

Forecast For The United Kingdom  
Issued by Met Office Exeter  
at 1945 on Monday 09 Apr 2007

++ Valid for broadcast at 2159

Here is the forecast for the United Kingdom for daytime tomorrow:  
Mist and fog patches in some parts of southern England will clear quickly leaving a dry and sunny day for most. Cloudier at first across northwest England and Western Scotland with a few spits and spots of drizzle in places, the cloud should break to give some brighter sunny spells later in the day.

Outlook for Wednesday and Thursday:

More of the same, eastern Scotland, England and Wales dry and sunny after clearance of any overnight mist or fog patches. Western Scotland rather more cloudy with a few spots of rain, but it should become mostly dry by Thursday with some good sunny spells developing.
