## INTERNATIONAL "SELECTED SHIPS" ROUTINE WIRELESS WEATHER REPORTS.

In accordance with Article 35 of the International Convention for Safety of Life at Sea, incorporated in the Merchant Shipping (Safety and Load Line Conventions) Act, 1932, it is intended that a certain limited number of ships, called "Selected Ships," of all nations party to the Convention shall voluntarily transmit meteorological observations by wireless telegraphy for the benefit of other ships and the various meteorological services. The messages will be in the new International Ships' Wireless Weather Telegraphy Code.

The number of "Selected Ships" of any nation which transmit observations under this scheme is to be in accordance with that nation's proportion of the World's tonnage, steam and motor, of vessels of over 100 tons.

The number of messages required for this service is comparatively small, if efficiently organized; but if not efficiently organized and limited, past experience has proved that the result is congestion of communication, wasted energy, expense, and consequent loss of efficiency.

The transmission of the messages in all parts of the world in a universal code, containing only essential information, is vital to the success of the scheme.

Before a definite schedule of times of observation and transmission of messages is adopted for international use, the British Meteorological Office has undertaken to make a trial of the schedule given below, and this commenced on 1st May, 1930. From that date the scheme outlined in the following pages has been worked by British "Selected Ships." It is based on the experience of British "Selected Ships" during the past few years in all parts of the world; and all concerned are asked to contribute towards the success of the scheme, "Selected Ships" by adhering to the schedule for communication, and other ships by listening for the messages at the specified times.

The instructions to ships detailed as "Selected Ships" in this voluntary system are published yearly in the January number of the "Marine Observer."

The names of British "Selected Ships" for the time being, are given quarterly in the "Marine Observer," (and corrected by monthly Supplements) published by H.M. Stationery Office, price 4s. (4s. 3d. post free). Annual subscription (including Supplements) 23s.

### Scheme for British "Selected Ships" Routine Wireless Weather Reports.

This scheme provides on a voluntary basis a system by which "Selected Ships" when at sea make meteorological observations at fixed times G.M.T., and subsequently report these observations at fixed times G.M.T. to certain coast stations and to all ships.

There are two main classes of "Selected Ships" which operate this scheme. They are chosen from those ships in the Voluntary Observing Fleet List of the Meteorological Office, according to their

sailing schedules and trade, to provide suitable geographical distribution; according to their wireless equipment to ensure efficient communication; and according to the keenness of their officers for this voluntary work.

The two classes of "Selected Ships" are:—

"A Selected Ships."—Ships fitted with long range, Type A1 (C.W.) apparatus, mostly mail liners, sailing and arriving on dates fixed by their mail contracts. These ships address their reports to an appropriate shore station, using the wave length allotted to that station, Berne and all concerned having been notified that such reports may be intercepted and used by all ships.

"B Selected Ships."—Ships fitted with short range A2 (I.C.W.) or Type B (Spark) apparatus. These include many passenger and cargo liners sailing according to an advertised programme, also a number of cargo vessels whose movements are irregular. These ships address their reports to C.Q. (All Ships) using the wave length 600 metres spark, shore stations within range intercepting them as required.

### Times of Observations.

The standard times of observation in all parts of the world are 0, 6, 12 and 18 hours G.M.T.

Many "Selected Ships," both "A" and "B" have only one officer in each watch, and these ships have been asked to record routine observations only at the fixed times which fall during daylight hours.

The schedule for communication given below is for the two observations per day which generally fall during daylight in the respective zones; but ships which carry two watch-keeping officers for each watch have been asked to record and report observations at all four observation times in certain zones, those observations made at the times not given in the schedule being transmitted as soon as possible, but always after the next S.O.S. period of silence.

### Schedule for Communication.

"Selected Ships" generally record and transmit their observations in accordance with the following schedule. This schedule gives the times (G.M.T.) of observation according to zone and the times (G.M.T.) of the commencement of periods for transmission of these observations. The times of transmission are based on the established periods of wireless operator watches. It should be noted that they follow immediately the S.O.S. three-minute period of silence.

## Schedule.

All times are G.M.T.

Zones between Greenwich Meridians.	FIRST WEATHER REPORT.			SECOND WEATHER REPORT.		
	Times of observations.	Times of reporting by Type A1 (C.W.) Ships.	Times of broadcasting by Type A2 (I.C.W.) and Type B (Spark) Ships.	Times of observations.	Times of reporting by Type A1 (C.W.) Ships.	Times of broadcasting by Type A2 (I.C.W.) and Type B (Spark) Ships.
30°W.—30°E. ...	0600	{ 0618 } { 0818 }	0830	1200	1218	1230
30°E.—80°E. ...	0600	{ 0618 } { 0818 }	0630 } 0830 }	1200	1218	1230
80°E.—160°E. ...	0000	0018	0030	0600	{ 0618 } { 0818 }	0830
160°E.—140°W.	0000	0018	0030	1800	{ 1818 } { 2018 }	2030
140°W.—70°W.	0000	0018	0030	1800	{ 1818 } { 2018 }	1830 } 2030 }
70°W.—30°W.	1200	1218	1230	1800	{ 1818 } { 2018 }	2030

It will be seen that against some of the observation times, there are two times of commencement of periods for transmitting. The second of these times is when single operator ships will report, as they will not be keeping wireless watch following the observation hour. In those "Selected Ships" which carry two or three operators, the earlier periods for transmission will be used; and they will also repeat at the second period for the benefit of ships carrying only one operator, the second or repeated message being addressed to C.Q.

## Control of Reports in Congested Areas.

In those parts of the world where there is congestion "A Selected Ships" work to the above schedule under the control of specified coast wireless stations.

In these areas, where there are at times more selected ships than are necessary to supply the number and distribution of reports required, the "A Selected Ships" from whom reports are desired, and whose approximate position is known, are informed in what order to report.

*At present* the Eastern North Atlantic is the only area so scheduled under this scheme as a congested area, and reports from "A Selected Ships" in this area are controlled by the British receiving station at Portishead (Lat. 51° 28' 41" N., Long. 2° 47' 30" W.). Portishead is notified daily by the Meteorological Office, London, of the names of the "A Selected Ships" from whom reports are desired; and the station calls up those ships at 2230 G.M.T., 0330 G.M.T. and 1030 G.M.T. and indicates the order in which they should make their reports and to which stations. In such congested areas "B Selected Ships" should not broadcast these reports, except in cases of urgency.

## Shore Stations Detailed to Receive the Reports.

The list of shore stations in different parts of the world detailed to receive reports from "A Selected Ships" and a list of stations detailed to intercept reports from "B Selected Ships" is published in the "Marine Observer," brought up to date each quarter.

## Procedure for A Selected Ships in parts of the world where there are not Shore Stations detailed to receive reports on long wave long range C.W.

In parts of the world where stations are not detailed to receive reports from "A Selected Ships," "A Selected Ships" should broadcast their reports at scheduled times on 2,100 metres wave length.

## Decoding of Ships' Wireless Weather Reports.

Any ship intercepting a wireless message from a "Selected Ship" commencing "C.Q. Weather" or "Weather London" or preceded by the word "Weather," containing numbers in five-figure-groups, may decode the message according to the new International Code.

The messages will be in one of the two following forms:—

## Key Letters.

(1) PQLLL 111GG DDF<sub>ww</sub> BBVTT 3C<sub>L</sub>C<sub>M</sub>C<sub>H</sub>N t<sub>d</sub>KdWN<sub>L</sub>  
d<sub>s</sub>fabb.

(2) PQLLL 111GG DDF<sub>ww</sub> BBVTT 6KdCN t<sub>d</sub>sAWC<sub>H</sub>.

The meaning of the symbols is given in the key below, in which they are arranged alphabetically. The message as received will consist of five-figure groups, the first two of which refer to Day, Position and Time, the remaining groups giving the meteorological elements observed. It will be seen by reference to the key to the symbol letters that while in many cases a single figure suffices to express a meteorological element, in some cases two figures are required, for example in the case of barometric pressure. Latitude and longitude, in the first two groups, each require three figures. The figures in a group are always in the same sequence, denoted by the symbols of the specimen forms given above.

In both forms of message the first four groups are identical; these are termed the universal groups and are never omitted. A message in form No. 1 contains supplementary groups, distinguished by the figure 3 at the beginning of the fifth group. A message in form No. 2 contains supplementary groups distinguished by the figure 6 at the beginning of the fifth group. A message may be shortened by the omission of the last group or groups, but the order of the groups will always be maintained, and the form of the message after the first four groups can always be identified by the first figure of the fifth group. The number of groups in a message is thus never less than four nor more than seven.

## Navigational Information.

Information of observed set and drift of Current, Ice, and Navigational Dangers may be added after the figure groups, as necessary, in plain language.

A = Amount and characteristic of barometric tendency expressed by a single figure. (*See* Table IX.)

a = Characteristic of barometric tendency during the period of three hours preceding the time of observation. (*See* Table X.)

BB = Pressure in whole millibars (initial 9 or 10 omitted). The values refer to sea level and include all corrections for index error, temperature and gravity. (*See* Table VIII.)

bb = Amount of barometric tendency during the three hours preceding the time of observation expressed in units of 1/5th of a millibar. (*See* Table XI.)

C = Form of predominating cloud. (*See* Table XVI.)

C<sub>H</sub> = Form of Upper (Cirrus) Cloud. (*See* Table XV.)

C<sub>L</sub> = Form of Low Cloud. (*See* Table XIII.)

C<sub>M</sub> = Form of Middle Cloud. (*See* Table XIV.)

DD = Direction of the wind (True) near the surface. (*See* Table III.)

d = Direction (True) from which swell comes. (*See* Table IV.)

d<sub>s</sub> = Direction of Ship's course on scale (0-8). (*See* Table IV.)

F = Force of the wind on the Beaufort Scale. (Forces above 9 are reported as 9, with the actual force in a word at the end.) (*See* Table V.)

f = Speed of ship in knots. (*See* Table XX.)

GG = Greenwich Mean Time of observation (06 = 6 a.m., 12 = noon, &c.).

K = Swell in the open sea. (*See* Table XIX.)

LL = Latitude in degrees and tenths, the tenths being obtained by dividing the number of minutes by 6 and neglecting the remainder.

lll = Longitude in degrees and tenths, the tenths being obtained as for latitude LLL.

N = Total amount of sky covered with cloud. (*See* Table XVII.)

N<sub>L</sub> = Amount of Low Cloud. (*See* Table XVII.)

P = Day of the week. (*See* Table I.)

Q = Octant of globe in which ship is situated. (*See* Table II.)

TT = Temperature of the air in whole degrees Fahrenheit.

t<sub>a</sub> = Difference between Air and Sea Temperature. (*See* Table XVIII.)

V = Visibility or distance at which objects can be seen in daylight (or at which lights can be seen at night). (*See* Table XII.)

W = Past weather—the weather in the interval preceding the time of observation. (*See* Table VII.)

ww = The actual weather at the time of observation. (*See* Table VI.)

Write the figures of the messages in the order received down the column, taking great care to put the first figure of the fifth group in its proper place, so that the supplementary groups may be correctly decoded.

57	957	28.26	92	992	29.29						
58	958	28.29	93	993	29.32						
59	959	28.32	94	994	29.35						

NOTE.—It will be seen that the code figures may represent two values of barometric pressure, but this only takes place with a very high or a very low barometer, so that recipients of a message will be able to decide which value is intended.

Table IX.

Code Figure.	A.—Barometric Tendency.
0	Barometer steady. (The barometer has not fallen or risen more than $\frac{1}{2}$ millibar in 3 hours.)
1	Barometer rising slowly. (The barometer has risen 1 to $1\frac{1}{2}$ millibars (.03-.04 in.) in last 3 hours.)
2	Barometer rising. (The barometer has risen 2 to $3\frac{1}{2}$ millibars (.06-.10 in.) in last 3 hours.)
3	Barometer rising quickly. (The barometer has risen 4 to 6 millibars (.12-.18 in.) in last 3 hours.)
4	Barometer rising very rapidly. (The barometer has risen over 6 millibars (.18 in.) in last 3 hours.)
5	Barometer falling slowly. (The barometer has fallen 1 to $1\frac{1}{2}$ millibars (.03-.04 in.) in last 3 hours.)
6	Barometer falling. (The barometer has fallen 2 to $3\frac{1}{2}$ millibars (.06-.10 in.) in last 3 hours.)
7	Barometer falling quickly. (The barometer has fallen 4 to 6 millibars (.12-.18 in.) in last 3 hours.)
8	Barometer falling very rapidly. (The barometer has fallen over 6 millibars (.18 in.) in last 3 hours.)

## Barograph.

Table X.

a.—Characteristic of changes of the Barometer in the last three hours.

(Adapted for British Ships.)

Code Figure.	Description of Changes.	
0	Barometer rising at first, then falling by a smaller or like amount.	Net result, Barometer same or higher
1	Barometer rising at first, then steady or rising less quickly.	
2	Barometer unsteady; but generally rising or stationary.	
3	Barometer steady or rising.	
4	Barometer falling or steady at first, then rising by the same or larger amount.	Net result, Barometer lower.
5	Barometer rising, at an increasing rate.	
6	Barometer falling at first, then rising by a smaller amount.	
7	Barometer falling at first, then steady or falling less quickly.	
8	Barometer unsteady, but falling.	Net result, Barometer lower.
9	Barometer falling.	
	Barometer steady or rising at first, then falling by a larger amount.	
	Barometer falling, at an increasing rate.	

NOTE.—These changes are generally only given by ships which have special barographs on board.

For illustration of these characteristic changes and guidance, see MARINE OBSERVERS' HANDBOOK, 5TH EDITION.

Table XI.

bb.—Amount of Rise or Fall of the Barometer in the last three hours.  
(In fifths of Millibars.)

## Visibility.

Table XII.

Code  
Figure.

## V.—Visibility.

- 0 Dense fog. Objects not visible at 50 yards.
- 1 Thick fog. Objects not visible at 1 cable.
- 2 Fog. Objects not visible at 2 cables.
- 3 Moderate fog. Objects not visible at  $\frac{1}{2}$  mile (nautical).
- 4 Mist or haze, or very poor visibility. Objects not visible at 1 mile (nautical).
- 5 Poor visibility. Objects not visible at 2 miles (nautical).
- 6 Moderate visibility. Objects not visible at 5 miles (nautical).
- 7 Good visibility. Objects not visible at 10 miles (nautical).
- 8 Very good visibility. Objects not visible at 30 miles (nautical).
- 9 Excellent visibility. Objects visible at more than 30 miles (nautical).

## Clouds.

Table XIII.

CL.—Form of Low Cloud.

Code  
Figure.

## Form of Cloud.

- 0 No low clouds.
- 1 Cumulus of fine weather.
- 2 Cumulus (Large, without anvil).
- 3 Cumulo-Nimbus.
- 4 Strato-Cumulus (spread from Cumulus).
- 5 Stratus or Strato-Cumulus (in layer).
- 6 Nimbus.
- 7 Cumulus and Strato-Cumulus of fine weather.
- 8 Cumulus, large (or Cumulo-Nimbus) and Strato-Cumulus.
- 9 Cumulus, large (or Cumulo-Nimbus) and Nimbus.

Table XIV.

CM.—Form of Middle Cloud.

Code

Figure.

## Form of Cloud.

- 0 No middle cloud.
- 1 Alto-Stratus, typical thin.
- 2 Alto-Stratus, typical thick (Sun or Moon invisible).
- 3 Alto-Cumulus or high Strato-Cumulus, single layer.
- 4 Alto-Cumulus, in bands, decreasing.
- 5 Alto-Cumulus, in bands, increasing.
- 6 Alto-Cumulus, spread out from Cumulus.
- 7 Alto-Cumulus with Alto-Stratus; or Alto-Stratus with parts resembling Alto-Cumulus.
- 8 Alto-Cumulus Castellatus (Alto-Cumulus in ragged fragments).
- 9 Alto-Cumulus in several layers, generally with fibrous veils and chaotic appearance of sky.

Table XV.

CH.—Form of Upper Cloud (Cirrus Cloud).

Code

Figure.

## Form of Cloud.

- 0 No upper clouds (cirrus type).
- 1 Cirrus, fine, not increasing: scarce.
- 2 Cirrus, fine, not increasing: plentiful, but not a continuous layer.
- 3 Cirrus, anvil.
- 4 Cirrus, fine, increasing.
- 5 Cirrus or Cirro-Stratus increasing, below 45° altitude.
- 6 Cirrus or Cirro-Stratus increasing, and reaching above 45° altitude.
- 7 Cirro-Stratus, veil covering whole sky.
- 8 Cirro-Stratus, not increasing, and not covering whole sky.
- 9 Cirro-Cumulus predominating, and a little Cirrus.

Table XVI.

C.—Predominating Form of Cloud.

Code  
Figure.

## Form of Cloud.

- 1 Cirrus.
- 2 Cirro-Stratus.
- 3 Cirro-Cumulus.
- 4 Alto-Cumulus.
- 5 Alto-Stratus.
- 6 Strato-Cumulus.
- 7 Nimbus.
- 8 Cumulus or Fracto-Cumulus.
- 9 Cumulo Nimbus.
- 0 Stratus or Fracto-Stratus.

Table XVII.

Code Figure.	N. and N <sub>L</sub> .—Amount of Cloud. Proportion of Sky covered, in tenths.
0	0.
1	Less than 1.
2	1.
3	2 to 3.
4	4 to 6.
5	7 to 8.
6	9.
7	More than 9, but with openings.
8	10, completely covered.
9	Sky obscured by fog, duststorm or other phenomenon.

## Temperatures.

Table XVIII.

t<sub>a</sub>.—Difference between Air and Sea Surface Temperatures.

Code Figure.	Air Temperature higher than Sea Temperature.
0	More than 9° Fahrenheit.
1	6° to 9°    "
2	3° to 6°     "
3	1° to 3°     "
4	0° to 1°     "
* Air Temperature lower than Sea Temperature.	
5	0° to 1° Fahrenheit.
6	1° to 3°     "
7	3° to 6°     "
8	6° to 9°     "
9	More than 9°   "

## Swell.

Table XIX.

K.—Swell.

Code Figure.	
0	No swell.
1	Low swell, short or average length.
2	Low swell, long.
3	Moderate swell, short.
4	Moderate swell, average length.
5	Moderate swell, long.
6	Heavy swell, short.
7	Heavy swell, average length.
8	Heavy swell, long.
9	Confused swell.

## Speed.

Table XX.

f.—Speed of Ship.

Code Figure.	Speed in Knots.
0	Ship stopped.
1	1 to 3 knots.
2	4 to 6    "
3	7 to 9    "
4	10 to 12   "
5	13 to 15   "
6	16 to 18   "
7	19 to 21   "
8	22 to 24   "
9	More than 24 knots.

Coded Reports of Weather Observations Contained in  
Wireless Weather Bulletins for Shipping.

Information of Weather observed at coast stations, when included by means of figures in weather shipping bulletins, may be decoded with the Decode Tables of the International Code for wireless weather messages from ships; but the arrangement of the groups is necessarily different.

There is no specified international key for the first group giving a Station report, and first groups are made in accordance with the requirement of the particular coast. The second group of the station reports is identical with the third group of the ship's code, viz., DDFww; and when a third group is used in a station report, it is identical with the fourth group of the ship's code, viz., BBVTT.

For the purpose of navigation in the waters of the British Isles the most desirable information is that of the Barometer, Wind, Weather and Visibility; and therefore for station reports in the British Weather Shipping Bulletin, the key letters of the first group are:—

I<sub>n</sub>ABBV

and the second group in accordance with the International arrangement, viz.:—

DDFww

The key to these symbol letters is given on page 6, with the exception of the symbol I<sub>n</sub>. I<sub>n</sub> = the distinguishing number of coast station in the particular country of the Bulletin.

Germany and Sweden adopted the same key for station reports in their Weather Shipping Bulletins; and the key for the Bulletin made in Chile for shipping is similar; except that the indicator figures for stations are two instead of one.

Information of these weather Bulletins, with descriptions including nature of forecasts issued, areas dealt with, wireless transmitting station, wave length, time, &c., are published annually in the "Marine Observer," in geographical order, starting with Great Britain in the April Number.

The following are the stations with their distinguishing numbers, for which reports of weather observations are given in the British Weather Shipping Bulletin:—

<i>Distinguishing</i>					<i>Station.</i>
<i>Number.</i>					
1	...	...	...	...	Stornoway.
2	...	...	...	...	Malin Head.
3	...	...	...	...	Valentia
4	...	...	...	...	Holyhead
5	...	...	...	...	Scilly
6	...	...	...	...	Guernsey
7	...	...	...	...	Dungeness
8	...	...	...	...	Yarmouth
9	...	...	...	...	Tynemouth
0	...	...	...	...	Wick
Foreign 1	...	...	...	...	Reykjavik (Iceland)
2	...	...	...	...	Thorshavn (Faroe Islands).

For information and guidance as to the use in navigation of the observations received in ships at sea Mariners are referred to "Wireless and Weather an Aid to Navigation," published by H.M. Stationery Office, price 5s.
