Head of Observations, Plans and Requirements Branch.

1. INTRODUCTION

Drifting buoys operated by European countries, the United States, Canada and E.G.O.S. (European Group on Ocean Stations) provide valuable meteorological data in the North Atlantic Ocean. This report is a summary of the performance of these buoys giving information on the number of buoys operating, the accuracy of reported locations and data quality, timeliness and availability. It is compiled by looking at observations received in the Met. Office Meteorological Data Bank (Met.D.B.) and by comparisons of observations with background fields from the Met. Office forecast model. Additional information on buoy operations and data quality is extracted from E.G.O.S. Technical Secretariat reports.

2. GENERAL PERFORMANCE

The following few sub-sections describe the general performance of the drifting buoys throughout the quarter.

(a) Location Accuracy

The location accuracy was good with 64 out of 69 of the buoys reporting having a '% of observations with acceptable positions' greater than 95% (compared to 73 out of 77 last quarter).

(b) Data timeliness

(see note 9 of section 6 for definition of terms.)

Timeliness	Last quarter.	This quarter
Very Good	60	50
Good	4	6
Satisfactory	7	3
Poor	0	1
Very poor	6	9
Total no. of buoys	77	69

(c) Data availability

(see note 9 of section 6 for definition of terms.)

Availability	South of 50 deg N		North of 50 deg N	
	Previous Quarter	Present Quarter	Previous Quarter	Present Quarter
Very Good	5	5	20	19
Good	11	15	12	8
Satisfactory	9	6	7	4
Poor	9	8	3	2
Very Poor	0	0	1	2

The total number of buoy days in the quarter was 5259 [obtained by summing the number of reporting days for each buoy] (last quarter the total was 5058) and the number of 'buoy hours' with at least one observation was 79898 (compared with 77353 last quarter). Thus, the mean number of hours per day, for days with at least one observation (averaged over all buoys operating in the area) was 15.19 (last quarter the figure was 15.29).

3. SUMMARY OF PRESSURE PERFORMANCE

(a) Buoy deployments, etc.

North of 50deg N

There were 32 buoys reporting pressure at the beginning of the period. 25 buoys were operating at the end of the period. 3 new buoys were deployed (44760, 44764 and 47556). 11 buoys ceased reporting pressure (44603(this buoy ceased reporting pressure on 28/12 but continued to report other elements), 44606, 44617, 44767, 44770, 44773, 44775, 44912, 48518, 62514 and 64563).

South of 50deg N

There were 30 buoys reporting pressure at the beginning of the period. 23 buoys were reporting at the end of the period. 4 new buoys were deployed (33503, 44762, 61521 and 61523). 11 buoys ceased reporting (13906, 33503, 41635, 44743, 44776, 44779, 61521, 62506, 62510, 62516 and 64561).

(NOTE : Buoy 62758 reported pressure throughout the period. However, only a small number of Ob-Bg values were available for this buoy (see Annex A).)

(e) Data Quality - Pressure

Revised RMS Differences

The technique used to assess the quality of pressure data in this report is based on the Revised RMS differences between the observations and the background field from the Global Forecast Model (see note 8 in Explanatory Notes). For buoys south of 50°N the Revised RMS differences should be less than 2.0 hPa and for buoys north of 50°N they should be below 3.0 hPa. The buoys whose revised RMS difference were found to lie outside these limits have had their performance described as 'suspect' and are included in the section below. Examination of the time-series plots (see Annex B) indicates the performance of these buoys:-

- 33503 - This buoy reported a bias of -3.2 for most of its reporting life.
- 41598 - Data from this buoy was erroneous at the beginning and the end of the period.
- 41635 - This buoy reported a bias of +1.0 from the beginning of the period until the end of its life(10/11/98)
- 44603 - Pressure data from this buoy showed a larger than normal scatter during the second half of the period.

44604 - Pressure data from this buoy showed a larger than normal scatter during the second half of the period.

- 44772 - Pressure data from this buoy showed a larger than normal scatter throughout the period.
- 44925 - Pressure data from this buoy showed a larger than normal scatter throughout the period.
- 62511 - This buoy reported a bias of +0.6 for the period. The data also showed a larger than normal scatter during October, and again at the end of the period.
- 62512 - Pressure data from this buoy showed a larger than normal scatter during October, and again at the end of the period.
- 62513 - Pressure data from this buoy showed a larger than normal scatter during October, and again at the end of the period.
- 62516 - The limited number of reports from this buoy became increasingly erroneous during its short life.
- 62517 - Pressure data from this buoy showed a larger than normal scatter during the second half of the period, with an increasingly positive bias developing.
- 62518 - Pressure data from this buoy was erroneous throughout the period.
- 62519 - Pressure data from this buoy showed a larger than normal scatter during October, and again at the end of the period.
- 65571 - Pressure data from this buoy showed a larger than normal scatter, particularly during the second half of the period.

Biases

Eighteen buoys (excluding those mentioned in the previous section) showed pressure biases greater than 0.5 hPa (pressure biases are determined using the mean value for unflagged data from Annex A). Those buoys whose pressure data showed a bias of greater than 0.5 hPa have also had their performance described as 'suspect'.

(4) Air Temperatures

The following table shows the mean and standard deviation of observation minus background differences for air temperatures.

(Note : The calculations below exclude the majority of gross errors. However, gross errors within +/-20 °C of the background value are included. Therefore, in some instances, the figures may be slightly misleading.)

Summary

Buoys 61521 (+1.36) and 62517 (-1.15) showed significant air temperature biases.

Data from buoys 44778 (+4.65) and 65599 (+8.70) became totally erratic from mid October.

Data from buoy 48518 (+4.12) showed a larger than normal scatter from the beginning of the period until the end of its reporting life (23/11/98).

(5) Winds

The following table shows the mean and standard deviation of observation minus background differences for wind speed and direction.

(Note : All wind speeds reported by buoy 62674 were less than 5 knots.
Subsequently, no analysis was carried out on this buoy.)

65599	01/10 31/12	-1.06	5.71	3334	6.85	37.52	3116

Buoys 44762 (+5.80) and 44773 (-6.02) showed significant wind speed biases.

Buoys 41504 (+11.79) and 41521 (-11.78) all showed significant wind direction biases throughout the period. Also, buoy 44601 (-16.02) showed a significant bias during the second half of the period.

6. EXPLANATORY NOTES:

- 1.** Buoy owners are as follows,

CA	- Canada	P	- Portugal
F	- France	UK	- United Kingdom
D	- Germany	US	- United States
N	- Norway	IC	- Iceland
NL	- Netherlands	EG	- EGOS
IR	- Ireland	??	- unknown

- 2.** Number of observations received is the number received at Bracknell in the Meteorological Data Bank (Met.DB). If identical reports are received which have originated at different Collecting Centres, the earliest one received at Bracknell is stored in the Met.DB.
- 3.** An observation with valid Time and Date is one that contains no coding errors in the Date/Time group.
- 4.** An acceptable position for an observation is within a distance d of the last acceptable position where $d=vt$ and,
 $v = \text{maximum drift speed} = 1/4 \text{ knot}$
 $t = \text{time between observations.}$
- 5.** The percentage of elements present is calculated from the total number of observations received.
- 6.** The delay is (Time of Receipt at Bracknell) - (Time of Observation).
- 7.** The mean number of observations per day is calculated from the total number of observations received divided by the number of days in the period. It therefore includes 'quasi-identical' observations, i.e. those made within a few minutes of one another. For this reason the mean number of hours per day with at least one observation and the % of hour periods without an observation has been included, where an 'hour period' is defined as the period from HH-30 to HH+29 minutes.

8. Mean (OB-BG) is the mean value of (Observation-Background) Pressure, where the Background is the 6-hour forecast from the Global Forecast Model. RMS (OB-BG) is the Root Mean Square value of (Observation-Background) Pressure differences.

Unflagged data are those data used in model analyses.

Flagged data (i.e. unused observations) are those observations of suspect quality and all observations reported by a buoy at a frequency greater than 5 times every 6 hours, with accepted observations being at least one hour apart. Thus, those buoys which report most frequently have a higher percentage of flagged data.

The Mean calculated over Unflagged Data gives an indication of the instrument bias, since any gross errors have been excluded from the calculation.

The Revised RMS is based on all data except for the few that contain gross errors (as indicated on the time-series graphs - see Annex B).

9. The performance categories are defined in the table below.

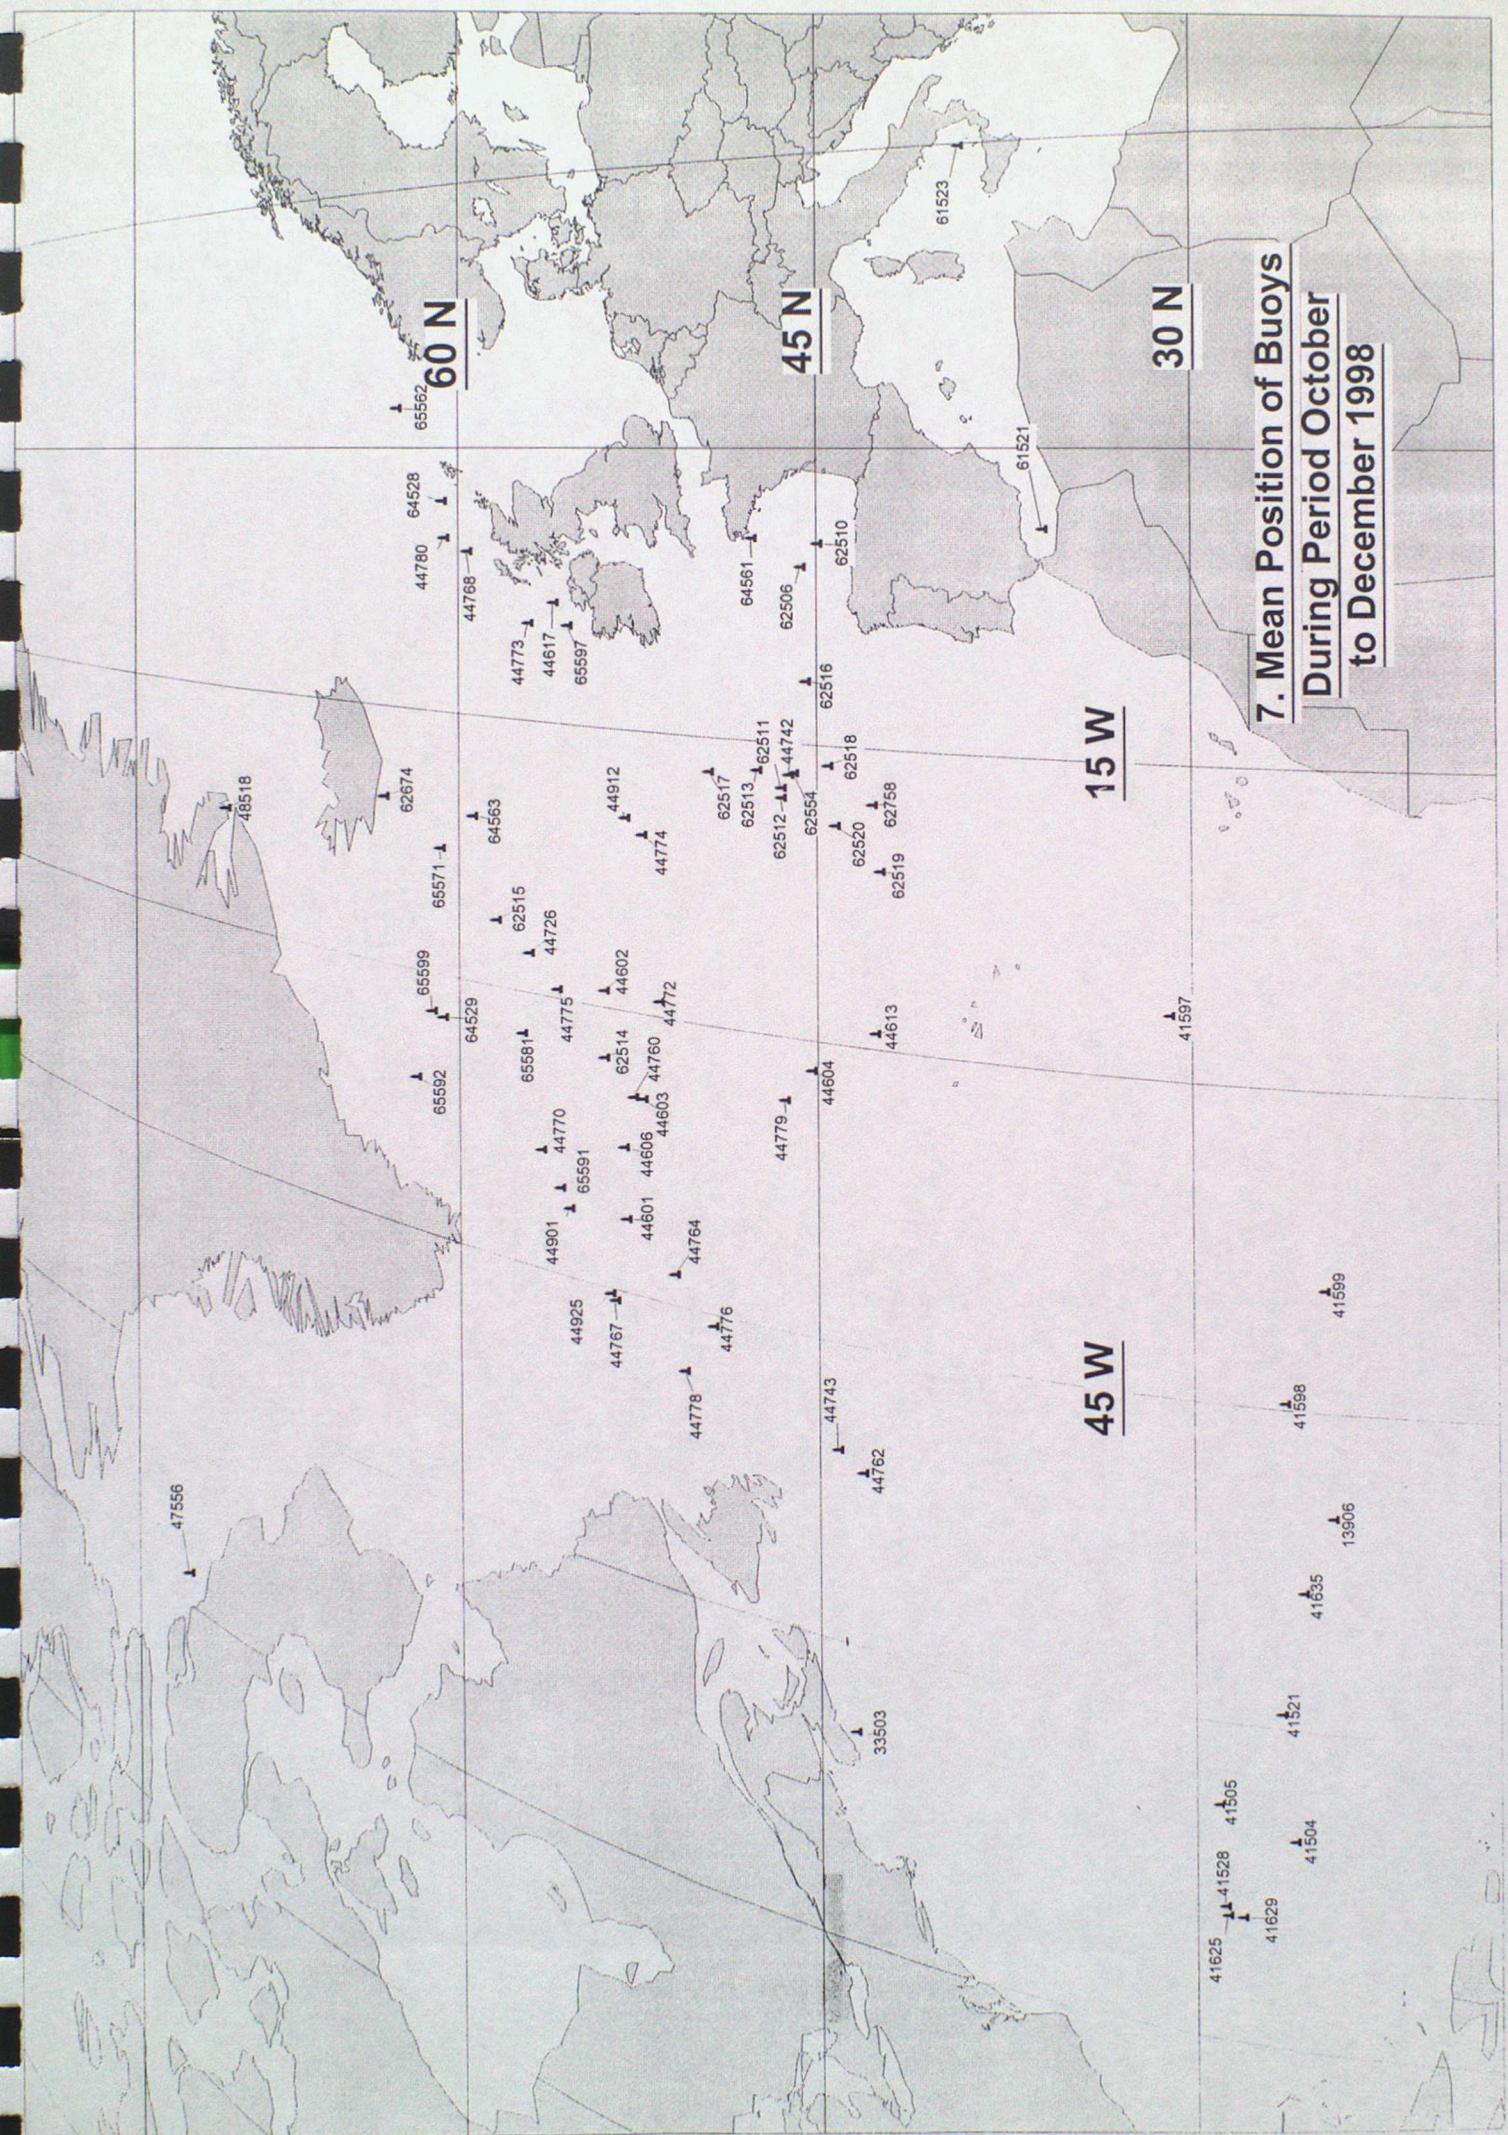

Performance	Availability (mean no. of obs/day)	Timeliness (median delay in mins)
Very Good	> 35	< 60
Good	25 - 35	60 - 119
Satisfactory	15 - 24	120 - 179
Poor	5 - 14	180 - 239
Very Poor	< 5	> 240

(N.B. WMO requirements state the need for only 4 observations per day from marine stations.)

The pressure quality is assessed from the Revised RMS and the Mean (for unflagged data).

Performance	Pressure Quality (in hPa)				
	North of 50 degN		South of 50 degN		
	RMS	MEAN	RMS	MEAN	
Acceptable	<= 3.0	<= 0.5	<= 2.0	<= 0.5
