### PLOTTED SURFACE OBSERVATIONS

THURSDAY  
1 MAY 1986

### SUMMARY OF BRITISH WEATHER

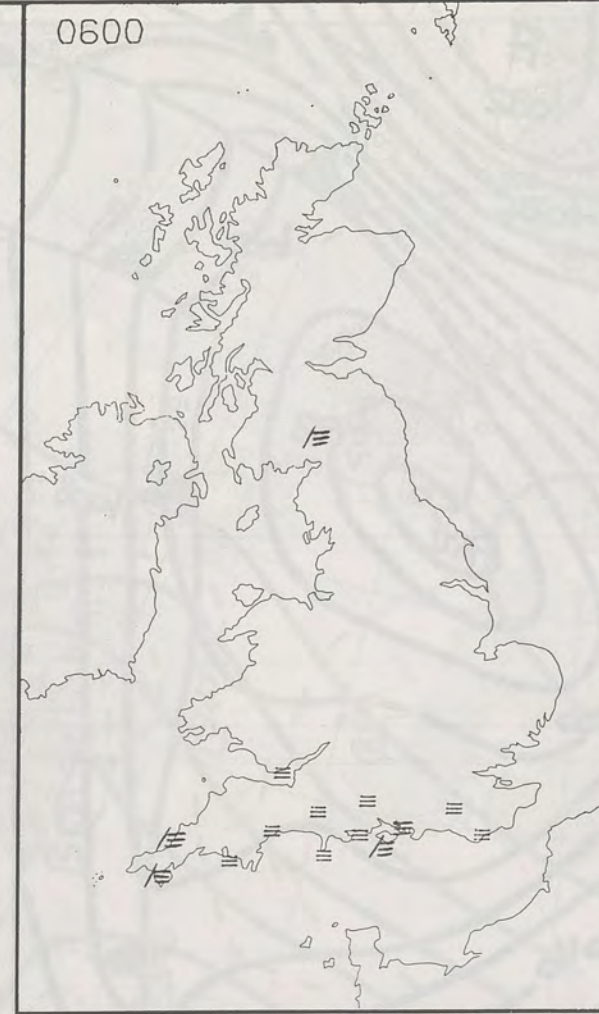

Much of Britain had a dry night but in Scotland there was a little light rain and drizzle here and there mainly in the west and north. In parts of central and southern England it was quite a cold night and in southern England there was some fog.

Most places in the United Kingdom had a sunny day but parts of western Scotland were more cloudy at times and there was a little drizzle, most of it in the Western Isles.

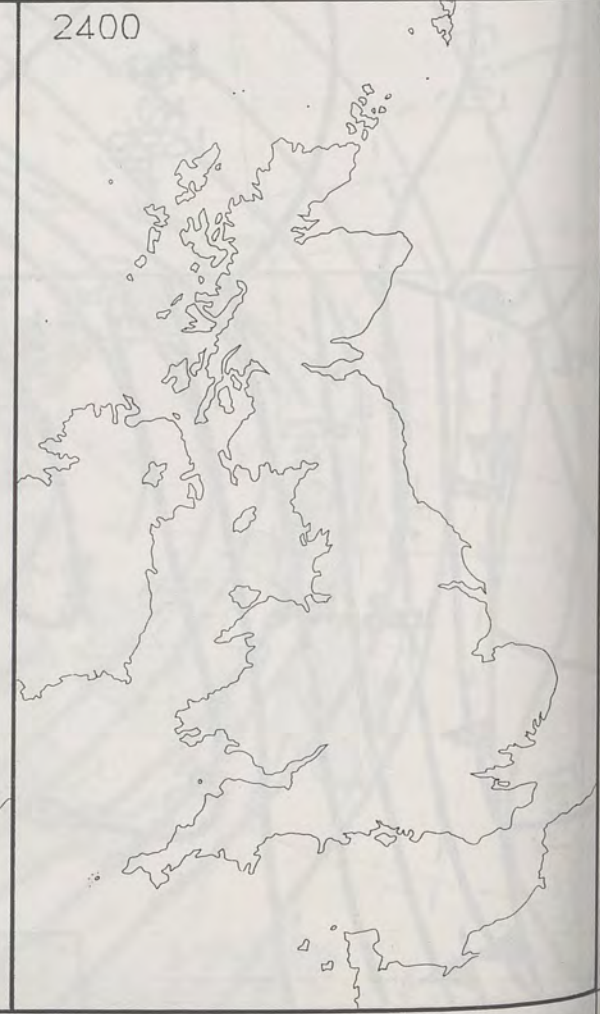

It was a warm day over much of inland Britain but many coastal districts were cooler with winds blowing from a comparatively cold sea.

SUMMARY  
OF  
BRITISH WEATHER

It was a dry night with clear skies and fairly cold in many places with a touch of frost in southern Scotland.

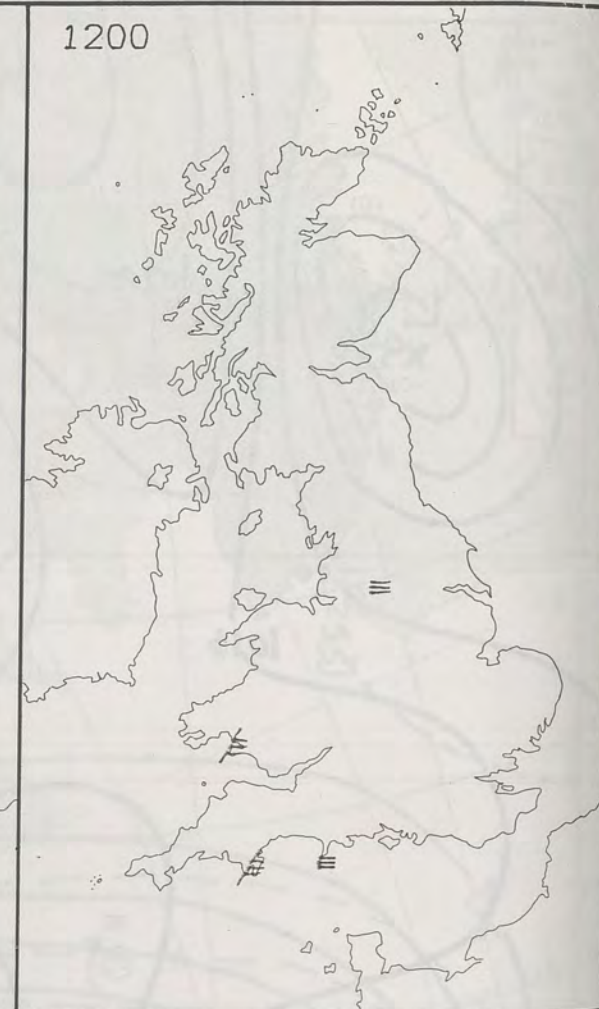

Most places in England had a dry day with a fair amount of sunshine but it was more cloudy at times and a few places had a shower. Wales was dry but after a sunny morning the weather clouded over. The Isle of Man too was sunny in the morning and early afternoon but then there were a few hours of rain, heavy at times, which also affected extreme southeast Scotland and parts of Cumbria.

There was some sunshine in Northern Ireland but the afternoon and evening was cloudy with a little rain here and there. Much of Scotland was dry and sunny but in the late afternoon and evening there was some rain, mainly in the west. Thunder was reported in the evening from parts of southwest Scotland and northeast Scotland.

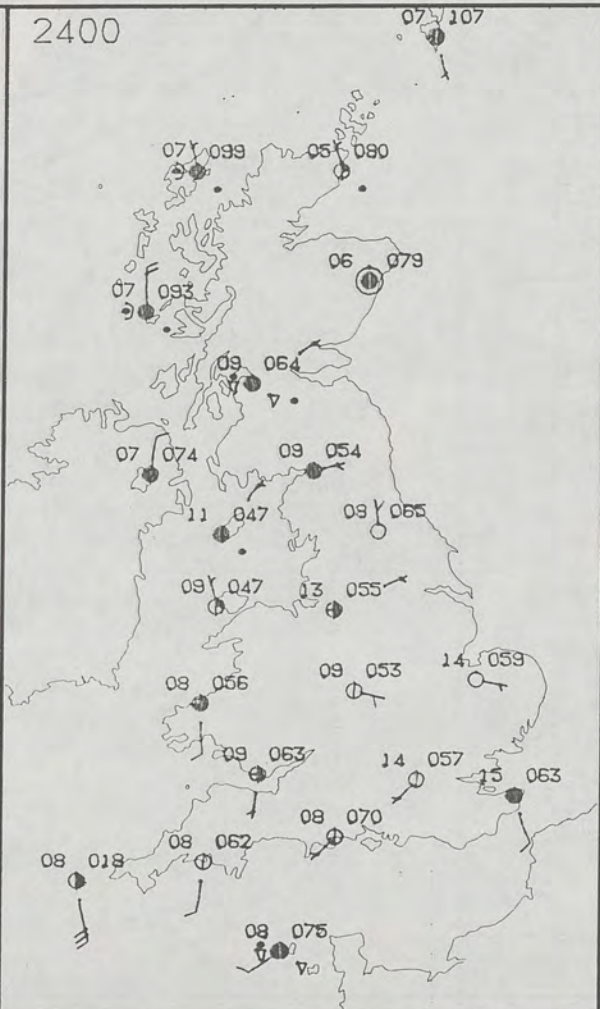

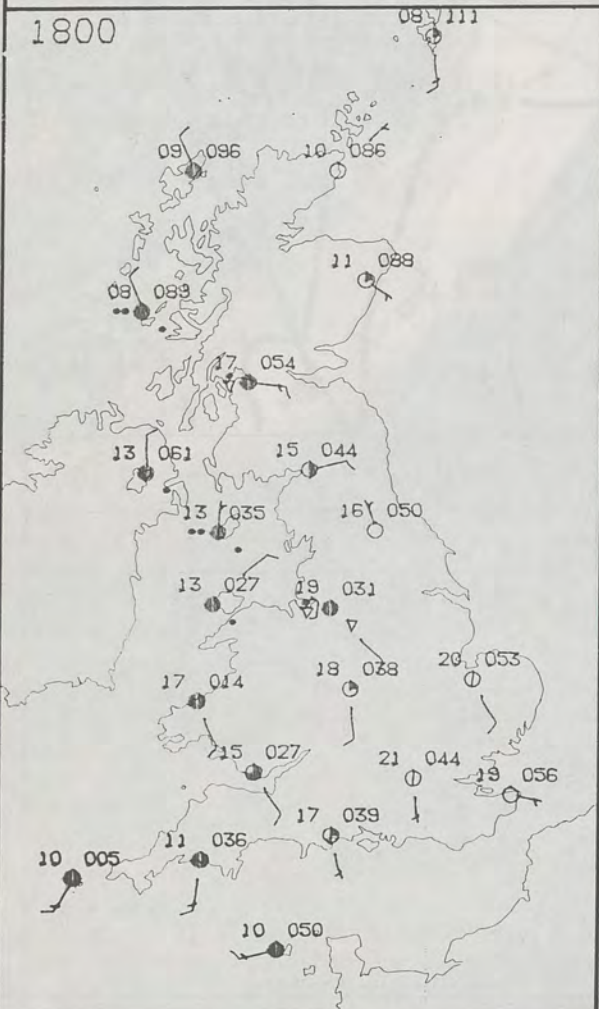

Most places were warm or very warm but Northern Ireland and some coastal districts had temperatures near or below normal.

SUMMARY  
OF  
BRITISH WEATHER

Overnight a line of thunderstorms moved north across East Kent into East Anglia and there was some rain at times in the Channel Islands, southern England, East Anglia, the East Midlands, Lincolnshire and South Wales. For the rest of England and Wales the night was dry and misty, with quite a lot of fog in northeast England. Rain in the far west of Scotland died out during the night, elsewhere over Scotland there were some showers early on. Northern Ireland had a dry night.

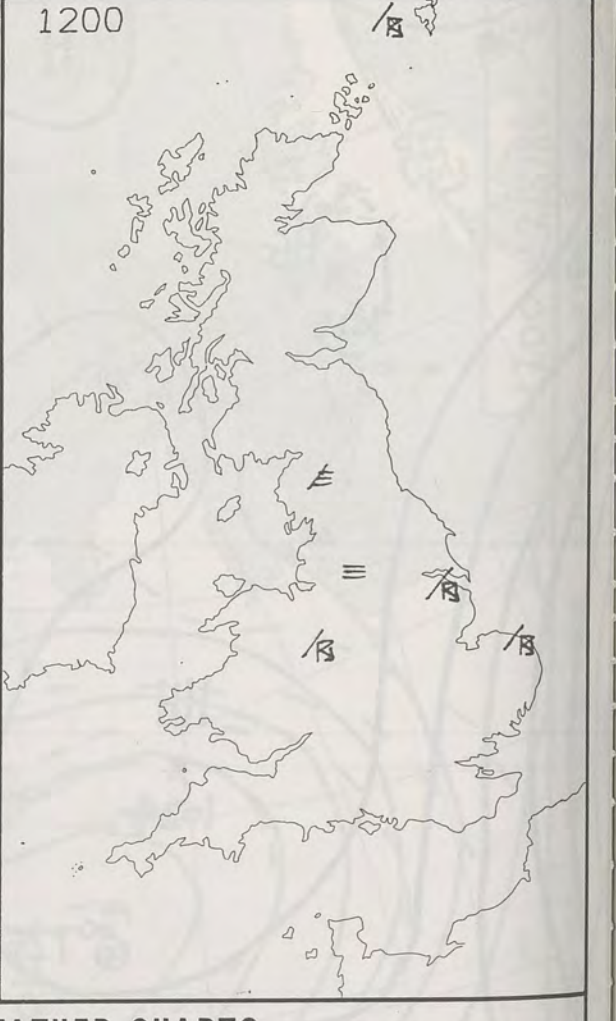

During the day most parts of England and Wales had some sunny spells - the best of them in East Anglia. There was also some rain around, some of it heavy, with a few thunderstorms in northwest England and along the Welsh border. The fog in northeast England cleared by lunchtime and here skies stayed mostly cloudy with rain at times.

Northern Ireland was cloudy with rain during the afternoon and evening, there was also the odd thunderstorm during the afternoon. Scotland had a cloudy day with outbreaks of rain and there were some more thunderstorms in southwest Scotland.

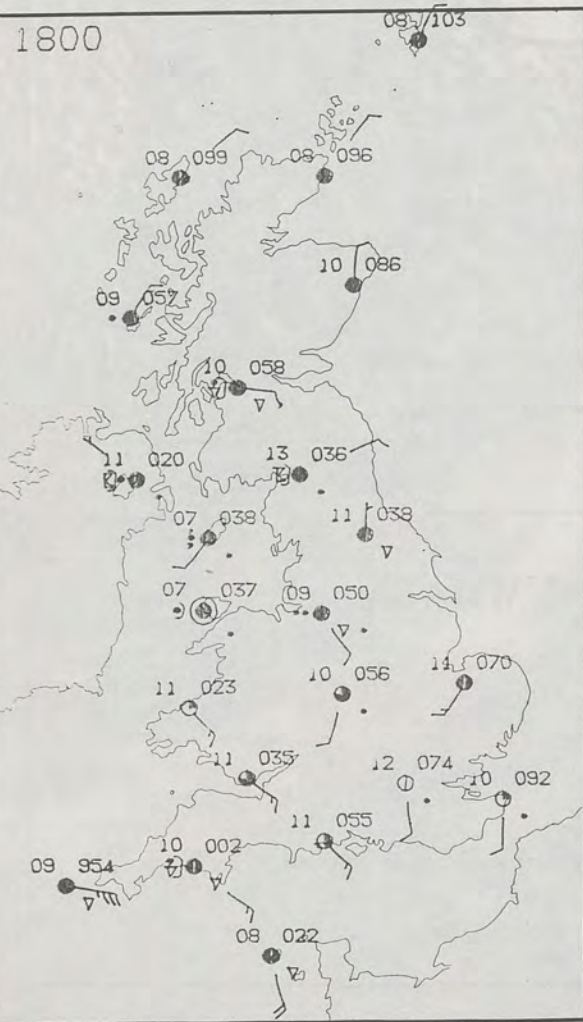

It was mostly rather cold over southwest and central southern England, the South Midlands, Wales, Northern Ireland and much of Scotland. On the other hand, East Anglia, Lincolnshire and the North Midlands had a warm day.

## PLOTTED SURFACE OBSERVATIONS

1800

2400

SUNDAY  
4 MAY 1986

Southwest England and South Wales had showers for much of the night, some of them quite heavy and prolonged. Towards morning showers turned up in central southern England too, but for the rest of England and North Wales the night was dry and clear.

Northern Ireland had some rain early on but for the most part it was a dry night here. Scotland including the Outer Isles had rain at times, with some thunder in places. Later the rain became confined to the far west and north, with fog forming near eastern coasts.

During the daytime it was generally showery over England, Wales and Northern Ireland, with bright or sunny spells. Showers were most frequent over the western half of England and Wales; with the best of the sunshine and fewer showers to be found in the more eastern counties of England from Kent through to Northumberland.

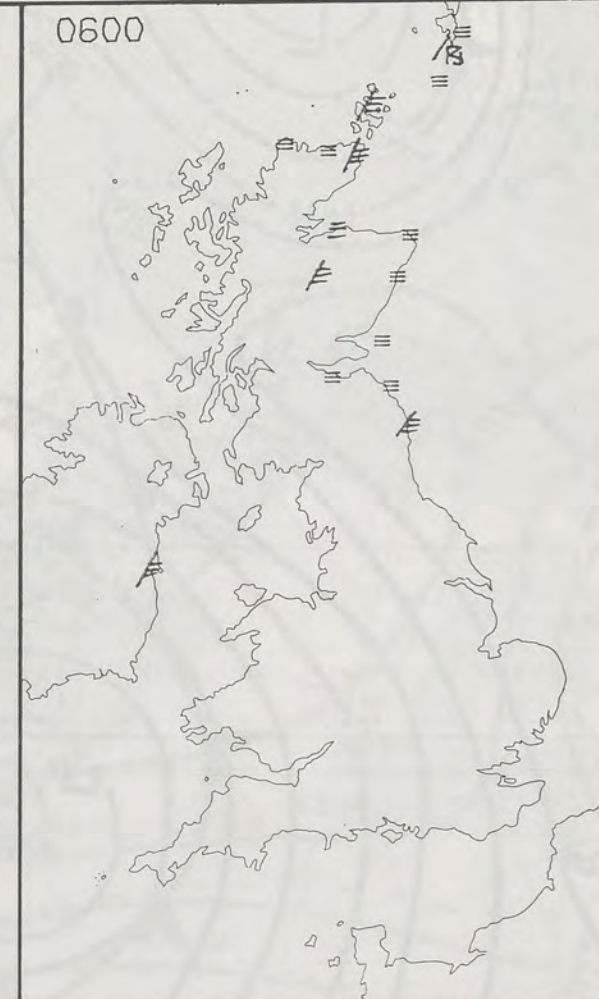

Southern Scotland had a fair amount of bright weather during the day with a few showers. Further north the day began dull and misty with a little rain in places. Later brighter skies spread from the south with some showers and the odd thunderstorm chiefly in southwest Scotland. Over the Northern Isles the day was misty with rain at times.

Temperatures were near average over much of Scotland and England except the southwest. Over Northern Ireland, Wales, southwest England and the Channel Isles it was rather cold.

MONDAY  
5 MAY 1986

SUMMARY  
OF  
BRITISH WEATHER

In most regions it was a cloudy night with patches of rain but in Scotland it was mainly dry with broken cloud.

During the day there were more outbreaks of rain over England and Wales. The rain spread northwards into southern and central Scotland during the morning; there were one or two heavy bursts of rain in eastern counties with isolated thunderstorms. The rain extended to northern Scotland later in the day, though it was mostly light and patchy here.

In southwestern parts of England and Wales there were sunny spells and scattered showers and this brighter weather gradually spread northeastward during the afternoon and evening and it was a fine end to the day in most southern and central regions.

In Northern Ireland there were one or two showers but much of the day was dry with a few bright intervals.

It was rather cold in most places but in parts of eastern England temperatures were near normal.

2400

TUESDAY  
6 MAY 1986SUMMARY  
OF  
BRITISH WEATHER

Overnight most places in England, Wales and Northern Ireland were dry but there were a few showers in southwest England and Wales and a little rain in Northern Ireland. Much of Scotland was wet for a while with some heavy rain at times but most places were drier by morning.

The rain in northern Scotland cleared early in the morning and then there was a lot of dry, fairly sunny weather but some places had showers.

Northern Ireland had some sunshine but quite a few showers, while Wales had a fair amount of sunshine and not many showers, with most places staying dry.

After quite a sunny morning most places in England were more cloudy in the afternoon and evening, with some showers in the west. Central and eastern areas had more persistent and at times heavy rain in the evening with a few thunderstorms.

Temperatures in most places were within a few degrees of normal.

### PLOTTED SURFACE OBSERVATIONS

1800

2400

WEDNESDAY  
7 MAY 1986

### SUMMARY OF BRITISH WEATHER

Heavy rain spread northwestwards across central, eastern and northern England and southern Scotland overnight and on to much of Scotland in the morning. Over the hills of southern Scotland there was heavy snow for a while in the morning.

Southern England, Wales and Northern Ireland had a lot of dry weather overnight and only a few showers.

Over much of England, Wales and Northern Ireland there was some sunshine, some places in southern England and East Anglia had good sunny periods but most places had showers, some heavy with hail and thunder. A heavy thunderstorm affected Belfast in the early evening.

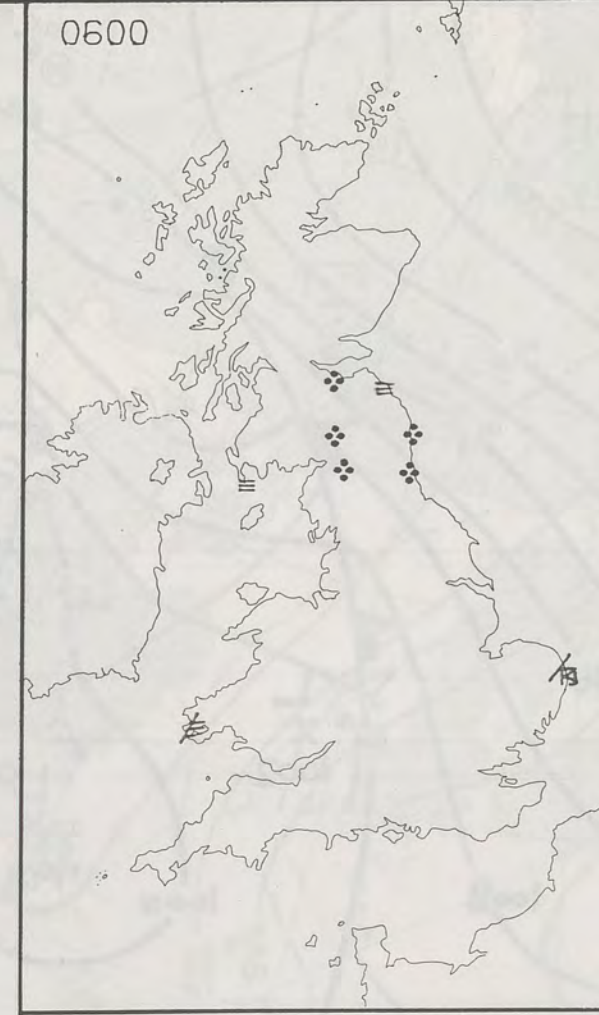

Scotland and northern England had more heavy rain although slowly during the day the weather in northern England brightened up but there were still showers. Southern Scotland turned drier in the evening.

Temperatures were below normal nearly everywhere and parts of Scotland had a very cold day.

**SUMMARY  
OF  
BRITISH WEATHER**

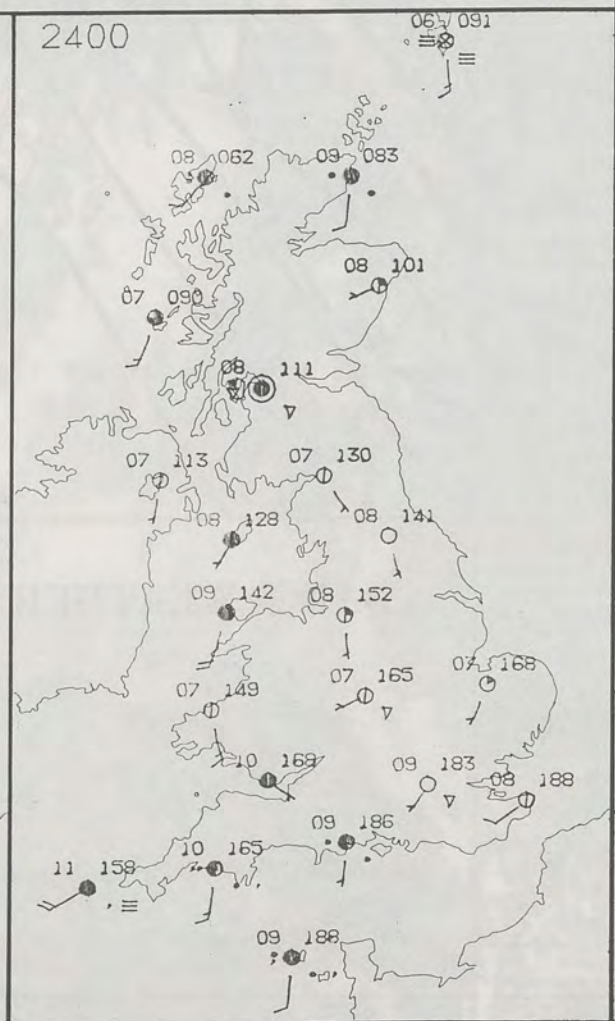

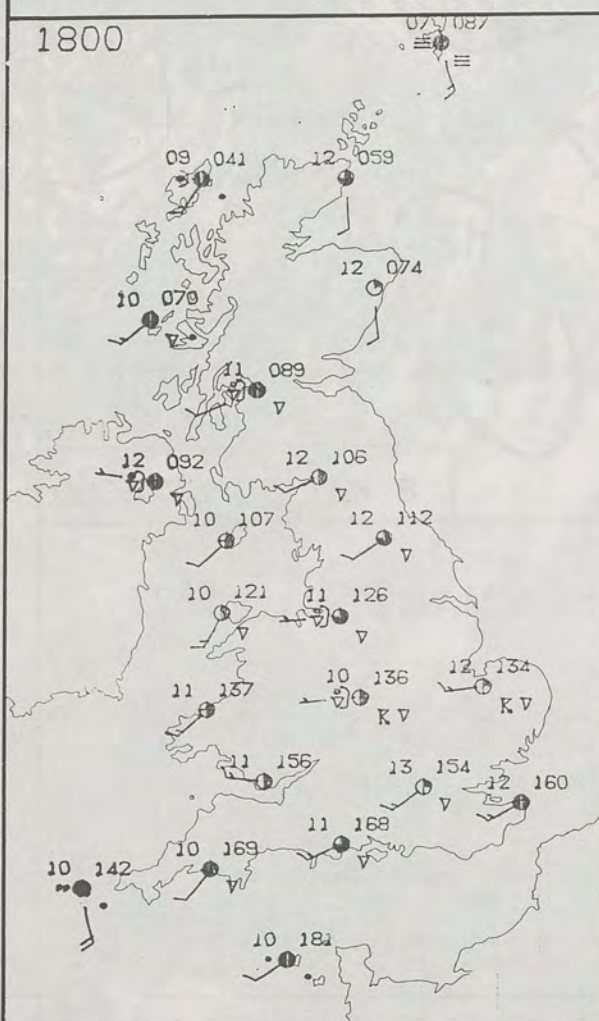

Rain in the far north of Scotland cleared by dawn, but lingered in far northwest of Scotland and the Western Isles for much of the day. The remainder of Scotland and all of Northern Ireland had a mostly dry night, followed by a day of sunshine and showers. The evening was dry, with long clear periods.

England and Wales too had a dry night, though it did turn misty in eastern areas. After dawn showers developed quickly, lasting through the morning and by the afternoon many of the showers were heavy with thunder and hail, especially in central and eastern England, however most areas also saw some sunshine as well. Towards evening, it clouded over in the southwest and the Channel Islands, with some light rain. Elsewhere the showers died away.

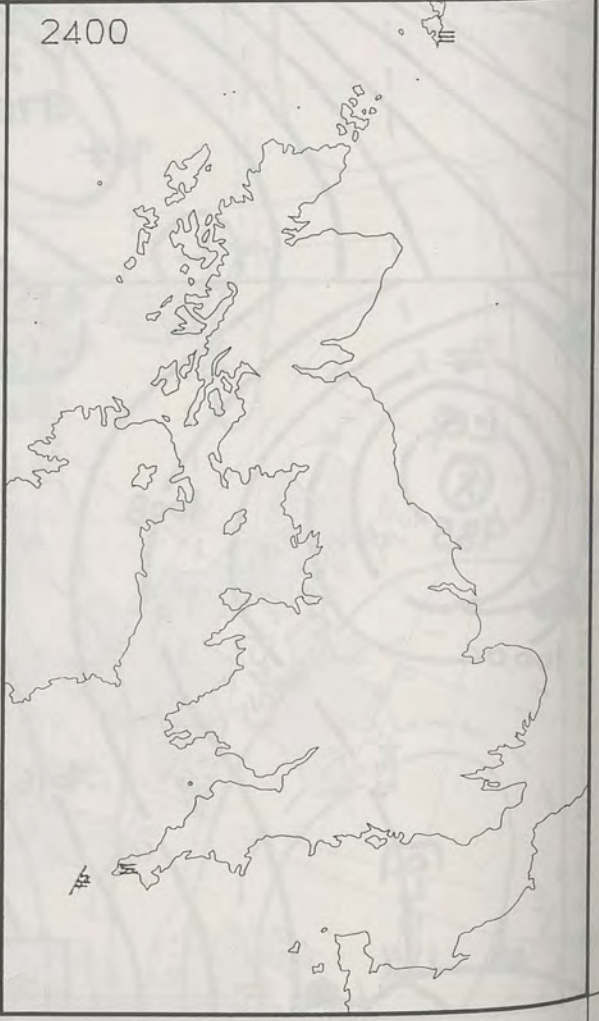

Temperatures were generally around the early May normal. Some places were rather warm while southwestern parts of England and Wales and the Western Isles were rather cold.

### PLOTTED SURFACE OBSERVATIONS

FRIDAY  
9 MAY 1986

### SUMMARY OF BRITISH WEATHER

There was some rain in the far north of Scotland overnight with the remainder of Scotland dry. During the morning cloud spread quickly from the southwest, with some rain into most areas by mid-day. The weather turned brighter during the afternoon, with some sunshine but also a few showers. Thick cloud and rain returned to southwest Scotland during the evening.

Northern Ireland too had a dry night, but thick cloud and some rain reached the area at first light, lasting until lunchtime. During the afternoon there were bright or sunny intervals, with more rain during the evening.

South Wales and southwest England had a cloudy night with rain, and it was very misty and foggy around coasts here. Elsewhere cloud increased after a dry and clear night, with some pockets of rain for most places by midday. The weather brightened up in many eastern areas during the afternoon, though still with a little rain here and there. Cloud increased generally again during the evening, with further rain. It remained very dull and damp around exposed coasts and over western hills.

Temperatures were well up to, and in sunny spots above, normal for this time in May, however, western coasts of England and Wales stayed rather cold in the persistent foggy areas.

SATURDAY  
10 MAY 1986

Rain moved northeast across Northern Ireland and Scotland overnight, with many places having several hours of heavy rain. There was also the odd thunderstorm mixed in over south-west Scotland and Northern Ireland later in the night. Drier weather reached Northern Ireland towards dawn. England and Wales had some rain and drizzle through the night, with fog patches along south and west facing coasts. Over the Welsh mountains the rain was heavy for a time.

During the morning somewhat drier weather spread cross England and Wales with a few bright spells. Some light showers followed on during the afternoon and evening.

Over Scotland the day started wet and windy. Brighter, showery weather spread quickly across southern and eastern Scotland by midday, with the far north and the Northern Isles picking up by afternoon. In northwest Scotland including the Hebrides, skies were mostly cloudy with rain on and off for much of the day. Over Northern Ireland it was a day of bright spells and showers.

Temperatures were near or a little above normal over much of the country, but in parts of eastern Scotland and in east and northeast England it became rather warm by afternoon. Coastal areas of Wales and south-west England were again mostly rather cold.

SUNDAY  
11 MAY 1986

SUMMARY  
OF  
BRITISH WEATHER

Moist southwesterly winds brought mainly cloudy weather overnight with patches of mostly light rain, but in western Scotland the rain was more persistent and heavy in places.

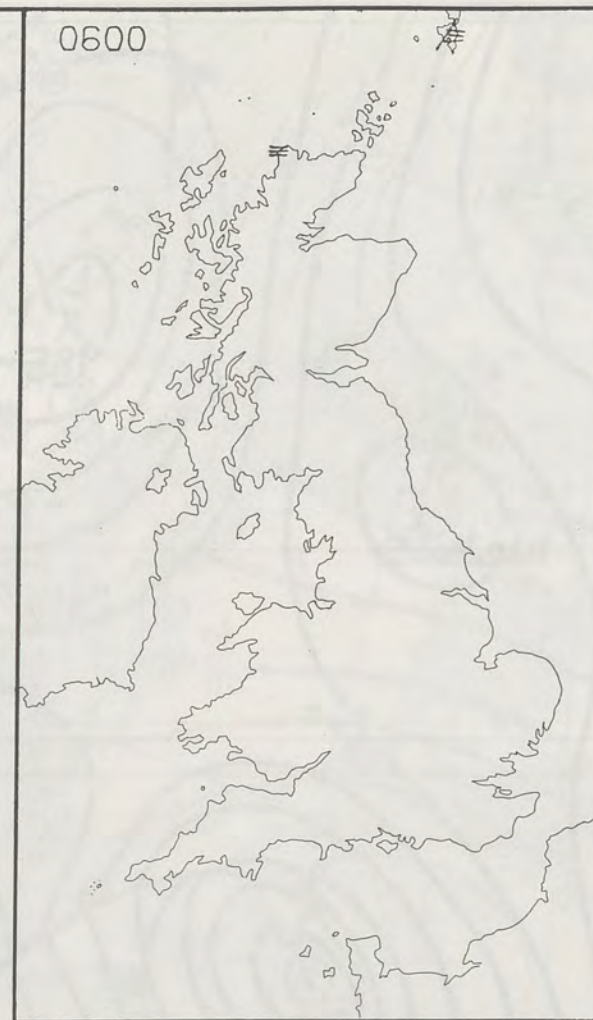

During the day there was still a lot of cloud and showery rain, especially in the morning, but some breaks developed to give sunny periods, particularly in parts of eastern and northern Britain and the Channel Islands. In southwestern counties of England and Wales thicker cloud brought outbreaks of rain later in the afternoon and this rain spread northeastward across much of Wales, England and Northern Ireland during the evening. In central and southeastern parts of England the rain was mostly light and patchy.

Temperatures were generally near normal.

MONDAY  
12 MAY 1986

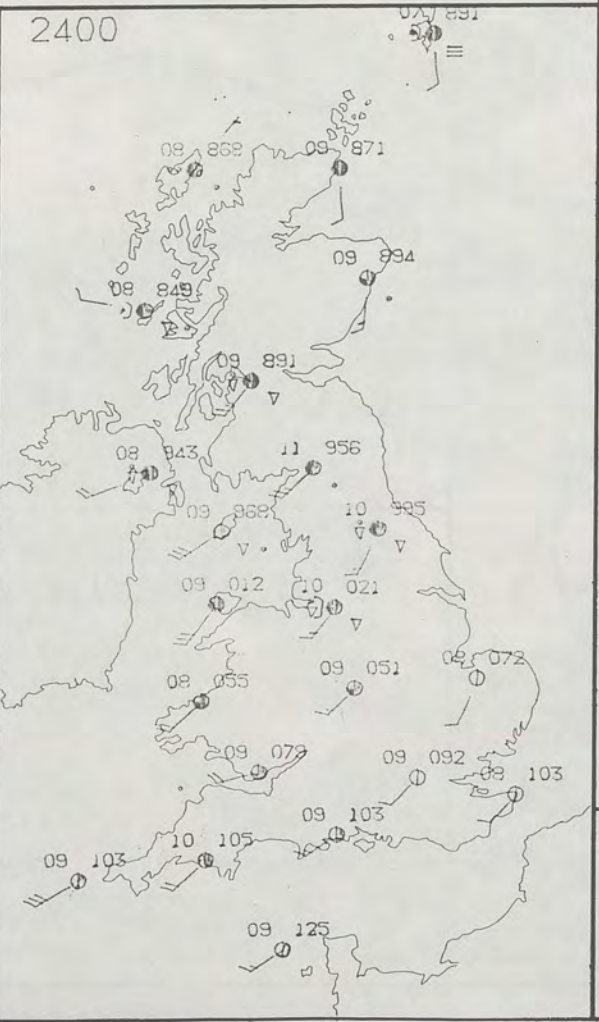

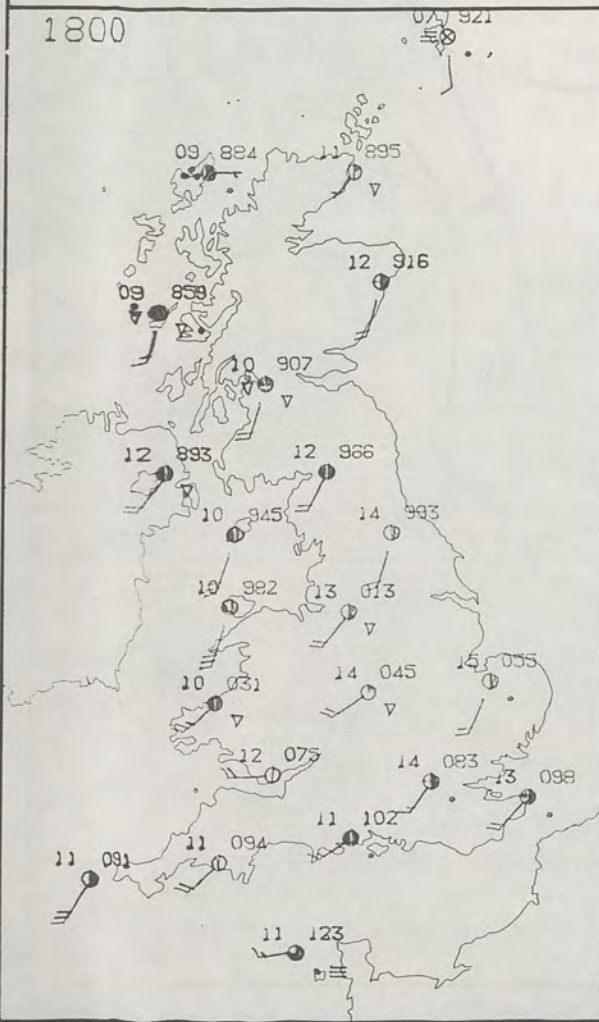

SUMMARY  
OF  
BRITISH WEATHER

Rain reached all but the far north of Scotland overnight, though amounts in most places were very small, the heaviest rain occurring in Northern Ireland and the south and west of Wales.

By the morning clearer skies had reached Northern Ireland but it was a wet start to the day in many areas, especially over northern England and Wales. Brighter, showery weather had extended to much of northern and western Britain by midday and to all parts by evening.

PLOTTED SURFACE OBSERVATIONS

SIGNIFICANT WEATHER CHARTS

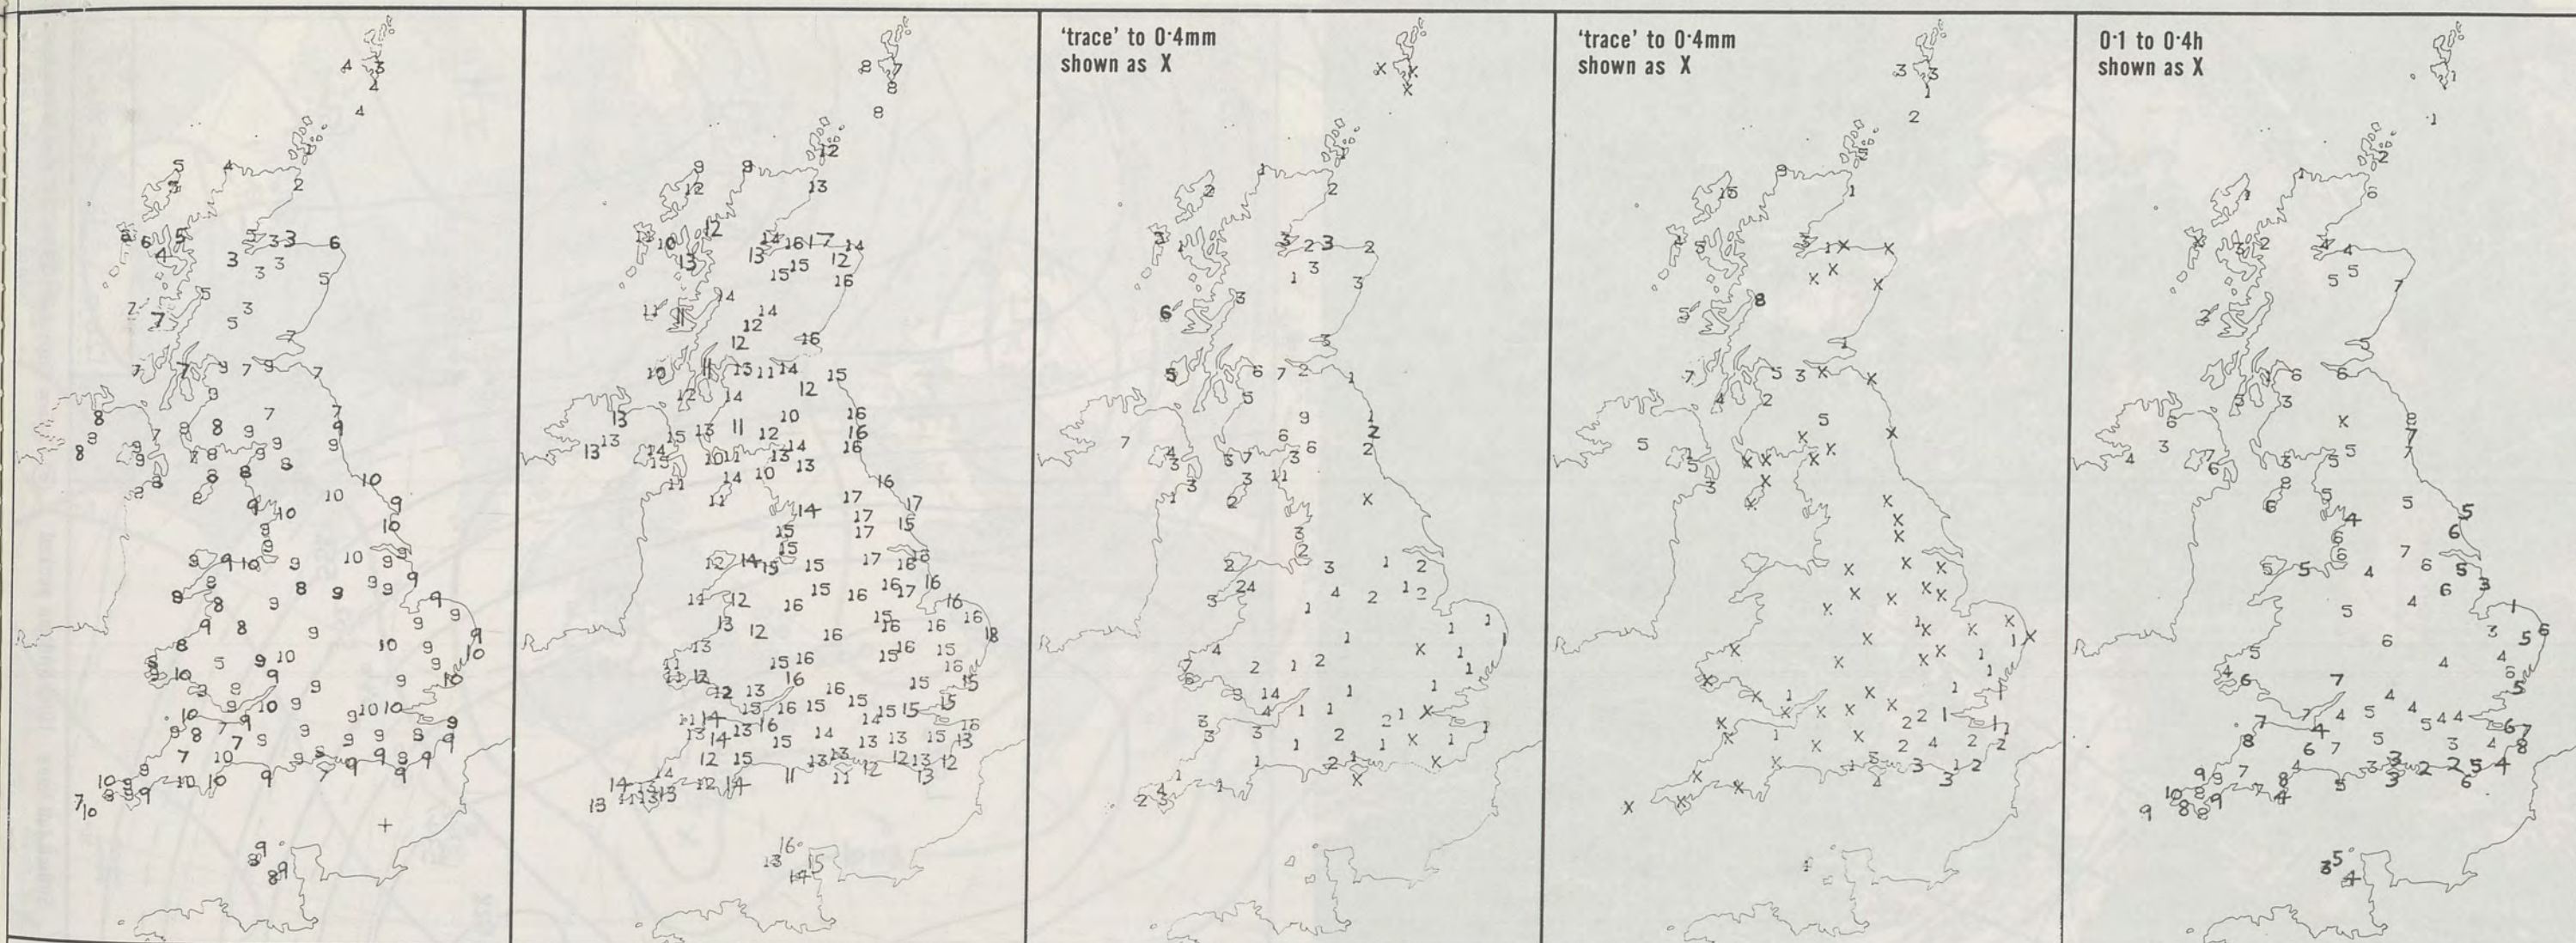

Over England and Wales showers were brief and well scattered with a fair amount of sunshine but Scotland and Northern Ireland had frequent showers, driven along by a strong wind. The Western Isles remained dull and wet for much of the day.

Temperatures were not far from the seasonal normal generally but it felt cool in the fresh to strong south to southwest wind. The Northern Isles had a cold day.

PLOTTED SURFACE OBSERVATIONS

TUESDAY  
13 MAY 1986

SUMMARY  
OF  
BRITISH WEATHER

England and Wales had a mainly dry night with well broken cloud, although scattered light showers did occur over northern England and western Midland counties. Further north, Scotland and Northern Ireland remained very showery, with longer periods of rain in some areas.

There was little change during the morning, with only scattered and mainly light showers over England and Wales, many areas enjoying a good deal of sunshine. Rain was persistent over western Scotland in particular but it turned more showery and a little brighter by midday. Northern Ireland became quite sunny through the morning, though showers were widespread. In the afternoon the sun broke through over much of Scotland but it remained rather cloudy generally, with further heavy and persistent showers, the Moray Firth becoming very wet later in the day. Showers were occasionally heavy over England and Wales in the afternoon, thunder and hail being reported in places, but showers were much less widespread than in the north.

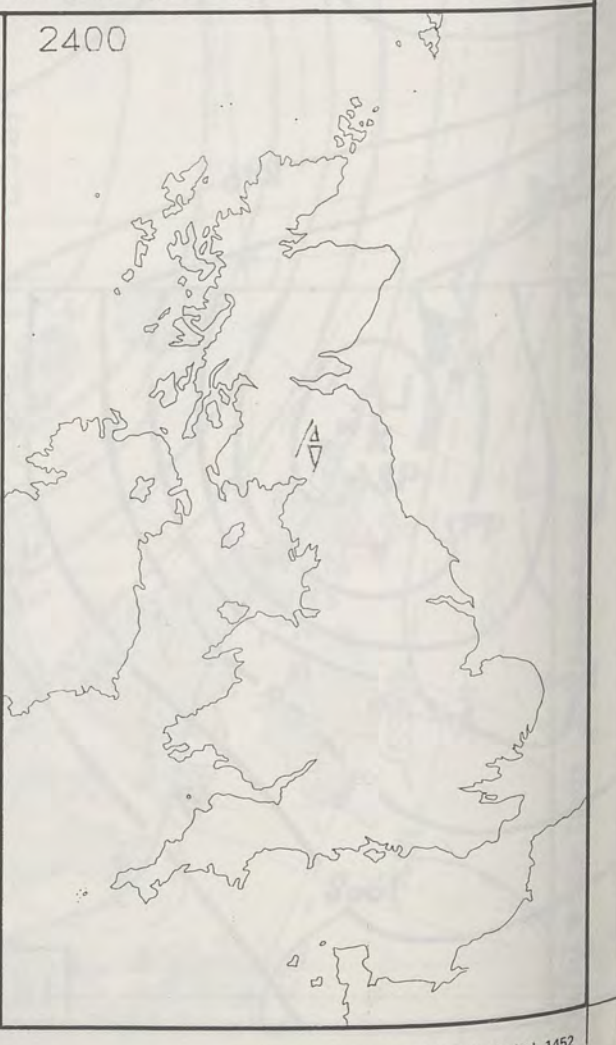

It was rather cool generally, even cool in some places.

## PLOTTED SURFACE OBSERVATIONS

1800

2400

WEDNESDAY  
14 MAY 1986SUMMARY  
OF  
BRITISH WEATHER

Scattered showers affected many western areas of the United Kingdom overnight, the odd one penetrating through to the east. However, much of the central and eastern parts of the country had a dry night, with well broken cloud. Later in the night, a more organised area of rain affected Northern Ireland and parts of northwest England and southwest Scotland.

After sunrise, showers developed quickly over much of the country, some were heavy and thundery, and merged to give longer periods of rain, with some hail reported as well. Some sheltered eastern and southeastern areas though had few and mostly light showers and good sunny periods. Late in the afternoon heavy, thundery rain reached southwest England and South Wales, and moved on to many other parts of the Midlands and southern England by midnight.

Northern Britain had a continuing mixture of clear intervals and showers.

The northwestern half of Scotland had occasional showers and long sunny periods.

It was a decidedly cool day in Northern Ireland and western areas of Britain, elsewhere it was mainly rather cool.

THURSDAY  
15 MAY 1986

SUMMARY  
OF  
BRITISH WEATHER

A large area of rain covered much of England and East Wales at first, though northwest and extreme southwest England were mostly dry. The heaviest rain was in the south and east Midlands and Lincolnshire.

Clearer weather in the west, as well as over Scotland and Northern Ireland spread east during the night, though there were still a few showers. It was a cold night in some northern and western areas with a touch of frost in places.

The day was generally one of sunshine and showers. Showers were few and far between over southern and western England and Wales, where many places had a sunny day.

Scotland, Northern Ireland, northern and eastern England and the Midlands had rather more in the way of showers. Hail occurred in places, and there were a number of thunderstorms in northern and eastern England as far south as the Essex/London border and the Thames Estuary. However, it became generally drier and sunnier during the afternoon.

It was mostly cool and breezy.

### PLOTTED SURFACE OBSERVATIONS

1800

2400

SATURDAY  
17 MAY 1986

### SUMMARY OF BRITISH WEATHER

In most regions it was a dry night with small amounts of thin cloud but in southwestern counties of England and Wales thicker cloud brought outbreaks of rain by daybreak. During the morning the rain extended steadily northeastward to reach all parts of England, Wales, Northern Ireland and southern Scotland by midday. The rain reached northern Scotland by late afternoon but in the Northern Isles it was a dry day with a good deal of sunshine and the dry weather continued into the evening. Heaviest rain was in southwestern parts of England and Wales, and Scotland. In eastern England rain was mainly light and patchy.

It was a rather cool day in most parts of the United Kingdom. Southeast to southerly winds became strong in some coastal regions, particularly in the west.

SUNDAY  
18 MAY 1986

SUMMARY  
OF  
BRITISH WEATHER

Western and far northern Scotland were wet throughout the period and some rain fell in other parts of Scotland too, though many eastern and southern areas were drier with sunny intervals. North and west Scotland had a cloudy evening with isolated showers.

Northern Ireland had rain overnight, this rain turning showery during the day becoming dry with sunny periods later in the afternoon. The evening remained dry.

Northwestern England and North and West Wales had a lot of cloud with some rain at times, more especially overnight, and at first during the morning. The afternoon was dry and reasonably sunny.

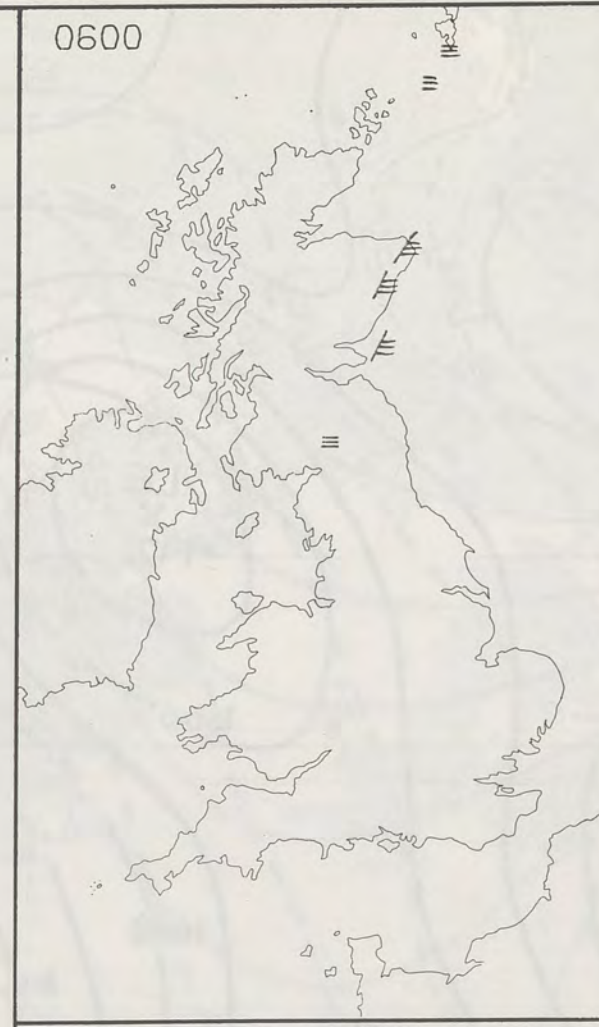

Remaining areas of England and Wales had a few showers overnight, mostly in the west and north. There was a lot of dry and sunny weather during the day with only isolated showers. The evening was dry over all of England and Wales.

Temperatures were mostly near or above normal, although many western coastal areas were again rather cool.

SUMMARY  
OF  
BRITISH WEATHER

Apart from the odd patch of drizzle on western coastal headlands, it was dry over England and Wales. There were a few mist patches inland and some southern and western hill and coastal areas were misty and foggy until mid morning, but the day was generally sunny and warm in most parts, although there were isolated thunderstorms in south-west England and the Channel Islands later.

In Northern Ireland and Scotland there was a lot of cloud and a few light showers but many places remained dry. There were some sunny intervals, especially in eastern Scotland, where it became very warm in places. Temperatures were within a degree or two of normal elsewhere.

### PLOTTED SURFACE OBSERVATIONS

TUESDAY  
20 MAY 1986

### SUMMARY OF BRITISH WEATHER

Thunderstorms over central southern England and the Midlands gave heavy rain in many places overnight, reaching the Vale of York by dawn. Severe flooding was reported from places in the Midlands.

Scotland and Northern Ireland had a mostly dry, clear night and it was quite chilly over central Scotland.

The thunderstorms continued to move north into the rest of northern England and southern Scotland in the morning with numerous reports of heavy rain and further storms over southern Britain too. Much of Wales and Cornwall remained dry with sunny periods.

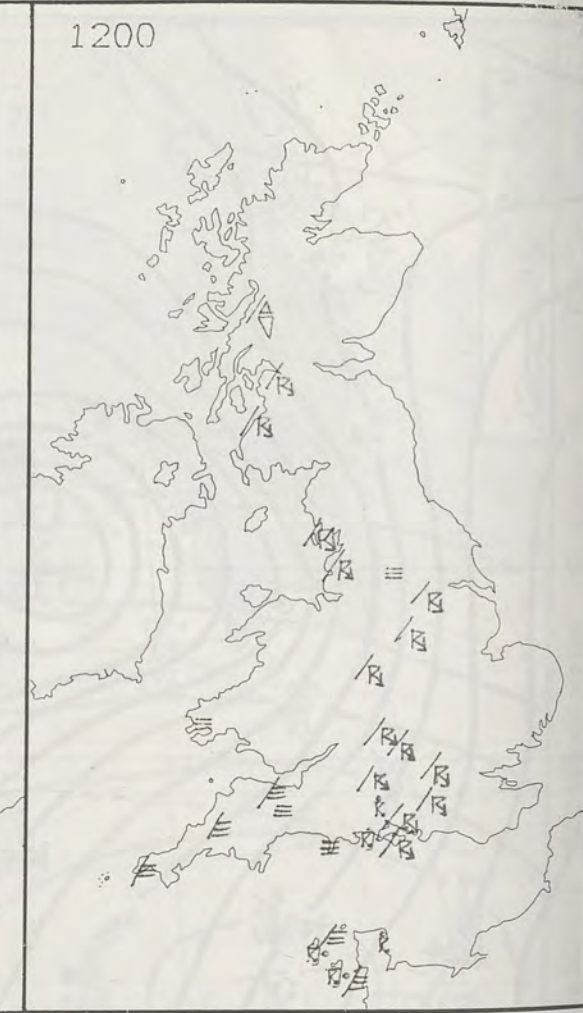

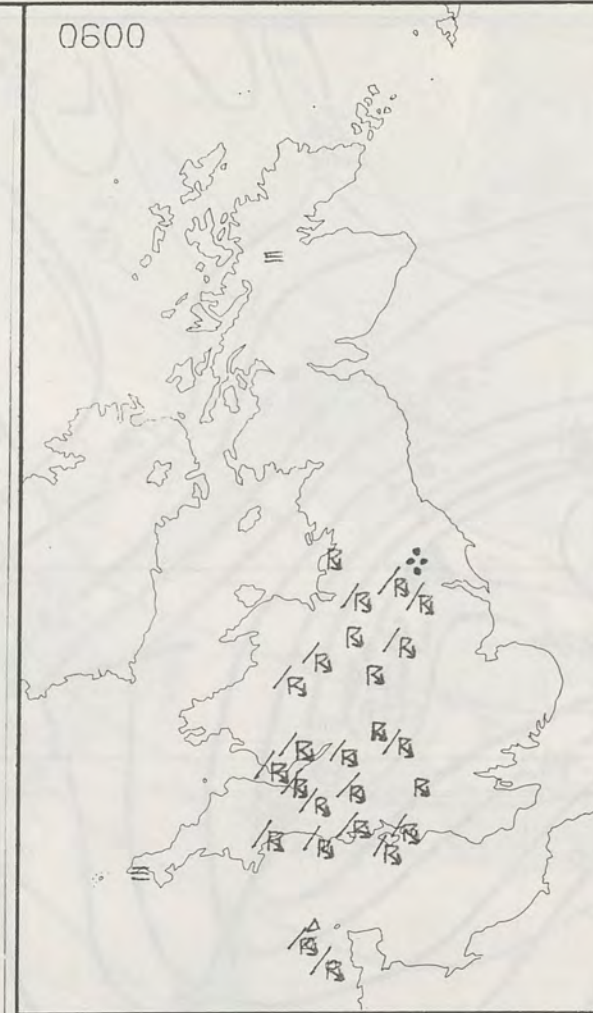

Drier conditions slowly moved across England from the west during the afternoon and early evening but the warm, humid air over eastern areas served to generate widespread showers and thunderstorms for the rest of the day.

Many parts of Scotland and Northern Ireland had some sunshine with only patchy rain.

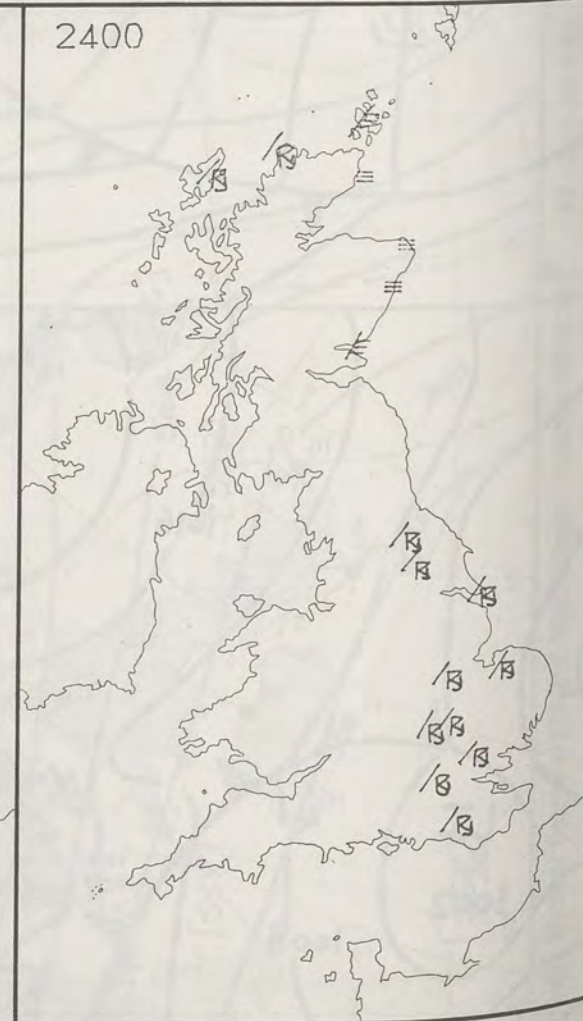

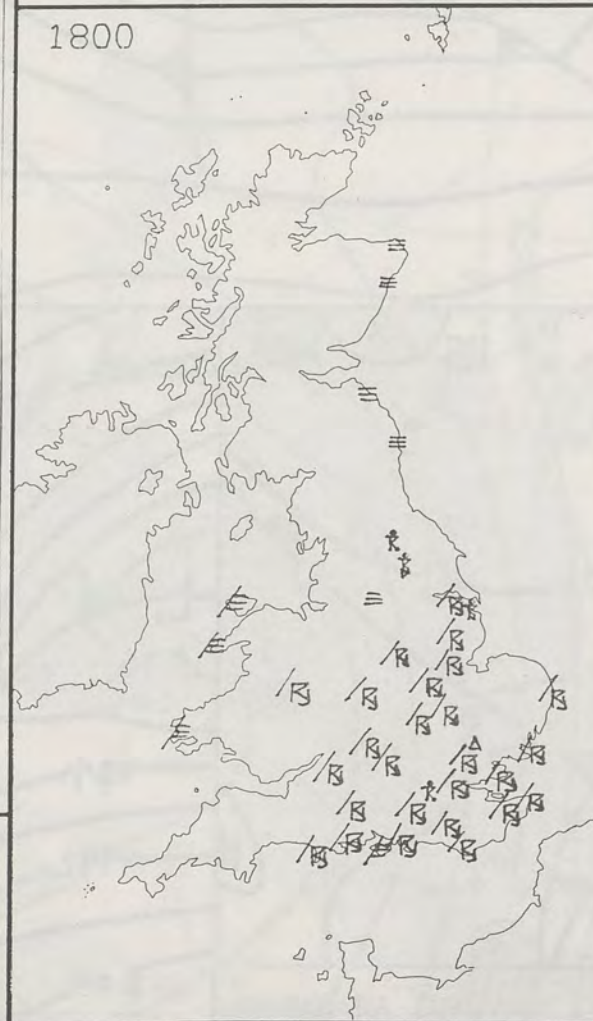

It became warm or very warm over southeast England and East Anglia, elsewhere temperatures were near or rather above normal.

WEDNESDAY  
21 MAY 1986

SUMMARY  
OF  
BRITISH WEATHER

The remnants of heavy rain were confined to the far northeast of Scotland overnight leaving many central and eastern parts of Britain dry and clear.

More rain reached Northern Ireland, southwest Scotland, Wales and western parts of England by dawn with a strengthening southerly wind. The rain was heavy in places. The rain quickly spread eastwards to the rest of England and Scotland by mid-morning, followed by brighter skies over western Britain.

The persistent rain had cleared the Midlands and central southern England by the middle of the afternoon and remaining areas by evening.

There was a good deal of sunshine after the rain but showers were heavy and frequent in northwest Britain, hail and thunder being reported in places.

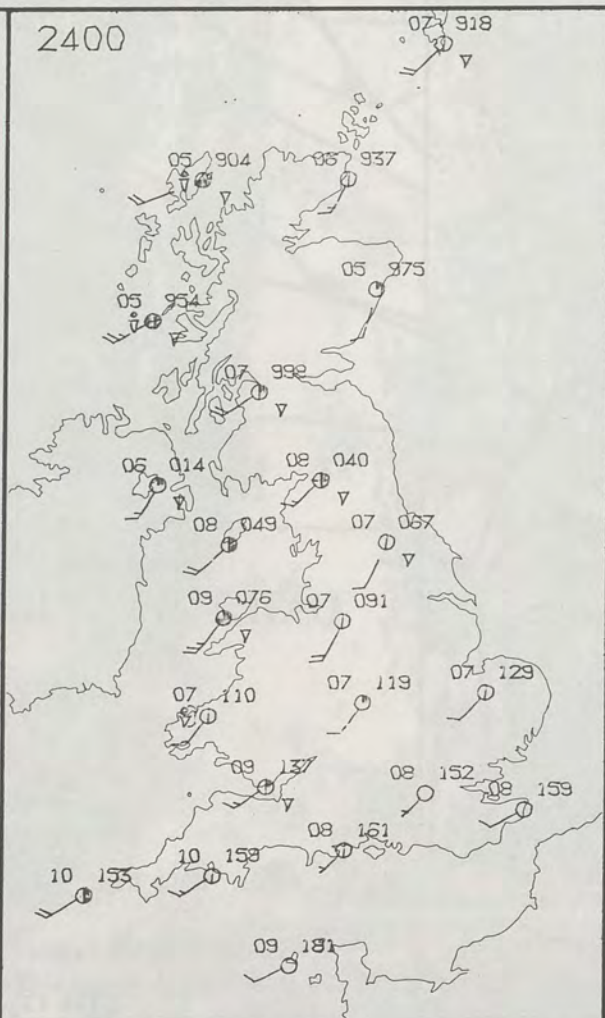

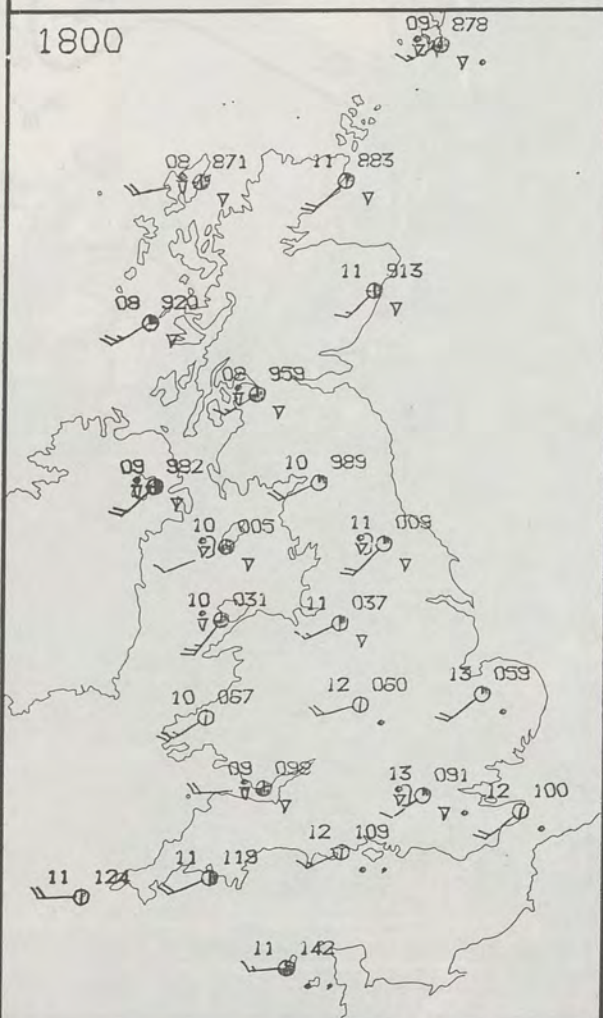

It was a cool day in many places and very cool in parts of Wales and southwest England. Winds were strong to gale force at times southerly veering southwesterly in the clearer weather.

## PLOTTED SURFACE OBSERVATIONS

1800

2400

THURSDAY  
22 MAY 1986SUMMARY  
OF  
BRITISH WEATHER

Overnight Scotland and Northern Ireland had showers of rain and hail, the showers being most frequent in western Scotland. Much of England and Wales stayed dry and clear, though there were one or two showers in western districts and across the North Midlands.

During the day there were more rain and hail showers over Scotland and Northern Ireland, but with sunshine in between.

Over much of England and Wales there was a good deal of sunshine. Central southern and southeast England, East Anglia and the South Midlands stayed dry but elsewhere light showers were to be found. In the Channel Islands, southwest England and South Wales skies were bright rather than sunny and the cloud thick enough at times to give a few spots of rain.

It was rather cool in most places, however, East Anglia, southeast England and some places in eastern England had near normal temperatures.

## PLOTTED SURFACE OBSERVATIONS

1800

2400

FRIDAY  
23 MAY 1986SUMMARY  
OF  
BRITISH WEATHER

Overnight there were showers across the western half of Scotland. In the east of Scotland and Northern Ireland they were few and far between with many places having a dry and clear night.

Northern England, the North Midlands and North Wales stayed dry but elsewhere over England and Wales there was some rain later in the night - the bulk of it falling over southern England and East Anglia.

During the morning the rain cleared and for the rest of the day much of England and Wales had a fair amount of sunshine; though in the Channel Islands, much of southeast England and East Anglia cloud was slow to break-up, making it bright, rather than sunny.

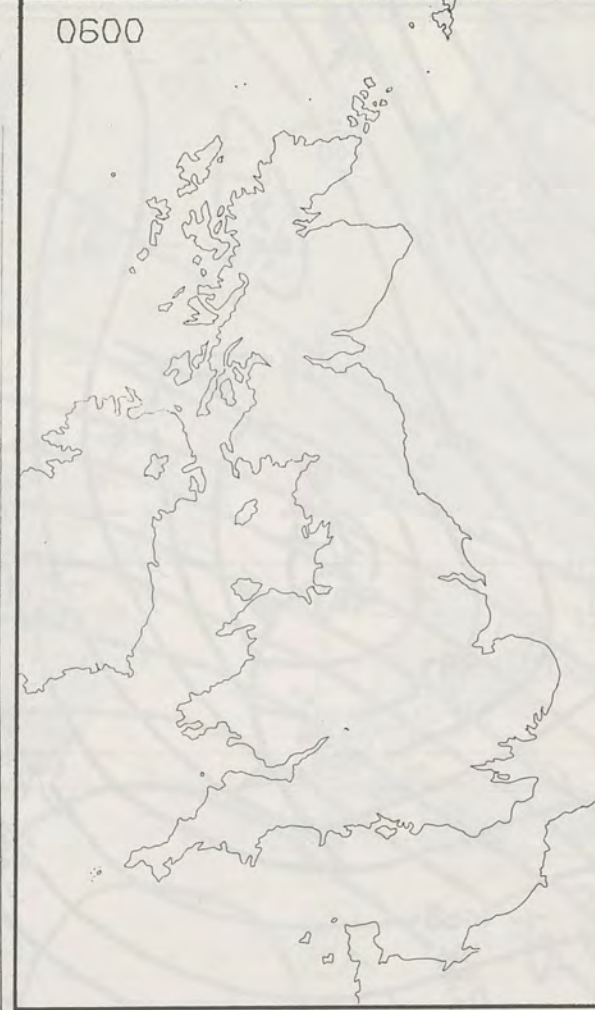

Scotland and Northern Ireland had a day of sunny spells and showers the best of the sunshine to be found in east and northeast Scotland.

West Wales, the far southwest of England and the Channel Islands had a rather cool day; elsewhere over the country temperatures were near the late May average, but along the coast of northeast England and East Anglia it turned out warm.

SATURDAY  
24 MAY 1986

SUMMARY  
OF  
BRITISH WEATHER

Over England and Wales there were isolated light showers, mainly in the west, but most places remained dry with well broken cloud at times. Sunniest regions were along the south coast, southeast England and East Anglia. Western counties became cloudy during the afternoon and outbreaks of rain reached Wales later and the rain extended to many northern and central parts of England during the evening.

In Northern Ireland there were isolated showers and sunny intervals at first but dull, wet weather reached all parts during the afternoon and rain continued through the evening.

In Scotland there were scattered showers and sunny intervals but later in the day more persistent rain reached western Scotland and the rain spread to most of Scotland during the evening, though parts of the northeast and Northern Isles remained dry.

Although temperatures were near normal in parts of eastern Britain, it was generally rather cool with a brisk southwesterly wind and in northwestern coastal regions southerly winds touched gale force later.

## PLOTTED SURFACE OBSERVATIONS

1800

2400

SUNDAY  
25 MAY 1986SUMMARY  
OF  
BRITISH WEATHER

In Scotland outbreaks of rain cleared from eastern parts by daybreak, then the whole of Scotland and Northern Ireland had a mixture of sunshine and scattered showers. Eastern Scotland in particular had long sunny periods. Later in the afternoon and evening more persistent rain returned to Northern Ireland and this rain spread quickly across Scotland during the evening.

In North Wales and northern England there was light rain in places at first but much of the day was dry and the more northern counties of England had quite a lot of sunshine. Cloud increased later to bring patchy rain to northwestern regions.

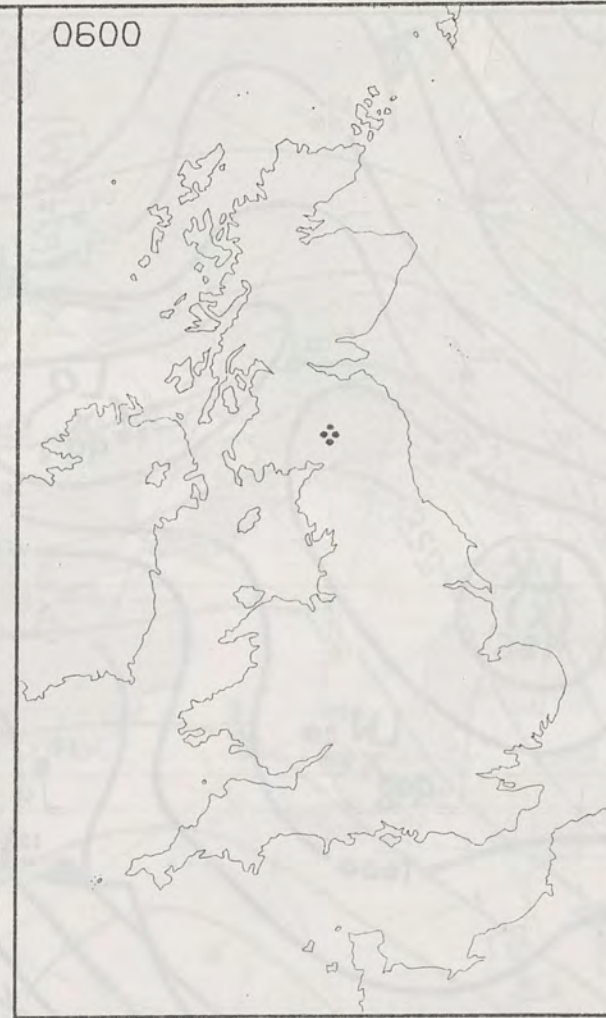

Most central and southern parts of England and Wales remained dry, though there were odd patches of drizzle, chiefly near southwestern coasts; it was mainly cloudy but much of Essex and Kent had a sunny day. The Channel Islands had a mainly sunny day also.

Temperatures were mostly near normal but in parts of eastern England and eastern Scotland it was a warm day. Southwest England and West Wales were decidedly chilly.

MONDAY  
26 MAY 1986

SUMMARY  
OF  
BRITISH WEATHER

Rain spread across most northern and western regions overnight, but most of southern, central and eastern England stayed dry, though mostly quite cloudy. Clearer weather with some showers raced across Northern Ireland and Scotland from the west by dawn.

There was a good deal of dry and sunny weather across the British Isles during the day. However, there were some showers over Scotland and Northern Ireland, where it was another windy day. An area of cloud and some drizzle moved southeast across England and Wales during the day, though little more than the odd spot was reported anywhere in the second half of the day. Once again, it was the coastal strip from Kent to Norfolk that came off best, with prolonged sunshine.

Southeast and eastern England had a warm day, elsewhere temperatures were mostly not far from normal - rather above in areas well away from coasts exposed to the southwest and west, rather below near these coasts. Further rain spread to western Scotland in the evening.

### PLOTTED SURFACE OBSERVATIONS

TUESDAY  
27 MAY 1986

### SUMMARY OF BRITISH WEATHER

Rain spread northeast across Northern Ireland and Scotland early in the day. Drier, somewhat brighter weather followed during the late morning and afternoon, though there were still showers, and the rain persisted in extreme northeast Scotland.

Over England and Wales it was mainly dry with sunny periods, Wales and the southwest having the most. There was an hour or two of cloudy weather with a little rain which crossed from the west during the morning. The Lake District and North Lancashire stayed fairly cloudy with some showers. A few other places also caught a shower.

Mot districts had a cool, windy day with gales in many central regions of the British Isles for a time. A gust of 65 knots was reported from Point of Ayre (Isle of Man) during mid morning.

Temperatures reached the seasonal normal in some eastern and southern districts well away from southwest or west facing coasts.

WEDNESDAY  
28 MAY 1986

SUMMARY  
OF  
BRITISH WEATHER

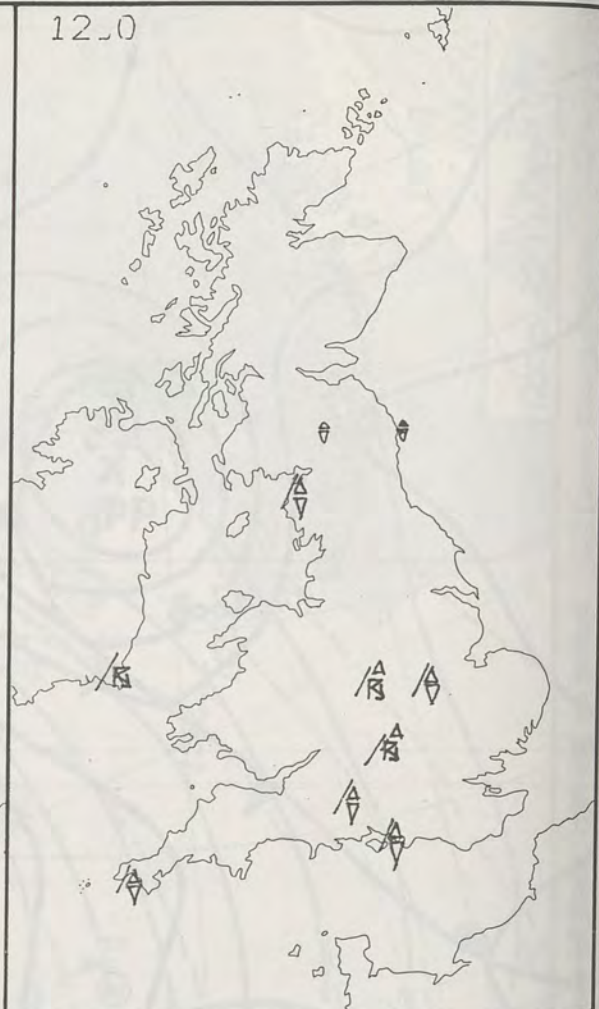

Many exposed western districts of Britain and Northern Ireland, and also much of northern Scotland had showers through the night, with the remainder of the United Kingdom being mostly dry with long clear spells.

During the morning showers developed quickly, and by the afternoon many thundery showers with hail were reported, the thunder more particularly over eastern England. There were some dry exceptions though, especially to leeward of the principal high ground, and most areas saw good spells of sunshine, despite the showers. The showers became well scattered during the evening, dying out completely in many eastern and southern areas by midnight.

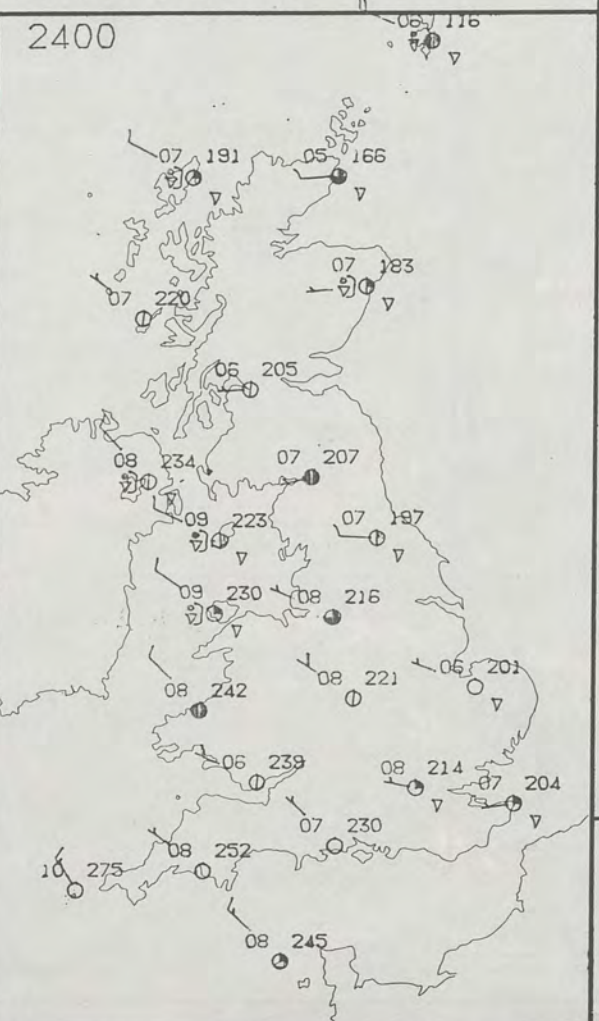

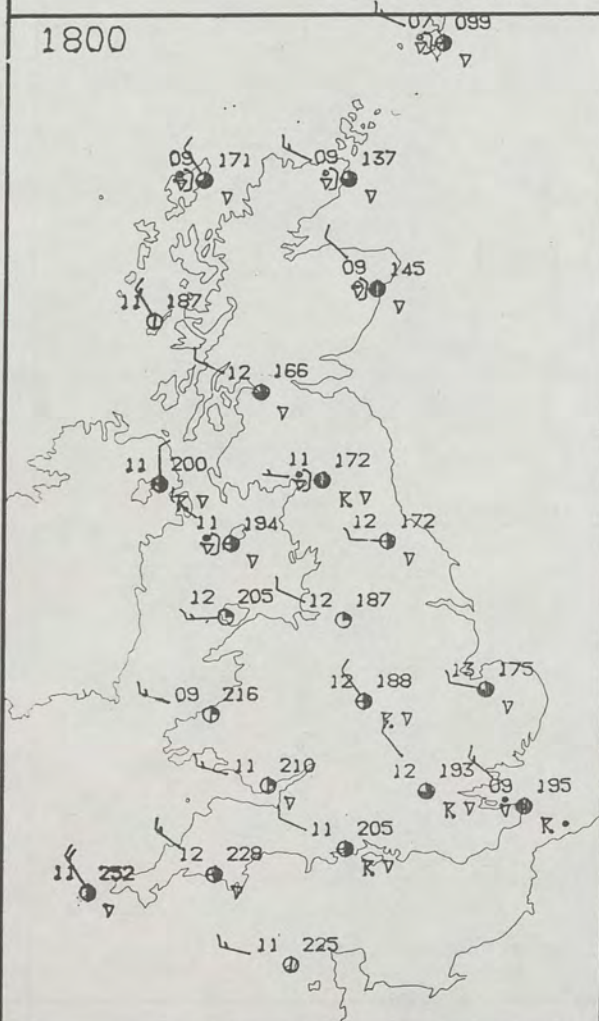

It was rather cool almost everywhere, even cool around some western parts of England and Wales.

THURSDAY  
29 MAY 1986

**SUMMARY  
OF  
BRITISH WEATHER**

The early hours of Thursday were clear and rather chilly in many eastern and southern areas of England, with a ground frost in places. Further north and west only isolated showers occurred, mainly in northern Scotland and over the Welsh hills.

During the morning showers developed in many other areas of the country, being most frequent in eastern districts, whilst South Wales and southwest England were mostly dry.

Thick cloud spread over Northern Ireland and parts of western Scotland during the afternoon, with some patchy rain in the far north of Scotland.

The showers in eastern and south-eastern England were locally heavy during the afternoon and some thunder and hail was reported too. During the evening showers mostly died out but left behind a lot of cloud and in some isolated areas pockets of residual rain carried on until midnight.

It was a rather cool day almost everywhere.

FRIDAY  
30 MAY 1986

SUMMARY  
OF  
BRITISH WEATHER

Most regions had a dry night and in southern and eastern counties of England the sky was mainly clear and there was a ground frost in places. Elsewhere the night was cloudy and in parts of northwest Scotland there was rain by dawn.

In England and Wales the day was dry and parts of southwest England and the Channel Islands had a good deal of sunshine; elsewhere there were only brief sunny intervals and in West Wales and parts of northwest England there was some rain during the late afternoon and evening.

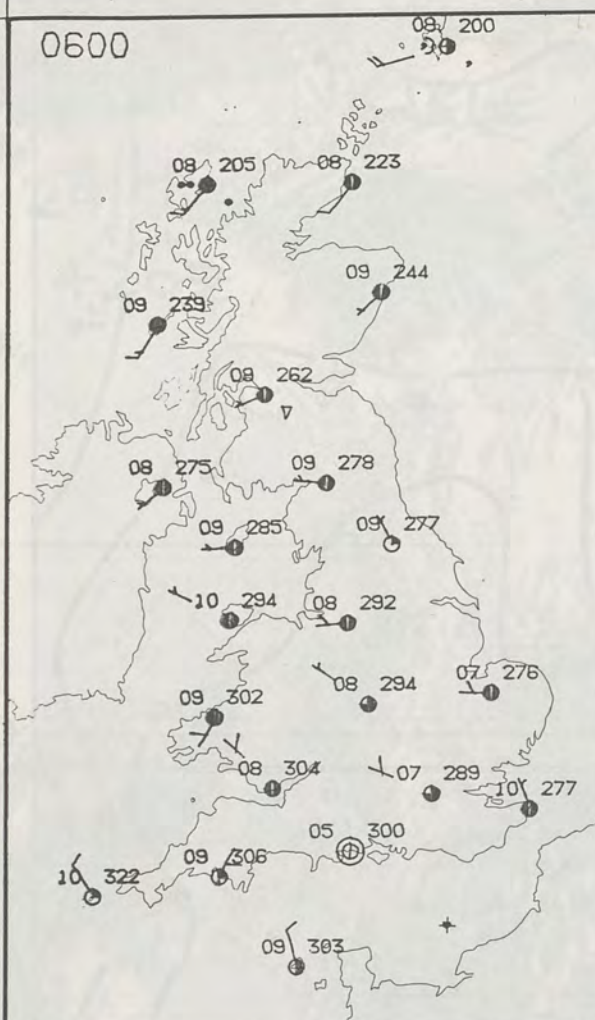

In Scotland and Northern Ireland it was a mainly cloudy day. Northwest Scotland had rain most of the time. In Northern Ireland rain spread from the west to all parts during the morning and continued through the afternoon and evening. Parts of eastern Scotland remained dry until late afternoon.

It was a rather cool day in most places and in Northern Ireland and some places in the west it was decidedly cool.

### PLOTTED SURFACE OBSERVATIONS

SATURDAY  
31 MAY 1986

### SUMMARY OF BRITISH WEATHER

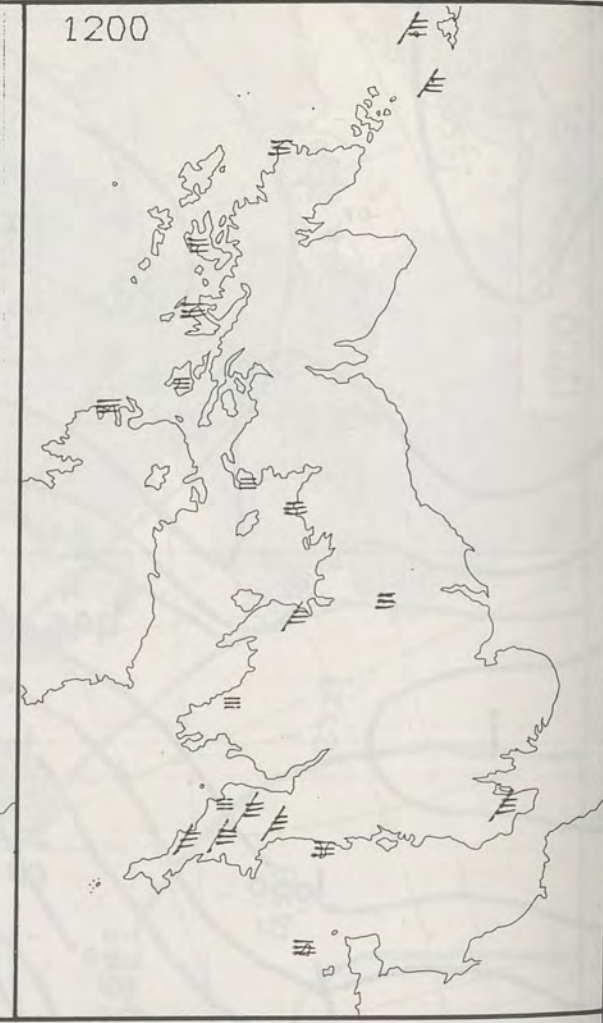

There was rain at times in most regions during the night but southeast England and East Anglia remained dry.

During the morning rain spread eastward across East Anglia and southeast England and the rest of the day was dull and wet with rain or drizzle at times. Over the rest of Britain and Northern Ireland the day was mostly dull and damp with patches of drizzle or light rain. There were some dry periods in parts of the north, especially in eastern Scotland.

It was very cool in southeast England and East Anglia and mostly rather cool or cool elsewhere. However, parts of central Scotland had temperatures near or a few degrees above normal.
