SIGNIFICANT WEATHER

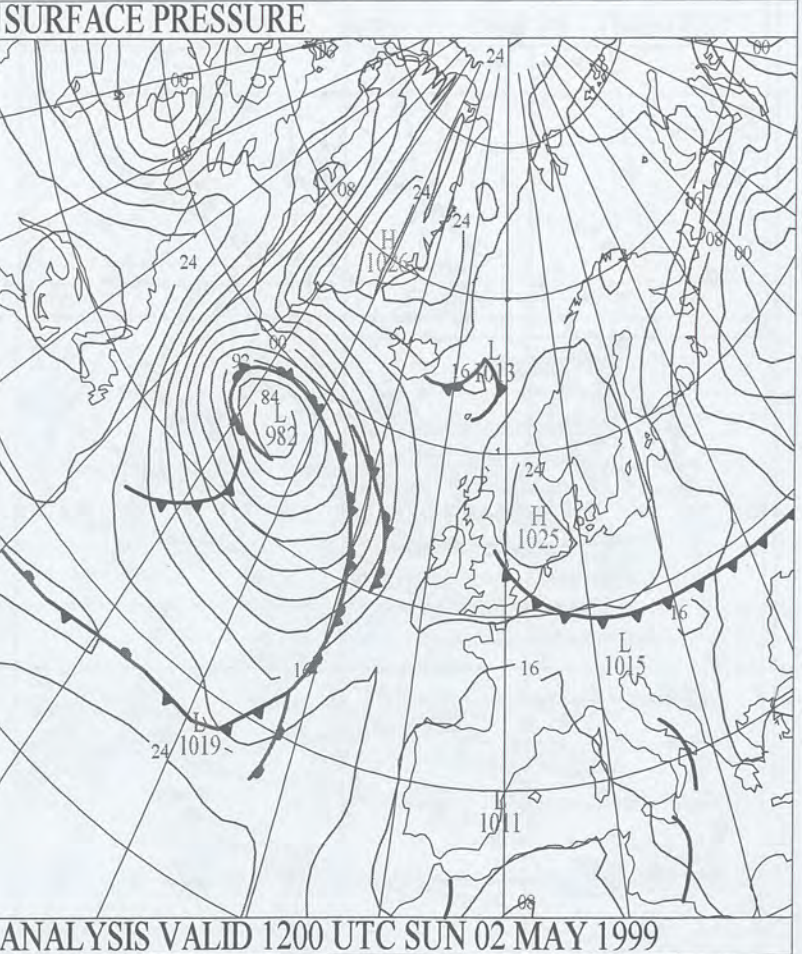

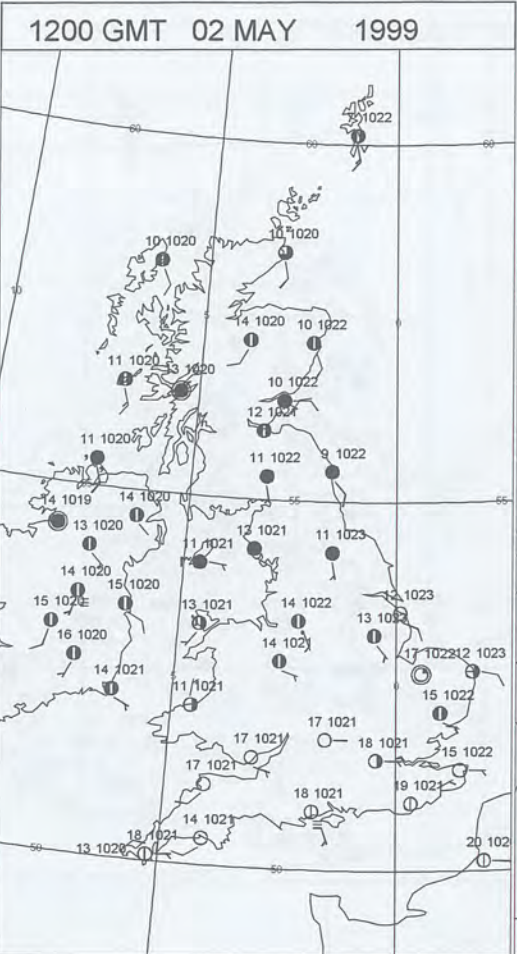

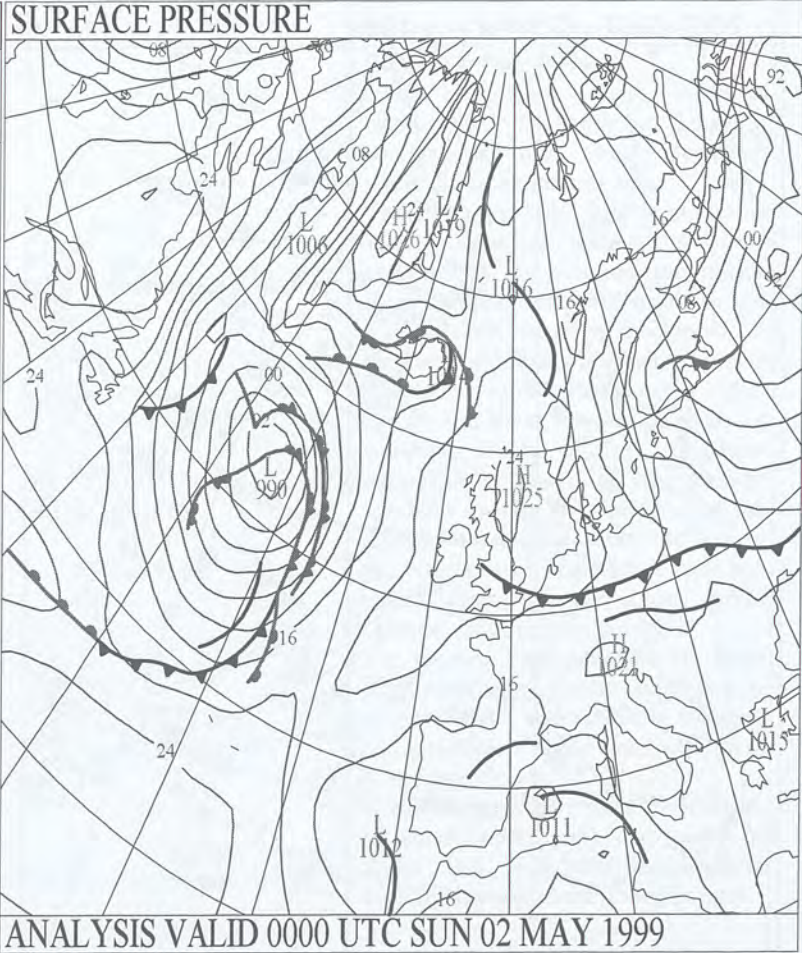

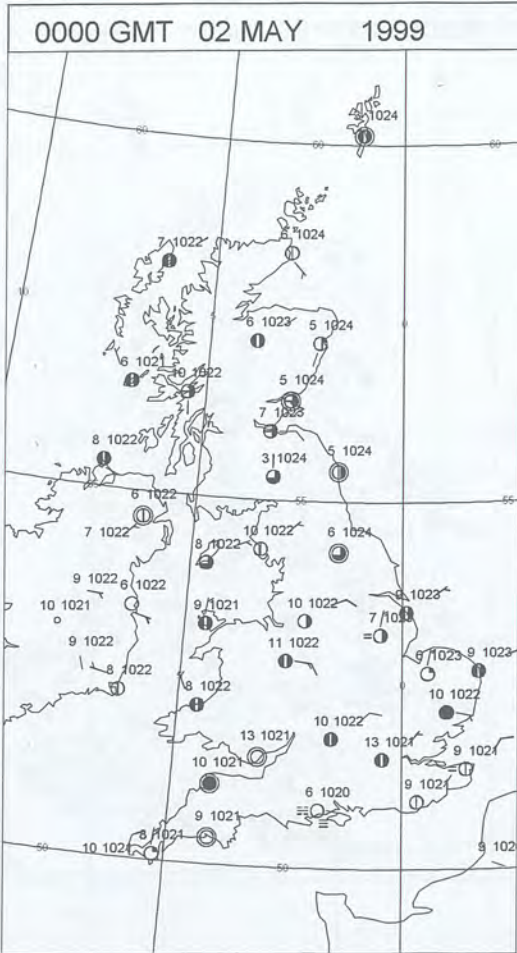

0600 GMT 01 MAY 1999 SIG WEATHER	1200 GMT 01 MAY 1999 SIG WEATHER	<p>Summary of UK weather for Saturday 1 May 1999</p> <p>Saturday began dry everywhere save for a few showers in Shetland, and many parts of the country had clear spells through the night. The area from the Scottish Borders south to the Midlands had rather more cloud than elsewhere and in some of the initially clear areas, fog patches started to form later in the night.</p> <p>Most of the fog patches that formed overnight cleared fairly swiftly in the morning but those around the Cornish and some Bristol Channel coasts were somewhat more reluctant to clear. Indeed, during the afternoon sea fog started to spread onto the Sussex coast and later some coasts of south Devon.</p> <p>During the morning the showers moved down from Shetland to affect northeastern parts of mainland Scotland but by the afternoon these had died out completely. The whole country was then dry for a while, and remaining so through the evening, however, the odd shower developed late in the afternoon.</p> <p>Temperatures were mostly above average, except where there was persistent sea fog or where there were onshore breezes but were locally very warm in some inland areas.</p>

SIGNIFICANT WEATHER

0600 GMT 02 MAY 1999	SIG WEATHER	1200 GMT 02 MAY 1999	SIG WEATHER	<div>Summary of UK weather for Sunday 2 May 1999</div> <p>It was a dry night. There were good clear spells in the south but the north was generally more cloudy. It turned misty in some southern areas</p> <p>There was a little light rain across south Lancashire and the southern Pennines in the morning and it was foggy for a time on some southern and southwestern coasts. For most of England and Wales though, it was a dry day. Northern areas were rather cloudy but there were long spells of sunshine in the south. Northern Ireland was mainly dry but cloudy. Scotland too was dry for most of the day but there were some showers in the Northern Isles and some light and patchy rain spread across other northern areas later in the day.</p> <p>The evening was generally dry apart from some light, patchy rain in the far north. Wales and southern England had good clear spells but other areas were more cloudy.</p> <p>It was warm or very warm over much of southern England and parts of Wales but elsewhere temperatures were mostly just a little above normal.</p>

SURFACE REPORTS

SIGNIFICANT WEATHER

0600 GMT 03 MAY 1999	SIG WEATHER	1200 GMT 03 MAY 1999	SIG WEATHER	Summary of UK weather for Monday 3 May 1999 Most of the country had a dry night, but there was some early rain in the Orkney Isles and for a time in southwest Scotland. Most of the rest of Scotland had variable, mainly large amounts of cloud, but Northern Ireland and much of England and Wales had well broken cloud with early morning mist or fog patches. Early mist or fog had largely cleared by 0900, though the far north of Scotland remained cloudy. All other parts had well broken cloud, and there were long sunny spells for most of England and Wales, Northern Ireland and southern parts of Scotland. During the evening the cloud cover, generally thin and high, increased over southern counties of England, and rain returned briefly to the northern and western isles of Scotland. Most of the country had temperatures above the seasonal normal, even the cloudier far north. South of Highland region nearly everywhere was in the warm or very warm category.
1800 GMT 03 MAY 1999	SIG WEATHER	0000 GMT 04 MAY 1999	SIG WEATHER	EXTREMES Highest Maximum: 23.4 Great Malvern, Hereford & Worcester Lowest Maximum: 8.5 Fair Isle, Shetland Lowest Minimum: 2.5 Baltasound, Shetland Lowest Grass Minimum: -1.8 Hawarden, Clwyd Most Rain: 7.8 Knockarevan, Fermanagh Most Sun: 13.9 Ronaldsway, Isle Of Man

Northeast England and eastern Scotland, though, had misty low cloud with fog patches. There were also a few scattered showers in the far northwest.</p> <p>The low cloud over eastern England and Scotland cleared from most parts during the morning, although it did linger in places, especially around coasts and in the Northern Isles. Elsewhere, it was largely dry with bright or sunny spells, the best of the sunshine in the west. However, there were increasing amounts of medium and high level cloud in the south and east of England as the day wore on. Western parts of Northern Ireland also saw increasing cloud late in the day with a few thunderstorms breaking out.</p> <p>The bulk of the country was dry through the evening with the showers in Northern Ireland dying out. Central and southeastern England had a good deal of medium level cloud but elsewhere there were clear spells. Temperatures were mostly warm or very warm, although along the east coast values were near normal.</p>

SIGNIFICANT WEATHER

0600 GMT 06 MAY 1999	SIG WEATHER	1200 GMT 06 MAY 1999	SIG WEATHER	Summary of UK weather for Thursday 6 May 1999 Rain affected the Isle of Man and parts of England between Cambridgeshire and Newcastle as the day started. Other parts were dry. During the early hours the rain area spread north into southern Scotland and Northern Ireland, while patchy rain and drizzle arrived into southern England. The morning saw the northern area of rain progress north, so that by midday it affected the region between the Borders and the Isle of Skye. The odd outbreak of light rain was reported from the southern England and Wales as well. In the afternoon there were a few showers in the Midlands, Lancashire, the southern Pennines, the Thames Valley, the Isle of Man and around the Llyn Peninsular, while the band of rain in Scotland moved north to lie from Aberdeen to Lewis late on. During the evening rain spread into Cornwall, as an area of showers moved north from Lancashire towards southwest Scotland and Northumberland. The rain in Scotland edged into Caithness. Temperatures varied from rather warm or warm in much of England and Wales to normal in most of Scotland.

SIGNIFICANT WEATHER

0600 GMT 07 MAY 1999	SIG WEATHER	1200 GMT 07 MAY 1999	SIG WEATHER	Summary of UK weather for Friday 7 May 1999 Patchy rain or drizzle affected Cornwall, eastern Scotland and Orkney at first, while fog patches were reported from Shropshire, Northern Ireland and northeast England. During the early hours the patchy fog became more widespread, while rain fell in coastal eastern Scotland, the Orkneys, west Wales and southwest England. Soon after dawn a band of often heavy rain lay from the Lleyn Peninsular to the Isle of Wight. During the morning it moved erratically north to stretch between Antrim and the Thames Estuary by midday, with further showery outbreaks to the southwest of this belt. The east coast, from Yorkshire north, saw drizzle and fog in places. In the afternoon the rain continued it's progress north, reaching from Argyll to Essex by late afternoon, but with further outbreaks to the southwest over Wales and the Midlands. Thunder was reported in places, while the haar persisted along the northeast coast. The evening saw this showery rain continue it's way across southwest Scotland, northern England, the Midlands and East Anglia. Temperatures varied from warm around The Wash, to rather cold along the coast around Aberdeen.

SURFACE REPORTS

SIGNIFICANT WEATHER

Summary of UK weather for Friday 14 May 1999

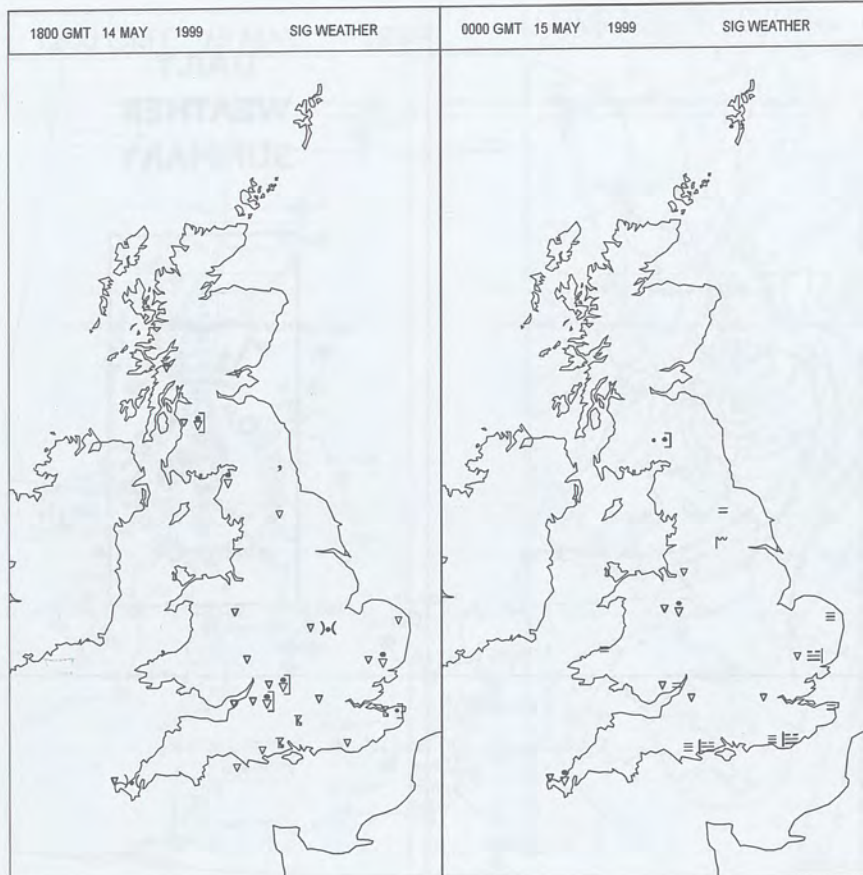

Much of Wales had showery outbreaks of rain overnight. The showers edged into the West Midlands and central southern England towards morning. Most other parts were dry but with generally a good deal of cloud.

During the morning, showers became widespread across much of Wales and the southern half of England. The showers were heavy in a number of places, especially during the afternoon when they also became thundery across the more southern counties. For the northern half of England, showers developed for a time in the afternoon, although the northernmost counties remained dry.

Scotland and Northern Ireland had a largely dry day with sunny spells, although there a few scattered showers across central and some eastern parts of Scotland for a while.

During the evening, most parts became dry although showers still affected southernmost counties of England.

The temperatures were generally close to, or a little above normal.

SIGNIFICANT WEATHER

0600 GMT 16 MAY 1999	SIG WEATHER	1200 GMT 16 MAY 1999	SIG WEATHER	Summary of UK weather for Sunday 16 May 1999 From about the Midlands northwards eastern parts had a cloudy start, southern and western parts had clearer skies. The cloud in the northeast eased southwards, the southeast of England was largely clear until the middle of the morning. There were outbreaks of rain or drizzle, generally light, in some parts of northwest England and the Midlands, and, further north, drizzle in the Orkney Isles during the morning. The east coast of Scotland had outbreaks of light rain or drizzle in the early morning and again in the evening. There were a few light showers in East Anglia during the afternoon, and by the evening these had migrated to London and the southern counties. Winds generally were northeasterly, mostly 5 to 10kts, never more than 10 to 15kts. Lowest temperatures overnight were mostly in the range 6 to 8C, with some places in central parts of England and the Welsh borders not falling below 10C. Highest afternoon temperatures were mostly between 14 and 16 degrees in the southern half of the country. In Scotland they ranged from 12 to 14 degrees, with some places in the north, and on the North Sea coast, never getting into double figures.

SIGNIFICANT WEATHER

0600 GMT 17 MAY 1999	SIG WEATHER	1200 GMT 17 MAY 1999	SIG WEATHER	Summary of UK weather for Monday 17 May 1999 <p>The north and west of Scotland had a dry and largely clear night. The south and east was more cloudy but most places stayed dry. Over Northern Ireland, England and Wales cloud was variable. Some light rain or showers occurred in East Anglia, northeast England and around the Thames Estuary late in the night.</p> <p>Northern and central parts of Scotland had a dry, sunny day. The Southern Uplands stayed mostly cloudy as did Northern Ireland, although there were some bright or sunny spells.</p> <p>England and Wales had variable cloud although along the south coast and in west Wales it was largely sunny, as were parts of the east coast from south Yorkshire to Kent. There was some mostly light showery rain across southeast England, East Anglia, the east Midlands and northeast England in the morning, with just isolated afternoon showers. Northern England was mostly cloudy. It was breezy in the south. Some rain spread into Hampshire and Sussex around midnight.</p> <p>Temperatures were mostly close to average but parts of the east coast were rather cool.</p>

0600 GMT 18 MAY 1999	SIG WEATHER	1200 GMT 18 MAY 1999	SIG WEATHER	<p>Summary of UK weather for Tuesday 18 May 1999</p> <p>Scotland, Northern Ireland and northern England had a largely clear night. Ground frost was reported in a number of places in Scotland and Northern Ireland but especially across the Highlands, Moray and Aberdeenshire, where there was air frost in places. Cloud increased across southern parts of England and Wales overnight, with rain into many southern counties by dawn.</p> <p>Scotland and Northern Ireland had a dry, sunny day. Northern counties of England, mostly north of a line from Merseyside to the Humber, stayed sunny through the day. Further south it was mostly cloudy but with a few bright or sunny spells across the Midlands, north and west Wales. The rain over southern parts edged north through the morning becoming lighter and more fragmented as it did so. There were sunny spells in the Channel Islands in the afternoon. Further patchy rain spread across southeast England, East Anglia and the Midlands in the evening.</p> <p>Temperatures were close to normal across the south and east of the country. It was rather warm or warm across many western areas from north Wales northwards.</p>

0600 GMT 19 MAY 1999	SIG WEATHER	1200 GMT 19 MAY 1999	SIG WEATHER	<p>Summary of UK weather for Wednesday 19 May 1999</p> <p>Wednesday began with an area of cloud and patchy rain extending from west Wales across the south Midlands to London and Essex and this slowly decayed in situ through the night. Elsewhere it was dry with long clear periods which allowed widespread mist and some patches of fog to form by morning.</p> <p>The morning saw the area of cloud and patchy rain continuing to slowly weaken and break up although it remained a feature of the weather in west Wales all day. Elsewhere there were some large amounts of sunshine in many places with Scotland faring best with unbroken sunshine in some spots. Further south it tended to become more cloudy in the afternoon.</p> <p>Towards mid to late afternoon an area of thunderstorms developed on the Surrey/Sussex border which subsequently drifted northwestwards during the evening. In some localities it deposited over 20mm in a few hours and was still giving some heavy downpours in the southwest Midlands late in the evening. Late evening another area of thunderstorms pushed west into east Kent and East Sussex.</p> <p>Temperatures were very warm in some sheltered localities whilst at some coastal locations temperatures were no better than average.</p>

SIGNIFICANT WEATHER

0600 GMT 27 MAY 1999	SIG WEATHER	1200 GMT 27 MAY 1999	SIG WEATHER	Summary of UK weather for Thursday 27 May 1999 Scotland had a rather cloudy night, and although many places were dry, there were some outbreaks of rain and drizzle, mainly over hilly parts of the south, and, more particularly, over northwestern areas. Northern Ireland, England and Wales were mainly dry with clear spells, and very little cloud in southeast England. Around western coasts there was patchy sea mist, and shallow fog formed temporarily around dawn in southern England. Cumbria had a little rain or drizzle. During the day, northern Scotland stayed mostly cloudy with rain and drizzle. Elsewhere across Scotland it was mainly dry and bright, although drizzle persisted across the Southern Uplands until early afternoon. Northern Ireland was mainly dry and bright, but much of England and Wales had a sunny day. However, outbreaks of rain affected southwest England during the morning, and these edged northeast during the afternoon, with numerous thunderstorms, and heavy rain, breaking out over central southern and southwest England, and south Wales during the evening. Most places were warm or very warm, but temperatures were near normal in the far northwest.

SURFACE REPORTS

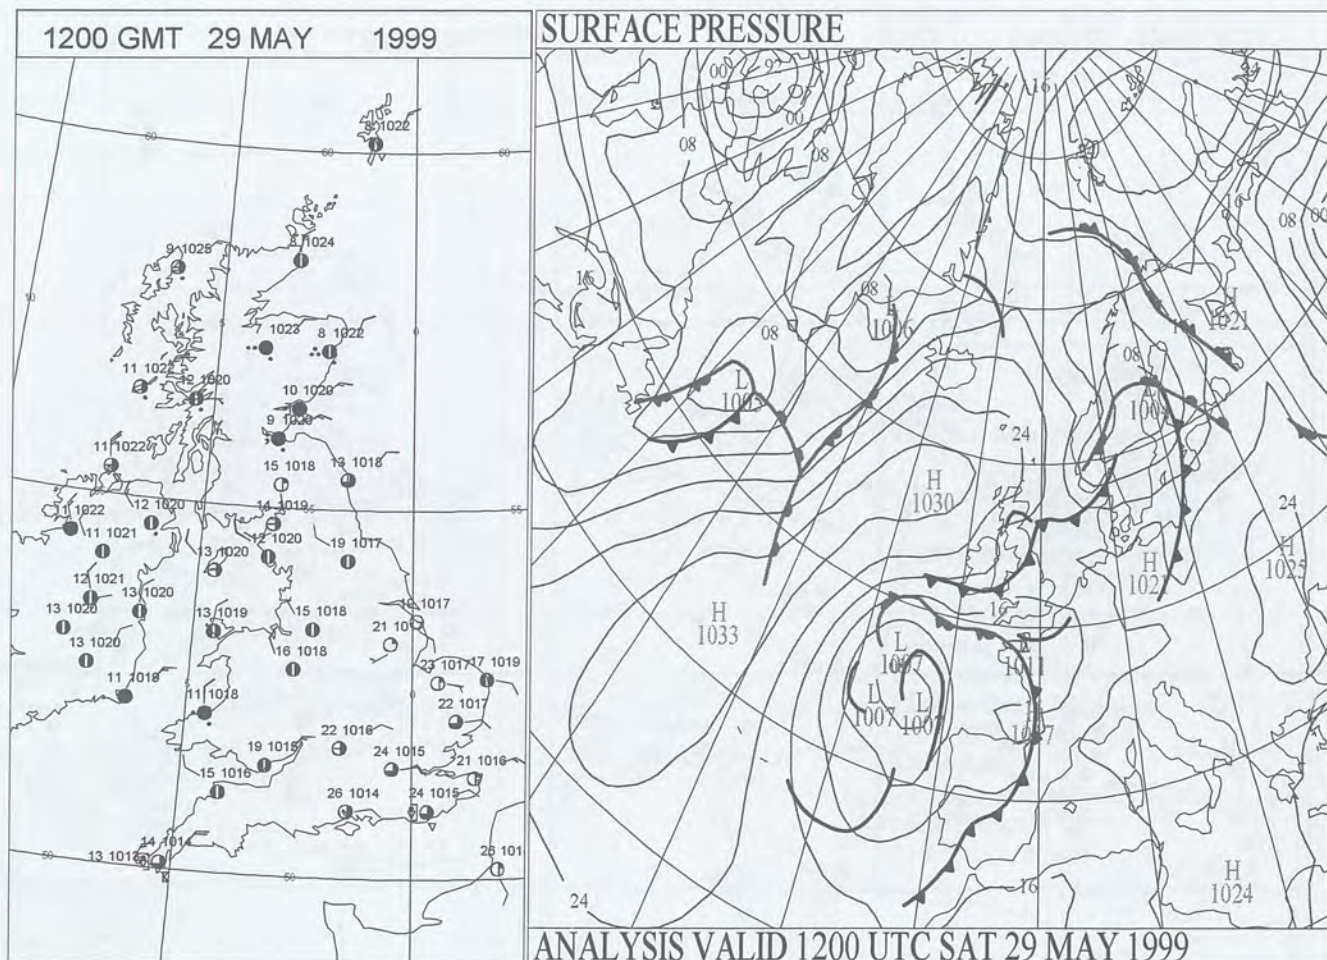

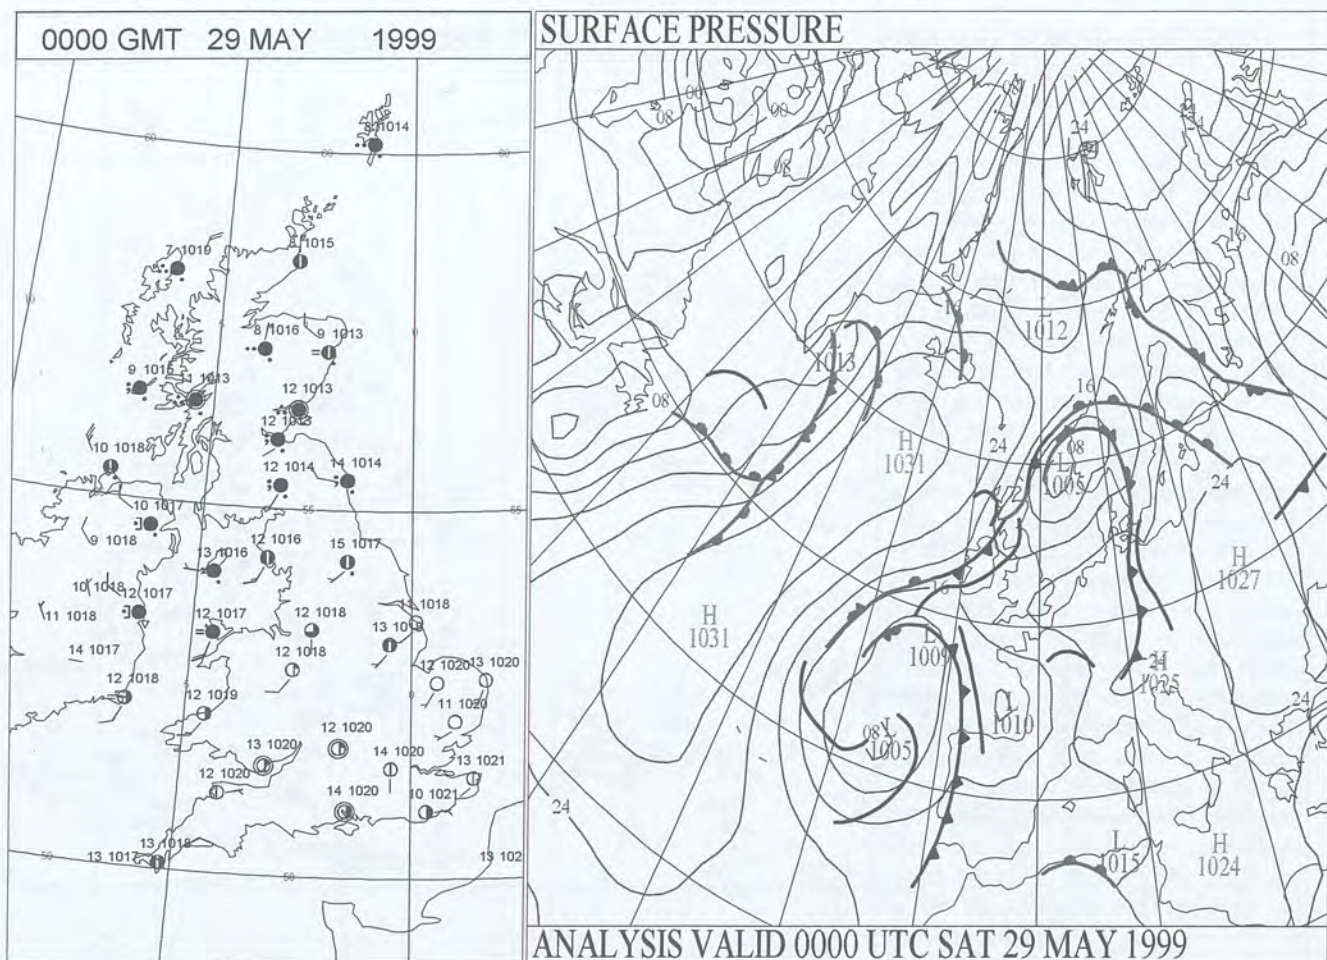

SIGNIFICANT WEATHER

Summary of UK weather for
Monday 31 May 1999

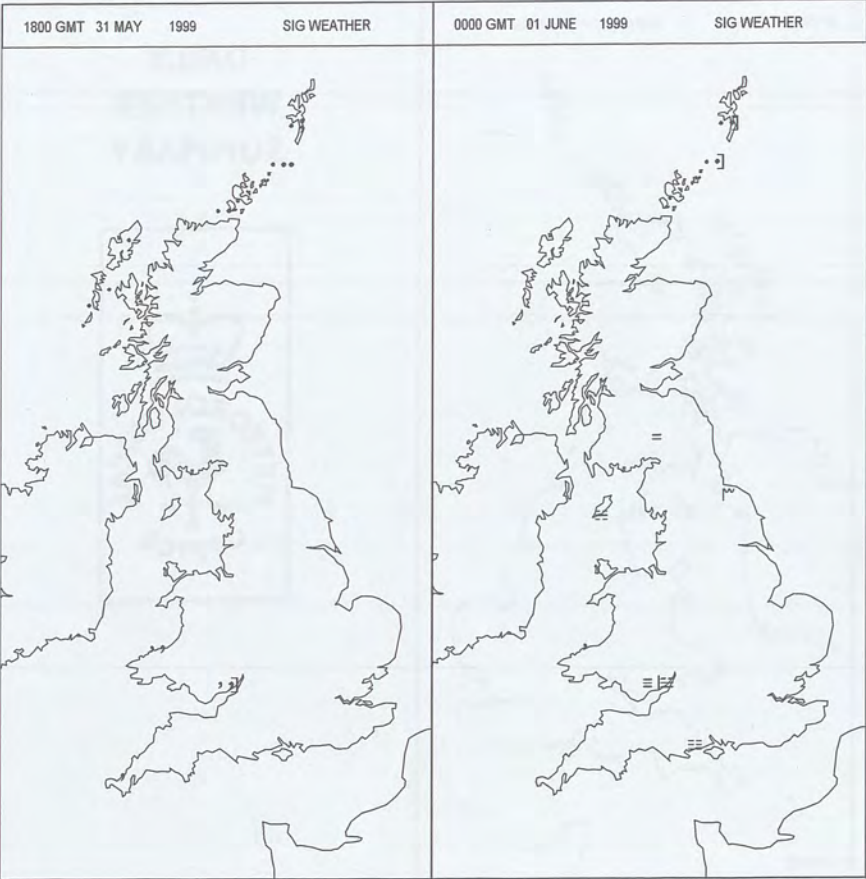

The Bank Holiday began mostly cloudy with some patchy drizzle in parts of southwest England. North of Northumberland and Dumfries and Galloway skies were mainly clear with the odd mist patch.

Towards the morning the drizzle in the southwest became more extensive even reaching western parts of central southern England, and there was also the odd spot of drizzle in west Wales.

During the morning the more broken cloud in the north edged slowly south down the eastern coastal fringes, whilst a band of cloud and patchy rain moved across the Hebrides and extreme northern parts of Scotland and in the afternoon affected the Northern Isles.

The breaks in the cloud continued to feed south into Lincolnshire, East Anglia, Essex and Kent during the afternoon. Central and western parts of England and all of Wales remained generally cloudy although the odd glimpse of sun occurred from time to time.

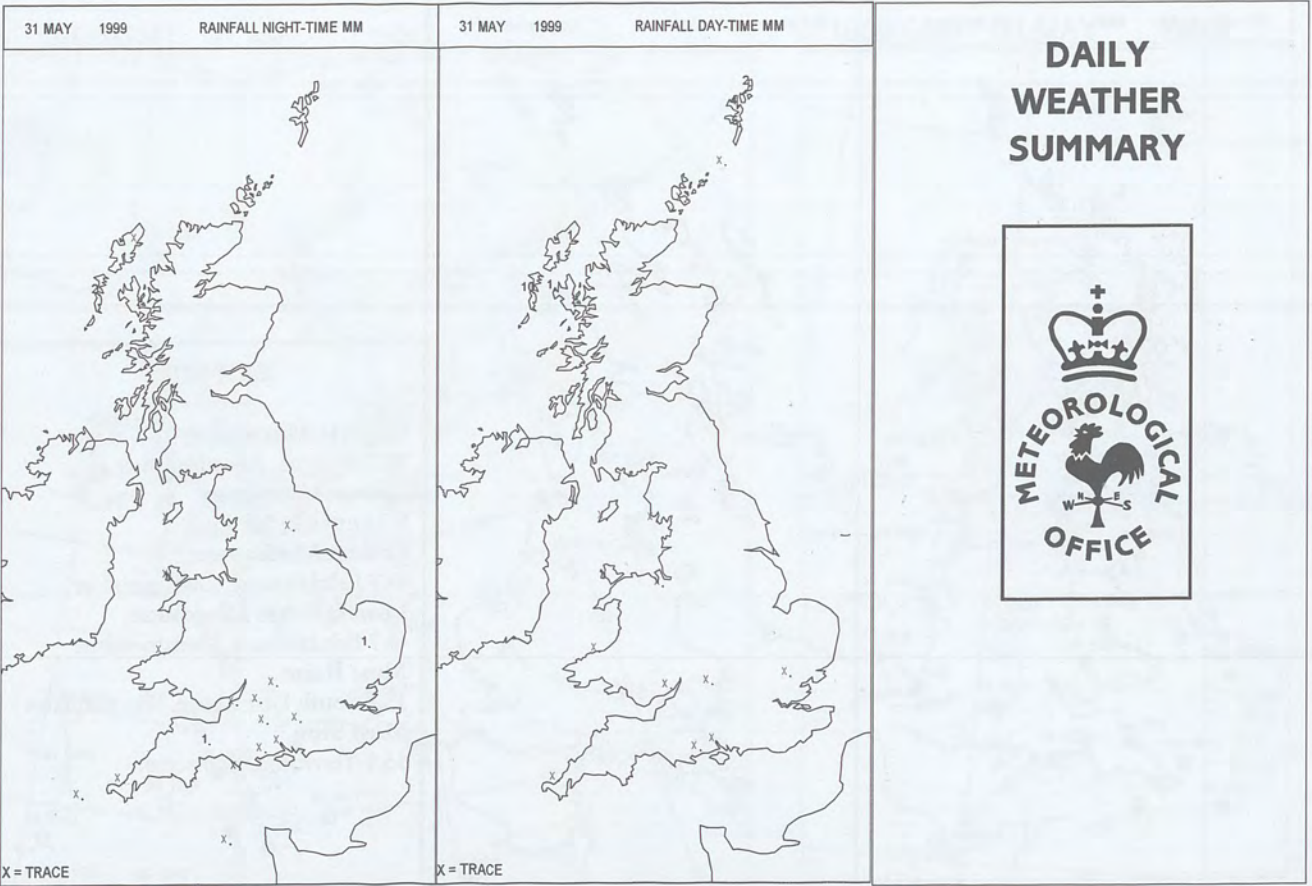

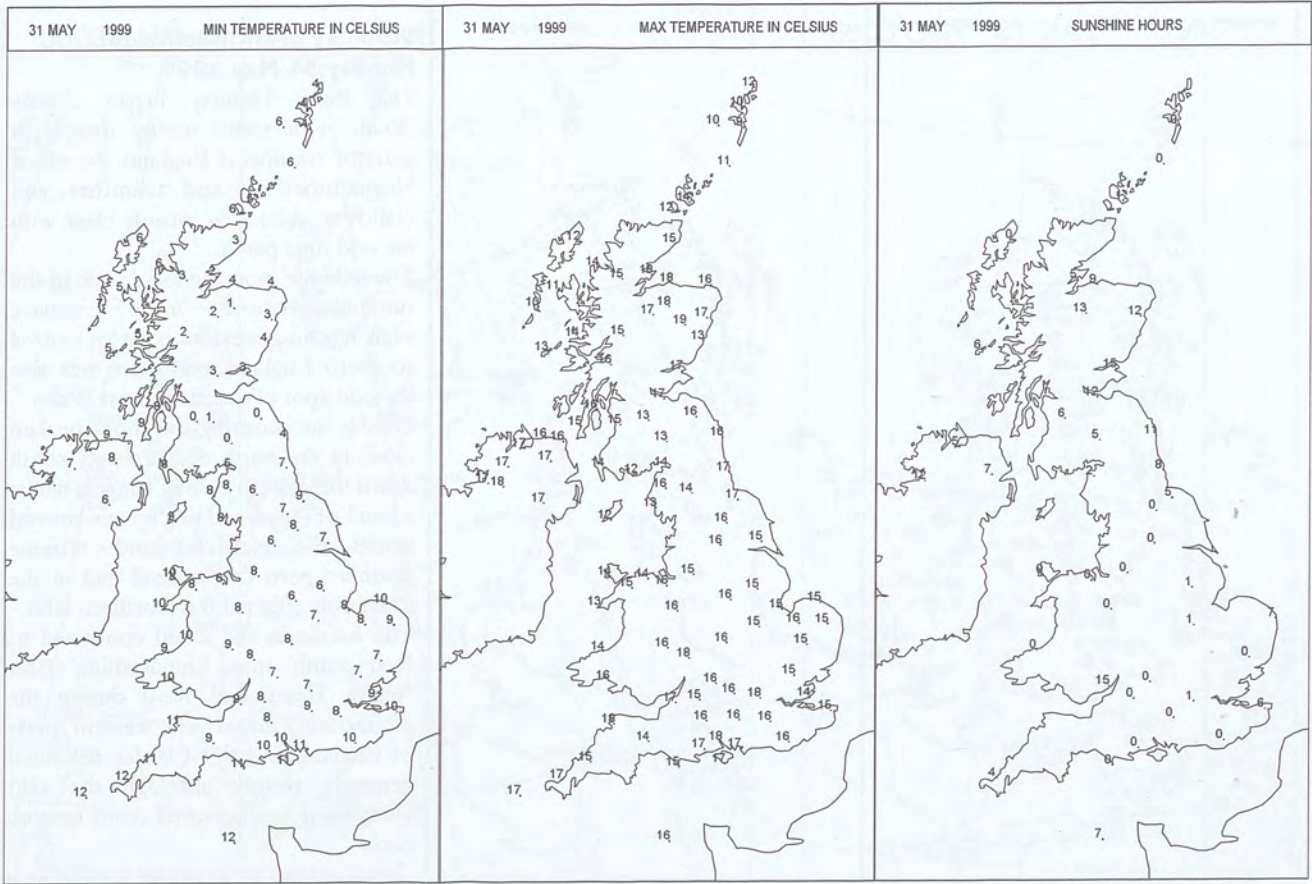

Temperatures were mostly average or a little below in England and Wales, but in some parts of Scotland were rather warm.
