PLOTTED SURFACE OBSERVATIONS

FRIDAY
1 MAY 1987

**SUMMARY
OF
BRITISH WEATHER**

Most places had rain or drizzle overnight, with some heavy rain in Scotland and Wales and snow on the Scottish mountains. Before daybreak Northern Ireland and much of Scotland were drier and clearer.

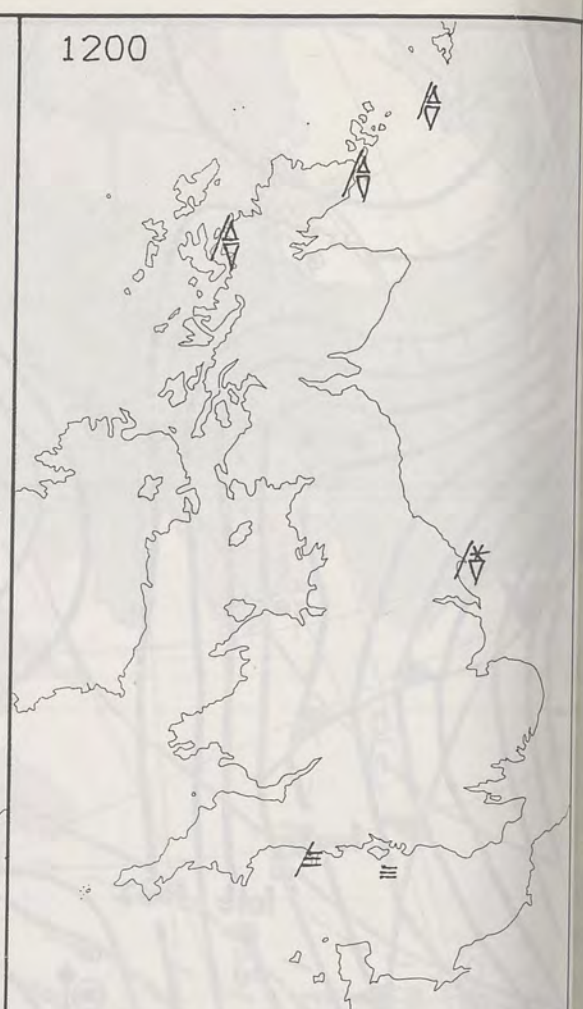

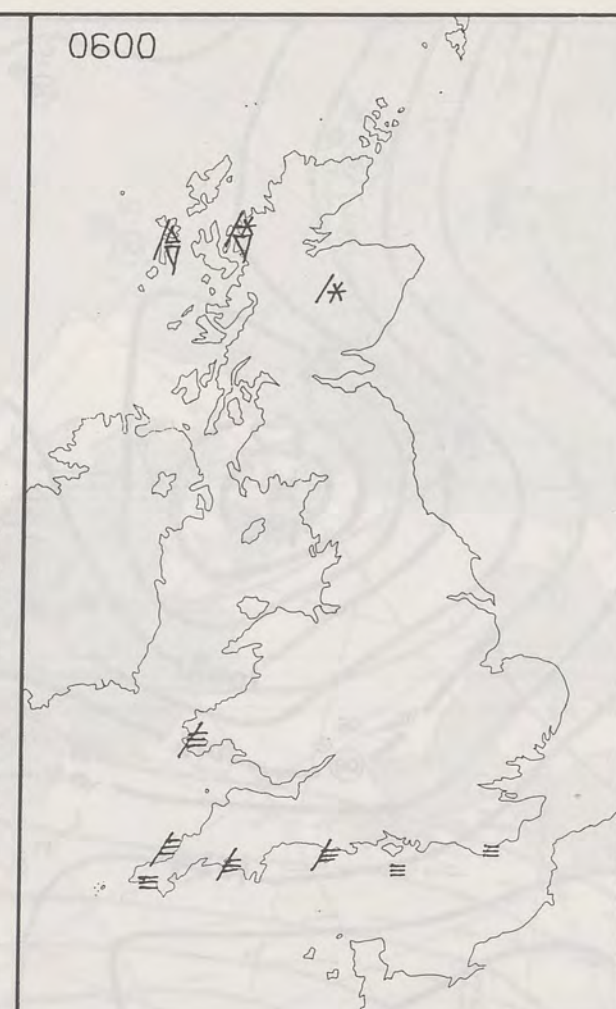

During the day there was a lot of dry, sunny weather in Scotland and Northern Ireland, but there were showers, most frequent and heaviest in the evening.

Over northern England and North Wales the rain cleared away during the morning and the weather brightened up with some sunshine. Many central and southern parts of England and South Wales had rain in the afternoon, although it was late on before the rain reached all of southeast England. By the end of the evening it was dry over England and Wales.

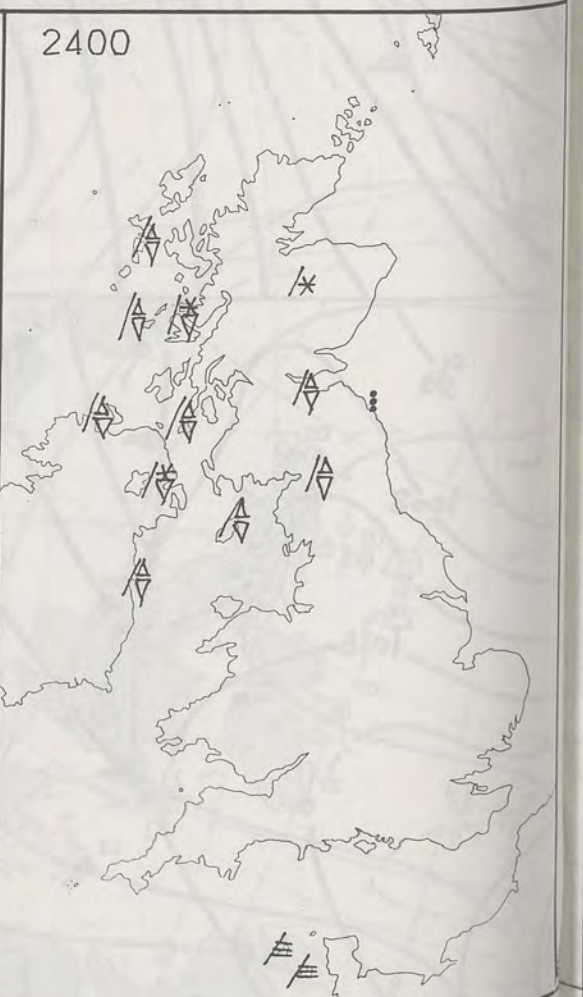

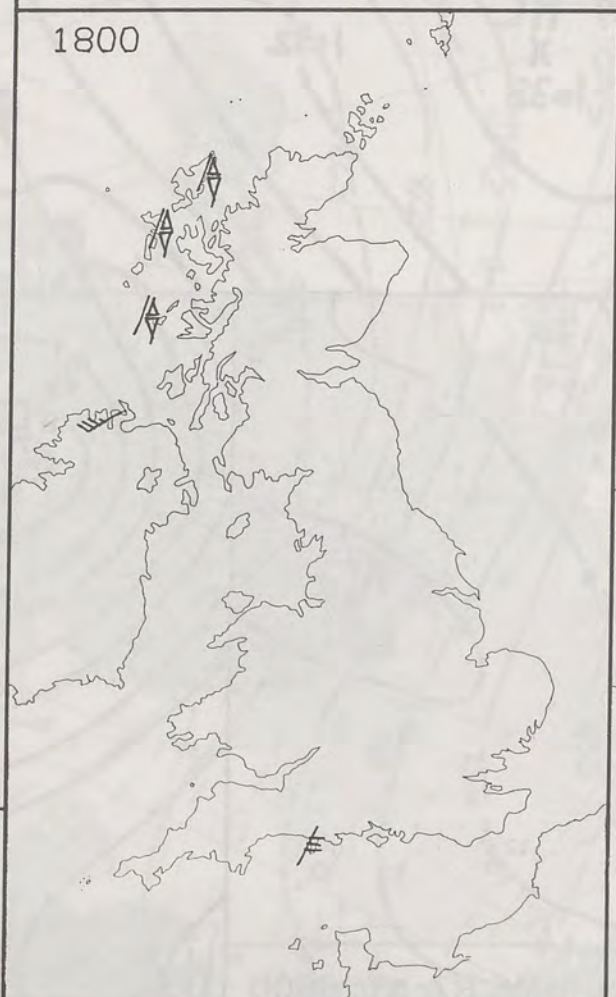

Much of Britain had temperatures close to or a little below normal, but it was still rather warm in parts of East Anglia and southern England.

SUMMARY
OF
BRITISH WEATHER

Scotland, northern England and Northern Ireland had showers overnight, falling as hail, sleet and snow as well as rain. It was a cold night and several places in Scotland were frosty.

Wales, central and southern England were mainly dry and clear, but there were a few showers here and there.

During the day Scotland, Northern Ireland, northern England and the Midlands had some sunshine, but there was a lot of cloud and frequent showers of hail, sleet and snow, the snow showers mainly on hills. It was a cold, windy day, the wind touching gale force on coasts and hills.

Over Wales, East Anglia and southern England there was a lot of dry, sunny weather, with most places dry until late afternoon, but then there were heavy showers with some hail, and a few thunderstorms.

It was rather cold generally and quite windy.

SUNDAY
3 MAY 1987

SUMMARY OF BRITISH WEATHER

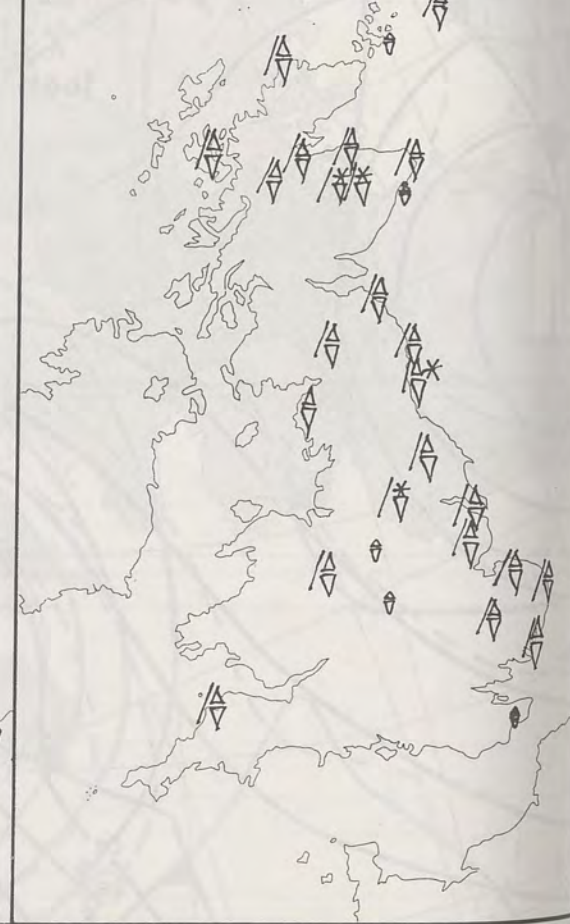

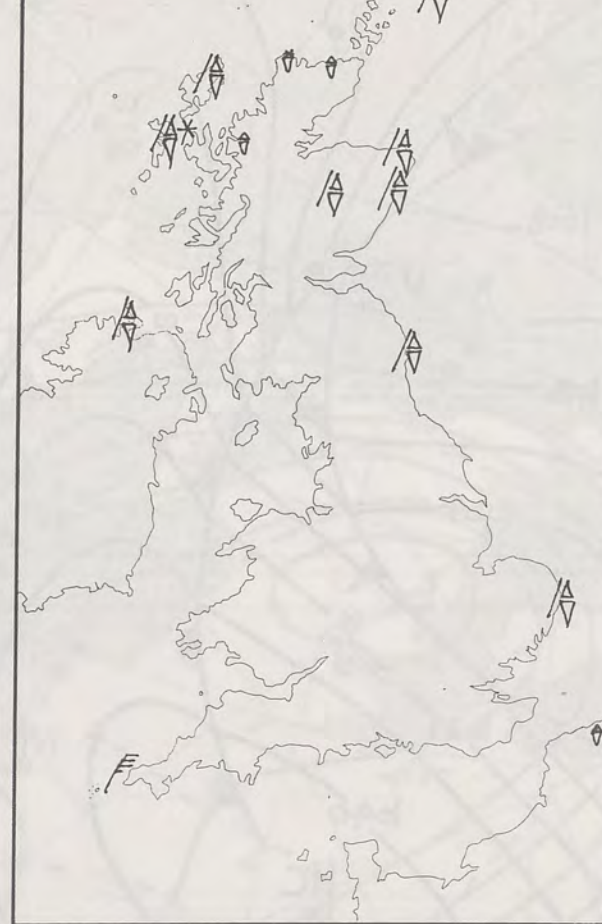

A cold northerly airstream brought a number of showers well inland overnight with eastern England and Northern Ireland probably seeing the most frequent showers. Gales persisted in northeast Scotland.

Showers were frequent over much of the country during the day with hail and thunder quite common and snow over northern hills and the Northern Isles. Western Scotland and Northern Ireland became mostly dry by afternoon but increasingly cloudy. England, Wales and southern Scotland had good sunny periods.

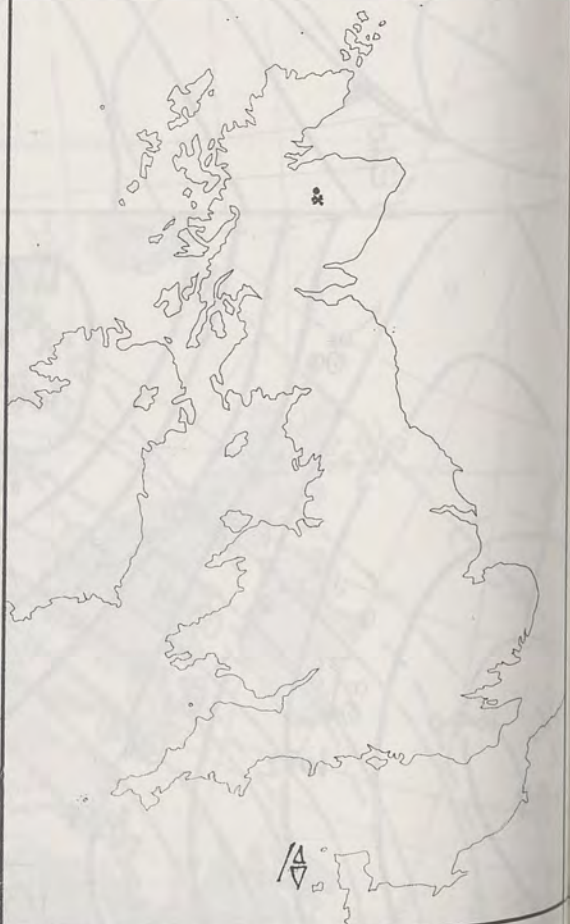

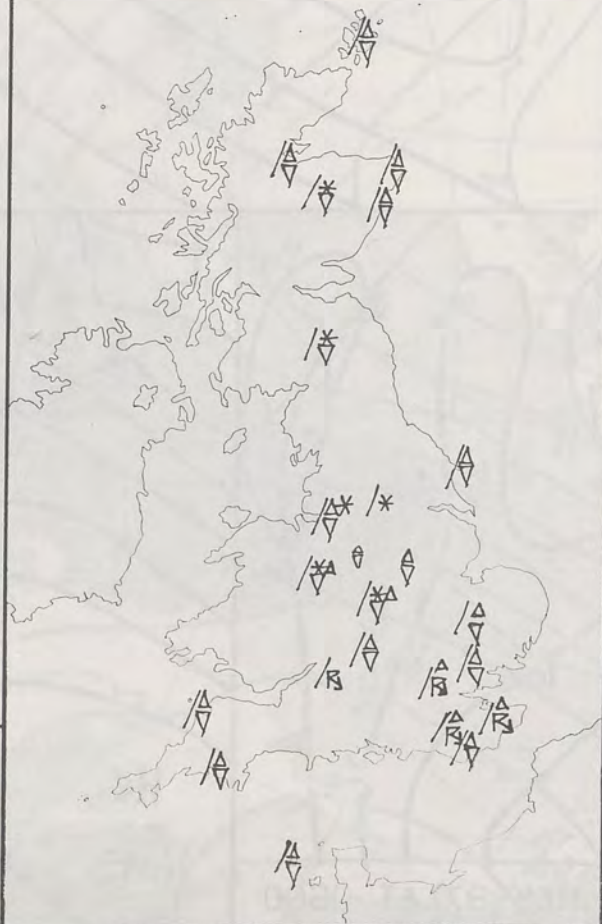

It was a cold day for early May generally and made to feel even colder in the strong and gusty northerly wind.

MONDAY
4 MAY 1987

SUMMARY OF BRITISH WEATHER

Much of England and Wales had a dry, clear night but the strong northerly wind continued to bring showers across East Anglia and the extreme southeast. Under clear skies it was a cold night with a widespread ground frost and a touch of air frost in central and northern parts.

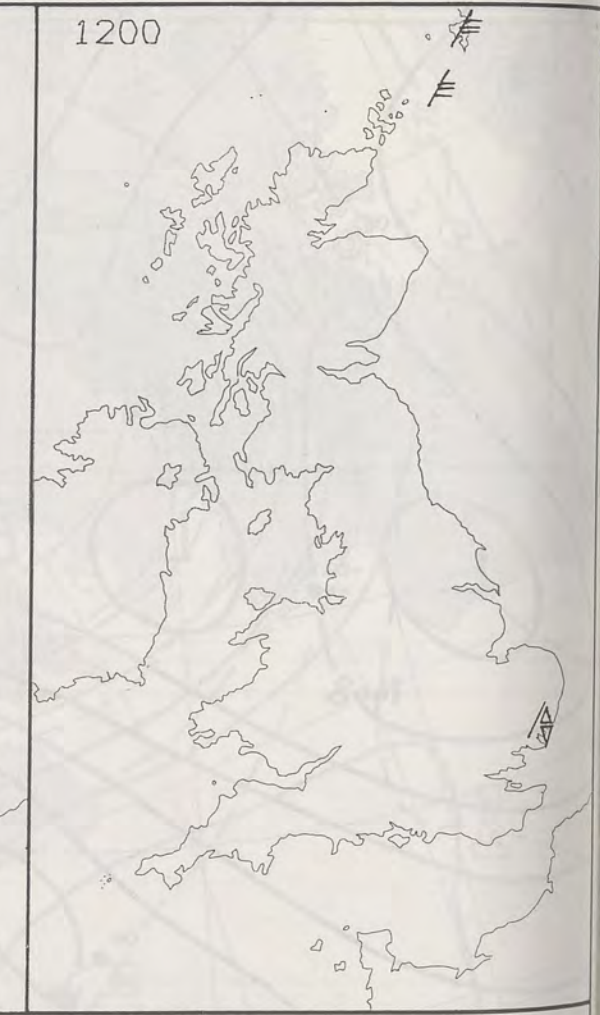

Over northern Britain only the south of Scotland stayed clear of cloud but there was a moderate frost at Eskdalemuir. Over the rest of Scotland and Northern Ireland cloud was thick enough to give some rain here and there, the heaviest and most persistent being in the northwest.

During the day the cloud extended south into northern and western parts of England and Wales but it remained dry. Brighter skies followed the rain further north, especially to the east of high ground. The showers in the southeast died out by midday. There was a good deal of sunshine in southern and eastern districts of Britain.

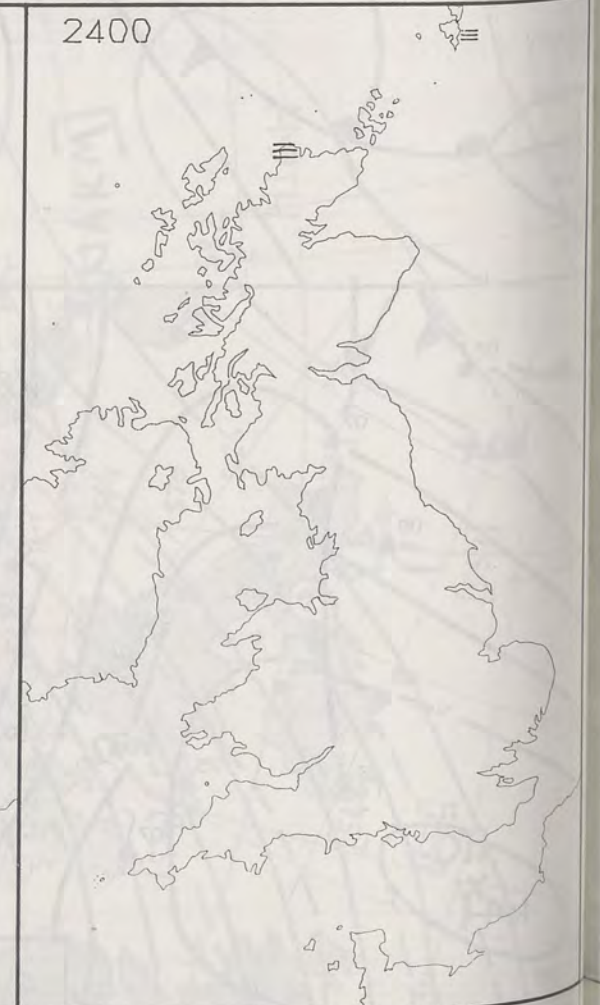

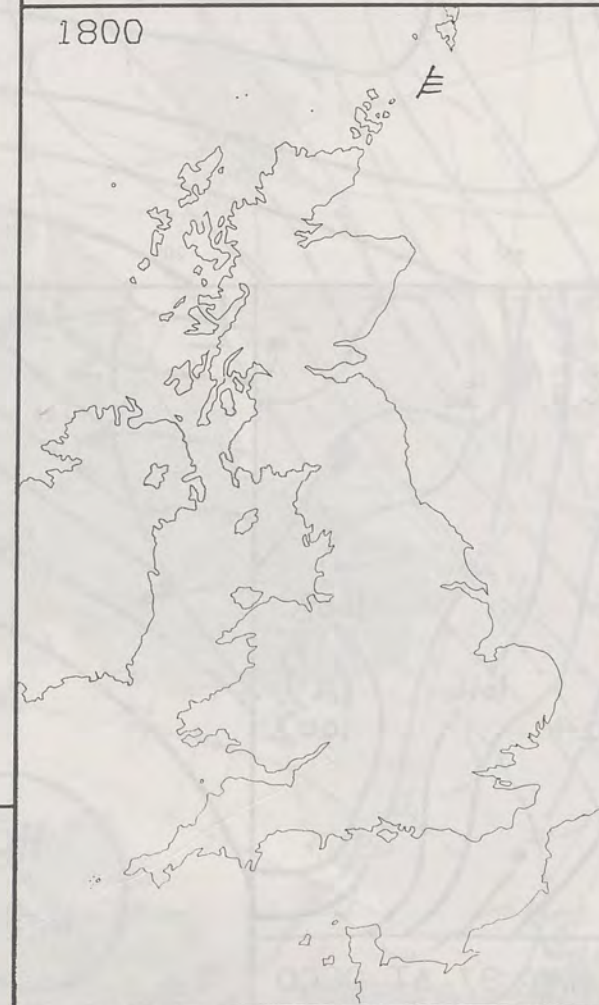

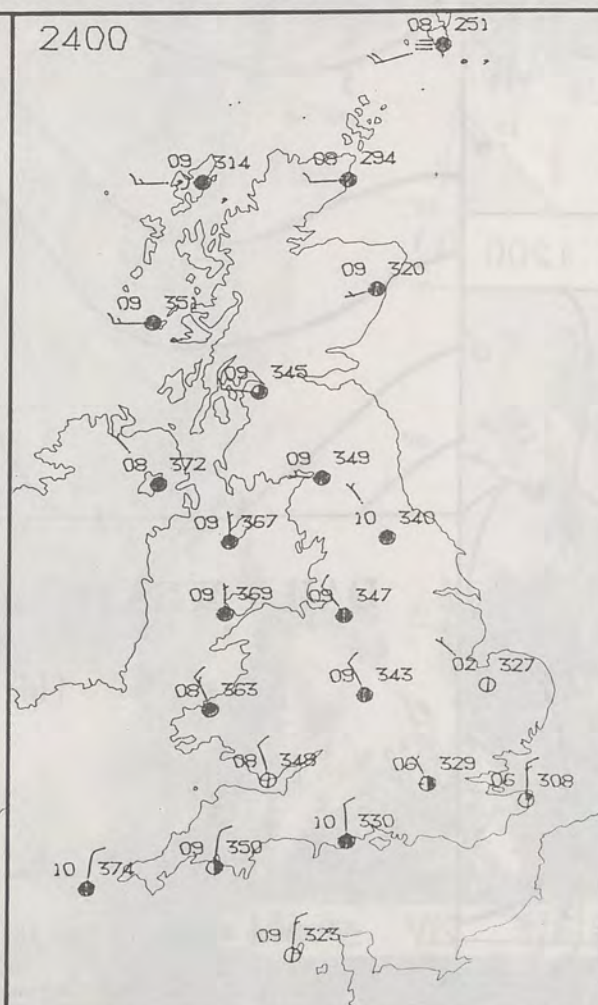

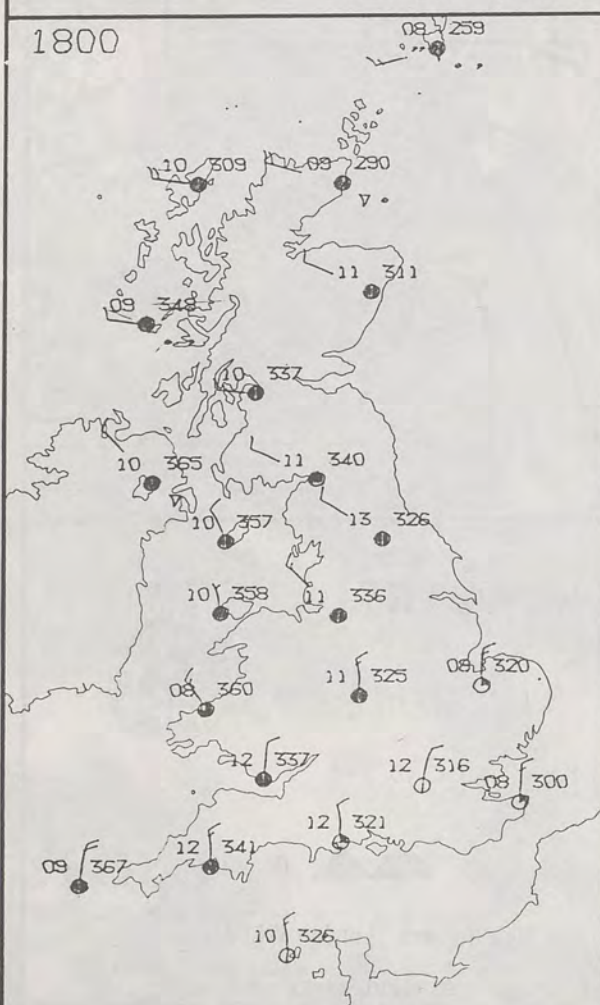

Although many places had a rather cold or cold day, in the central parts of Britain, southeast Scotland and northeast England temperatures were up to normal.

TUESDAY
5 MAY 1987

SUMMARY OF BRITISH WEATHER

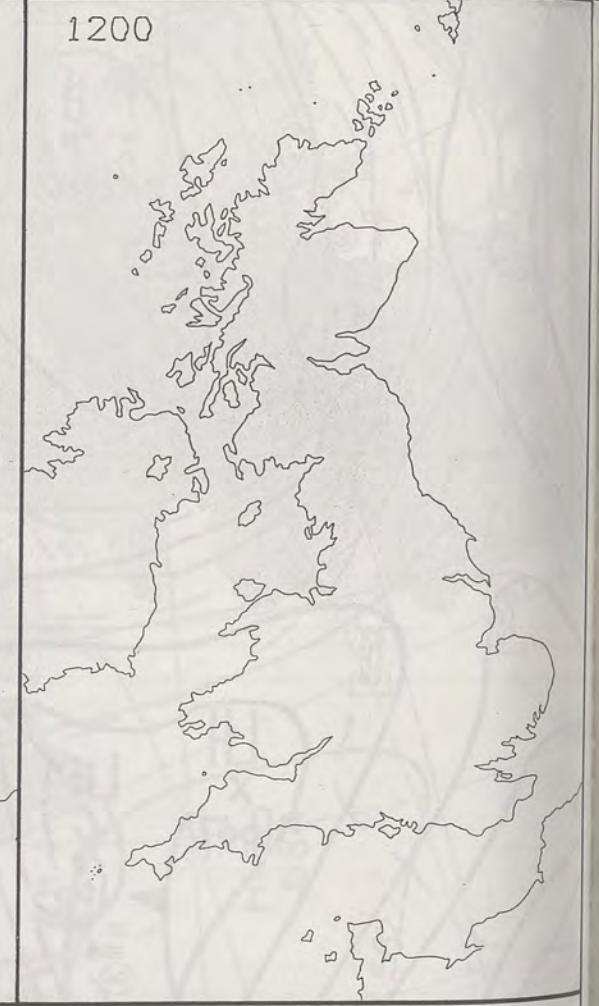

Most of the British Isles was dry throughout, though northern Scotland had some mostly light drizzle, rain or showers, with patchy coastal fog.

There was generally a lot of cloud across the country, but its distribution was variable, resulting in some places having a clear night with a touch of frost, others a cloudy, mild night.

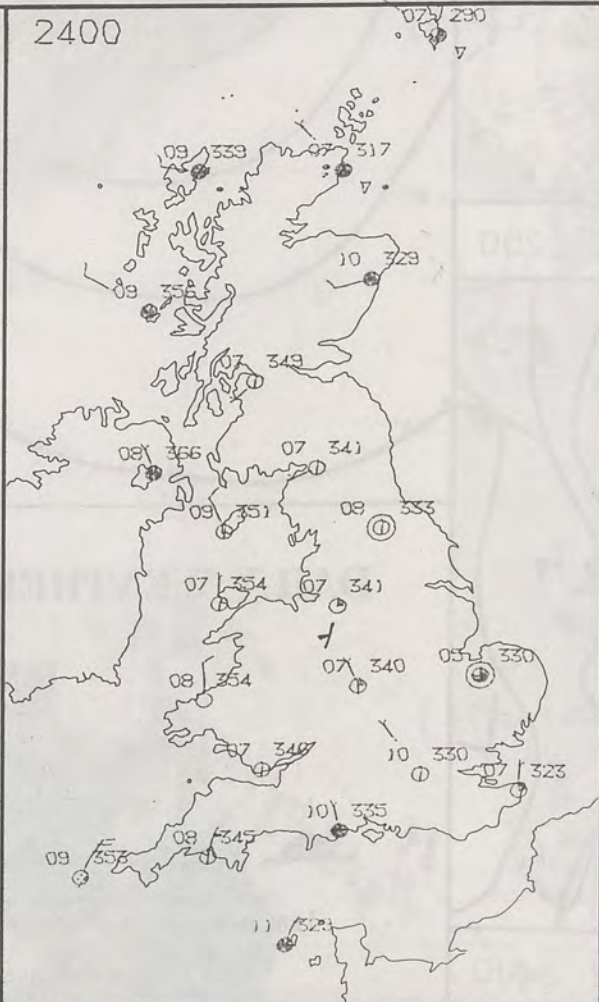

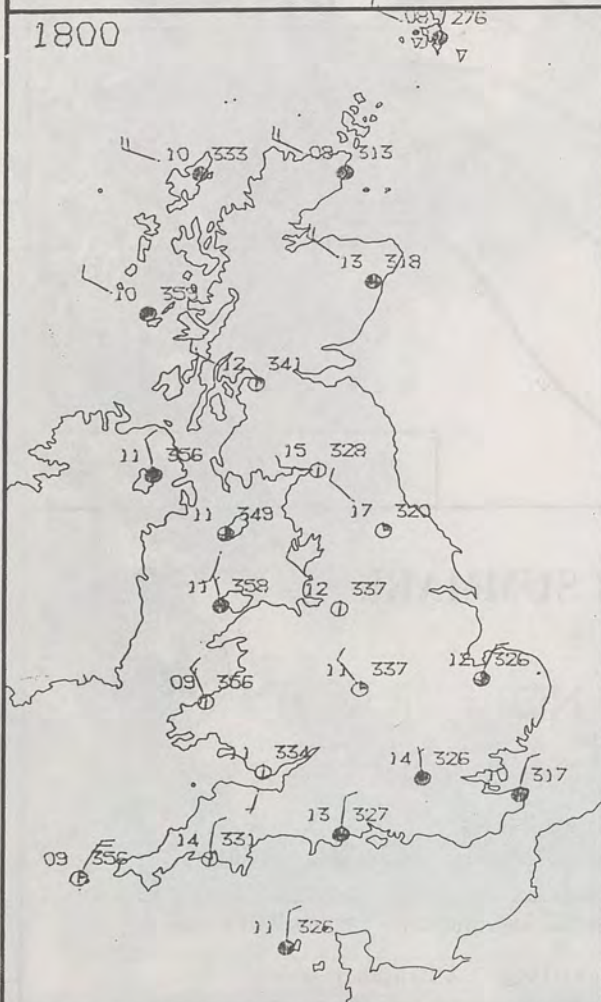

During the day, the sunnier areas of southeast Scotland and north-east England became rather warm, even warm locally, whilst temperatures stayed near or even a little below normal in the cloudy districts. Winds were light occasionally moderate over England and Wales and Northern Ireland mainly from the north-west, while Scotland had mostly moderate to fresh winds from the westnorthwest.

2400

WEDNESDAY
6 MAY 1987SUMMARY
OF
BRITISH WEATHER

It was dry virtually everywhere. An area of cloud over western and northern Scotland moved southeast near the east coast of England during the early hours, and then moved west over central and eastern England during the day, after a sunny start in many places here.

The western counties of England together with Wales, Northern Ireland and much of southern Scotland had a mostly sunny day.

There were areas of low cloud at first in the western Midlands, and these were rather slow to clear.

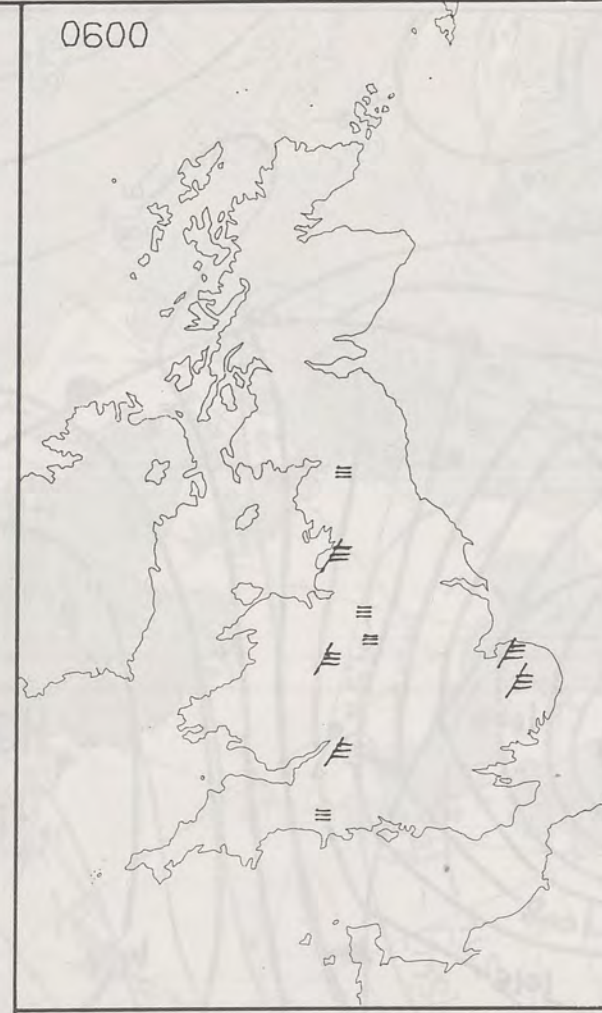

The cloud sheet spreading from the east married itself with a mass of smoke and other pollution over the north Midlands, notably around Nottingham, in the middle of the day. However, rather cleaner, clearer air came in from the North Sea over eastern England during the afternoon, with the cloud breaking from the northeast in the evening.

The sunnier areas were mostly rather warm or warm, except for a few coasts. The cloudier areas were mostly a little on the chilly side.

THURSDAY
7 MAY 1987

**SUMMARY
OF
BRITISH WEATHER**

The far north and northwest of Scotland, along with parts of Northern Ireland, remained fairly cloudy through the day but only experienced a light damping of drizzle here and there.

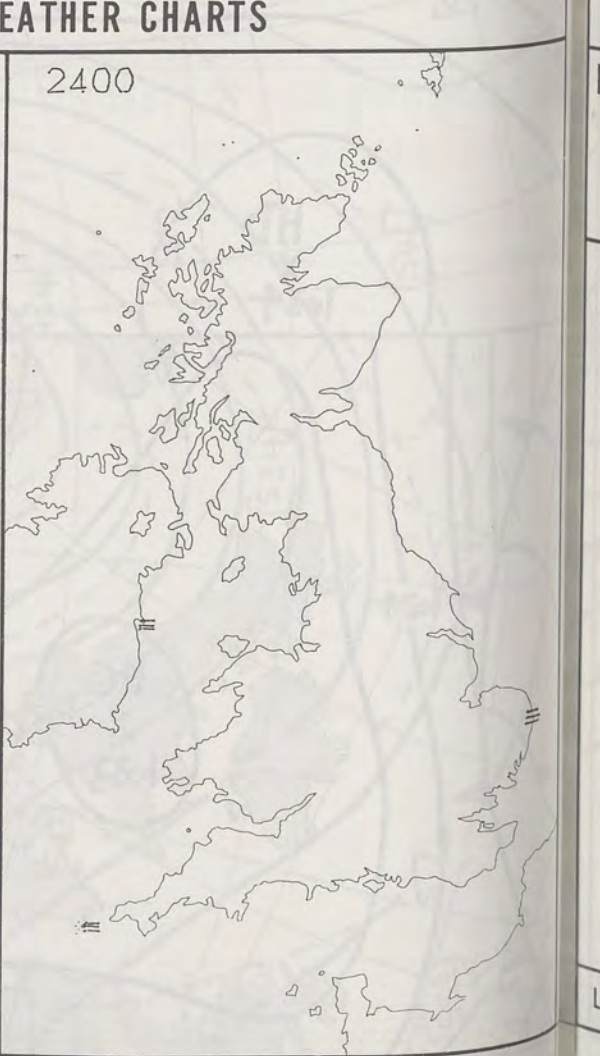

Remaining parts of Scotland and most of Northern Ireland had a dry day, with some sunshine, as did much of England and Wales, though sea breezes kept many coasts several degrees cooler than inland.

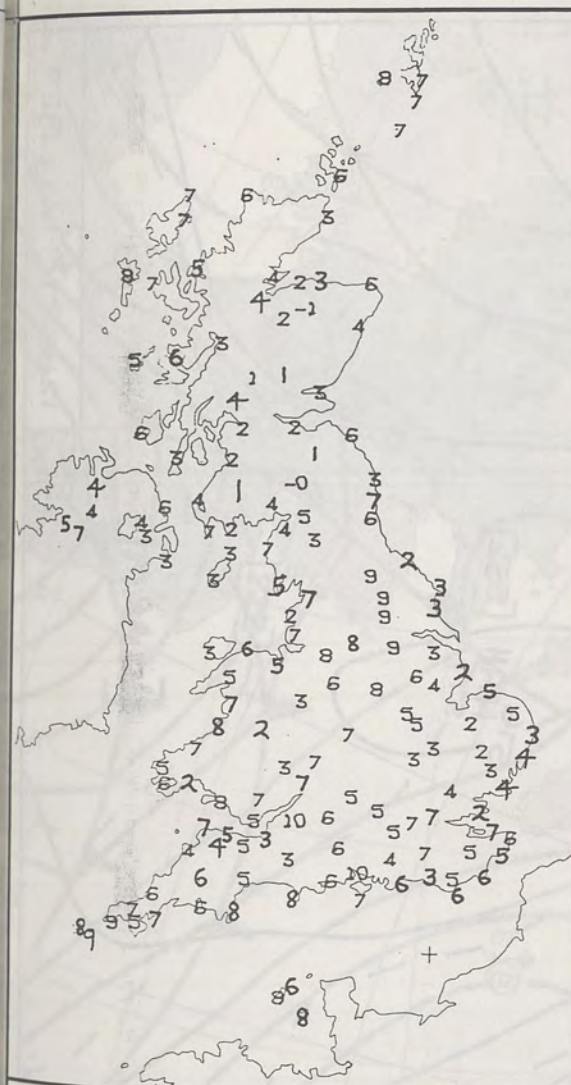

Apart from the coasts, and the cloudier northwest, it became warm or very warm. Eastern English counties with little protection from North Sea winds only achieved normal temperatures.

FRIDAY
8 MAY 1987SUMMARY
OF
BRITISH WEATHER

The far northwest of Scotland had some rather cloudy weather, with rain at times. The rest of the United Kingdom had a dry day, with large amounts of sunshine, once overnight mist, fog and extensive ground frost had cleared soon after dawn.

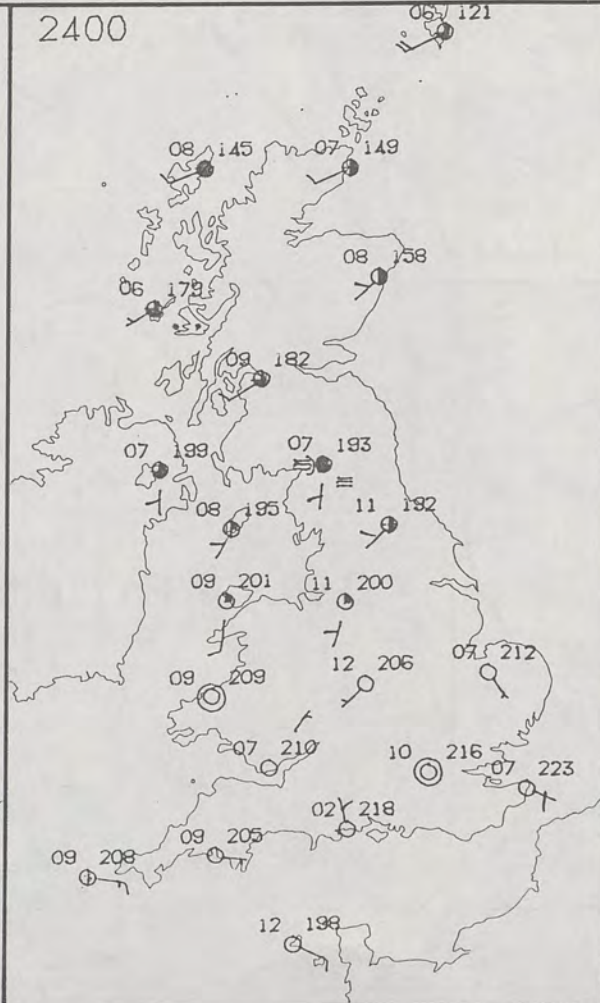

The afternoon became very warm in places with temperatures 9° above normal in parts of eastern England, but temperatures were noticeably disappointing along the southeast and Channel coastline where winds ran off a decidedly cooler sea surface, and cloudier areas of the northwest had near normal temperatures.

SUMMARY
OF
BRITISH WEATHER

Wales and much of England had clear skies overnight, although there was patchy fog here and there and the border counties of northern England clouded over. It was a cold night in southern England and parts of Wales and a few places had a touch of frost.

During the day most places in England and Wales were sunny and in central and southern areas it was a very warm day. The cloudy weather in the border counties of northern England spread slowly southwards during the day to much of northern England and to North Wales and a few places had a light shower.

Scotland and Northern Ireland had some sunshine, but there were at least a few showers in most places as well. It was much colder than farther south, with temperatures generally close to or a little below normal.

PLOTTED SURFACE OBSERVATIONS

MONDAY
11 MAY 1987

SUMMARY OF BRITISH WEATHER

Scotland and Northern Ireland had a wet night with heavy rain at times and a brisk southwesterly wind. This rain extended to northern England, intensifying as it crossed the Pennines, but leaving most of Wales and the southern half of England dry.

There was a little rain here and there during the day with sunshine mainly confined to the Channel Islands and places sheltered by high ground. There was a further period of rain over northwest England and south Wales around the middle of the day with widespread rain reaching southwestern areas by evening.

The south and east of Scotland had further rain through the morning but brighter weather soon reached the far north and extended to most other parts of northern Britain by midday. There were a lot of showers during the day and cloud again became more extensive with spells of rain, chiefly over eastern Scotland.

It was rather cool or cool in many places especially in the west, although some places in the east had near normal temperatures.

TUESDAY
12 MAY 1987SUMMARY
OF
BRITISH WEATHER

Scotland and Northern Ireland had a showery night with more persistent rain over parts of eastern Scotland, especially around Tayside. It was windy in the west but lighter winds and broken cloud in northern Scotland led to a cold night with temperatures only just above freezing. Further south over England and Wales it was cloudy with rain at times, some being heavy, but clearer weather extended to most central and western parts by the end of the night.

There was some sunshine everywhere during the day but also a lot of showers, the showers being heavy with hail and thunder and often prolonged over the north-west and southeast of England and East Anglia. Western Scotland, southwest England and Wales had fewer showers with many places becoming dry by early evening.

It was a windy day in the west with a gust to 62 knots at Berry Head in Devon around the middle of the day. Temperatures were generally below average making it rather cold or cold in most places.

WEDNESDAY
13 MAY 1987

**SUMMARY
OF
BRITISH WEATHER**

It was a generally clear, cold night with ground frost in places. Showers continued near, and a little way inland from, northwest facing coasts. Hail fell in places, and there was thunder near Norwich.

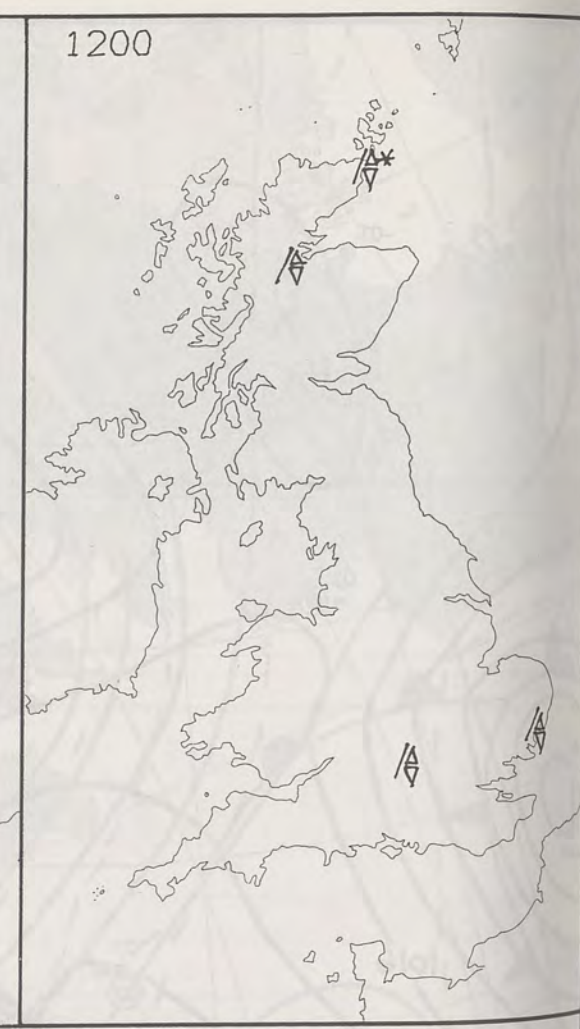

There was mostly quite a lot of sunshine during the day, mainly in the southeastern half of Britain, but some showers too, especially in the east and north. Again, there was hail in places - and a clap of thunder near Gatwick around 1915h.

High cloud increased from the west during the day, and thickened further later, with rain spreading to many northern and western districts during the evening.

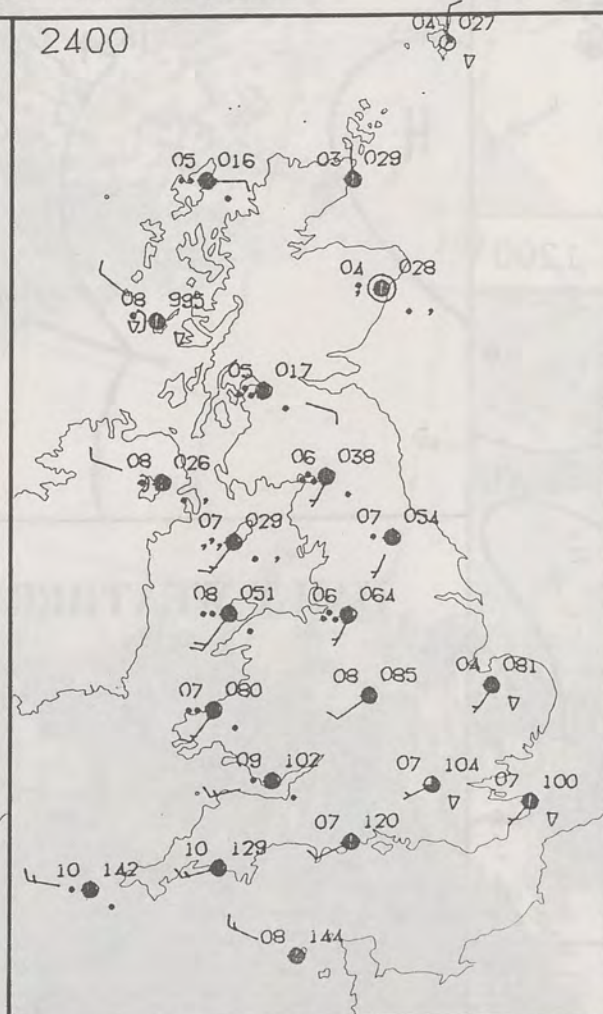

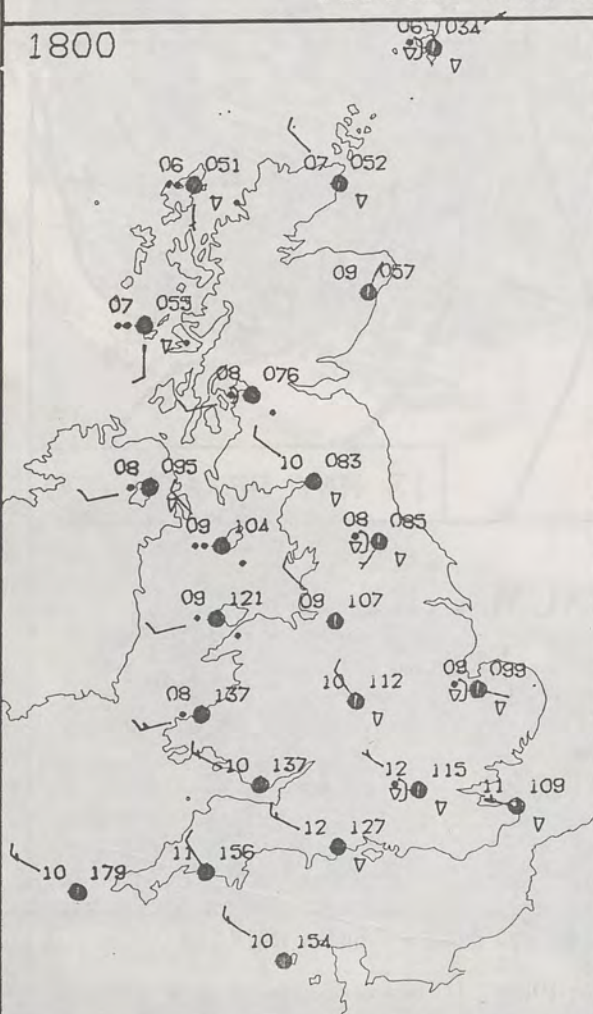

It was mostly rather cold.

PLOTTED SURFACE OBSERVATIONS

THURSDAY
14 MAY 1987

SUMMARY OF BRITISH WEATHER

Cloud and outbreaks of rain crossed most parts during the night, only the far northeast of Scotland remaining in clearer, showery conditions.

Brighter, showery weather moved east across southern parts of England and Wales during the morning with some heavy showers by the afternoon, some with thunder in the southeast.

Northern parts of England stayed mostly cloudy with rain at times, though it became mostly dry in the evening.

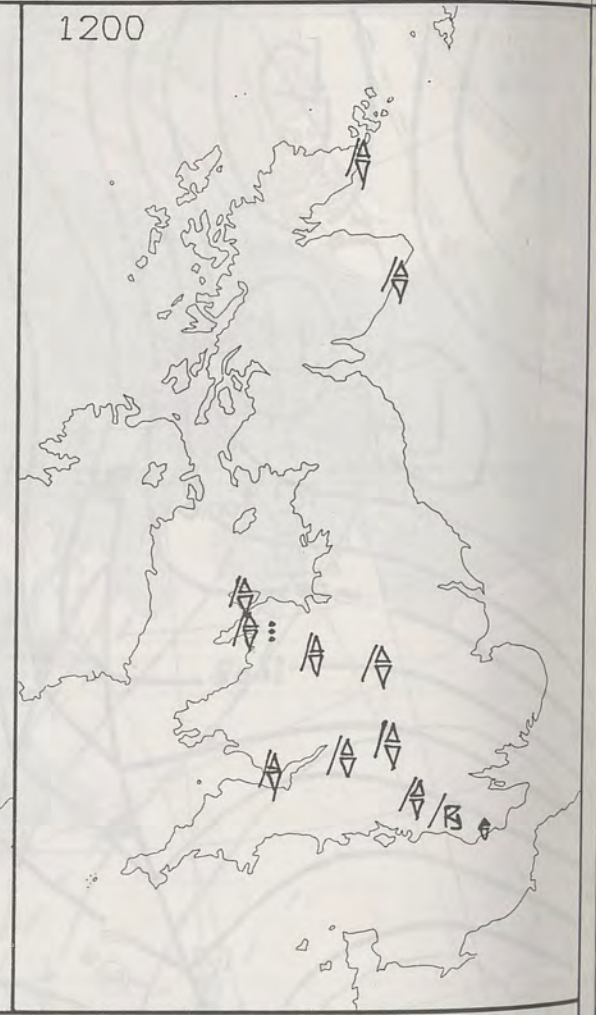

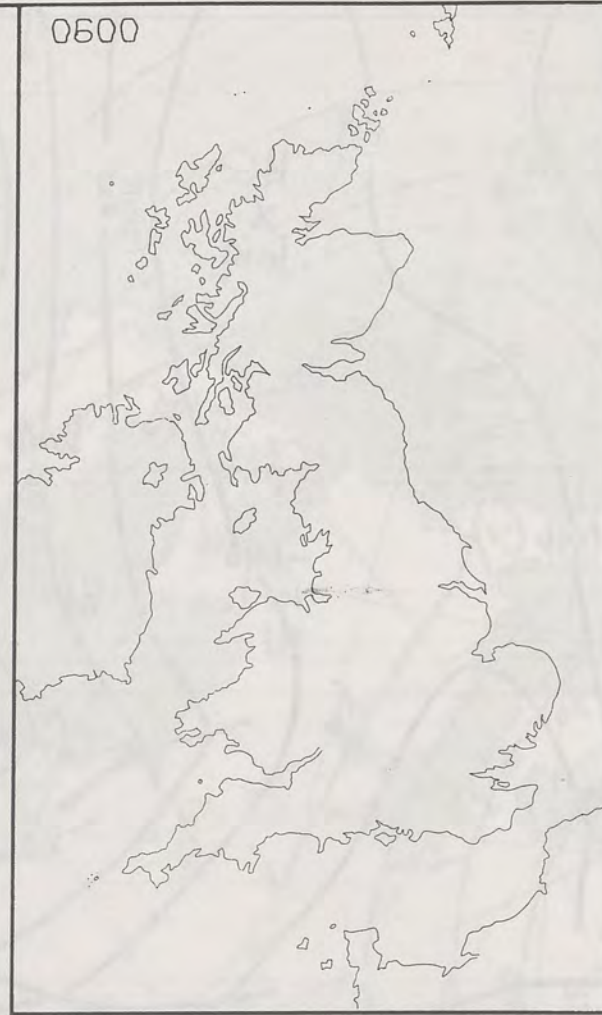

The southern half of Scotland had a dull, wet morning with sunshine and showers spreading from the north.

Northern Ireland had a mixture of sunshine and showers, though it was rather cloudy during the middle of the day.

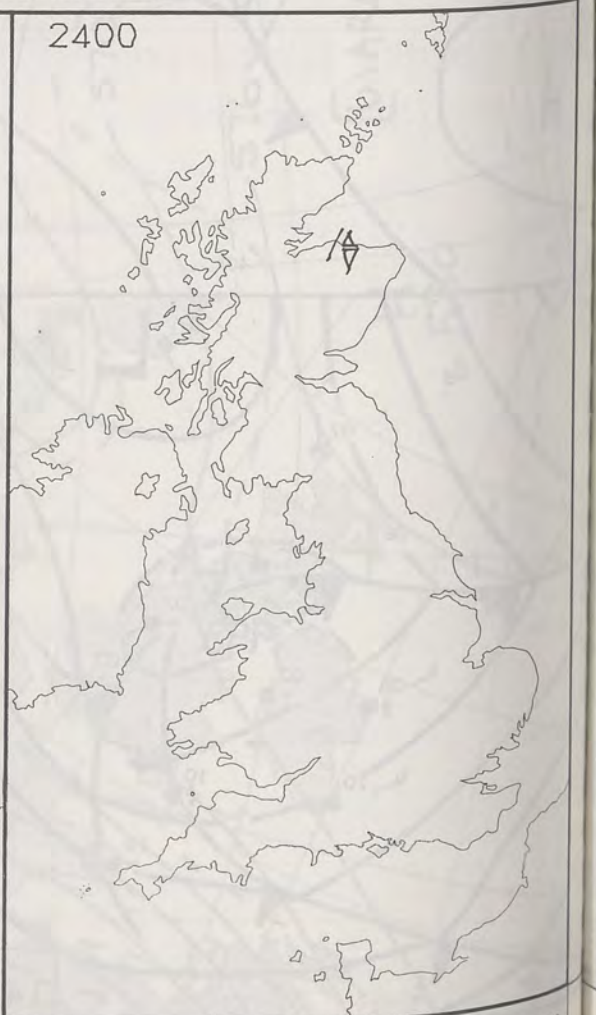

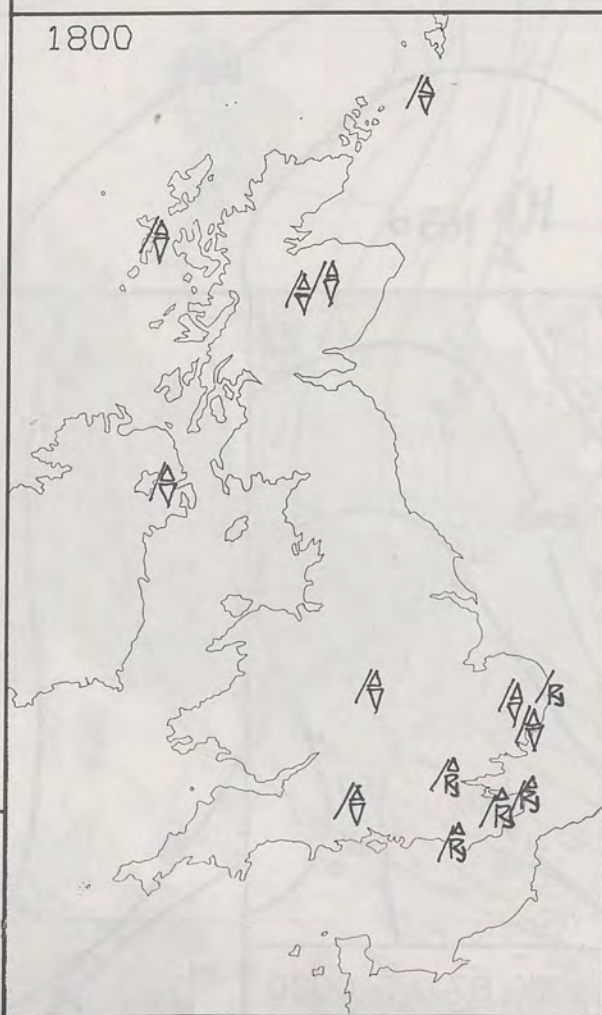

It was a rather cold or cold day generally and very cold in north-east England.

PLOTTED SURFACE OBSERVATIONS

FRIDAY
15 MAY 1987

SUMMARY OF BRITISH WEATHER

Overnight most places were dry, however East Anglia and south-eastern England had some prolonged rainfall, which lingered into the morning before moving away eastwards, to be replaced by the showery weather that had quickly developed elsewhere over England. The showers over eastern and central England were frequently heavy, with hail and thunder, and lasted in some places well into the evening.

The showers tended to be lighter, and well scattered over much of Scotland, Northern Ireland, Wales and the West Country, with some places escaping altogether.

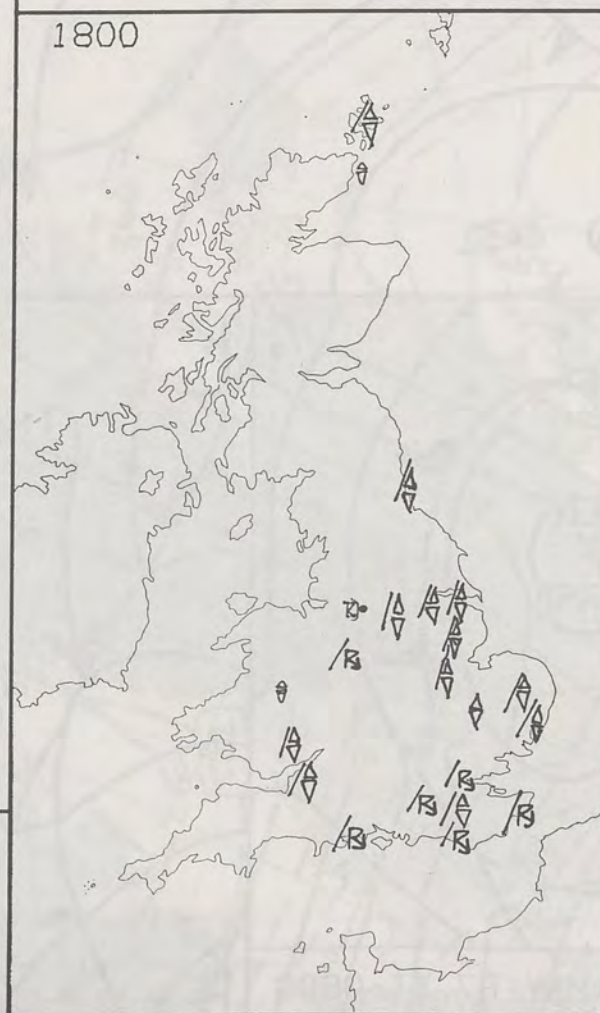

Despite some large amounts of sunshine, it was cool or very cool in most parts of the UK, especially near North Sea coasts, and only in well sheltered south-west coastal areas did maxima reach normal values.

SATURDAY
16 MAY 1987SUMMARY
OF
BRITISH WEATHER

During the night, showers continued running into northwest England, with thunder being reported from Merseyside. Showers also affected parts of East Anglia. Elsewhere, the night was dry, largely clear and cold, with frost by dawn in places.

During the morning, showers developed and became scattered about fairly widely, and although the showers were brief, a few were quite sharp, with hail being reported from parts of the southwest of England and over East Anglia. Showers were reluctant to die out in eastern areas in the evening, with some moderate showers still being reported from East Anglia.

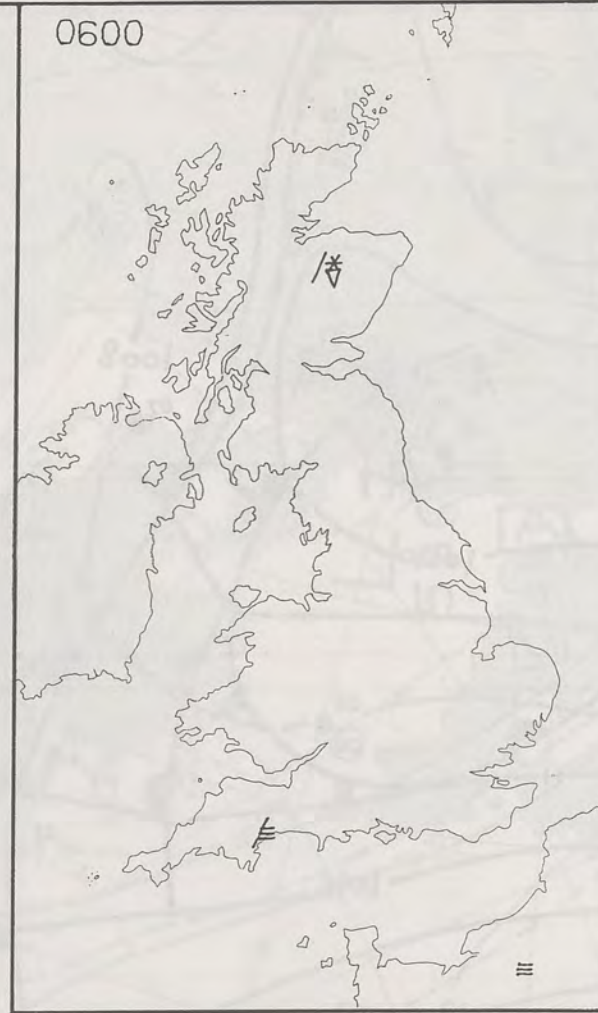

Cloud spread across Northern Ireland during the morning, bringing a little rain to the Province, and this cloud pushed across to the western mainland of Britain, again giving a little rain, more especially in westernmost Scotland.

Despite most places having reasonable sunshine totals, temperatures were disappointingly chilly; most places being rather cool.

SUNDAY
17 MAY 1987SUMMARY
OF
BRITISH WEATHER

It was a cloudy night nearly everywhere, although Shetland was fairly clear and cold. Much of Scotland along with Northern Ireland, Wales and the west and north of England were wet, with some heavy rain in Scotland and northern England.

Orkney and Shetland were dry for a good part of the day and Shetland was fairly sunny, but central and eastern Scotland were cloudy and quite wet. Western Scotland and Northern Ireland were a little brighter, but there was still a lot of cloud and quite a few showers.

Wales was wet in the morning, but then the afternoon and evening were drier, although there were showers here and there. England was cloudy all day, much of East Anglia and southeast England had a dry morning, but wet weather, with some heavy rain in places, spread southeastwards during the day.

Much of Britain had quite a cool day and it was very cool in some central and southern parts of England.

SUMMARY
OF
BRITISH WEATHER

It was a cloudy night nearly everywhere. Most places in Scotland, Northern Ireland, northern England and Wales were dry, just a little rain here and there, but central and southern parts of England had persistent and sometimes heavy rain for a while, although many places were dry before morning.

Much of Scotland was dry during the day, with some sunshine, but there was a lot of cloud and the Western and Northern Isles had a little drizzle.

Most places in Northern Ireland were dry, and eastern counties were quite sunny but there was a little rain in the west.

North and west Wales and northwest England were sunny and in northeast England the weather brightened up, but central and southern England stayed cloudy with quite a few showers, some of them heavy.

Temperatures in the sunnier areas were around normal, but southern, central and eastern England were mostly cool.

TUESDAY
19 MAY 1987

SUMMARY OF BRITISH WEATHER

Southeastern parts of England were mostly dry overnight and cloudy. Over the Midlands and other southern counties of England, Wales and parts of northeast England skies were clear for part of the night with ground frost in some places.

Scotland and Northern Ireland had a cloudy night with a little rain in places and this cloudier weather spread south to northern parts of England by the morning.

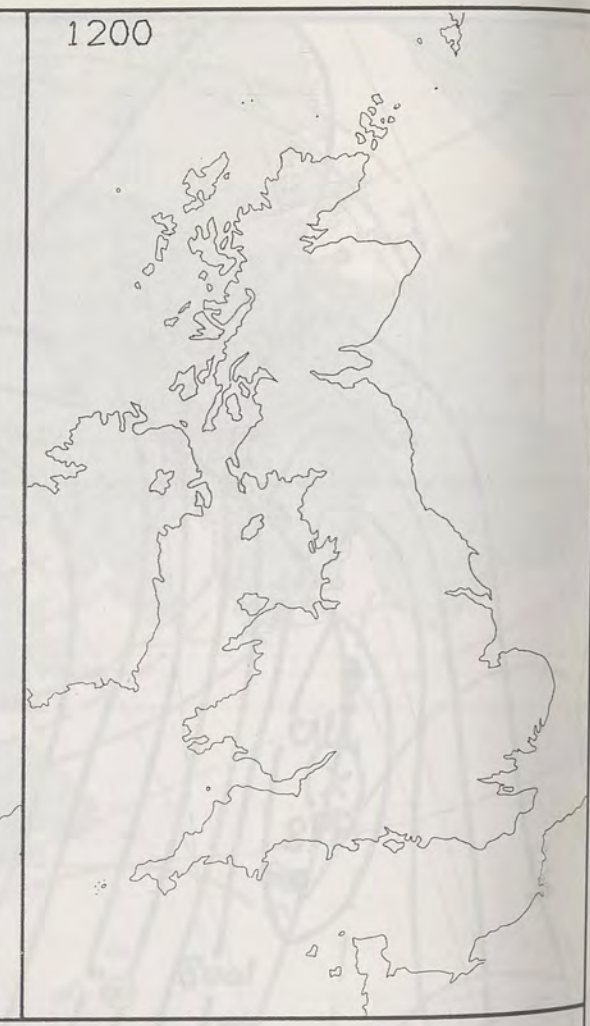

These northern regions then had a mostly dry day with some sunny spells, especially in the north and west of Scotland, though Orkney and Shetland had frequent showers and strong northerly winds.

England and Wales had a mostly dry day with sunny spells, with the best of the sunshine along the south coast.

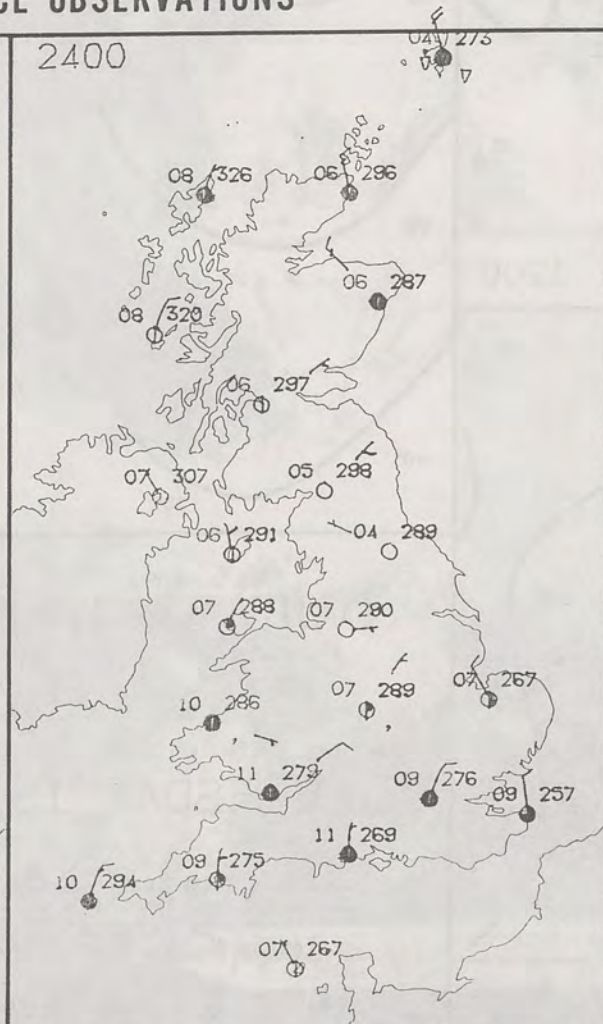

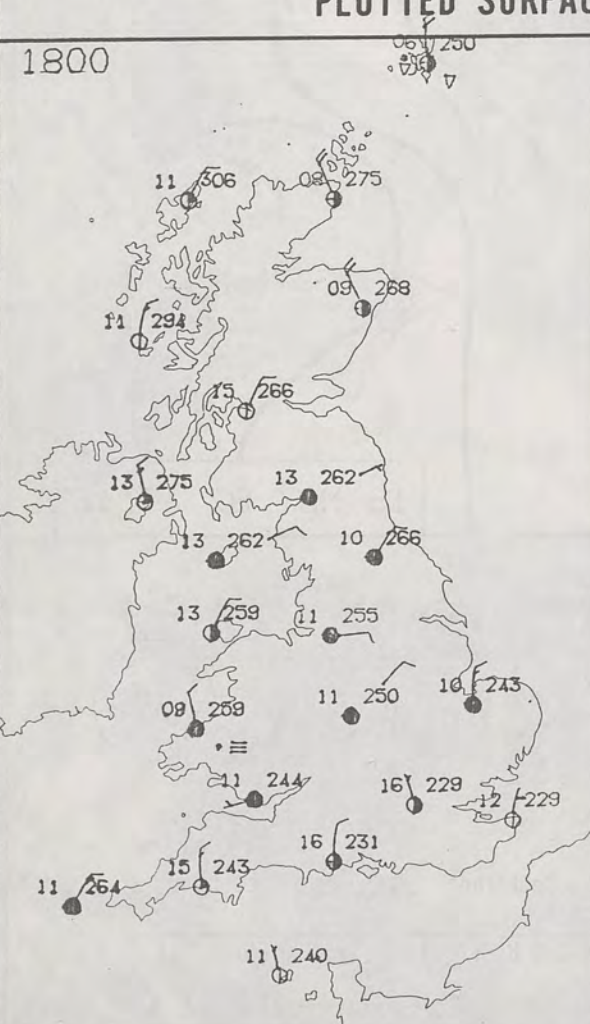

Temperatures were near to the average over most of the United Kingdom, though eastern coasts were rather cool.

WEDNESDAY
20 MAY 1987

SUMMARY
OF
BRITISH WEATHER

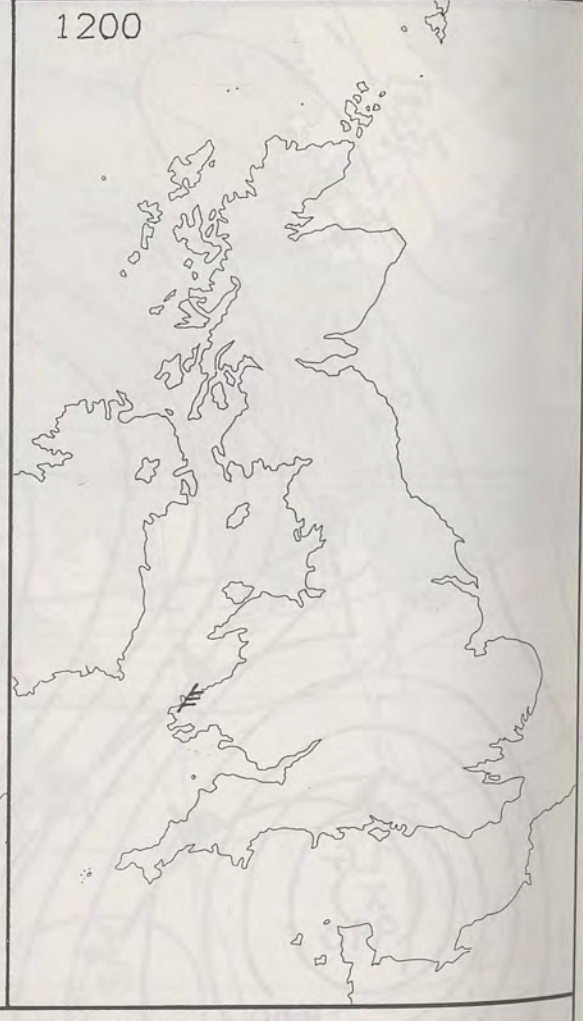

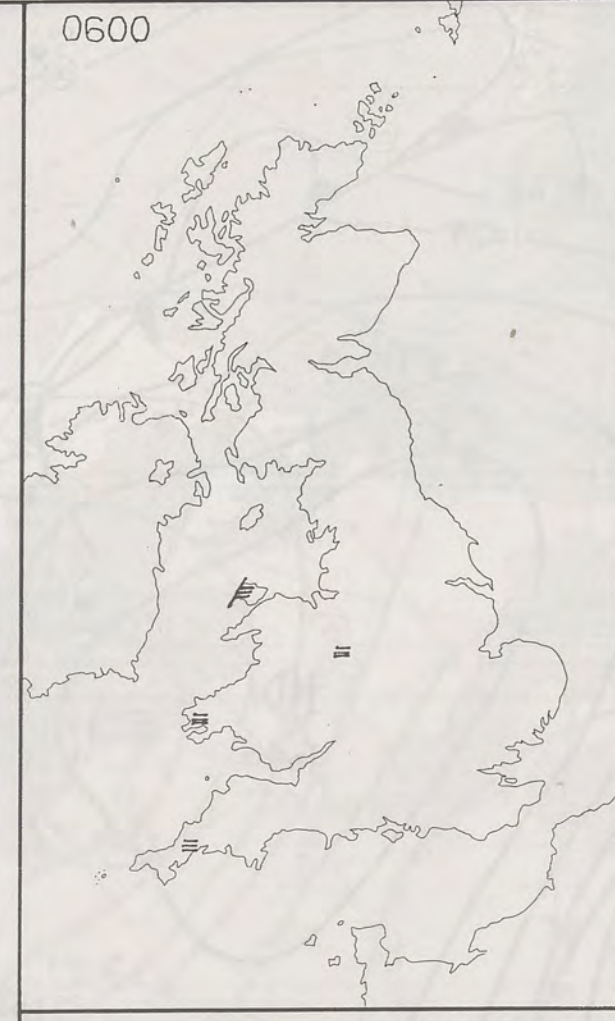

It was a dry night over most of the UK with clear periods and a ground frost in parts of Scotland southward to the English Midlands. Most parts then had a dry day with sunny periods, the best of the sunshine in western Scotland and Northern Ireland.

There was patchy cloud in many areas, especially near to eastern coasts with a few showers in east Anglia and the Northern Isles of Scotland. For most parts of the UK it was a sunny day.

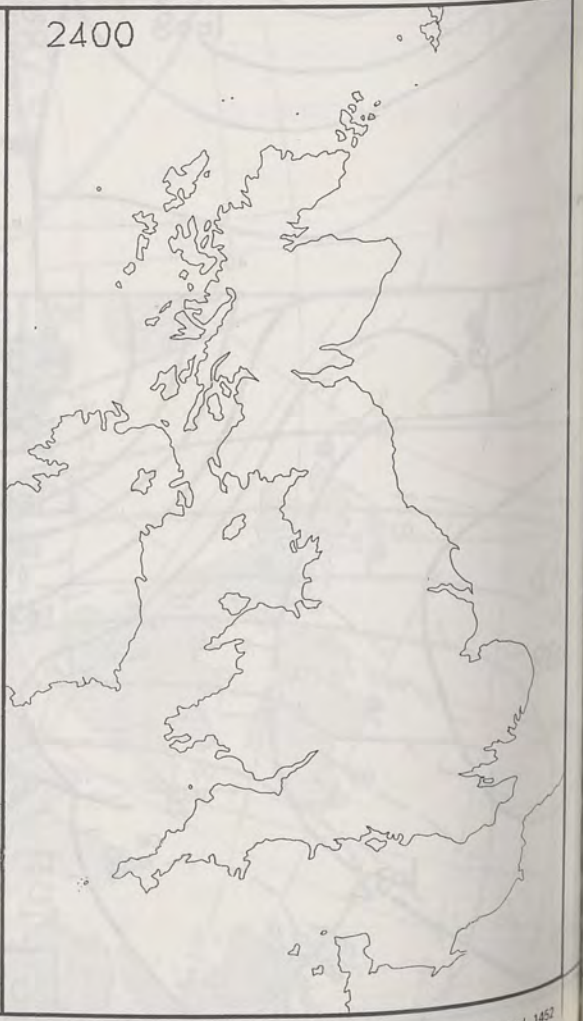

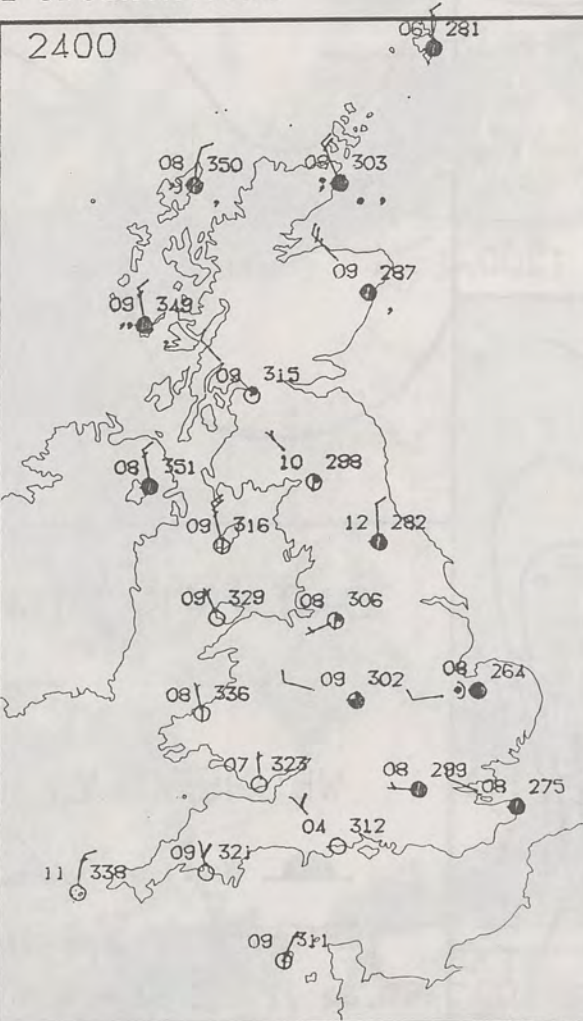

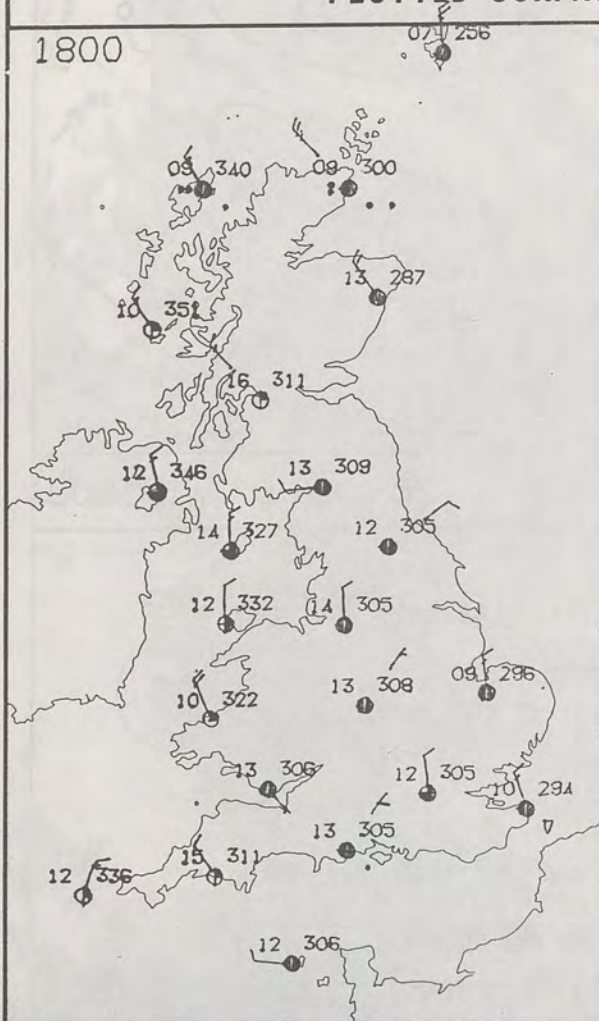

It was a very cool day near eastern coasts of England with a fresh northerly wind, but further west temperatures were higher and it became warm in central parts of Scotland and around some southwestern coasts.

SUMMARY OF BRITISH WEATHER

The day was mostly sunny over southwest England, and also in parts of the Hebrides. Elsewhere, the cloud sheet in the north and east spread southwards across most districts. There were some brighter intervals but light rain or showers also affected various districts.

It was windy in the east and southeast. Most places had a cool day, with eastern England being particularly chilly. However, the temperature reached normal in the southwest, whilst some northwestern areas were warm.

PLOTTED SURFACE OBSERVATIONS

FRIDAY
22 MAY 1987

Most places had a dry night, though there was some rain and drizzle in northeast Scotland, and one or two showers in the south of Britain. A narrow band of rain moved west into East Anglia before dawn.

During the morning, some rain moved west across England, but tended to die out. A fair amount of cloud continued westwards, and many western and northern districts of the British Isles had a fairly cloudy, though generally dry day. Some places in the far southwest of England and Wales were quite sunny.

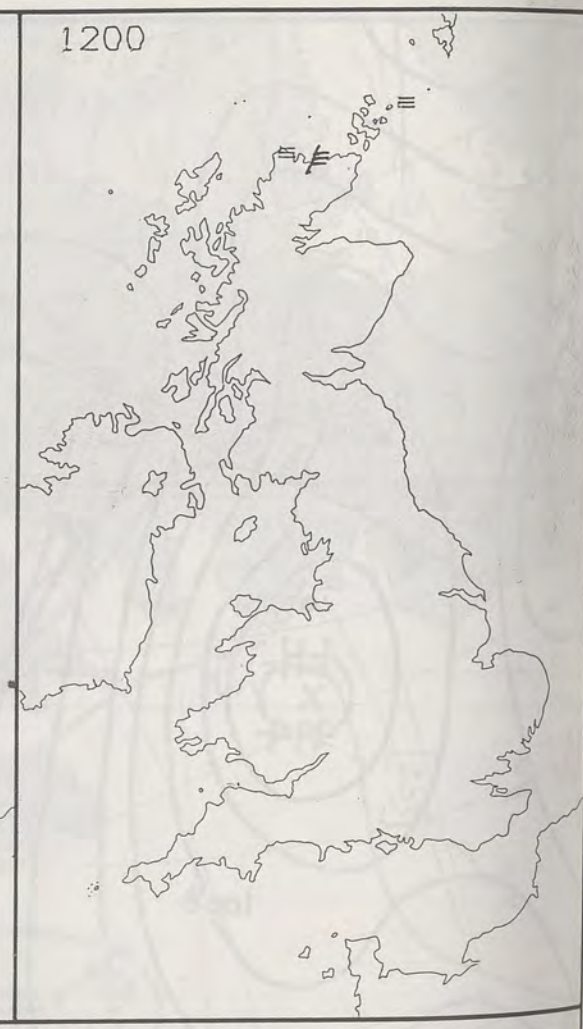

Over southeast Wales, most of southern England, the Midlands and East Anglia showers quickly developed after short brighter intervals behind the band of rain. Towards the east coast and over the northern half of the Midlands the showers were mostly light, but London and all central southern counties of England had a lot of heavy showers with hail, and some thunderstorms. Virtually the whole of the south coast from Eastbourne to Portland Bill had at least one thunderstorm.

In the evening the showers spread to the southwest but became lighter. However, some rain moved in from the North Sea across northeast England during the evening.

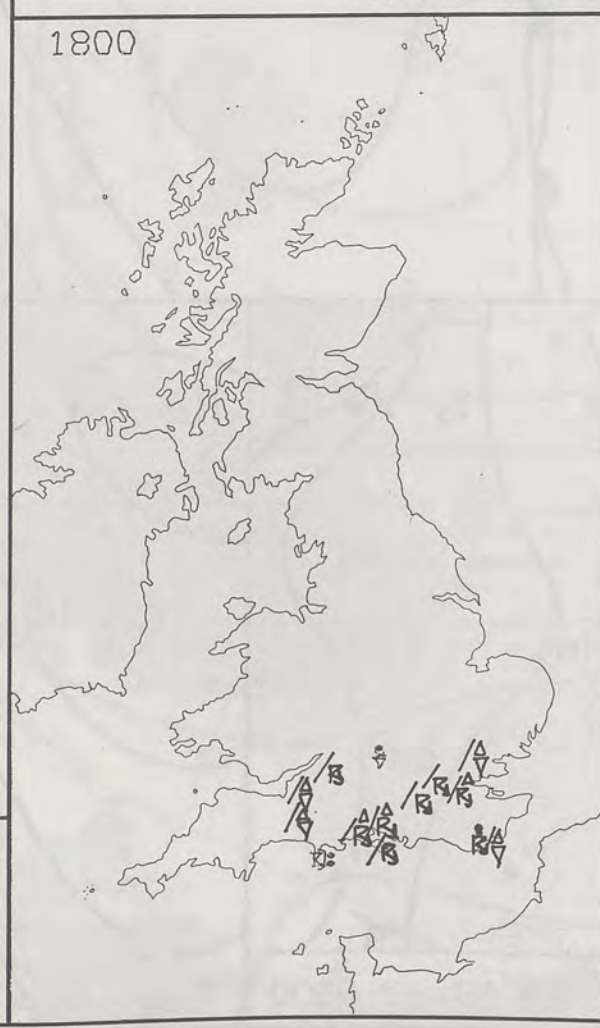

It was a very cool day generally, but quite warm in parts of western and central Scotland.

PLOTTED SURFACE OBSERVATIONS

SATURDAY
23 MAY 1987

SUMMARY OF BRITISH WEATHER

Most of Scotland and Northern Ireland had dry weather, with sunshine in many areas, particularly to the west of the main high ground. However, low cloud ran off the North Sea to north-east and eastern Scotland, and through the Forth and Clyde Valleys for a time, producing some drizzle on coasts.

Some southern counties of northern England had a wet night, but the rain cleared during the morning, then the rest of the day was dry, with some prolonged sunshine in the far northwest.

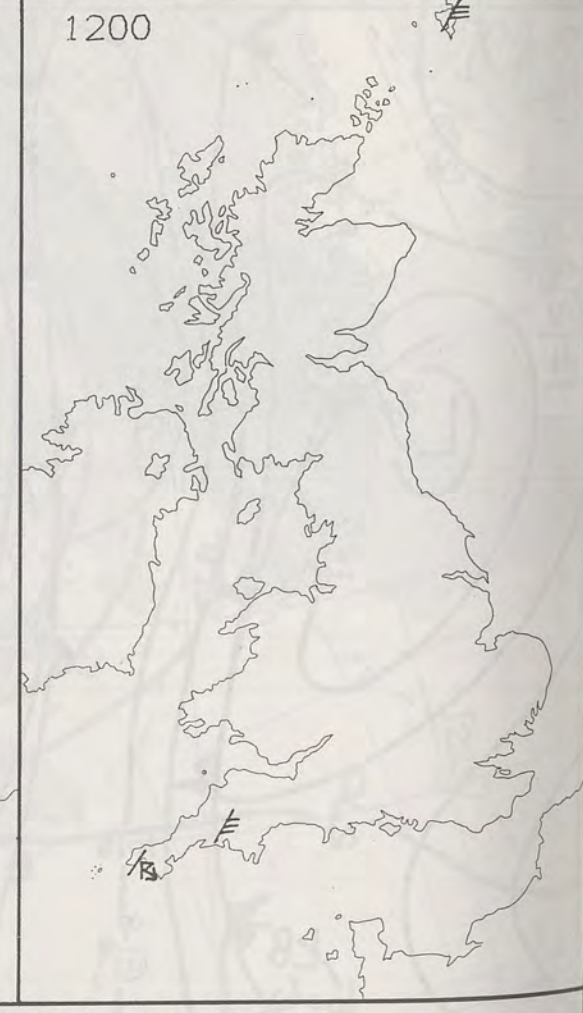

Much of central, east and south-eastern England, together with north and mid Wales had spells of rain, dying out by late morning or early afternoon, with brighter weather pushing into some eastern counties late in the day.

Southwest England had a day of bright or sunny weather and showers, with some of the showers being accompanied by thunder. The Severn Valley had some heavy rain during the late morning and early afternoon.

Temperatures ranged from decidedly cold along the east coast, through chilly in cloudier eastern and southern counties, to pleasantly warm across Northern Ireland and western Scotland.

SUNDAY
24 MAY 1987SUMMARY
OF
BRITISH WEATHER

Overcast low cloud affected many places at dawn, having run in overnight from the east. The cloud persisted until well into the afternoon in eastern and southern lowland areas.

Most of the United Kingdom had a dry day, though scattered showers broke out in the far southwest during the afternoon, with some persistent and heavy rain pushing up from the Channel Islands to many parts of the southwest during the early evening, in turn moving to parts of South Wales.

Most places had long sunny spells, especially in the afternoon, the best of the sun was found to the leeward of the main high ground in northwest England, West and North Wales, Northern Ireland and western Scotland.

Temperatures varied from very warm in central Scotland to near or rather below normal in other places, and decidedly cool down the east coast of England.

PLOTTED SURFACE OBSERVATIONS

MONDAY
25 MAY 1987

SUMMARY OF BRITISH WEATHER

Most places had a dry night, but it was wet for a time in parts of southwest England and south Wales with some heavy rain. In eastern Scotland there was a little drizzle.

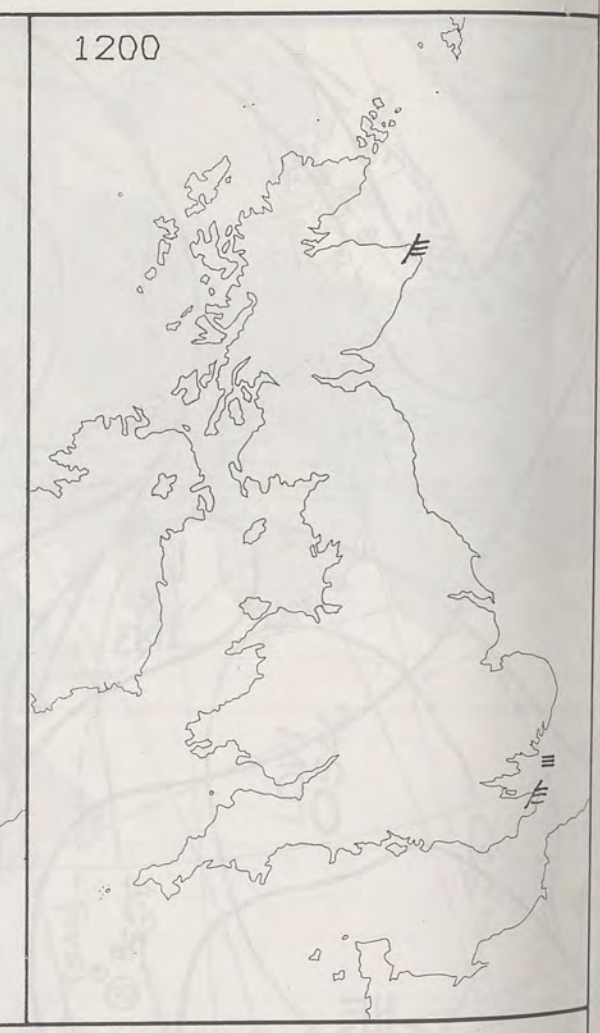

On the south coast of England and in many western areas of the United Kingdom skies stayed clear but most places clouded over.

During the day northern and western Scotland, Northern Ireland, the west of England and the south coast of England were mainly sunny. Over the rest of Britain the day dawned dull, but in most places the weather brightened up during the day, with some sunshine, although parts of eastern Scotland stayed cloudy all day, with a little drizzle here and there.

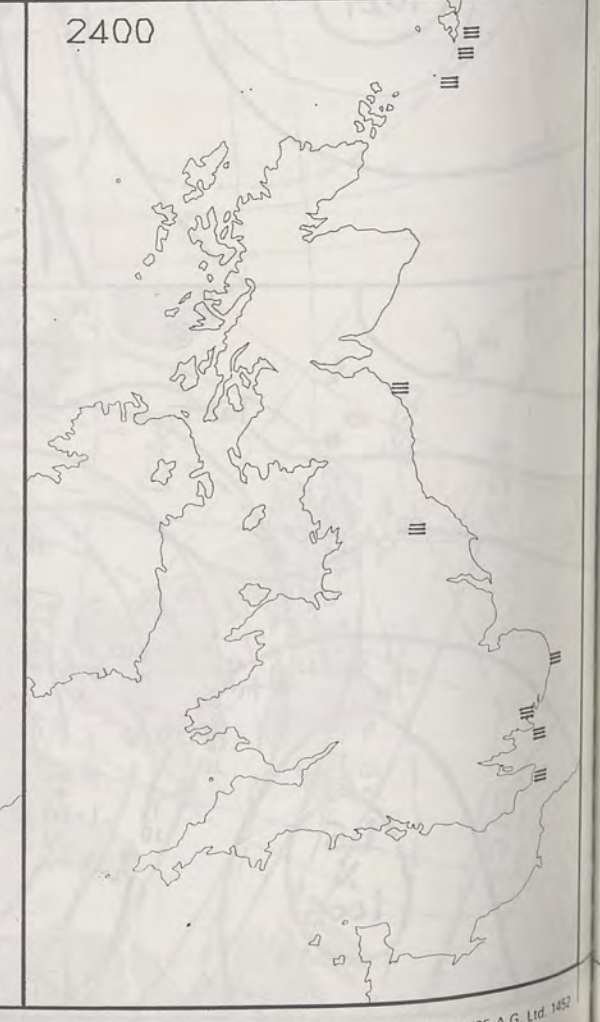

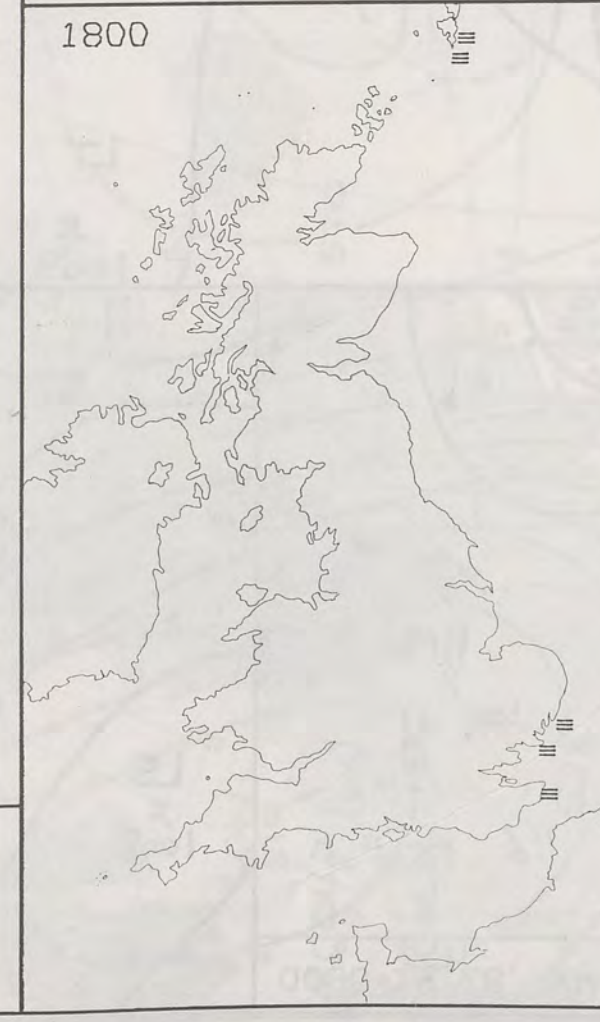

Over much of Britain temperatures were close to or a few degrees above normal, but eastern coastal districts had a cold day.

PLOTTED SURFACE OBSERVATIONS

TUESDAY
26 MAY 1987

SUMMARY OF BRITISH WEATHER

Much of the United Kingdom turned cloudy overnight and in England and Scotland there was fog in quite a few places. Most places stayed dry, but in the east and north of Scotland there was a little drizzle. The Channel Islands had rain and thunderstorms late in the night.

During the morning the weather brightened up in most places and then it was sunny at times, with some places in northwest Britain sunny for much of the day, but Orkney and Shetland, along with parts of the coasts of northeast England and eastern Scotland, stayed dull and cold all day, with a little drizzle here and there.

The Channel Islands and southwest England were mainly cloudy. Many places were dry, but there was heavy rain and thunderstorms, mostly in the Channel Islands and Cornwall. South Wales and central southern England had rain and thunder later in the evening.

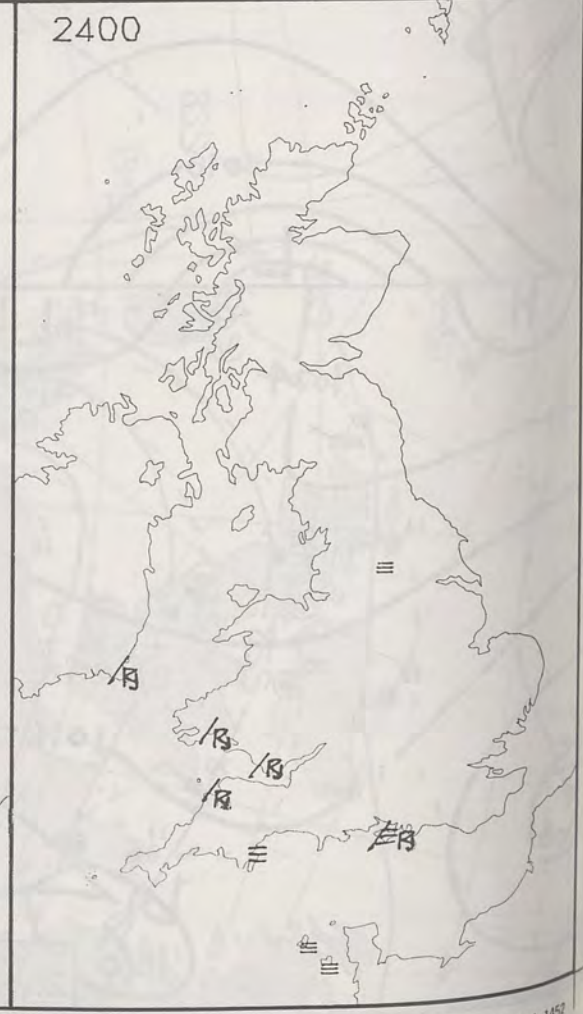

Much of Britain had a very warm day, and extremely warm in central southern England.

WEDNESDAY
27 MAY 1987

SUMMARY
OF
BRITISH WEATHER

Southern parts of England and Wales stayed cloudy overnight with some remnants of thundery rain. Southwest England remained quite cloudy but was dry.

Much of the rest of England and Wales had a dry, warm day with hazy sunshine but northeastern parts of England and eastern Scotland were cloudy and cool with some drizzle in places. Western Scotland was dry with sunny spells and mostly normal temperatures.

Northern Ireland had a warm day with sunny spells, but with some thundery showers later in the afternoon. During the evening some showers developed over Wales and the southwest Midlands.

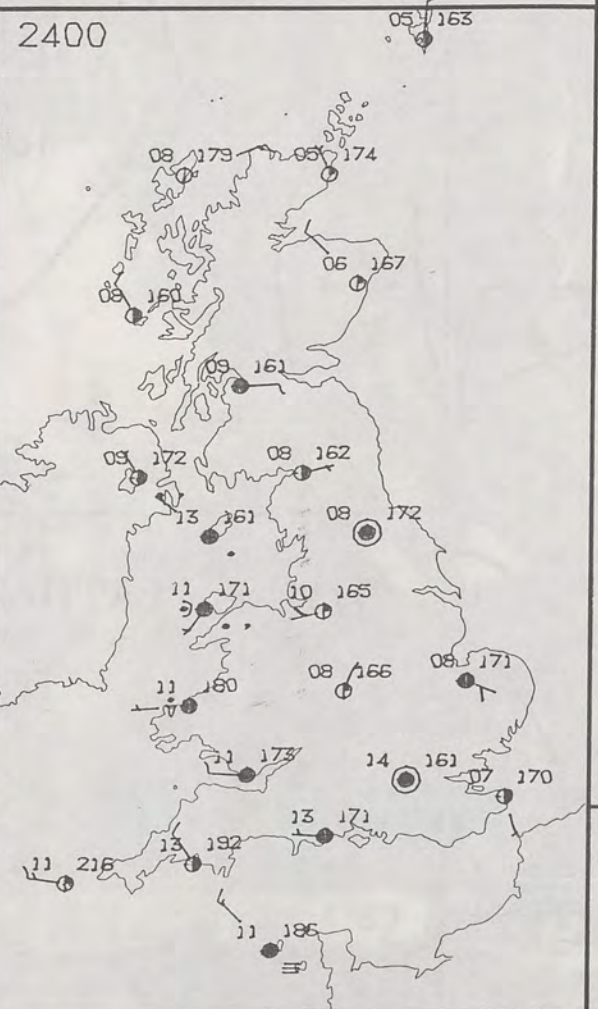

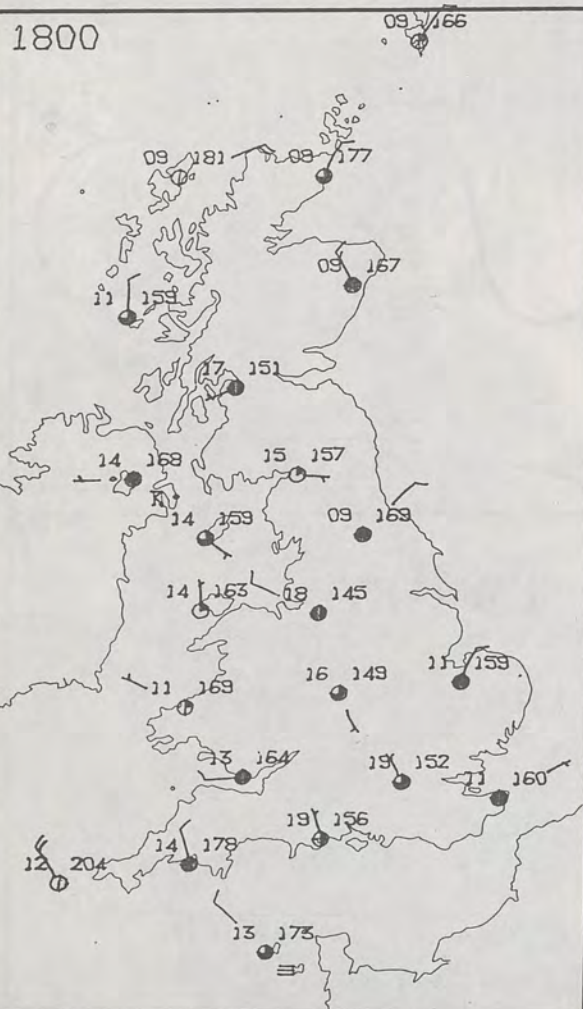

Winds over the UK were mostly light and variable.

THURSDAY
28 MAY 1987

SUMMARY
OF
BRITISH WEATHER

The night was generally cloudy over the United Kingdom with some fog patches in the southern half of England.

Outbreaks of mainly light rain developed over northwest England, North Wales and the West Midlands later in the night and spread slowly east to some eastern parts of England during the day. Southern parts of England had some spells of hazy sunshine, especially the southwest, but some heavy showers occurred over the more southeastern parts during the afternoon.

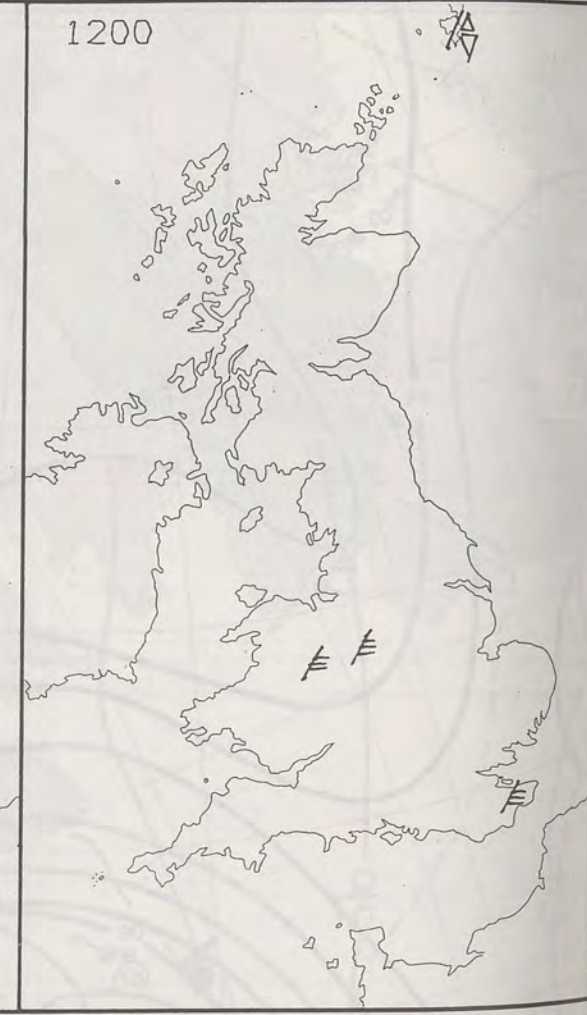

Scotland had a rather cloudy day with some light rain at times in southeastern parts and a few showers in the Northern Isles. There were also some sunny spells, especially around the Moray Firth.

Northern Ireland was rather cloudy with some showers.

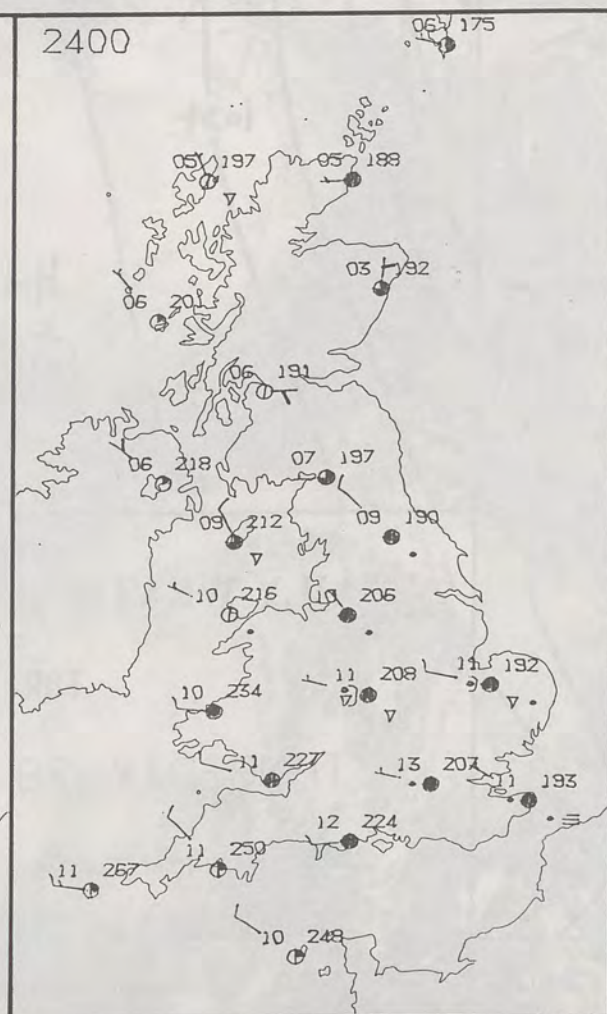

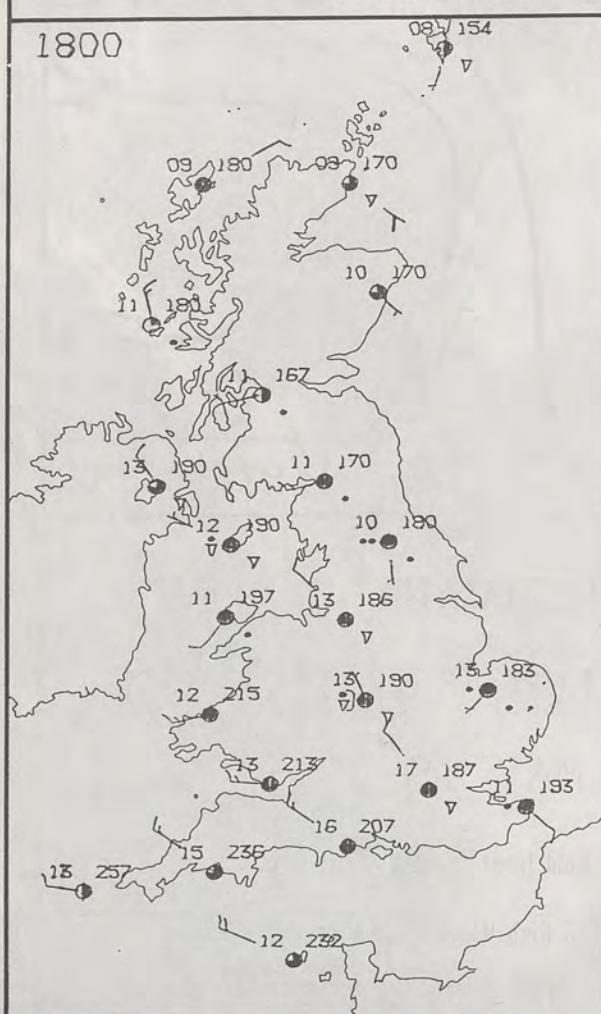

It became warm in southern parts of England but the remaining areas of the UK were mostly rather cool or cool and decidedly cool down the North Sea coast.

FRIDAY
29 MAY 1987SUMMARY
OF
BRITISH WEATHER

After a largely dry, if misty night across most of the United Kingdom, cloud thickened and increased across Northern Ireland, bringing rain to the Province soon into the morning.

This rain spread across the west and southwest Scotland and parts of northwest England and North Wales by midday. In southwestern England, misty low cloud produced extensive fog on coasts and hills, and some patchy drizzle.

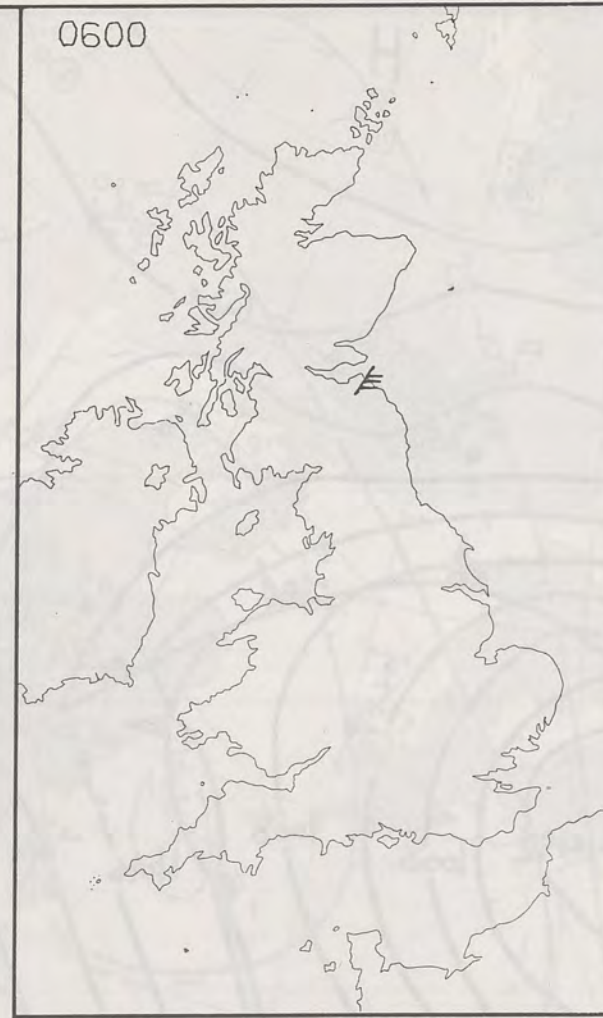

Central and eastern England, sheltered parts of Wales, eastern and northern Scotland stayed dry well into the afternoon, with some prolonged sunshine, though rain did eventually spread to remaining areas of Scotland and much of northeastern England by nightfall.

Temperatures ranged from around normal in the north and west, to somewhat above in parts of the sunnier southeast.

SATURDAY
30 MAY 1987

SUMMARY
OF
BRITISH WEATHER

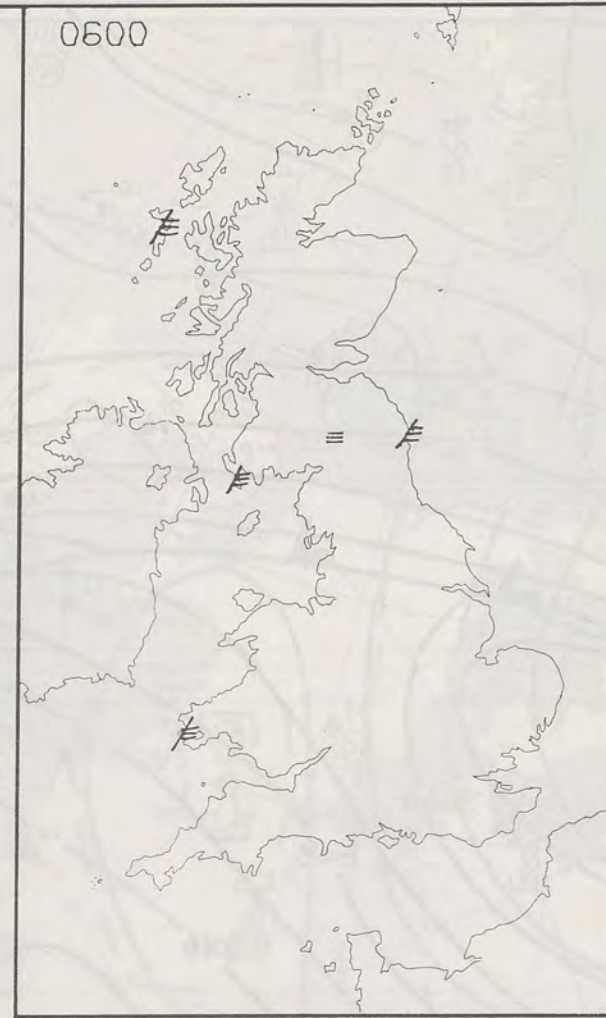

Scotland and Northern Ireland had rain overnight, with Scotland having some prolonged spells of wet weather. During the early morning, fresher, brighter weather pushed across Northern Ireland, with a mixture of sunshine and showers and this brighter weather extended to most of southern, central and western Scotland by midday, and all but the extreme north by the middle of the afternoon.

Much of England and Wales had a dry night, and across much of Lowland England the day continued with dry weather and sunshine. However, soon into the morning rain reached the northwest of England and West Wales, and this rain pushed across to most areas by nightfall, with some heavy rain being reported in the southwest. The rain belt in turn followed by brighter skies, and scattered heavy showers, some of the showers accompanied by thunder.

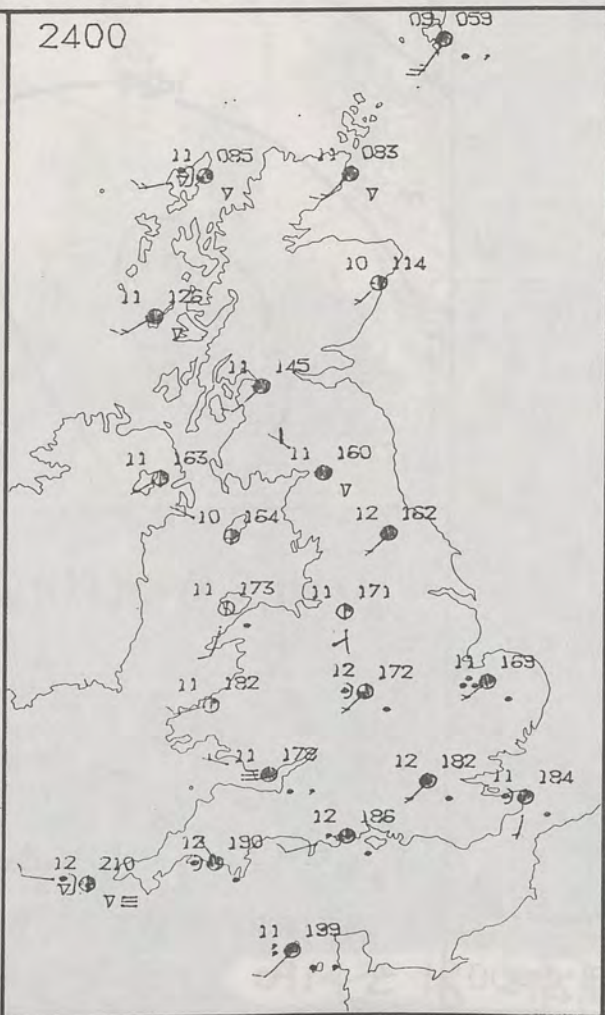

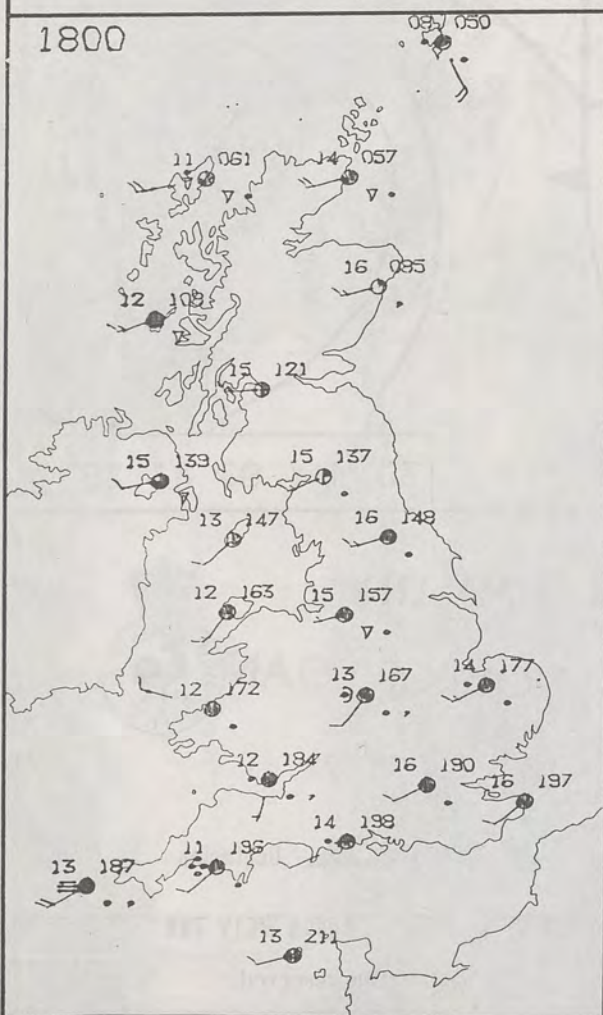

Temperatures were well up to the end of May average, with the sunnier areas of the southeast of England well above, in the very warm category.

SUNDAY
31 MAY 1987

SUMMARY
OF
BRITISH WEATHER

Central and southern areas of England were wet for a while overnight, with a lot of heavy rain, but it was dry again by daybreak or soon afterwards. Wales and the rest of England were dry, but many places turned misty with some patchy fog. Northern Ireland had one or two showers and there were showers in Scotland, mainly in the north and west.

During the day much of England and Wales were dry and sunny, although a few places had a shower. In the evening Wales and northern England clouded over with a little rain here and there.

Scotland and Northern Ireland had a little sunshine, but there was a lot of cloud and quite a few showers, with a few thunderstorms in northern Scotland.

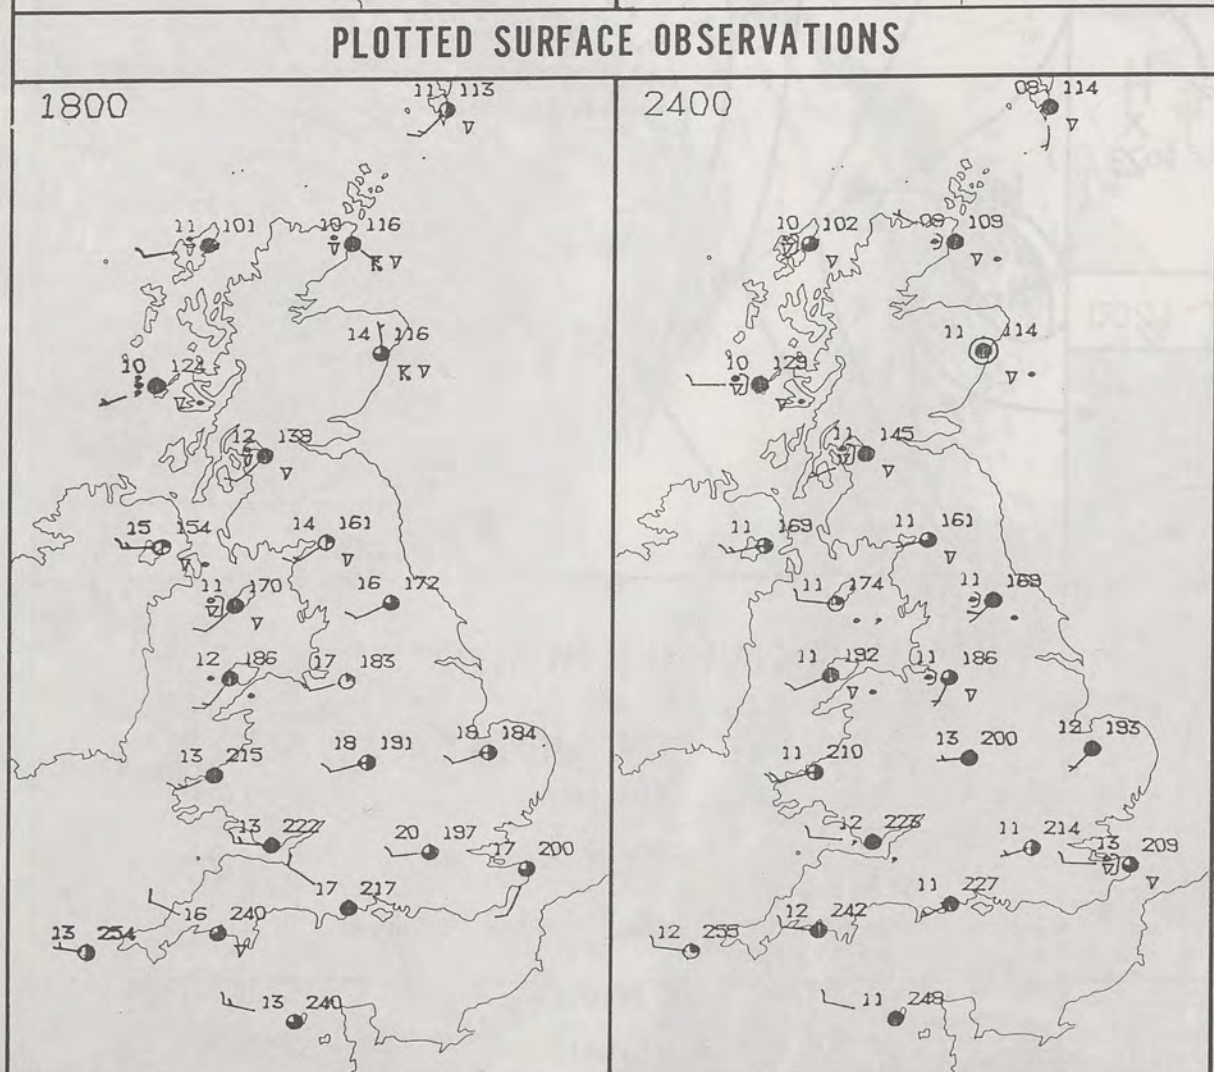

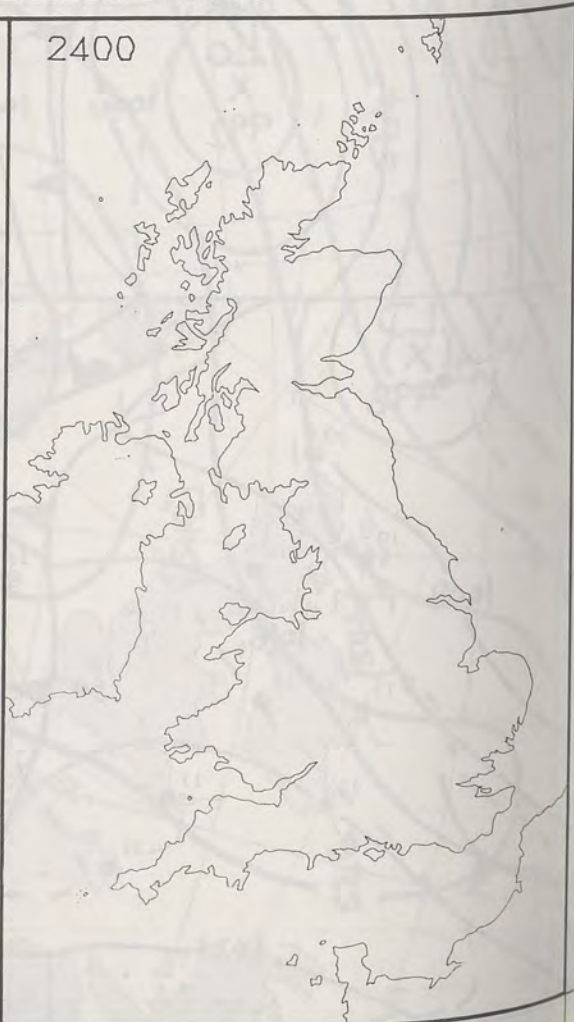

Most places had temperatures close to or a little above normal, with east and southeast England decidedly on the warm side.
