

Forecast For The United Kingdom  
Issued by Met Office Exeter  
at 1945 on Tuesday 01 May 2007

++ Valid for broadcast at 2159

Here is the forecast for the United Kingdom for daytime tomorrow:  
Many eastern and some central areas will start rather grey and misty. However, this will burn back to North Sea coasts, and then most places will be dry with long sunny periods and become warm. However, it will again be rather windy for southern and southwestern areas.

Outlook for Thursday and Friday:

It will remain dry and there will be plenty of sunshine once mist and low cloud across central and eastern areas has burned back to North Sea coasts. It will remain warm or very warm, but cloudier North Sea coasts will be cooler. Brisk winds in the south will ease.
