DEFRA (Ref: MO43) For Weather Forecast Planning Issued on Tuesday, 08 December 2020 at 05:32 local time

Air Quality Forecast for the UK

Issued by the Met Office

Today: Air pollution levels will be largely Low across the UK on Tuesday. However some isolated Moderate levels may develop this morning in the east, due to light winds and fog allowing the build-up of locally emitted pollution, mainly along busy roads in urban areas.

Tomorrow: After early rain and cloud clears the east, Wednesday will become increasingly dry and bright before rain and cloud arrives from the west later. Air pollution levels will be Low.

Outlook: Rather changeable weather from Thursday with air pollution levels expected to be mainly Low. Pockets of Moderate air pollution are possible near urban sources where winds fall light.
