DAILY WEATHER SUMMARY

SURFACE REPORTS

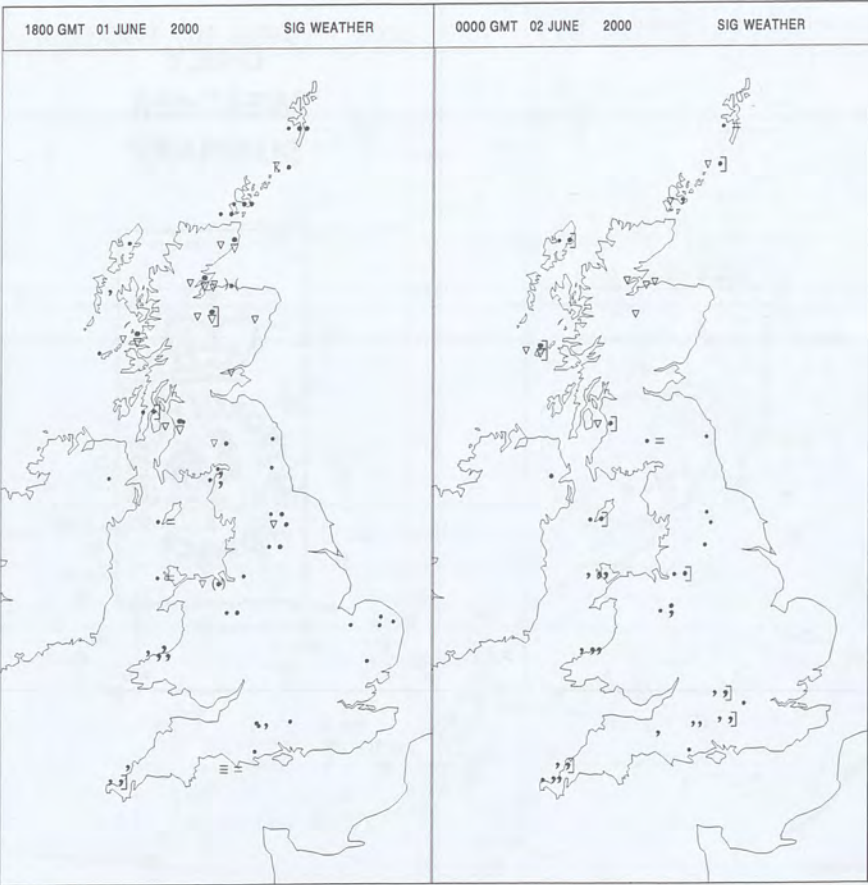

SIGNIFICANT WEATHER

Summary of UK Weather for Thursday 01 June 2000.

There was some mainly light rain over Northern Ireland and Scotland overnight. An area of rain spread across England and Wales. It was light and sporadic over southeastern parts and heaviest over Wales.

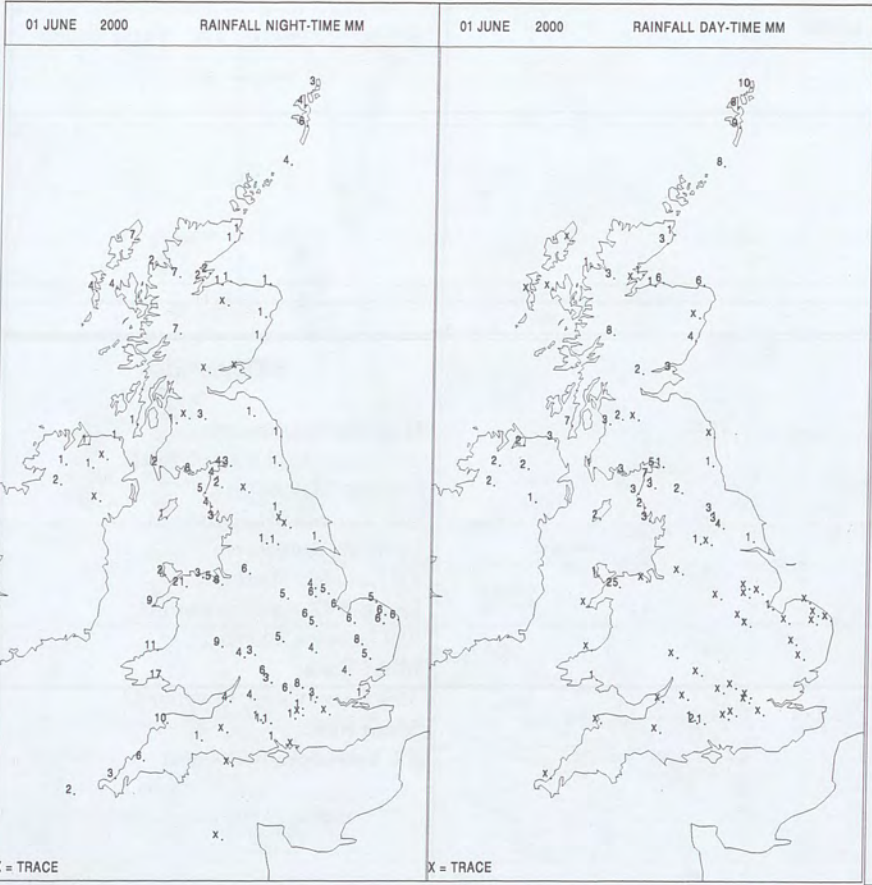

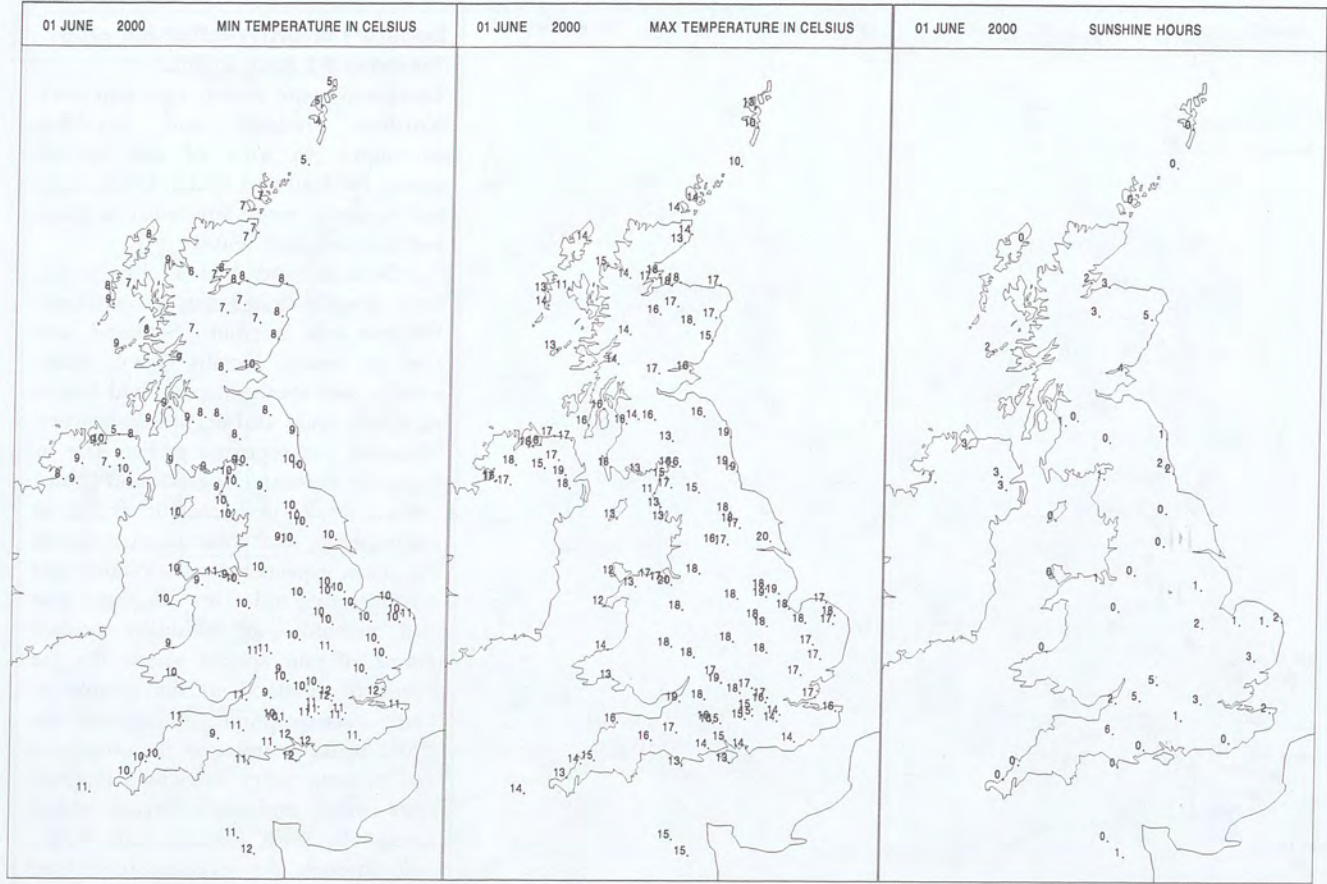

Northern Ireland had a cloudy day with mostly light rain or showers. Western and northern Scotland had rain at times, locally heavy, while eastern and southern parts had bright or sunny spells and scattered showers. Thunder was reported at Fair Isle in the early evening. England and Wales started cloudy with rain or drizzle in many places, and some heavier rain in the west, especially across Wales and northern England. This rain eased east and petered out, although further pulses of rain spread across the far north of England in the afternoon. Over eastern parts of England the cloud broke at times in the afternoon and evening. Misty low cloud lingered over south and west facing coasts across the West Country and Wales, and through the evening the cloud spread back northeast across England. Temperatures were within a degree or two of average generally.

EXTREMES

- Highest Maximum:**
20.9 Leconfield, Humberside
- Lowest Maximum:**
10.3 Lerwick, Shetland
- Lowest Minimum:**
4.8 Lerwick, Shetland
- Lowest Grass Minimum:**
-0.9 Lerwick, Shetland
- Most Rain:**
30.4 Capel Curig, Gwynedd
- Most Sun:**
6.1 Yeovilton, Somerset

SIGNIFICANT WEATHER

0600 GMT 02 JUNE 2000 SIG WEATHER		1200 GMT 02 JUNE 2000 SIG WEATHER		<p>Summary of UK Weather for Friday 02 June 2000.</p> <p>Much of the UK had overnight rain although the heaviest downpours were reserved for Central England Wales and Ireland. Elsewhere it was rather more patchy. There was light rain and mist in central Scotland and rain and drizzle reported along the Channel coast.</p> <p>During the day that band of rain lingered right across the central belt of the UK throughout making very little progress. The associated wave tip spent the entire day in the Irish Sea. The wettest weather occurred in Pembrokeshire. To the south of the rain it did brighten up and become mainly dry with occasional sunny spells as one or two cloud breaks appeared, more especially in the far southeast. Scotland and in the west in particular had the best of the sunshine. There were fresh to strong winds in the northwest of the UK with light to gentle winds in the south.</p> <p>It was warm and a little muggy in the southern half of the UK and rather cool and somewhat fresher in the north.</p>

SIGNIFICANT WEATHER

0600 GMT 03 JUNE 2000	SIG WEATHER	1200 GMT 03 JUNE 2000	SIG WEATHER	Summary of UK Weather for Saturday 03 June 2000. Overnight rain persisted in a band extending from the South West approaches across southern Ireland and into the Scottish Borders. There was a fresh northeasterly wind with extensive fog over the southwest and into Wales. During the early hours the mist and fog did spread across central England and into East Anglia. The mist was slow to clear western parts with rain and drizzle hanging on here and becoming moderate at times extending into the Pennines. It was a fine dry day in Northern Scotland with the Northern Isles getting a few showers during the afternoon. It was bright with sunshine in the southeast with the back edge of the rain slowly creeping north. During the evening a band of thundery rain made its way through Kent, east Essex and into eastern Suffolk before drifting into the North Sea. Kent did have moderate rain for a time. Late on a band of thundery showers ran up through western Hampshire and across into the east Midlands. Suffolk also had thunder just before midnight. Temperatures very warm in the south but cool in north.

0600 GMT 06 JUNE 2000	SIG WEATHER	1200 GMT 06 JUNE 2000	SIG WEATHER	<p>Summary of UK Weather for Tuesday 06 June 2000.</p> <p>Southern Britain saw the remnants of yesterday's showers slowly die out during the night, and with clearing skies mist, fog and haze formed readily. Rain was reported across central Scotland and there were showers over Northern Ireland, these merging into longer spells of rain before dawn.</p> <p>During the morning the rain already in some western parts of the UK edged east across western Scotland, Wales and western England, but the rain was mostly light and patchy in the south. Elsewhere, the mist, fog and haze cleared quickly. By midday, clearer showery weather had spread across Northern Ireland and some western parts of Wales and southwest England, but the rain further east continued and it had turned thundery across North Yorkshire. During the afternoon further thundery showers were reported as the rainband moved east, including some in Norfolk and Essex. By the late afternoon western areas had become mainly dry, but the rain turned heavy across parts of London and the southeast. By dusk, most places were dry, except central and northern Scotland.</p> <p>Temperatures were generally near or slightly above average.</p>

SIGNIFICANT WEATHER

0600 GMT 07 JUNE 2000	SIG WEATHER	1200 GMT 07 JUNE 2000	SIG WEATHER	<p>Summary of UK Weather for Wednesday 07 June 2000.</p> <p>It was a largely dry night across much of the British Isles with only the extreme north of Scotland and the Northern Isles seeing any rain, although showers did affect the Western Isles and the western coast of Northern Ireland. Then during the morning this rain cleared away east, with the showery conditions following into the Northern Isles.</p> <p>A further band of rain spread slowly northwards and eastwards through Ireland, and on into southwest Scotland during the latter half of the afternoon. At the same time the showers in northern parts of Scotland gradually died away. This band of rain made further progress through the evening and by the end of the day all of Scotland south of the Grampians was damp, together with the northernmost counties of England. In addition cloud had spread across the whole of the UK and this was thick enough to give outbreaks of patchy light rain, particularly across Northwest England, North Wales and the West Country.</p> <p>Temperatures were below normal across Northern Ireland but near normal elsewhere.</p>

DAILY WEATHER SUMMARY

SIGNIFICANT WEATHER

Summary of UK Weather for Sunday 11 June 2000.

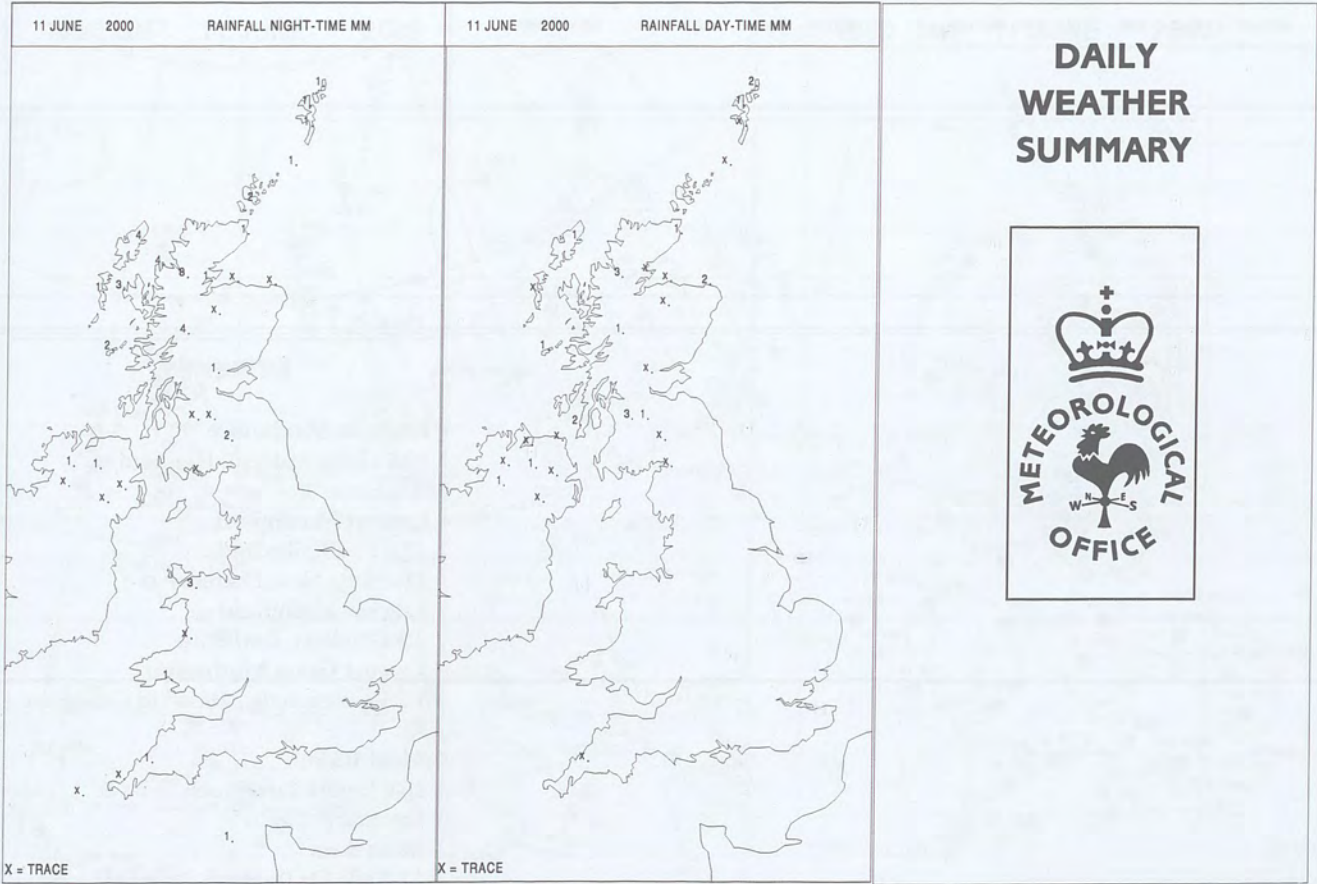

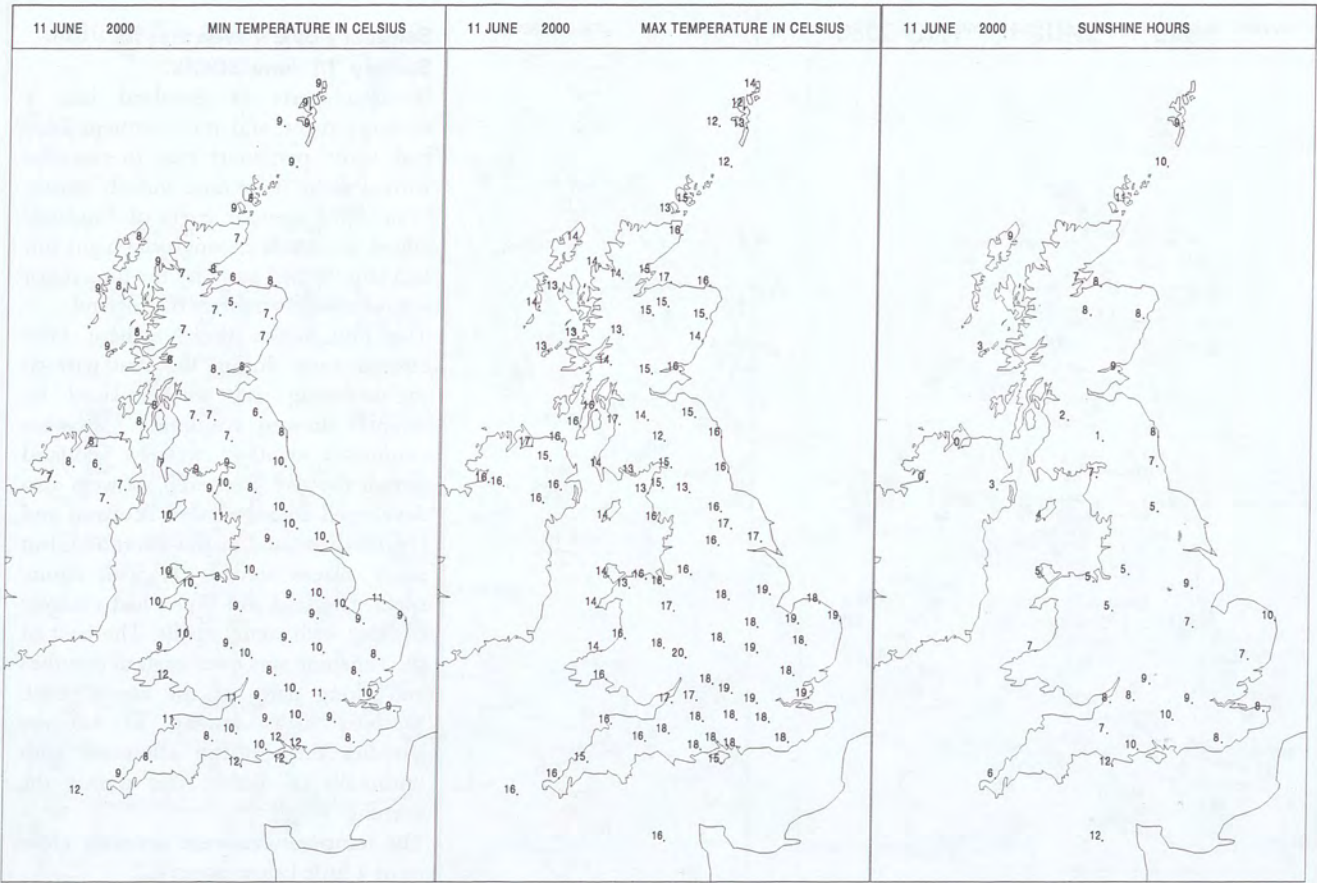

Western parts of Scotland had a showery night, and the Northern Isles had some persistent rain to contend with. Patchy light rain, initially across Wales and western parts of England, edged eastwards through the night but had largely died away by the time it got across eastern counties of England. The rain across the Northern Isles cleared away during the first part of the morning and was replaced by brighter showery conditions. Showers continued to affect western Scotland during the day. Scattered showers also developed across eastern Scotland and Northern Ireland in the afternoon, but many places stayed dry with sunny spells. England and Wales had a largely dry day with sunny spells. The best of the sunshine was over eastern counties and along parts of the south coast. Western areas tended to become cloudier through the afternoon with outbreaks of drizzly rain during the evening. The temperatures were generally close to or a little below normal.

DAILY WEATHER SUMMARY

Tuesday 13 June 2000

SURFACE REPORTS

SIGNIFICANT WEATHER

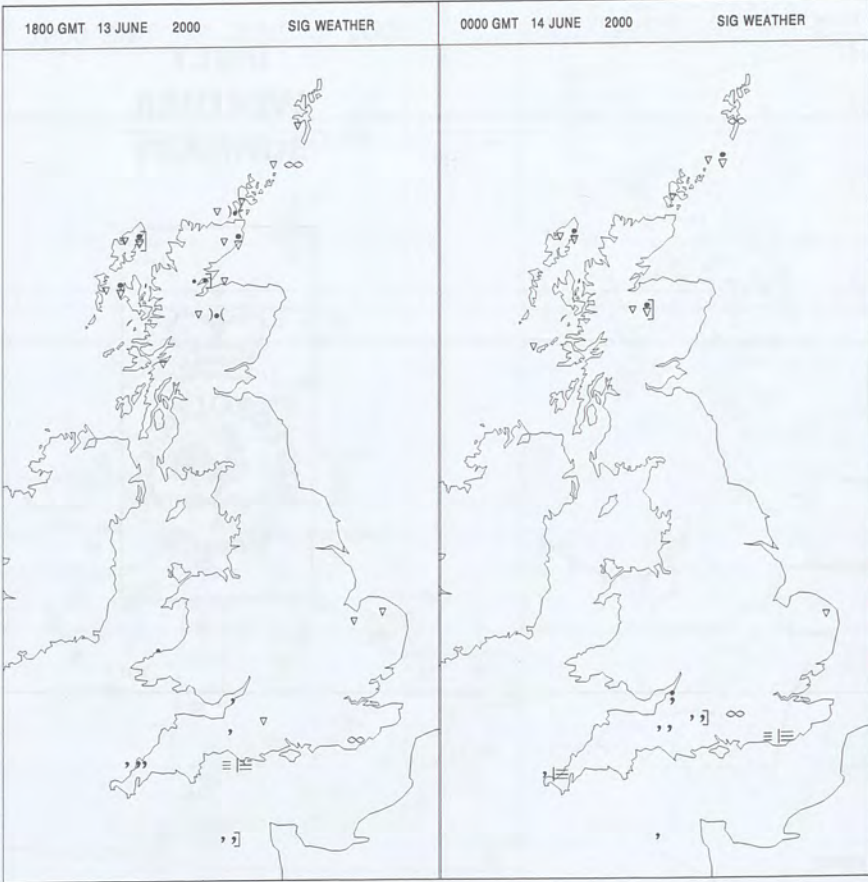

Summary of UK Weather for Tuesday 13 June 2000.

A band of rain/drizzle initially stretching from southern Ireland to southern Scotland, edged south overnight. The rain was heavy in Dumfries, but elsewhere it was mainly light. To the north there were scattered showers whilst to the south there was drizzle, especially near exposed coasts and hills of Wales and southwest England where there were also fog patches.

During the morning the light rain/drizzle edged south into the Midlands, and the drizzle in the south became restricted to western coasts where it was locally heavy at times in Devon. Blustery showers continued across northern Scotland, and a gust of 100kt was reported at North Rona, but elsewhere it was dry. By midday the band of precipitation was lying from Cornwall to East Anglia, but it was very weak and some places stayed dry. Apart from showers in northern Scotland and patchy rain/drizzle in southern England, the afternoon was dry with sunshine in places. During the evening heavy drizzle was reported in Cornwall.

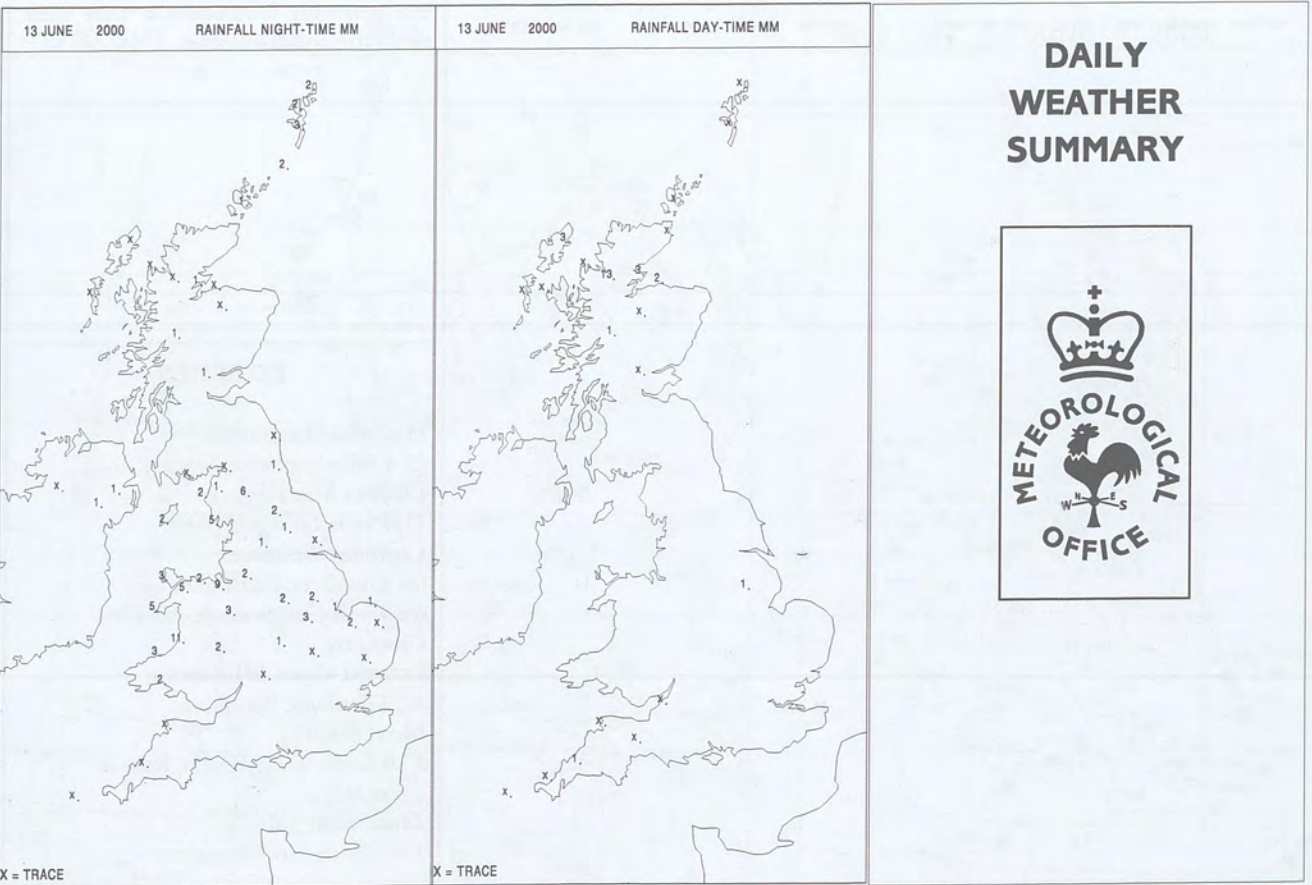

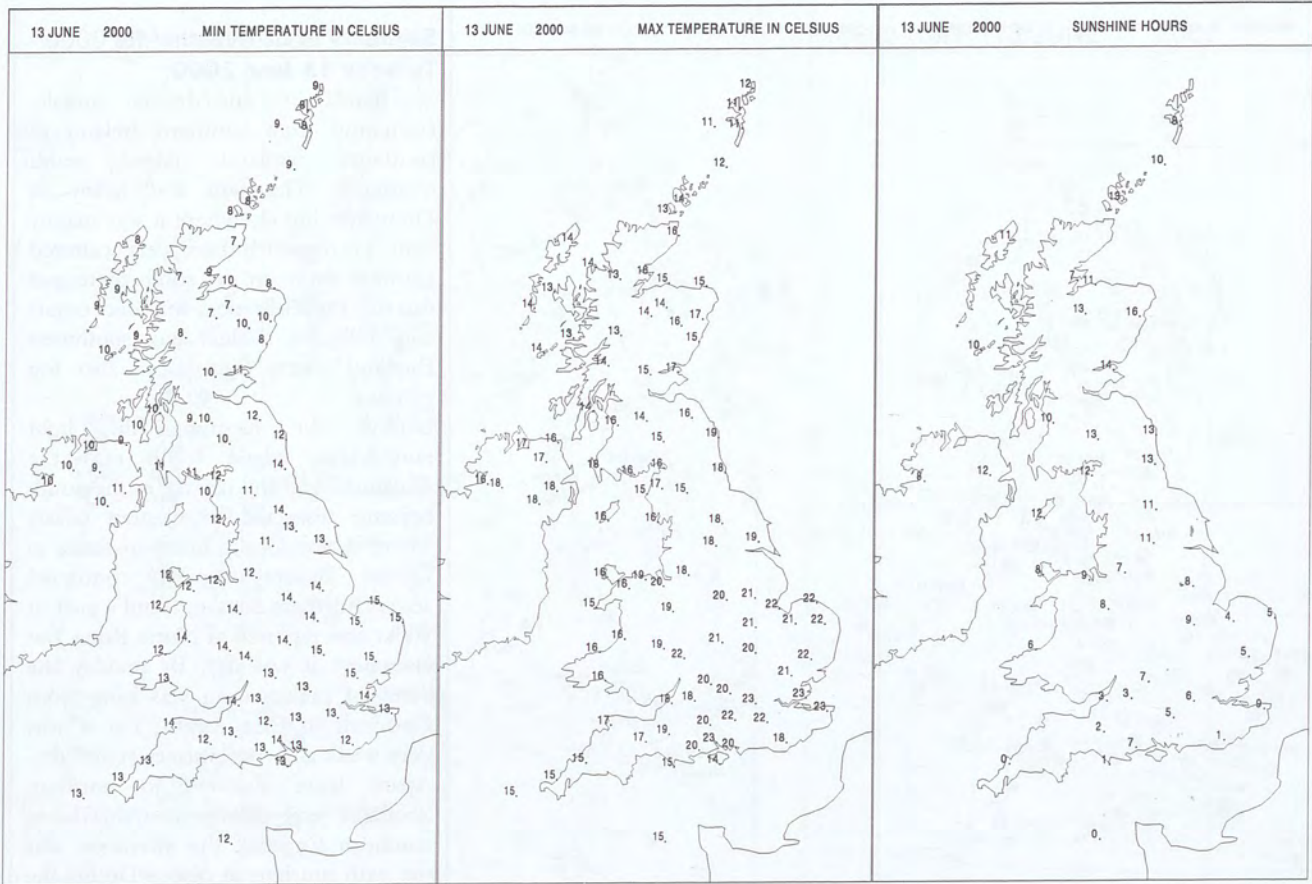

It was very warm in Kent and Essex, but generally temperatures were near or a little above average.

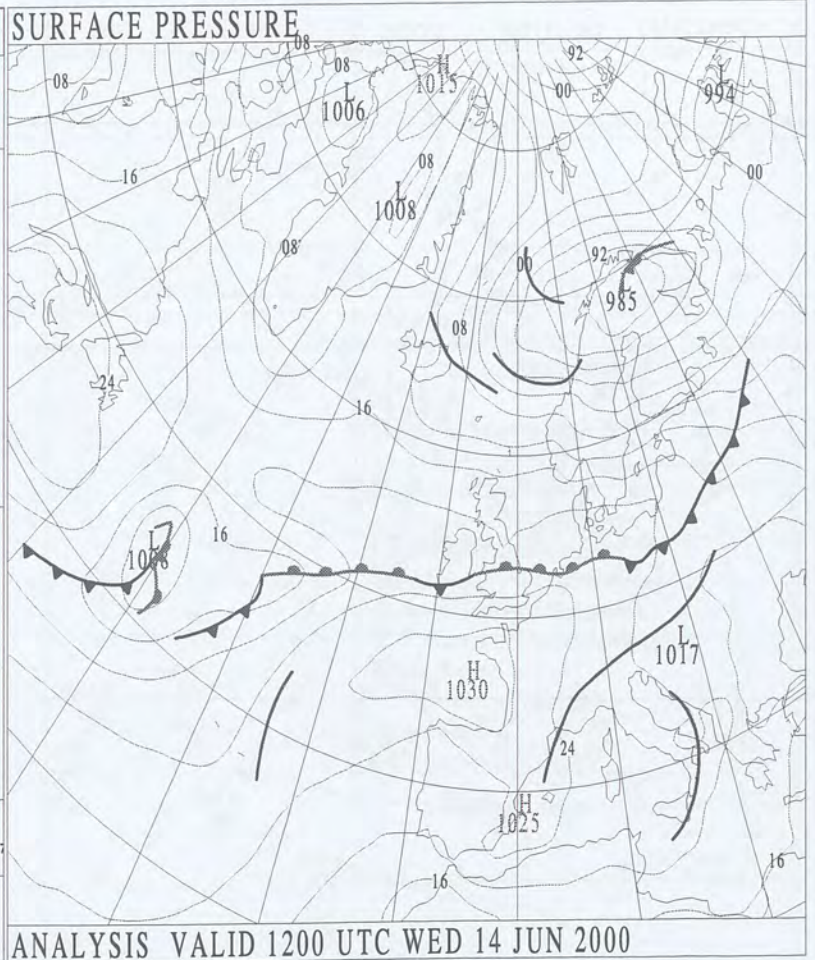

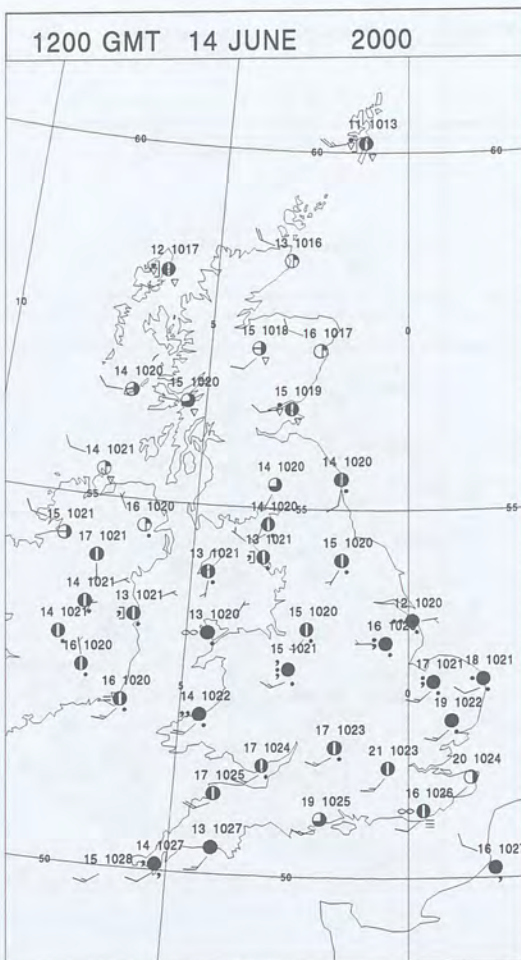

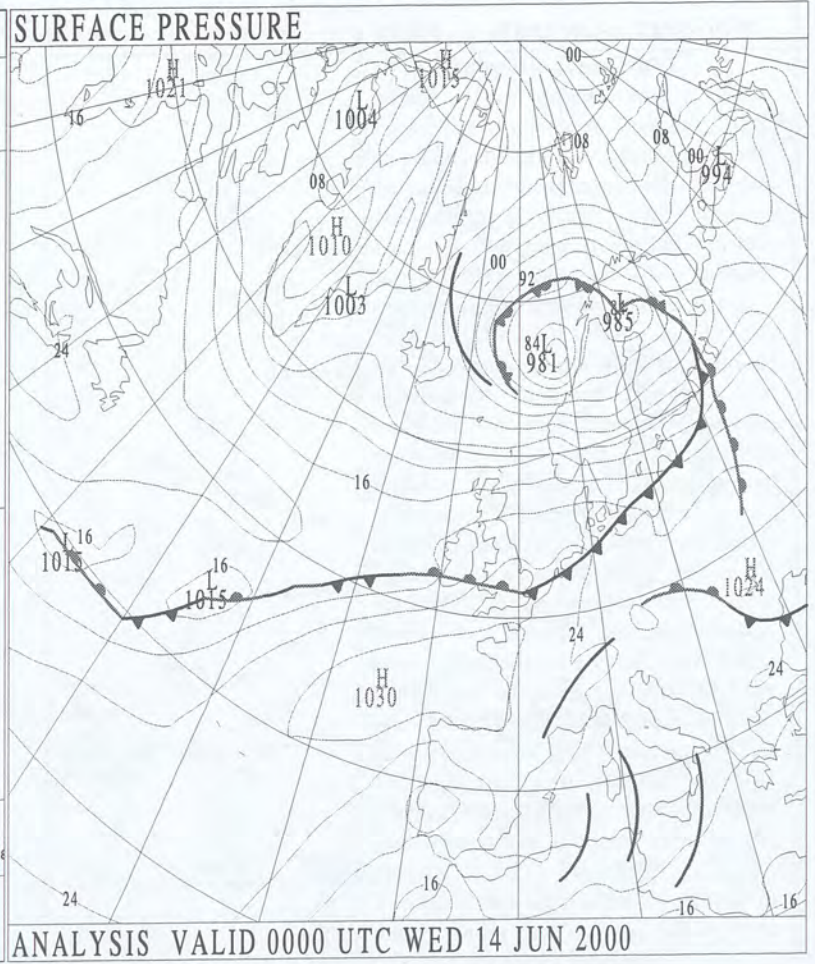

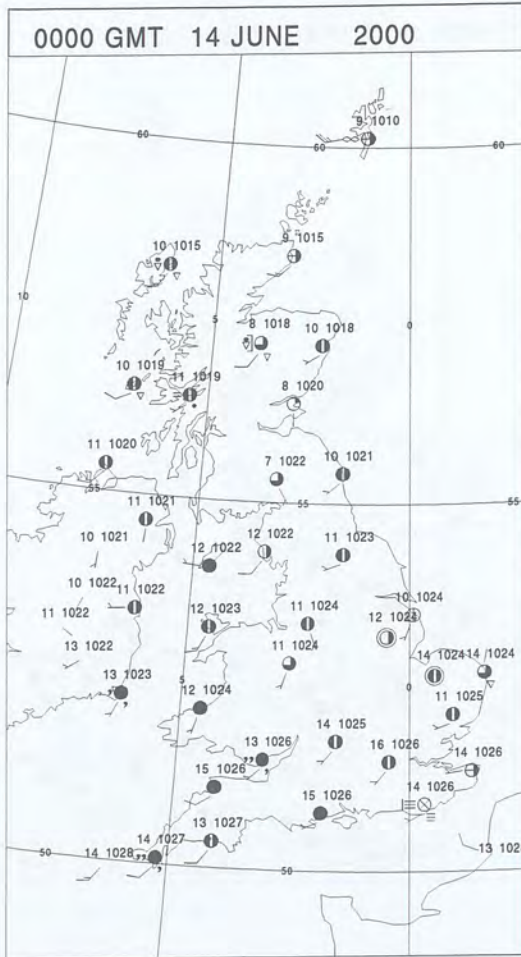

EXTREMES

- Highest Maximum:**
23.4 Shoeburyness, Essex
- Lowest Maximum:**
11.0 Sella Ness, Shetland

- Most Rain:**
13.0 Loch Glascarnoch, Ross & Cromarty
- Most Sun:**
15.7 Dyce, Aberdeenshire

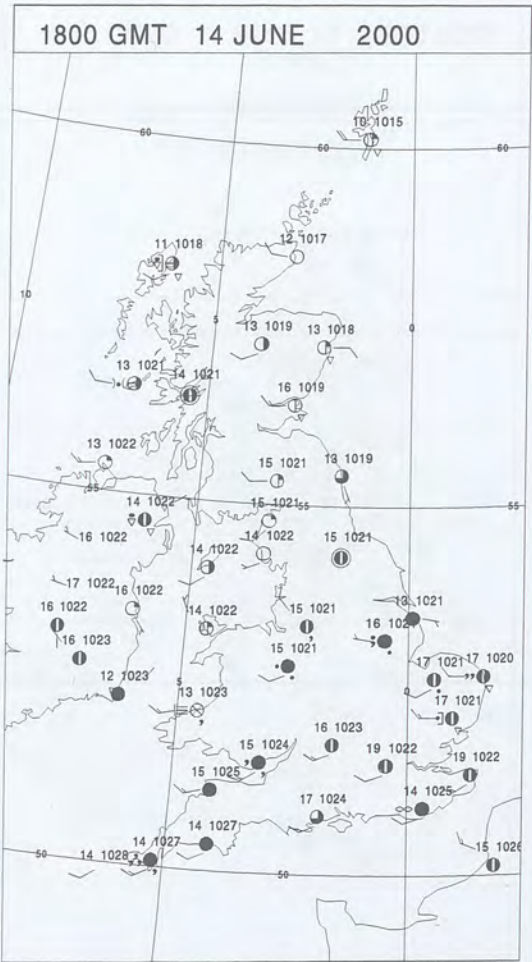

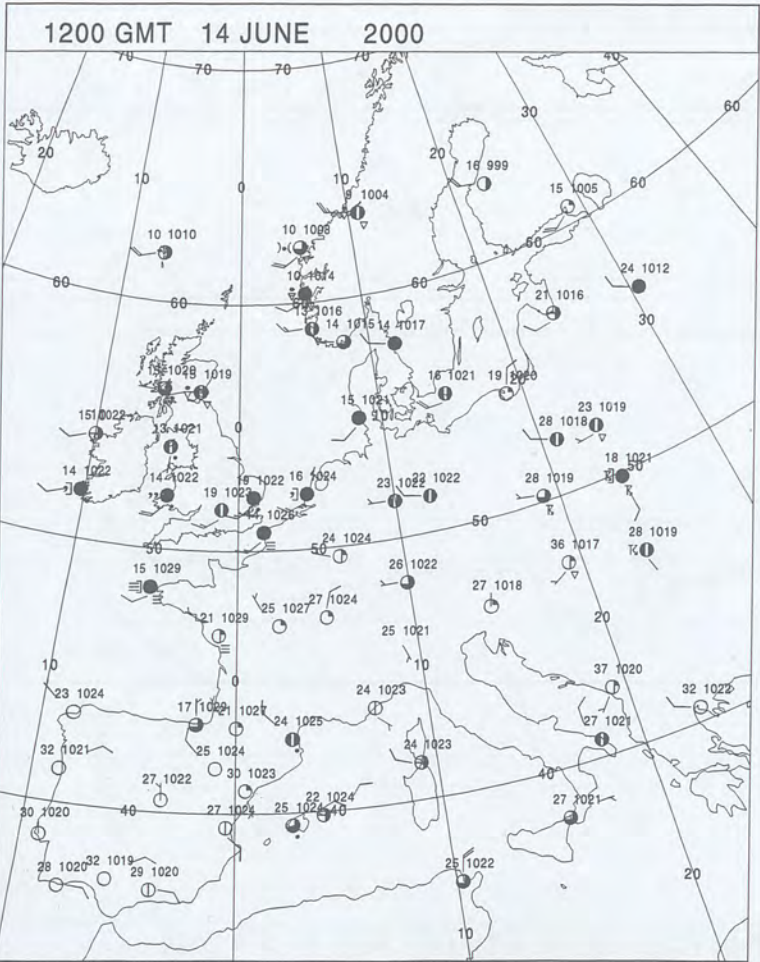

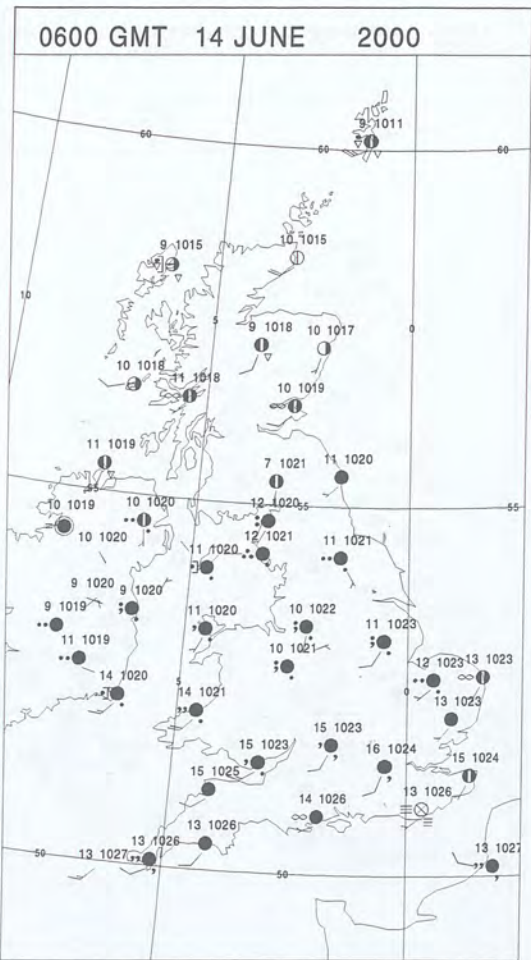

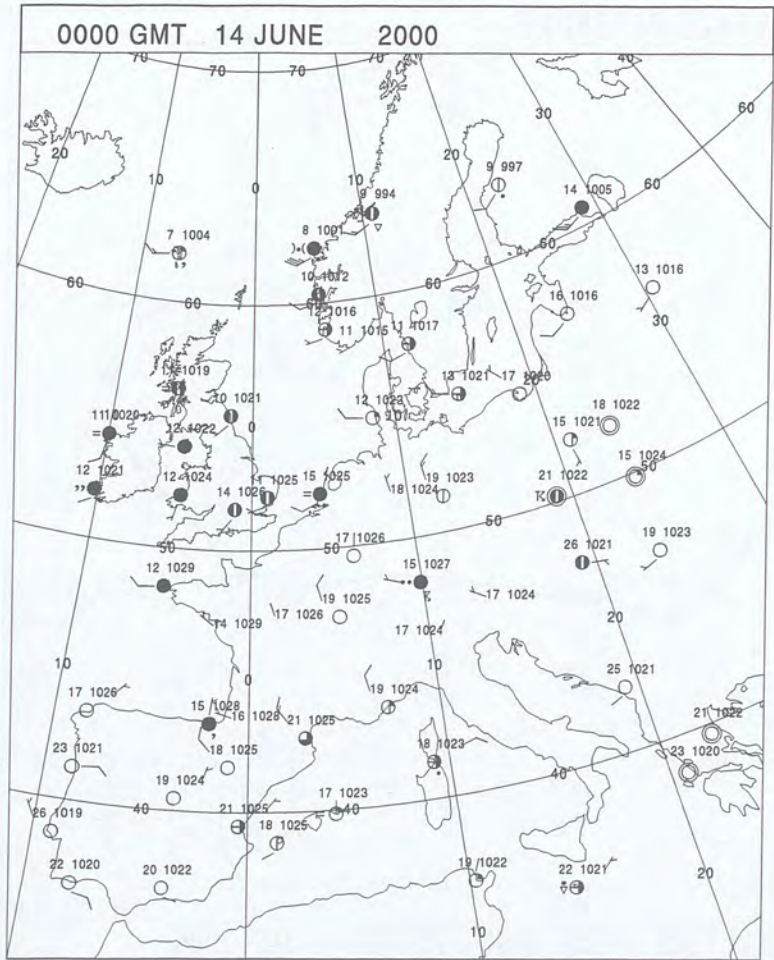

DAILY CLIMATE DATA

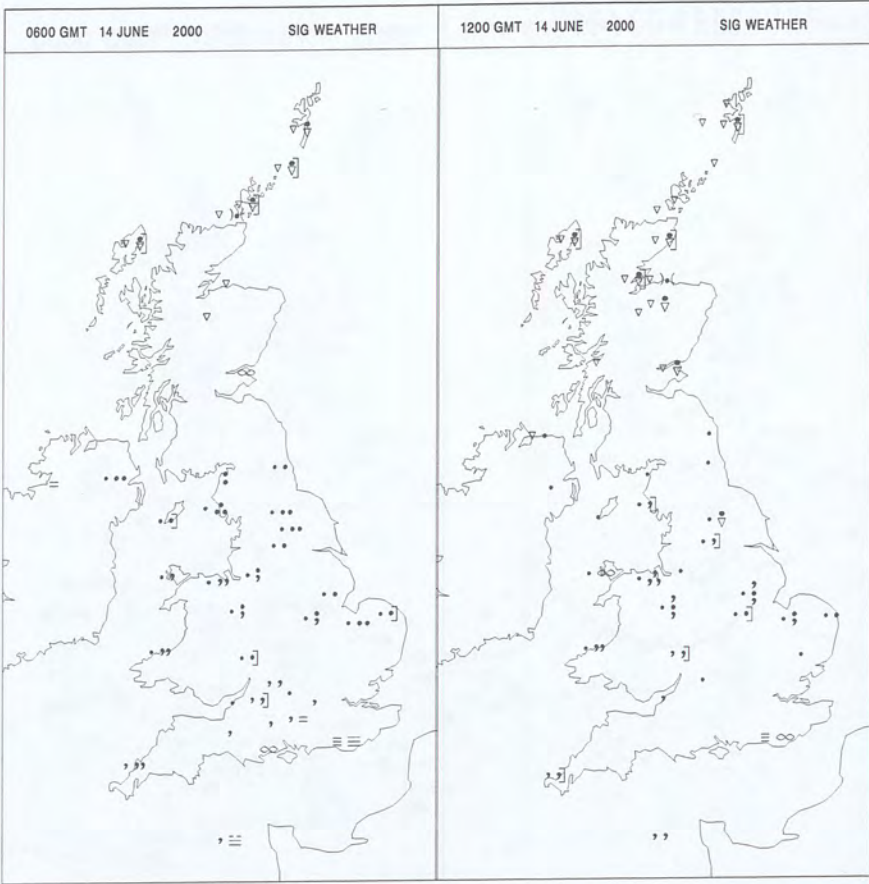

DAILY WEATHER SUMMARY

SURFACE REPORTS

SIGNIFICANT WEATHER

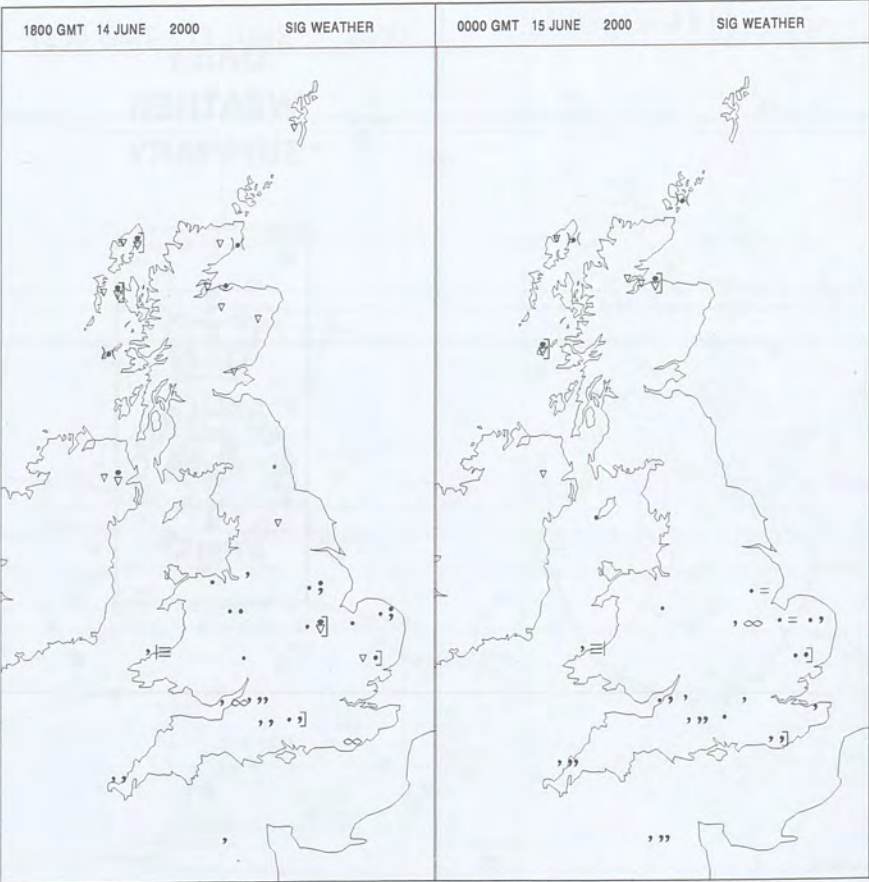

Summary of UK Weather for Wednesday 14 June 2000.

Much of the country had a cloudy night. There was some rain and drizzle in places, mostly light across the south of England, but rather more persistent across north Wales and northern England. Northern Ireland was mostly dry and there were just a few showers over the north and west of Scotland.

Northern Ireland had a bright day although there were a few pockets of rain in the morning. The west and north of Scotland had further showers through the day, and a few showers developed across the Highlands. Most of eastern Scotland was sunny.

England and Wales had a largely cloudy day although there was some sunshine across southeastern parts. There was further rain and drizzle, more especially in a band from Wales across the Midlands to Norfolk, but northwest Wales brightened up later. Low cloud, fog and persistent drizzle affected southwest England and the Channel Islands. There was some light rain over other southern areas in the evening.

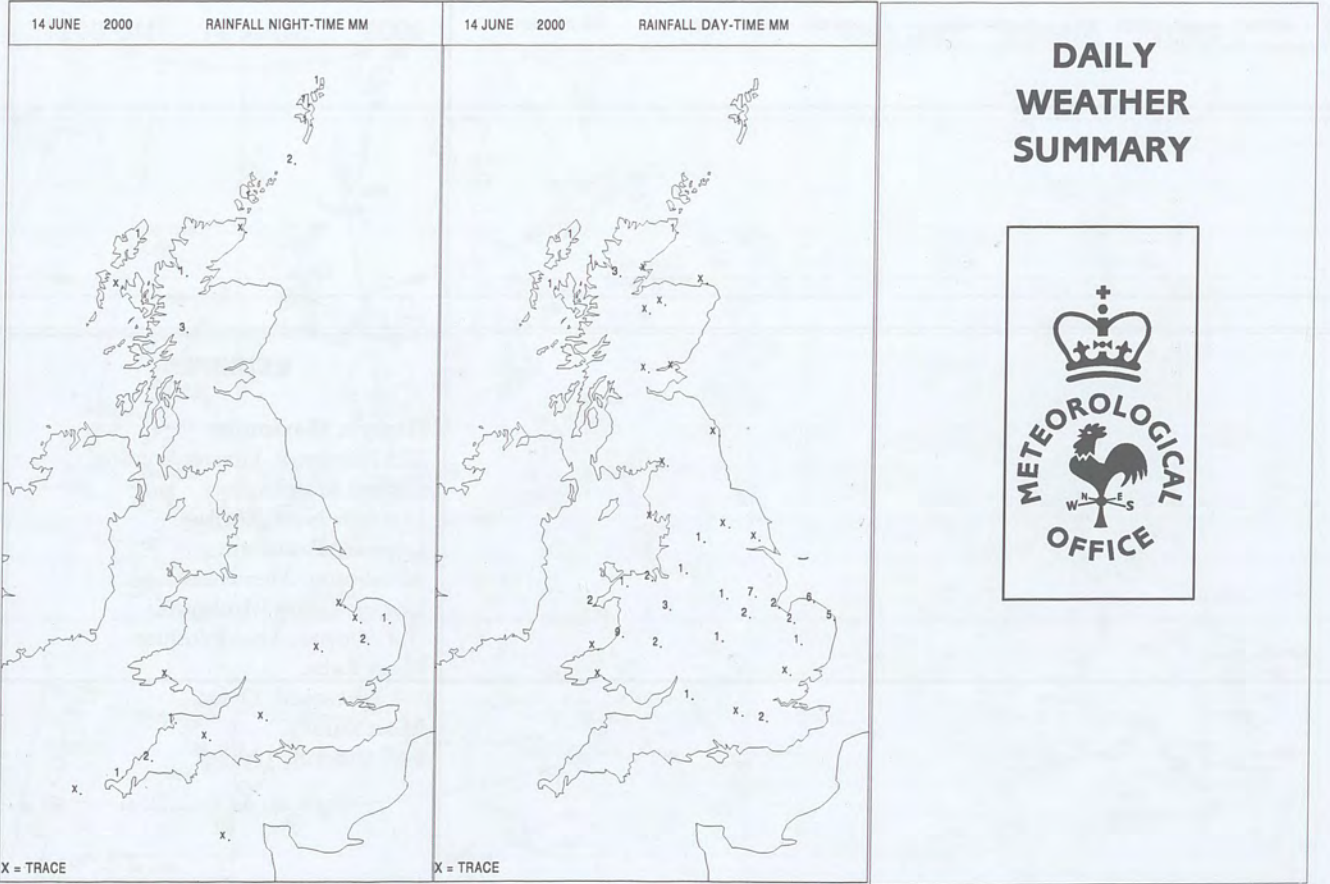

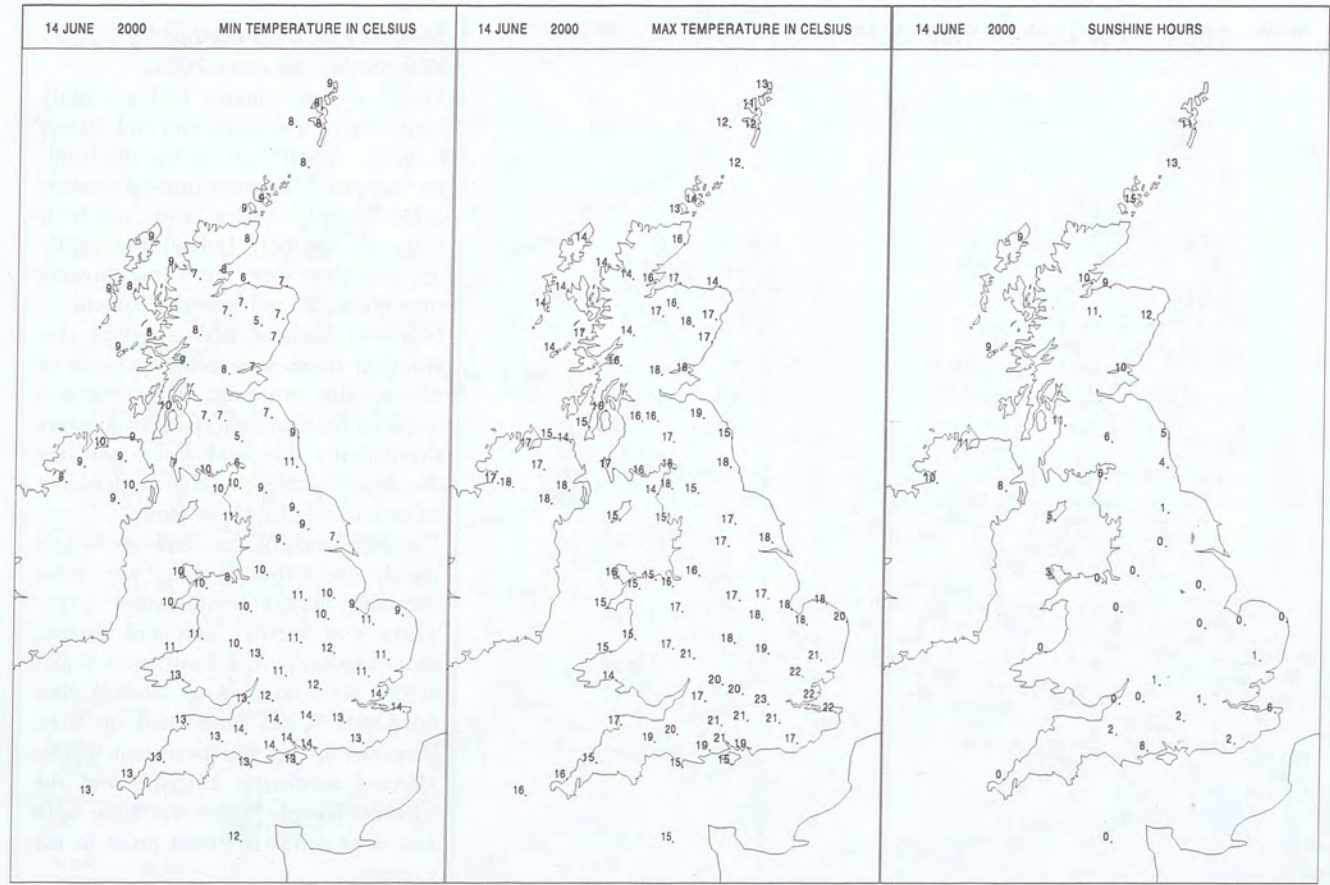

Temperatures were close to normal in many places but it was warm over much of southeast England.

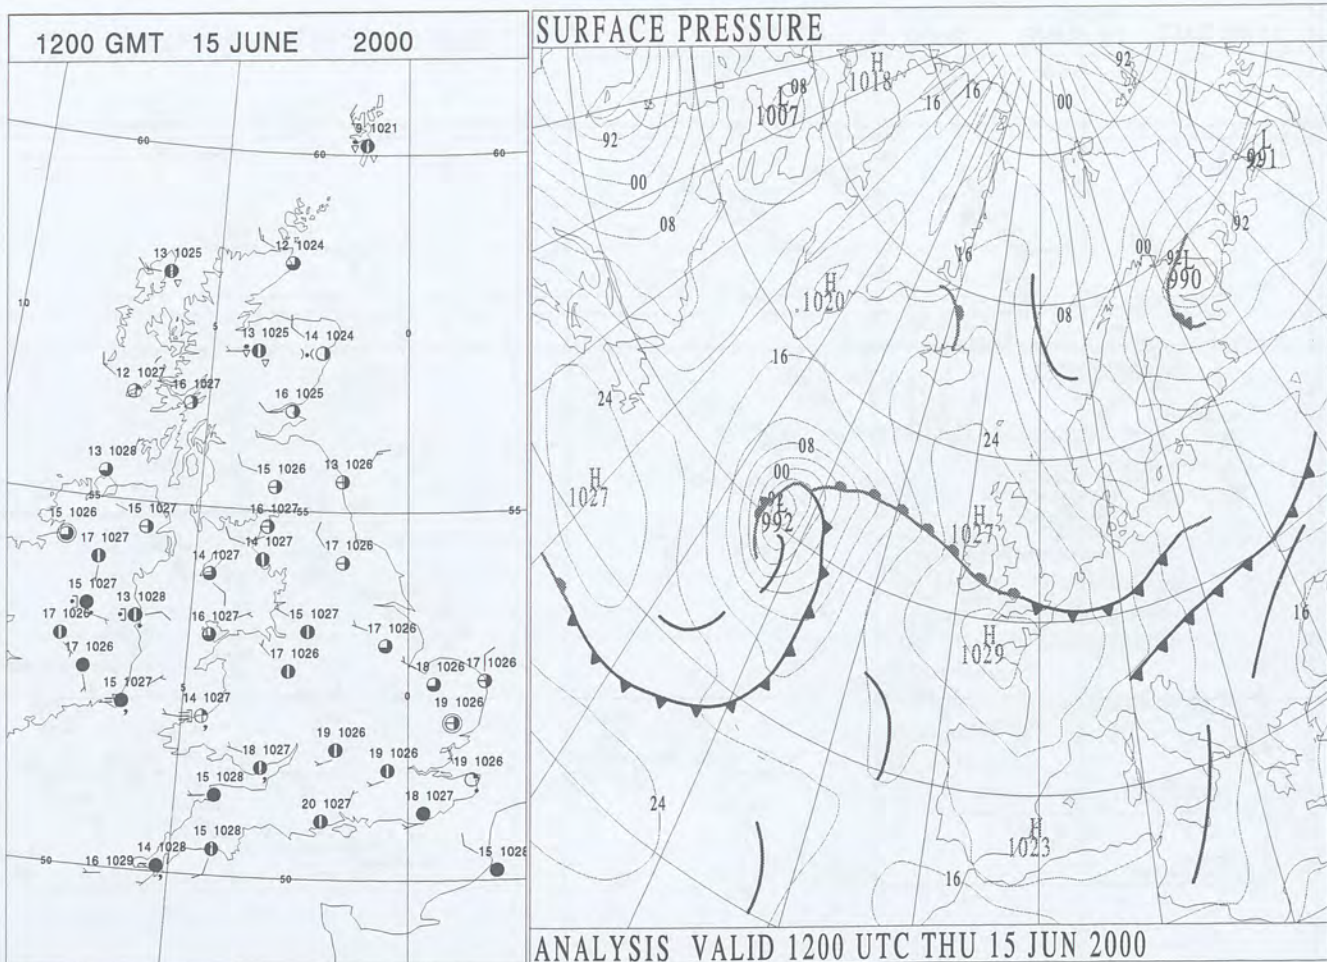

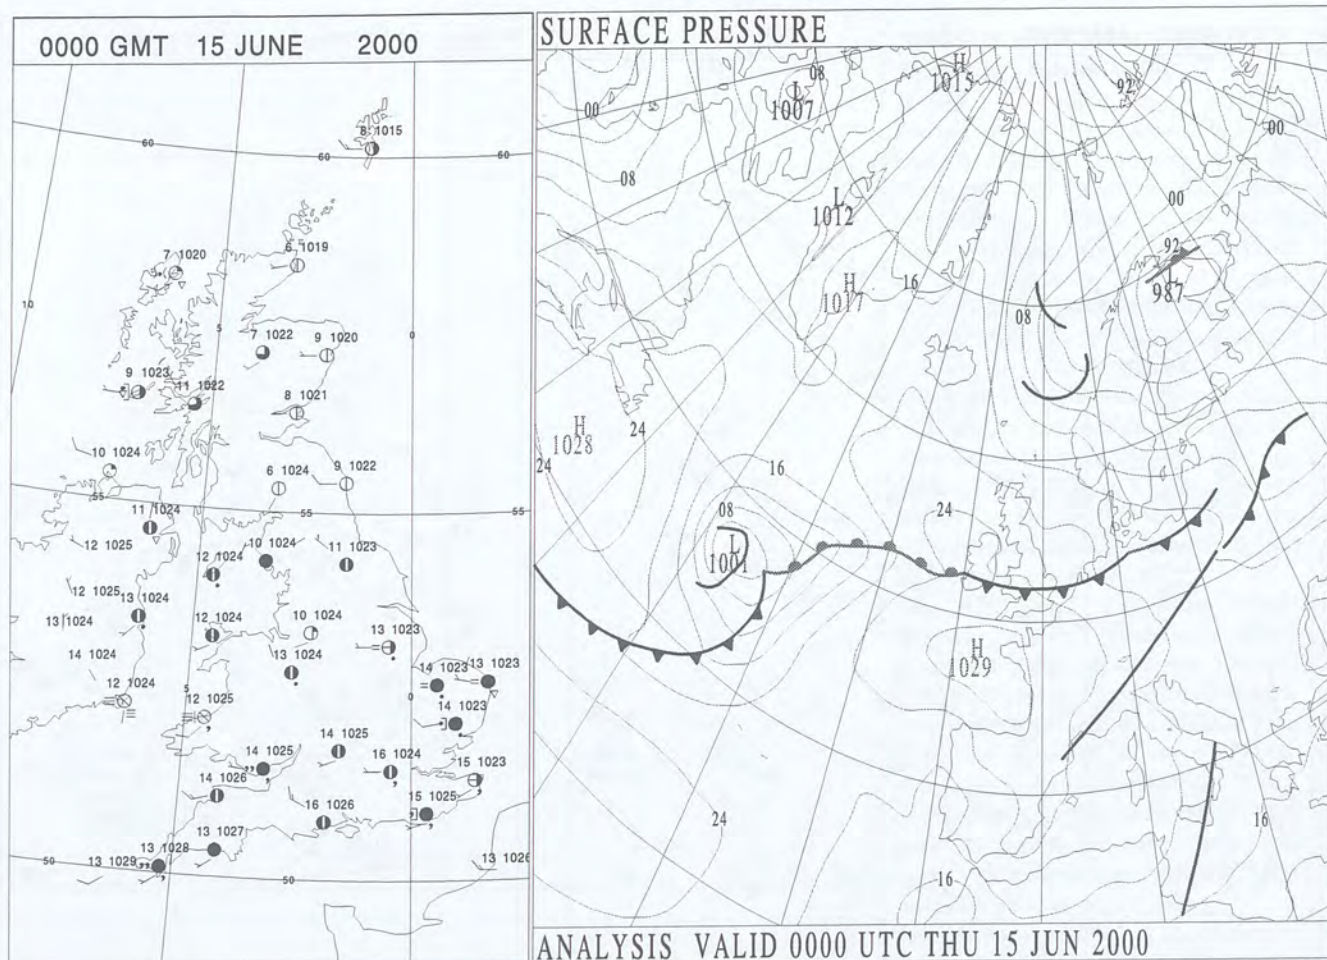

EXTREMES

- Highest Maximum: 22.5 Heathrow, Greater London
- Lowest Maximum: 11.0 Sella Ness, Shetland
- Lowest Minimum: 4.7 Aboyne, Aberdeenshire
- Lowest Grass Minimum: -1.4 Aboyne, Aberdeenshire
- Most Rain: 9.4 Trawscoed, Dyfed
- Most Sun: 14.7 Kirkwall, Orkney

SIGNIFICANT WEATHER

0600 GMT 15 JUNE 2000	SIG WEATHER	1200 GMT 15 JUNE 2000	SIG WEATHER	Summary of UK Weather for Thursday 15 June 2000. It was a dry night across Northern Ireland and most of Scotland but there was a scattering of showers across the Northern and Western Isles. Over England and Wales it was mostly cloudy with fog, low cloud and drizzle in the southwest, south and west Wales and the Channel Islands. Patchy drizzle affected parts of southeast England and East Anglia. Northern Ireland had a sunny morning and then more cloudy skies in the afternoon. Most of Scotland was dry, although there were a few showers, chiefly in the northeast, into the afternoon. Much of the south and east of Scotland was sunny. Fog, low cloud and some drizzle lingered across southwest Wales, southwest England and the Channel Islands. Apart from some early drizzle across the southeast and isolated light afternoon showers, it was a dry day elsewhere over England and Wales, albeit mostly cloudy. East Anglia was generally sunny, and sunny then clear spells developed in central and southern parts in the evening. Temperatures were close to average in most places but it was locally rather warm in the Midlands.

SURFACE REPORTS

SIGNIFICANT WEATHER

Summary of UK Weather for Tuesday 20 June 2000.

Most places started dry but by dawn there were outbreaks of rain in the Channel Islands and southwest England. Some of these were heavy and thundery and they spread into central southern England soon after dawn. Some rain also started to affect Northern Ireland by the end of the night.

During the morning, heavy, thundery outbreaks of rain spread northeastwards across southern England and the Midlands. There were outbreaks of rain across central and southern Scotland but it was more patchy over northern England. Many areas were drier during the afternoon but still cloudy. There were showers in Northern Ireland and some western areas but here there were also some sunny intervals.

Through the evening more thundery showers spread from France into the southeast corner of England and outbreaks of rain spread to southwest England, parts of Wales and Northern Ireland. There were also showers in parts of Scotland, mainly the northwest.

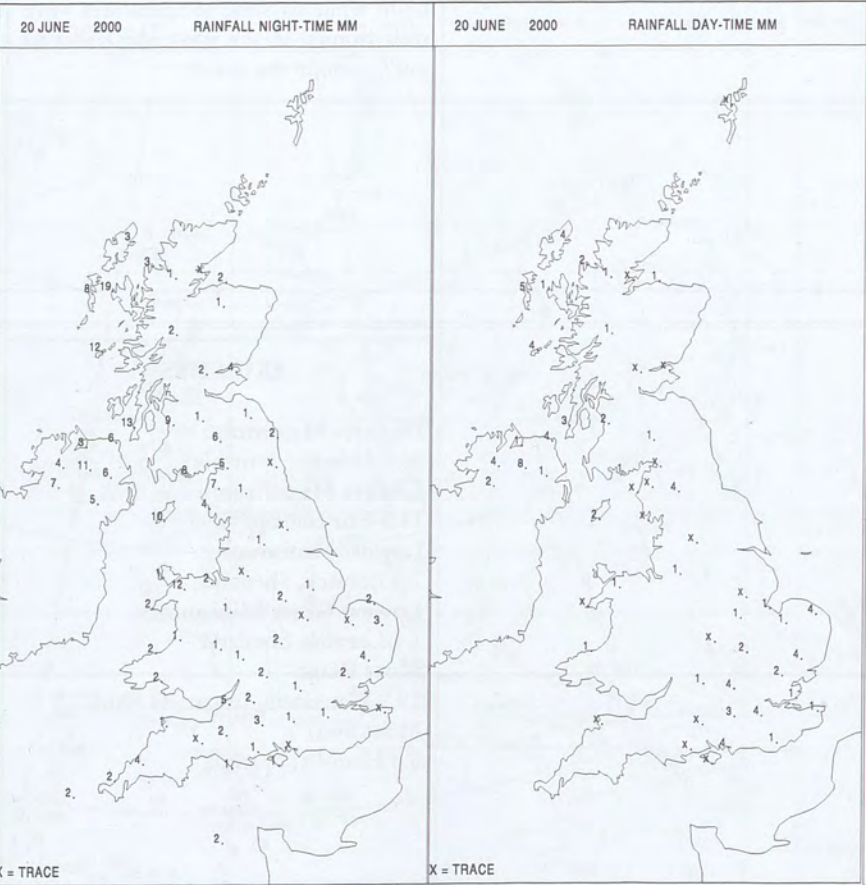

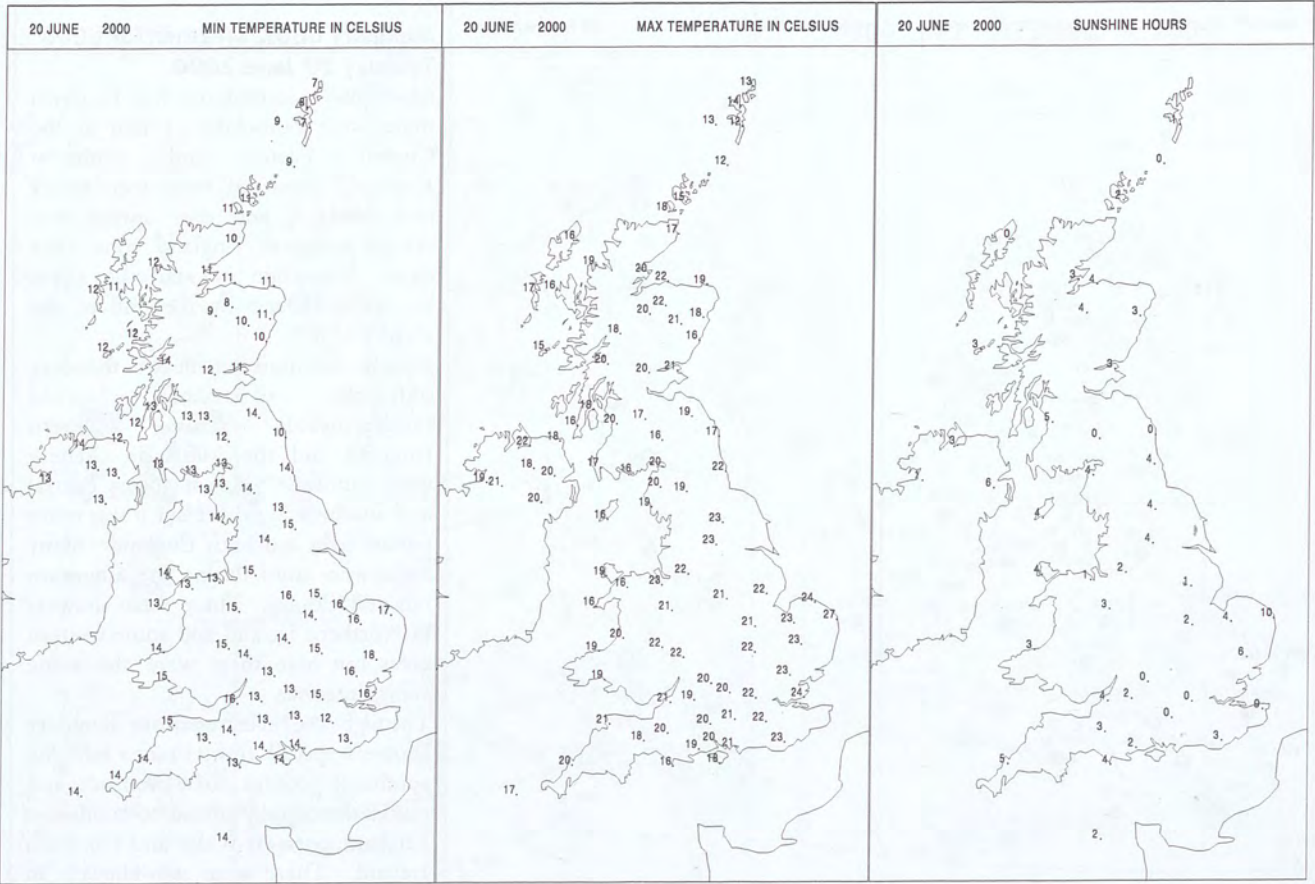

Most places had another very warm night while daytime temperatures were near normal in the west and warm or very warm in the east.

SURFACE REPORTS

SIGNIFICANT WEATHER

Summary of UK Weather for Wednesday 21 June 2000.

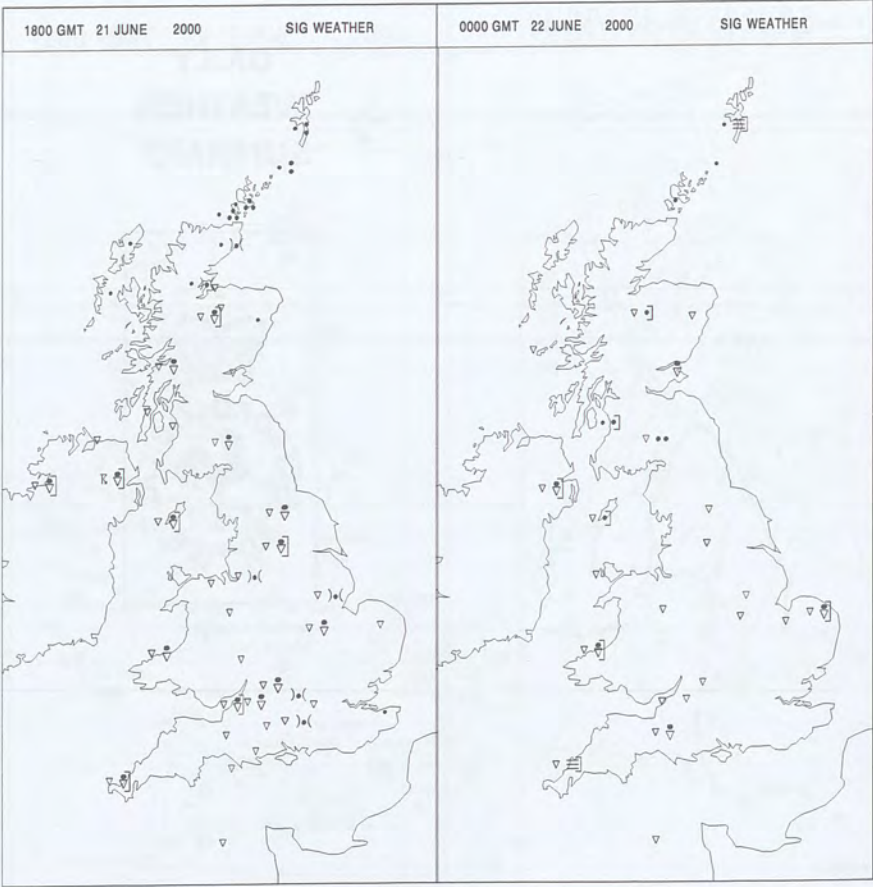

Showery rain affected much of Northern Ireland and western Scotland through the night. The rain was heavy in a number of places. Northern Ireland became drier later in the night. For England and Wales, a band of cloud and mostly light rain tracked eastwards overnight, although easternmost counties remained largely dry.

The showery rain over western Scotland extended across the rest of Scotland during the morning, and did not clear northern parts until the evening. Brighter conditions followed on behind but with some showers, chiefly in the south.

During the morning, showers, some heavy and locally thundery, developed over Northern Ireland, Wales and western parts of England and extended into eastern England during the afternoon. East Anglia and southeast England though, saw very few.

Showers continued to affect many western areas through the evening, but eastern parts became largely dry.

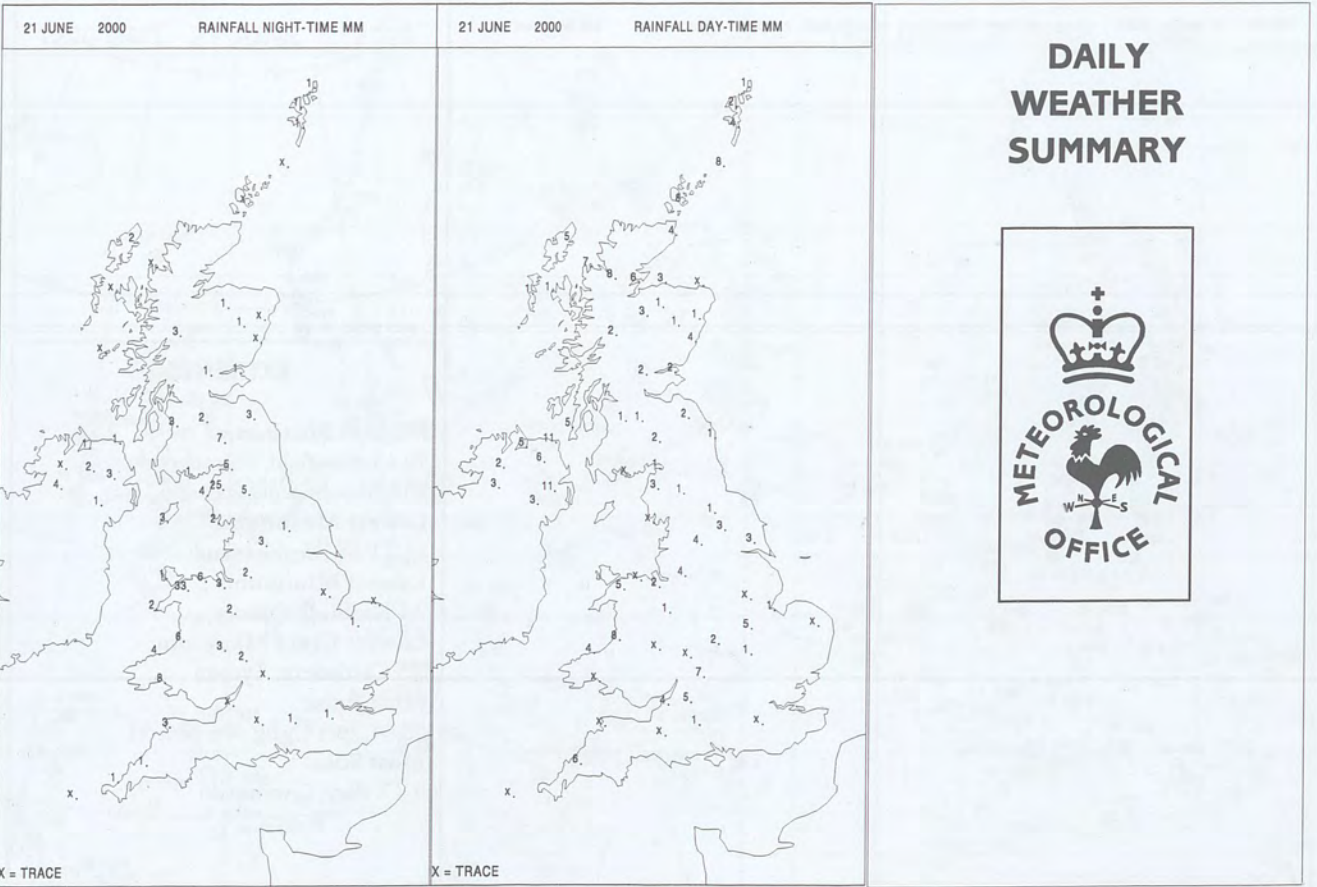

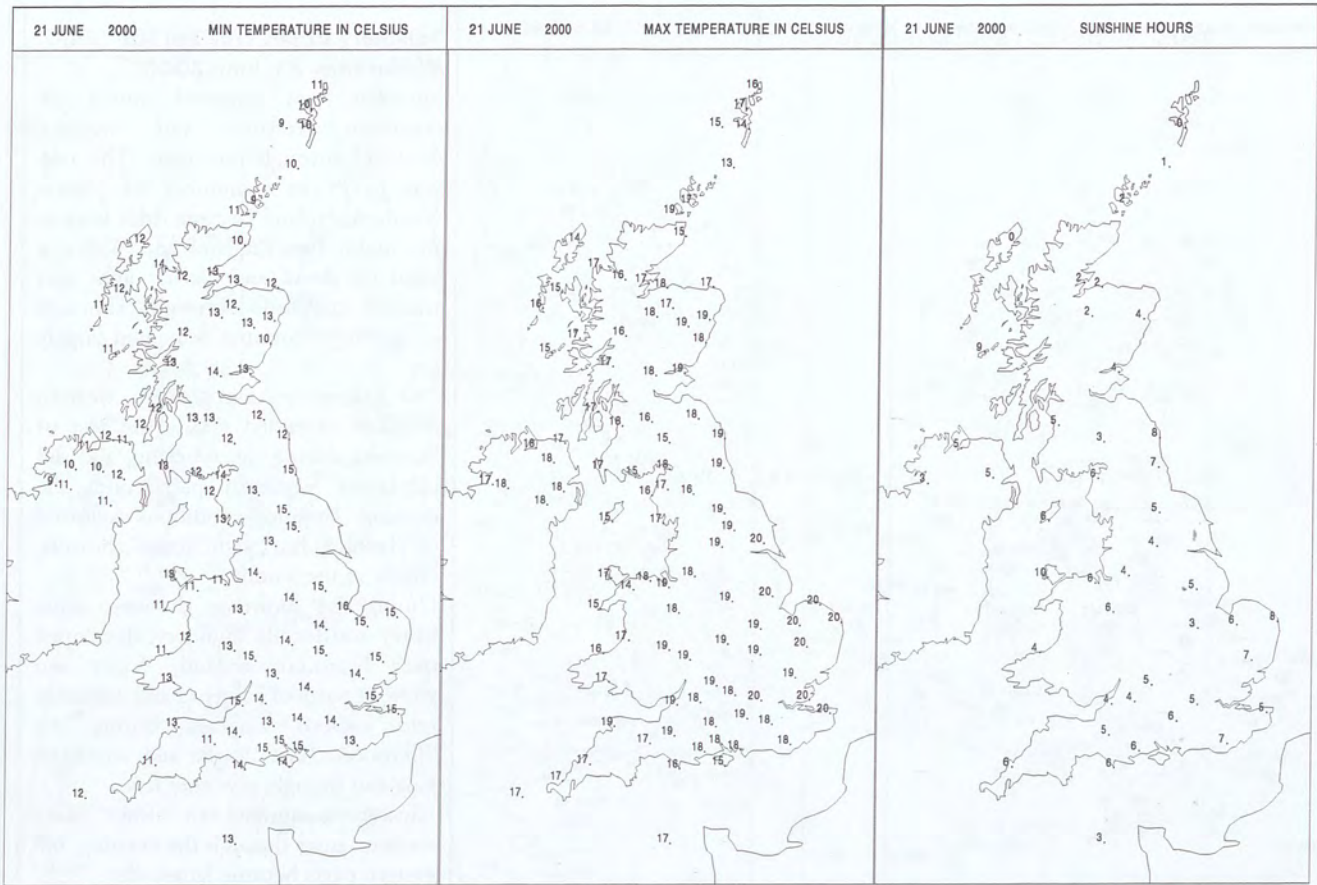

The temperatures were generally close to normal in brisk winds.

DAILY CLIMATE DATA

DAILY WEATHER SUMMARY

SURFACE REPORTS

SIGNIFICANT WEATHER

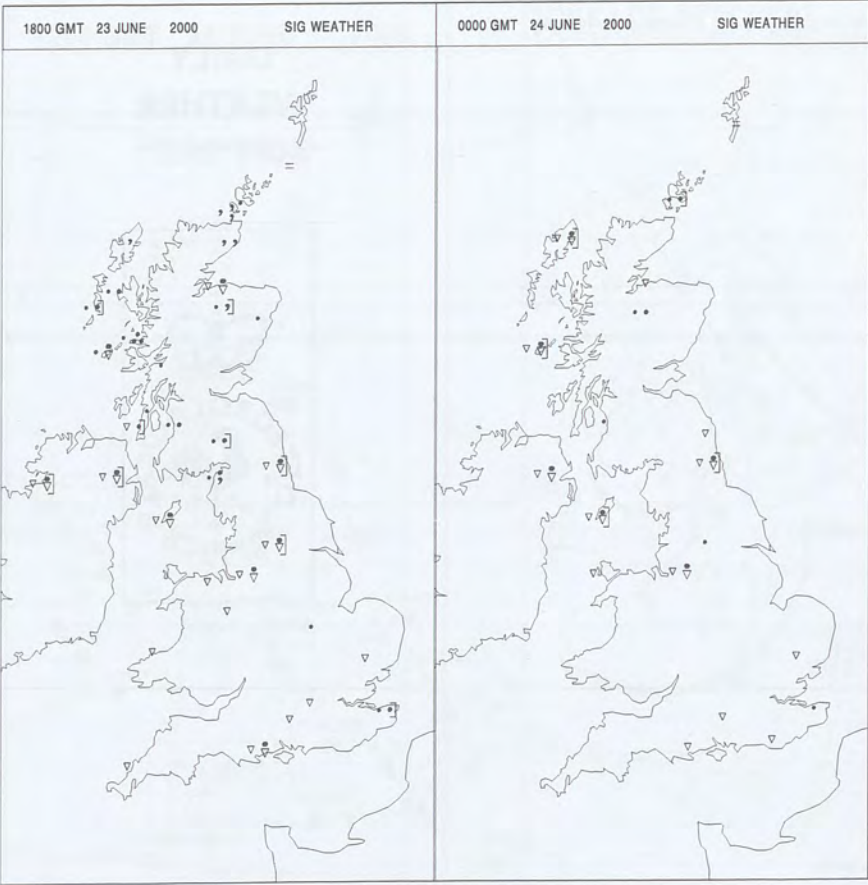

Summary of UK Weather for Friday 23 June 2000.

There was a scattering of showers across England, Wales and Northern Ireland, particularly across eastern England late in the night. Scotland had some patchy rain with more persistent rain or drizzle at times in the north and in the Northern and Western Isles.

Northern Ireland had a day of sunshine and showers. In Scotland it was mostly cloudy and many places had some rain or drizzle from time to time, especially in the west. The brightest weather was in southeast Scotland. Over England and Wales, the best of any sunshine was generally in the northeast and along the south coast. Many areas had some showers and were rather cloudy but there were some bright or sunny intervals.

In the evening there was some more persistent rain in the extreme southeast of England for a time but much of the south became dry. Some persistent rain and drizzle also affected parts of northern Scotland. Showers continued over the rest of Scotland, Northern Ireland, Wales and northern England, especially the northwest.

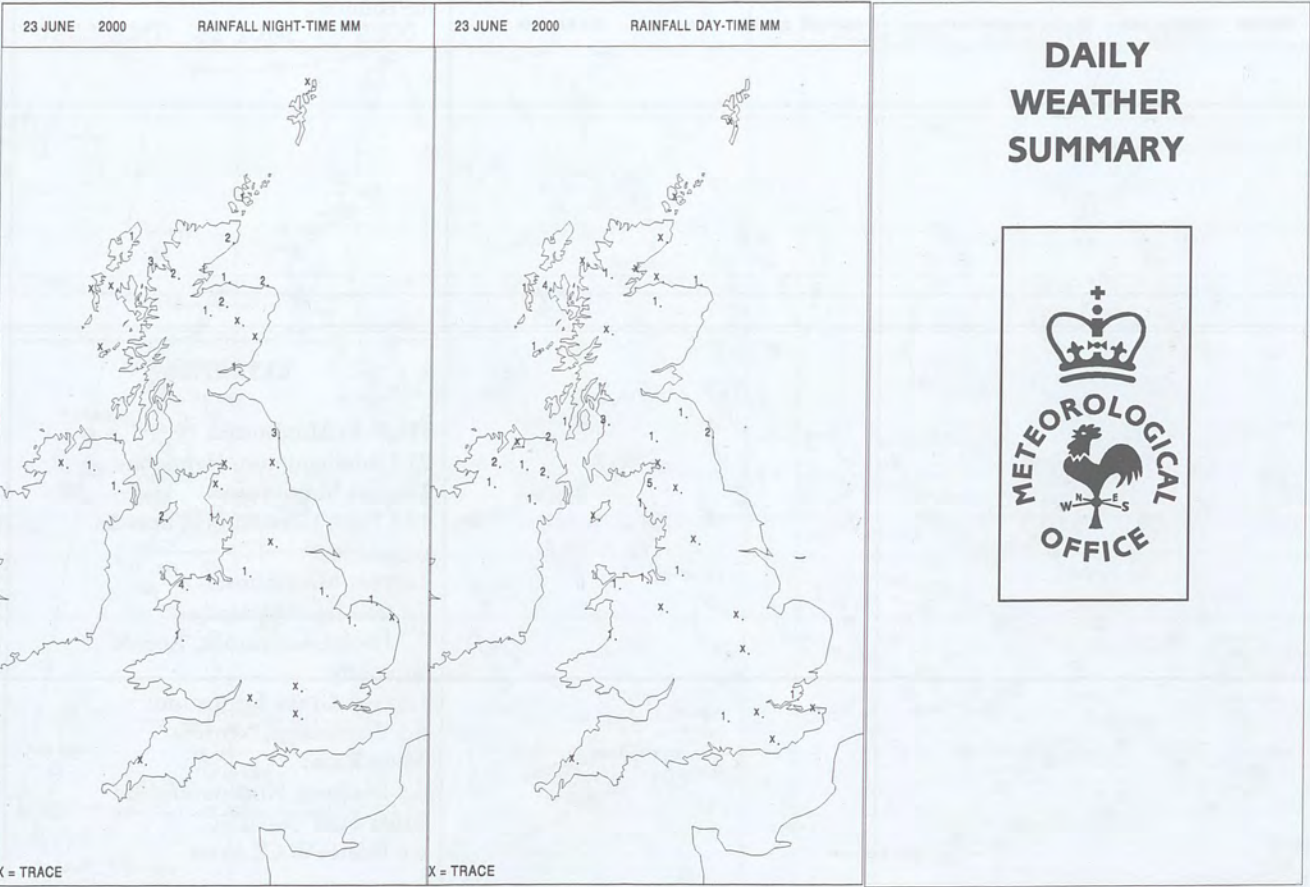

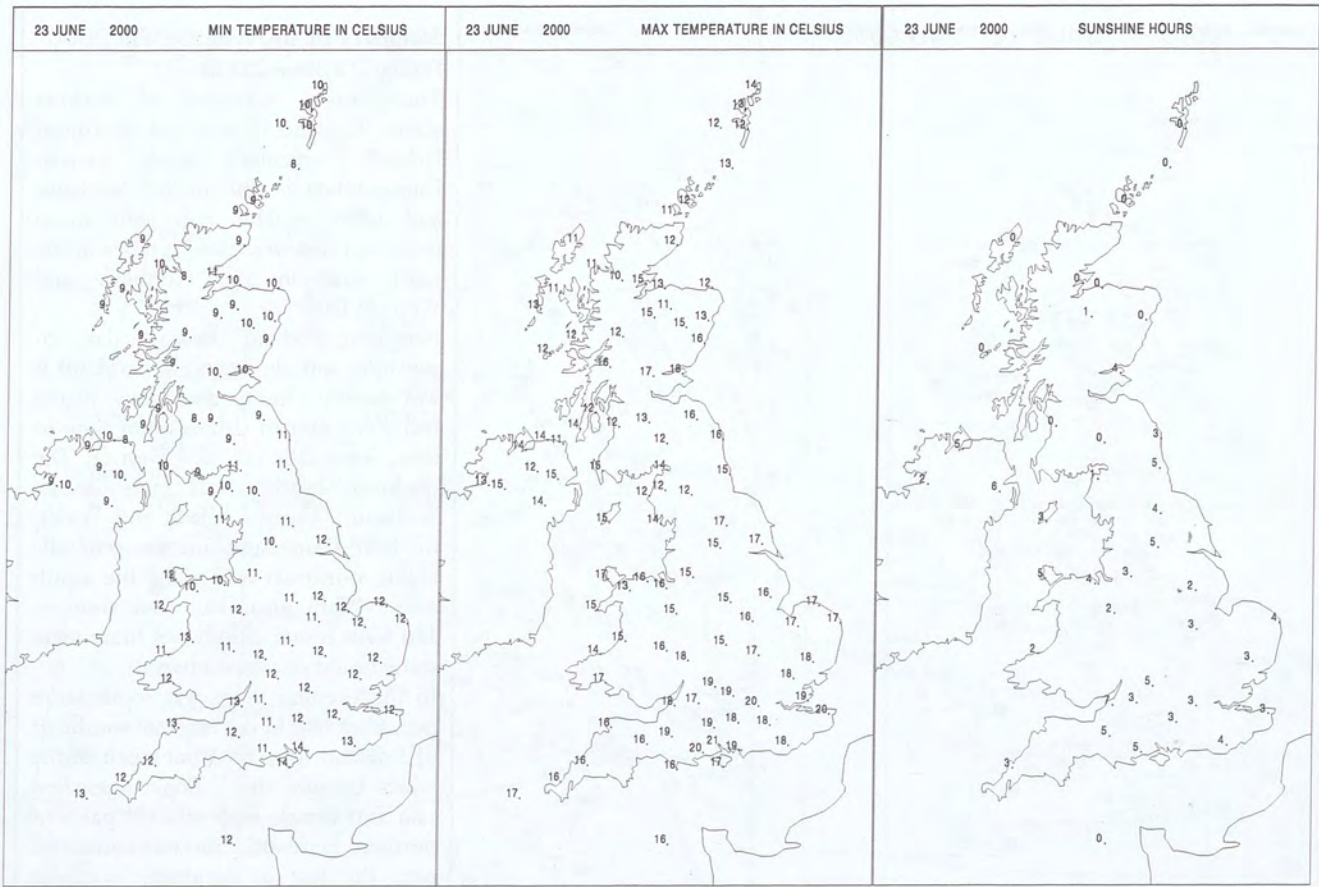

It was cool or rather cool over most of the country.

SURFACE REPORTS

SIGNIFICANT WEATHER

Summary of UK Weather for Sunday 25 June 2000.

Much of the country had a dry and rather cloudy night. There were a few light showers or outbreaks of rain in northeast Scotland, across the northern coast of Northern Ireland and in northern England. Wales and southwest England had clear periods. Some light showers continued in northeast Scotland, especially the Northern Isles, but most of Scotland had a dry day. The south and much of the west had a sunny day, with cloudier skies in other parts. Northern Ireland was cloudy.

Southwest England, the Channel Islands and south Wales were sunny, as was the north Norfolk coast. North Wales, northern and many eastern parts of England had a mostly cloudy morning, and there was a little light and patchy rain over northern England. These parts brightened up though the day as a band of cloud edged south. Southeastern parts had some morning sunshine and then a more cloudy afternoon, with very isolated light showers into the evening. It was rather cool generally but southern Scotland had temperatures near average.

EXTREMES

Highest Maximum:
19.3 Strathallan Airfield, Perthshire (In Taysi)

Lowest Maximum:
7.8 Foula, Shetland

DAILY WEATHER SUMMARY

SURFACE REPORTS

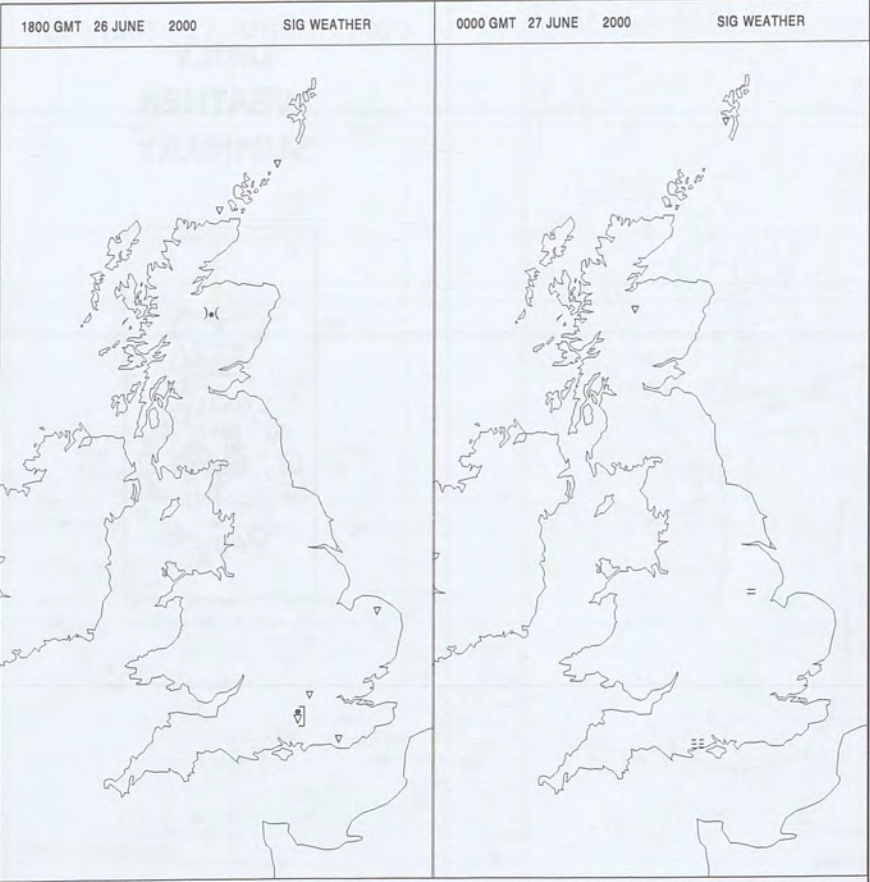

SIGNIFICANT WEATHER

Summary of UK Weather for Monday 26 June 2000.

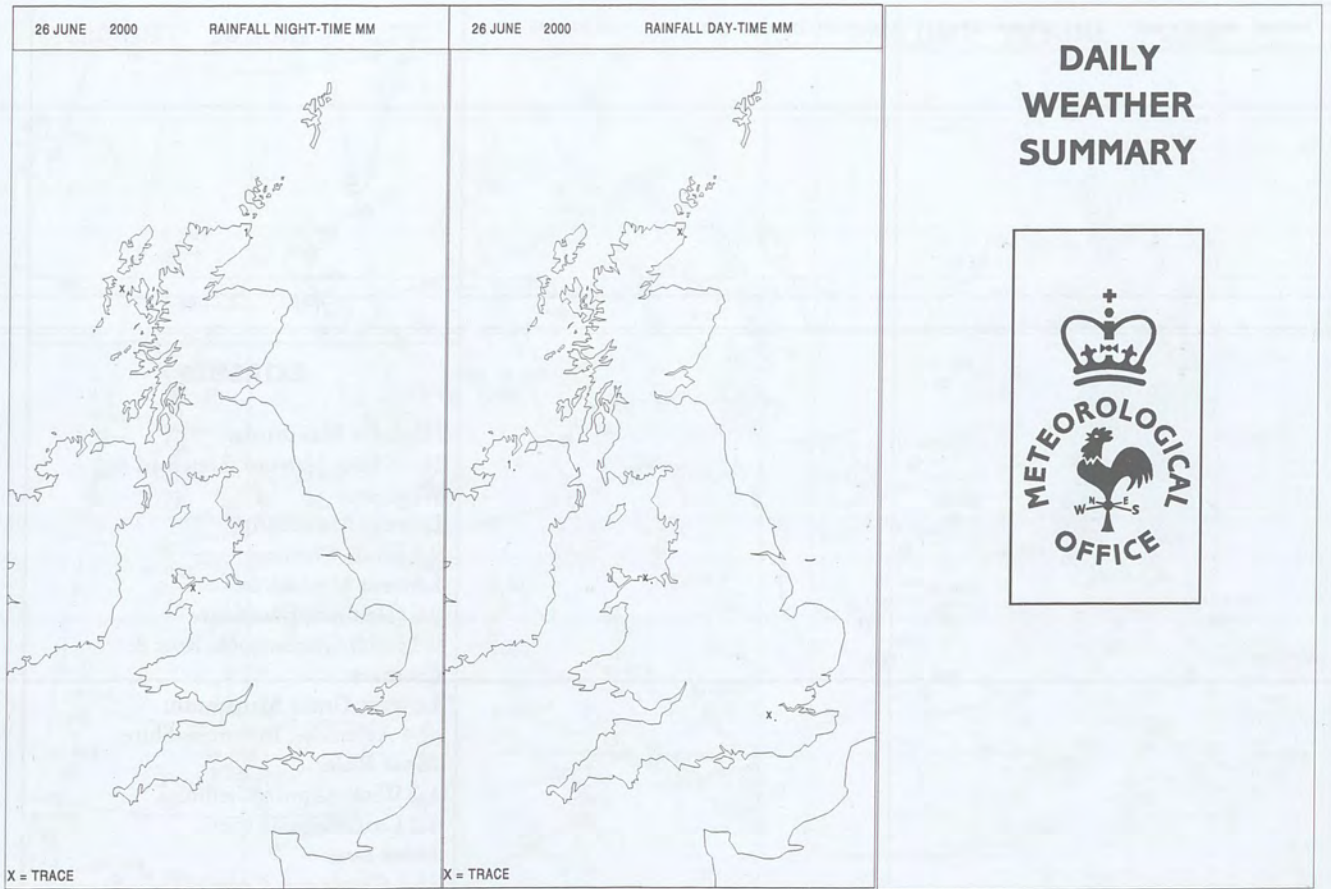

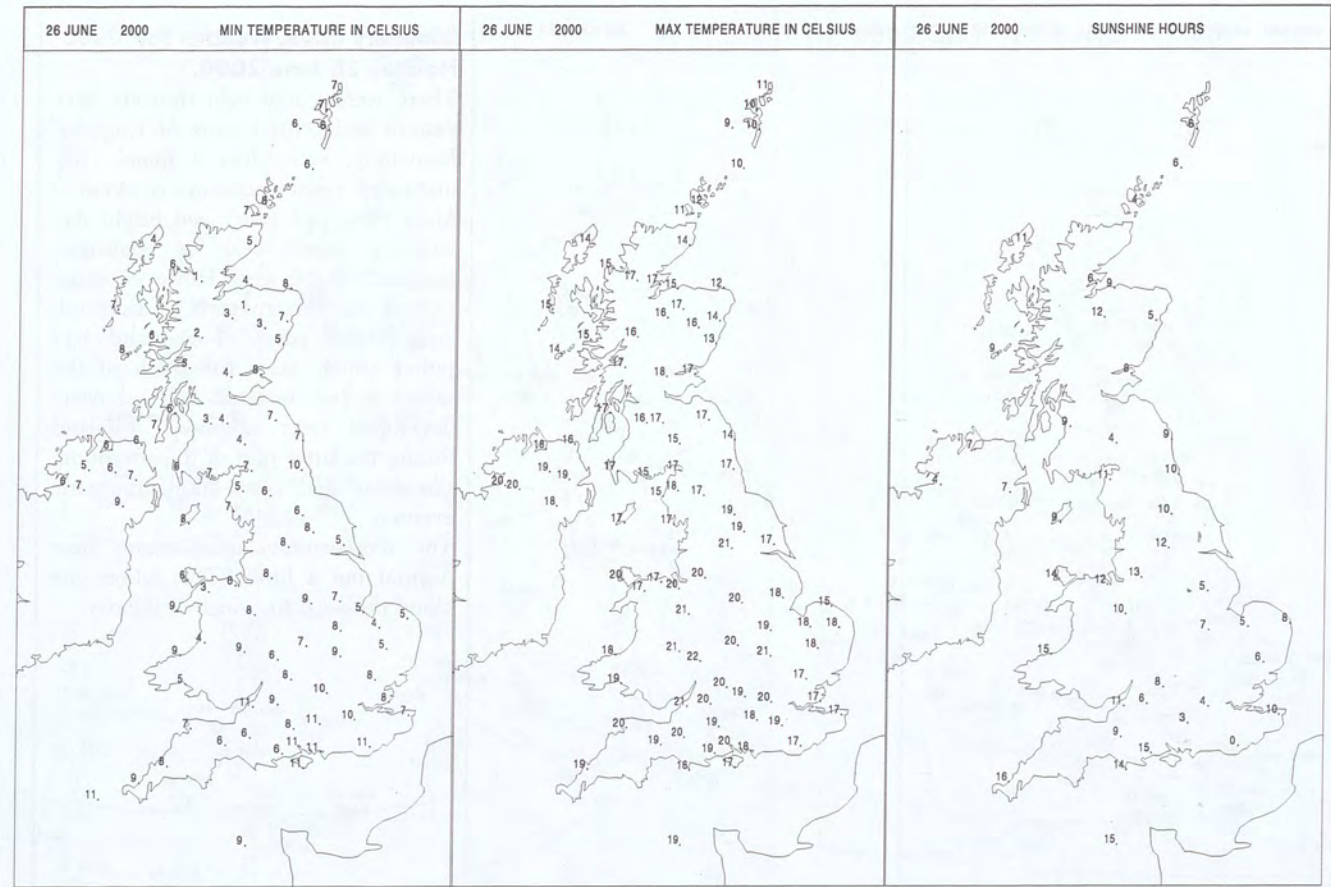

There were a few light showers over eastern and central parts of England. Remaining areas had a mainly dry night with variable amounts of cloud. Most parts had a dry and bright day with a good deal of sunshine, especially in the west. However, some central and eastern parts of England, and eastern parts of Scotland had rather cloudy skies for much of the time. A few isolated light showers developed over southeast England during the latter part of the afternoon, but these died away during the early evening. The temperatures were mostly near normal but a little below where the cloud persisted for much of the day.

SIGNIFICANT WEATHER

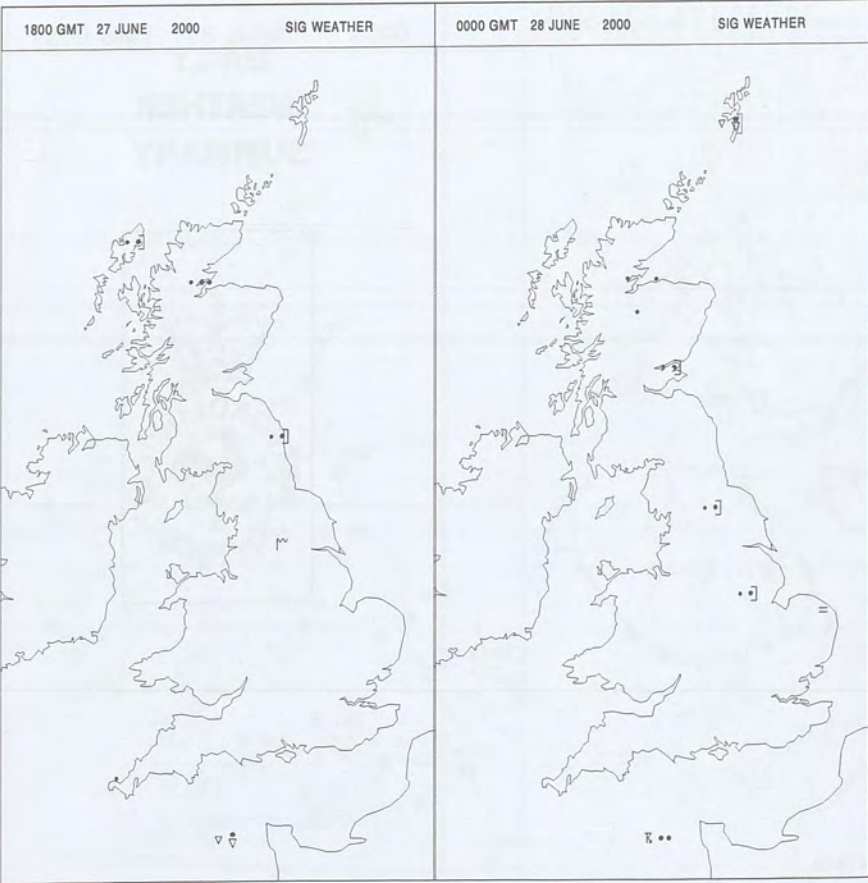

Summary of UK Weather for Tuesday 27 June 2000.

Northwesternmost parts of Scotland saw the odd shower overnight, but remaining areas had a dry night with variable amounts of cloud. It became misty in a number of places late in the night.

Scotland and Northern Ireland generally had a good deal of cloud through the day but also some sunny spells. On the whole it remained dry, although there were some showers across northern Scotland in the afternoon, and also during the evening.

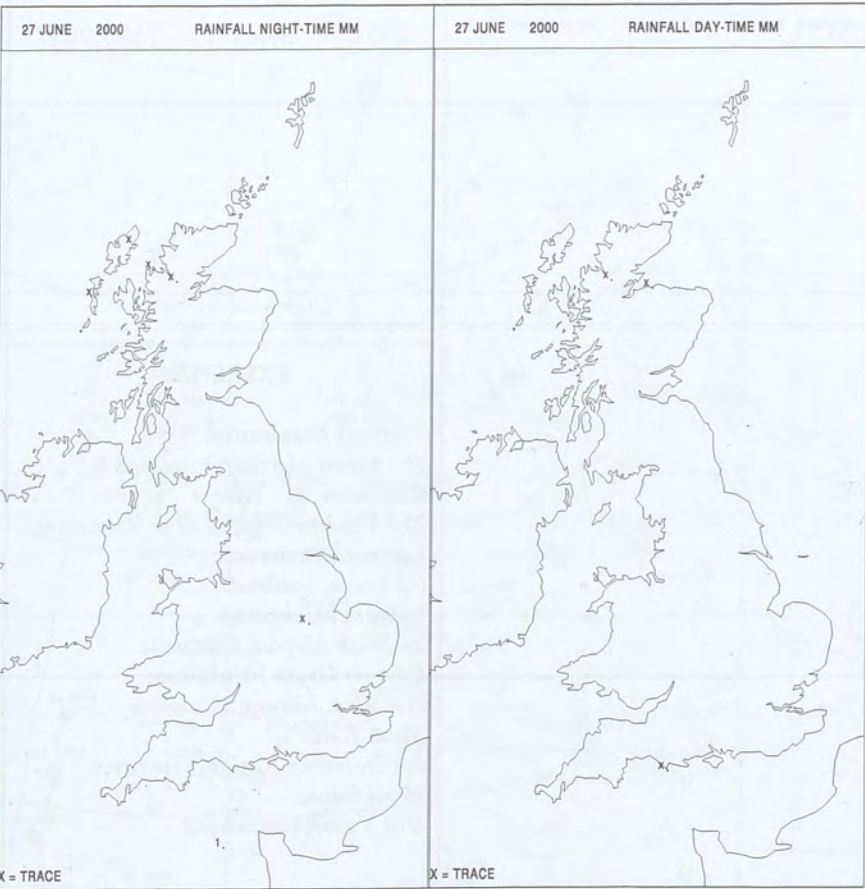

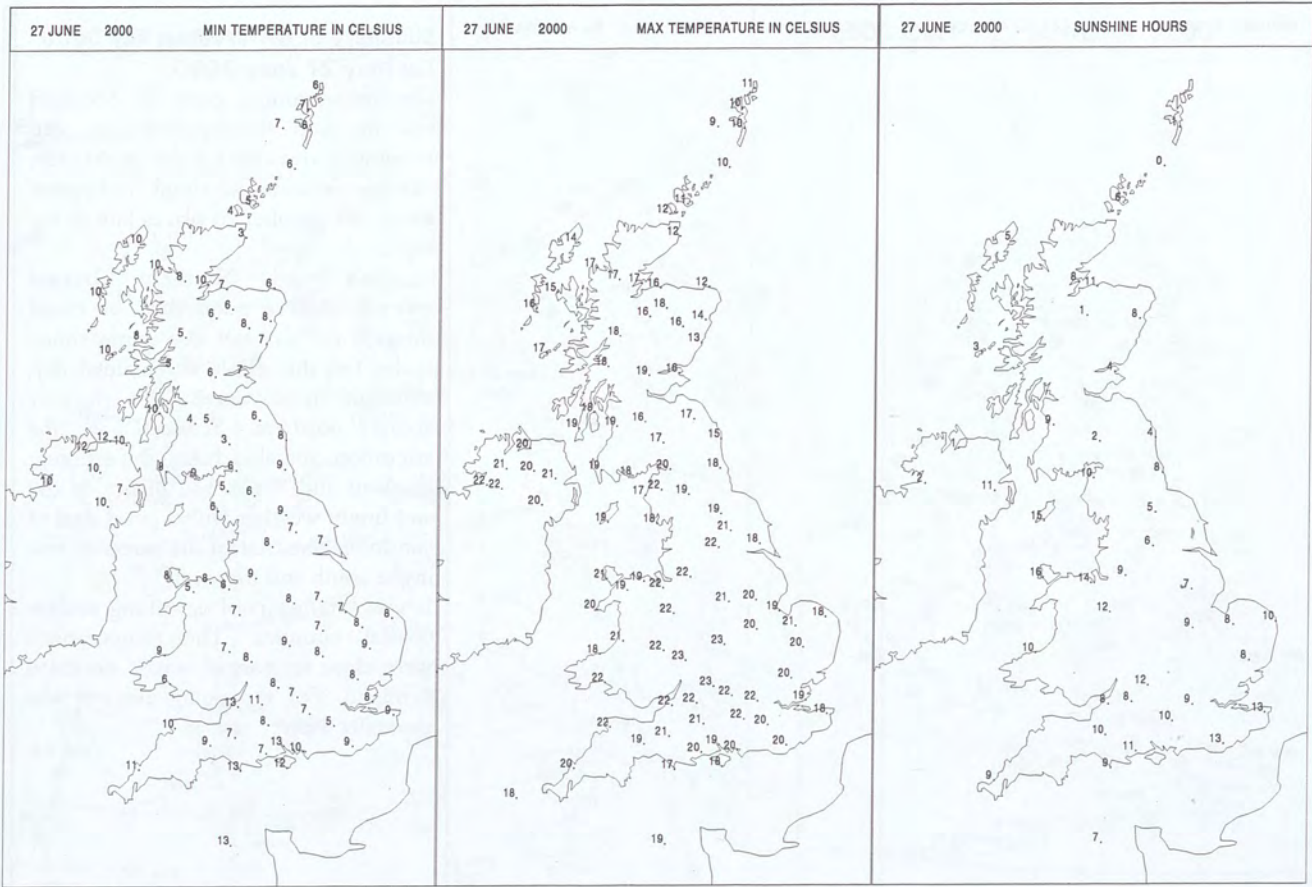

England and Wales had plenty of dry and bright weather with a good deal of sunshine. The best of the sunshine was in the south and the west.

It was a rather cool day along eastern coastal counties. The temperatures were close to normal across northern Scotland. For remaining areas it was generally warm.

SURFACE REPORTS

SIGNIFICANT WEATHER

Summary of UK Weather for Thursday 29 June 2000

Much of Scotland and Northern Ireland had a dry night with some clearer spells, but cloudier weather with light rain or drizzle affected the southern uplands and Orkney and Shetland. Wales and the West Country had a dry night, but outbreaks of rain affected remaining areas of England.

During the day the eastern half of Scotland was rather cloudy with light rain at times, but western Scotland and Northern Ireland had a dry day with spells of sunshine. Northern, eastern and southeastern England stayed rather cloudy with outbreaks of mainly light rain and fog was reported over the Pennines. Central southern and southwest England, together with much of Wales had a mostly dry day with spells of sunshine, although fog occurred around the southern coast of Cornwall.

During the evening an area of heavy showers developed over the south Midlands and southern England, with thunderstorms reported at Odiham and Heathrow. Elsewhere it remained fairly cloudy with outbreaks of rain or showers in places. Sea fog continued to affect the Cornish coasts.

Temperatures generally were around normal or on the warm side, but it was cool down the eastern side of England and Scotland and very cool over east Anglia.
