<p>0600 GMT 01 MARCH 2001 SIG WEATHER</p> 	<p>1200 GMT 01 MARCH 2001 SIG WEATHER</p> 	<p><b>Summary of UK Weather for Thursday 01 March 2001.</b>          Wintry conditions continued to persist, especially across the southeast corner of England which remained overcast during the early hours, with outbreaks of rain, sleet and snow. Elsewhere there was a mixture of clearer skies and scattered wintry showers, the showers mainly affecting northern and eastern parts of Scotland, the remaining east coast of England and western parts of Northern Ireland. Under the clearer skies it was frosty, severe in places, with the lowest temperature falling to -17.3 Celsius in Biggar ( South Lanarkshire ). During daylight hours, outbreaks of sleet and snow continued to affect areas to the east of the Wash to West Sussex, with scattered snow showers affecting other areas, except the Southwest of England and some western parts of Scotland that enjoyed mostly dry conditions. Snow showers were particularly persistent across the north and east of Scotland and down eastern coastal counties of England. After dark, snow showers continued to plague eastern areas of the United Kingdom especially, with remaining areas mostly dry and frosty.</p> <p>Temperatures remained subdued compared to early March averages, especially over snow covered areas.</p>

# SIGNIFICANT WEATHER

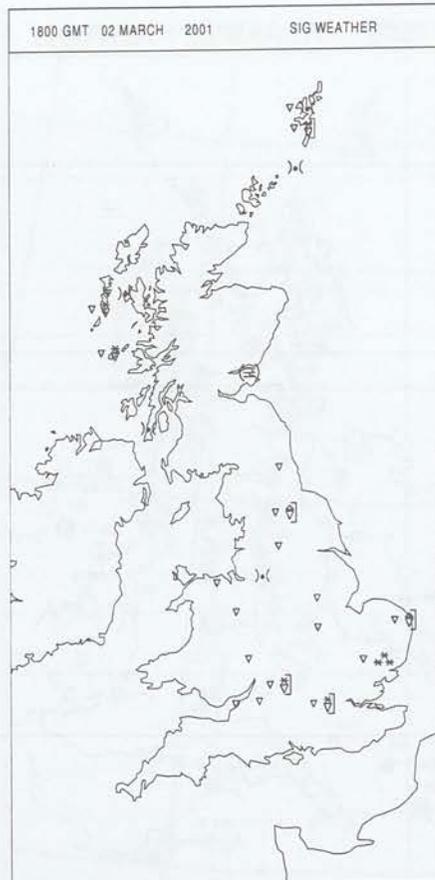

## Summary of UK Weather for Friday 02 March 2001.

It was a very cold and frosty night across the British Isles, with clear periods, patchy freezing fog and mainly coastal wintry showers. Some more general outbreaks of snow were however reported near to the east coast of England and into East Anglia. Carnwath, South Lanarkshire achieved its lowest March minimum on record, at -19.7C.

Wintry showers developed through the day near to the north and west coast of Scotland and Northern Ireland. Elsewhere across Northern Ireland and Scotland, much of Northern England, Wales and Southern and Western England, some snow showers developed, although there was a fair amount of sunshine between the showers. Snow showers also ran down the east coast of England and East Anglia saw locally significant snow falls.

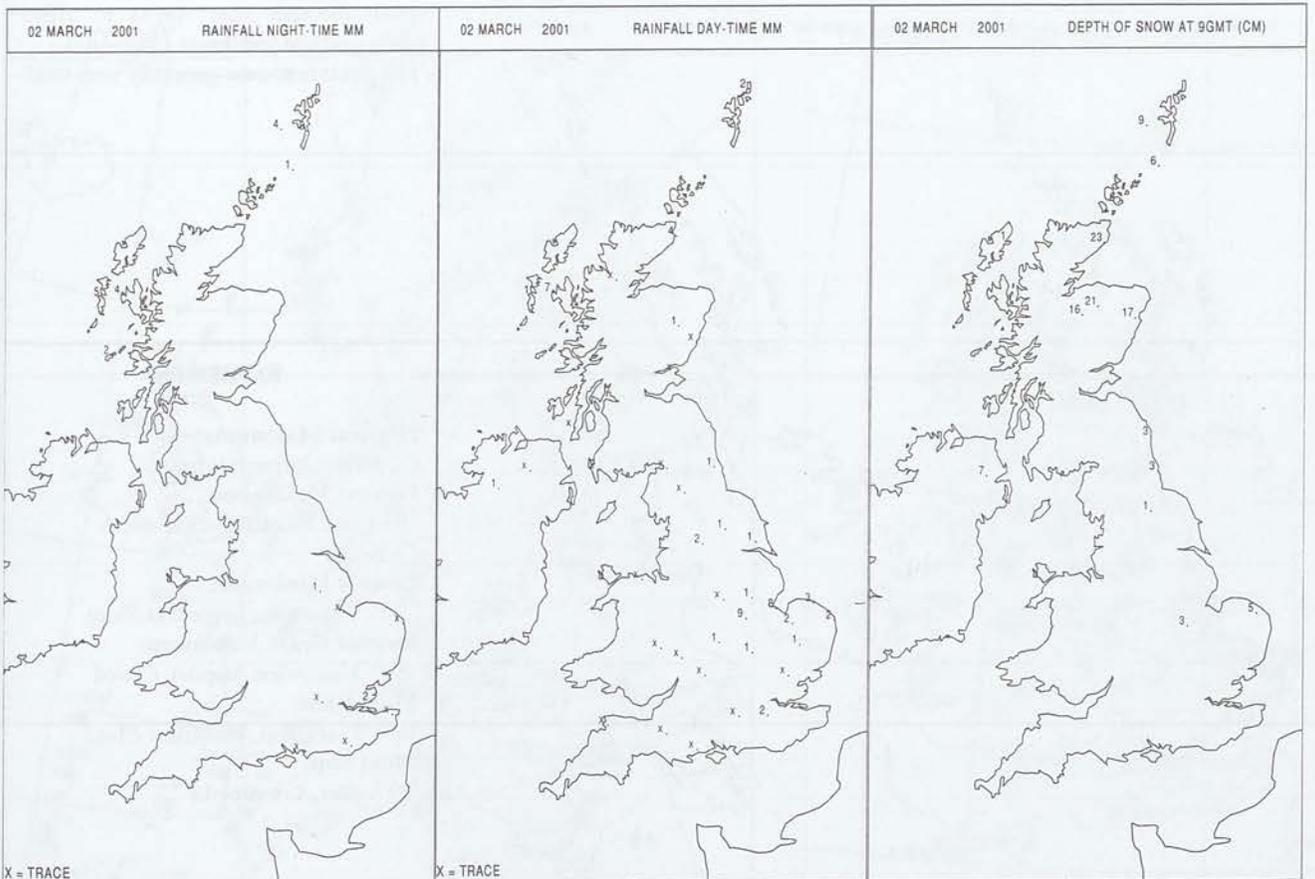

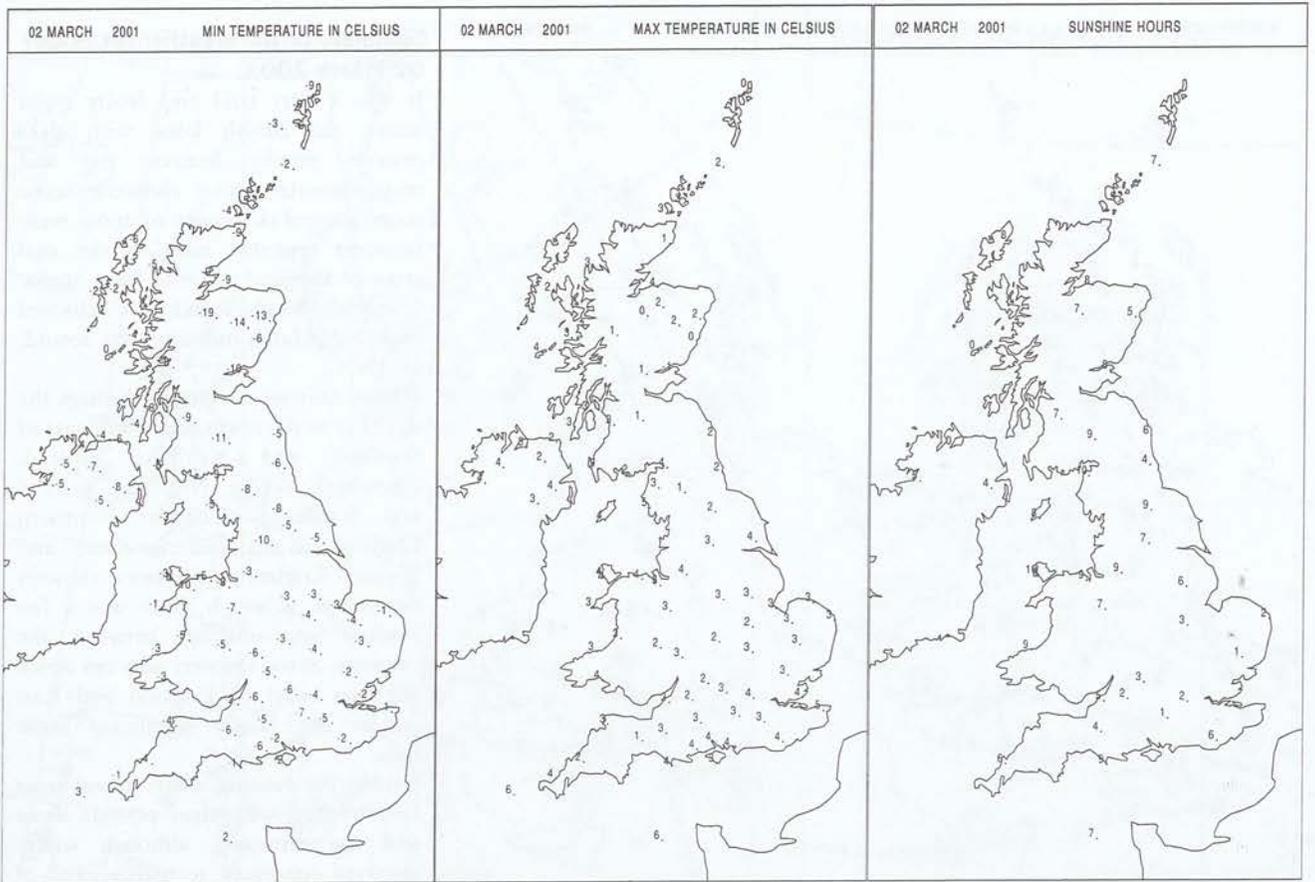

During the evening, many inland areas became dry, with clear periods, frost and fog returning, although wintry showers continued to affect parts of Northern Ireland, the west of Scotland, and parts of East Anglia. More general outbreaks of snow edged south through East Anglia to affect other parts of southeast England. Temperatures were generally very cold.

## EXTREMES

<p>0600 GMT 03 MARCH 2001 SIG WEATHER</p> 	<p>1200 GMT 03 MARCH 2001 SIG WEATHER</p> 	<p><b>Summary of UK Weather for Saturday 03 March 2001.</b>                  A band of snow fed across Essex towards the London area in the early hours but it subsequently collapsed south and died away. Elsewhere it was mostly dry, but cold and frosty, and once again some very cold temperatures were experienced in the glens of Scotland with minus 13 to minus 15 in a number of places but with below minus 20 in a couple of cold spots. The exception to the dry theme were a few wintry showers which affected western Scotland and fringed Northern Ireland and also those which blew across north Norfolk and into Lincolnshire. During the morning most of the wintry showers tended to die away with a fair amount of sunshine. In the afternoon the sunshine gave way to increasing cloud in the southwest with outbreaks of light rain and drizzle which pushed into the extreme southwest by late afternoon. In parts of the region this turned to sleet and snow and a spell of snow ensued in the Channel islands. Temperatures were mostly cold everywhere and in a few places were very cold.</p>

The former edged east along southern counties of England, but it was very patchy by dawn.          The morning saw further light sleet and snow across parts of southeast England (moderate for a time in Hampshire) and there were wintry showers in northwest Scotland, but elsewhere there was plenty of dry weather and there were some good sunny periods especially in the west and particularly at Anglesey where over 10 hours of sunshine was recorded. The wintry precipitation petered out in the southeast during the afternoon, but the cloud was reluctant to break in a number of places. A snow shower was observed in Norfolk, turning to rain later. The sleet and snow in northwest Scotland turned increasingly to rain, persistent and moderate in the Outer Hebrides and heavy later in Skye, and it was accompanied by strengthening southerly winds.</p>

# SIGNIFICANT WEATHER

**Summary of UK Weather for Monday 05 March 2001.**  
 The night was dry and frosty in southern parts of the UK with isolated freezing fog patches, but Scotland and Northern Ireland had more cloud and wind and there were outbreaks of occasionally moderate rain in the Hebrides, western Scotland and the northern isles.  
 Overnight fog patches cleared during the morning leaving England and Wales with a fine and dry day with a good deal of sunshine in most places, but coastal regions of East Anglia and Kent saw some cloud from time to time and there was patchy cloud across Cornwall and Devon. The cloud over Northern Ireland cleared giving some long spells of sunshine there, and there were sunny intervals in parts of eastern Scotland, but many western parts of Scotland remained cloudy for much of the day with further outbreaks of rain, these becoming increasingly confined to Highland and the Western Isles. Apart from light rain in Cornwall, there was little change during the evening.  
 Temperatures were generally near or a little above average, but it was mild in parts of north Wales, Yorkshire and southwest England.

# SIGNIFICANT WEATHER

**Summary of UK Weather for Tuesday 06 March 2001.**

Overnight, the border region of Scotland had freezing fog patches, while parts of West Wales found a little rain. Otherwise, the night was dry with just some mist in places.

By day, everywhere had a noticeable east or southeasterly wind, which reached gale force in parts of Southwest England, Wales and Scotland.

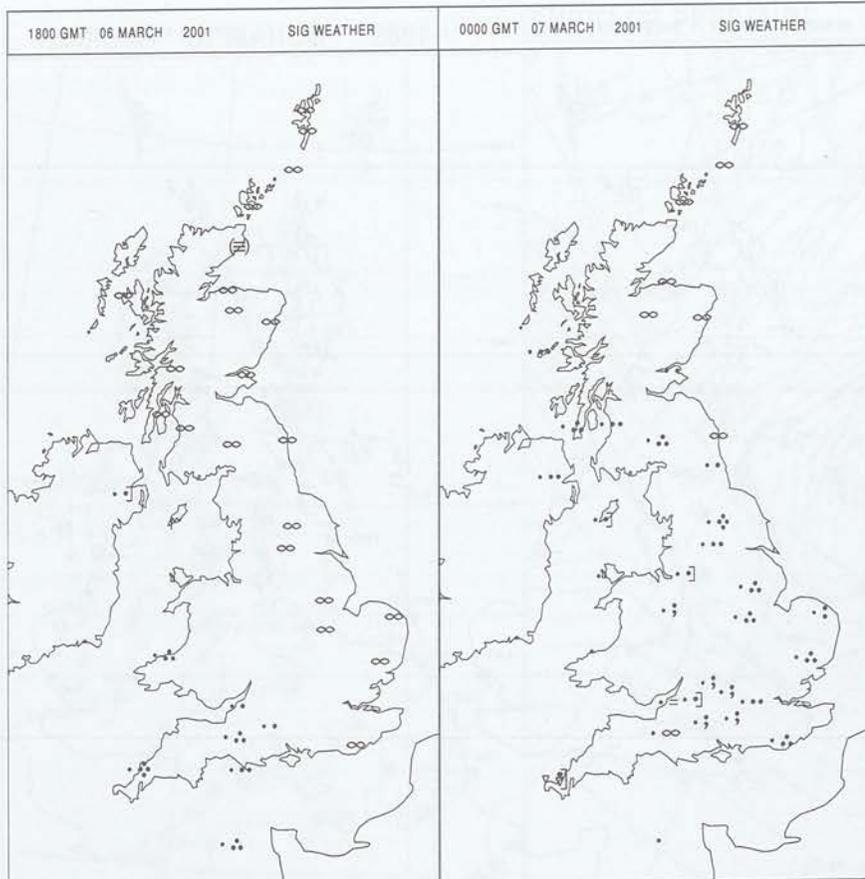

Scotland stayed dry with some sunshine, especially in parts of the north before the evening brought patchy rain into the west.

Over Northern Ireland, the day was largely dry, if mainly cloudy. Then, rain arrived in the evening and became heavy at times.

In Wales, there was some brightness and much of the day stayed dry, but from late afternoon onwards, rain worked its way in from the southwest and became heavy at times.

In England, much of the day was dry with some hazy sunshine, but the southwest turned wet by dusk and these outbreaks of heavy rain moved from the southwest to almost everywhere before midnight.

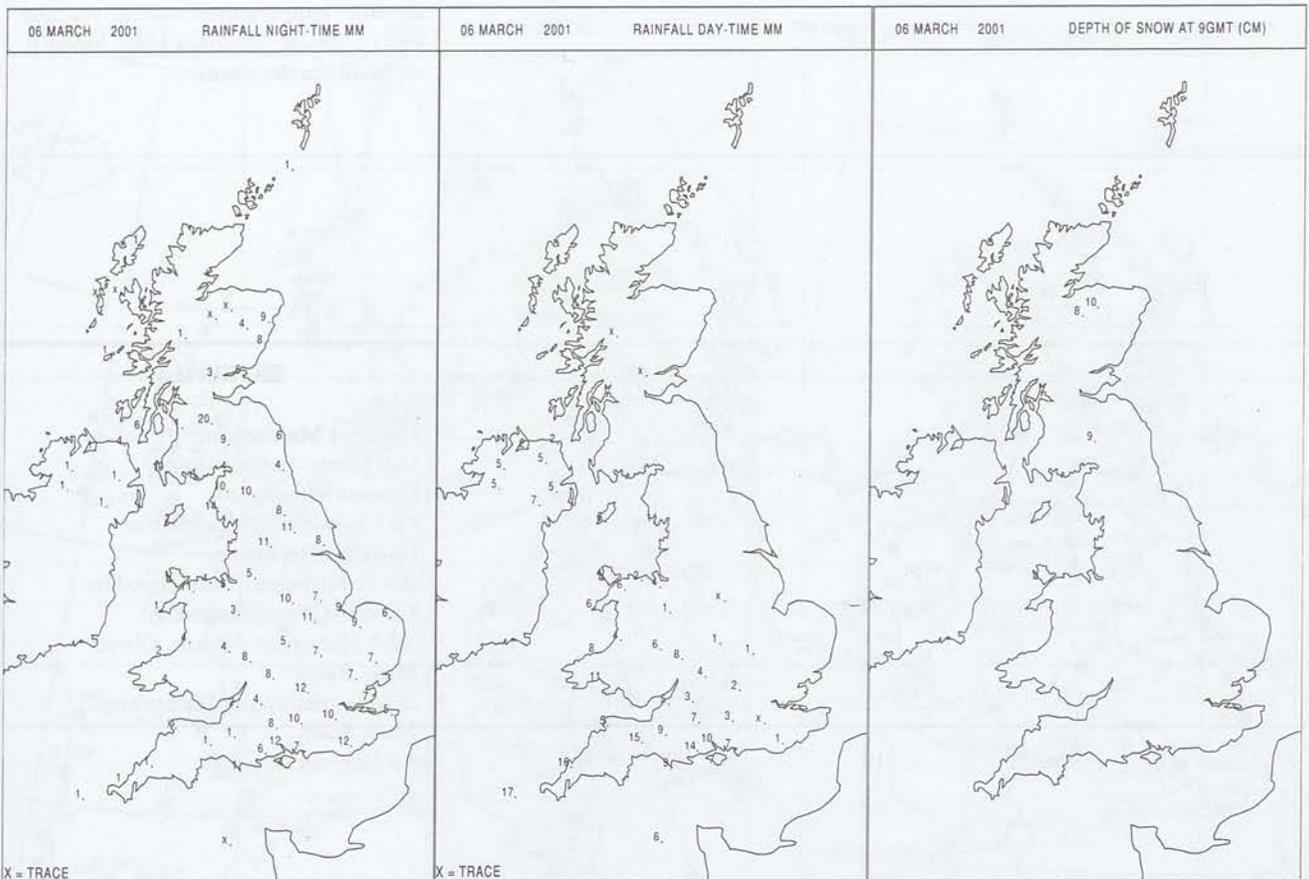

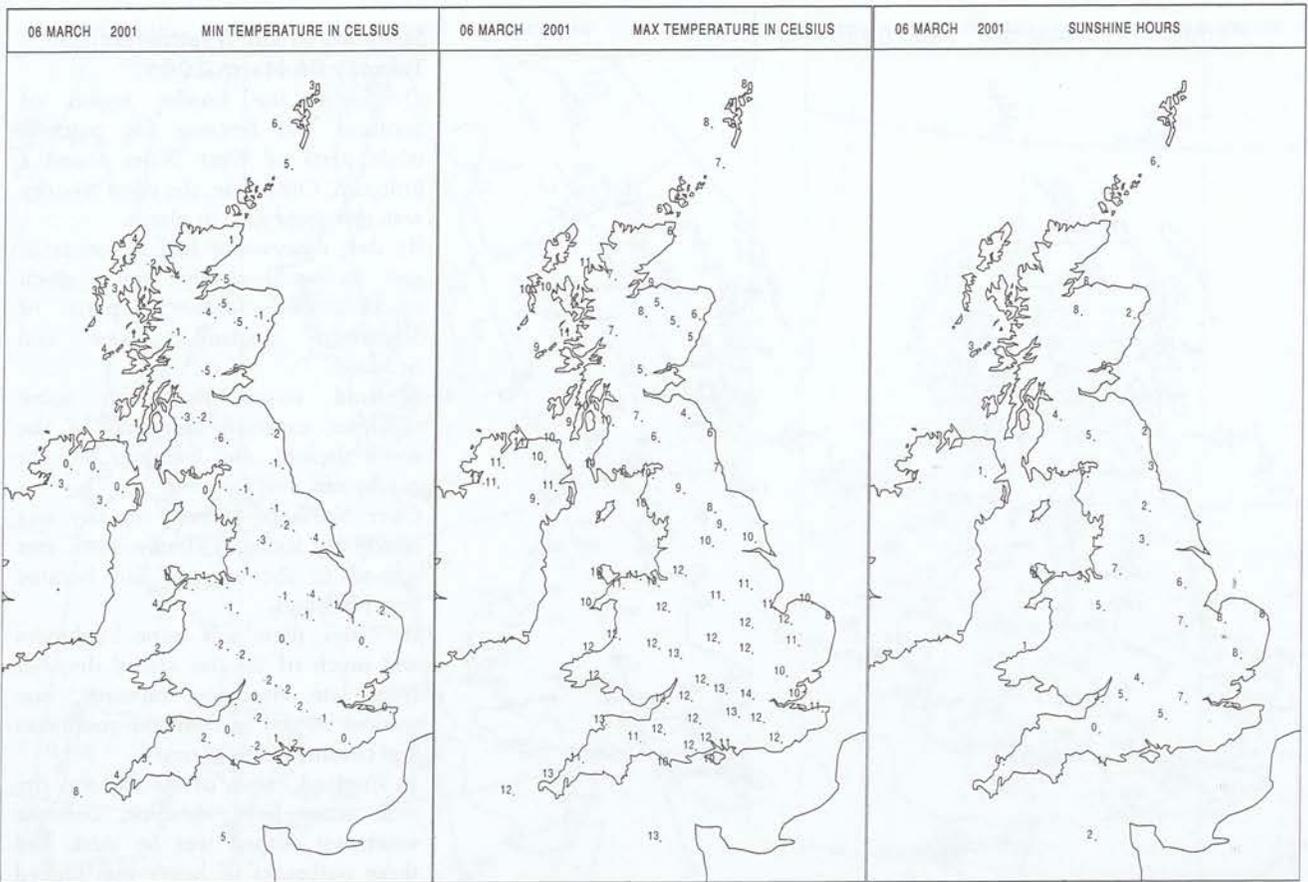

Although parts of the north were cold, daytime temperatures mostly reached or exceeded the seasonal normal, especially in the south.

## Summary of UK Weather for Thursday 08 March 2001.

Northern Ireland had a few showers early in the night and then clear periods. The Northern Isles had fog and low cloud, and there was a scattering of showers over the west and south of Scotland. Some fog patches formed over northeast England. The extreme southeast had rain around dawn. A few showers affected the Channel Islands but the rest of the United Kingdom had clear periods.

Northern Ireland had a bright morning, a cloudier afternoon and some rain in the evening. The Northern Isles had fog and some drizzle until evening. There were a few showers in the south of Scotland but many places were bright. Rain spread to the west in the evening.

Rain spread into southeast England and East Anglia in the morning and only slowly cleared north in the afternoon, reaching south Yorkshire by dusk. The rain had just cleared Norfolk by midnight. The Channel Islands had showers. Elsewhere it was bright. Further showers spread across Wales, the West Country and parts of the south coast in the evening.

It was mostly very mild.

## Summary of UK Weather for Sunday 11 March 2001.

Southern and central parts of Wales, together with southern Scotland saw outbreaks of rain overnight, but elsewhere it stayed mostly dry and fairly cloudy. Fog affected some coastal areas of Wales and southern England.

An area of rain spread into Northern Ireland during the morning, heavy at times, and this rain spread into southern Scotland during the afternoon. Rain also pushed into Devon and Somerset towards midday and spread across southern England and East Anglia during the afternoon. Eastern parts of England and Scotland saw the best of the morning sunshine, but it was northern Scotland that had the best of any afternoon sunshine.

By early evening the rain area in the north was still affecting the southern half of Scotland, but had finally cleared from Northern Ireland. Across England the rain was southeast of a line from Hull to Southampton. By late evening many parts of England and Wales had become dry with clearer spells, but showers started to develop in the west. Across Scotland the rain continued to push northwards, but the Borders area became mostly dry.

For much of the UK it was a mild or very mild day, but temperatures over Northern Ireland were around normal.

## Summary of UK Weather for Friday 16 March 2001.

Overnight the outbreaks of rain initially across much of Wales, the Midlands and East Anglia edged slowly north allowing drier and occasionally misty/foggy conditions to develop in southern England and south Wales. Northern parts of the UK were dry, apart from isolated wintry showers in Scotland.

During the morning there were further wintry showers in Scotland but also some lengthy sunny periods as well. The rain in more southern parts largely petered out, except near London where there was drizzle at times, and it remained generally cloudy. The afternoon saw further drizzle and light rain near the Thames Valley, this extending west into south Wales. Some heavier rain developed across Cornwall later in the afternoon and this extended northeast during the evening across much of southern England and south Wales. Elsewhere showers continued in the far north but remaining parts were mostly dry. A brisk northeasterly wind developed in the south.

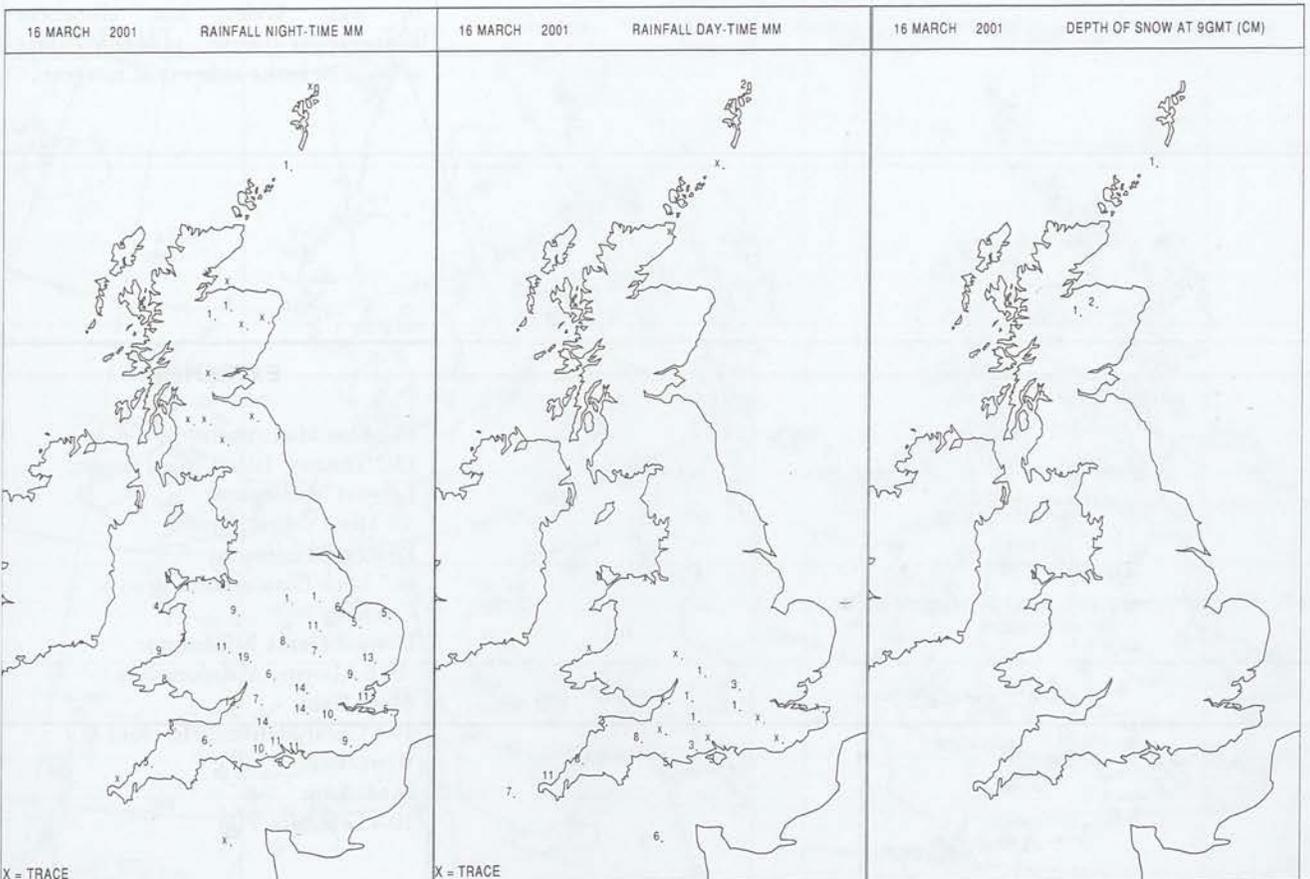

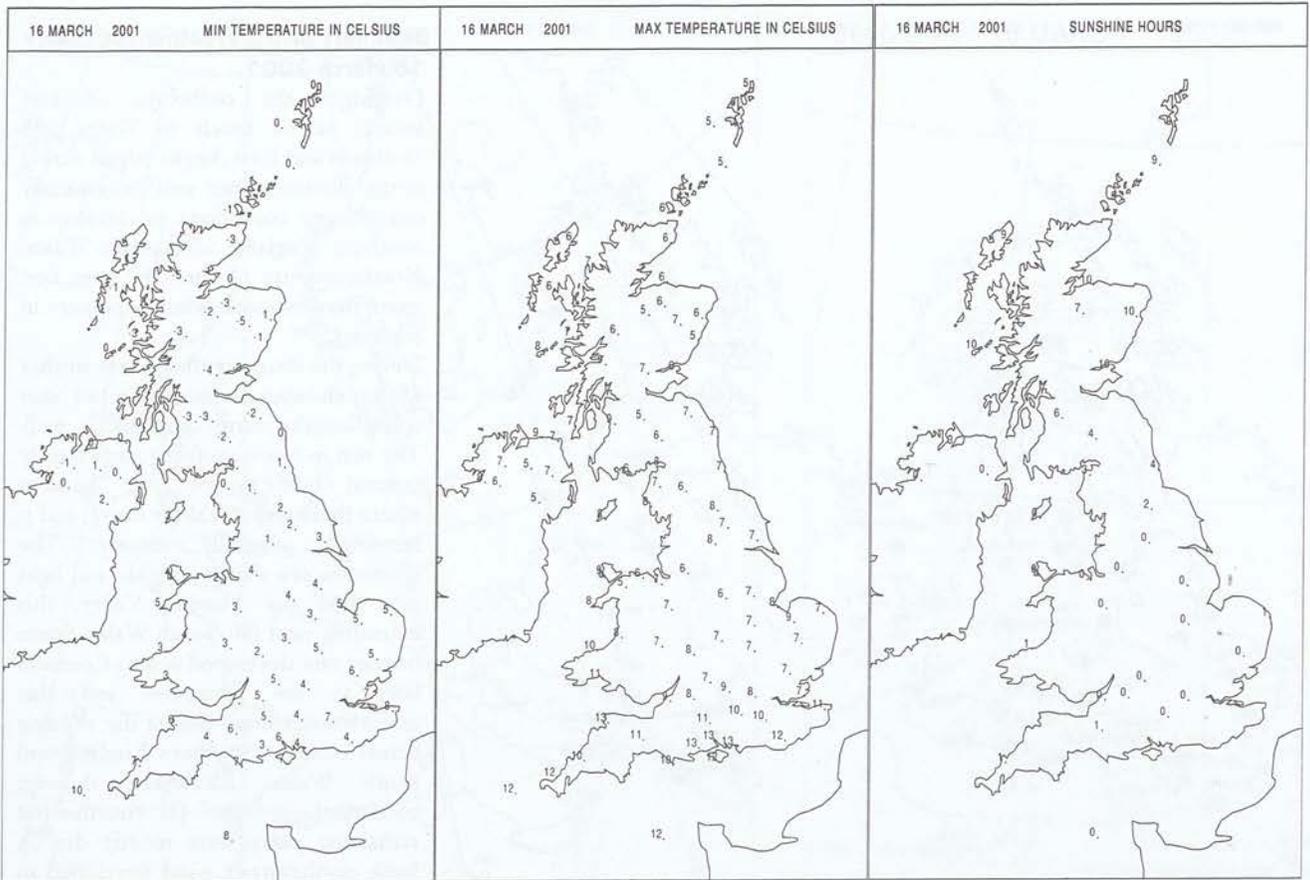

Rather warm conditions prevailed over the south coast of England and parts of west Wales, but elsewhere temperatures were generally near average or in the rather cold category.

# DAILY CLIMATE DATA

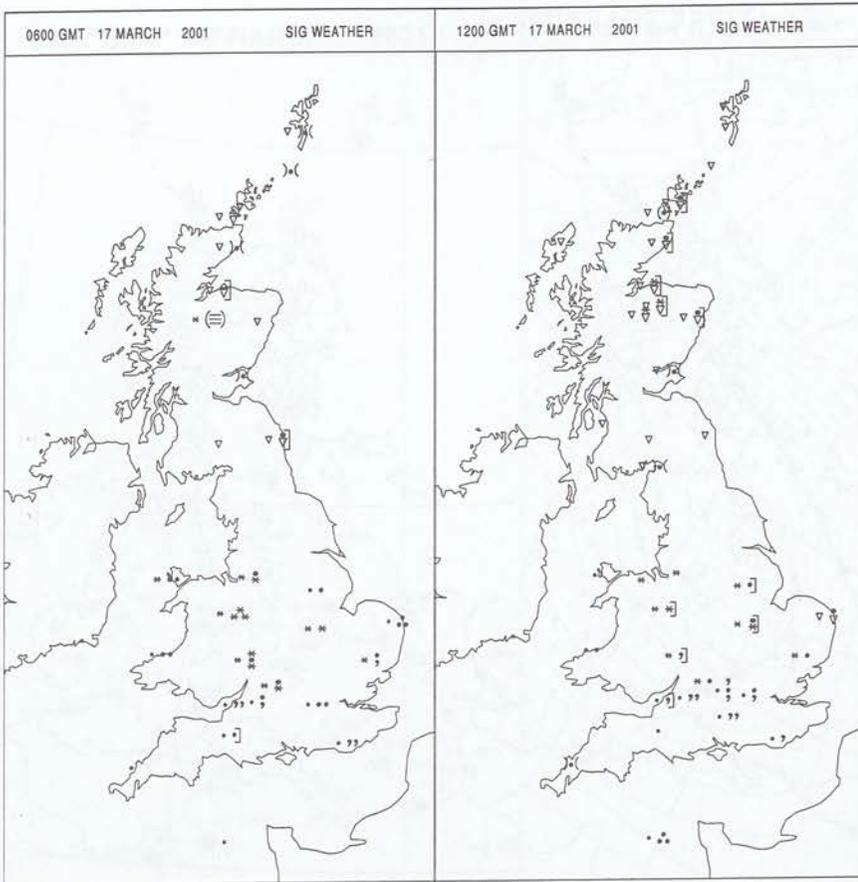

# DAILY WEATHER SUMMARY

# SURFACE REPORTS

# SIGNIFICANT WEATHER

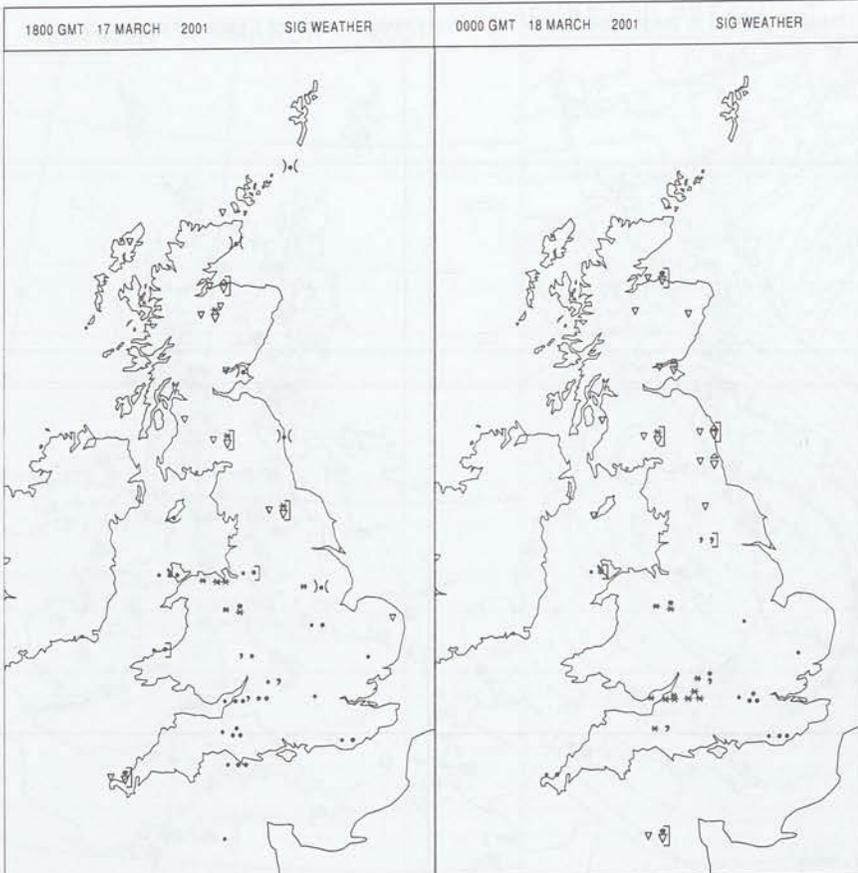

**Summary of UK Weather for Saturday 17 March 2001.**

The overnight period found northern parts of the UK with clear periods and wintry showers, these chiefly in north and east Scotland, but southern England and south Wales had a spell of wet weather with locally very heavy rain and thunderstorms. The band of rain edged north across East Anglia and the Midlands, turning increasingly to sleet and snow on its northern flank, especially the West Midlands.

By dawn the precipitation had reached a line from Manchester to Lincolnshire with outbreaks of sleet and snow from the Thames Valley northwards. There was little northward movement during the morning, but the precipitation turned less wintry. Conversely, wintry showers became extensive across Scotland and the northern counties of England, but Northern Ireland remained dry and sunny. The afternoon was dull and drizzly in the south, but the north was brighter although showery. Heavier rain edged across the south of England in the evening whilst the precipitation turned wintry across Wales and the west country.

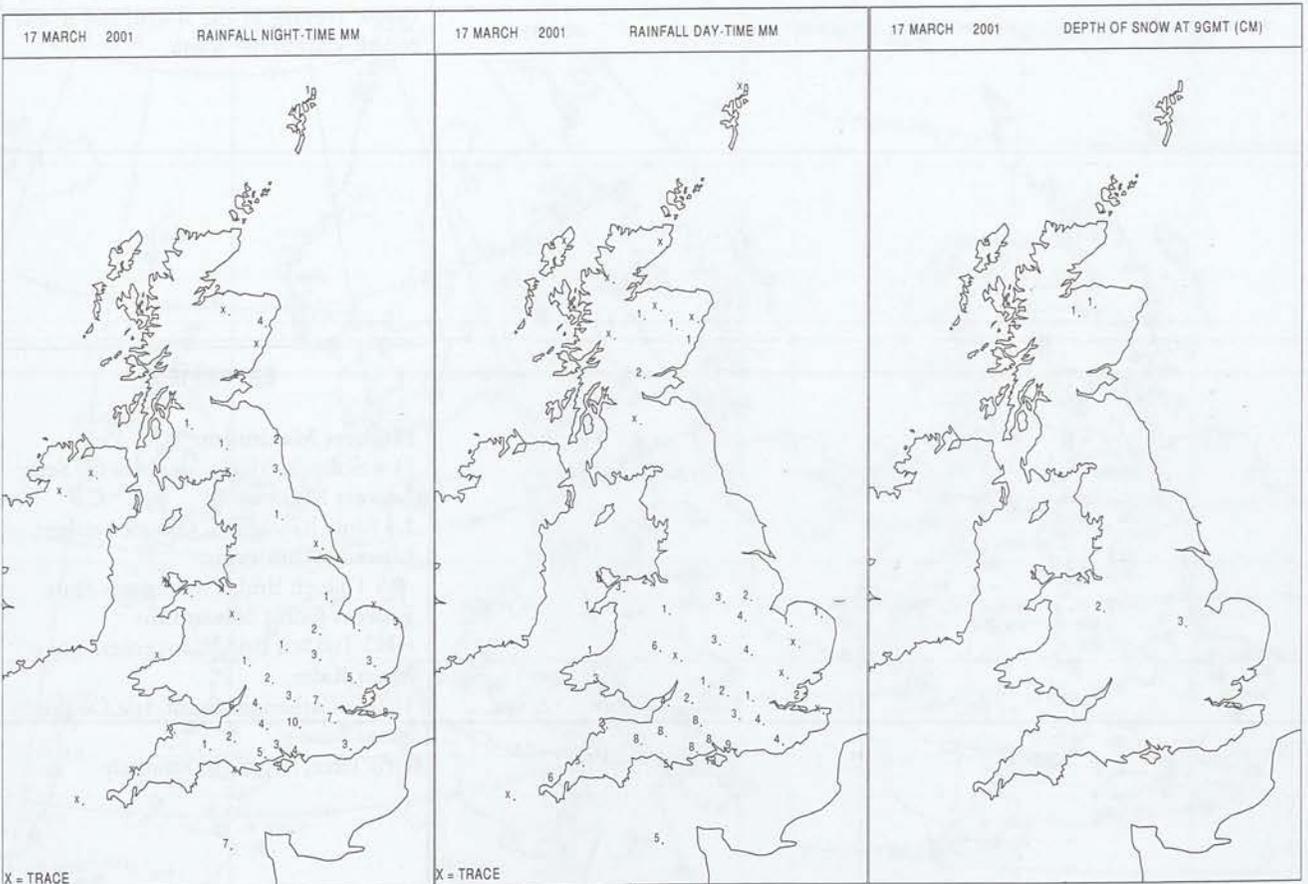

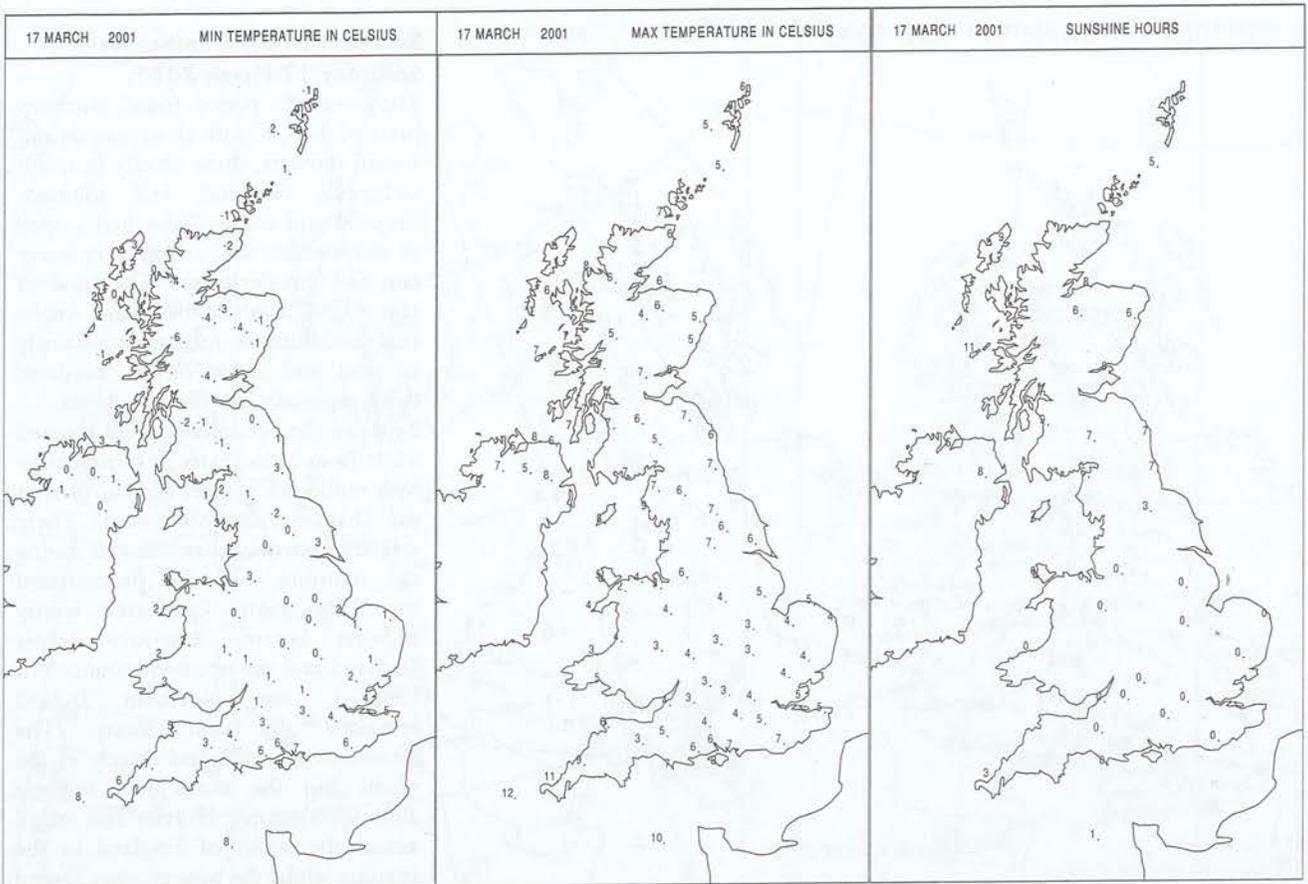

Temperatures were near or slightly below average in the north, but it was mostly cold in the south.

**Summary of UK Weather for Monday 19 March 2001.**

Overnight, the far Northeast of Scotland had some snow showers, but otherwise, Scotland, Wales and Northern Ireland stayed fine. In England, the night brought some patchy rain or snow to areas away from the southwest, before snow showers became confined to some eastern coastal areas by morning.

By day, much of Scotland stayed dry with plenty of sunshine, though Highland Region found one or two showers with hail reported from Aviemore in the afternoon. Meanwhile, Northern Ireland remained dry with a good deal of sunshine, albeit hazy at times, while across Wales, it also stayed dry with some hazy sunshine, although skies tended to turn more generally cloudy with time.

In England, apart from a few early snow showers near the East Coast, it was otherwise a mostly bright day in many places. However, the far Southwest started cloudy and some rain followed before this type of weather edged a little further eastwards during the afternoon and evening.

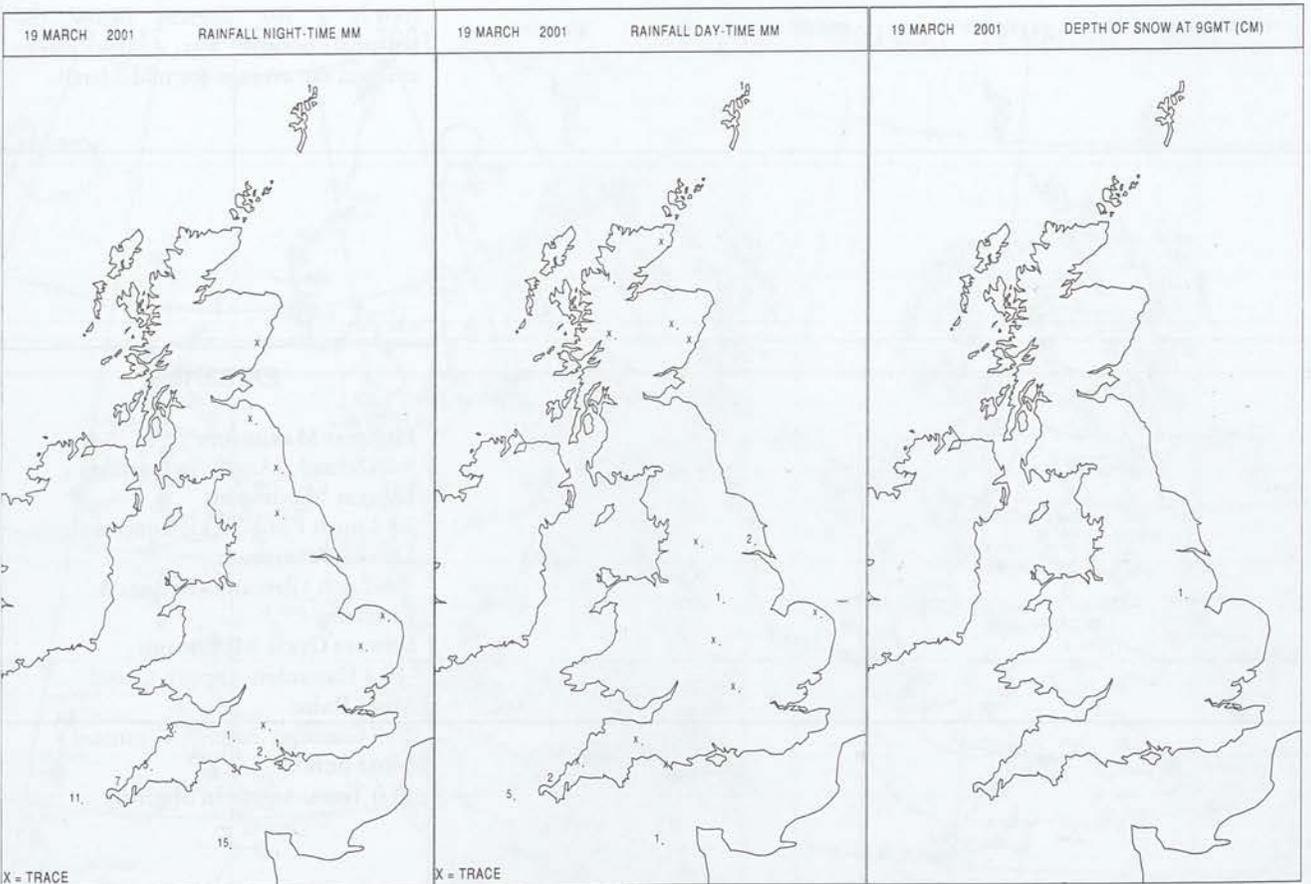

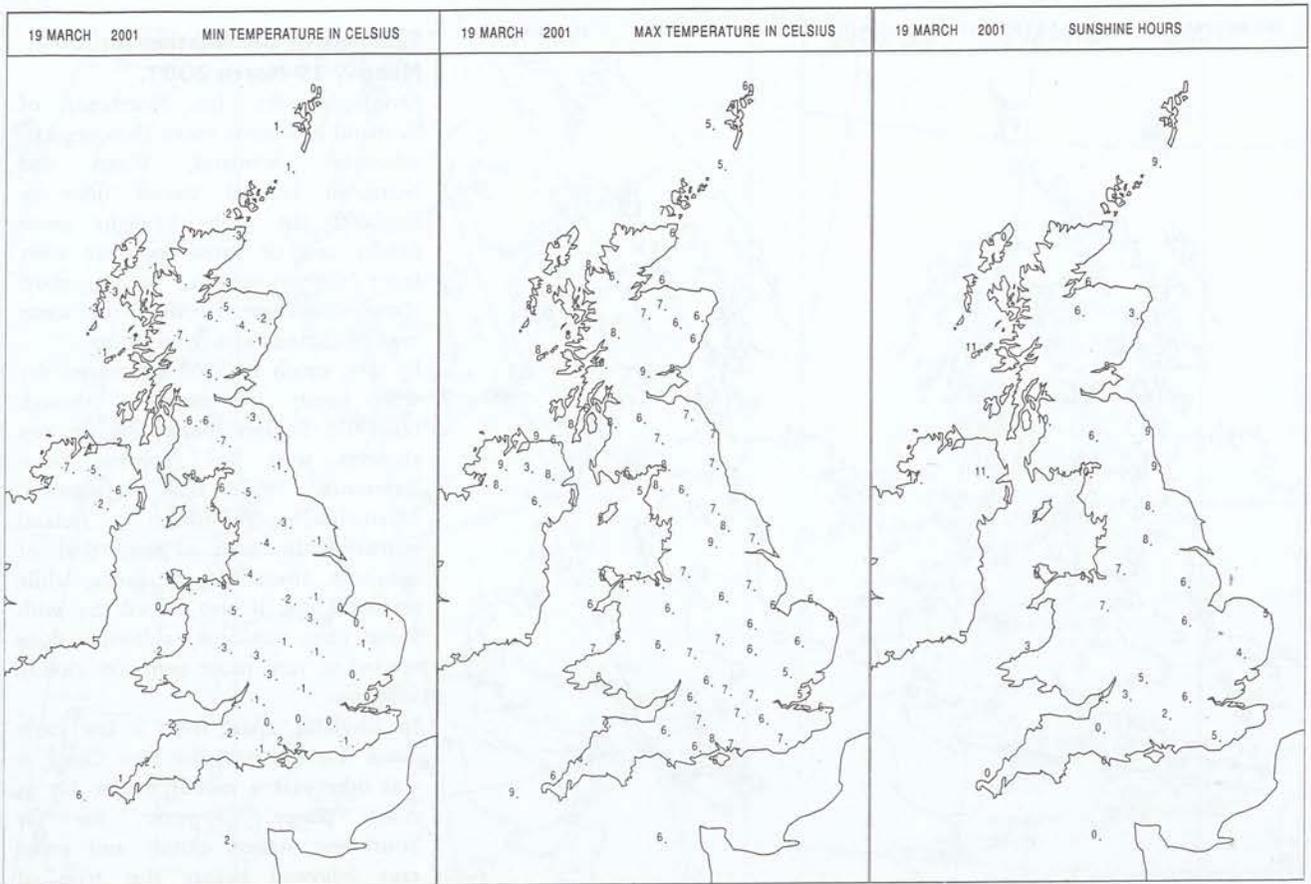

Temperatures countrywide were mostly a few degrees below the seasonal normal, but a few places reached the average for mid-March.

**Summary of UK Weather for Tuesday 20 March 2001.**

Overnight, Scotland, Northern Ireland and Wales remained dry. For England, the night brought some rain or drizzle to the southwest, but elsewhere it remained dry. By day, in Scotland, the Northern Isles found isolated snow showers, while the Edinburgh area had hail showers in the afternoon. Otherwise it was a day of sunny periods followed by a fine evening. Across Northern Ireland, there was plenty of hazy sunshine, but the day was perhaps most notable for strong biting easterly winds. In Wales, the easterly wind reached gale force in parts of the west and north. In North Wales, it stayed dry, but South Wales had rain near the Pembrokeshire coast with sleet or snow at times elsewhere, giving several centimetres of snow cover in places. In England, Southern Coastal Counties had some rain or snow, while other parts of the South and the Midlands found patchy sleet or snow moving northwards. Other regions stayed dry with northern areas having the best of the day's brightness. Temperatures countrywide were mostly near or below normal, but the Channel Islands was very mild.

# SIGNIFICANT WEATHER

## Summary of UK Weather for Friday 23 March 2001.

Overnight outbreaks of rain, with sleet and snow on hills, persisted across many parts of Scotland, especially in the east. The Northern Isles had scattered wintry showers. England, Wales and Northern Ireland were generally overcast and misty with hill and coastal fog. Patchy light rain and drizzle affected many areas with heavy and persistent rain spreading from the southwest across southern England and South Wales by morning.

Most places had a cloudy day. Rain, heavy at first across many southern areas, gradually became lighter and less extensive through the day though some lingered well into the evening. To the south of the rain the Channel Islands saw a good deal of sunshine. Northern England and Northern Ireland were rather cloudy, with any rain here light and well scattered with some long dry spells.

Southern and central Scotland saw some more persistent rain with snow on hills with the far north brighter with wintry showers.

Temperatures ranged from rather warm to warm in the far south, through near normal in central areas to rather cold or cold in parts of Scotland.

## EXTREMES

0600 GMT 27 MARCH 2001	1200 GMT 27 MARCH 2001	Summary of UK Weather for Tuesday 27 March 2001.
		<p>Overnight in Scotland, the far northeast had wintry showers, while in the southwest, sleet arrived. In Northern Ireland and Wales, the night brought outbreaks of rain. Over England, it was mainly dry, before rain reached the southwest and moved a little further northeastwards. By day in Scotland, the Outer Hebrides had a bright morning, but most places remained cloudy with outbreaks of rain, especially in the south and southwest. Northern Ireland was mainly wet with more northern and eastern areas having quite heavy rain. Across Wales, occasional rain also turned quite heavy at times, but clearer, showery weather moved from the southwest in the afternoon. In England, outbreaks of rain moved up from the southwest, though not reaching parts of the Northeast and East Anglia until evening. Clearer showery weather reached the southwest before midday before extending as far as the Midlands and East Anglia. Some showers turned heavy with Bridport in Dorset reporting a sudden gust to 102 mph (89 knots) at 1933 BST. Over most regions, temperatures were near normal, although parts of the north stayed cold.</p>
