DEFRA (Ref: MO43) For Weather Forecast Planning Issued on Tuesday, 30 May 2023 at 05:42 Local time

#### Air Quality Forecast for the UK

Issued by the Met Office

Today: Light winds, coupled with fine and sunny weather has the potential to allow air pollution levels to build to Moderate across parts of Northern Ireland and Scotland, with the greatest risk through The Central Belt. Otherwise mainly Low conditions are expected, with the breezier conditions further south helping to disperse any pollutants.

Tomorrow: Very similar conditions are expected Wednesday, with isolated pockets of Moderate air pollution possible across Scotland, most likely through The Central Belt. Otherwise Low levels expected.

Outlook: Little change, with mainly Low pollution levels expected. Isolated pockets of Moderate remain possible however, with a slightly increased risk of occurring across southern England.
