THE BEAUFORT SCALE OF WIND FORCE.

Beaufort Number.	Admiral Beaufort's General Description of Wind.	Specification for use on Land, based on observations made at Land Stations.	Limits of Mean Velocities Statute Miles per Hour.
0	Calm	Calm : smoke rising vertically	Less than 1
1	Light air	Direction of wind shown by smoke drift	1-3
2	Light breeze	Wind felt on face ; leaves rustle	4-7
3	Gentle breeze	Leaves and small twigs in constant motion ; wind extends light flag	8-12
4	Moderate breeze	Raises dust and loose paper ; small branches are moved	13-18
5	Fresh breeze	Small trees in leaf begin to sway ; crested wavelets on inland waters...	19-24
6	Strong breeze	Large branches in motion ; whistling heard in telegraph wires	25-31
7	Moderate gale	Whole trees in motion ; inconvenience felt when walking against wind	32-38
8	Fresh gale	Breaks twigs off trees ; generally impedes progress	39-46
9	Strong gale	Slight structural damage occurs (chimney pots and slates removed)	47-54
10	Whole gale	Seldom experienced inland ; trees uprooted	55-63
11	Storm	Very rarely experienced ; accompanied by widespread damage	64-75
12	Hurricane		Above 75

With present weather is combined, whenever possible, the general character of the weather.
 A "solidus" divides actual existing weather from preceding conditions, thus: -bc/r = fair weather after rain; i = intermittent; - = "decreasing"; + = "increasing"; h(r) = "hail" or "rain and hail";
 Capital letters indicate intensity, suffix o indicates slight; and repetition of letters continuity, thus: -
 R = heavy rain.
 rr = continuous moderate rain
 rrr = continuous light rain.

GALE WARNINGS.

The Meteorological Office issues warnings to ports and fishing stations of gales on or near the coasts of the British Isles. When one of these notices has been received at a station a black canvas cone is hoisted.

The South Cone (point downwards) is hoisted for gales from S.E., veering to S.W., W. or N.W.
 " S.W., veering to W. or N.W.
 " W., veering to N.W.
 " E., veering to S. or S.W.

The North Cone (point upwards) is hoisted for gales from S.E., E. or N.E., backing to N.
 " N.W., veering to N., N.E. or E.
 " N., veering to N.E. or E.
 " N.E., veering to E.

The Signals remain hoisted after the receipt of a warning telegram until danger of a gale is passed.
 The Districts to which warnings are sent are shown in the British Section of the Daily Weather Report by the following symbols: -

- ▼ South Cone hoisted.

NOTES ON THE INFORMATION CONTAINED IN THE VARIOUS SECTIONS OF THE DAILY WEATHER REPORT.

Heights of Stations.—The heights of British Stations above M.S.L. published in the British Section of the Daily Weather Report refer to the plot of ground on which the rain gauge is situated.

Pressure.—The distribution of barometric pressure at Mean Sea Level is shown by means of isobars which are drawn for intervals of 2 millibars on the British Section of the Report and for intervals of 4 millibars on the International Section.

The wind at a height of 1,500-2,000 feet above ground usually blows along the isobars and, for the same temperature, pressure and latitude, the speed of the wind is inversely proportional to the distance between the isobars, *e.g.*, for isobars 1 inch apart in the Daily Weather Report the speed of the upper wind is about 12 m.p.h. in latitude 55°, with a temperature of 50° F. and a pressure of 1,015 mb; if, however, the isobars are $\frac{1}{2}$ inch apart the corresponding speed is 24 m.p.h.

The scale below can be used with both the International and the British Sections. If the distance between consecutive isobars is measured along the rule from the left-hand extremity the geostrophic wind is shown by the scale in miles per hour.

GEOSTROPHIC WIND SCALE FOR

4 mb isobars on 1 : 2 × 10⁷ Charts.
or 2 mb " " 1 : 10⁷ "
or 1 mb " " 1 : 5 × 10⁶ "

This scale applies under the following conditions:—

Pressure, 1,015 mb. Temperature, 50° F. Latitude, 55°.

Corrections.—For an increase of 10 mb pressure, subtract 1% from velocity; for an increase of 10° F. add 2%. From Latitude 55° to Latitude 65° subtract 1% for each degree above 55°. From Latitude 55° to Latitude 45° add 1½% for each degree below 55°.

Temperature.—Temperature is specified in degrees Fahrenheit, and is shown on the charts by means of figures written alongside the circles which indicate the positions of the stations.

Relative Humidity.—From January 1st 1926, relative humidity at British stations has been calculated from the following hygrometric formulæ:

$$x = f - .444(t - t') \text{ for wet bulb readings above } 32^\circ \text{ F.}$$

$$x = f - .400(t - t') \text{ for wet bulb readings below } 32^\circ \text{ F.}$$

where x is the vapour pressure in mb.;

f the saturation vapour pressure at the temperature of the wet bulb;

t the dry bulb temperature; and

t' " wet "

The use of Glaisher's tables has been discontinued.

The tables used for calculating humidities from the readings of the dry and wet bulb thermometers on aeroplanes, are based on a formula similar to the above, but allowance is made for the variation of barometric pressure with height and for the increased ventilation of the thermometers.

Upper Air Temperature.—The British observations are made normally, one at 1,000 feet above the level of the aerodrome, and the remainder at pressures of 950, 900, 850, 800, etc., millibars. Heights are then computed and, apart from instrumental error, are correct heights: they do not require modification for differences of temperature from normal as these are allowed for in the computation. The values are shown graphically and in tabular form in the Upper Air Supplement. On the diagram, temperatures are given in degrees Fahrenheit and Absolute. The oblique line marked "Dry Adiabatic" shows the lapse rate of temperature for dry air ascending or descending under adiabatic conditions, *i.e.*, without communication of heat from external sources. The lapse rate under these circumstances is very approximately 5.5° F. per 1,000 feet, or 10°a per kilometre. A lapse rate greater than this value indicates instability in a dry atmosphere.

The broken lines marked Saturated Adiabatic show lapse rates for saturated air. These are for air masses which contain just sufficient moisture at 1,015 mb. pressure to become saturated after rising 1 km. in an environment having the dry adiabatic lapse rate. The condensed moisture is assumed to be retained thereafter in the air as it rises.

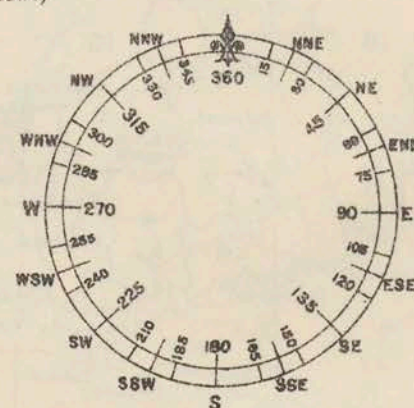

Wind.—All wind directions specified in the reports are "true," as distinguished from "magnetic." The arrows indicating wind direction are drawn to fly with the wind. Wind velocities are shown on the charts of the British Section and Upper Air Supplement in m.p.h. by the

numbers placed within the small circles. In the International Section velocities are not shown. In both Sections the number of feathers on the arrows denotes wind force by Beaufort number.

Upper Winds.—The direction and velocity of the wind are given in the charts of the Upper Air Supplement for heights of 2,000 feet and 6,000 feet. The data are also given in tabular form for various heights. The reports are usually based on Pilot Balloon ascents.

Wind reports deduced from British Pilot Balloon Ascents refer to the 1,000 feet layers centering at the heights given in the table up to 16,000 feet. When winds are reported at greater heights, they refer to the 5,000 feet layers centering at 20,000 feet, 25,000 feet, 30,000 feet and 35,000 feet.

In the tabular statement direction is specified in degrees from true north measured through East 90°, South 180°, West 270° to North 360°. (See diagram below.)

Rainfall.—At Stations marked † in the International Section of the Report, the rainfall is received in an abbreviated code and the measurement entered is therefore not necessarily correct to the nearest millimetre. For example any fall between 11 and 15 mm. would be reported by the same code figure and entered as 13 mm. in the Report.

Sea Disturbance.—The code for sea disturbance used at coastal stations is given on p. 1 of the British Section of the Report. Ships at sea use the following code:—

0. No or slight swell	} and {	Sea smooth to moderate.	} and {	5. No or slight swell	} and {	Sea rough or above.
1. Moderate swell				6. Moderate swell		
2. Heavy "				7. Heavy "		
3. Long low "				8. Long low "		
4. Confused "				9. Confused "		

Adjusted Readings.—Where an instrumental reading is found to be in error and some adjustment is necessary, such adjusted reading is published in brackets thus (50).

The entries in the British Section of the Report for the stations in the main tables on pages 1, 2, and 4 are compared with those in the returns received from the stations at the end of the month and errors in the Report so found are noted in the monthly correction sheets.

The reports from the London Stations on page 1 and from the Health Resorts on page 4 are not subjected to the same close scrutiny but if any errors are found these are also noted in the correction sheets.

Times of Sunrise, Noon and Sunset.—From January 1st, 1926, the times of Sunrise, Noon and Sunset published in the British Section of the Report for certain stations have been recalculated from (1) the figures for the duration of sunshine contained in the International Meteorological Tables and (2) the value of the sun's declination and the equation of time published in the Nautical Almanac. The change of declination of the sun on the same day from year to year over a cycle of four years is now taken into account. This change was formerly neglected.

Valentia.—The observations at 1 a.m. are taken at the Post Office Wireless Station on Valentia Island. Those at all other hours at the Observatory near Cahirciveen on the mainland.

Guernsey.—The observations at 7h., 13h., and 18h. are taken at Fort George, the station being situated at 295 feet above M.S.L. on the high ground to the south of St. Peter Port and outside the town. The observations at 1h. together with the sunshine readings are taken at the station of the States Meteorological Service which is situated in St. Peter Port at 173 feet above M.S.L.

SUPPLEMENT TO THE DAILY WEATHER REPORT OF THE METEOROLOGICAL OFFICE, LONDON.
SUMMARY OF METEOROLOGICAL OBSERVATIONS AT SELECTED STATIONS ISSUED ON THE 1st DAY OF EACH MONTH.

Notes on the Weather of JULY, 1927.

Unsettled weather prevailed throughout the greater part of the month, depressions being frequently centred over or near the British Isles. Thunderstorms occurred in many parts, particularly in Southern England where some remarkably heavy rain fell at times.

A depression which passed over Brittany towards the Straits of Dover on the night of June 30th. caused much rain in Southern England including 42 mm. at Portland Bill on July 1st. while the next depression deepened considerably as it approached our western coasts and caused gales near the Scilly Isles on the morning of the 4th. Secondaries associated with this depression passed over our eastern counties giving further heavy rain and local thunderstorms on the 5th, 6th, and 7th. On the night of the 6th. - 7th, in particular, the rainfall was exceptionally heavy: Deal 78 mm, Clacton 72 mm, and Dover 71 mm.

By Sunday, the 10th, the low pressure system had shifted to Germany and a ridge of high pressure began to spread in from the West. Fine, warm weather prevailed in most places that day, temperature rising to above 80°F. in some parts but thunderstorms of a very local character were experienced in a few districts. The following afternoon a severe storm visited the London area, 45 mm. being measured at Kensington Palace, more than half of which amount fell in 12 minutes. For some days pressure was high over or near Scotland while very shallow "Lows" were situated over England. Further thunderstorms developed locally, especially in Southern and Western England and in Wales.

After the 14th. an anticyclone became centred off Ireland while conditions remained unsettled in S.E. England. Temperature failed to reach 60°F. at Kew Observatory on the 14th. and 17th. while the total sunshine there for the five days 13th. - 17th. was only 3.1 hours, three of the days being quite sunless. On the 18th. - 19th. the anticyclone moved across Great Britain giving warmer, temporarily fairer weather in the Southeast but the subsequent arrival of fresh depressions from the Atlantic renewed an unsettled type of weather which was maintained until the end of the month.

It was the dullest July since 1919 at Kew and since records began at Ross-on-Wye in 1914.

† The average rainfall used for this station has been computed from the short records available by reference to the nearest stations with long records.

‡ Based in part on reports made by telegraph in which the day & night measurements are rounded off to the nearest whole millimetre. Small discrepancies may arise between these totals and those given in the Monthly Weather Report which are based on readings taken to 0.1 mm.

G. C. SIMPSON, F.R.S., Director.

PRESSURE: ICELAND TO GULF OF LIONS JULY, 1927.

ISOPLETHS* BASED ON SIX-HOURLY OBSERVATIONS.

NOTE: The diagram is obtained by drawing a line from Akureyri in Iceland to the South of France, near Marseilles. The points at which the isobars drawn for 4 mb. pressure intersect this line at 1h, 7h, 13h, and 19h are plotted consecutively and joined to show the variation of pressure from day to day at any point in the line. The line terminates at Lat. 65° N., Long. 18° W. in the north, at Lat. 43° N., Long. 4° E. in the south.

GENERAL INFERENCE.

A depression over S.E. England will move north for a time and then become stationary and fill up slowly. Weather will continue unsettled, with the heaviest rainfall in N.E. England.

Districts.	Forecasts for the 24 hours commencing 15h. G.M.T. Friday, 1st July, 1927.	Further Outlook.
1. S.E. England	Wind westerly, light to fresh; showery; perhaps local thunder; fairer intervals later; visibility moderate; temperature moderate or rather low.	Showery in the South, and further rain and coastal fog in the Northeast; considerable fair periods in Ireland and N.W. Scotland.
2. E. England	Wind variable to W. or N.W., light or moderate; heavy rain at first, showery later, with perhaps local thunder, but fairer intervals; mist locally at first; rather cool.

b blue sky (not more than a quarter covered with cloud).
bc sky partly cloudy (one half covered).
c generally cloudy
d drizzle. a wet air. g gloomy. f fog, visibility 200-1000 m. F thick fog, " less than 200 m. m mist, " 1000-12000 m. h hail. i intermittent. j precipitation within sight of station.
KQ line squall. l lightning. o overcast sky. p passing showers. q squally. r rain. s snow. rs sleet & thunder. u ugly, threatening sky. v unusual visibility. w low.

x hoar frost. y dry air.
z dust haze; the turbid atmosphere of dry weather.
h(r) = "hail" or "rain and hail."
Capital letters indicate intense; suffix o indicates slight; repetition of letters indicates continuity.
R = heavy rain. r₀ = slight rain. rr = continuous rain.

SYMBOLS.
< = (less than (for cloud height).
☉ = solar halo. ☾ = lunar halo.
With present weather is combined, where possible, the general character of the weather.
A "solidus" divides actual existing weather from preceding conditions, thus: -ho: = fair weather after rain; - = has decreased; + = has increased.

The BEAUFORT SCALE OF WIND is used only for surface observations. In the accompanying table the speed of the wind corresponding with the different numbers, is the speed at about 30 feet above the ground.

GENERAL INFERENCE.

A secondary depression associated with a nearly stationary depression west of Ireland is indicated off the mouth of the Channel, and will probably move north across our western districts and cause strong winds and rain today except possibly over Eastern England and Scotland, where the weather will be fair to cloudy and rather warm.

Further Outlook.

Districts	Forecasts for the 24 hours commencing 15h. G.M.T. Wednesday, 6th July, 1927.
1. S.E. England	Wind S.E. to S., moderate to fresh; fair to cloudy at first, probably some rain and perhaps local thunder later; visibility mainly good; moderate temperature to rather warm.
2. E. England	
3. E. Midlands	
4. W. Midlands	
5. S.W. England	Strong southerly winds, reaching a gale locally; dull to rainy, fair periods later; visibility mainly good; moderate temperature.
6. South Wales	
7. North Wales	Strong S.E. to S. winds, reaching a gale locally; dull to rainy, fair periods later; visibility mainly good; moderate temperature.

EXPLANATION.
 BAROMETER.—Isobars are drawn for intervals of two millibars.
 WIND.—Direction is shown by arrows pointing with the wind. Force on the scale 0-12 is indicated by the number of strokes. Mean velocity is shown in miles per hour by figures in small circles.
 TEMPERATURE.—Isotermals are given in degrees F.

GENERAL INFERENCE.

A deepening depression has moved from Northern France to the coast of Norfolk during the night and is still deepening. It will probably move northwestwards to the Atlantic. A less intense disturbance, indicated off the mouth of the Channel, will probably move north. Rain and local thunder are expected at times in all districts during the next day or two.

GENERAL INFERENCE.

From an anticyclone cent near the Azores a ridge of high pressure, extending northeastward across Ireland and Scotland, is moving slowly southeastwards. Shallow secondaries over Southern England will give rise to occasional rain locally but elsewhere weather will be mainly fine to fair and warm. Further local thunderstorms will occur in most districts.

Districts.

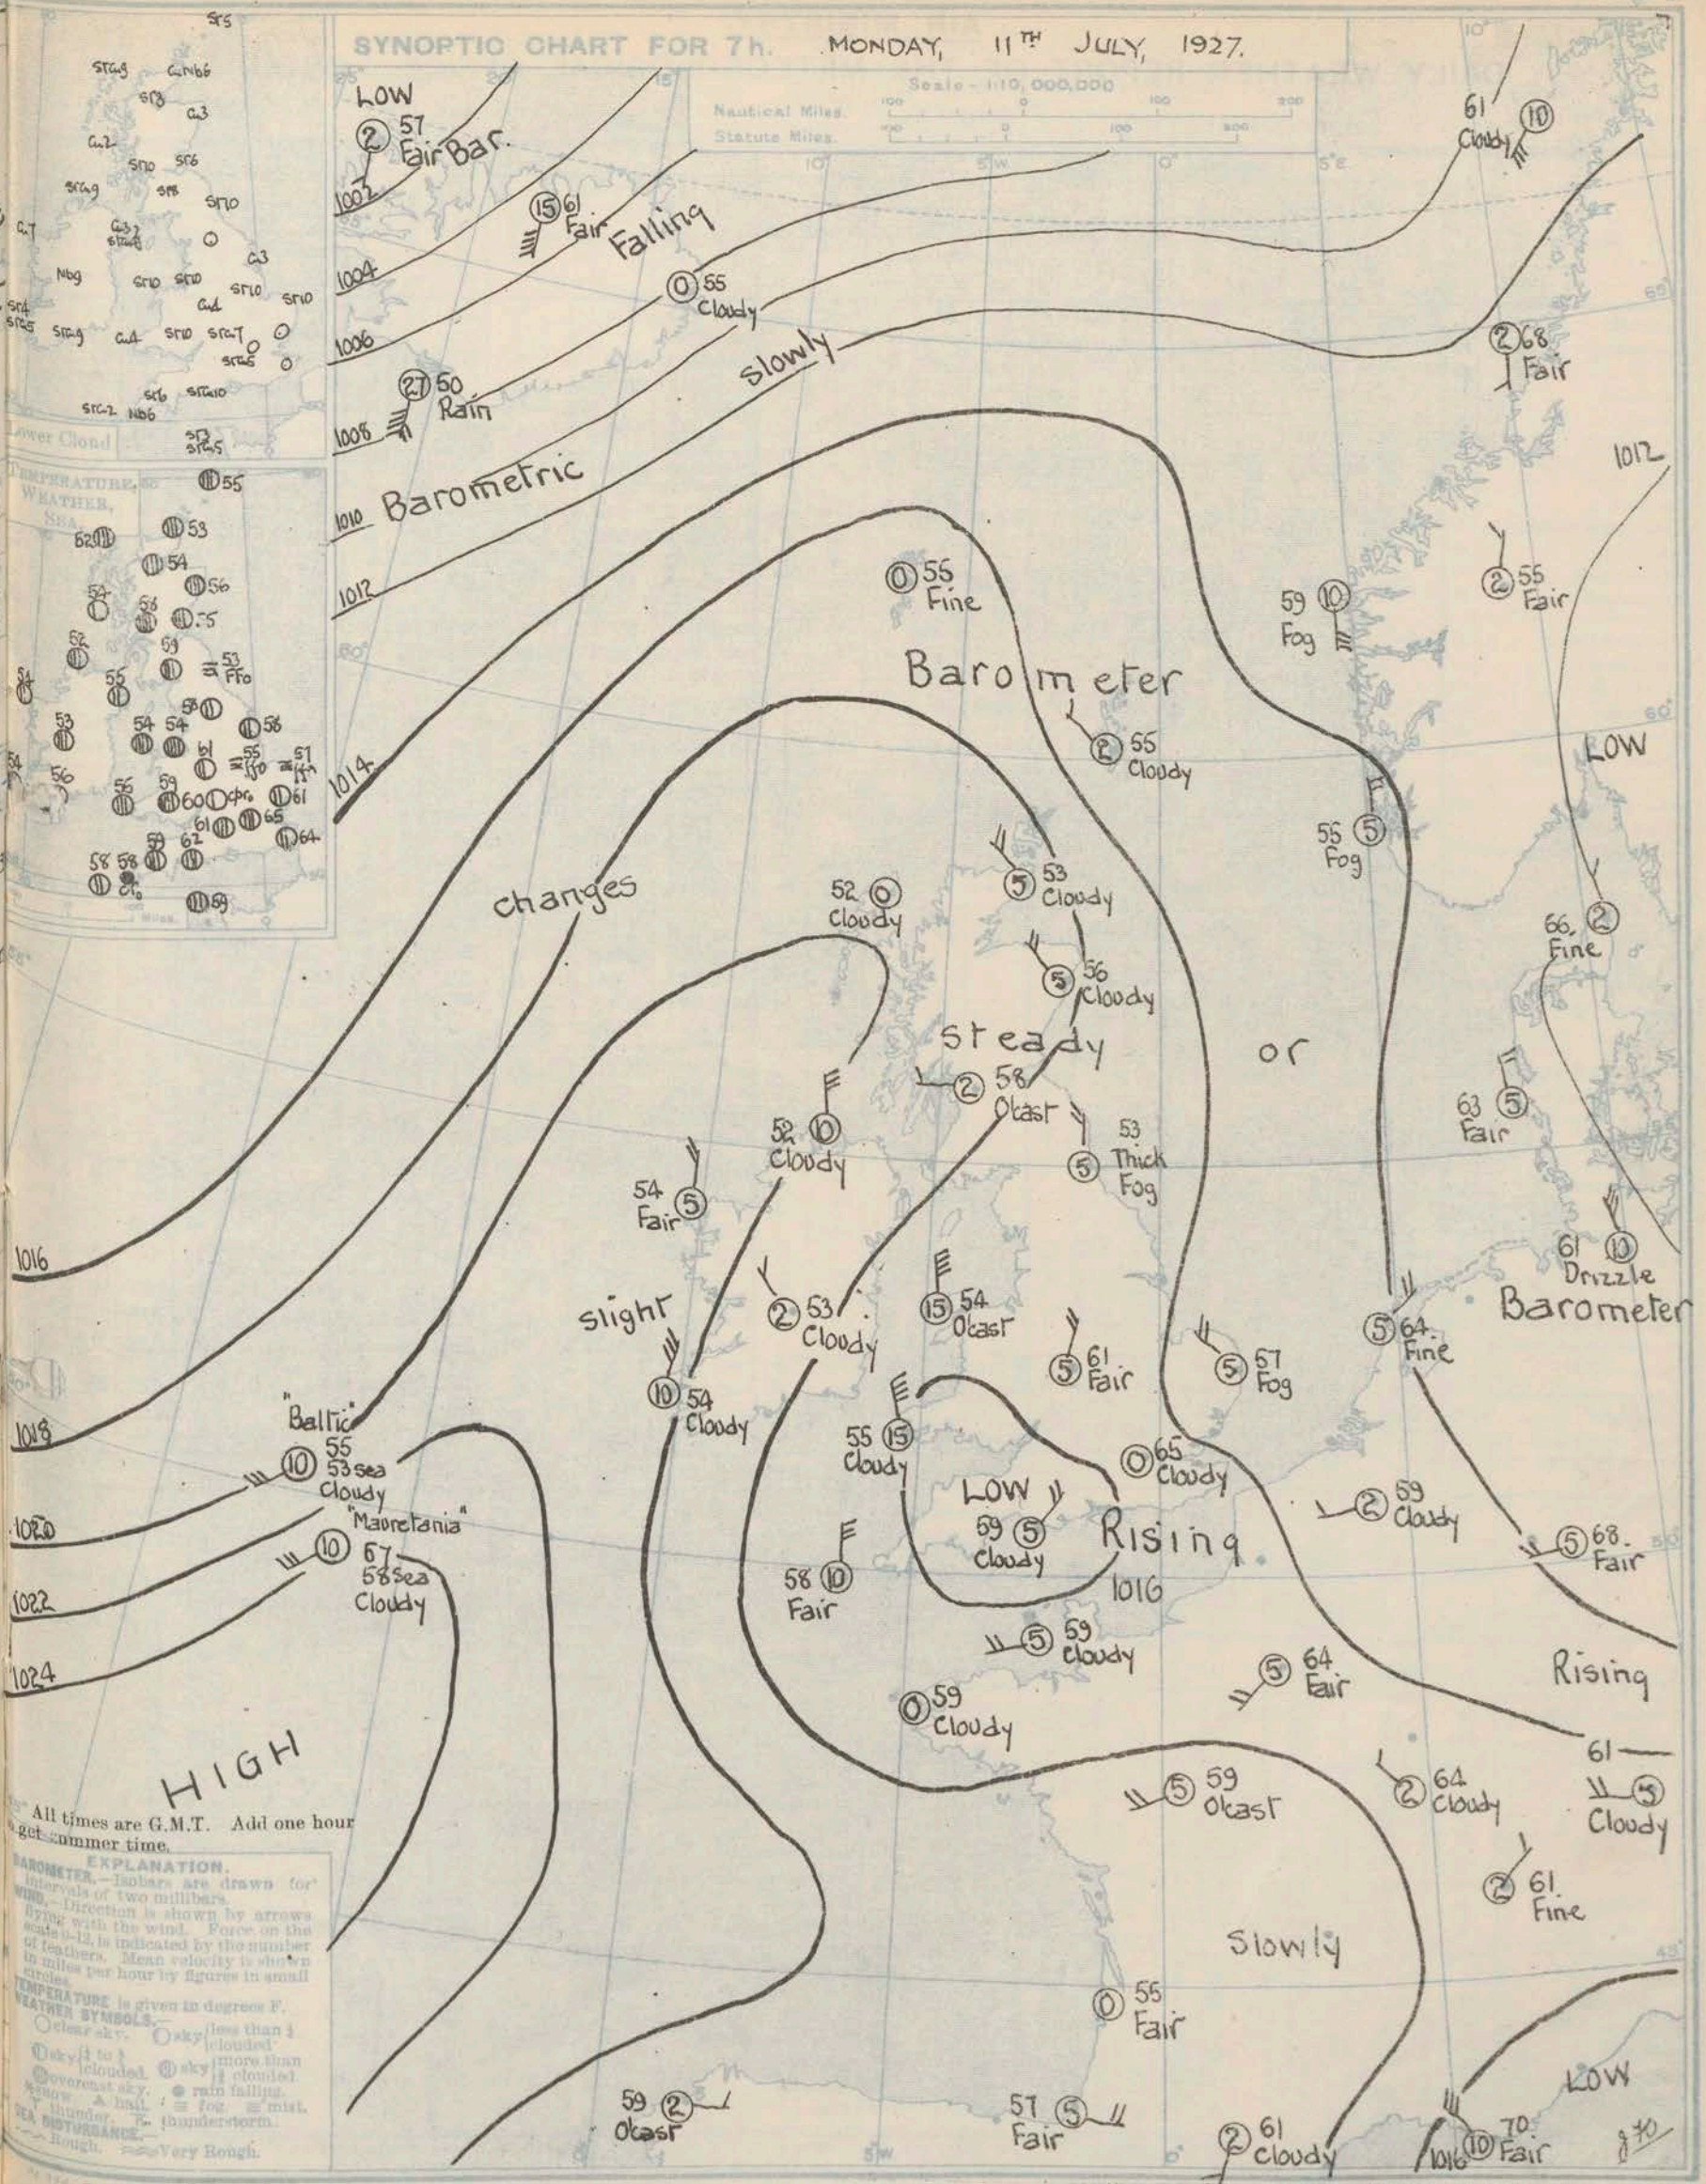

Forecasts for the 24 hours commencing 15h. G.M.T. Monday, 11th July, 1927.

Further Outlook.

1. S.E. England	Winds mainly light and indefinite; variable skies, local thundery rains or thunderstorms; morning mist or fog inland and local coastal fog; warm.
2. E. England	
3. E. Midlands	
4. W. Midlands	
5. S.W. England	
6. South Wales	
7. North Wales	
8. N.W. England	
9. N. Midlands	
10. N.E. England	
11. S.E. Scotland	Variable winds, freshening from S.W.; fine to fair at first, cloudy with local rain or drizzle later; some mist; rather warm to moderate temperature.
12. S.W. Scotland & Isle of Man	
13. N.W. Scotland	
14. N.E. Scotland	
15. N.E. Scotland	
16. Orkney and Shetlands	
17. N.W. Ireland	
18. N.E. Ireland	
19. S.E. Ireland	
20. S.W. Ireland	

Unsettled in the N.W.; doubtful in the South, but probably mainly fair and warm apart from local thunderstorms.

SYNOPTIC CHART FOR 7h. MONDAY, 11th JULY, 1927.

All times are G.M.T. Add one hour to get summer time.

EXPLANATION.
Isobars are drawn for intervals of two millibars.
Direction is shown by arrows lying with the wind. Force on the scale 0-12, is indicated by the number of feathers. Mean velocity is shown in miles per hour by figures in small circles.
TEMPERATURE is given in degrees F.
WEATHER SYMBOLS.
☉ Clear sky. ☁ Sky less than 1/4 clouded.
☁ 1/4 to 1/2 clouded. ☁ 1/2 to 3/4 clouded. ☁ 3/4 to 1 clouded.
☁ Overcast sky. ☁ Rain falling.
☁ Thunder. ☁ Fog. ☁ Mist. ☁ Thunderstorm.
SEA DISTURBANCE.
— Rough. — Very Rough.

All times are G.M.T. Add one hour
for summer time.

EXPLANATION.

Isobars are drawn for
every two millibars.
Direction is shown by arrows
with the wind. Force, on the
scale 1-12, is indicated by the number
of feathers. Mean velocity is shown
in miles per hour by figures in small
circles.
Temperature is given in degrees F.
Weather symbols:

GENERAL INFERENCE.

The anticyclone off our N.W. coasts has become practically stationary. The weather will probably be mainly fine over Scotland and Ireland but the northerly winds over the northern part of the North Sea will continue to turn south-westwards across England and cause long dull periods with slight local rain.

Districts. Forecasts for the 24 hours commencing 15h. G.M.T. Saturday, 16th July, 1927.

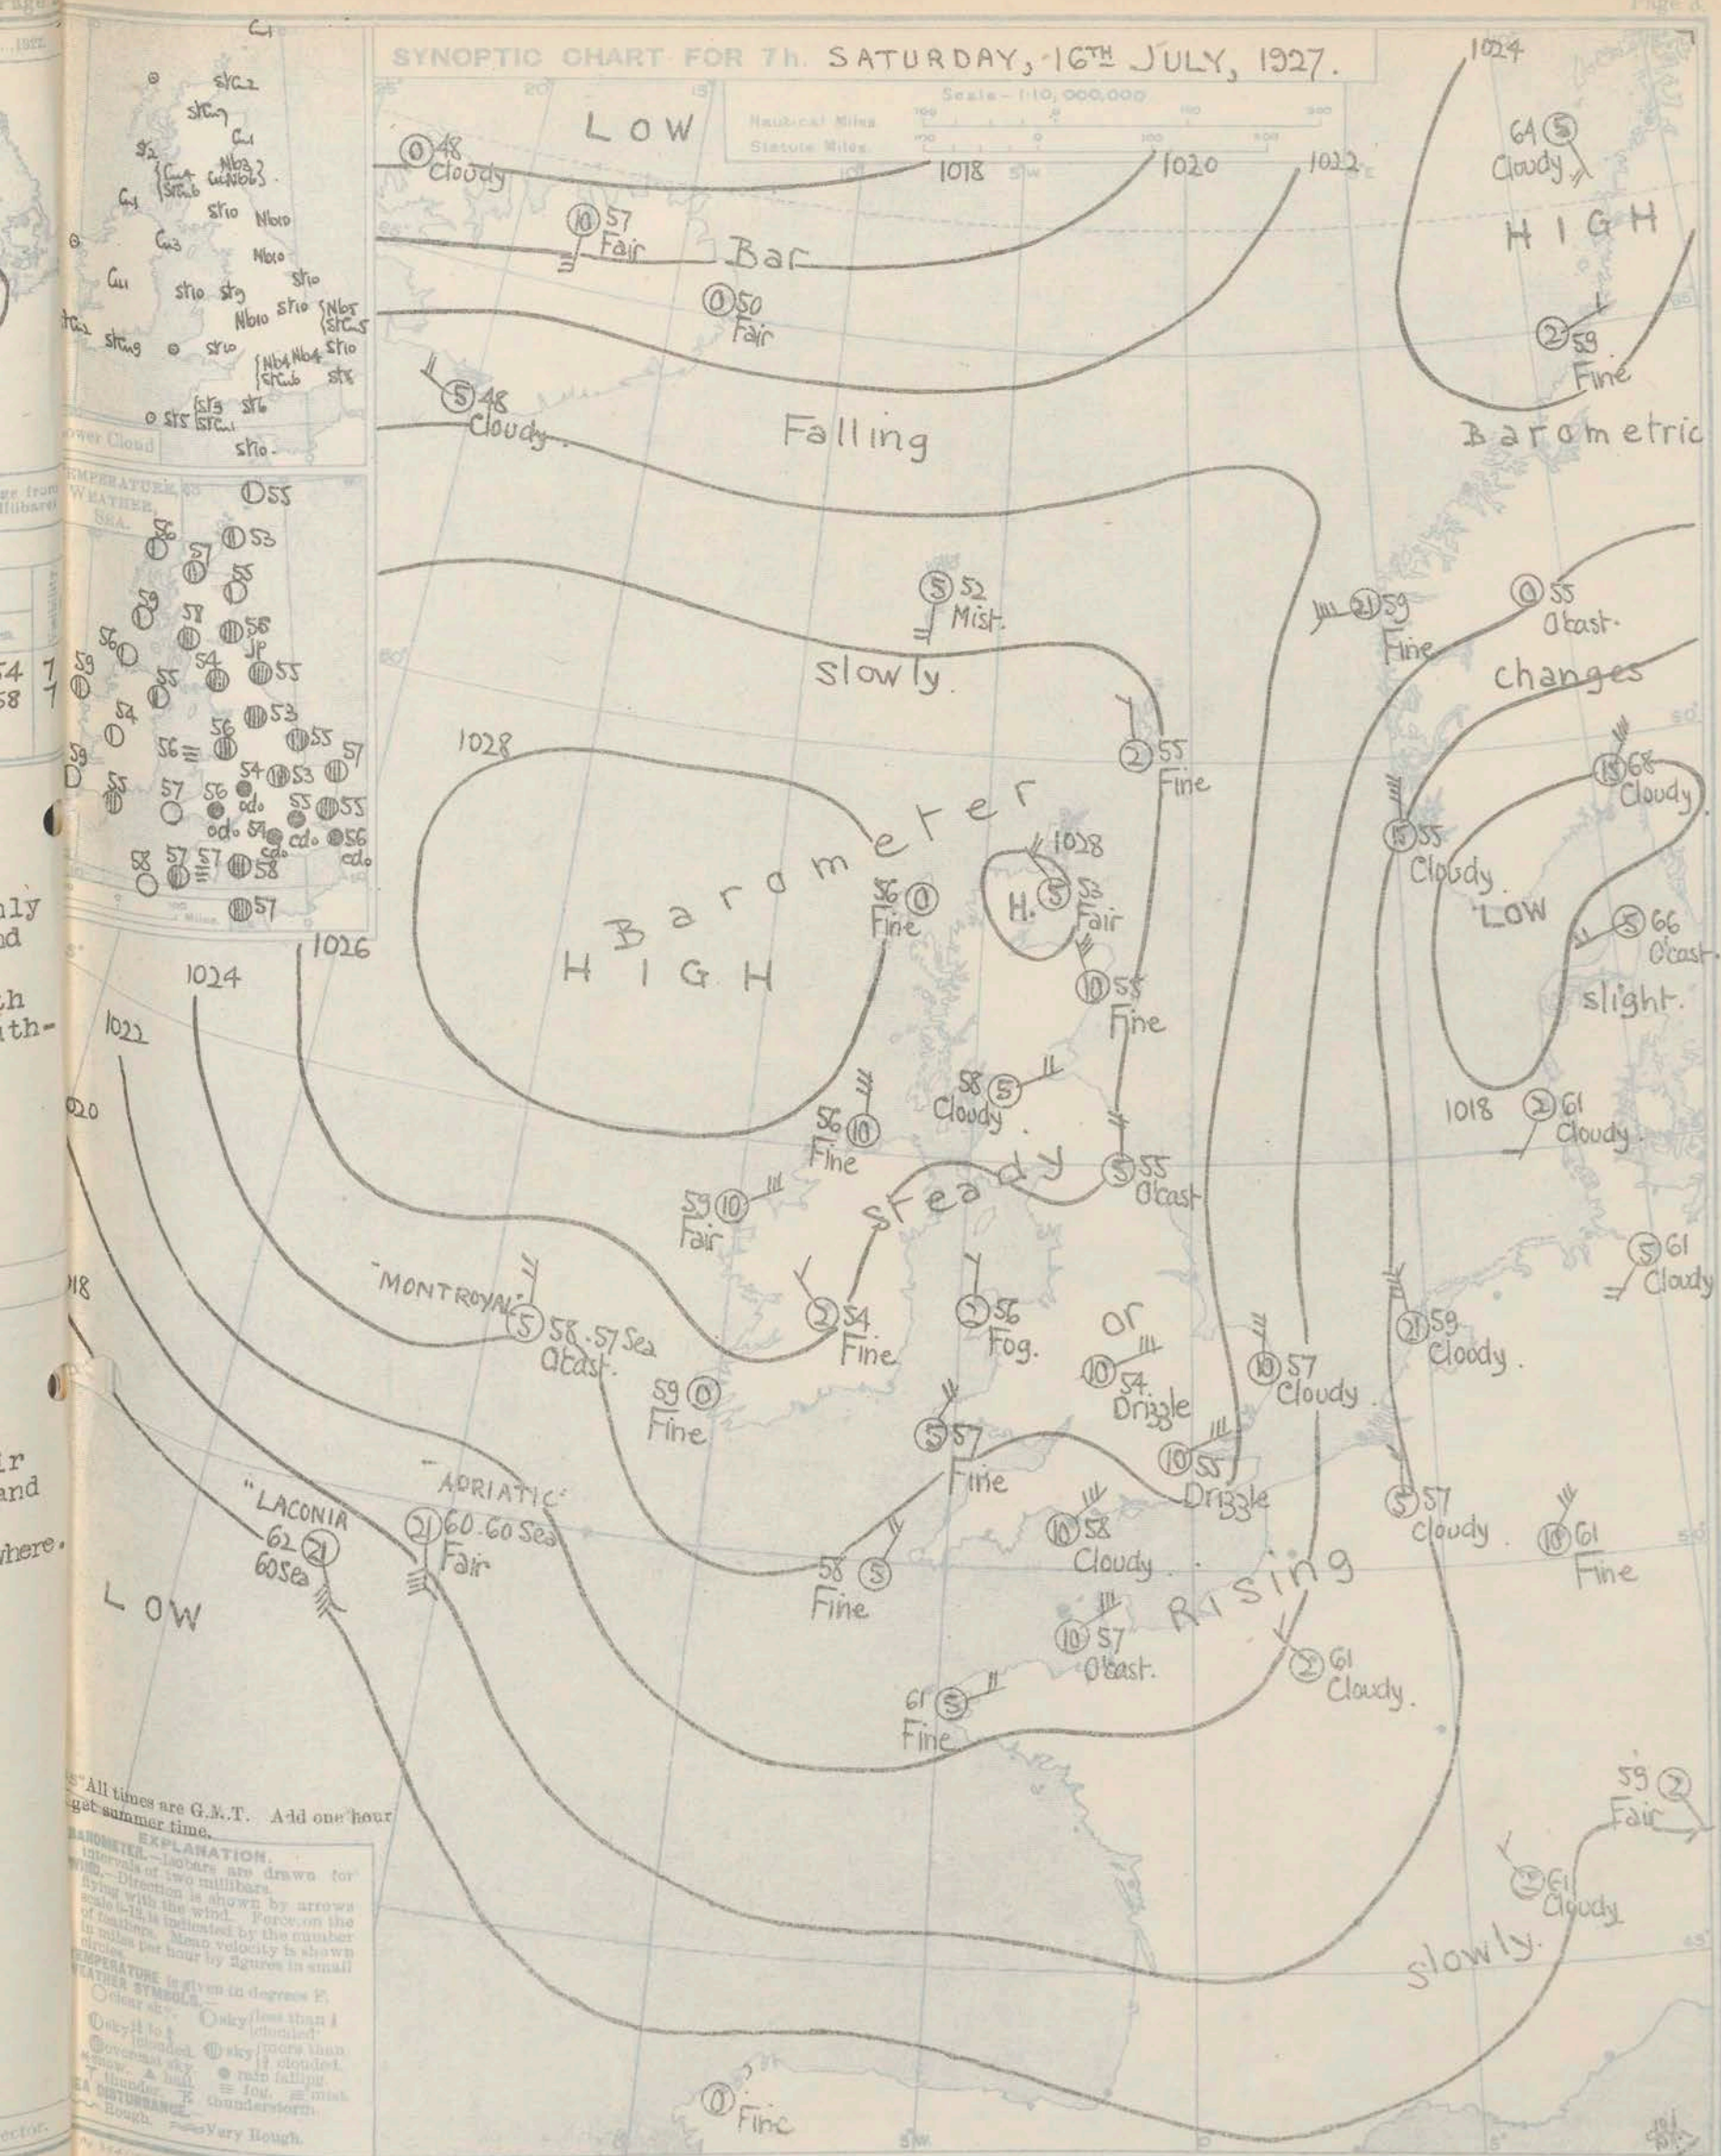

Further Outlook.

1. S.E. England	Moderate winds, from between N. and N.E., mainly cloudy to dull, occasional slight rain in most places; local mist; moderate temperature.
2. E. England	
3. E. Midlands	
4. W. Midlands	
5. S.W. England	Moderate winds, from between N. and N.E.; mainly cloudy but some finer periods; local fog and drizzle at times; moderate temperature to rather warm.
6. South Wales	
7. North Wales	
8. N.W. England	
9. N. Midlands	As 1 - 4.
10. N.E. England	
11. S.E. Scotland	
12. S.W. Scotland & Isle of Man	
13. A.W. Scotland	Light northeasterly to indefinite winds; fair to fine; local mist or moderate fog; warm.
14. Mid-Scotland	
15. N.E. Scotland	
16. Orkneys and Shetlands	
17. N.W. Ireland	
18. N.E. Ireland	
19. S.E. Ireland	
20. S.W. Ireland	

Mainly fair in Scotland and Ireland; uncertain elsewhere.

EXPLANATION.
Isobars are drawn for
intervals of two millibars.
Direction is shown by arrows
lying with the wind. Force on the
scale 1-12, is indicated by the number
of feathers. Mean velocity is shown
in miles per hour by figures in small
circles.
TEMPERATURE is given in degrees F.
WEATHER SYMBOLS.
Clear sky. Cloudy (less than 1
clouded). Sky (more than 1
clouded). Rain falling. Thunder.
Thunderstorm. Very Rough.

Valentia 4-44 12-47 20-48														rr = continuous rain.													
														SYMBOLS.													
														< = (less than (for cloud height).													
														< = before (for precipitation).													
														B = solar halo. V = lunar halo.													
														With present weather is combined, whenever possible, the general character of the weather.													
														A = cold; a = divides animal existing weather from preceding conditions.													
														thus - bc = air weather after rain;													
														- = has decreased; + = has increased.													
														SEA DISTURBANCE.													
														0 = no swell. 1 = mod. swell. 2 = heavy swell. 3 = no swell. 4 = mod. swell. 5 = heavy swell. 6 = rather rough sea. 7 = rough sea. 8 = very rough sea. 9 = mountainous sea.													
														The BEAUFORT SCALE OF WIND is used only for surface observations. In the accompanying table the speed of the wind corresponding with the different numbers, is the speed at about 20 feet above the ground.

GENERAL INFERENCE.

Pressure is highest north of the Azores. The depression near Denmark will move away and another centre is likely to move ESE. over or just north of Scotland. Weather will be fair for a time apart from local showers but will deteriorate in the North, and in all districts before long.

Districts.

Forecasts for the 24 hours commencing 15h. G.M.T.

Saturday, 23rd July, 1927.

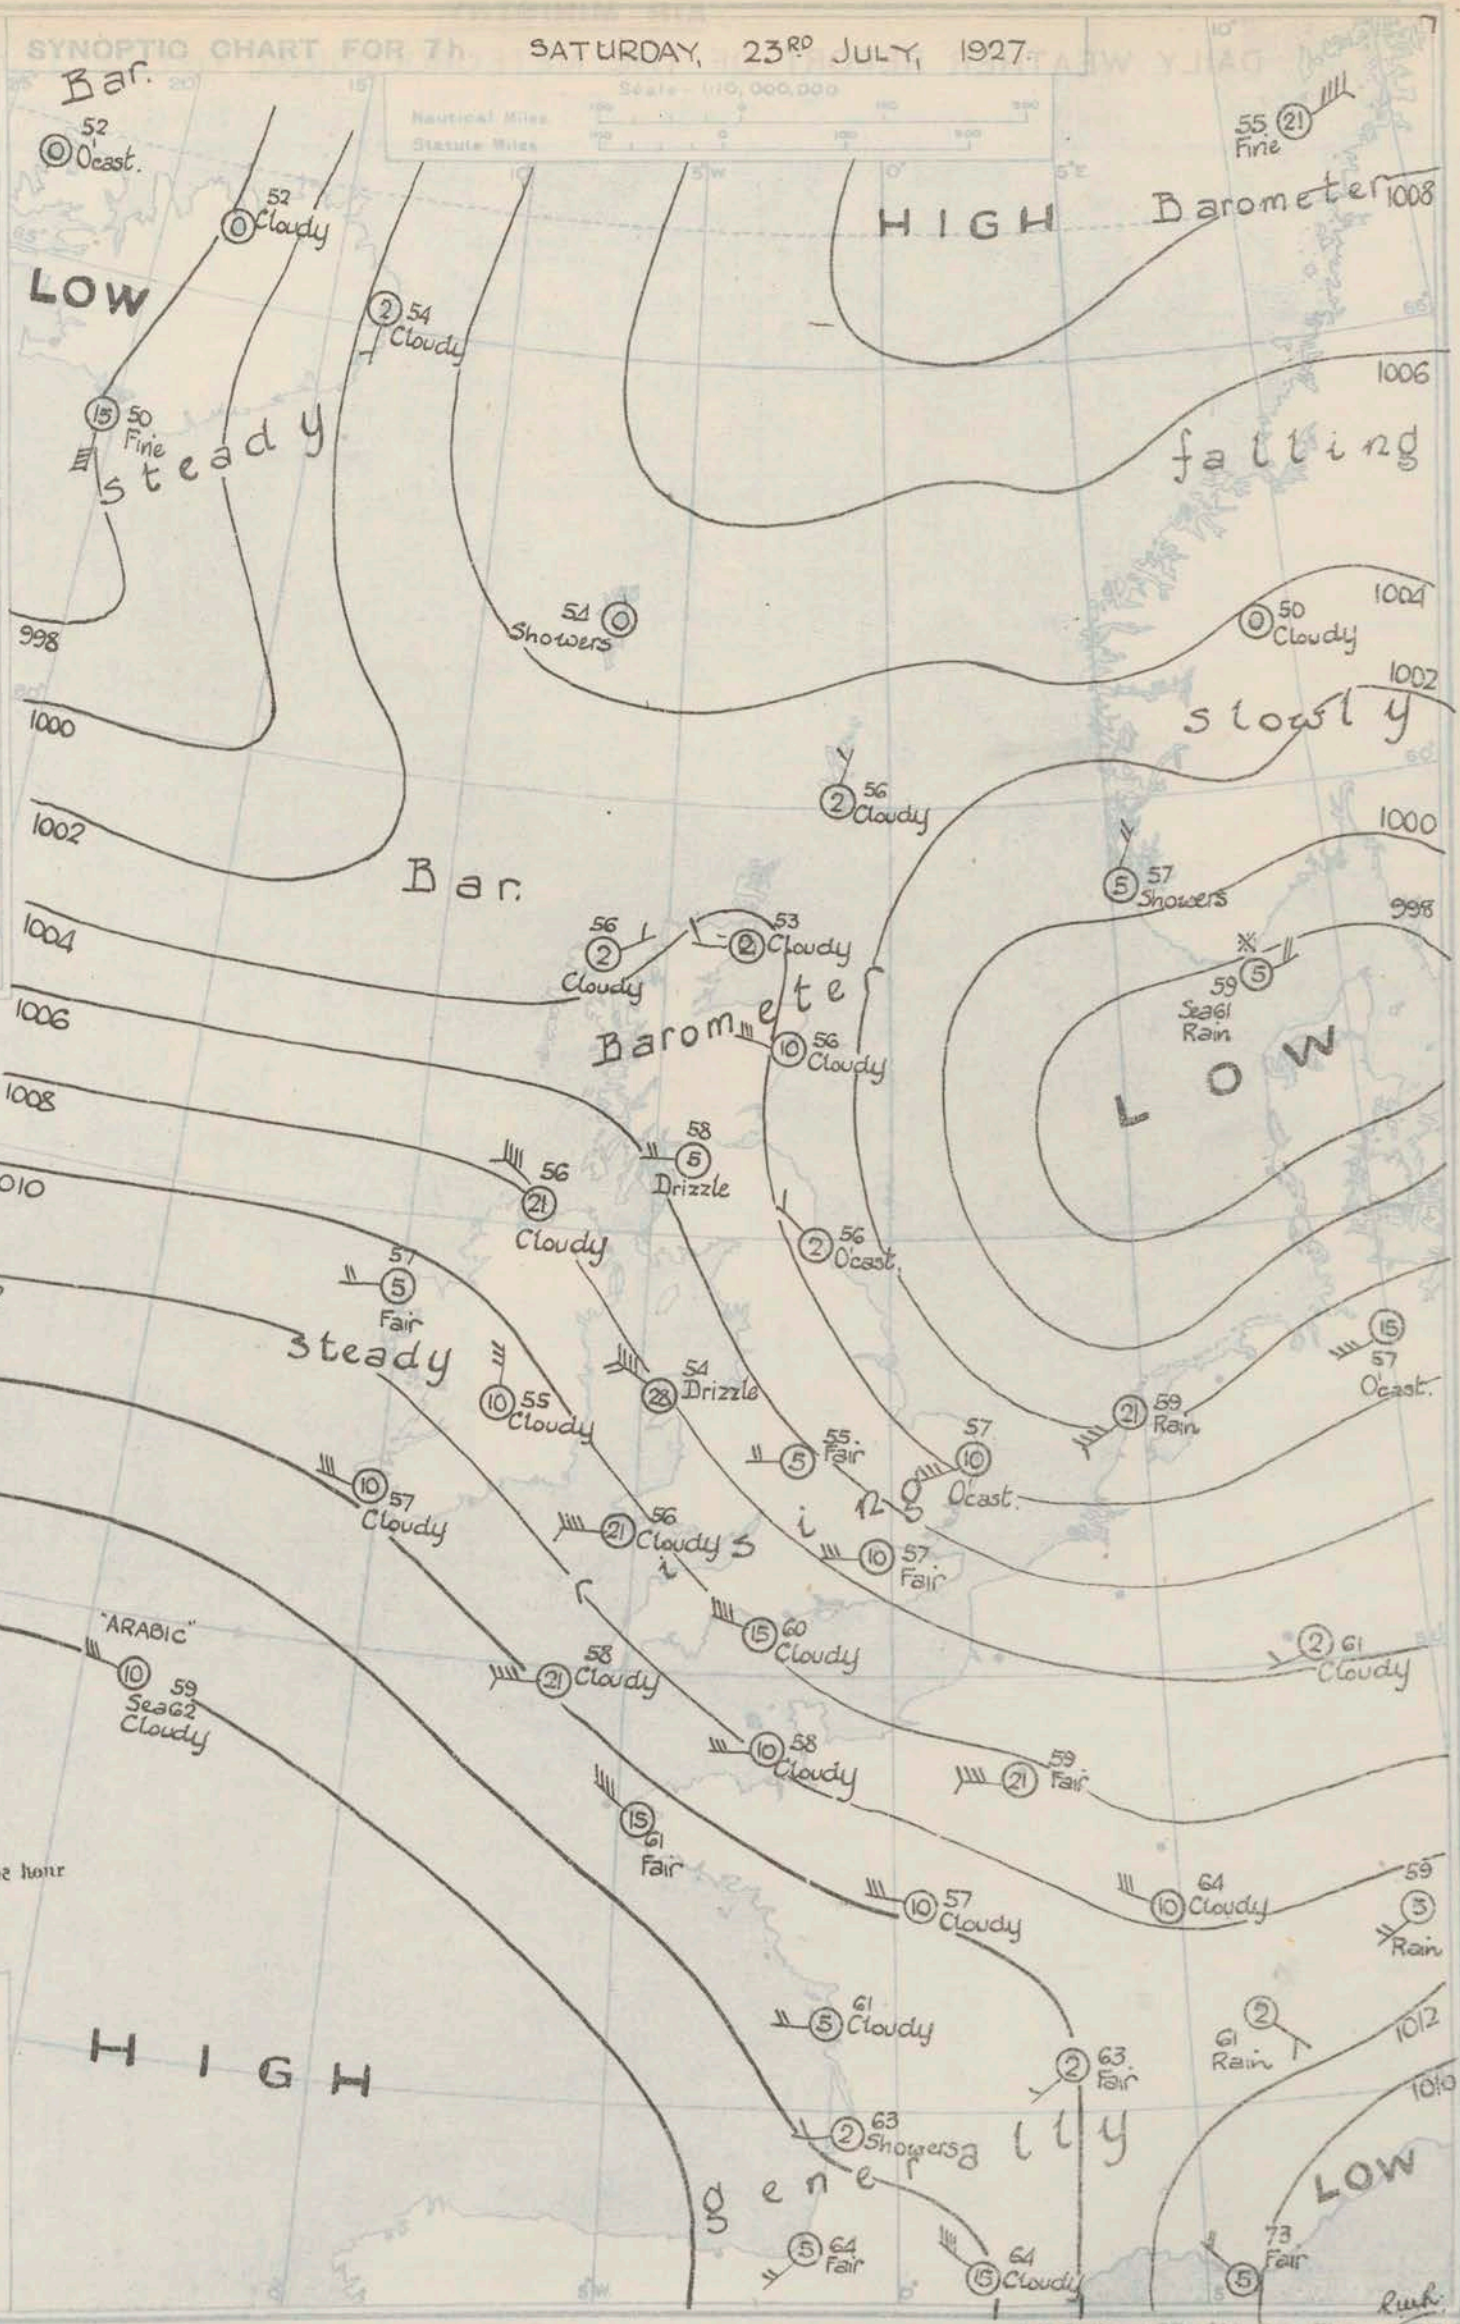

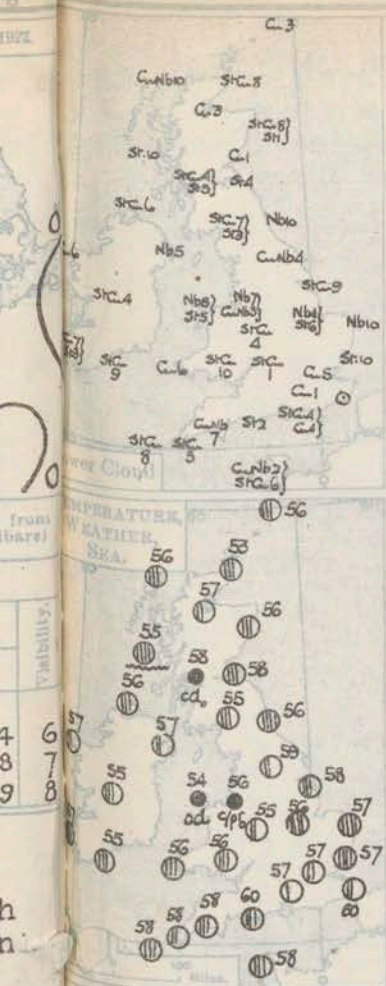

Further Outlook.

1. S.E. England	Wind westerly, moderate or fresh; fair apart from local showers; perhaps deteriorating during tomorrow; visibility good; moderate temperature.	Unsettled generally.
2. E. England		
3. E. Midlands		
4. W. Midlands		
5. S.W. England		
6. South Wales		
7. North Wales	Wind W. to S.W., moderate or fresh; fair to cloudy; local showers at first and probably rain later; visibility mainly good; moderate temperature.	Unsettled generally.
8. N.W. England		
9. N. Midlands		
10. N.E. England		
11. S.E. Scotland		
12. S.W. Scotland		
13. Isle of Man		
14. N.W. Scotland	Wind variable, mainly light or moderate; occasional rain; visibility variable; temperature moderate.	Unsettled generally.

GENERAL INFERENCE.

A belt of high pressure still extends from the Azores to Central Europe. A secondary trough of relatively low pressure which extends south-westwards from a depression centred north of the Faeroes will probably move east to northeast and cause rain at times in most places but it is doubtful whether more than slight rain will occur in Southern England.

Districts.	Forecast for the 24 hours commencing 15h. G.M.T. Monday, 25th July, 1927.	Further Outlook.
1. S.E. England	Wind south to southwest, moderate to fresh; fair to dull, occasional rain or drizzle in most places; visibility moderate to good; moderate temperature.	Unsettled; considerable periods in Southern England.
2. E. England		
3. E. Midlands		
4. W. Midlands		
5. S.W. England		
6. South Wales	Southwesterly winds, strong at times; mainly cloudy, occasional rain; visibility moderate to good; moderate temperature.

EXPLANATION.
BAROMETER.—Isobars are drawn for intervals of two millibars.
WIND.—Direction is shown by arrows lying with the wind. Force on the scale 1-12 is indicated by the number of feathers. Mean velocity is shown in miles per hour by figures in small circles.
TEMPERATURE.—Is given in degrees F.
WEATHER SYMBOLS.—
☉ Clear sky. ☁ Less than 1 clouded. ☁☁ more than 1 clouded. ☁☁☁ overcast sky. ☔ rain falling. ☎ snow. ☌ hail. ☌☌ fog. ☌☌☌ thunder. ☌☌☌☌ thunderstorm.
SEA DISTURBANCE.—
— Rough. — Very Rough.

GENERAL INFERENCE.

A rather deep depression west of Ireland will probably move N.E., high pressure subsequently advancing from the Southwest. Rain will occur at times in most districts today, but in S.E. England the amount is likely to be small. Fairer weather is expected to spread N.E. across the British Isles before long.

Further Outlook.

Districts.	Forecast for the 24 hours commencing 15h. GMT. Tuesday, 26th July, 1927.	Further Outlook.
1. S.E. England	Wind S. to S.W., moderate to fresh; mainly cloudy, with slight local rain today; showers, possibly accompanied by thunder locally tomorrow, with sunny periods; visibility mainly moderate to good; moderate temperature to rather warm.	Mainly fair and warm in the South; outlook uncertain for the North.
2. E. England		
3. E. Midlands		
4. W. Midlands		
5. S.W. England		
6. South Wales	Wind southerly, veering to S.W. or W. later, strong at times; mainly dull with intermittent rain or drizzle at first, showers and sunny periods later; visibility moderate to good; moderate temperature.	South Cone hoisted 10.37 G.M.T.
7. North Wales		
8. N.W. England		
9. N. Midlands		
10. N.E. England

SYNOPTIC CHART FOR 7h. Wednesday, 27th, July, 1927

Scale - 1:10,000,000
Nautical Miles
Statute Miles

EXPLANATION.
Isobars are drawn for intervals of two millibars.
Direction is shown by arrows pointing with the wind. Force on the scale 0-12 is indicated by the number of feathers. Mean velocity is shown in miles per hour by figures in small circles.
TEMPERATURE is given in degrees F.
OTHER SYMBOLS.
Clear sky. Sky less than 1 clouded.
Dsky 1 to 4. Sky more than 1 clouded.
Overcast sky. Sky 1 clouded.
Snow. rain falling.
Thunder & hail. rain falling.
Thunderstorm. rain falling.
DISTURBANCE.
Rough. Very Rough.

All times are G.M.T. Add one hour to get summer time.

GENERAL INFERENCE.

A depression centred three or four hundred miles west of Ireland appears likely to move north or northeast, but secondary depression will probably move northwards over the western parts of the British Isles and cause occasional rain there. Local thunderstorms will probably occur in most districts during the next day or two and at times, especially coastal fog but mainly fair weather is expected in the eastern districts of England and Scotland today.

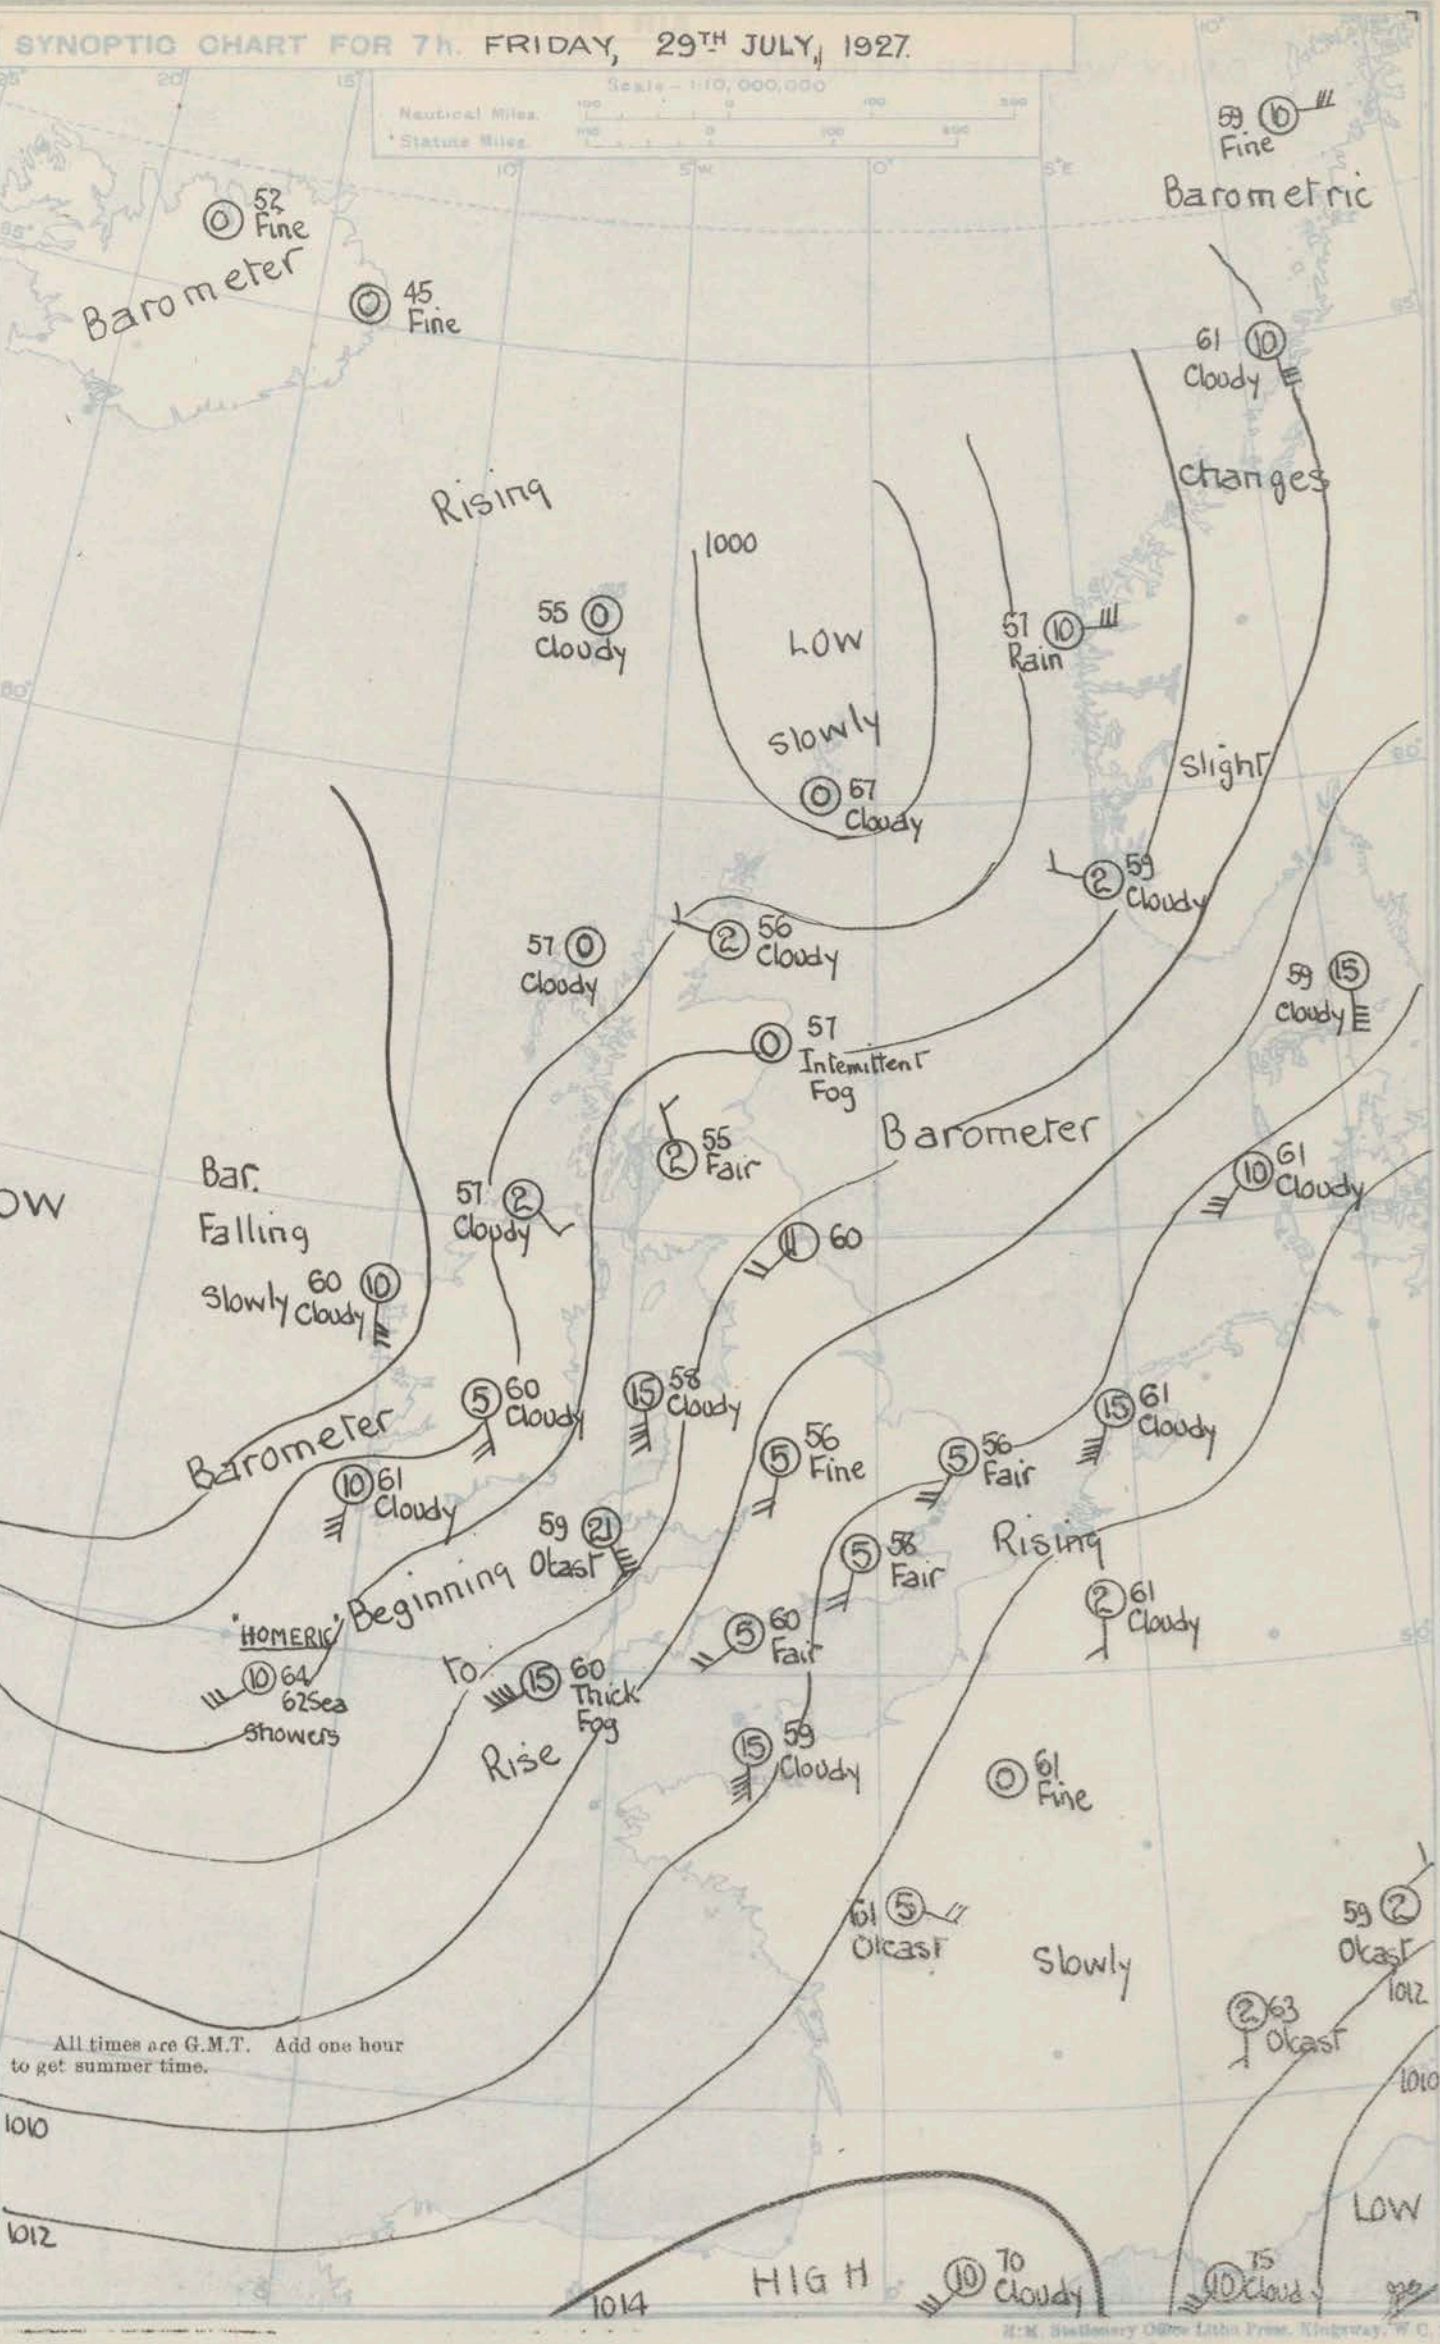

Districts.	Forecast for the 24 hours commencing 15h. G.M.T.	Friday, 29th July, 1927.	Further Outlook.
