Daily Weather Summaries for July 2019

If you have any questions or feedback about this product or wish to obtain further data please contact the Met Office.

This document contains daily weather summaries for each day of July 2019. The Met Office National Meteorological Library and Archive holds a continuous record of daily weather summaries or daily weather reports from 1860, and these daily weather summaries form a continuation of that series.

The purpose of each summary is to provide an overview of the weather conditions across the UK on that day, with the historical emphasis mainly based on observations from surface network of weather stations, although the format has varied over the decades. While the emphasis remains on observations from the surface network, the current daily weather summaries supplement these by including satellite and rain-radar imagery to provide a more complete overview. The current format of the daily weather summaries is as follows:

1. Text summary of the main characteristics of the weather during the day, written by an operational meteorologist in the Met Office operations centre.
2. Table of daily extremes for the UK for key climate variables including temperature, rainfall, sunshine and gust speeds.
3. Overview of the synoptic situation at 00 and 12 UTC comprising: analysis charts showing the surface pressure pattern and associated weather fronts; North Atlantic and European infra-red satellite images showing cloud-cover; combined infra-red and rain-radar images of the UK; maps of wind speed and direction at 00 and 12 UTC; observations of pressure, wind speed and direction, cloud cover, air and dewpoint temperature at selected UK and European stations in data tables.
4. UK maps of key climate variables from observing stations including maximum, minimum and grass minimum temperature, rainfall, sunshine, gust speed and snow.
5. Further guidance notes

If you spot any data errors or omissions in this product please contact the Met Office.

Daily Weather Summary for Monday 01 July 2019

This day's summary created 14/08/2019 13:14

Summary of the UK Weather for Monday 01 July 2019

The early hours of Monday morning were cloudy across northern and western parts of Scotland as well as in Northern Ireland, with some outbreaks of rain and drizzle elsewhere. These areas as well as the remainder of northern Britain were breezy too. The remainder of the country stayed dry with clear spells, especially in the east and southeast. As a result it was a fresher and more comfortable start to the day. Through the morning it was rather cloudy across northern and some western parts with further outbreaks of showery rain affected Northern Ireland, western Scotland and the Pennines. Some cloud developed further south and east during the day but it remained dry and through the afternoon this fragmented again to leave plenty of sunny spells. It was a rather breezy day across most of the UK, especially so in the northwest where it felt cool. On the whole temperatures were close to average in the east and below average in the west.

Summary of the UK Weather for Tuesday 02 July 2019

Skies were clear across much of England and Wales through the early hours of Tuesday morning and the winds eased. Under clear skies it turned rather chilly. Skies were cloudier across Scotland and Northern Ireland, however, with a scattering of showers in places although these were mostly light.

Scotland continued to see often cloudy skies through the day with some showery rain across the north and northeast. Elsewhere it was a dry and warm day with fair weather cloud developing through the morning. The sunniest conditions were across southwest Wales and the northern coast of southwest England.

The daytime cloud dissipated through the evening to leave some good clear patches across much of the UK. It stayed dry for most, although there were one or two showers for the Northern Isles, and winds were light.

Summary of the UK Weather for Wednesday 03 July 2019

Wednesday started dry across almost all of the UK with clear skies across much of England and Wales. It was cloudier across the far northwest and Northern Isles, where a freshening wind developed. Under clear skies it became quite chilly in the countryside. Rain moved into parts of northern Scotland by morning. Skies became cloudy across Scotland and Northern Ireland through the day with a few scattered showers in northern Scotland and in the Northern Isles. Elsewhere, it was sunny and warm. Cloud bubbled up in southern and eastern England during the afternoon, but there were still plenty of sunny spells. During the evening showery rain continued across the far north of Scotland and it was cloudy across Northern Ireland. Elsewhere it was dry with clear spells.

Summary of the UK Weather for Thursday 04 July 2019

It remained cloudy and breezy across Scotland during the early hours with occasional rain in the north and west. Cloud across Northern Ireland produced isolated showers before thinning and breaking to give some clear spells. Meanwhile it was dry with largely clear skies across England and Wales, and with light winds, some shallow mist and fog formed in places and it became chilly in some rural areas by morning. Skies stayed cloudy in northern areas during the day with outbreaks of rain across Scotland, heavy at times, and a few spots of light rain in Northern Ireland. Elsewhere, it stayed clear with plenty of strong sunshine and it became very warm in the south.

Summary of the UK Weather for Friday 05 July 2019

There were a few outbreaks of rain across Scotland during the early hours of the morning. Elsewhere it stayed dry with clear spells. A few short lived mist patches formed here and there around dawn. Most places across central and southern England and Wales had a bright start, but there was a little more cloud further north. Rain continued across Scotland through much of the day, reaching parts of northern England and Northern Ireland during the afternoon. However, across southern England and Wales it stayed mainly dry and bright with some high level cirrus cloud in places. It became very warm in the south but elsewhere temperatures were around average for the time of year.

This day's summary created 13/07/2019 03:00

Summary of the UK Weather for Saturday 06 July 2019

Patchy rain moved southwards across Northern Ireland and northern England during the early hours of Saturday morning. Behind this, it turned drier across much of Scotland with clear spells, although there were a few showers towards the east and northeast, where it remained breezy. Southern England and Wales stayed largely fine with clear periods, for a while at least, before some clouds filtered down from the north. As a result it was a chilly start to the day across the north, whilst in the south it remained mild and quite muggy. During the day cloud and rain continued to edge slowly southwards across Wales, the Midlands and East Anglia. To the south of this it remained fine with some very warm sunshine and only a slow increase of cloud cover. However to the north it was much brighter with plenty of sunny spells. A few showers affected the far northeast of Scotland, but for most it was dry and fairly warm. Temperatures were still above average across the south, however further and under the cloud and rain they were closer to average.

Summary of the UK Weather for Sunday 07 July 2019

Yesterday's band of cloud and patchy light rain continued to move very slowly south across southern England and Wales. Some hill fog developed along this too. Elsewhere it was mostly dry with clear spells. A few light showers developed across northern Scotland during the early hours. Under the cloud, temperatures remained in double figures, but elsewhere, where the skies cleared temperatures fell into single figures. It was a cloudy start across southern England with isolated spells of rain and drizzle in the southeast. It was also a rather cloudy start for parts of northeast England and southeast Scotland. Sunny spells developed through the day and it was a dry day for most, with the rain and drizzle in the southeast stopping by the afternoon. There were one or two showers over the Pennines during the afternoon.

This day's summary created 15/07/2019 03:00

Summary of the UK Weather for Monday 08 July 2019

It was a largely dry night with clear spells for many. The clearest skies were across Scotland and northeast England, where it turned rather chilly in some rural spots. Some thicker cloud across southeast England produced a few showers during the evening and first part of the night, before fading away to leave a dry night. Elsewhere, it stayed dry with variable amounts of cloud and clear spells. Some mist and fog patches formed across parts of southwest England during the early hours of Monday morning. During the day, southern parts were warm and bright. There was significant rainfall in Northern Ireland, and a little rain in Scotland, north Wales and northwest England. Many places were cloudy, but there was widespread sunshine near the southern and eastern coasts.

This day's summary created 16/07/2019 03:00

Summary of the UK Weather for Tuesday 09 July 2019

Cloud and outbreaks of rain spread eastwards across Northern Ireland, Scotland and parts of northern England overnight. The rain was persistent and heavy at times, especially across western parts of Scotland, mainly over higher ground. Elsewhere, the rain was fairly light and patchy in nature. The cloud extended further southeast into parts of the Midlands, East Anglia and southeast England during the early hours, with some patchy drizzle in places, mainly over the hills. Meanwhile, much of Wales and the southwest of England stayed dry with clear skies overnight, as did the far northeast of Scotland, especially the Northern Isles.

Outbreaks of rain continued across Scotland, northern England and the north of Northern Ireland through the day, although Shetland remained dry with sunny spells. Wales started dry with some sunny spells, but occasional showers spread into the far north during the afternoon. Patchy rain across some central and southern areas faded away during the morning, and then it was dry with some long sunny spells. It was warmest across the sunnier south and southwest of England and Wales.

Summary of the UK Weather for Wednesday 10 July 2019

Cloud and outbreaks of rain spread across the north overnight, with heavy bursts of rain at times across Scotland. Skies were cloudy in northern and central areas, and patchy light rain and drizzle affected parts of Wales, the midlands and East Anglia. Further south it stayed dry with some clear spells in places and a few mist and fog patches in southwest England. It was a warm and muggy night, especially in the south. During the morning, residual showers eased from East Anglia to give many central and southern parts a fine, warm and humid day with spells of hazy sunshine. Heavy showers developed across Northern Ireland and eastern Scotland through with some torrential downpours, thunder and hail.

Summary of the UK Weather for Thursday 11 July 2019

It was cloudy for most overnight, with some light outbreaks of rain spreading east across Wales and central parts of England, and with some locally heavy bursts of rain across parts of northern England and Scotland. Low cloud brought misty conditions to west Wales, and areas of fog affected coastal regions of the far north of Scotland and the Northern Isles. It was a humid night, and warm in the south. During the day many southern parts remained dry with some warm spells of sunshine, although it felt rather humid too. For west Wales it was much cloudier with a cold front bringing outbreaks of drizzle around the coasts and hills as well as some mist, murk and low cloud. Further north across northeast England and especially eastern Scotland, thunderstorms broke out with some torrential downpours bringing heavy rain and hail.

Summary of the UK Weather for Friday 12 July 2019

A few showers continued on through the night, mainly but not exclusively affecting the Grampians. However, most of the UK stayed dry all night. There was a fair amount of cloud around which kept temperatures fairly mild. Friday was a largely dry day, with sunny spells for most. However, there was some thicker cloud lingering over parts of Northern Ireland and northern, eastern parts of Scotland. Meanwhile, scattered showers, which were locally heavy with thunder affected parts of southeast Scotland and northeast England during the afternoon. A few isolated showers developed over parts of southeast England, but it was a mostly dry day. It was a warm day for many.

Summary of the UK Weather for Saturday 13 July 2019

It was a dry night across all parts with plenty of clear spells in the south and west. Some low cloud edged in across eastern areas, especially North Sea coasts. There were cloudier conditions across the far north and west of Scotland. Winds remained light overnight and it was mild for all parts. The odd light shower affected the high ground of eastern Scotland and northern England.

It was a largely dry and bright day, with variable amounts of cloud and some warm sunny spells. The sunniest skies were across parts of southern England and parts of the west. Meanwhile, there were some scattered showers across the higher ground of Scotland and northern England, with a few isolated showers across parts of southern England.

Summary of the UK Weather for Sunday 14 July 2019

It was dry through the early hours across most of the UK, with light winds. There were some showers in the east, which moved south from Yorkshire to the London area by morning. The showers were frequent at times, but rainfall totals were small. Cloud increased from the North Sea overnight, with many central and eastern areas becoming rather cloudy by morning. The best of the clear spells were in the west. Early cloud and outbreaks of rain across east and southeast England cleared to the south by mid-morning. Otherwise, it was generally dry for many on Sunday, with variable amounts of cloud and bright or sunny spells. The best of the sunshine was towards the west, especially across western Scotland, Northern Ireland, Wales and southwest England. However, there were a few isolated showers across parts of northeast England, east Midlands and southwest England during the afternoon, but most places stayed dry. It was a little cooler along North Sea coasts, with an onshore north-easterly breeze. Temperatures were around average for the time of year.

Summary of the UK Weather for Monday 15 July 2019

Through the early hours, most places had clear spells which caused temperatures to drop and a few mist and fog patches to form around dawn. Parts of east and southeast England were a little cloudier to begin the day. It was a dry and warm day across much of the UK, but it remained rather cloudy across parts of eastern England until late afternoon, and here there was a light but cool northerly breeze. It was a different story across Shetland, where mist and low cloud lingered throughout the day.

Summary of the UK Weather for Tuesday 16 July 2019

The early hours of Tuesday were mostly dry with clear spells across much of the UK. Despite this, there were a few showers across Northern Ireland and western Scotland but these were fairly light and many remained dry. A few mist and fog patches developed by the morning across southeast England and compared with recently it was a chillier start across some parts. However, it was a fine and sunny start to the day, especially across England, Wales and eastern Scotland, whilst Northern Ireland and western Scotland were cloudy. Clouds bubbled up through the day though, with isolated showers developing from late morning onwards across the Scottish Borders and parts of Aberdeenshire, with a few heavy bursts. Some showers also developed across Wales and the Midlands but these were much lighter. Some cloud developed in the south, but this was mainly inland from the south coast, due to a significant sea breeze, which made for a sunny picture along the English Channel coasts. Temperatures were close to average under the cloudier skies further north, but elsewhere they were well above average especially in the southeast.

Summary of the UK Weather for Wednesday 17 July 2019

The weather was quiet through the early hours of Wednesday morning with long clear spells leading to some patchy fog across the south and southwest. For most it was dry, but cloud thickened across Northern Ireland and western Scotland during the small hours bringing some rain here by the time dawn broke. With clear spells elsewhere it was quite a chilly start to the day across Wales and some southern counties of England. Through Wednesday daytime cloud and showery outbreaks of rain continued to edge steadily southeastwards through the day, affecting much of northern England, Wales, the west Midlands and eventually parts of the southwest by the evening. East Anglia and southeast England remained dry with hazy spells of sunshine. Winds were light for many, but they turned a little fresher in the northwest as the rain pushed in. For many temperatures remained on the warm side, especially so in the southeast. As it turned drier and brighter in the far northwest late afternoon, it felt fresher.

Summary of the UK Weather for Thursday 18 July 2019

Outbreaks of light and patchy rain moved steadily southeastwards during the early hours of Thursday, bringing the first rain of the month to parts of Wales, central and southern England. There were not large amounts of rain though and some southeastern parts remained dry. With fairly cloudy skies it was a warm and humid night in the southeast, elsewhere, it turned clearer and fresher and frequent showers pushed into the northwest.. Early cloud and outbreaks of rain over eastern, central and southeastern parts of England gradually cleared away southeast during Thursday afternoon. Elsewhere, it was a day of sunny spells and scattered showers. The heaviest of the showers were across Scotland and Northern Ireland, where there was perhaps the odd rumble of thunder in places. Still a warm day in the east and southeast of England, with temperatures above the average for the time of year.

Summary of the UK Weather for Friday 19 July 2019

Scattered showers continued across Scotland and the far north of England overnight, but elsewhere through the first half of the night it was largely dry if increasingly cloudy.

Outbreaks of locally heavy rain spread across southwest England and Wales late in the night, with a band of thundery showers following into the far southwest around dawn.

An unsettled day than of late, with a spell of rain, heavy at times, spreading north-eastwards across England and Wales. The heaviest of the rain was seen across parts of south Wales and southwest England during the morning. Meanwhile, the far north of Scotland did have a largely dry day, with bright or sunny spells, but also some scattered showers. Further outbreaks of rain, locally heavy, moved in across southwest England later in the day. Temperatures were a little lower than recent days, but feeling increasingly humid in the south.

Summary of the UK Weather for Saturday 20 July 2019

It was an unsettled night across the UK with heavy showers and some thunderstorms. Thunderstorms were particularly prominent across southeast England with some places seeing near 20 mm within an hour. Elsewhere the showers were not quite as heavy, though they merged into some longer spells of rain across parts of Scotland and northern England through the early hours. There were some clear spells in between but despite these it was a mild and humid night for many.

Early thundery showers in East Anglia soon eased, with warm sunny spells developing for many. Into the afternoon however, a line of thunderstorms developed across the the Midlands and Lincolnshire, with 9.0 mm in an hour at Hollies. There were showers along North Sea coasts of England and Wales, with isolated thunderstorms in northeast England and East Anglia. For much of the country it stayed dry though, with plenty of sunny spells. Although, it was humid for some in the southeast.

Summary of the UK Weather for Sunday 21 July 2019

The early hours of Sunday were dry for many parts of the United Kingdom, with variable amounts of cloud. However, western Scotland continued to see some showery rain throughout the night, with Northern Ireland, south Wales and southwest England also seeing a few showers at times.

Plenty of sunshine developed during the morning, especially in central and eastern areas. There were scattered showers in Wales, western Scotland and the South West, where skies were cloudier, and outbreaks of rain moved across Northern Ireland. Into the afternoon, there were isolated thundery outbreaks in Northern Ireland, and the often heavy rain extended into western Scotland. The best of the sunshine was across eastern and southern England.

Summary of the UK Weather for Monday 22 July 2019

Heavy outbreaks of rain persisted across Northern Ireland, western Scotland and Cumbria through the night where it turned breezy too. Elsewhere it was largely dry and cloudy. There was some patchy drizzle in western Wales where low cloud formed, giving some mist and fog around the coast.

Through Monday daytime the rain across northwest Scotland persisted. It was mainly dry elsewhere but rather cloudy across Wales and the southwest. The cloud here only showed limited clearance by the afternoon. Across eastern and southeastern parts of England there were some good spells of very warm sunshine. It was a breezy day across many parts, with a fresh to strong wind across Northern England and Scotland.

Summary of the UK Weather for Tuesday 23 July 2019

Rain continued across the northwest of Scotland through the early hours, with further heavy outbreaks. For much of the UK it was dry, but low cloud and fog rolled into many northern and western areas. It was a warm start to the day in central and southeastern parts, with plenty of sunshine here by dawn.

Through the daytime it was very warm and sunny across most of the country, with just a little cloud across western parts. A few medium-level showers moved into the West Country by the afternoon. It was hot in central and eastern areas, with temperatures in the thirties for many here.

Summary of the UK Weather for Wednesday 24 July 2019

Thunderstorms with frequent lighting, torrential rain, hail and some gusty winds moved northwards across the UK during the early hours of Wednesday morning. By dawn these stalled across Scotland and eastern England, whilst elsewhere it turned drier although low cloud moved into Wales and the West Country. It was a humid start to the day too where some places in eastern England had not fallen below 20 degrees Celsius. The thunderstorms continued to move out of Scotland and eastern England during the morning, with most areas becoming dry. Skies were cloudiest in western and northwestern parts, but otherwise there were spells of sunshine, which occasionally turned hazier. Western areas were a touch fresher than on Tuesday, although it still felt warm in the sunshine. However, eastern and particularly southeastern parts of England saw another very hot day with temperatures rocketing in the strong sunshine. Through the evening, skies turned a little cloudier across Northern Ireland with outbreaks of rain affecting the far west.

Summary of the UK Weather for Thursday 25 July 2019

It was a quiet picture across the UK through the early hours of Thursday with clear spells for many, although some mist and low cloud developed around coasts in the southwest. A little rain affected the far northwest too, but for all areas it was warm and humid with some places staying around twenty degrees Celsius throughout. Clear skies then led to a sunny start to the day, with only the far west having a little cloud and just a few spots of rain over the west of Northern Ireland. Temperatures climbed rapidly in the sunshine but this triggered some thunderstorms across east Wales and the west Midlands which spread northwards giving some large hail across Liverpool and northwest England. Further thunderstorms also developed over the continent and spread northwards across the England Channel into central and eastern England. These gave frequent lightning, some intense downpours and hail during the evening. It was an exceptionally hot day with temperatures widely reaching the mid thirties Celsius. A daily maximum temperature of 38.7 °C was recorded at Cambridge Botanic Garden, setting a new all-time UK temperature record. Western areas were not as hot though with temperatures nearer normal.

Summary of the UK Weather for Friday 26 July 2019

Thunderstorms and frequent lightning affected southern, eastern and some central areas through the early hours of Friday morning. This led to some torrential rain, but the lightning and gusty winds were more of a feature at times. Temperatures were exceptionally high for a good portion of the night with some areas seeing temperatures rising rather than falling at times. Further west it was drier with some clear periods. Scattered showers, some heavy and thundery spread north across eastern parts of England during the morning, with a line of thunderstorms developing across the northeast during the afternoon. Across Scotland, Northern Ireland and the western side of England there were some bright or sunny spells and scattered showers. It was breezy along Irish Sea coasts, which kept it cool here, but it was warm and humid further east.

Summary of the UK Weather for Saturday 27 July 2019

During the early hours most northern, eastern and many central parts of the British Isles were cloudy with some showery outbreaks of rain, locally heavy with some thunder and lightning. Western Scotland, Northern Ireland, much of Wales and southwest England stayed dry with some clear intervals. Outbreaks of locally heavy rain continued across western Scotland, much of northwest England, the Midlands and southeast England through the day. There were some drier interludes across parts of central England in the afternoon, but the rain returned here by evening. Southwestern areas were bright with some sunshine but also isolated showers. Across Northern Ireland it was dry with hazy sunshine, and across the northeast of Scotland it was dry with some warm sunshine inland although low cloud developed over some eastern coasts.

Daily Weather Summary for Sunday 28 July 2019

This day's summary created 04/08/2019 03:00

Summary of the UK Weather for Sunday 28 July 2019

A slow-moving band of rain affected parts of Northern Ireland, southwest Scotland, northwest England, northeast Wales, the Midlands and East Anglia through the early hours. Much of this rain was heavy and persistent, with low cloud and hill fog in places. It was drier elsewhere with some clear spells. Throughout the day the band of rain remained slow-moving with some further heavy rain being reported across the north Midlands, northern England, southern Scotland and Northern Ireland. In this band a few thunderstorms also developed. To the north of the rain band, apart from a few showers it was largely dry with some sunny spells, and in the sunshine it was another very warm day. To the south of the rain band it was also dry with some spells of sunshine, especially across south Wales and southwest England, although southeast hung onto a lot of cloud until the second half of the afternoon. Temperatures were around average for the time of year, except the Northern Isles which were very warm.

Summary of the UK Weather for Tuesday 30 July 2019

Through the early hours there were heavy showers and strong winds across parts of southwest England and Wales, and also across Northern Ireland and parts of northern England, with a thunderstorm developing close to Sheffield. Elsewhere it was mainly dry, with some low cloud and fog across the Shetlands, northeastern Scotland, and some parts of northeast England. Heavy and thundery rain pushed north-eastwards across much of England and Wales through the day. Heavy thunderstorms hit parts of Scotland too, mainly in the west whilst further east it was drier. It was a blustery day with strong winds, especially in the south where there were coastal gales.

Summary of the UK Weather for Wednesday 31 July 2019

Cloudy skies and outbreaks of rain persisted across northern, eastern and central parts of England as well as north Wales through the early hours of Wednesday morning, some of this rain heavy leading to further flooding, especially in Yorkshire and Cheshire. Elsewhere, showers faded to leave drier conditions with clear spells, although for much of England and Wales it was warm, humid and breezy. During the morning bands of heavy showers continued and developed further across much of northern England as well as central and western Scotland, with these turning heavy and thundery through the afternoon. This led to some torrential rain, hail and gusty winds causing further localised flooding in places. Away from these areas there was a mixture of bright or sunny spells and scattered showers, although these were much lighter. Winds continued to ease across the southwest, but it remained breezy across eastern and southeastern England. Temperatures were close to average in many parts of the UK, although it still felt warm in southeast England with temperatures a touch above average.

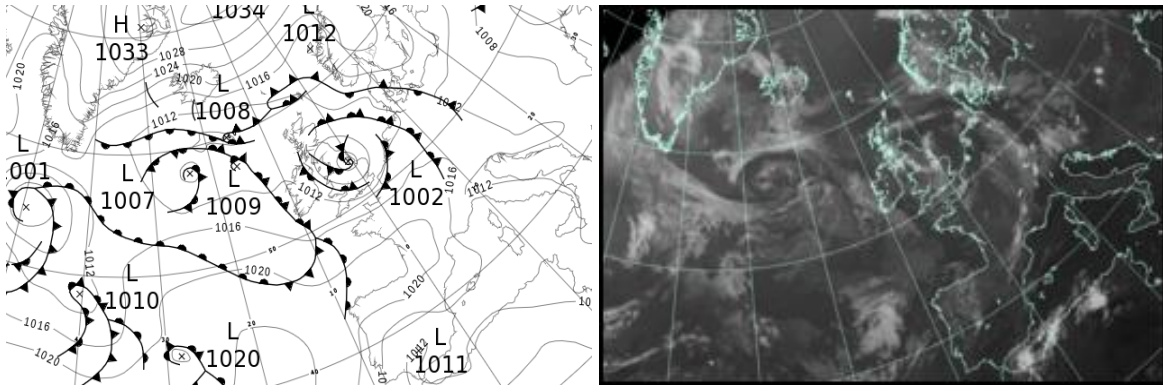

Daily Extremes

<i>Highest Maximum</i>	24.9°C Heathrow (Greater London, 25mAMSL)
<i>Lowest Maximum</i>	14.5°C Pennerley (Shropshire, 357mAMSL)
<i>Highest Minimum</i>	17.2°C Bognor Regis (West Sussex, 7mAMSL)
<i>Lowest Minimum</i>	9.1°C Dalwhinnie No 2 (Inverness-shire, 351mAMSL)
<i>Lowest Grass Minimum</i>	5.2°C Dalwhinnie No 2 (Inverness-shire, 351mAMSL)
<i>Most Rainfall</i>	31.6mm Buxton (Derbyshire, 307mAMSL)
<i>Most Sunshine</i>	13.7hr Tenby (Dyfed, 5mAMSL)
<i>Highest Gust</i>	34Kt 39mph Cranwell (Lincolnshire, 63mAMSL)
<i>Highest Gust (mountain)</i>	32Kt 37mph Great Dun Fell No 2 (Cumbria, 847mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values

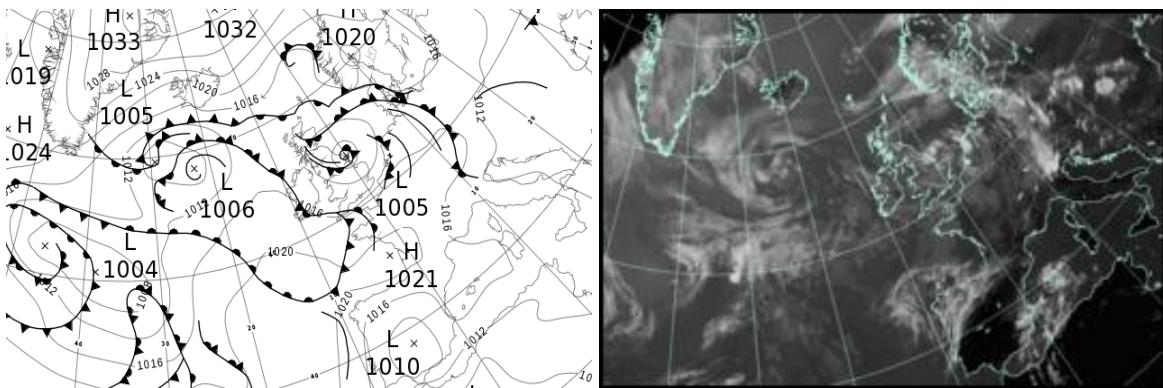

mAMSL refers to station elevation in metres above mean sea level

Daily Weather Summary for Wednesday 31 July 2019

Daily Weather Summary for Wednesday 31 July 2019

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Guidance Notes

UTC = Universal Coordinated Time. For the UK UTC is the same as GMT (Greenwich Mean Time).

National boundaries shown on the European station map are for illustrative purposes only.

Daily extremes

- Daily extremes have been manually confirmed by Met Office Observations Quality Management as valid observations from the live database at the time of checking. However, more extreme values may still be possible if they occur after the time of production.
- Mountain stations above 500 masl are excluded from lowest temperatures, highest gust speeds and greatest snow depths at 0900 UTC. This is because they are not considered representative of low level areas.
- Counties quoted against each station are based on historical county boundaries pre-1974 and may not reflect current administrative boundaries.

Analysis charts and satellite imagery

- The satellite imagery is infra-red imagery from the geostationary MSG satellite.
- The rainfall image is derived from satellite data from MSG and rain-radar data. This represents a snapshot of instantaneous rain-rates at 0000 UTC and 1200 UTC and so does not necessarily reflect daily accumulations in the rainfall station map.
- Any analysis charts or satellite images which are unavailable will be displayed as white space.

Station maps

- The UK maps show station data for the same set of stations presented UK data table. These stations are selected to provide good spatial coverage across the UK; they represent only a fraction of the overall UK observing network.
- Wind speed maps show wind speed in Kt and direction both averaged over the hour up to the time of observation. 1 Kt = 1.151 mph.

Hourly station data

- The data tables provide spot hourly observations from synoptic messages at 0000 and 1200 UTC. Missing data are denoted by '-'.

- Pressures are mean sea level pressure in hPa.
- For UK stations, Gibraltar and Jersey, the wind speeds and directions are both averaged over the hour up to the time of observation. However, for European stations wind speeds and directions are both averaged over a 10-minute period up to the time of observation.
- Wind speeds are in Kt. Wind directions are stored in the database every 10 degrees and have been converted to the nearest point of the compass. These give the direction the wind is blowing from, not to.
- Cloud amounts are in Oktas from 0 (clear) to 8 (overcast). 9 indicates sky obscured (eg by fog).
- Air temperature and dew point temperature are in Celsius.

Temperature maps

- Daily maximum, minimum and grass minimum temperatures are in Celsius.
- The period for the daily maximum temperature on day D is defined from 0900 UTC day D to 0900 UTC day D+1.
- The period for the daily minimum and grass minimum temperatures on day D is defined as 0900 UTC day D-1 to 0900 UTC day D.
- On any given day D the minimum will typically occur in the early hours of the morning and the maximum in early afternoon.

Rainfall, sunshine and max gust speed maps

- Daily rainfall is in mm from 0900 UTC day D to 0900 UTC day D+1.
- Daily sunshine is in hours from Kipp and Zonen CSD1 automatic sunshine records. Bright sunshine is defined as exceeding 120 W/m².
- Max gust speeds are the daily max gust in Kt from 0000-0000 UTC

Snow maps

- The day of snow falling map displays data from present weather sensors, showing stations which have recorded sleet or snow falling at any point in the day (0000-0000 UTC).
- The snow lying map shows level snow depth as recorded by the automatic snow depth sensors at 0900 UTC. These snow depth sensors do not record snow depth if this is less than 1cm.
- Snow depth sensors are normally operational from October to April, in the event of snow falling outside this period data availability may be limited.
- Snow maps will only be displayed if one or more of the selected stations on that date have recorded either snow falling or non-zero snow depths. If snow maps are not

displayed it is still possible that other stations in the network have recorded a day of sleet or snow falling or non-zero snow depth.
