SIGNIFICANT WEATHER

<p>0600 GMT 01 AUGUST 2002 SIG WEATHER</p> 	<p>1200 GMT 01 AUGUST 2002 SIG WEATHER</p> 	<p>Summary of UK Weather for Thursday 01 August 2002.</p> <p>Overnight there were outbreaks of rain over northwest Scotland, the Pennines and south Wales, and rain extended west across East Anglia, but elsewhere the weather was mainly dry with variable cloud and patchy fog.</p> <p>During the morning the fog cleared leaving most places dry for a time with variable cloud and some sunshine, the best of this in Cornwall but there were also lengthy spells of sunshine along other south coast resorts and in parts of Scotland as well. East Anglia remained cloudy with further outbreaks of rain, this edging west across the Midlands and much of Wales by midday and north across Lincolnshire and the southern Pennines. During the afternoon the rain extended slowly north and west across Yorkshire reaching Cumbria by the evening. Either side of this band the weather remained dry. There was little change in the position of the rain during the evening.</p> <p>Temperatures were in the very hot category in parts of western Scotland, it was very warm in Northern Ireland, but elsewhere temperatures were broadly average although it was rather cool in wetter areas.</p>

<p>0600 GMT 02 AUGUST 2002 SIG WEATHER</p> 	<p>1200 GMT 02 AUGUST 2002 SIG WEATHER</p> 	<p>Summary of UK Weather for Friday 02 August 2002.</p> <p>Northern Ireland, Western Scotland, the bulk of Central and Southern England, and South Wales saw a dry night with clear periods and mist patches. Meanwhile Central, Southern and Eastern Scotland were cloudier with occasional drizzle. By far the worst conditions affected North Wales, and more generally Northern England, where torrential downpours were reported.</p> <p>Further very heavy rain affected Northern England during the morning, especially the northeast, although during the afternoon the rain band eased and edged slowly north towards Southern Scotland. Wales saw some rain in the morning, but eventually joined much of the remainder of England, in having plenty of dry and bright weather. A few heavy showers developed in the West Country. Eastern Scotland and Northern Ireland had a rather cloudy day with patchy drizzle, but further west very warm sunshine arose.</p> <p>Into the evening lighter showery rain plagued Southern and Eastern Scotland, and parts of Northern Ireland. The odd shower affected Southwest England, and towards midnight continental showers threatened Southern most counties of England.</p> <p>Temperatures were cool under cloud, but warm or very warm, locally hot in sunshine.</p>

0600 GMT 03 AUGUST 2002	SIG WEATHER	1200 GMT 03 AUGUST 2002	SIG WEATHER	<p>Summary of UK Weather for Saturday 03 August 2002.</p> <p>Overnight a band of rain, heavy at times, lay across southwest Scotland, the Central Lowlands and Aberdeenshire. Some showers affected areas close to the south coast of England. Elsewhere it was mainly dry with variable cloud and a few mist or fog patches.</p> <p>During the morning showery rain gradually became more widespread and extensive across the southern half of the UK with thunder in places. The northern band of rain became increasingly confined to the eastern side of Scotland. A few showers cropped up over Northern Ireland. Through the afternoon a more extensive area of rain spread westwards into East Anglia whilst patchy rain continued across central and eastern parts of Scotland. Many northern and far western parts of England remained fine and bright. Northern Ireland was mostly cloudy. In the evening the rain in East Anglia slipped south into London and the Southeast with some torrential downpours and thunder reported. Temperatures were generally quite close to the seasonal normal but many parts of Wales, Central and Northern England became warm, locally very warm.</p>

0600 GMT 04 AUGUST 2002	SIG WEATHER	1200 GMT 04 AUGUST 2002	SIG WEATHER	<p>Summary of UK Weather for Sunday 04 August 2002.</p> <p>Very heavy and thundery rain affected Southeast England overnight, inducing local flash flooding. Showery rain also fed into Northeast England, and this extended southwestwards into the West Midlands and East Wales towards dawn. Elsewhere across the British Isles it was rather cloudy with patchy rain, and local fog patches. Showery rain sank south through the West Midlands, East Wales and parts of Southwest England during the morning. Some sunshine was reported elsewhere, although most places were fairly cloudy. Patchy rain affected Scotland and Northern Ireland, whilst showers fed into Northern and Eastern England. The latter saw heavy and thundery downpours later. In the afternoon further very heavy and thundery showers developed or fed across England and parts of Wales from the east and northeast. Much drier and in places brighter weather arose across Scotland, Northern Ireland and other western parts of the British Isles.</p> <p>More showers reached Northern England, East Wales and Western England in the evening, but they became isolated elsewhere. Low cloud affected North Sea coasts. Temperatures were average across England and Wales, but mostly warm to very warm elsewhere.</p>

SURFACE REPORTS

SIGNIFICANT WEATHER

0600 GMT 07 AUGUST 2002	SIG WEATHER	1200 GMT 07 AUGUST 2002	SIG WEATHER	Summary of UK Weather for Wednesday 07 August 2002. Outbreaks of rain affected northern England, Scotland and Northern Ireland at times overnight, but across southern England and south Wales it was dry with clear spells and isolated mist and fog patches. Showers or longer spells of rain continued across Scotland for much of the day, giving thunder in parts of eastern Scotland during the afternoon. Showers also started to develop over Wales and western parts of England during the morning and by midday some of the showers were turning thundery. Early in the afternoon showers started to develop over the eastern half of England with thunderstorms breaking out almost everywhere. By early evening there were torrential downpours in parts of eastern and southern England with up to 60mm of rain falling in one hour in places. By late evening the thunderstorms were mainly confined to east of a line from Newcastle to Portsmouth, with lighter showers further west over Wales and northwest England.. Temperatures were warm or very warm over much of England and eastern parts of Wales, normal over Scotland, the West Country and western parts of Wales, but rather cool across Northern Ireland.

SIGNIFICANT WEATHER

0600 GMT 08 AUGUST 2002	SIG WEATHER	1200 GMT 08 AUGUST 2002	SIG WEATHER	<p>Summary of UK Weather for Thursday 08 August 2002.</p> <p>Overnight showers affected eastern Scotland and much of England east of a line from Newcastle to Cardiff. By dawn heavy showers started to develop again across central southern England. During the morning there were further heavy showers over the Midland, Yorkshire and central southern England, and scattered showers also across Scotland. Outbreaks of rain from the next weather system reached western parts of Wales and the West Country. By early afternoon the heavy showers reached East Anglia and southeast England, giving localised thunderstorms. The rain area continued to move slowly eastwards and by the end of the afternoon rain was affecting Northern Ireland, Wales and western parts of England. Through the evening the showers died away from eastern England to be replaced by outbreak of rain. The rain then affecting much of England and Wales, although by that time it had turned more showery across South Wales and southwest England. Outbreaks of rain also occurred across central parts of Scotland. Temperatures were around normal for southeast England and East Anglia but elsewhere it was rather cool.</p>

SIGNIFICANT WEATHER

0600 GMT 09 AUGUST 2002	SIG WEATHER	1200 GMT 09 AUGUST 2002	SIG WEATHER	Summary of UK Weather for Friday 09 August 2002. Overnight a band of rain across Wales, central and southern parts of England moved north and east reaching Lancashire, Yorkshire and East Anglia by dawn. There was also some rain across central Scotland and showers over southwest England. During the morning the rain over Scotland eased although it developed over the far northeast. The rain over northern England moved only slowly north whilst that over East Anglia turned showery. Showers over southwest England and Wales edged slowly east and intensified, turning thundery across Somerset by midday. Elsewhere the weather was largely dry; it was rather cloudy in Northern Ireland but the Hebrides had the best of the sunshine. During the afternoon outbreaks of rain affected parts of central and eastern Scotland, the rain over northern England remained slow moving and thundery showers continued across central and southern England. A funnel cloud was reported in Berkshire and there were several reports of waterspouts. There was little general change in the evening. Temperatures were near normal or in the rather cool category but it was cool in wetter parts of Scotland.

SURFACE REPORTS

SIGNIFICANT WEATHER

0600 GMT 12 AUGUST 2002	SIG WEATHER	1200 GMT 12 AUGUST 2002	SIG WEATHER	Summary of UK Weather for Monday 12 August 2002. Some patchy rain cleared northeast Scotland during the early hours, leaving central and northern Scotland and Northern Ireland largely dry for the rest of the night with variable cloud cover and some clears spells. For southern Scotland, England and Wales it was a rather cloudy night, with some patchy light drizzle in places. Eastern Scotland had a bright day with sunny spells. However, across Northern Ireland and western Scotland cloud increased during the day bringing with it some patchy rain. England and Wales started rather cloudy and the cloud was slow to clear from eastern England. However, the cloud broke from the west, with the breaks eventually reaching East Anglia and good sunny periods developed. Patchy rain continued to affect parts of Northern Ireland and western Scotland through the evening. Skies also clouded over across parts of north Wales, northwest England and southwest Scotland. Elsewhere cloud remained broken with largely clear skies across East Anglia and southeast England. Generally temperatures were close to normal but it was a warm day across parts of eastern Scotland, the Welsh borders and southern England.

SIGNIFICANT WEATHER

0600 GMT 13 AUGUST 2002	SIG WEATHER	1200 GMT 13 AUGUST 2002	SIG WEATHER	Summary of UK Weather for Tuesday 13 August 2002. Outbreaks of mostly light drizzle and rain affected much of Northern Ireland and Scotland overnight, although northwest Scotland remained largely dry. Wales and the western half of England had a cloudy night with fog and drizzle affecting coasts and hills. The rest of England was dry with generally small amounts of cloud. Some fog developed under the clearer skies towards the end of the night. Patchy light rain or drizzle was still evident across parts of Northern Ireland and southern Scotland in the morning but many places became dry for a time and a little brighter. Scattered showers developed during the afternoon though. Northern, but more especially eastern Scotland, had a bright day with long sunny spells. Wales and western England remained largely cloudy through much of the day with fog and occasional drizzle affecting coasts and hills, especially during the morning. Eastern England though had a dry and largely sunny day after a misty start in places. It was generally warm or very warm, but locally hot across parts of East Anglia.

SIGNIFICANT WEATHER

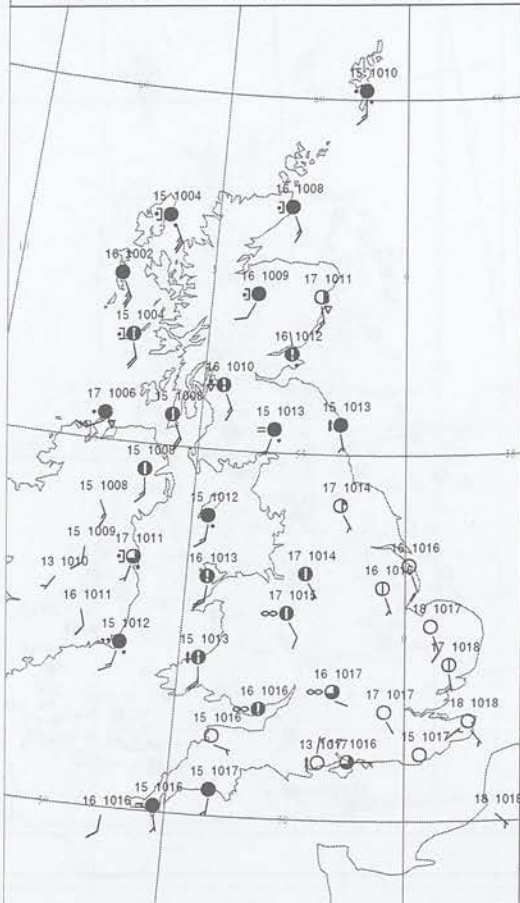

0600 GMT 14 AUGUST 2002	SIG WEATHER	1200 GMT 14 AUGUST 2002	SIG WEATHER	Summary of UK Weather for Wednesday 14 August 2002. A generally cloudy night across the UK with the best of any breaks in the east. Some patchy light rain or drizzle affected southern parts of Scotland, Northern Ireland, and coastal parts of Wales. Southern parts of England saw quite extensive mist and fog by the end of the night. Mist, fog and low cloud gradually cleared much of England and Wales to leave a fine and dry day with plenty of sunshine. Coastal parts of Wales and southwest England held onto the mist and low cloud for much of the day with some light drizzle. Northern Ireland and Scotland remained rather cloudy throughout the day with patchy rain across many areas. This rain was locally heavy and persistent particularly across northern coastal parts of Northern Ireland and the Western Isles of Scotland, where it also became quite windy. The evening saw the patchy rain continuing across Northern Ireland and Scotland. It was a warm or very warm day across the sunnier south and locally hot across parts of East Anglia. Elsewhere saw temperatures close to normal.

SIGNIFICANT WEATHER

0600 GMT 15 AUGUST 2002	SIG WEATHER	1200 GMT 15 AUGUST 2002	SIG WEATHER	Summary of UK Weather for Thursday 15 August 2002. Much of Scotland and Northern Ireland had a wet and windy night. Elsewhere it was generally fine and dry with variable cloud, although some low cloud affecting the coasts of Wales and the far southwest of England gave some light rain and drizzle. Mist developed across parts of England. This was most widespread in the southwest where there was also some fog. Parts of Scotland and Northern Ireland had a wet and windy start. However, the rain gradually turned more showery in nature. Some sunshine developed in most places but western Scotland remained cloudy throughout the day. The rest of the UK was generally fine and dry with the best of the sunshine in eastern parts earlier in the day. A line of heavy and thundery showers developed later in the afternoon, stretching from the north of London to the north Norfolk coast. Small hail was reported in a few places across East Anglia. During the evening the thundery showers gradually cleared into the North Sea. Temperatures were hot or very hot across parts of East Anglia and Southeast England.

0600 GMT 16 AUGUST 2002	SIG WEATHER	1200 GMT 16 AUGUST 2002	SIG WEATHER	Summary of UK Weather for Friday 16 August 2002. Apart from a few showers in the far northwest and some drizzle on other western coasts, it was a dry night. Some mist patches formed here and there. England and Wales had a fine day with lots of sunshine in most areas. Isolated showers developed in some southeastern areas during the afternoon. There was more cloud across Scotland and Northern Ireland throughout the day but even here most places had some bright or sunny spells. The far northwest of Scotland had a few showers at first but these died out by early afternoon. During the evening Scotland and Northern Ireland were mostly cloudy but skies were largely clear across England and Wales. There were still isolated showers in eastern England for a time but these died out during the evening. Some fog spread into coastal areas of Norfolk and Suffolk. Temperatures were near normal in Northern Ireland, northwest Scotland and along western coasts but most places were warm. Parts of the southeast were very warm or hot.

0600 GMT 17 AUGUST 2002 SIG WEATHER	1200 GMT 17 AUGUST 2002 SIG WEATHER	<p>Summary of UK Weather for Saturday 17 August 2002.</p> <p>Most parts had a dry night with clear spells. Eastern counties had the clearer skies, and here fog developed in a number of places.</p> <p>Much of Scotland had a dry start to the day. The skies were often cloudy but there were some bright spells. During the afternoon, outbreaks of rain edged across western parts and then into some central and eastern areas during the evening. It was a windy day, especially in the west.</p> <p>Northern Ireland had a dry and bright day with sunny spells. It was windy here, too.</p> <p>Much of England and Wales also had a dry day. There was a good deal of sunshine, especially over central and eastern parts. Western and northern areas generally had more in the way of cloud. Later in the day outbreaks of rain edged across the far west of Cornwall and southwest Wales. Through the evening, the rain extended further north to affect much of west Wales and eventually northwest England. The rain was locally very heavy.</p> <p>It was hot or very hot across central and eastern England. Elsewhere, it was warm or very warm.</p>

SIGNIFICANT WEATHER

0600 GMT 22 AUGUST 2002	SIG WEATHER	1200 GMT 22 AUGUST 2002	SIG WEATHER	Summary of UK Weather for Thursday 22 August 2002. Much of northeast England and east Scotland were rather cloudy throughout with some patchy light rain in places. This cloud and rain tended to move westwards over the borders and the far north of England late in the period. Elsewhere over the UK, cloud was more broken and many places had some sunny spells, notably Wales, southern and central England and East Anglia, and most of the UK was dry. Northern Ireland had patchy cloud with some showery rain in the morning, improving in the afternoon but with a few showers. Some showers broke out in some other places, mainly in the late afternoon and during the evening, and mostly in the Bedfordshire/Cambridgeshire area and southwards towards London and Essex where they were dying out late in the period. A few light, isolated showers occurred elsewhere but the accent was on a pleasant summer's day in many areas of the UK. Winds were generally light and most places, except the northeast, were warm(2-3 degs above normal). Temperatures in the cloudy parts of the northeast of the UK were rather cool.

Elsewhere it was a mainly dry night with some mist patches although some showers developed in southern England later in the night. Outbreaks of rain moved east across many parts of Scotland although the far west was mainly dry. A few showers developed in Northern Ireland. There was some rain in northern and eastern England and showers developed in the south. The showers were heavy and thundery in parts of the southwest and south Wales. Small tornadoes were reported from the Rhondda valleys and Blaen Gwynfi. There was some sunshine in the showery areas of England and Wales but the best sunshine was in the Western Isles. In the evening some heavy showers ran into central southern England and the London area before dying out. Elsewhere there continued to be some outbreaks of rain in northeast England and in parts of Scotland and showers became more widespread in Northern Ireland. Temperatures were mostly around normal although it was warm in Northern Ireland and in a few southern areas.

SURFACE REPORTS

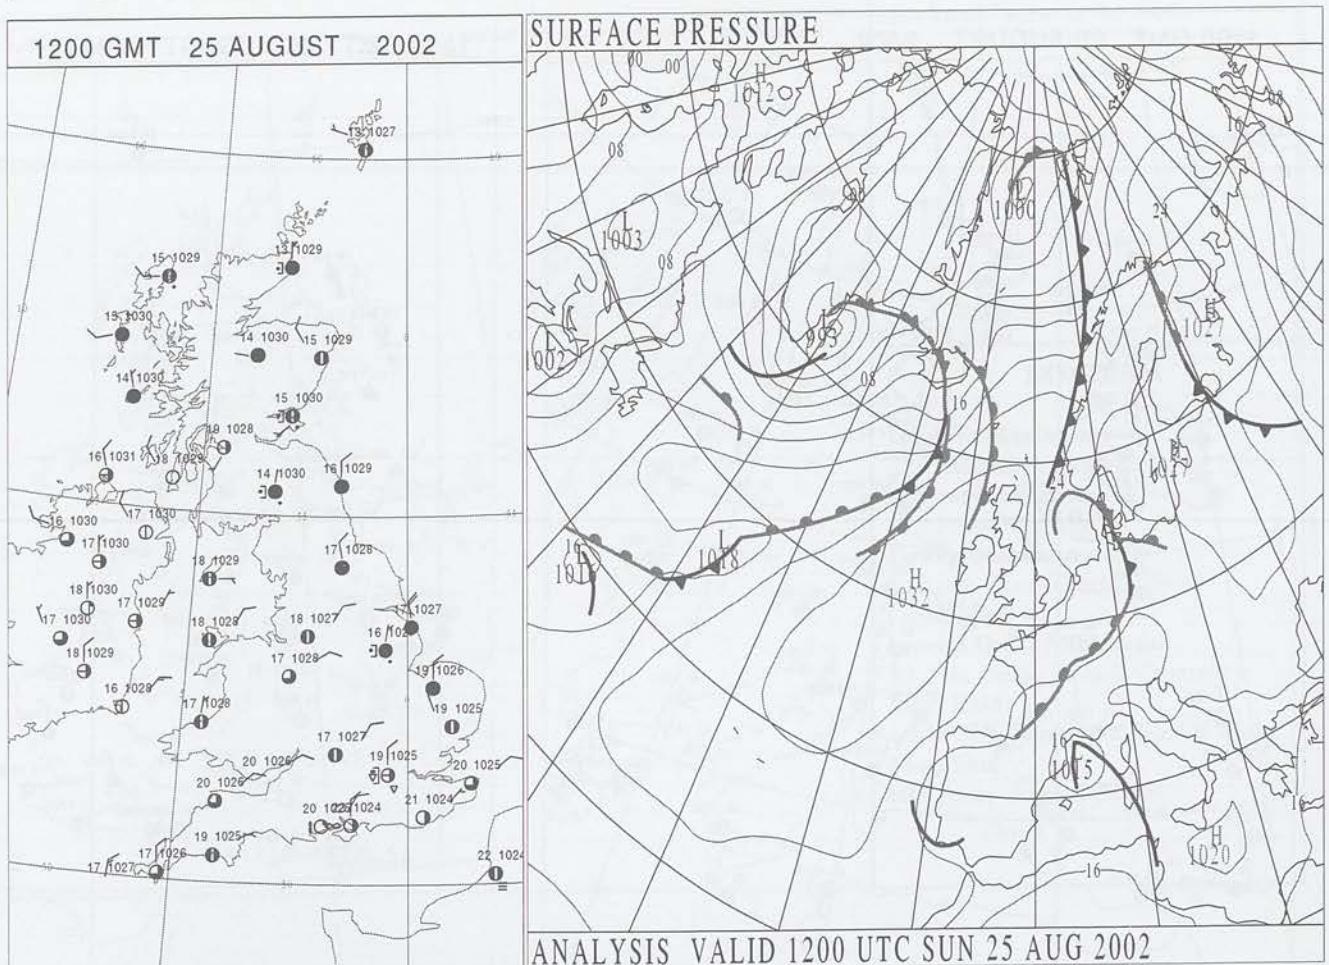

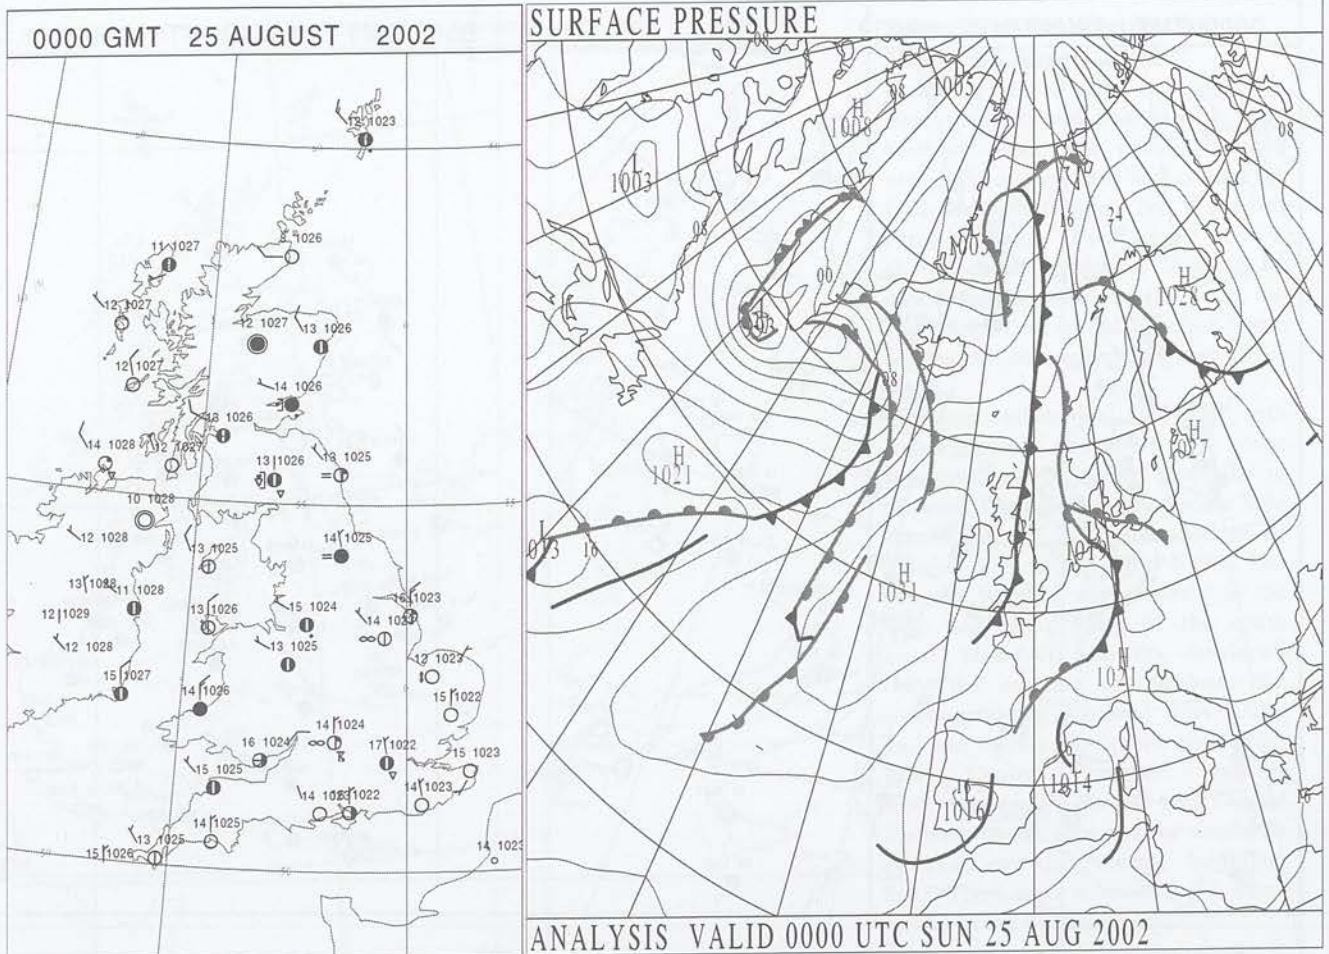

SIGNIFICANT WEATHER

Summary of UK Weather for Tuesday 27 August 2002.

East Anglia, Central and Southern England all had a cloudy night. Patchy rain brushed across some southern coastal fringes and there were outbreaks of drizzle across parts of East Anglia and southeast England. It also became rather cloudy across the Northern and western Isles, northwest Scotland and Northern Ireland through the night. There were outbreaks drizzle in these parts. Elsewhere it was a largely dry night with variable cloud but some mist and fog patches developed, particularly across northwest England.

The cloud affecting northwest Scotland moved southeast across Scotland through the day, still producing the odd pocket of drizzle, but at the same time brighter conditions followed across the Northern Isles and northwest Scotland. Skies also brightened across Northern Ireland through the day.

For East Anglia and parts of southeast England Skies remained rather cloudy but the rest of England and Wales had a bright day with sunny period.

Temperatures were close to normal across the more eastern parts of England as well as the Northern and western Isles. Elsewhere it was a warm day and locally very warm across Wales and the West country.

SIGNIFICANT WEATHER

0600 GMT 29 AUGUST 2002	SIG WEATHER	1200 GMT 29 AUGUST 2002	SIG WEATHER	Summary of UK Weather for Thursday 29 August 2002. Overnight there was a band of cloud from SW England to NE Scotland, still with the odd heavy burst of rain. To the southeast, it dawned dry but misty, with some early morning low cloud and fog. To the northwest, clearer weather with showers had started to move in. Through the morning the front continued to slowly slip southeastwards, although by lunchtime this was nothing more than a band of cloud and patchy light rain. Ahead of this after the low cloud had dispersed, it became bright with sunny spells here, although through the afternoon it clouded over as the front moved closer. Scotland and Northern Ireland had sunshine and showers, and this later spread into Northern England. It was windy in Northern Scotland, with gusts of over 50 mph reported in the Northern and Western Isles. Later in the day Northern Ireland tended to cloud up again, associated with the next front coming in from the southwest. Temperatures were generally a little above average although in Eastern and Southern England which had the sunshine for longest it was very warm.

SIGNIFICANT WEATHER

0600 GMT 30 AUGUST 2002	SIG WEATHER	1200 GMT 30 AUGUST 2002	SIG WEATHER	Summary of UK Weather for Friday 30 August 2002. Overnight, rain across Northern Ireland spread into Scotland and the far north of England. The rain was persistent and heavy in places. Elsewhere, it was generally dry, but rather cloudy with patchy hill fog and it was humid in the south. Scotland had further outbreaks of rain throughout the day, although southern parts became drier during the afternoon. Drier weather also occurred across Northern Ireland as a band of rain moved away south-eastwards to reach north Wales and northwest England by early afternoon. The rest of England had a mostly dry, albeit rather cloudy day. Sunny spells did break through though, notably across parts of eastern England. During the evening, the band of rain continued south-eastwards to affect the rest of England, except the southeast where there were clear spells. There were also clear spells in Northern Ireland and western Scotland. Central and eastern Scotland remained cloudy and wet. It was rather cool in the north, but much of England was warm and it became very warm in the brighter parts of the east.
