## Daily Weather Summaries for October 2022

**If you have any questions or feedback about this product or wish to obtain further data please contact the Met Office.**

This document contains daily weather summaries for each day of October 2022. The Met Office National Meteorological Library and Archive holds a continuous record of daily weather summaries or daily weather reports from 1860, and these daily weather summaries form a continuation of that series.

The purpose of each summary is to provide an overview of the weather conditions across the UK on that day, with the historical emphasis mainly based on observations from surface network of weather stations, although the format has varied over the decades. While the emphasis remains on observations from the surface network, the current daily weather summaries supplement these by including satellite and rain-radar imagery to provide a more complete overview. The current format of the daily weather summaries is as follows:

1. Text summary of the main characteristics of the weather during the day, written by an operational meteorologist in the Met Office operations centre.
2. Table of daily extremes for the UK for key climate variables including temperature, rainfall, sunshine and gust speeds.
3. Overview of the synoptic situation at 00 and 12 UTC comprising: analysis charts showing the surface pressure pattern and associated weather fronts; North Atlantic and European infra-red satellite images showing cloud-cover; combined infra-red and rain-radar images of the UK; maps of wind speed and direction at 00 and 12 UTC; observations of pressure, wind speed and direction, cloud cover, air and dewpoint temperature at selected UK and European stations in data tables.
4. UK maps of key climate variables from observing stations including maximum, minimum and grass minimum temperature, rainfall, sunshine, gust speed and snow.
5. Further guidance notes

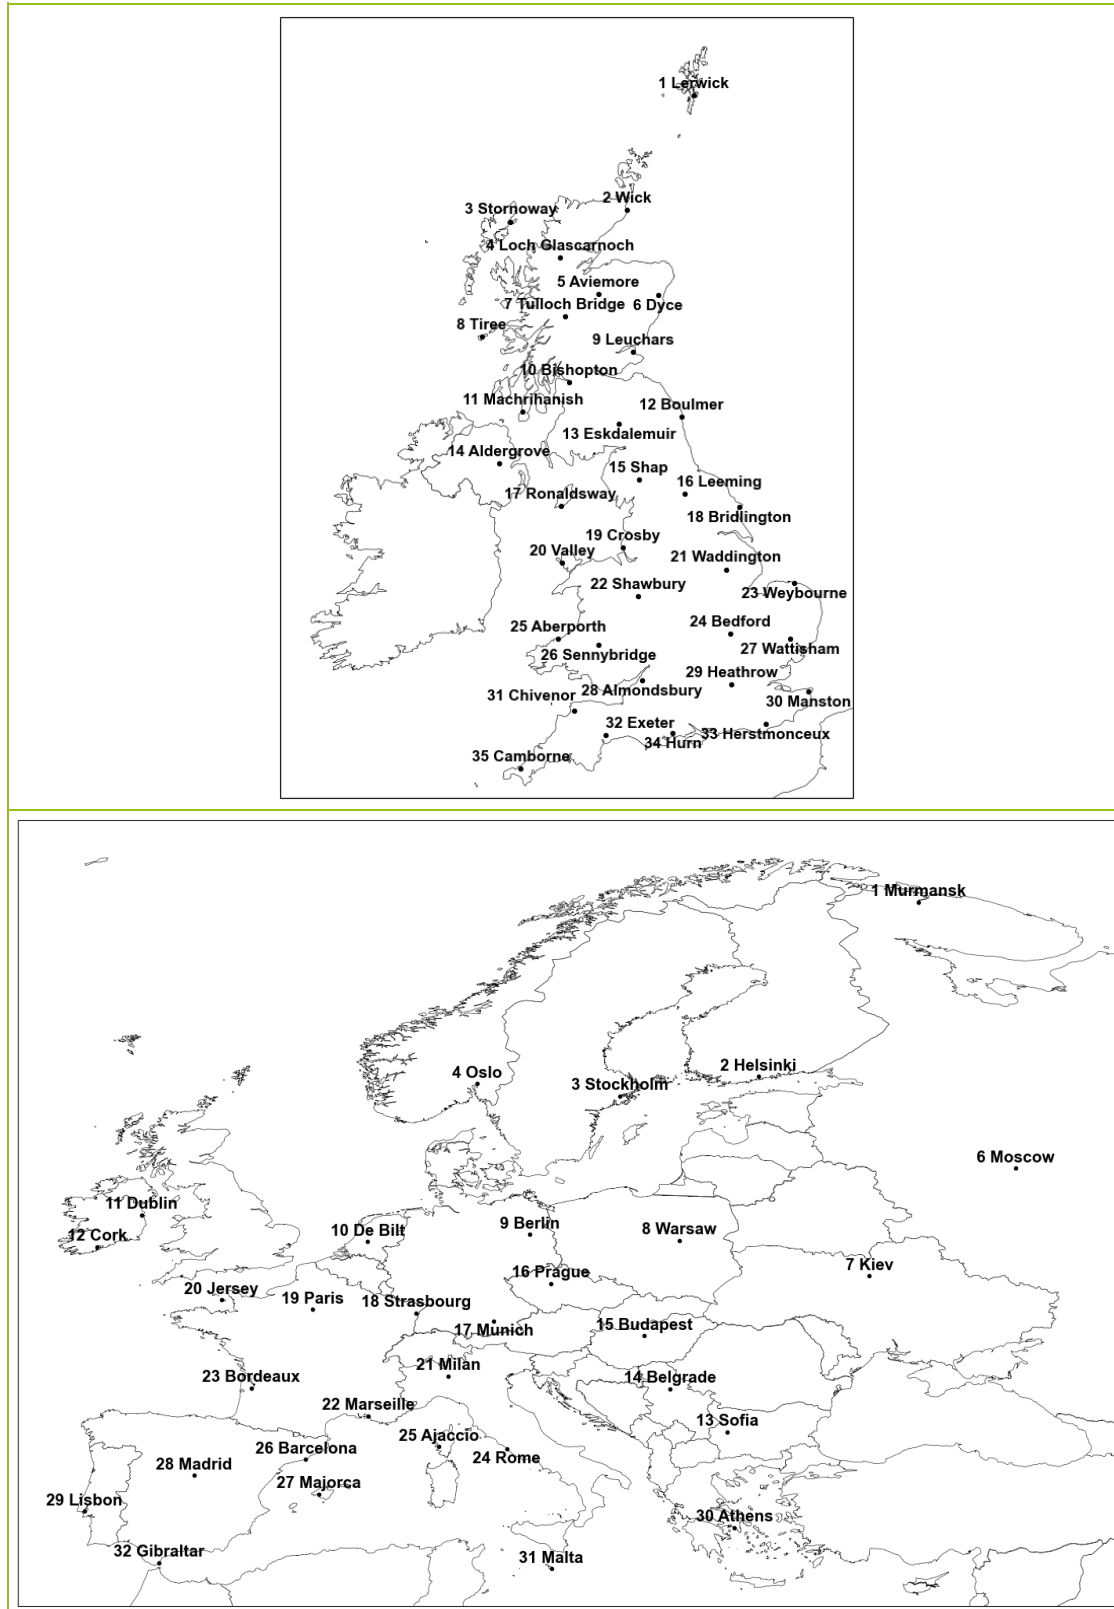

If you spot any data errors or omissions in this product please contact the Met Office.

## Daily Weather Summary for Saturday 01 October 2022

This day's summary created 08/10/2022 03:03

### Summary of the UK Weather for Saturday 01 October 2022

Wet and windy weather pushed southwards and eastwards overnight. The northwest saw the heaviest and most frequent rain with typical wind speeds of 30 to 40 miles per hour, and some gale force winds in the Western Isles and Scottish Highlands. Here it was also chilly. Though drier and clearer, it was also generally breezy in the south, preventing temperatures from dipping too low. Blustery showers alternating with sunny spells continued in the northwest through the morning. These later spread across the entire north, including Scotland, Northern Ireland and northern England, and became more fragmented. The showers became confined to the northwest and parts of northern England and western Wales in the evening. A band of cloud and rain arrived over Cornwall and Devon in the early evening, bringing some patchy rain to these areas. Winds eased for most towards the end of the day.

### Summary of the UK Weather for Sunday 02 October 2022

It was a widely cloudy night away from the east of the UK, with the weather dominated by a deep low maturing near Iceland. A frontal wave brought increasing amounts of rainfall to the southwest of England and southern Wales through the early hours, whilst further north and east there was light rain and showers. Rain associated with the frontal wave continued, making its way eastwards fairly quickly and cleared by late morning. Once the rain cleared, the south saw a bright and clear day with moderate to light winds and sunny spells. Northern and western parts of Scotland saw occasional light showers through the day, and some showers broke out in northwest England in the afternoon, where brisker winds and cloudier conditions prevailed. Clear spells allowed fog patches to form overnight, particularly in southern and eastern parts of England and Wales.

### Summary of the UK Weather for Monday 03 October 2022

It was a mild and dry start across most parts of the UK as a high pressure system sat over the south of the country. A band of locally heavy rain approached Northern Ireland shortly before dawn and continued to move eastwards through the course of the morning. Some light showers were reported in parts of central Scotland in the small hours. Any early fog patches cleared rapidly after dawn. A low pressure system, northwest to the UK, continued moving eastwards over the course of the day, bringing strong winds and a large area of rain, locally heavy on western upslopes. This brushed past Northern Ireland around midday, then travelled northeastwards, covering Scotland by sunset, and brought patches of rain to the north of England at times. Further south it was a dry day for most, with patchy cloud and sunny spells, especially in central and eastern areas. The odd shower was also formed in the southwest from a lingering frontal wave. Conditions remained similar throughout the evening, except in the south where cloud thickened.

This day's summary created 11/10/2022 03:03

### Summary of the UK Weather for Tuesday 04 October 2022

With a deep low to the northwest, a band of rain travelled northeastwards across Northern Ireland and western parts of Scotland in the early hours, this being heavy at times. Under a yellow rain warning, issued from midnight until 10am for western Scotland, the Hebrides and western parts saw significant rainfall totals. Winds were brisk and northerly, with gusts along Scottish coastal regions. The low pressure system off the northwest coast continued eastwards, pushing a double-fronted structure across the UK to the southeast. The band of rain continued southeastwards, pushing across Scotland into the afternoon and leaving scattered, blustery showers with some sunny spells behind. Further south it was a dry day for most, staying generally cloudy throughout the day. Most experienced brisk, southwesterly winds with temperatures remaining near normal throughout and into the night.

This day's summary created 12/10/2022 03:03

### Summary of the UK Weather for Wednesday 05 October 2022

Under the effects of a low pressure system sat to the northwest, a large band of frontal rain traversed much of the country during the early hours of Wednesday. Much of Wales, Scotland, Northern Ireland and northern parts of England were affected, with locally heavy rainfall experienced throughout. With parts of southern Scotland and the Scottish Borders under a yellow rain warning issued from 9pm on Tuesday to 11am on Wednesday, rainfall was significant in places. Much of the rest of the UK had a dry start to the day, with some light showers reported in central southern and southwestern areas. Parts of northern England were under a yellow wind warning for much of the morning. By the afternoon, the low pressure region had moved to the northeast of Scotland, leaving a double frontal system moving eastwards through most of the UK. This caused cloudy conditions for many, with heavy cloud and showers in Wales and northwest England. Into the evening, it became cooler than of late.

### Summary of the UK Weather for Thursday 06 October 2022

Thursday morning was characterised by a band of rain pushing eastwards through much of Scotland, and parts of Northern Ireland and northern England, brought by a series of occluded fronts. Occasional lightning strikes accompanied this rainfall, particularly in Scotland, however much of the rest of the UK was dry and clear. Local coastal gales were experienced in the far north. It felt cooler than recent nights for many, particularly in the south where it was locally chilly. The series of occluded fronts continued eastwards throughout the day, maintaining heavy rain across much of western Scotland, northwest England and Wales. Occasional lightning strikes accompanied this rainfall, particularly off the west coast of Scotland into the early afternoon. Much of the UK remained dry and clear with sunny spells. Temperatures were near normal during the day and became chillier than normal moving into the night.

## Daily Weather Summary for Friday 07 October 2022

This day's summary created 14/10/2022 03:03

### Summary of the UK Weather for Friday 07 October 2022

A double frontal system pushed southeastwards through the early hours of Friday morning, bringing consistent rain to southern Scotland and central and Northern Ireland. Most of Scotland experienced some rainfall, locally heavy in places. Much of the rest of the UK stayed dry, however it was a cloudy morning for many. Night-time temperatures were at or above average for most of the UK. The cold front continued southeastwards throughout the day, pushing a band of heavy rain across the country. This gradually reduced in intensity and reached the south by early afternoon. Cold, blustery showers with some sunny spells followed, with lightning reported throughout the day. Temperatures were generally near normal but became cooler as rain spells cleared and winds eased into the evening.

### Summary of the UK Weather for Saturday 08 October 2022

It was a clear and dry start to the day for most of the UK after a cold front progressed offshore in a south easterly direction into the English Channel and onto Europe. The west coast of Scotland experienced some isolated showers, as well as northwest England. It was a chilly night across the UK with most of the country in single figure temperatures. As dawn broke isolated showers continued for western Scotland, northwest England and Northern Ireland. Elsewhere it was a mainly dry start with clear spells for much of England and Wales. These showers continued in western Scotland throughout the day and into the evening, though were light and sporadic. Despite a drier start for the rest of Scotland, it was cloudy for much of the day with outbreaks of light showers for the far north around lunchtime. The showers in northwest England and Northern Ireland cleared quickly leaving a bright morning for most. This dry weather continued through the afternoon and into the evening with some cloud cover approaching from the west.

### Summary of the UK Weather for Sunday 09 October 2022

The day began with a north/south split, as continental high pressure brought clearer, chilly spells to the south and south east. It was a cloudy start to the day across Scotland as low pressure system to the southwest of Iceland pushed a band of dense cloud across the northwest into early morning. There were some scattered showers in southern areas of Scotland but elsewhere it was largely dry. At dawn, a cold front brought a dense band of cloud and locally heavy rain into west and northwest Scotland and Northern Ireland. As the day progressed, the rain moved eastwards across Scotland and into northern England. The rest of the country remained dry through the day with a clear start for most, with clouds starting to move eastwards across the country into the afternoon. Into the evening, the band of rain cleared eastwards off the coast of Scotland with scattered showers following behind. As the front continued to move in elsewhere, reaching Wales and southwest England before midnight, it weakened, bringing more sporadic rainfall to these regions.

### Summary of the UK Weather for Monday 10 October 2022

At midnight, a large cold front stretched from northeast England, over Wales and to the southwest. This brought a band of cloud and rain, heavy at times, across central England in the small hours. Clearer spells followed as this frontal system quickly moved southeast into the early morning, followed by scattered showers over parts of northwest Scotland. Winds were light to moderate for most, with stronger winds reported to the far north. By mid-morning, the cold front had made its way to the Channel, allowing the heavy rain to clear. As the day progressed, some scattered cloud appeared over Northern Ireland and parts of Scotland, bringing showers of rain that cleared by the evening. Southern, central, and northern England, and Wales, saw a generally fine and bright day once any precipitation had cleared. There was a southeasterly breeze for many, with fresher easterly winds in Scotland and northern parts of England.

### Summary of the UK Weather for Tuesday 11 October 2022

In the early hours of the morning, cloud covered most of Scotland bringing showers to north and northwest Scotland and northern England. By 6am, showers became more widespread in the far west and north of Scotland. The light covering of cloud over the rest of England and Wales cleared into the morning, leaving dry conditions with light and variable winds. Moderate westerly winds in west Scotland. A ridge of high pressure sat over the south of the UK in the morning, bringing clear skies and sunshine to southern and eastern England which extended up to the far south of Wales. Late in the morning, patchy cloud moved in from the north where it had prevailed since the early hours. This cloud also brought scattered showers to Scotland, northwestern parts of England and western parts of Northern Ireland at various times throughout the day. Most places experienced sunny spells in between the showers. While it was less windy than recently, fresh breezes did pick up again in the afternoon, especially in the northwest of Scotland. In the evening, a frontal system reached the Highlands and Islands, bringing heavier and more persistent rain to this area and the very north of Northern Ireland. The clearest skies were in the southeast, where it became rather chilly.

This day's summary created 19/10/2022 03:03

### Summary of the UK Weather for Wednesday 12 October 2022

Early this morning, a cold front moving in from the west led to showers, locally heavy, in north, northeast and west Scotland and Northern Ireland. There were also some showers through the morning for northern England, the southwest and Wales but much of England remained dry. The showers became more widespread in Scotland later in the morning. The cold front slowly sank southeastwards throughout the day, which brought a continuation of patchy light rain across northern and western parts and reached the northeast and eastern Scotland by late morning. An occlusion lay ahead of the cold front, also edging southeastwards throughout the day. Ahead of this saw fine and dry conditions. Into the afternoon, light patchy rain eased over northern and western parts of Scotland and reached central and eastern parts of England, however, the precipitation remained in northwest England and north Wales. The showers associated with the cold front reached the far southeast by the evening, easing into the night. Meanwhile patchy light rain continued for northwest England.

### Summary of the UK Weather for Thursday 13 October 2022

A cold front affected conditions in the south of the country in the early hours, with some heavy rain moving eastwards across the south coast as the front gradually cleared. Mist was present at dawn in central regions. Clear spells across Scotland and Northern Ireland were interspersed with wetter weather brought by a band of showery rain moving eastwards. The cold front cleared to the southeast by mid-morning, leaving behind thick mist and fog across most southern regions, which persisted into the late morning. A series of occlusions spread from the northwest and brought patchy rain, heavy in places particularly in the far northwest of Scotland. This travelled southeastwards across the country continuing to bring generally light rain stretching from Northern Ireland to the far northeast of Scotland, becoming more organised as it progressed southeastwards. These bands of showers moved across central and northern parts into the evening, and under clear skies in between the passage of fronts, fog patches and formed.

## Daily Weather Summary for Friday 14 October 2022

This day's summary created 21/10/2022 03:03

### Summary of the UK Weather for Friday 14 October 2022

Early on, skies were cloudy across the South West and South Wales, with a band of rain moving eastwards and clearing by dawn. Showers and some longer spells of rain moved east across Northern England, Northern Ireland and Scotland, with northernmost regions being windy. The Midlands and southeast remained largely dry, though mist and fog were seen in some parts. A series of occluded fronts continued to push southeastwards from the northwest throughout the day, bringing showers and sunny spells to many, however the southwest was largely dry. Scotland experienced the heaviest of the rainfall, with very few breaks in the cloud, however this had cleared much of Scotland by the afternoon, leaving a clear evening for many. Into the evening, a band of showers moved into central and northeastern England from the west. Under persistent cloud cover, lightning was observed to the northeast of Northern Ireland.

### Summary of the UK Weather for Saturday 15 October 2022

It was a cloudy start to the day for many with occluded fronts bringing locally heavy rain across south Wales, the Midlands and, closer to dawn, Northern Ireland and western Scotland. Mist and fog formed in southeastern Scotland, and northeastern and southeastern England where skies were clearer. A low pressure system sat to the northwest of the UK for much of the day, bringing widely unsettled conditions. Organised bands of showery rain moved quickly eastwards, bringing heavy rain in some places, particularly affecting the north and the west. Scotland and Northern Ireland saw some of the highest rainfall totals. The east and south experienced the driest and brightest conditions, although brighter patches were seen by many between these showery periods. The passage of these occlusions across the UK brought a series of lightning strikes, affecting Northern Ireland, Wales, and the northwest. Into the evening, showers, locally heavy, continued to affect northern and western parts. Southern and central regions were mostly dry, with breaks in the cloud cover.

### Summary of the UK Weather for Sunday 16 October 2022

It was cloudy across western and northern regions of the UK to begin, with showery outbreaks of rain across Cornwall, Somerset and the north of England, as well as parts of Scotland and Northern Ireland. These were interspersed with clear and dry periods, which became more prevalent in central and southern portions of the UK as the morning progressed. Winds were generally southwesterly and gusty in parts of western Scotland and northeast England. A low pressure system north of Scotland brought patchy cloud for much of Scotland throughout the day with isolated showers. Through the afternoon, cloud cover progressively increased in central England, starting in Northern Wales and along the west coast, and then moving eastwards, however remaining dry for many. Simultaneously a warm front pushed northwards from the English Channel, bringing heavy cloud to the south coast, especially in the west, and heavy rain later in the evening. This rainfall continued to push northeastwards, but breaking up to become more isolated further north. It remained cloudy for the majority of the UK. Winds were moderate westerlies for many coastal areas throughout the day.

This day's summary created 24/10/2022 03:03

### Summary of the UK Weather for Monday 17 October 2022

A deep low pressure system sat to the west of the country for much of the day, bringing unsettled weather for many. Throughout the early morning, an extended band of heavy rain was passing through Scotland from the southwest, although this had cleared land by dawn. A patchier band of rain and showers moved across England and Wales, bringing particularly heavy rainfall in northern areas. Some areas saw some early morning mist or fog, which was slow to clear in places. Strong winds in the north and west brought local gales. A frontal band brought rainfall to east Sussex and Kent but cleared by mid-morning. Throughout the morning a low pressure zone moved eastwards from the Atlantic to Scotland, bringing an occluded frontal system. This remained over Scotland for much of the day causing significant rainfall and strong gusts across high ground in Scotland, and cloud in northern England. However, it was a clear day for much of central England. A band of cloud moved northwards from Iberia in the afternoon, resulting in some evening cloud across the southeast.

This day's summary created 25/10/2022 03:03

### Summary of the UK Weather for Tuesday 18 October 2022

It was a dry and clear start for much of the country, although scattered showers persisted in northeast Scotland, while a low pressure system sat to the north of Scotland moved slowly eastwards through the morning. Fog and mist patches developed across central and southern England, as well as Northern Ireland and Wales, which was slow to clear. In the southwest however, it was cloudier and breezier, with the odd shower forming off the western coast towards dawn. The low pressure system cleared off the east coast through the morning, drawing in a high pressure ridge that remained over much of the UK for the rest of the day. After fog patches cleared there were widespread sunny spells for most. There were some localised outbreaks of rain to the southwest, with associated winds and isolated thunderstorms later in the day. There was a north/south split in terms of temperatures, feeling much cooler to the north with some scattered showers and southerly winds.

### Summary of the UK Weather for Wednesday 19 October 2022

It was a dry start to the day for much of the country with patchy cloud for many. However heavy convective showers moved northeastwards over the southwest, and south Wales. These came with local thunderstorms, which were short lived in most places. Mist reported in western Cornwall.. These bands of rain continued northeastwards through the day, bringing localised heavy showers and some isolated thunderstorms across the southwest. There were drier conditions across central England and Wales later on, as cloud cover tended to lighten into the early afternoon bringing some sunny spells. Wind speeds dropped through the course of the day. Temperatures were mild for most compared to average.

### Summary of the UK Weather for Thursday 20 October 2022

Thursday started dry for most across the UK, except in, northern England and Scotland, where banded rainfall and showers moved eastwards from the Irish Sea. Further showers, heavy and thundery at times, progressed across northwestern England in the early morning. By dawn, widespread rain had moved over the south coast from the English Channel, and most of the UK experienced significant cloud cover. Throughout the rest of the morning, rain covered much of the south and southeast of England and the midlands. Showers dominated in northern England and Scotland and reports of lightning were widespread across east and north England. The large area of cloud and widespread rain, locally heavy, moved northeastwards in the afternoon, leaving showers behind in the south of England which also then cleared. By mid-afternoon much of the midlands also had dry conditions. Into the evening, the rain was predominately in northeast England with showers over much of Scotland, and the rest of the country was dry.

### Summary of the UK Weather for Friday 21 October 2022

A low pressure system move northwards over the North Sea overnight, sending bands of rain over eastern parts of Scotland. By dawn these had mainly become confined to the far north. At the same time, a second low pressure system crept up from the southwest, bringing locally heavy and thundery showers as far as Wales, parts of the Midlands and just brushed the south of Northern Ireland. Lightning was also recorded in the Midlands before dawn. In between any precipitation, skies were clearer, but fog developed over much of central and eastern England around dawn. Throughout the morning, clouds developed across the whole country bringing bands of rain, locally heavy. The heaviest rain was located in the southwest earlier, and this moved northeastwards across the country, spreading into the Midlands and the east coast. Most areas experienced strong winds, and scattered showers occurred over Scotland and Northern Ireland throughout the day. Another heavy band of rain swept across the southwest in the early afternoon, extending northeastwards into the Midlands, northern England and Wales into the evening.

## Daily Weather Summary for Saturday 22 October 2022

This day's summary created 29/10/2022 03:03

### Summary of the UK Weather for Saturday 22 October 2022

An occluded front stretching over Wales, central England and Northern Ireland moved northwards through the early hours. Showers in these areas died out as the front passed, meaning that most areas saw clear spells overnight and a dry start to the day. The occlusion reached the south of Scotland by dawn, bringing some locally heavy showers to this area, and to most of Northern Ireland. Winds eased overnight. Occlusion debris followed through the remainder of the day, continuing northwards, and bringing bands of rain and scattered showers to much of the UK. The heaviest rainfall concentrated over the southwest and central parts of England and Wales during the afternoon. Elsewhere, there were drier, sunny spells interspersed with showers. Winds remained generally light to moderate with coastal gales at times.

This day's summary created 01/11/2022 09:27

### Summary of the UK Weather for Sunday 23 October 2022

It was a rather unsettled start under the influence of a low pressure system situated to the southwest of the UK. A band of heavy rain moved into southwest England around midnight and continued to travel northwards during the early hours. This turned thundery at times, leading to reports of lightning strikes across the southwest. Meanwhile, scattered showers were seen locally in Scotland and northwest England. As these thunderstorms moved northwards, they brought widespread heavy rain to much of England, especially in the east. There was briefly some clearer weather for many in the south and west through the morning as the thunderstorms cleared. Scotland had a mainly dry morning, with showers reaching the south of the country before midday, whilst there was widespread rain in Northern Ireland. Into the afternoon, this band of rain continued northwards through Scotland, though much less intense than earlier in the day. Another band of thunderstorms arrived in the south of England around 2pm, bringing widespread thunder and lightning, and some very gusty winds. As this band moved north through the afternoon, gusts of over 50 kts were recorded in central England for a time. These continued northwards through the evening, with another band of thunderstorms making landfall from the channel before midnight.

### Summary of the UK Weather for Monday 24 October 2022

It was a wet start for many as a band of rain stretched across southern Wales and central parts, reaching the east coast. A vast area of rain covered northern half of Scotland, fragmenting through the early morning. The southeast saw scattered, locally heavy showers during the small hours, although these cleared to the east by dawn. In early morning showers and light rain were observed in northern and southeastern areas, and foggy conditions occurred in some northern and central parts of the UK. Afterwards, in the late morning the rain was concentrated in the southern half of the UK, but gradually cleared and drier conditions dominated over most parts of the UK. Through the afternoon, most parts of the UK experienced clear and dry weather. However, some places in southwestern, central and northwestern areas experienced showers and light rain.

### Summary of the UK Weather for Tuesday 25 October 2022

It was a mostly dry and cloudy start for many, with clearer spells in central and eastern areas through the early morning. Thick low cloud covered the far north with some rain reported, while scattered showers were present to the south and west. Winds strengthened through the morning until dawn, where temperatures were generally above average. Some light showers remained in western parts throughout the morning, but it stayed dry for most. In the early afternoon a large band of rain moved northeastwards from the Atlantic, bringing rain to much of Cornwall. This band of rain moved northwards through the evening and then northeastwards over Scotland in the late evening, bringing fairly heavy rain to the country. It remained cloudy for most, with thick cloud in the south west and western Wales, however breaks in the cloud allowed people to view a partial solar eclipse. It was a breezy day across the country, with strong gusts in Scotland and on southwestern coasts.

### Summary of the UK Weather for Wednesday 26 October 2022

A large band of rain stretched across Scotland and northern England after midnight, while elsewhere it was largely dry and cloudy with some drizzle over Wales. This frontal system pushed northeastwards and gradually fragmented during the early hours, followed by sunny spells and scattered showers, locally heavy with reports of thunderstorm activity. Largely windy with coastal gales in the west and northwest, with temperatures remaining above average. Throughout the morning, the band of rain continued to move northeastwards, resulting in heavy rain moving across Scotland reaching the east coast by mid-morning. By lunchtime, this system had passed through leaving behind scattered showers across much of central Scotland and northern England. Elsewhere, the front led to early morning rain across much of Wales and showers in southwest England. The rain cleared fairly quickly leaving most of England dry for the morning, except a few scattered showers in the south. The afternoon was largely dry for most with scattered showers across Northern Ireland, Scotland, the Midlands and northern England. Heavier showers developed in northern England and south Scotland later with reports of thunderstorm activity. These showers cleared away leading to a dry night across most of the country. Southwesterly winds dominated.

### Summary of the UK Weather for Thursday 27 October 2022

In the early hours clear skies and dry weather conditions were observed in most parts of the UK. Shortly after however, cloudy conditions developed across southwest parts of the UK. Afterwards, until the early morning, showers and rain spread north into central England and Wales, while clear skies and dry conditions dominated the rest of the UK. A large band of rain and scattered showers covered much of the Midlands, northern England and parts of the south during the morning, moving eastwards. This cleared the east coast by lunchtime with scattered showers following behind. In Scotland, locally heavy rain in the south dominated in the morning moving eastwards. The rest of Scotland received scattered showers, locally heavy, throughout the morning. The afternoon was dry for most, with very few scattered showers across the UK. Cloud dominated over further north, whereas the south of England has more scattered clouds and sunny spells. Into the evening and overnight, showers started to build up more in Scotland and a few in Northern Ireland. The rest of the country remained dry.

### Summary of the UK Weather for Friday 28 October 2022

In the early hours, clear skies and dry conditions were experienced in most parts of the UK, with cloudy conditions and rain across southwest, west, and central parts of the UK. In the late morning, heavy rain covered Wales, Northern Ireland, western Scotland, and northeast England, whilst it remained mainly dry elsewhere. By dawn, heavy rain made its way eastwards, bringing showers, heavy in parts, to western regions of the UK, with Northern Ireland and northwest Wales seeing significant rainfall totals. Early coastal mist in eastern regions cleared into the midmorning. A thick rain band swept northeastwards across the UK through the morning, with precipitation clearing over western parts, and spreading into northeast England and Scotland, leaving residual patchy rain elsewhere. By midday, the band cleared north, making way for a generally drier afternoon, however, the early evening saw a spell of heavy showers with occasional lightning over Northern Ireland. Winds were generally light to moderate and southwesterly, with coastal gusts in places. The evening saw dry and clear spells for most, allowing the formation of fog patches.

### Summary of the UK Weather for Saturday 29 October 2022

Cloud and sporadic outbreaks of rain moved northwards through the morning as a warm front progressed, primarily affecting central and southern regions, although rainfall was heavy at times in the west. The north and southeast were largely dry and clear, however some showery areas lingered in Scotland and northern England for much of the morning. Western parts were particularly windy, with risks of coastal gales. Any early morning fog was quick to clear. Through the remainder of the day, patchy rainfall over central areas tended to clear northwards and eastwards, becoming much drier with clearer spells. Heavier rain over the southeast was much more persistent. Later into the evening there were some scattered showers over western parts with some thunderstorm activity reported. Winds were generally light but stronger in the west throughout the day, and temperatures were close to, if not slightly above average for late October.

## Daily Weather Summary for Sunday 30 October 2022

This day's summary created 06/11/2022 03:03

### Summary of the UK Weather for Sunday 30 October 2022

It was a dry and clear start for many, with scattered showers developing throughout the early morning, particularly in Scotland and the south, as heavier cloud pushed northeastwards. A large band of heavy rain had reached the southeast by dawn, brought by a slow moving frontal wave approaching from the south. The west was particularly windy, with a few isolated lightning strikes seen off the coast. The frontal wave edged away into the English Channel into the late morning, allowing any heavier rain to ease over the southeast. Meanwhile, the morning saw an emerging deep low to the west and associated troughs and occluded front edging eastwards, which brought a vertical band of rain down western coasts. Through the afternoon, the rain became more scattered and spread to central and eastern parts, though rain persisted along western coasts into the afternoon and overnight. Some showers broke out in the south in the evening, but it was generally a dry night for many, with mist and fog patches forming in clear spells. Winds were moderate with some coastal gusts, and widely southerly.

### Summary of the UK Weather for Monday 31 October 2022

It was a dry start with clear spells across central and eastern parts of the UK. Meanwhile, the north and west saw more in the way of cloud with some scattered showers in places through the small hours. Any early mist or fog patches quickly cleared following dawn. With low pressure to the northwest of the UK, the late morning saw heavier rain develop across Northern Ireland and western Scotland. This slowly edged eastwards into the afternoon, in the way of scattered showers further inland. Meanwhile, a deep low pressure travelled across the channel in the early evening, bringing areas of rain, some heavy, and made its way northwards across England and Wales. The south saw strong winds, and persistent rain into the evening, triggering both rain and wind warnings today and overnight into tomorrow.

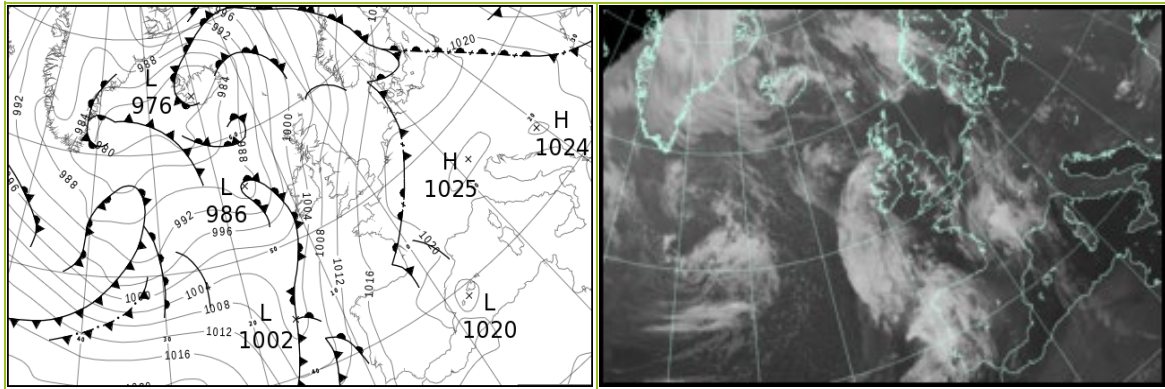

### Daily Extremes

<i>Highest Maximum</i>	<b>18.6°C</b> Marnhull (Dorset, 60mAMSL)
<i>Lowest Maximum</i>	<b>10.9°C</b> Lough Navar Forest (Fermanagh, 126mAMSL)
<i>Highest Minimum</i>	<b>14.7°C</b> Swanage (Dorset, 10mAMSL)
<i>Lowest Minimum</i>	<b>5.5°C</b> Loch Glascarnoch (Ross & Cromarty, 269mAMSL) also Drumnadrochit (Inverness-shire, 53mAMSL)
<i>Lowest Grass Minimum</i>	<b>2.1°C</b> Urquhart, Northwood (Ross & Cromarty, 17mAMSL)
<i>Most Rainfall</i>	<b>39.6mm</b> Upper Lliw Resr (West Glamorgan, 183mAMSL)
<i>Most Sunshine</i>	<b>7.0hr</b> Whitby (North Yorkshire, 41mAMSL)
<i>Highest Gust</i>	<b>96Kt 110mph</b> Wight: Needles Old Battery (Isle Of Wight, 80mAMSL)
<i>Highest Gust (mountain)</i>	<b>77Kt 89mph</b> Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

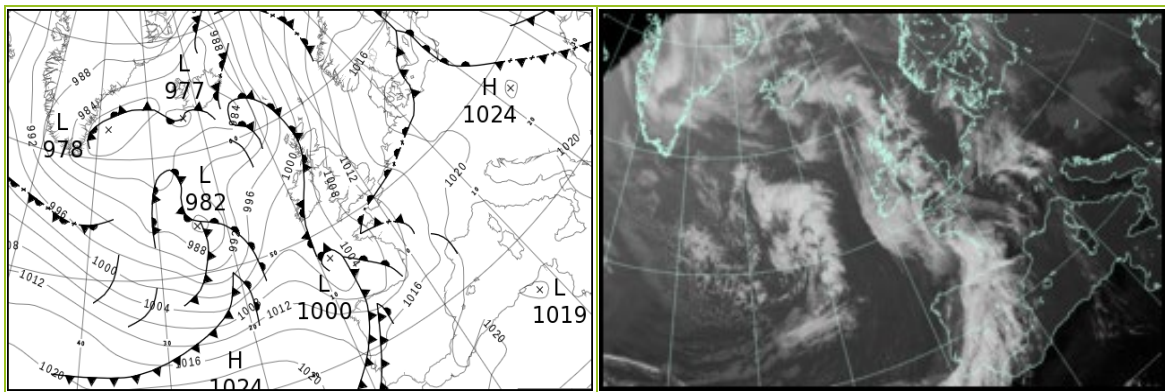

mAMSL refers to station elevation in metres above mean sea level

# Daily Weather Summary for Monday 31 October 2022

## Daily Weather Summary for Monday 31 October 2022

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Guidance Notes

UTC = Universal Coordinated Time. For the UK UTC is the same as GMT (Greenwich Mean Time).

National boundaries shown on the European station map are for illustrative purposes only.

### Daily extremes

- Daily extremes have been manually confirmed by Met Office Observations Quality Management as valid observations from the live database at the time of checking. However, more extreme values may still be possible if they occur after the time of production.
- Mountain stations above 500 masl are excluded from lowest temperatures, highest gust speeds and greatest snow depths at 0900 UTC. This is because they are not considered representative of low level areas.
- Counties quoted against each station are based on historical county boundaries pre-1974 and may not reflect current administrative boundaries.

### Analysis charts and satellite imagery

- The satellite imagery is infra-red imagery from the geostationary MSG satellite.
- The rainfall image is derived from satellite data from MSG and rain-radar data. This represents a snapshot of instantaneous rain-rates at 0000 UTC and 1200 UTC and so does not necessarily reflect daily accumulations in the rainfall station map.
- Any analysis charts or satellite images which are unavailable will be displayed as white space.

### Station maps

- The UK maps show station data for the same set of stations presented UK data table. These stations are selected to provide good spatial coverage across the UK; they represent only a fraction of the overall UK observing network.
- Wind speed maps show wind speed in Kt and direction both averaged over the hour up to the time of observation. 1 Kt = 1.151 mph.

### Hourly station data

- The data tables provide spot hourly observations from synoptic messages at 0000 and 1200 UTC. Missing data are denoted by '-'.

- Pressures are mean sea level pressure in hPa.
- For UK stations, Gibraltar and Jersey, the wind speeds and directions are both averaged over the hour up to the time of observation. However, for European stations wind speeds and directions are both averaged over a 10-minute period up to the time of observation.
- Wind speeds are in Kt. Wind directions are stored in the database every 10 degrees and have been converted to the nearest point of the compass. These give the direction the wind is blowing from, not to.
- Cloud amounts are in Oktas from 0 (clear) to 8 (overcast). 9 indicates sky obscured (eg by fog).
- Air temperature and dew point temperature are in Celsius.

### **Temperature maps**

- Daily maximum, minimum and grass minimum temperatures are in Celsius.
- The period for the daily maximum temperature on day D is defined from 0900 UTC day D to 0900 UTC day D+1.
- The period for the daily minimum and grass minimum temperatures on day D is defined as 0900 UTC day D-1 to 0900 UTC day D.
- On any given day D the minimum will typically occur in the early hours of the morning and the maximum in early afternoon.

### **Rainfall, sunshine and max gust speed maps**

- Daily rainfall is in mm from 0900 UTC day D to 0900 UTC day D+1.
- Daily sunshine is in hours from Kipp and Zonen CSD1 automatic sunshine records. Bright sunshine is defined as exceeding 120 W/m<sup>2</sup>.
- Max gust speeds are the daily max gust in Kt from 0000-0000 UTC

### **Snow maps**

- The day of snow falling map displays data from present weather sensors, showing stations which have recorded sleet or snow falling at any point in the day (0000-0000 UTC).
- The snow lying map shows level snow depth as recorded by the automatic snow depth sensors at 0900 UTC. These snow depth sensors do not record snow depth if this is less than 1cm.
- Snow depth sensors are normally operational from October to April, in the event of snow falling outside this period data availability may be limited.
- Snow maps will only be displayed if one or more of the selected stations on that date have recorded either snow falling or non-zero snow depths. If snow maps are not

displayed it is still possible that other stations in the network have recorded a day of sleet or snow falling or non-zero snow depth.
