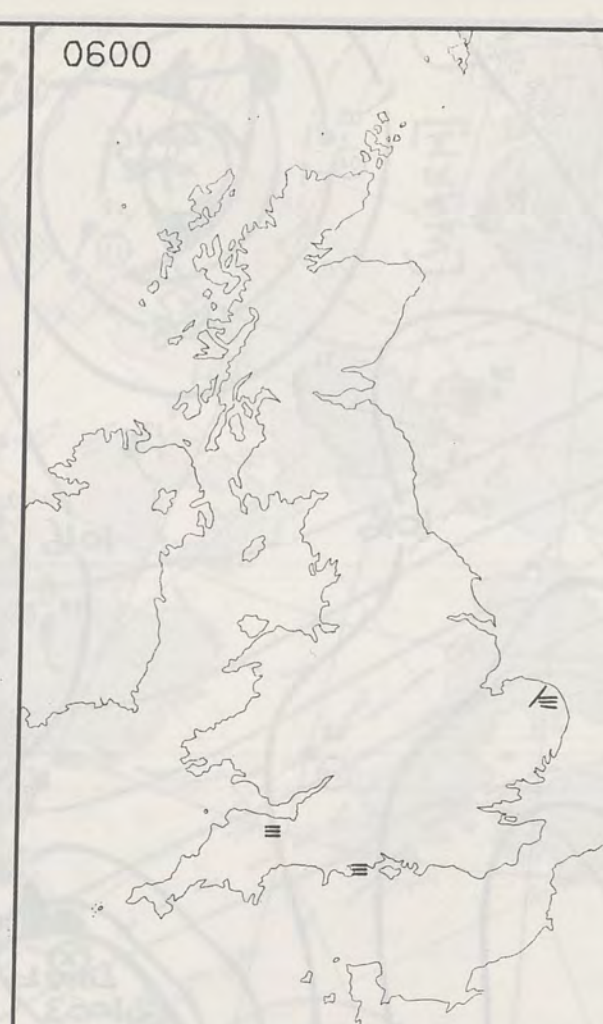

During the day there was quite a lot of dry, sunny weather and many places had a sunny day but there were showers in Scotland and a thunderstorm at St. Abb's Head. There were isolated showers in England and Wales too. In the afternoon cloudy weather with rain, some of it heavy, reached the Channel Islands and southwest England and then spread on during the evening to much of southern England, parts of the Midlands, the Isle of Man and Northern Ireland.

Temperatures were generally close to normal, however many places in England were warm.

THURSDAY  
2 AUGUST 1984

SUMMARY  
OF  
BRITISH WEATHER

Northern Scotland had a dry night, but over the rest of Britain it was wet, with quite a lot of heavy rain. Northern Scotland stayed dry during the day, with some sunshine and some places were fairly warm. Central and southern Scotland and parts of northeast England had a cool, cloudy day, with rain at times throughout the day, some of the rain heavy.

In Northern Ireland after a wet morning the afternoon and evening were a little brighter, but there were showers and it was rather cool.

During the morning, brighter weather, with some sunshine spread from southwest England and Wales to much of England. There were showers in many places, some of them heavy and in northern England there were several thunderstorms in the afternoon and evening.

At Littleover in Derbyshire nearly 30 mm of rain fell in 24 hours - 23.5 falling in 20 minutes; 70 mm of rain was reported from Gedling (East Nottingham) and at Gotham (Near Nottingham) a whirlwind caused roofs to be ripped off, trees uprooted and garages smashed.

Temperatures over England and Wales were mostly close to or a little above normal, however northeast England was cool.

## PLOTTED SURFACE OBSERVATIONS

1800

2400

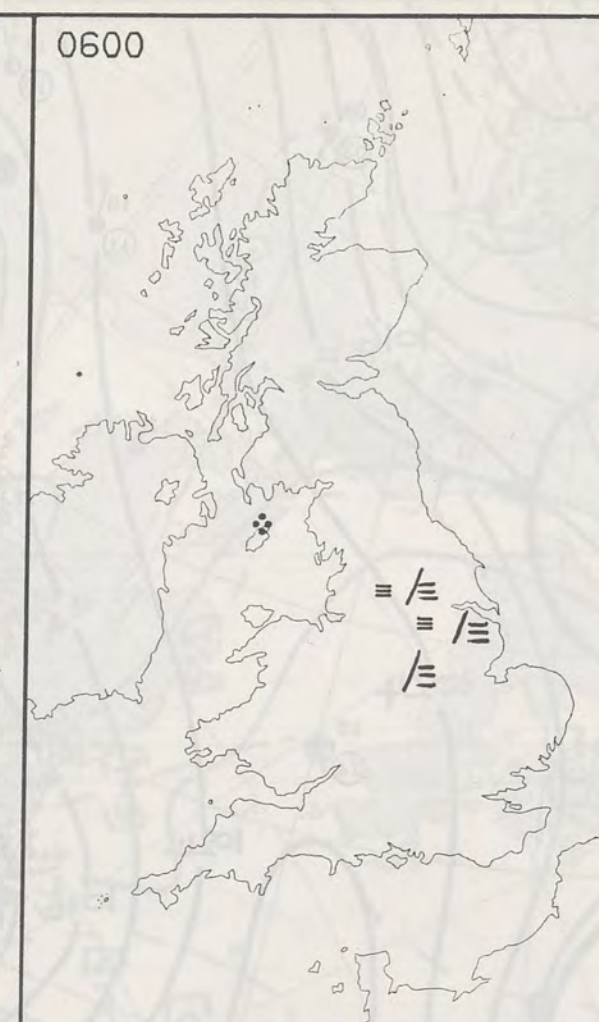

FRIDAY  
3 AUGUST 1984SUMMARY  
OF  
BRITISH WEATHER

Overnight Wales, central and southern areas of England had clear intervals and scattered showers, the showers chiefly in the west. Northern England, Northern Ireland, southern and central Scotland had a cloudy night with a band of persistent rain across Northern Ireland, southern Scotland and the border counties of England. There was some rain too in parts of north-east Scotland but northwest Scotland remained dry. During the day central and southeastern counties of England were mostly dry and quite sunny with only a few scattered showers. Many parts of South Wales and southwest England started dry and bright but showers in the extreme southwest became widespread later and by evening there were a lot of showers and longer spells of rain in most places. There were quite a lot of showers in North Wales and northern England too, with thunderstorms in places. In Northern Ireland and southern Scotland, Cumbria and northeast England a cloudy day with rain at times and some places in the west had a lot of rain. Eastern and northeast Scotland also had a little rain but northwest Scotland was mostly dry and bright. Temperatures were near normal over Wales and much of England but it was rather cool over Scotland, Northern Ireland and northern England.

PLOTTED SURFACE OBSERVATIONS

SATURDAY  
4 AUGUST 1984

SUMMARY  
OF  
BRITISH WEATHER

Most of East Anglia and southeast England had a dry night with clear spells but further west over central southern England, East Wales and the Midlands there was quite a lot of rain, heavy in places. West Wales and northern and western parts of England were mostly cloudy with some rain. Much of Northern Ireland and Scotland also had a cloudy night with a little rain and drizzle, chiefly in eastern Scotland.

During the day most central areas of England had a mainly cloudy and cool day with rain and showers, the rain heavy and prolonged in places with some thunderstorms. Parts of south-east England, however, were mostly dry with sunny periods and quite warm and near the south coast of England it was fairly sunny in places. Over Wales, northern and western parts of England there was also a good deal of cloud with showery rain in places and again some of it was quite heavy and thundery. Many parts of Northern Ireland and Scotland, however, had a dry day and although the weather was cloudy in some parts with showers in eastern Scotland, some western regions of Scotland and parts of Northern Ireland had sunny periods. Temperatures were near normal over parts of southern and eastern England but generally it was rather cool.

SUNDAY  
5 AUGUST 1984

SUMMARY  
OF  
BRITISH WEATHER

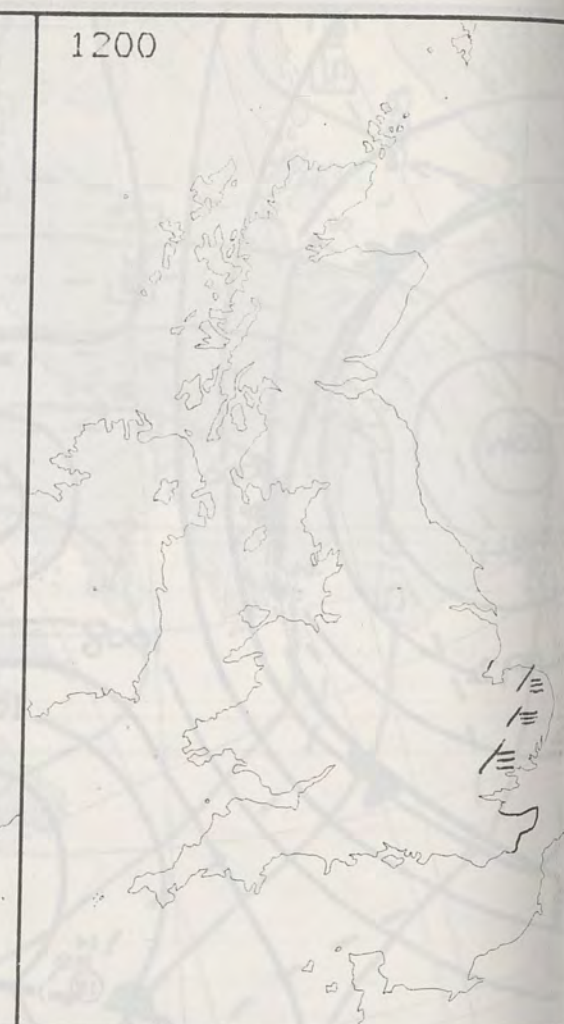

Much of Scotland, Northern Ireland, Wales and southwest England had a dry day with sunshine at times. Further east there was a good deal of cloud with sunny spells after some early rain. Near the east coast, from Kent through to Northumberland, cloud was persistent with light rain from time to time.

By evening most of Northern Ireland and the Western Isles had cloudy skies with light rain in places. Temperatures were slightly below average in northern and western Scotland and along much of the east coast of England. Elsewhere they generally made average values.

MONDAY  
6 AUGUST 1984

SUMMARY  
OF  
BRITISH WEATHER

Apart from some rain in western Scotland and Northern Ireland, most parts of Britain had a clear night and sunny start to the day. The Midlands, East Anglia and southern England continued to have a good deal of sunshine until evening but elsewhere over Britain it soon became cloudy with outbreaks of showery rain, which was quite heavy locally, with a thunderstorm reported on the northeast coast of England. An improvement to showers and bright spells got into western and central Scotland during the evening.

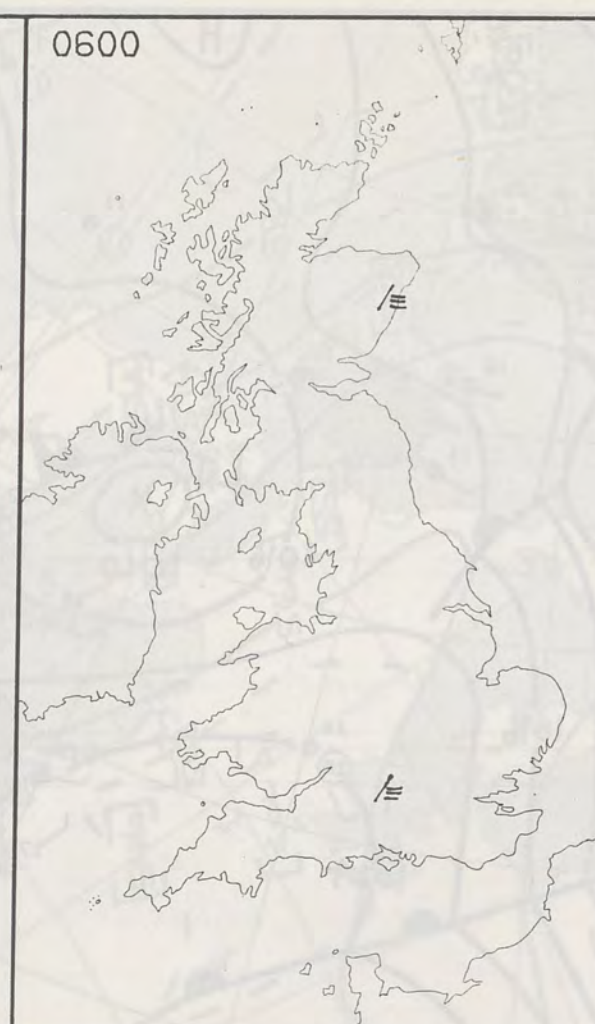

Temperatures were about average or a little below over the northern half of the UK, but around normal in the southern half.

TUESDAY  
7 AUGUST 1984SUMMARY  
OF  
BRITISH WEATHER

Much of Scotland had a dry night, but there was a little rain in the north and east. Over Northern Ireland, Wales and the west of England there were showers overnight, while central and eastern areas of England, and parts of northwest England had a wet night, with heavy rain in many places.

Northern Ireland and Scotland were mainly dry with some sunshine, just a few showers in northern Scotland.

Wales, central and western areas of England had sunshine, and showers and in southwest England one or two thunderstorms.

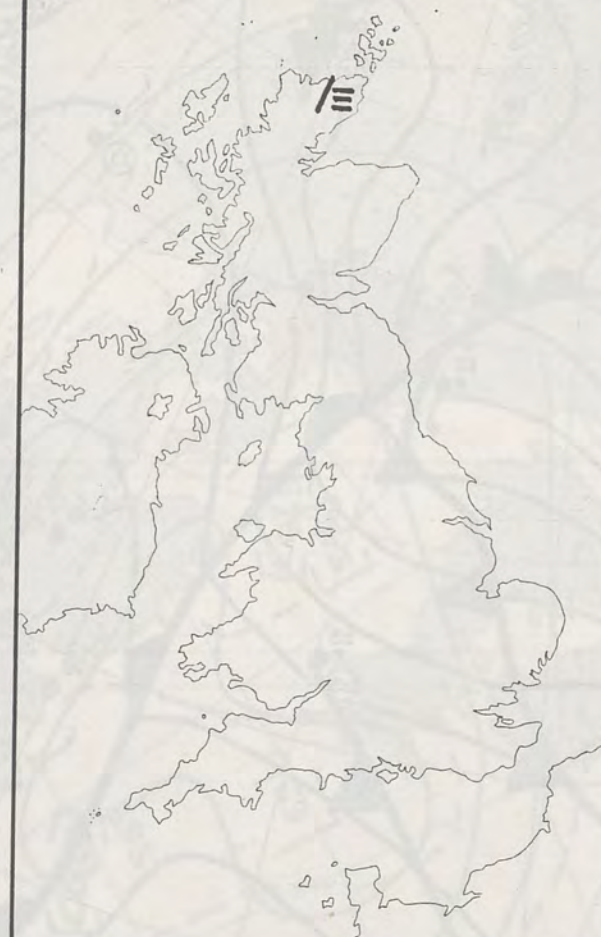

Eastern England was cloudy in the morning with rain, some of it heavy. The afternoon and evening were brighter, with some sunshine, but there were showers too, some of them heavy, especially in the southeast where there were some thunderstorms.

In northern Britain temperatures were close to normal, but over England and Wales, most places were quite chilly.

WEDNESDAY  
8 AUGUST 1984SUMMARY  
OF  
BRITISH WEATHER

Much of Britain had a dry night, but there was some rain and drizzle in the north and east of England and in the Northern Isles of Scotland, and before morning rain reached the Western Isles of Scotland and western counties of Northern Ireland.

Over Wales and much of England it was a dry day with some sunshine, but in the morning there was a little rain and drizzle in northern and eastern England and in the afternoon and evening there were showers in the Midlands, East Anglia and southeast England. Some of these were heavy and there were a few thunderstorms.

In eastern Scotland and the southeast of Northern Ireland it was a bright day, but the cloudy weather with rain and drizzle spread slowly to most parts during the day. Temperatures were close to normal in most places.

THURSDAY  
9 AUGUST 1984

SUMMARY  
OF  
BRITISH WEATHER

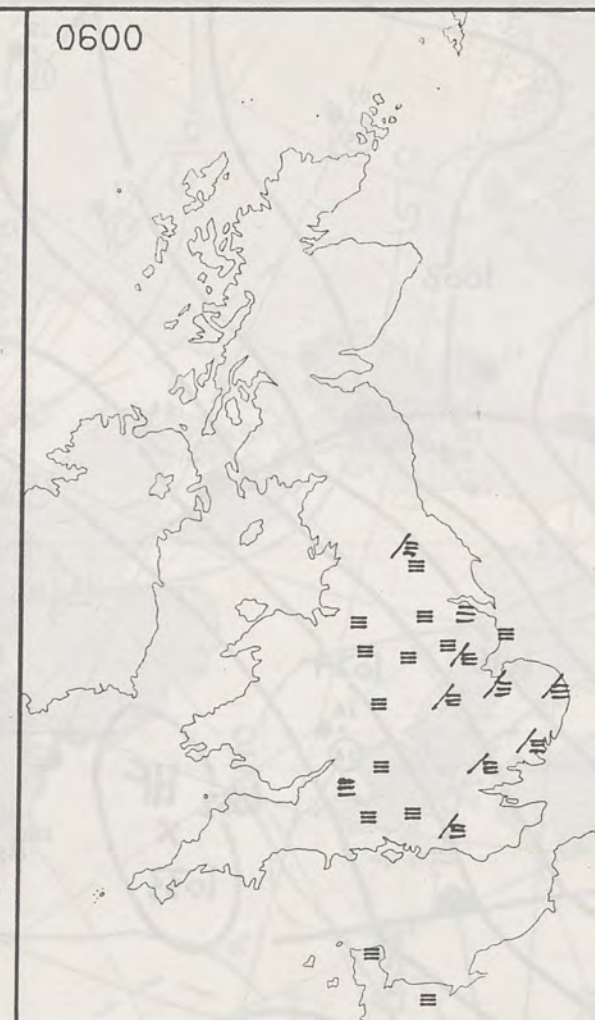

Scotland, Northern Ireland and the far north of England were mostly cloudy overnight with a little light rain or drizzle here and there but there were clear spells in northwest Scotland. England and Wales had a dry night with clear spells but central and eastern parts of England were quite misty. After a misty start in places southern parts of England had a dry, mostly sunny day. Parts of North Wales, the Midlands, East Anglia and north-west England were also dry and quite sunny. Cloudier weather spread to eastern England and in the far north of England and a good deal of Northern Ireland and southern Scotland it was a mostly cloudy day but dry. Central and northern regions of Scotland, however, brightened up and many parts of northern Scotland were quite sunny.

Much of southern England, the Midlands and central Scotland had a warm day, Northern Ireland and southern Scotland were rather cool, remaining areas of the UK had near normal temperatures.

## PLOTTED SURFACE OBSERVATIONS

1800

2400

FRIDAY  
10 AUGUST 1984SUMMARY  
OF  
BRITISH WEATHER

Northern areas of England, Northern Ireland and Scotland had a dry and mostly clear night but it was cool and misty in places and in parts of southeast Scotland there may well have been a touch of ground frost in places. Wales and the southern half of England were mostly cloudy but mainly dry.

During the day Scotland, Northern Ireland and northern England had a rather warm and sunny day, and central regions of Scotland were very warm. Wales and western areas of England were also mostly dry with a good deal of sunshine and reasonably warm but southeastern counties of England and East Anglia had a cooler day and only sunny intervals. There was a little light rain or drizzle in places chiefly in East Anglia and southeast England but many central and eastern parts had a drier afternoon with sunny spells and this clearer weather reached the southeast during the evening. The Channel Islands however remained dry and sunny through the day.

## PLOTTED SURFACE OBSERVATIONS

1800

2400

SATURDAY  
11 AUGUST 1984SUMMARY  
OF  
BRITISH WEATHER

Apart from an isolated light shower in East Anglia and some rain in the Western Isles around dawn the night was dry with clear spells. A few mist and fog patches formed for a time later in the night but dispersed soon after dawn.

Western Scotland and Northern Ireland after a bright start in places had a rather cloudy day with some outbreaks of rain. These tended to die out later and a few breaks in the cloud gave a little sunshine late in the day. Temperatures were near normal.

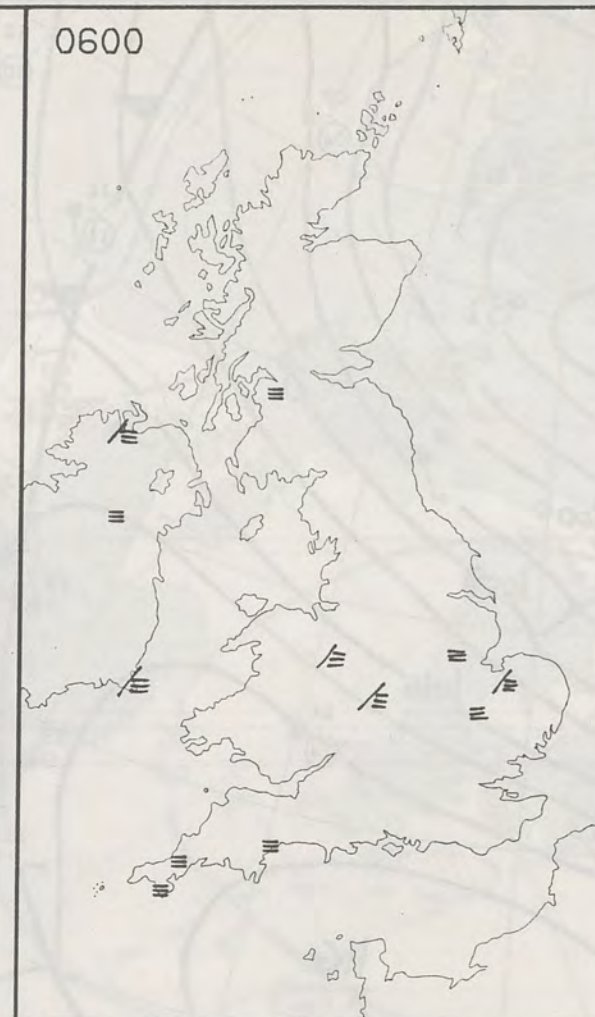

Southern and central Scotland were very warm with long sunny periods.

Much of England and Wales had a dry, warm day with a good deal of sunshine. Near the west and east coasts however it remained rather more cloudy and was thus not quite as warm as elsewhere. Patchy fog also affected parts of the west coast of Wales for much of the day keeping it rather cool.

## PLOTTED SURFACE OBSERVATIONS

1800

2400

SUNDAY  
12 AUGUST 1984SUMMARY  
OF  
BRITISH WEATHER

England and Wales had a dry night with well broken cloud and mist and fog patches in East Anglia, West Wales, central southern England and parts of the West Country. Scotland and Northern Ireland had rather more in the way of cloud with a little rain in places.

Once any fog cleared much of the country had a dry day with sunny periods. It was rather more cloudy at times in Scotland and Northern Ireland with a little rain in places, chiefly at first, some patchy cloud did give a few spots of rain in Kent and southwest England during the afternoon and evening.

Temperatures were generally on the warm side.

## PLOTTED SURFACE OBSERVATIONS

1800

2400

MONDAY  
13 AUGUST 1984SUMMARY  
OF  
BRITISH WEATHER

Overnight in southern England, skies became cloudy from the east, with some outbreaks of mainly light rain which eventually moved west into parts of Southwest England and South Wales. The rest of Britain had a mostly dry and clear night with fog patches forming, more especially over East Anglia and the Midlands.

During the morning the rain over southern England died out and the fog cleared from all other areas.

The remainder of the day was dry with a good deal of sunshine over much of the country. Northwest Scotland and the Northern and Western Isles remained generally cloudy though dry and in central southern England and South Wales a few showers developed in the afternoon and evening with an isolated thunderstorm reported by Odiham in Hampshire.

Temperatures were generally above average with many places becoming very warm by afternoon.

TUESDAY  
14 AUGUST 1984

SUMMARY  
OF  
BRITISH WEATHER

Scotland and Northern Ireland had a good deal of cloud overnight with a little rain in the west. During the morning the cloud broke to give some sunshine and a few mainly light showers as well.

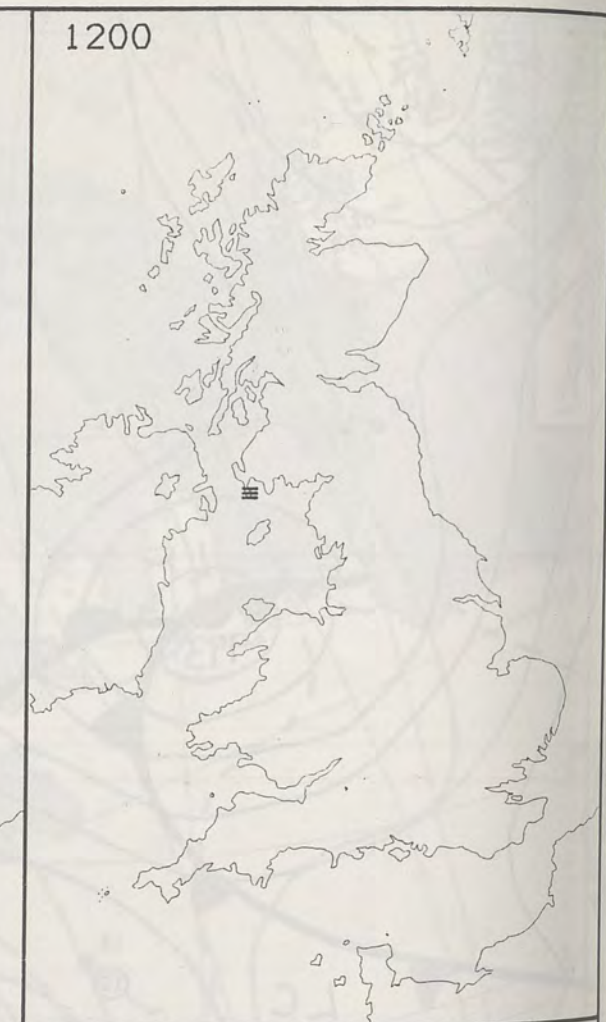

Over England and Wales the night was mostly dry with clear skies leading to some patchy fog. The western coast was affected by patches of sea fog at times.

The fog cleared from most places soon after sunrise to give some sunny spells throughout the day. A few showers developed in the afternoon, and some were heavy and thundery. One thunderstorm gave 14.6 mm of rain at Odiham in Hampshire.

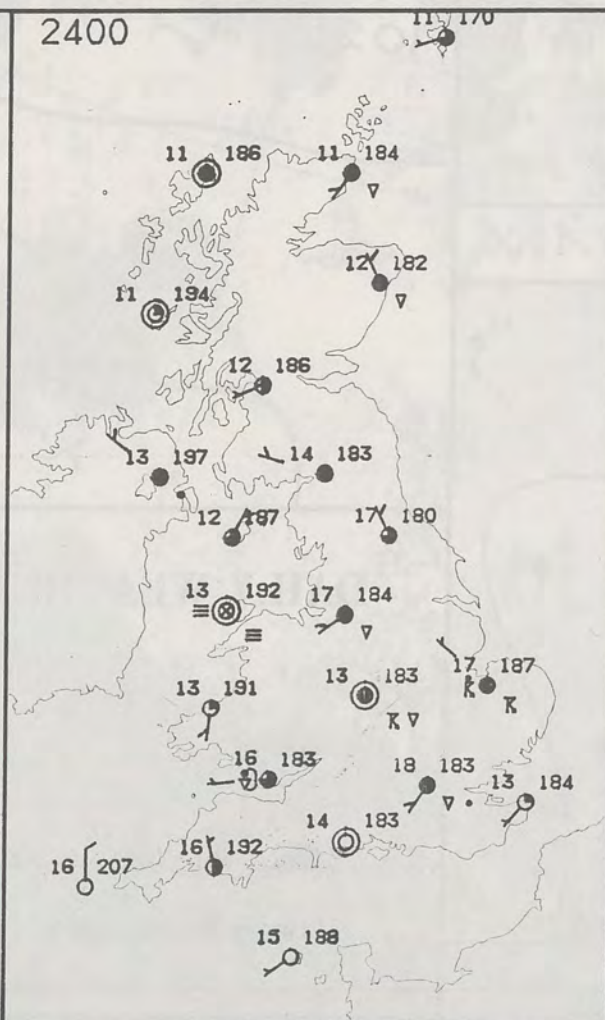

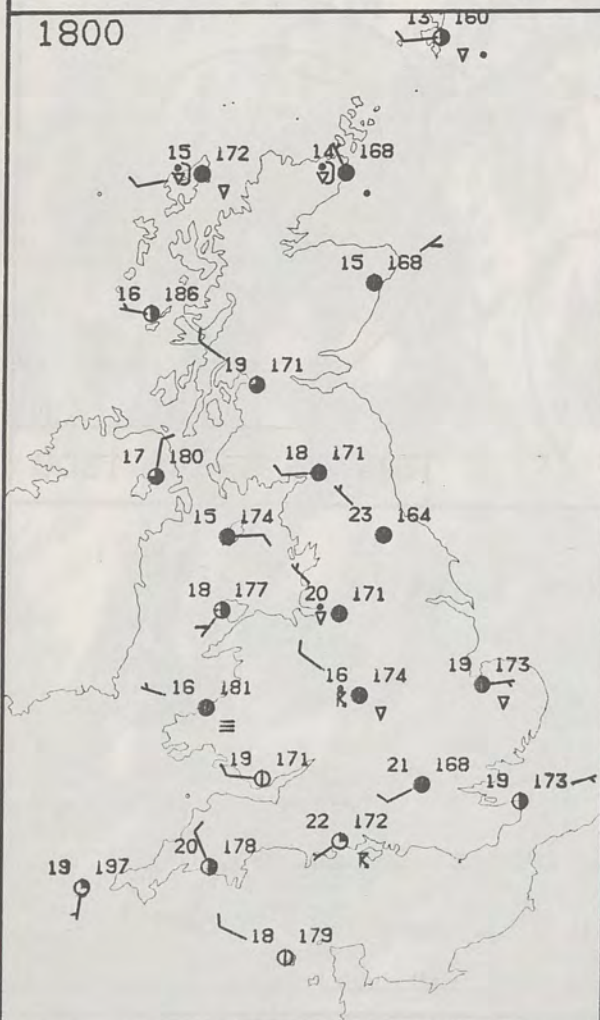

Temperatures were generally in the warm or very warm category but coasts and parts of northern and western Scotland were near the mid-August average.

WEDNESDAY  
15 AUGUST 1984

SUMMARY  
OF  
BRITISH WEATHER

Isolated thunderstorms over East Anglia persisted into the early hours before dying out to join the rest of the UK in a dry, fairly clear night. Patchy fog developed over many parts of England and Wales around dawn. The fog cleared very quickly to give all parts a dry morning with some sunshine.

During the afternoon, scattered thunderstorms developed over East Anglia, Lincolnshire, southeast and central southern England. Some of the rain was heavy with hail. Reports of hail in Denmark Hill, S. London and 2 inches of rain near Andover were received and the Thames Water Authority measured 54.1 mm at Surbiton in Surrey in only 45 minutes. The rest of the British Isles had a dry, sunny afternoon apart from a few scattered light showers.

Temperatures ranged from very warm in parts of southeast and central southern England to near or just above normal over the rest of the UK, including most coastal regions.

1800

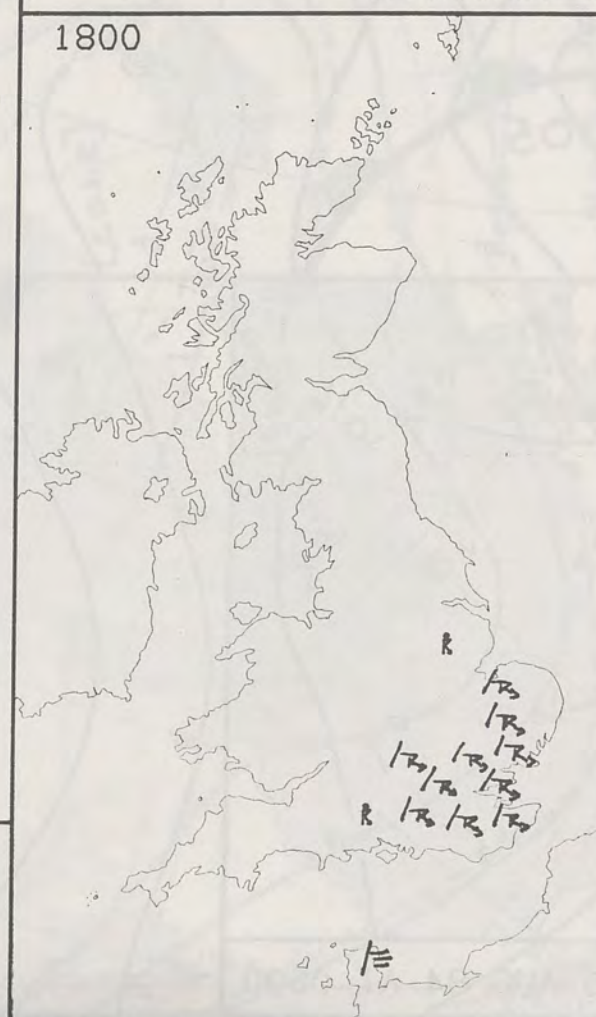

2400

THURSDAY  
16 AUGUST 1984SUMMARY  
OF  
BRITISH WEATHER

All parts had a dry night with fairly clear skies. This led to patches of fog forming in central southern and southeast England, the Midlands, East Anglia, Lincolnshire and northeast Scotland. Some of the fog became quite dense for a while.

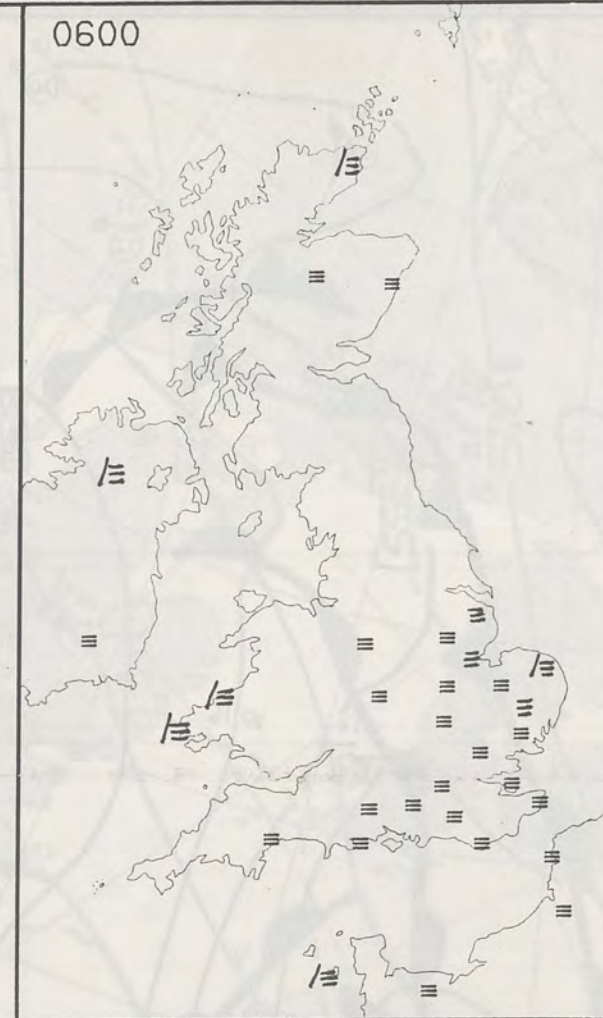

During the morning the fog cleared to give most places a dry, fairly sunny day. Southern Scotland was rather cloudier with a few isolated light showers and in southern England one or two showers developed with a thunderstorm at Anvil Green in Kent during the afternoon.

Temperatures were rather warm inland but nearer normal along all coasts.

FRIDAY  
17 AUGUST 1984

# SUMMARY OF BRITISH WEATHER

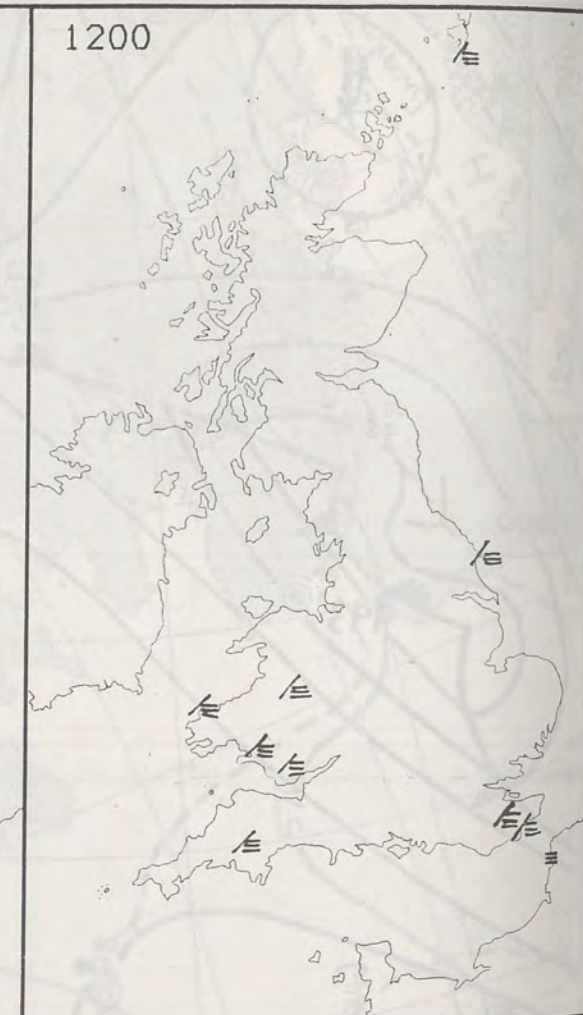

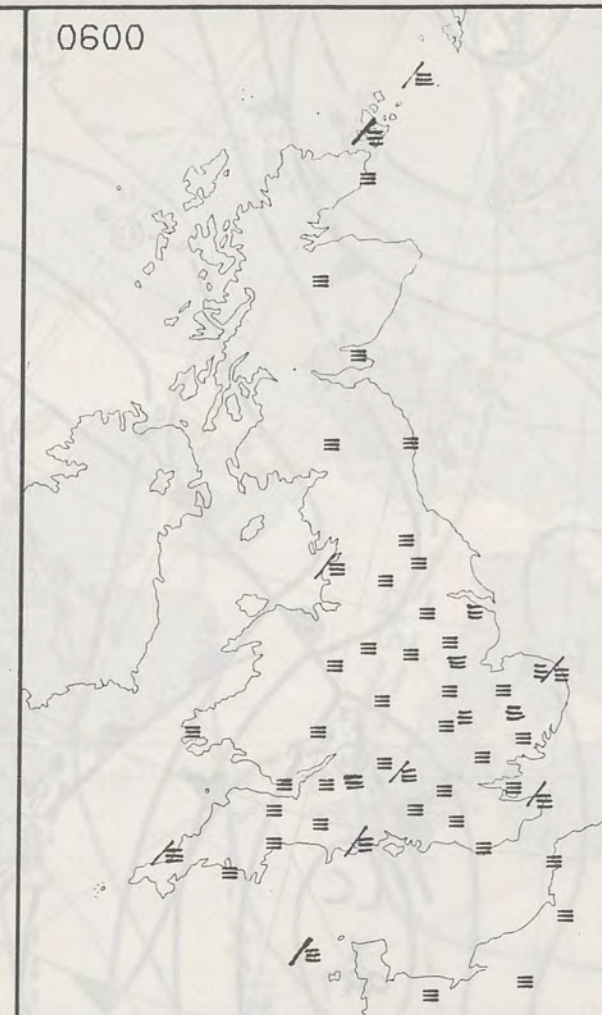

Over England and Wales, many places were affected by early fog, dense in a few areas. The day was dry with good sunny periods in the south and west, sunny intervals elsewhere.

Scotland and Northern Ireland had sunny periods during the morning, but cloud increased during the afternoon bringing rain into western areas of Northern Ireland and into the Hebrides during the evening.

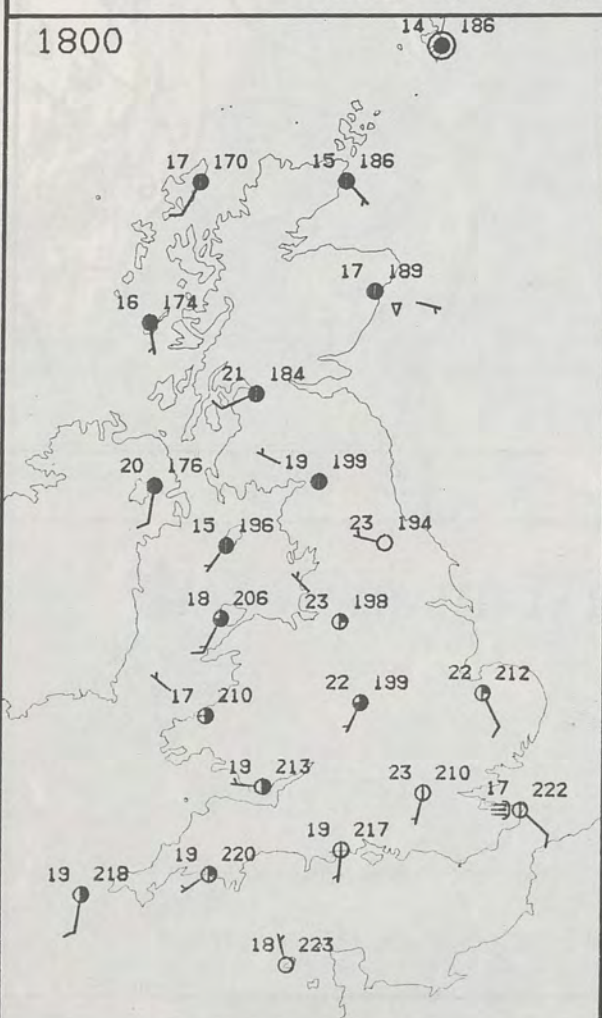

Most parts of the UK had a warm day, very warm in some places in the Midlands and Scotland. Western areas of Wales and south-west England had near normal temperatures.

### SUMMARY OF BRITISH WEATHER

Apart from a little light rain and drizzle overnight in the north of Scotland and a few light showers over northeast Scotland, it was a dry day over the British Isles.

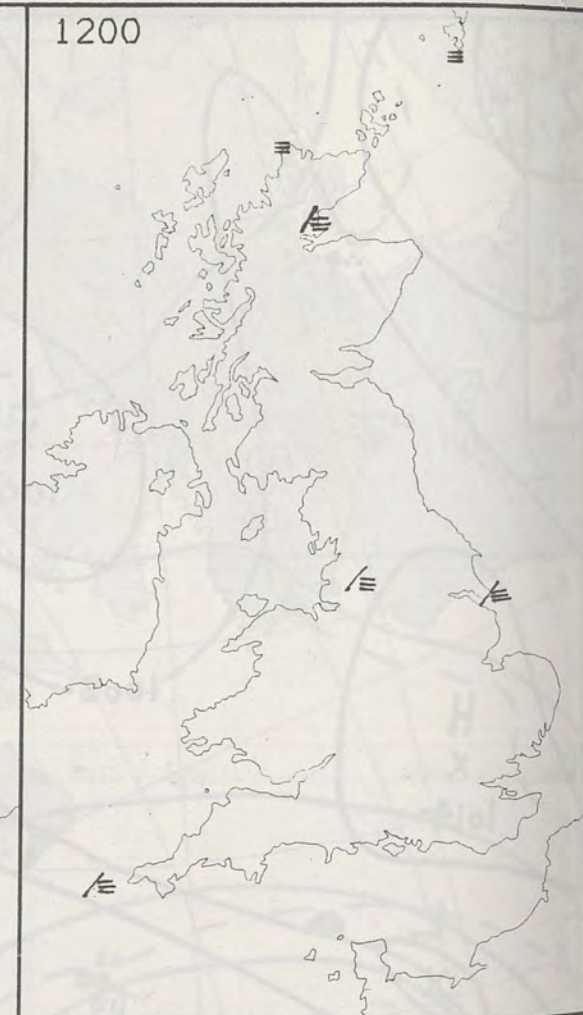

A very warm night over much of Scotland was followed by a very warm or hot day except in Shetland. From the Forth-Clyde Valley southwards, it was a sunny day, too, after a few early morning fog patches had cleared.

Northern Ireland was very warm while England and Wales had a mostly hot day.

MONDAY  
20 AUGUST 1984

SUMMARY  
OF  
BRITISH WEATHER

The night was dry apart from a few spots of rain in Fair Isle.

Sea fog drifted onto coasts in northern and eastern Scotland during the night and some fog patches formed around dawn in parts of East Anglia and south-east England. It was then a dry, sunny and hot day in most parts of Britain, although North Sea coasts were a little cooler in the moderate easterly breeze.

Sea fog drifted onto the coast of Norfolk and Suffolk during the afternoon and returned to the Northern Isles during the evening.

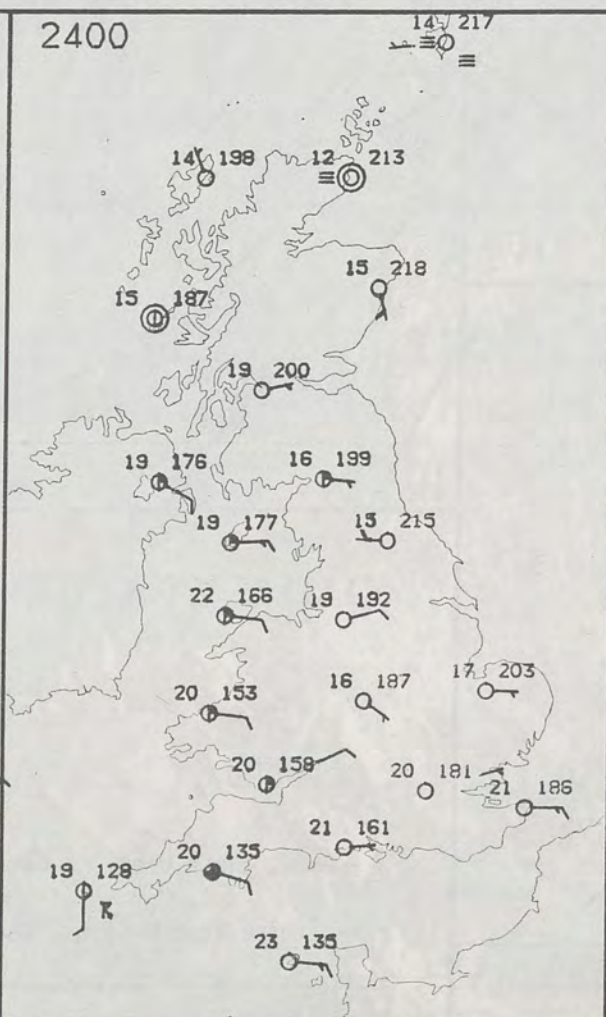

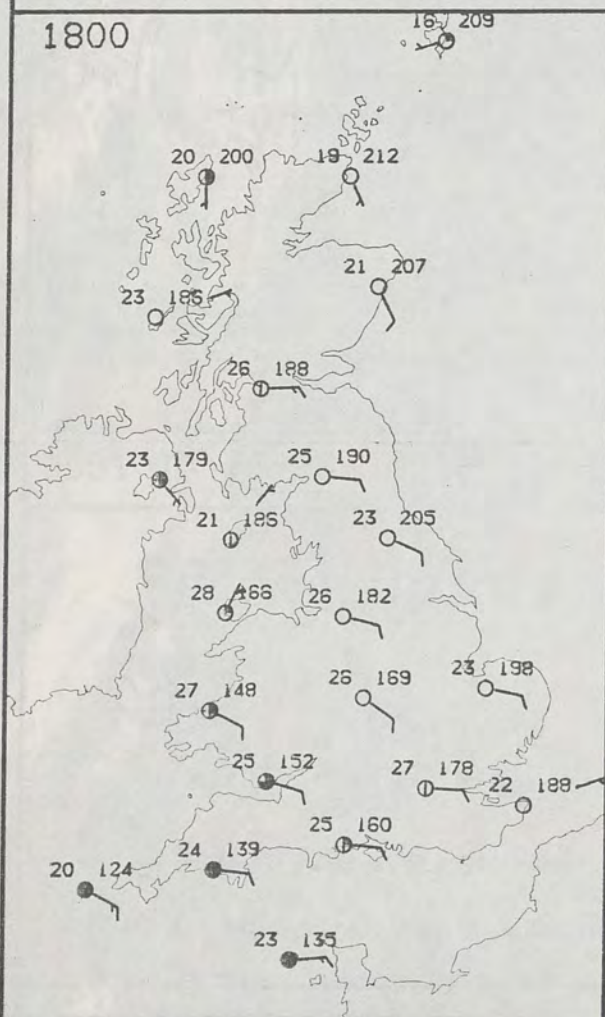

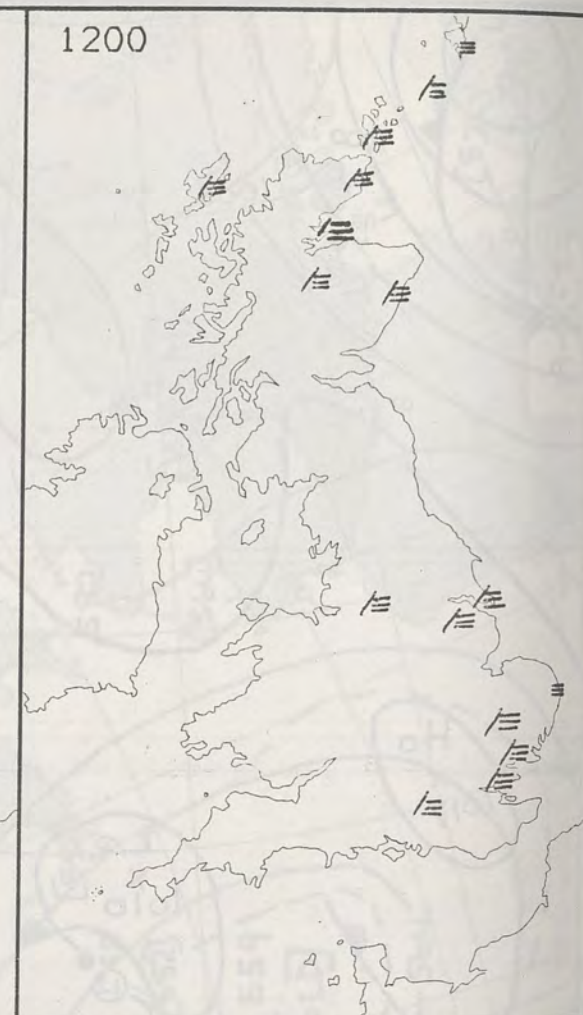

Cloud increased in Cornwall during the day and thunderstorms were reported from the Scilly Isles and Gwennap Head near Lands End during the evening.

There were some noteworthy diurnal temperature ranges countrywise. For example:-

	Min	Max
Aviemore (Highland)	8.1°C	28.4°C
Glasgow/Abbotsinch	9.6°C	29.2°C
Madley (Nr Hereford)	9.2°C	28.8°C
Bournemouth/Hurn	9.7°C	28.3°C

TUESDAY  
21 AUGUST 1984

SUMMARY  
OF  
BRITISH WEATHER

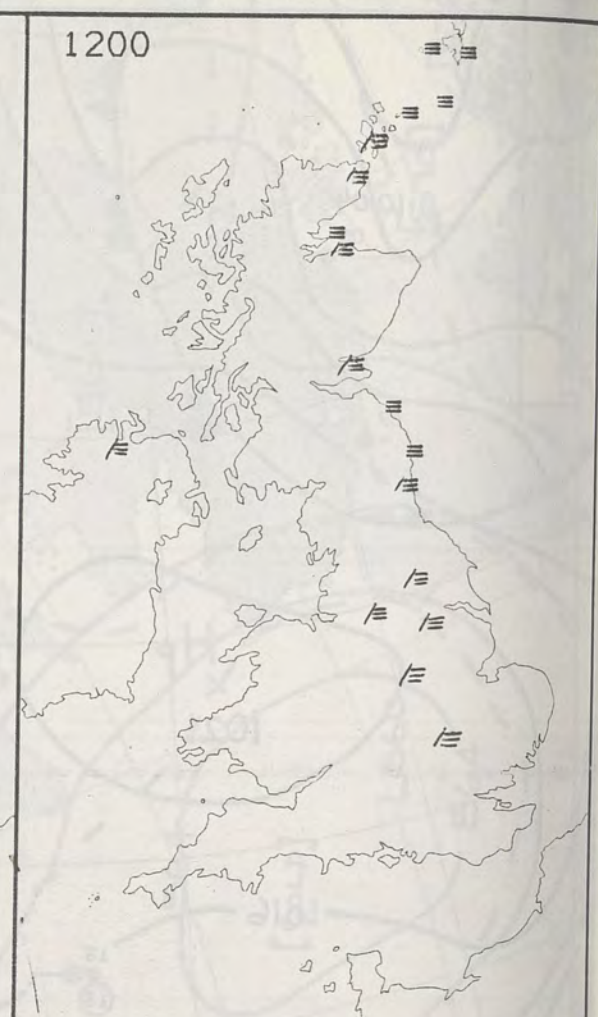

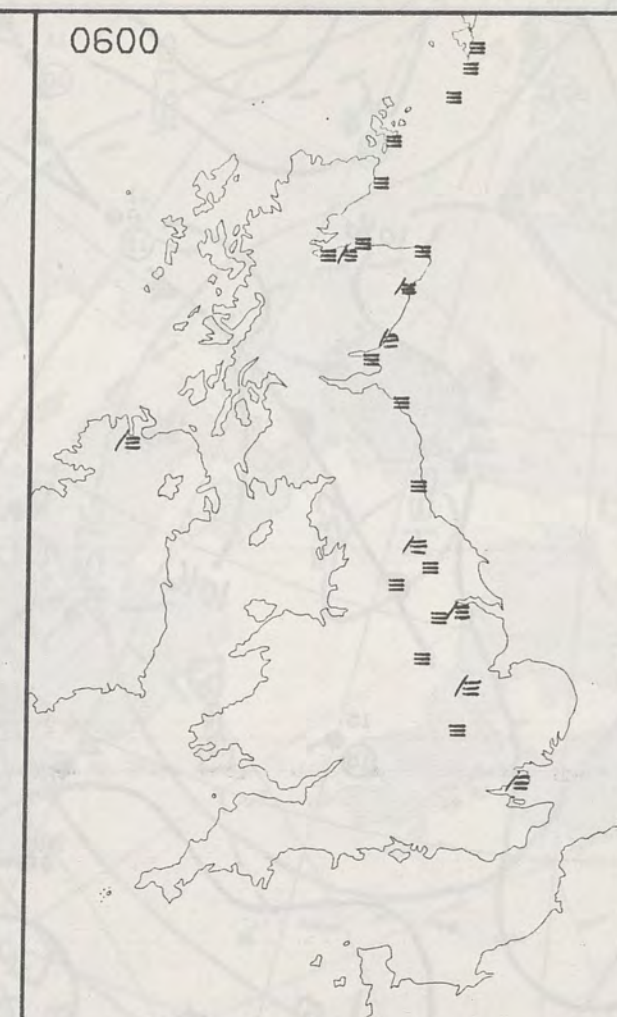

Most of the United Kingdom had a dry, sunny day after the clearance of early mist and fog patches. Near eastern coasts of Scotland and in the Shetland Isles it remained dull and misty for much of the day.

In Cornwall there was rain in places by dawn and during the day cloudy weather extended to much of southwest England, the Channel Islands and South Wales, bringing outbreaks of rain. The rain was heavy at times and there were several thunderstorms during the afternoon and evening, especially in the Channel Islands, Cornwall and Devon.

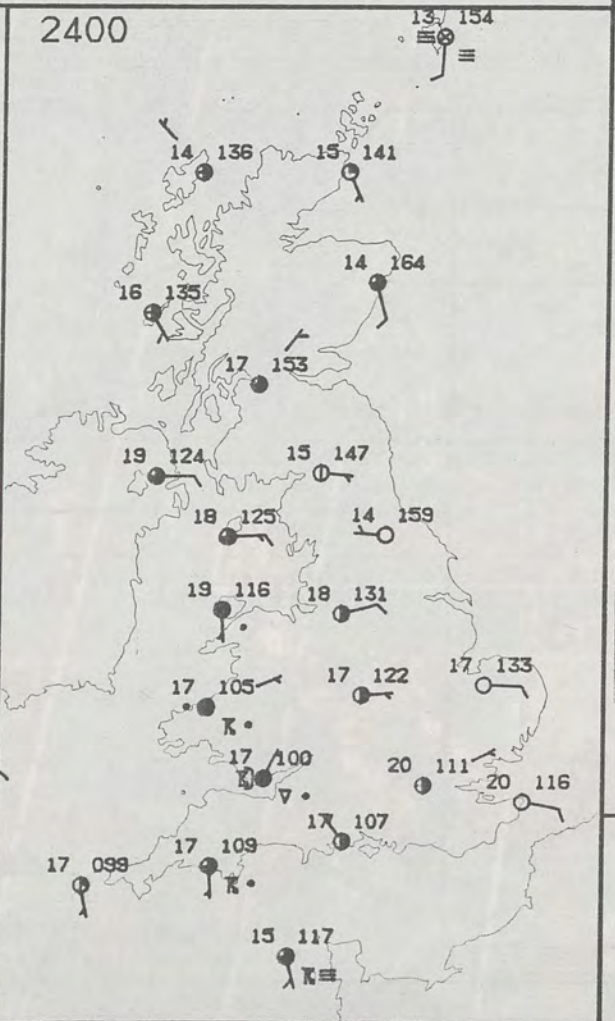

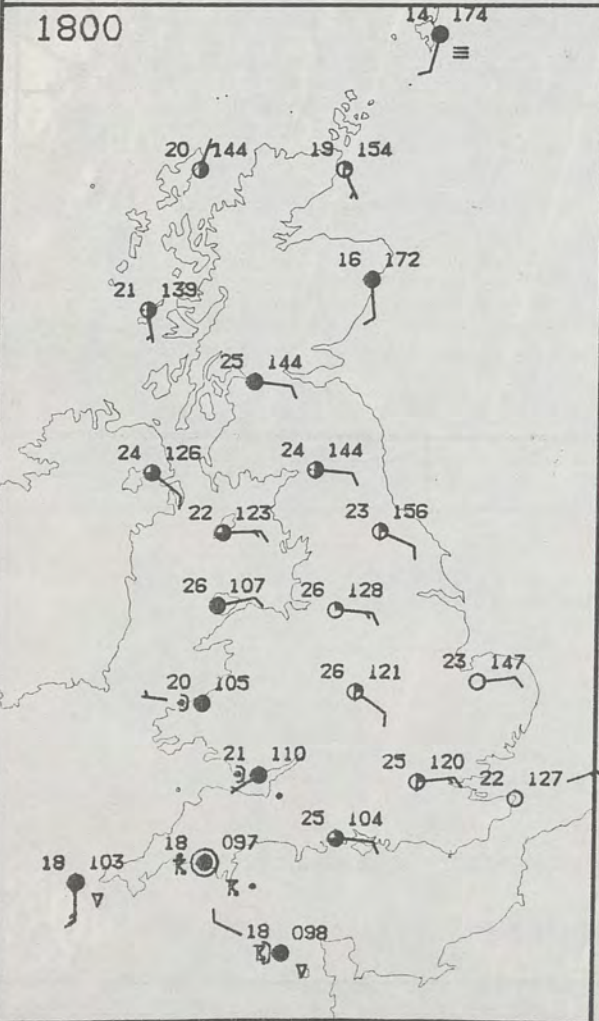

It was very hot in most regions but temperatures were near normal in Cornwall and along eastern coasts.

## PLOTTED SURFACE OBSERVATIONS

1800

2400

WEDNESDAY  
22 AUGUST 1984SUMMARY  
OF  
BRITISH WEATHER

Over much of southern England, Wales and the South Midlands it was a rather cloudy day with isolated showers and thunder. Most places remained dry, however, and in the Channel Islands, Cornwall, Devon and East Kent there were sunny periods.

In East Anglia, northern Britain and Northern Ireland it was a dry, sunny day in most places. In some counties of eastern England low cloud took much of the morning to clear, and on the Northumberland coast it remained dull and misty. In the extreme northwest and north of Scotland it was also rather cloudy. During the evening there were isolated thunderstorms in the North Midlands.

Scotland, Northern Ireland, northern and eastern England (away from eastern coasts) and East Anglia had a very warm or hot day. Remaining areas of the UK had temperatures in the warm category.

## PLOTTED SURFACE OBSERVATIONS

1800

2400

THURSDAY  
23 AUGUST 1984SUMMARY  
OF  
BRITISH WEATHER

Mist and fog was quite widespread over much of Britain by dawn. During the morning most of the fog cleared but it persisted near the east coast of Scotland and northeast England.

Over the Channel Islands there was some thundery rain during the early hours and this continued northwards into southwest England by dawn, dying out later.

Over central southern and south-east England, along with Wales, thundery showers developed by late afternoon and continued into the evening. For the remainder of England, Northern Ireland and most of Scotland, there was quite a lot of sunshine and only isolated showers.

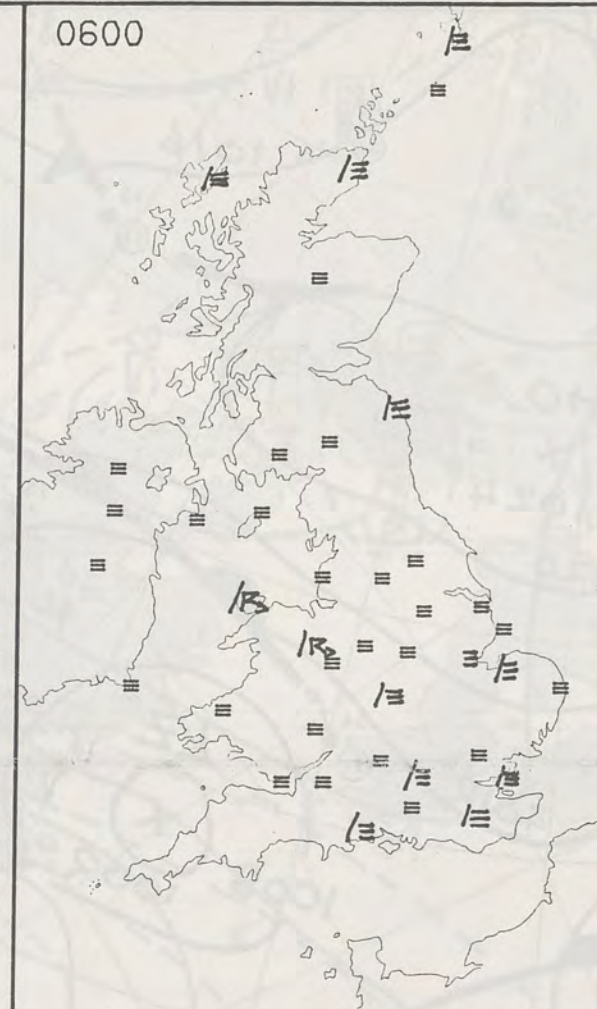

Northern Scotland along with Orkney and Shetland had a cloudy day with mist and fog patches and some light rain from time to time.

Temperatures over England and Wales were in the warm or very warm category although coasts of northeast England were nearer to normal. Northern Ireland and coasts of Scotland were near or rather above normal with inland areas of Scotland being very warm or hot.

FRIDAY  
24 AUGUST 1984

SUMMARY  
OF  
BRITISH WEATHER

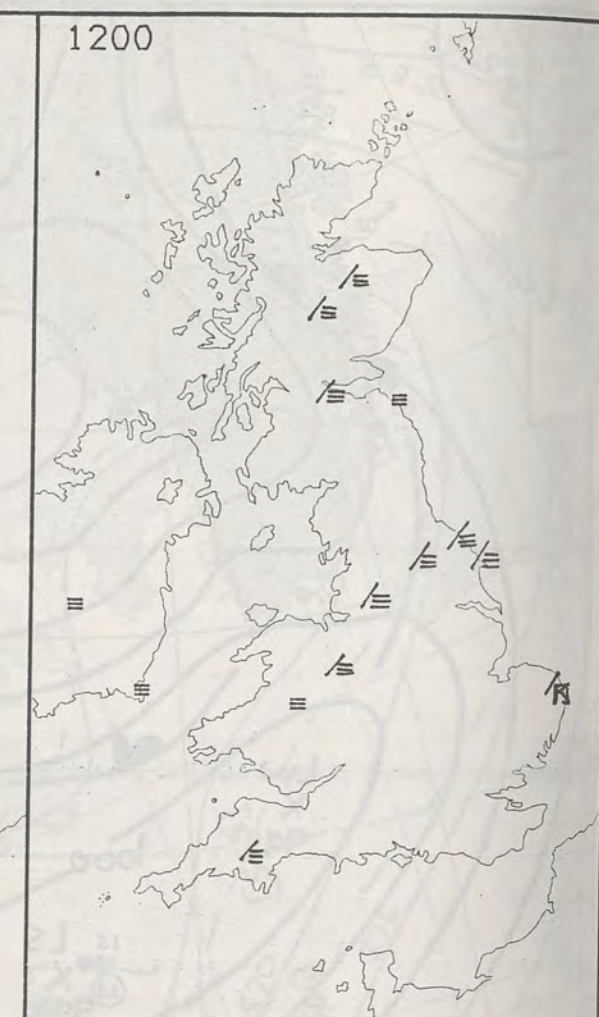

The eastern coasts of England remained dull and misty all day with some fog patches. Over the rest of England and Wales it was a dull and misty start with some fog over the Channel Islands and parts of southwest England. Scattered thundery showers at dawn later became more widespread, with thunder reported in a number of places. It stayed generally cloudy with only brief bright or sunny intervals.

Over Scotland and Northern Ireland it was a mostly dry day, with a good deal of sunshine over the west of Scotland and Northern Ireland. The north and east of Scotland was more cloudy, with coastal fog and drizzle at times. Later in the day drier air moving in from the north, cleared most of the cloud and mist, to give some sun in most eastern and northern parts of Scotland.

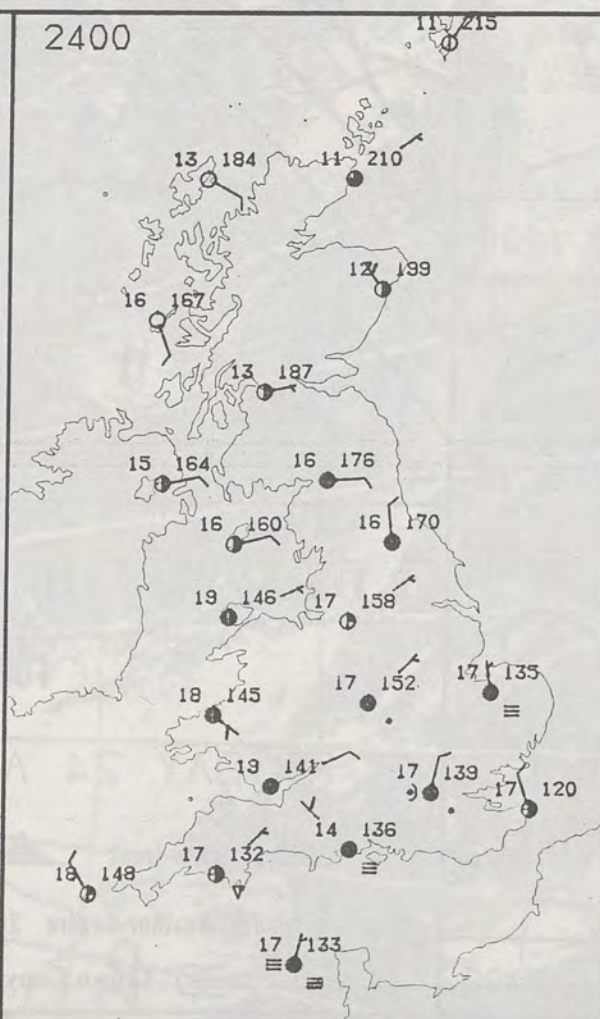

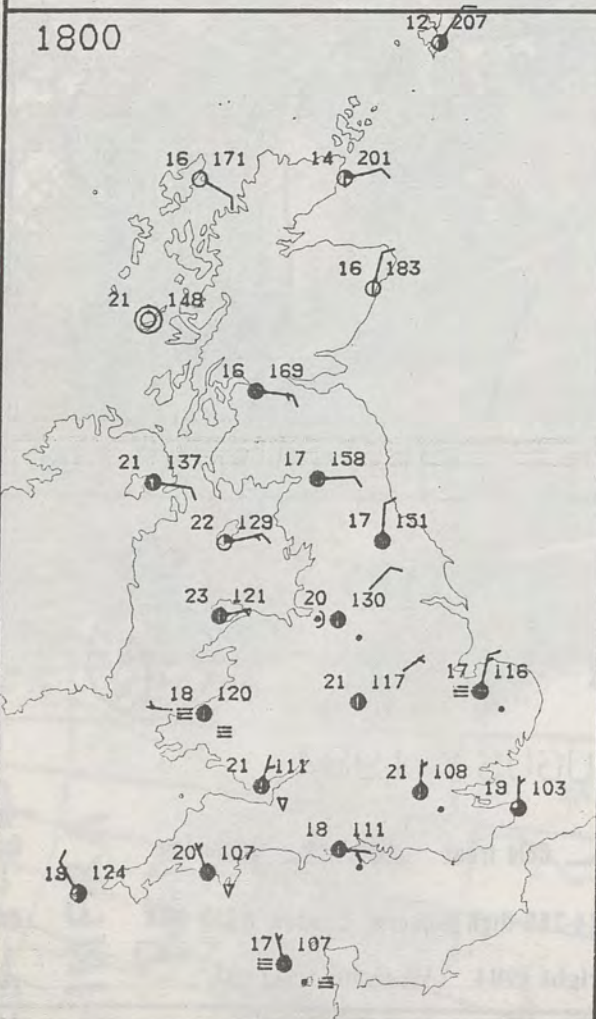

It was warm or very warm generally over England, Wales, Northern Ireland, western Scotland and the central Highlands. Northeast England and the remainder of Scotland had near normal temperatures.

SATURDAY  
25 AUGUST 1984

SUMMARY  
OF  
BRITISH WEATHER

It was another warm night in the south, though with a moderate northerly breeze over the eastern half of England; most of the southern half of England and Wales were cloudy and misty with a little rain in places. Many northern and central regions of the British Isles had a cooler night than recently with clear intervals.

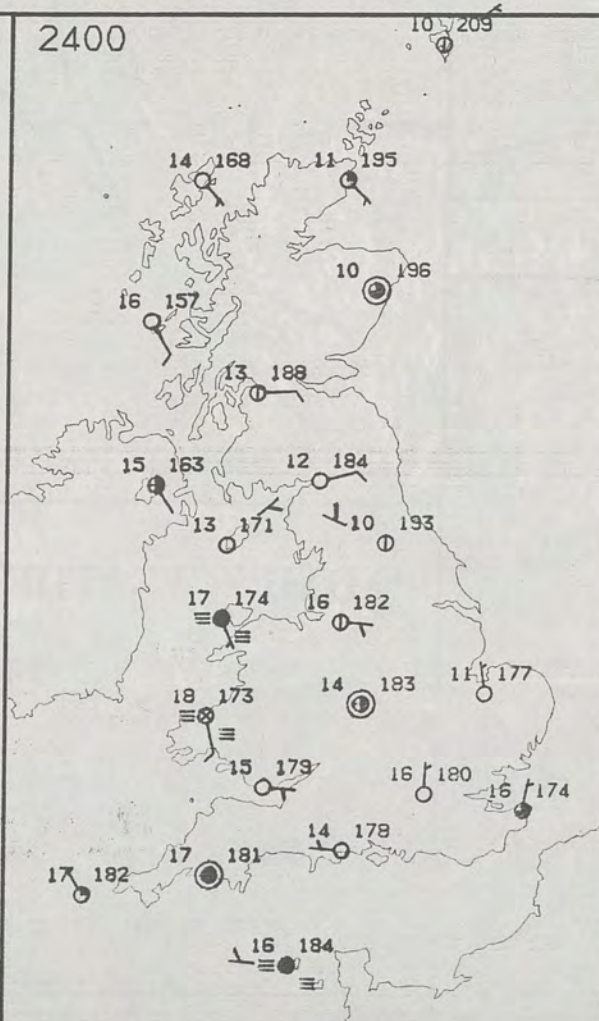

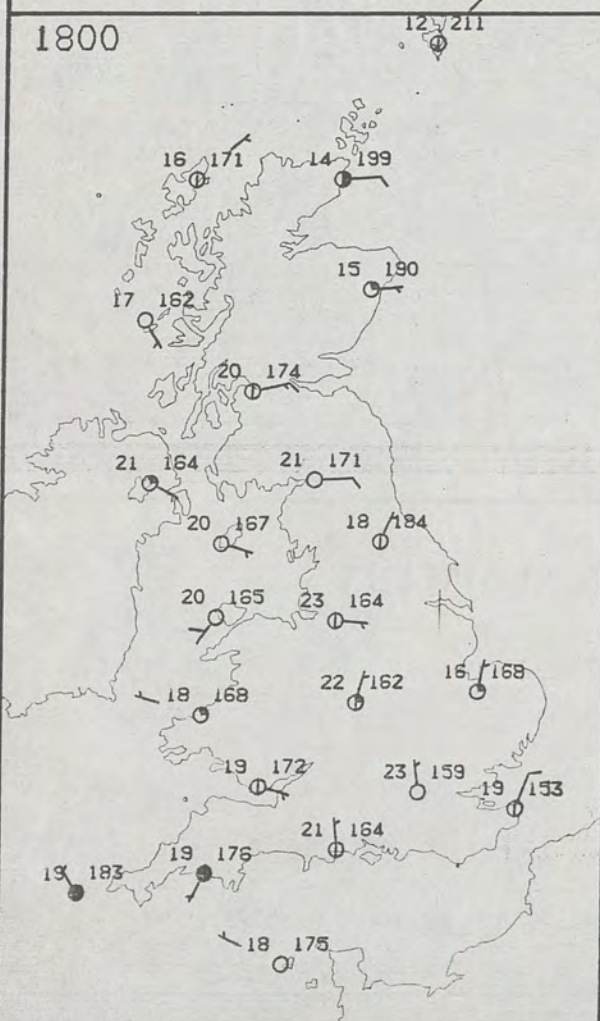

The day eventually became sunny and warm nearly everywhere, even very warm in places, though in some southern counties it took some time for the cloud to break, with much of Wiltshire, Avon, Somerset and Dorset having a cloudy day and near normal temperatures. North Norfolk, too, stayed quite cloudy, and most eastern coastal counties of the British Isles from Norfolk northwards were rather on the cool side.

One or two thunderstorms affected east Sussex in the late afternoon and early evening.

SUNDAY  
26 AUGUST 1984

# SUMMARY OF BRITISH WEATHER

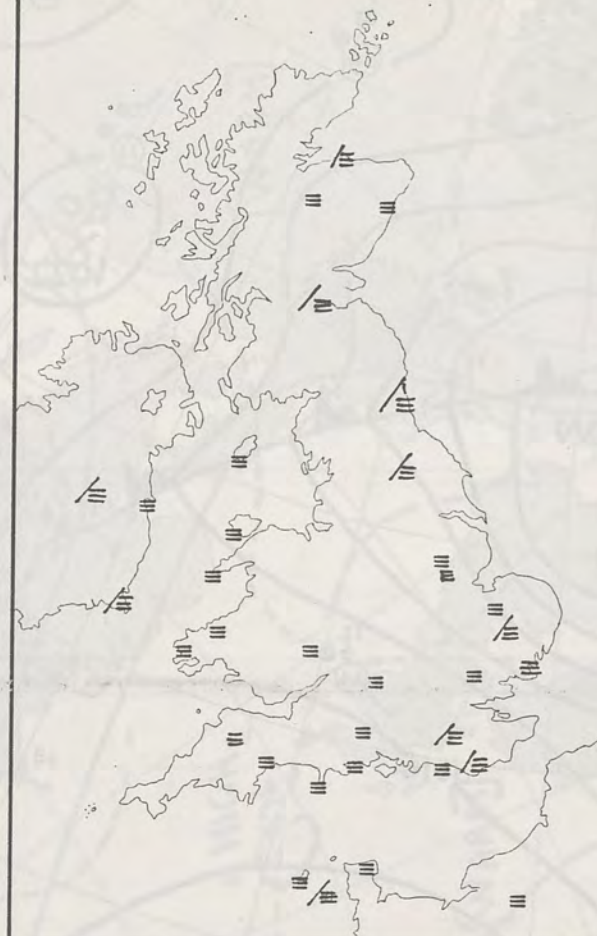

The night was dry everywhere and many places had clear skies. However, patchy fog and low cloud formed in various areas, clearing from most districts by mid-morning, although sea fog drifted onto some southern and western coasts of England, Wales and southwest Scotland during the day.

Much of the country had a sunny day, but cloudier weather spread slowly northeast across Northern Ireland, the Western Isles of Scotland, Wales, western and southern England. There were a few showery outbreaks of rain, with thunderstorms over the moors near Exeter and locally over the Welsh mountains in the late afternoon. During the evening, cloudier weather with rain here and there spread further east across western and northern Scotland.

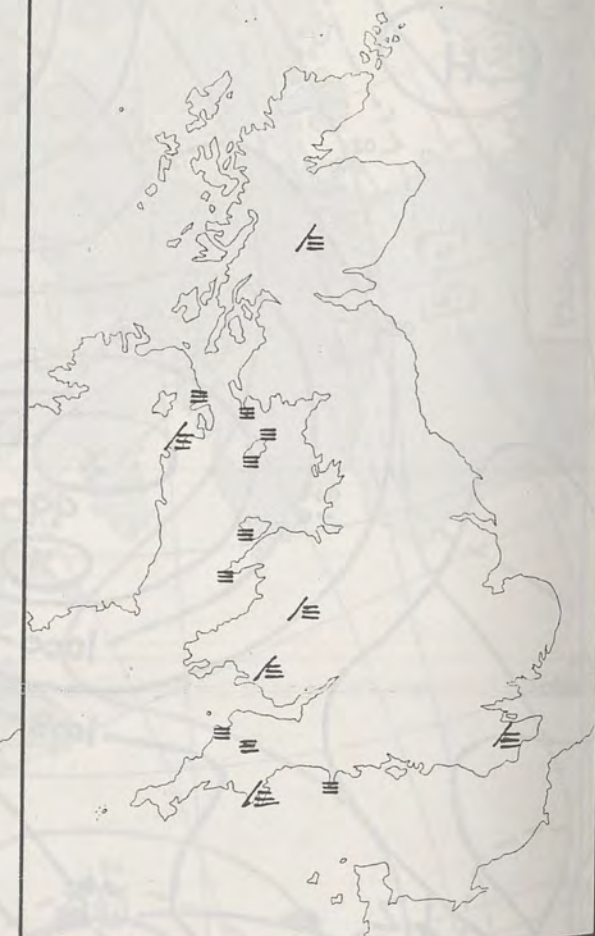

It was warm or very warm in most places, however, the Northern Isles, east coastal areas of Scotland and England, also the south and southeast coasts of England had near normal temperatures.

MONDAY  
27 AUGUST 1984

SUMMARY  
OF  
BRITISH WEATHER

Most of Britain had a mild night, the exceptions being eastern Scotland and East Anglia.

Apart from some light rain over parts of western and northern Scotland, and a shower or two over Cornwall, it was a dry night.

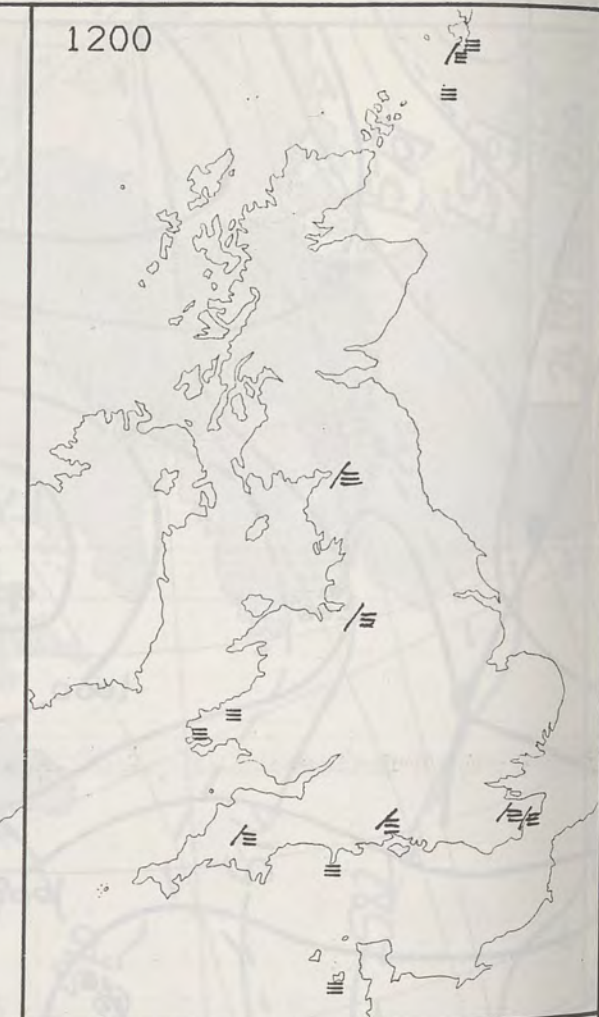

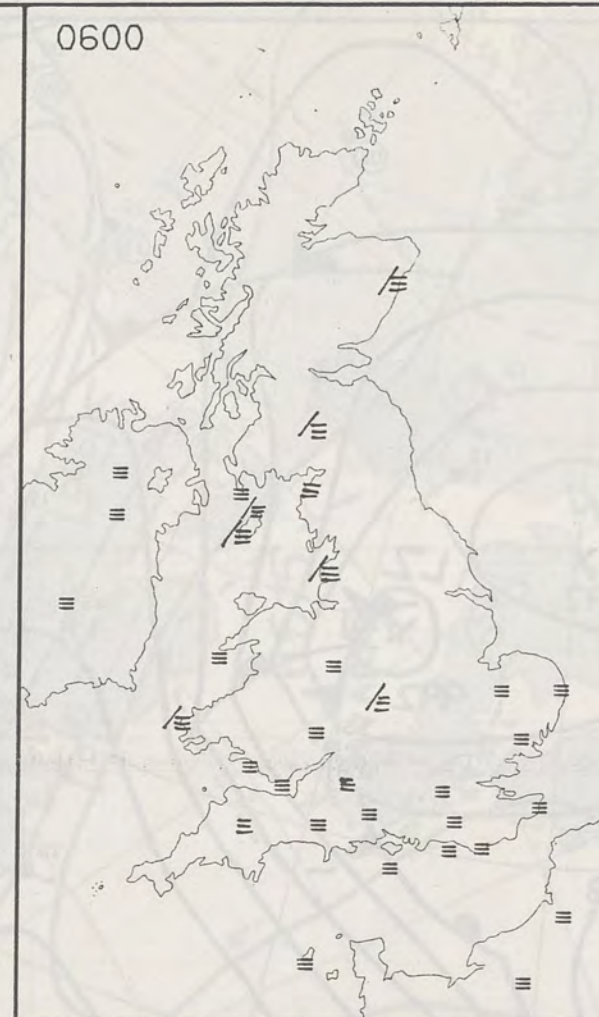

Many western coastal districts were foggy through much of the night, and inland fog formed over much of central and southern England, to disperse during the morning. On southern and western coasts though, the fog persisted through much of the day.

Whilst the north of Scotland stayed mostly cloudy, the rest of the UK had some sunny periods. Many inland districts of England, southern and central Scotland became very warm, most other areas of the UK were on the warm side.

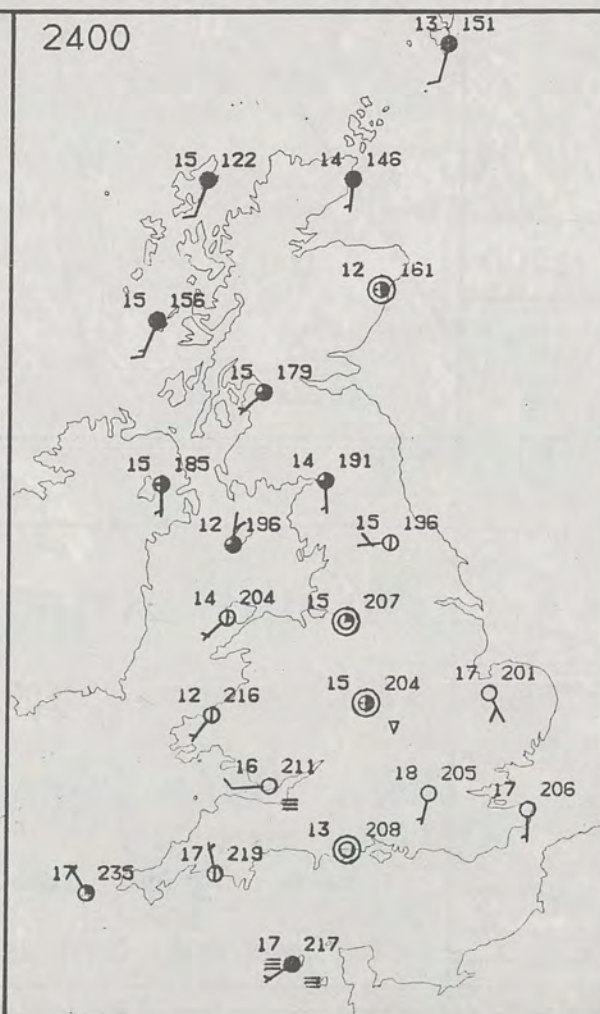

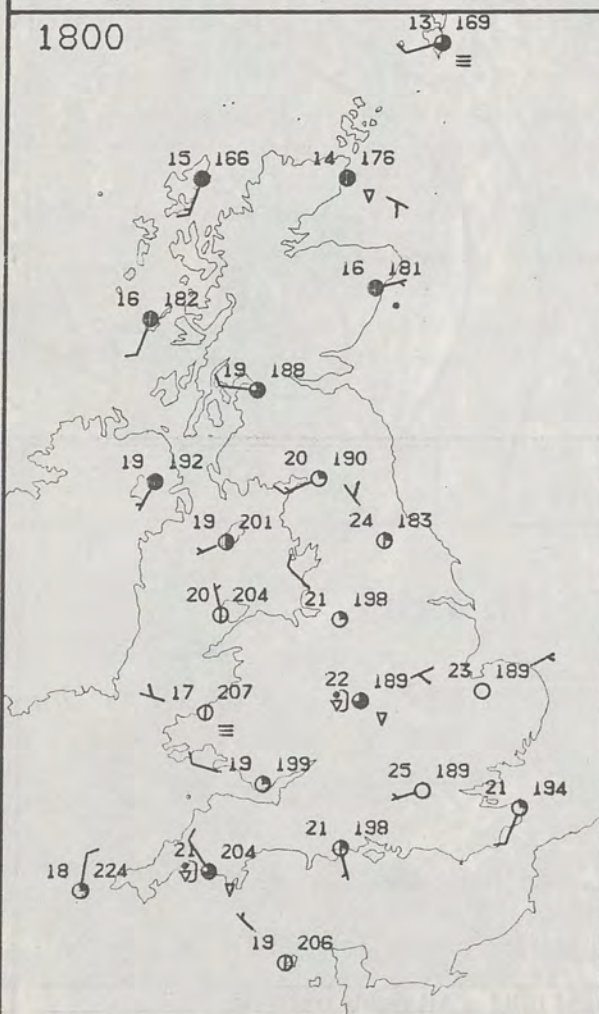

Apart from a few light showers, it was a generally dry day, too.

TUESDAY  
28 AUGUST 1984SUMMARY  
OF  
BRITISH WEATHER

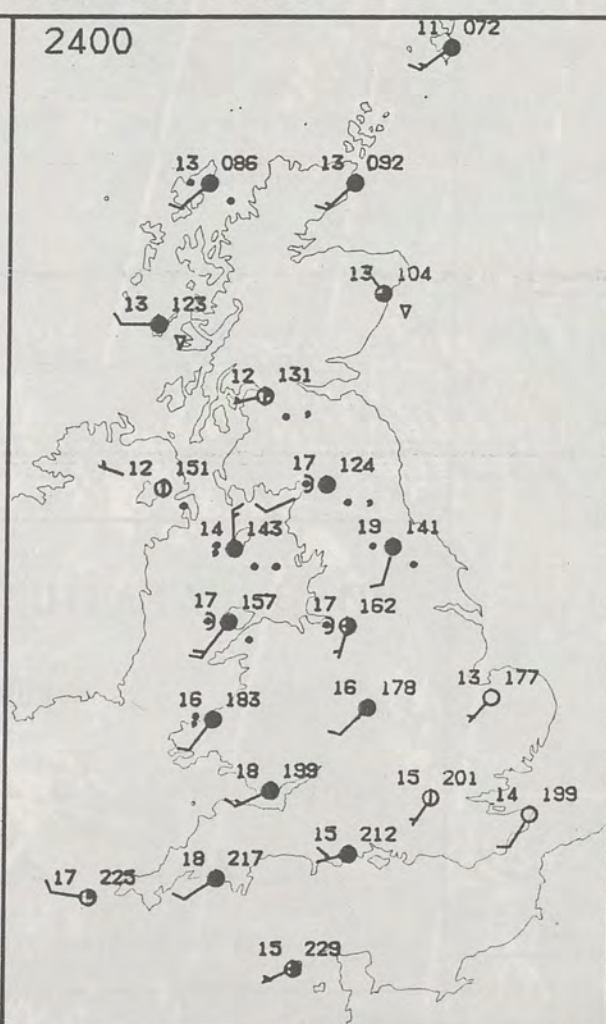

Rain ahead of an advancing trough of low pressure reached northwest Scotland soon after midnight, and made steady southeasterly progress to North Wales and most of northern England by the end of the day. Although mostly light, there were some outbreaks of heavy rain close to the trough. Brighter, showery weather followed into northwest Scotland around midday, and the change to drier weather had reached most of southern Scotland and Northern Ireland at days end.

## PLOTTED SURFACE OBSERVATIONS

1800

2400

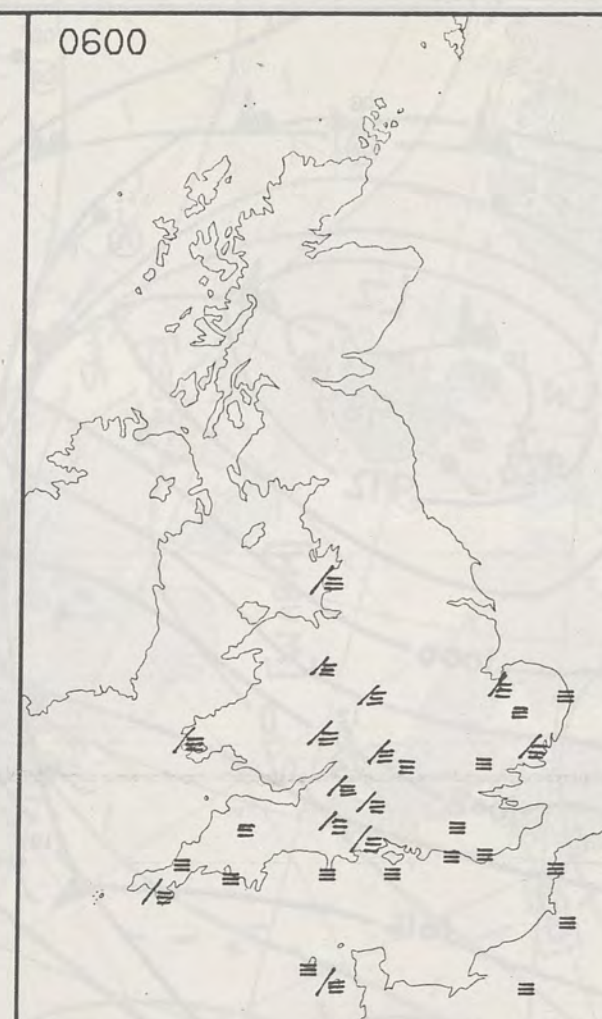

Elsewhere most of England and Wales had a dry day with a good deal of sunshine after the clearance of fog and low cloud from southern England in the morning. Along the Channel coast though, some of the fog clung on until the afternoon.

It was another warm or very warm day over most of England and eastern Scotland. The north and west of Scotland and Northern Ireland had near normal temperatures.

PLOTTED SURFACE OBSERVATIONS

WEDNESDAY  
29 AUGUST 1984

SUMMARY  
OF  
BRITISH WEATHER

England and Wales had some rain overnight but Wales, the Midlands and northern England became dry by morning. Northern Ireland and much of Scotland were dry, however, there were some showers in Scotland.

Most places in Scotland had showers during the day. The Western and Northern Isles had more persistent and at times heavy rain.

Northern Ireland was rather cloudy, with a little rain in a few places.

Northern England, the Midlands and Wales were mainly dry and sunny but in South Wales there was some rain during the evening.

East Anglia and southern England had a cloudy morning with rain and drizzle here and there. Most places had a fairly sunny afternoon but parts of southwest England stayed cloudy with some rain and drizzle.

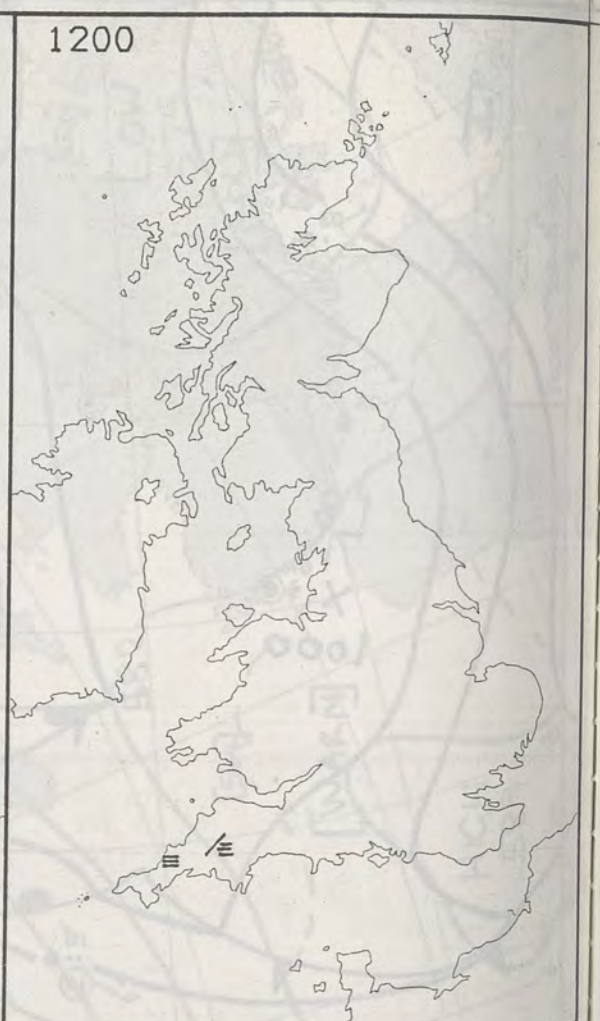

Temperatures were close to or above normal in most places, and in central southern and southeast England, the Midlands, East Anglia and eastern Scotland it was very warm.

THURSDAY  
30 AUGUST 1984

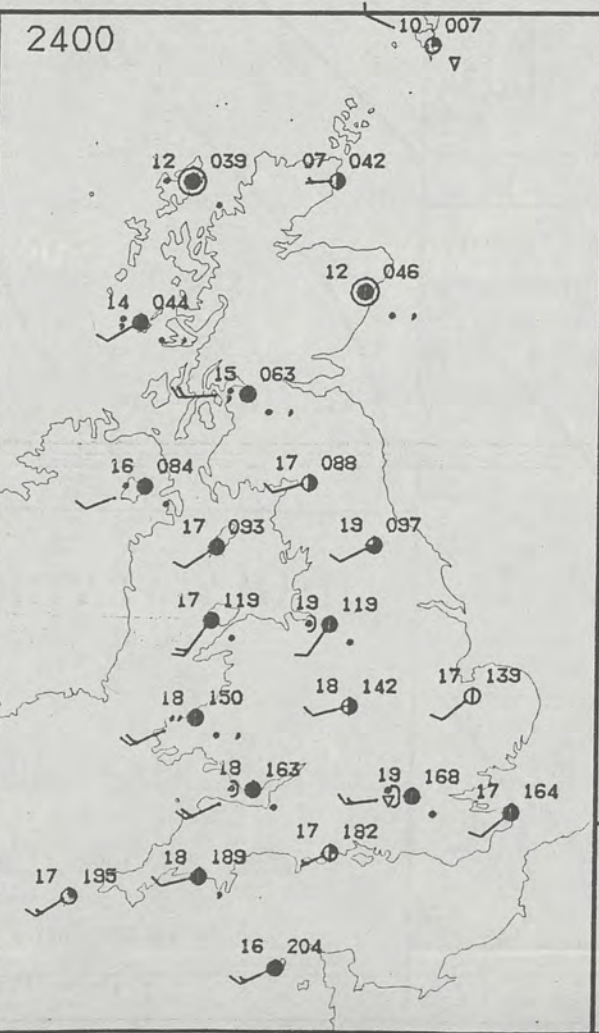

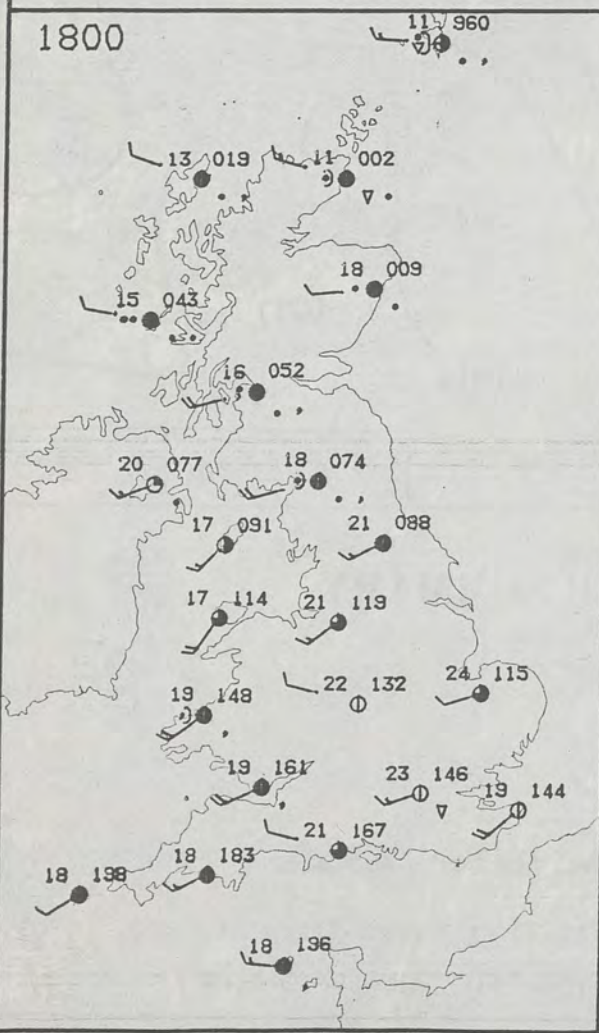

**SUMMARY  
OF  
BRITISH WEATHER**

Overnight northern and western Scotland had rain, but the east and south stayed dry. Northern Ireland was dry, but over England and Wales there was rain and drizzle in many places. Most places in Scotland had rain during the day, some of it heavy, and in Shetland there was a thunderstorm in the evening.

Northern Ireland was mainly cloudy and there was a little light rain here and there.

**PLOTTED SURFACE OBSERVATIONS**

Over England and Wales there was some rain and drizzle in the morning, but in most places the weather had brightened up by early afternoon and there was some sunshine. In East Anglia and southeast England there were a few light showers, while southwest England and the south and west of Wales had some light rain and drizzle.

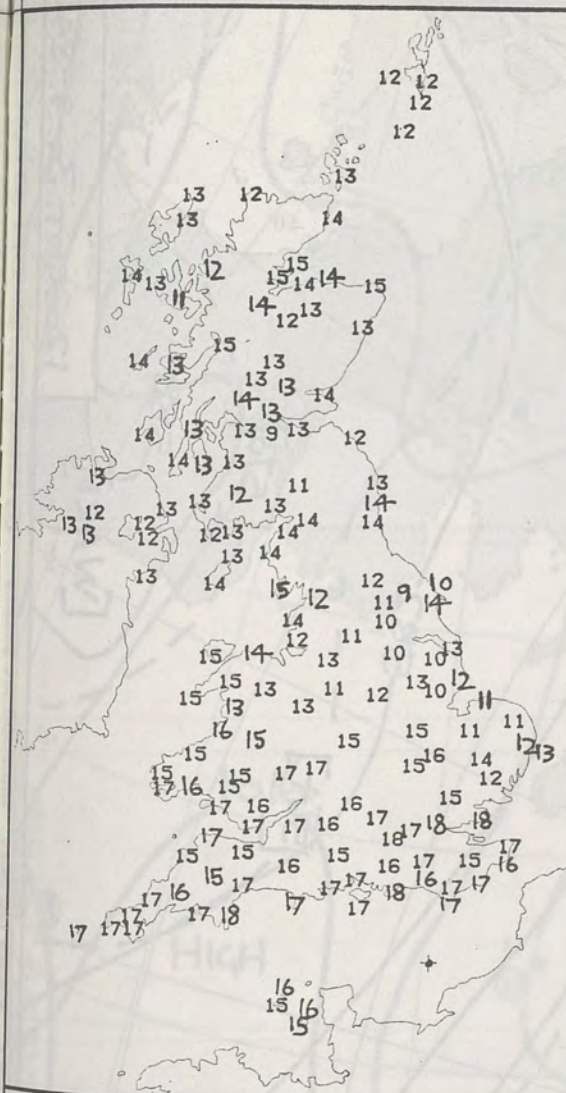

Temperatures were generally above normal; it was very warm in eastern Scotland and Northern Ireland and hot in East Anglia, the Midlands, central southern and southeast England. The Northern Isles, southwest England and southwest Wales, however, had normal temperatures.

FRIDAY  
31 AUGUST 1984

SUMMARY  
OF  
BRITISH WEATHER

Much of southern England, South Wales and East Anglia had a cloudy start with light rain in places. Later the cloud broke-up to give sunny spells. Southwest England was generally cloudy throughout the day, with some spots of rain. Further north over England, Wales and Northern Ireland there were sunny intervals for most of the day but for Cumbria cloud was rather persistent with rain from time to time.

The Western and Northern Isles of Scotland were bright for much of the day with one or two showers over Orkney and Shetland and later this brighter cooler weather spread south into Highland and Grampian regions. For the rest of mainland Scotland it was a mainly dull day with rain a times.

The Borders became drier later with some bright intervals.

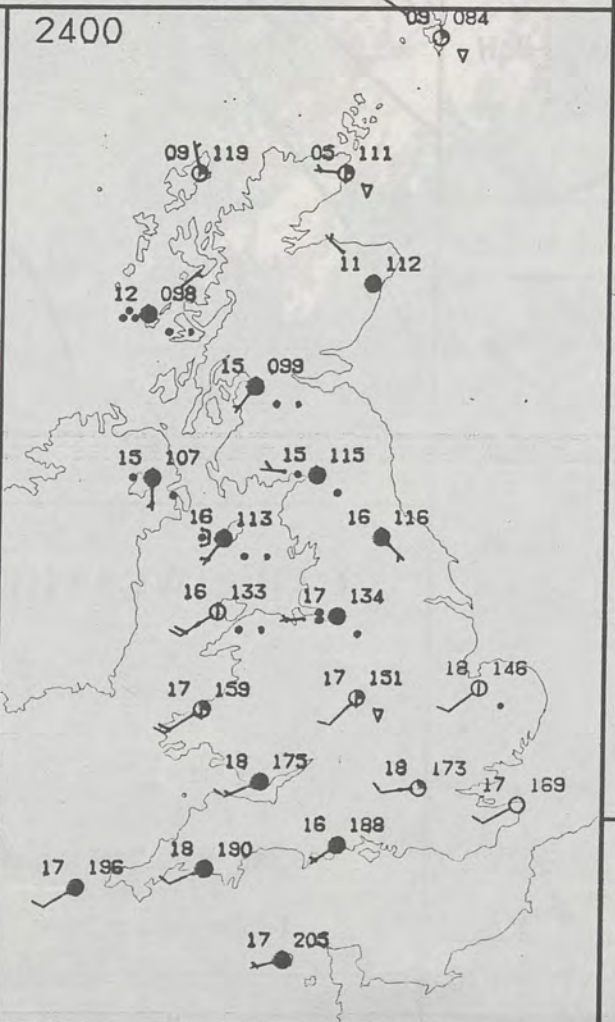

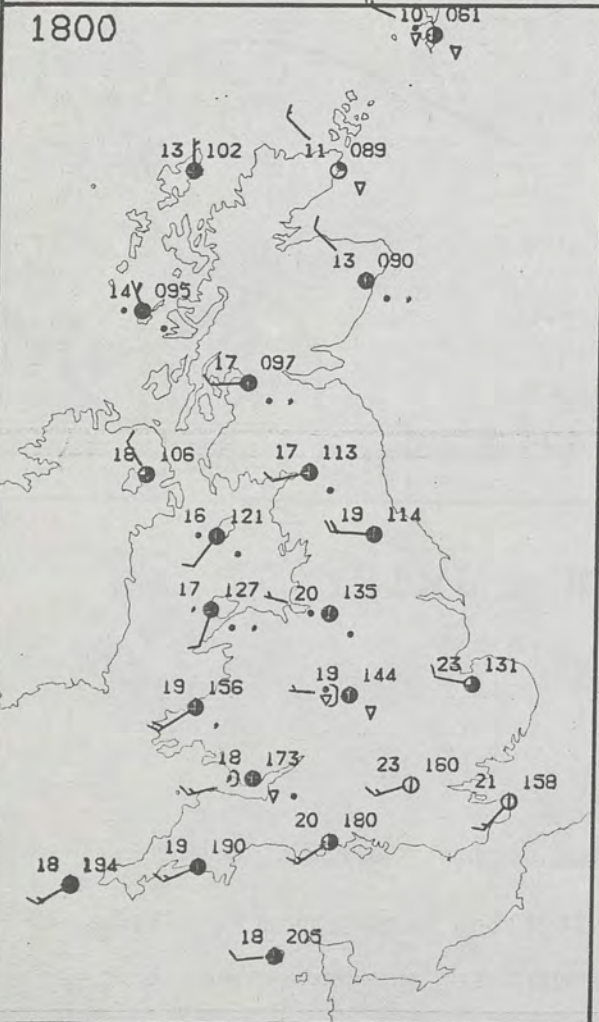

Northern Ireland, and much of England and Wales were very warm even hot in places in East Anglia and southeast England. Southwest England and much of Scotland had normal temperatures, however some places in east and southeast Scotland were warm.
