THE BEAUFORT SCALE OF WIND FORCE.

Beaufort Number	Admiral Beaufort's General Description of Wind.	Specification for use on Land, based on observations made at Land Stations.	Limits of Mean Velocities Statute Miles per Hour.
0	Calm	Calm; smoke rising vertically	Less than 1
1	Light air	Direction of wind shown by smoke drift	1-3
2	Slight breeze	Wind felt on face; leaves rustle	4-7
3	Gentle breeze	Leaves and small twigs in constant motion; wind extends light flag	8-12
4	Moderate breeze	Raises dust and loose paper; small branches are moved	13-16
5	Fresh breeze	Small trees in leaf begin to sway; crested wavelets on inland waters	19-24
6	Strong breeze	Large branches in motion; whistling heard in telegraph wires	25-31
7	Moderate gale	Whole trees in motion; inconvenience felt when walking against wind	32-38
8	Fresh gale	Breaks twigs off trees; generally impedes progress	39-46
9	Strong gale	Slight structural damage occurs (chimney pots and slates removed)	47-54
10	Whole gale	Seldom experienced inland; trees uprooted	55-63
11	Storm	Very rarely experienced; accompanied by widespread damage	64-75
12	Hurricane		Above 75

GALE WARNINGS

The Meteorological Office issues warnings to ports and fishing stations of gales on or near the coasts of the British Isles. When one of these notices has been received at a station a black canvas cone is hoisted.

The South Cone (point downwards) is hoisted for gales from S.E., veering to S.W., W. or N.W.
S.W., veering to W. or N.W.
W., veering to N.W.
E., veering to S. or S.W.

The North Cone (point upwards) is hoisted for gales from S.E., E. or N.E., backing to N.
N.W., veering to N., N.E. or E.
N., veering to N.E. or E.
N.E., veering to E.

The Signals remain hoisted after the receipt of a warning telegram until danger of a gale is passed.

The Districts to which warnings are sent are shown in the British Section of the Daily Weather Report by the following symbols:-

- ▼ South Cone hoisted
- ▲ North

METEOROLOGICAL OFFICE, LONDON.

NOTES ON THE INFORMATION CONTAINED IN THE VARIOUS SECTIONS OF THE DAILY WEATHER REPORT.

Stations.—Croydon. From 1st May, 1928, the wind records at Croydon have been obtained from a new site, the anemometer vane being 104.5 feet above ground level whereas formerly in the old site the height was 40 feet. Since 15th February, 1929, the velocity as measured from the anemometer record has been reduced in the ratio 6:5 before conversion to the Beaufort number by the table of equivalents in general use in this country which is applicable to anemometers having a height of 40 feet.

Guernsey.—The observations have been taken at the station of the States Meteorological Service in St. Peter Port from June 10th, 1929. Formerly the readings at 7h., 13h., and 18h. were taken at Fort George, those at 1h. being from St. Peter Port.

Kew. Temperature readings at Kew are taken in a large louvered screen placed against the north wall of the observatory. The thermometer bulbs are at a height of 10 feet above the ground immediately surrounding the building. This ground is raised a few feet above the general level of the Old Deer Park in which the observatory stands.

Valentia. The observations at 1 a.m. are taken at the Post Office Wireless Station on Valentia Island. Those at all other hours at the Observatory near Cahirciveen on the mainland.

Heights of Stations.—The heights of British Stations above M.S.L. published in the British Section of the Daily Weather Report refer to the plot of ground on which the rain gauge is situated.

Pressure.—The distribution of barometric pressure at Mean Sea Level is shown by means of isobars which are drawn for intervals of 2 millibars on the British Section of the Report and for intervals of 4 millibars on the International Section.

The wind at a height of 1,500–2,000 feet above ground usually blows along the isobars and, for the same temperature, pressure and latitude, the speed of the wind is inversely proportional to the distance between the isobars, e.g., for isobars 1 inch apart in the Daily Weather Report the speed of the upper wind is about 12 m.p.h. in latitude 55°, with a temperature of 50° F. and a pressure of 1,015 mb; if, however, the isobars are $\frac{1}{2}$ inch apart the corresponding speed is 24 m.p.h.

The scale below can be used with both the International and the British Sections. If the distance between consecutive isobars is measured along the rule from the left-hand extremity the geostrophic wind is shown by the scale in miles per hour.

GEOSTROPHIC WIND SCALE FOR

4 mb isobars on 1 : 2 × 10⁷ Charts.
or 2 mb " " 1 : 10⁷ "
or 1 mb " " 1 : 5 × 10⁶ "

This scale applies under the following conditions:—

Pressure, 1,015 mb. Temperature, 50° F. Latitude, 55°.

Corrections.—For an increase of 10 mb pressure, subtract 1% from velocity; for an increase of 10° F. add 2%. From Latitude 55° to Latitude 65° subtract 1% for each degree above 55°. From Latitude 55° to Latitude 45° add 1½% for each degree below 55°.

Temperature.—Temperature is specified in degrees Fahrenheit, and is shown on the charts by means of figures written alongside the circles which indicate the positions of the stations.

In ship reports published on page 3 of the British Section of the Report sea temperature is given below air temperature and is preceded by the word "Sea."

Relative Humidity.—Relative humidity at British stations is calculated from the following hygrometric formulæ:

$$x = f - .444(t - t') \text{ for wet bulb readings above } 32^\circ \text{ F.}$$

$$x = f - .400(t - t') \text{ for wet bulb readings below } 32^\circ \text{ F.}$$

where x is the vapour pressure in mb;

f the saturation vapour pressure at the temperature of the wet bulb;

t the dry bulb temperature; and

t' " wet "

The tables used for calculating humidities from the readings of the dry and wet bulb thermometers on aeroplanes, are based on a formula similar to the above, but allowance is made for the variation of barometric pressure with height and for the increased ventilation of the thermometers.

Upper Air Temperature.—The British observations are made normally, one at 1,000-feet above the level of the aerodrome, and the remainder at pressures of 950, 900, 850, 800, etc., millibars. Heights are then computed and, apart from instrumental error, are correct heights: they do not require modification for differences of temperature from normal as these are allowed for in the computation. The values are shown graphically and in tabular form in the Upper Air Supplement. On the diagram, temperatures are given in degrees Fahrenheit and Absolute.

The oblique line marked "Dry Adiabatic" shows the lapse rate of temperature for dry air ascending or descending under adiabatic conditions, i.e., without communication of heat from external sources. The lapse rate under these circumstances is very approximately 5.5° F. per 1,000 feet, or 10°a per kilometre. A lapse rate greater than this value indicates instability in a dry atmosphere.

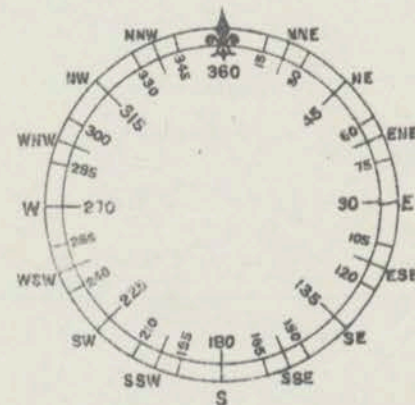

The broken lines marked Saturated Adiabatic show lapse rates for saturated air. These are for air masses which contain just sufficient moisture at 1,015 mb. pressure to become saturated after rising 1 km. in an environment having the dry adiabatic lapse rate. The condensed moisture is assumed to be retained thereafter in the air as it rises.

Wind.—All wind directions specified in the reports are "true," as distinguished from "magnetic." The arrows indicating wind direction are drawn to fly with the wind. Wind velocities are shown on the charts of the British Section and Upper Air Supplement in m.p.h. by the numbers placed within the small circles. In the International Section velocities are not shown. In both Sections the number of feathers on the arrows denotes wind force by Beaufort number.

Upper Winds.—The direction and velocity of the wind are given in the charts of the Upper Air Supplement for heights of 2,000 feet and 6,000 feet. The data are also given in tabular form for various heights. The reports are usually based on Pilot Balloon ascents.

Wind reports deduced from British Pilot Balloon Ascents refer to the 1,000 feet layers centering at the heights given in the table up to 16,000 feet. When winds are reported at greater heights, they refer to the 5,000 feet layers centering at 20,000 feet, 25,000 feet, 30,000 feet and 35,000 feet.

In the tabular statement direction is specified in degrees from true north measured through East 90°, South 180°, West 270° to North 360°. (See diagram below.)

Rainfall.—At Stations marked † in the International Section of the Report, the rainfall is received in an abbreviated code and the measurement entered is therefore not necessarily correct to the nearest millimetre. For example any fall between 11 and 15 mm. would be reported by the same code figure and entered as 13 mm. in the Report.

Sea Disturbance.—The code for sea disturbance used at coastal stations is given on p. 1 of the British Section of the Report. Ships at sea use the following code:—

0. No or slight swell	} and { Sea smooth to moderate.	5. No or slight swell	} and { Sea rough or above.
1. Moderate swell		6. Moderate swell	
2. Heavy " "		7. Heavy " "	
3. Long low " "		8. Long low " "	
4. Confused " "		9. Confused " "	

Adjusted Readings.—Where an instrumental reading is found to be in error and some adjustment is necessary, such adjusted reading is published in brackets thus (59).

The entries in the British Section of the Report for the stations in the main tables on pages 1, 2, and 4 are compared with those in the returns received from the stations at the end of the month and errors in the Report so found are noted in the monthly correction sheets.

The reports from the London Stations on page 1 and from the Health Resorts on page 4 are not subjected to the same close scrutiny but if any errors are found these are also noted in the correction sheets.

Times of Sunrise, Noon and Sunset.—The times of Sunrise, Noon and Sunset published in the British Section of the Report for certain stations are recalculated from (1) the figures for the duration of sunshine contained in the International Meteorological Tables and (2) the value of the sun's declination and the equation of time published in the Nautical Almanac. The change of declination of the sun on the same day from year to year over a cycle of four years is taken into account.

SUPPLEMENT TO THE DAILY WEATHER REPORT OF THE METEOROLOGICAL OFFICE, LONDON.
SUMMARY OF METEOROLOGICAL OBSERVATIONS AT SELECTED STATIONS ISSUED ON THE 1st DAY OF EACH MONTH.

Notes on the Weather of **AUGUST 1929.**

Conditions were very unsettled during the first week, depressions moving eastward or northeastward across the British Isles. Temperature was generally low and there was some local thunder and occasional heavy rain. An anticyclone began to spread in from the Atlantic on the 6th. and the 6th. and 7th. were the only rainless days of the month at Stornoway, in the Northern Hebrides. Subsequently the anticyclone off our Southwest coasts spread northeast, the tracks of the depressions were further north and weather became much more settled in England, especially in the East and Southeast, practically no rain falling in the latter districts from the 8th. - 15th., while temperature also rose. Meanwhile unsettled conditions persisted in the North.

The fair weather was broken in the Southeast on the 16th. by a secondary depression over France moving north. Rain was general on this date and was heavy with thunder locally. Thunder was also experienced locally in Scotland on the 17th. Subsequently for some days depressions were centred over or near Iceland and mainly westerly winds prevailed over the British Isles. Small secondary disturbances in this westerly current caused heavy scattered rainfall though it continued mainly dry in Southern England.

On the 25th. an anticyclone off Southwest Ireland with a wedge extending to Iceland moved eastward and was followed by a depression with a series of secondary depressions to the south of the main centre. There followed a spell of warm weather and good sunshine records in most of England, particularly in the inland and eastern districts. There were local thunderstorms and rain was heavy at times in Ireland and Scotland. Malin had 35 mm. and Tirze and Valentia 24 mm. on the 30th. and Renfrew 23 mm. on the 27th. On the 31st. day temperature touched 90°F. at Margate and 89°F. at Maldon (Essex.)

The month was wet with many rain days in Ireland and Scotland and dry in England, particularly in the Midlands and East Anglia. On the whole sunshine was below the normal, though slightly above at Liverpool and probably about normal in East and Southeast England.

† The average sunshine for Liverpool and the average rainfall for the other stations marked † have been computed from the records available for these several stations by reference to the nearest stations with long records.

‡ Based in part on reports made by telegraph in which the day & night measurements are rounded off to the nearest whole millimetre. Small discrepancies may arise between these totals and those given in the Monthly Weather Report which are based on readings taken to 0.1 mm.

G. C. SIMPSON, F.R.S., Director.

PRESSURE: ICELAND TO GULF OF LIONS AUGUST, 1929.
ISOPLETHS* BASED ON SIX-HOURLY OBSERVATIONS.

NOTE: The diagram is obtained by drawing a line from Akureyri in Iceland to the South of France, near Marseilles. The points at which the isobars drawn for 4 mb. pressure intervals intersect this line at 1h, 7h, 13h, and 19h, are plotted consecutively and joined to show the variation of pressure from day to day at any point in the line. The line terminates at Lat. 65°N., 10°W. in the north, at Lat. 44°N., Long. 4°E. in the south.

EXPLANATION.
Isobars are drawn for
intervals of two millibars.
WIND - Arrows show the wind.
Number of feathers indicates direction
force. Mean velocity in miles
per hour entered in small circles.
TEMPERATURE is given in degrees F.
WEATHER SYMBOLS.
Clear sky. Cloudy (less than 1
clouded). Partly cloudy (more than
1 clouded). Rain falling. Rain
or snow. Thunder. Thunderstorm.
SEA DISTURBANCE.
Very rough. Very rough.
In barometric change from
1 h. to 1 h. in half millibars is entered
in the word for weather.

A wedge of high pressure off Ireland is moving eastwards and will cause the weather of the British Isles to be mainly fairer than of late.

Further Outlook.

Less settled conditions are probable in Ireland and Western Scotland after today.

Scale - 1:10,000,000

Nautical Miles
Statute Miles

EXPLANATION.
Isobars are drawn for intervals of two millibars.
WIND - Arrows fly with the wind. Number of feathers indicates Beaufort Force. Mean Velocity in miles per hour noted in small circles.
TEMPERATURE is given in degrees F.
WEATHER SYMBOLS.
Clear sky. (less than 1 cloud).
Partly cloudy. (more than 1 cloud).
Overcast sky. (rain falling).
Snow. (A ball).
Thunder. (A zigzag line).
SEA DISTURBANCE.
Slight. (A wavy line).
Very Slight. (A wavy line).
In FOLLING barometric change from 4 to 10 to half millibars entered beneath the word for weather.

All times are G.M.T. Add one hour to get summer time.

Nautical Miles
Statute Miles

EXPLANATION.
BAROMETER. - Isobars are drawn for intervals of two millibars.
WIND. - Arrows fly with the wind. Number of feathers indicates Force. Mean Velocity in miles per hour entered in small circles.
TEMPERATURE. - Is given in degrees F.
WEATHER SYMBOLS.
Clear sky. ☐. Partly cloudy. ☐. Cloudy. ☐. Rain. ☐. Thunder. ☐. Fog. ☐. Snow. ☐. Ice. ☐. Mist. ☐. Thunderstorm. ☐.
SEA DISTURBANCE. - Rough. ☐. Very Rough. ☐. Gale. ☐. Storm. ☐. Hurricane. ☐.
ISLAND. - barometric change from 4h. to 7h. in half millibars is entered beneath the word for weather.

All times are G.M.T. Add one hour to get summer time.

EXPLANATION.
 Anemometer. Inobars are drawn for
 intervals of two millibars.
 Wind. — Arrows fit with the wind.
 Number of feathers indicates Beaufort Force. Mean Velocity in miles per hour entered in small circles.
 TEMPERATURE is given in degrees F.
WEATHER SYMBOLS.
 ☁ Clear sky. ☁ Sky less than 1/2 clouded.
 ☁ 1/2 Sky 1/2 clouded. ☁ Sky more than 1/2 clouded.
 ☁ Overcast sky. ☁ Fog falling.
 Snow. A ball. ☁ Fog. ☁ mist.
 Thunder. T Thunderstorm.
SEA DISTURBANCE.
 R Rough. V Very Rough.
 The barometric change from 4 in. to 1 in. in half millibars is entered beneath the word for weather.

ISALOBARS

11th August.

SYNOPTIC CHART FOR 7h. SUNDAY, 11th AUGUST, 1929.

All times are G.M.T. Add one hour to get summer time.

EXPLANATION.
Isobars are drawn for intervals of two millibars.
Arrows by with the wind.
Number of feathers indicates Beaufort Force. Mean Velocity in miles per hour entered in small circles.
TEMPERATURE is given in degrees F.
WEATHER SYMBOLS.
Clear sky. Sky less than 1/2 clouded.
Sky 1/2 to 1 clouded. Sky more than 1/2 clouded.
Overcast sky. Rain falling.
Snow. A hail. Fog. Mist.
Thunder. Thunderstorm.
SEA DISTURBANCE.
Very Rough.
In Iceland barometric change from 24 to 7h. in half millibars is entered beneath the word for weather.

GENERAL INFERENCE.

A depression is situated between Iceland and Norway while an anticyclone lies southwest of the British Isles. A comparatively small secondary depression indicated west of Ireland is likely to cause some rain in western and northern districts, but elsewhere weather will be mainly fair.

Districts	Forecasts for the 24 hours commencing 12 Noon G.M. Thursday, 15th August, 1929.	Further Outlook.
1. S.E. England	Wind light and variable, becoming westerly; fair; moderate temperature; mist locally at night and early morning.	Fair in South and East England, probably unsettled in western and northern districts.
2. E. England		
3. E. Midlands		
4. W. Midlands		
5. S.W. England		
6. South Wales	Wind southwest to west, light or moderate; cloudy but some brighter periods; moderate temperature.

EXPLANATION.
 BAROMETER. Isobars are drawn for intervals of two millibars.
 WIND. Arrows fly with the wind. Number of feathers indicates Beaufort Force. Mean Velocity in miles per hour entered in small circles.
 TEMPERATURE. is given in degrees F.
 WEATHER SYMBOLS.

SYNOPTIC CHART FOR 7H. TUESDAY, 27th AUGUST, 1929.

Scale - 1:10,000,000
Nautical Miles
Statute Miles

All times are G.M.T. Add one hour to get summer time.

EXPLANATION.
Isobars are drawn for intervals of two millibars.
Arrows show the wind direction and force.
Numbers in circles indicate the mean velocity in miles per hour.
Weather symbols are given in degrees F.
Cloudy sky. ☁️
Partly cloudy. ☁️
Overcast sky. ☁️
Rain falling. ☔️
Thunder. ⚡️
Thunderstorm. ⚡️
Very Rough. 🌪️
In Iceland barometric change from 24h. in half millibars is entered beneath the word for weather.
