This report has not been published.
Permission to quote from it should be obtained from the
Branch Director (Observations, Plans and Requirements).

1. INTRODUCTION

Drifting buoys operated by European countries, the United States, Canada and E.G.O.S. (European Group on Ocean Stations) provide valuable meteorological data in the North Atlantic Ocean. This report is a summary of the performance of these buoys giving information on the number of buoys operating, the accuracy of reported locations and data quality, timeliness and availability. It is compiled by looking at observations received in the Met. Office Meteorological Data Bank (Met.D.B.) and by comparisons of observations with background fields from the Met. Office forecast model. Additional information on buoy operations and data quality is extracted from E.G.O.S. Technical Secretariat reports.

2. SUMMARY OF PRESSURE PERFORMANCE

NOTE

Although buoys 44616, 44742, 44763 and 65594 were reporting at the beginning of the period, pressure data failed to reach the Observation Processing Databanks (OPD) until 5/10, 12/10, 4/10 and 12/10 respectively

(a) Buoy deployments, etc.

North of 50deg N

There were 8 buoys reporting pressure at the beginning of the period (this figure excludes the buoys in the note above - all of which are north of 50 degN) and 14 at the end. This 8 at the beginning includes buoy 63661 which has drifted into the report area during this quarter. 5 new buoys were deployed during the period (44727, 44761, 44774, 62501 and 62694). 3 buoys ceased reporting (44764, 63661 and 65581).

South of 50deg N

There were 12 buoys reporting pressure at the beginning of the period and 8 at the end. (Buoy 44779 was mistakenly quoted as reporting at the end of the last period. Buoy 44613 drifted south of 50 degN during this quarter and is included in the statistics for the south.) 4 new buoys were deployed (61527, 62502, 62503 and 62504). 8 buoys ceased reporting (44546, 44547, 44548, 62502, 62511, 62517, 62519 and 62524).

(b) Location Accuracy

The location accuracy was better than last quarter with 30 out of 33 of the buoys reporting having a % of observations with acceptable positions' greater than 95% (compared to 27 out of 35 last quarter). There were 3 gross errors in location during the quarter, compared with 21 last quarter (see under Data Quality).

(c) Data timeliness

(see note 9 of section 5 for definition of terms.)

Timeliness	Last quarter.	This quarter
Very Good	20	14
Good	4	6
Satisfactory	2	6
Poor	2	1
Very poor	7	6
Total no. of buoys	35	33

(d) Data availability

(see note 9 of section 5 for definition of terms.)

Availability	South of 50 deg N		North of 50 deg N	
	Previous Quarter	Present Quarter	Previous Quarter	Present Quarter
Very Good	1	1	15	12
Good	--	2	3	2
Satisfactory	9	8	2	2
Poor	3	5	1	1
Very Poor	--	--	1	--

The total number of buoy days in the quarter was 2,373 [obtained by summing the number of reporting days for each buoy] (last quarter the total was 2,496) and the number of 'buoy hours' with at least one observation was 37,850 (compared with 41,710 last quarter). Thus, the mean number of hours per day, for days with at least one observation (averaged over all buoys operating in the area) was 15.95 (last quarter the figure was 16.71).

(e) Data Quality - Pressure

Revised RMS Differences

The technique used to assess the quality of pressure data in this report is based on the Revised RMS differences between the observations and the background field from the Global Forecast Model (see note 8 in Explanatory Notes). For buoys south of 50 degN the Revised RMS differences should be less than 2.0 hPa and for buoys north of 50 degN they should be below 3.0 hPa. The buoys whose revised RMS difference were found to lie outside these limits have had their performance described as 'suspect' and are included in the section below. Examination of the time-series plots (see Annex B) indicates the performance of these buoys:-

- 44546 - This buoy showed a bias of +2.0 hPa from the beginning of the period to the end of the buoy's life on 29/11.
- 44547 - The buoy showed a bias of approximately +3.0 hPa throughout much of December.
- 44764 - Data from this buoy became totally erratic and produced a large number of gross errors from the start of the period until the end of the buoy's life on 29/11.
- 62511 - This buoy showed a slight pressure bias of +0.7 hPa throughout the early part of the period and the data became slightly erratic towards the end of the buoy's life on 26/11.

Biases

2 buoys (excluding those mentioned in the previous section) showed pressure biases greater than 0.5 hPa (pressure biases are determined using the mean value for unflagged data from Annex A). Those buoys whose pressure data showed a bias of greater than 0.5 hPa have also had their performance described as 'suspect'.

WMO No.	Position	Buoy bias (hPa)	Ship bias (hPa)	Period of reports
44548	W of SCOS	-1.0	-0.1	01/10 - 10/10
44616	SOBA	+0.9	+0.6	01/10 - 31/12

The ship bias represents the mean pressure biases reported from ships within a radius of 500 nautical miles of the mean position of each buoy.

Gross errors

The observations that appear to lie outside the expected distribution - the 'gross' errors (see Time-series graphs) - have been ringed. (The erroneous observations which occurred towards the end of the life of buoys 44546, 44764, 62502 and 62517 have not been included in this section.) The observations have been individually examined to see whether the errors lie with the pressure, location or the background field. Out of 120 occasions the results are as follows -

ERROR	NUMBER LAST QUARTER	NUMBER THIS QUARTER	COLLECTING CENTRE
bg field	0	0	-----
location	0	0	Oslo
location	3	3	Sondre Stromfjord
location	14	0	Paris
location	0	0	Unknown
location	4	0	US Air Force
pressure	49	84	Oslo
pressure	55	0	Sondre Stromfjord
pressure	42	33	Paris
pressure	20	0	US Air Force
pressure	0	0	Unknown
Total no. of buoy hours	41,710	37,850	

During the quarter 117 gross pressure errors were transmitted as compared to 166 last quarter. The number of gross location errors from the Local User Terminals was less than last quarter (3 compared to 21 last quarter).

(3) Air Temperatures and Sea Surface Temperatures

The following table shows the mean and standard deviation of observation minus background differences for air temperatures and sea surface temperatures. Figures in brackets are for the observations from voluntary observing ships within a radius of about 500 nautical miles of the mean position of each buoy.

(Note : The calculations below include gross errors. Therefore, in some instances, the figures may be slightly misleading.)

WMO No.	Air Temperature			Sea Surface Temperature		
	Mean	St. Dev	No. of Obs	Mean	St. Dev.	No. of Obs
25565	0.4(0.1)	1.4(1.8)	1870 (74)	---	---	---

65581	0.7(-0.1)	5.2(1.1)	921 (119)	0.4(-0.6)	1.4(3.2)	615 (72)
65594	0.2(-0.4)	1.5(0.8)	4963 (17)	-0.1(0.5)	0.9(0.7)	5822 (11)

Statistics of (ob-bg) differences for buoys reporting this quarter and all ships within 500 nautical miles

Buoys 44764 (1.1) and 44774 (2.8) showed significant air temperature biases. The bias from buoy 44764 was largely the result of erroneous data being reported towards the end of the buoy's life. The significant bias reported from buoy 44774 was due to the Paris LUT intermittently reporting air temperatures which were approximately 12°C too high.

Buoy 44760 (-1.0) was the only buoy to show a significant sea surface temperature bias.

(4) Winds

The following table shows the mean and standard deviation of observation minus background differences for wind speed and direction. Figures in brackets are for the observations from voluntary observing ships within a radius of about 500 nautical miles of the mean position of each buoy (Note - it is not known what proportion of the ships' winds were measured rather than estimated visually using the Beaufort Scale). The statistics for this report can be compared with those for ships and the relative quality of the wind data from each buoy can be assessed.

WMO No	Period	Wind Speed (kn)		Wind Direction (deg)		No. of Obs
		Mean	St. Dev.	Mean	St. Dev.	
44613	01/10-31/12	-1.1(2.3)	5.0(6.5)	-0.1(-1.6)	23.7(27.5)	4016 (530)
44616	01/10-31/12	-18.0(3.8)	9.0(6.9)	20.7(-7.0)	64.1(25.9)	685 (123)
44742	01/10-31/12	-2.4(5.4)	4.9(5.2)	3.8(-4.6)	22.2(10.6)	4377 (17)
44764	01/10-29/11	-4.4(1.3)	6.1(8.4)	-11.0(-6.1)	31.1(34.5)	2203 (330)
62501	05/10-31/12	-0.1(2.3)	4.8(6.6)	-13.8(-3.2)	22.5(29.1)	1586 (789)
62502	04/10-01/12	1.3(2.1)	5.9(6.7)	-21.6(-2.8)	19.0(28.7)	946 (1627)
62517	01/10-03/10	40.9(1.9)	34.6(6.3)	-69.7(-1.2)	65.8(28.1)	3 (755)
62518	01/10-31/12	-0.1(2.0)	3.6(6.8)	1.3(-2.9)	20.2(29.2)	1540 (1872)

Statistics of (ob-bg) differences for buoys reporting this quarter and all ships within 500 nautical miles

Buoys 44613 (-1.1), 44616 (-18.0), 44742 (-2.4), 44764 (-4.4), 62502 (1.3) and 62517 (-40.9) all showed significant wind speed biases. However, only 3 observations were received from buoy 62517.

Buoys 44616 (20.7), 62502 (-21.6) and 62517 (-69.7) showed a significant wind direction bias. Buoys 44616 and 62517 also showed a larger than normal standard deviation of wind direction. However, only 3 observations were used in the calculation for buoy 62517.

5 EXPLANATORY NOTES

1. Buoy owners are as follows.

CA	- Canada	P	- Portugal
F	- France	UK	- United Kingdom
D	- Germany	US	- United States
N	- Norway	IC	- Iceland
NL	- Netherlands	EG	- EGOS
IR	- Ireland	??	- unknown

2. Number of observations received is the number received at Bracknell in the Meteorological Data Bank (Met DB). If identical reports are received which have originated at different Collecting Centres, the earliest one received at Bracknell is stored in the Met DB.
3. An observation with valid Time and Date is one that contains no coding errors in the Date/Time group.
4. An acceptable position for an observation is within a distance d of the last acceptable position where $d=vt$ and,
 v = maximum drift speed = 1/4 knot
 t = time between observations.
5. The percentage of elements present is calculated from the total number of observations received.
6. The delay is (Time of Receipt at Bracknell) - (Time of Observation).
7. The mean number of observations per day is calculated from the total number of observations received divided by the number of days in the period. It therefore includes 'quasi-identical' observations, i.e. those made within a few minutes of one another. For this reason the mean number of hours per day with at least one observation and the % of hour periods without an observation has been included, where an 'hour period' is defined as the period from HH-30 to HH+29 minutes.

8. Mean (OB-BG) is the mean value of (Observation-Background) Pressure, where the Background is the 6-hour forecast from the Global Forecast Model. RMS (OB-BG) is the Root Mean Square value of (Observation-Background) Pressure differences.

Unflagged data are those data used in model analyses.

Flagged data (i.e. unused observations) are those observations of suspect quality and all observations reported by a buoy at a frequency greater than 5 times every 6 hours, with accepted observations being at least one hour apart. Thus, those buoys which report most frequently have a higher percentage of flagged data.

The Mean calculated over Unflagged Data gives an indication of the instrument bias, since any gross errors have been excluded from the calculation.

The Revised RMS is based on all data except for the few that contain gross errors (as indicated on the time-series graphs - see Annex B).

9. The performance categories are defined in the table below.

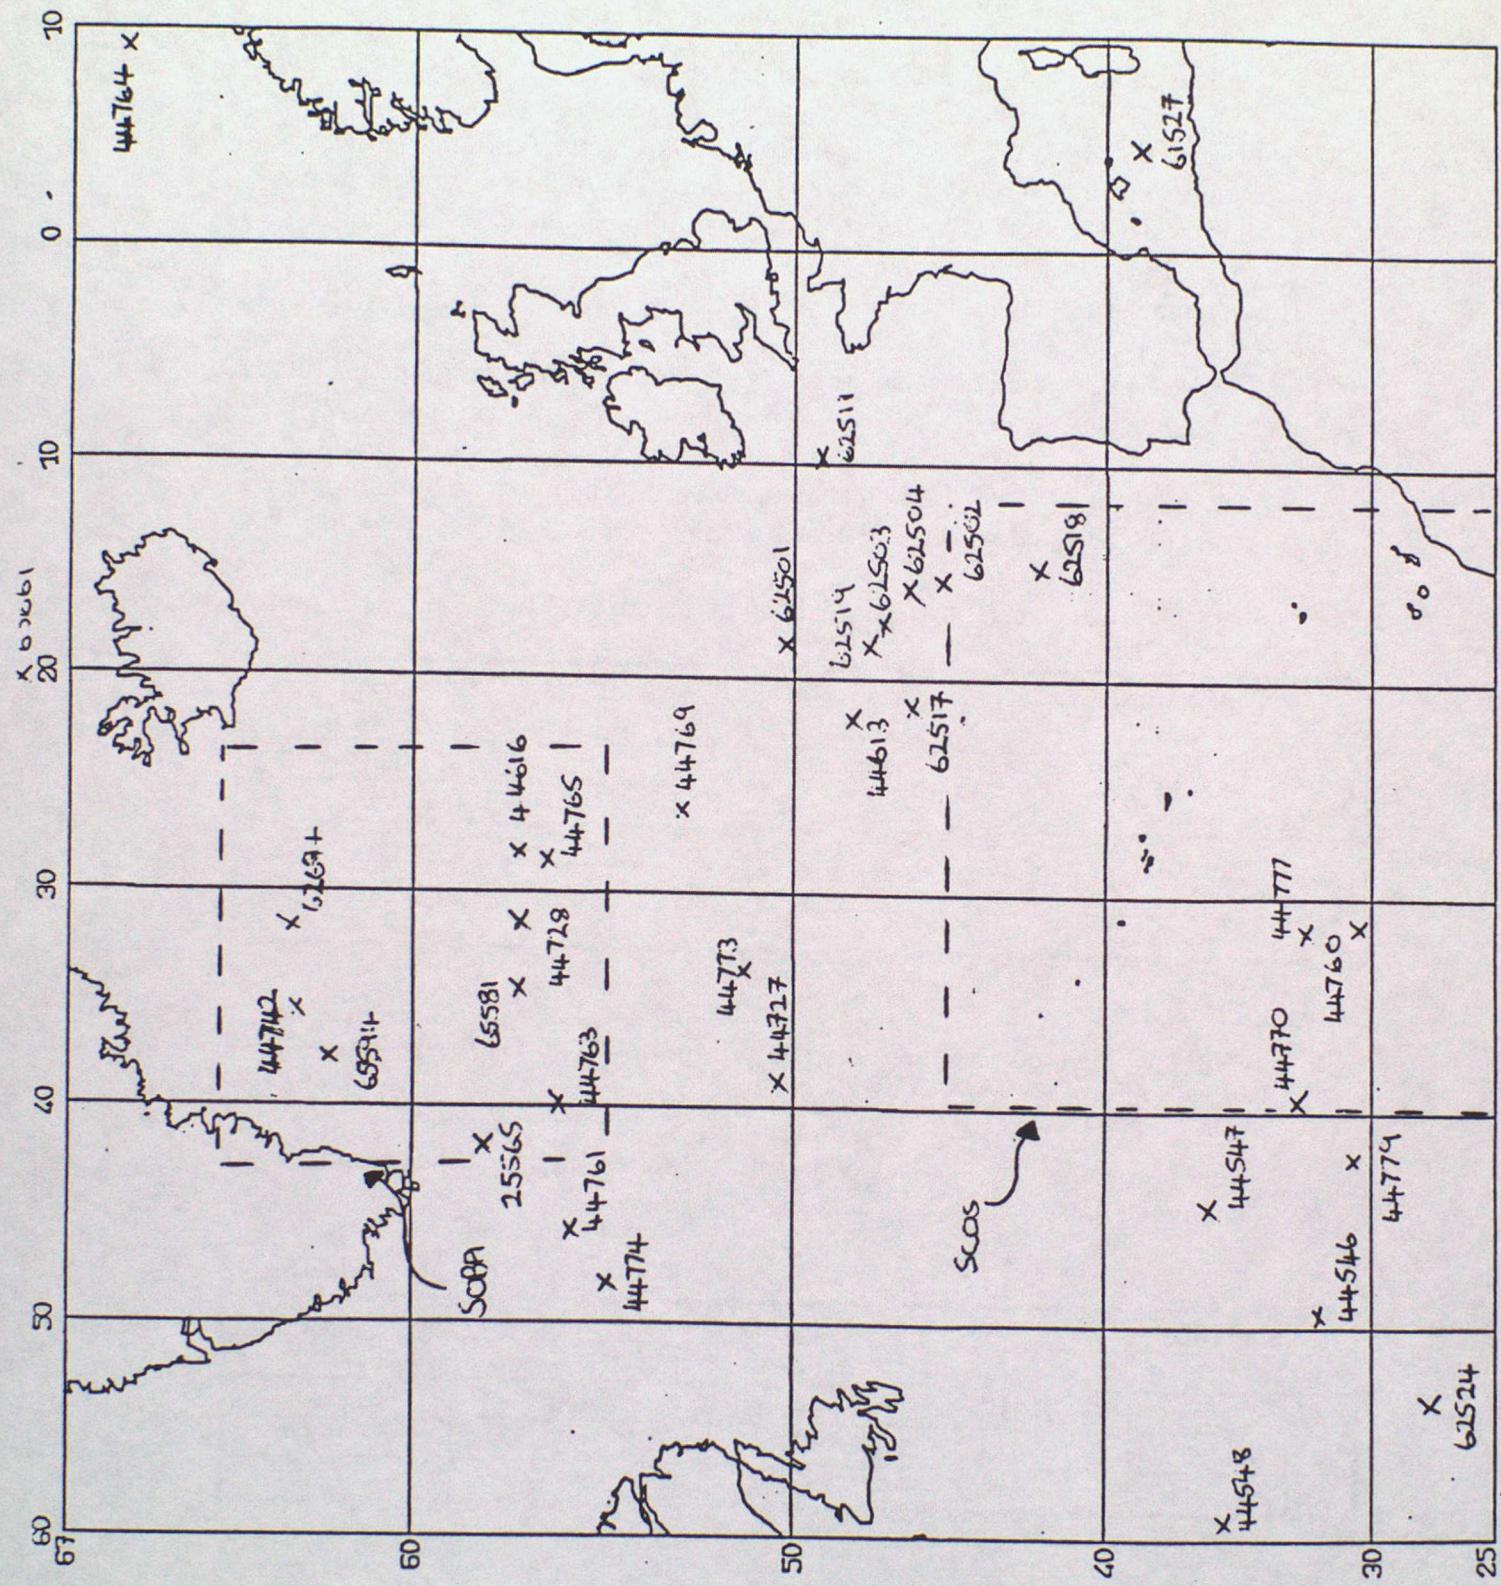

Performance	Availability (mean no. of obs/day)	Timeliness (median delay in mins)
Very Good	> 35	< 60
Good	25 - 35	60 - 119
Satisfactory	15 - 24	120 - 179
Poor	5 - 14	180 - 239
Very Poor	< 5	> 240

(N.B. WMO requirements state the need for only 4 observations per day from marine stations.)

The pressure quality is assessed from the Revised RMS and the Mean (for unflagged data).

Performance	Pressure Quality (in hPa)			
	North of 50 degN		South of 50 degN	
	RMS	MEAN	RMS	MEAN
Acceptable	< 3.0	< 0.5	< 2.0	< 0.5
Suspect	> 3.0	> 0.5	> 2.0	> 0.5
