## Daily Weather Summaries for November 2022

**If you have any questions or feedback about this product or wish to obtain further data please contact the Met Office.**

This document contains daily weather summaries for each day of November 2022. The Met Office National Meteorological Library and Archive holds a continuous record of daily weather summaries or daily weather reports from 1860, and these daily weather summaries form a continuation of that series.

The purpose of each summary is to provide an overview of the weather conditions across the UK on that day, with the historical emphasis mainly based on observations from surface network of weather stations, although the format has varied over the decades. While the emphasis remains on observations from the surface network, the current daily weather summaries supplement these by including satellite and rain-radar imagery to provide a more complete overview. The current format of the daily weather summaries is as follows:

1. Text summary of the main characteristics of the weather during the day, written by an operational meteorologist in the Met Office operations centre.
2. Table of daily extremes for the UK for key climate variables including temperature, rainfall, sunshine and gust speeds.
3. Overview of the synoptic situation at 00 and 12 UTC comprising: analysis charts showing the surface pressure pattern and associated weather fronts; North Atlantic and European infra-red satellite images showing cloud-cover; combined infra-red and rain-radar images of the UK; maps of wind speed and direction at 00 and 12 UTC; observations of pressure, wind speed and direction, cloud cover, air and dewpoint temperature at selected UK and European stations in data tables.
4. UK maps of key climate variables from observing stations including maximum, minimum and grass minimum temperature, rainfall, sunshine, gust speed and snow.
5. Further guidance notes

If you spot any data errors or omissions in this product please contact the Met Office.

## Daily Weather Summary for Tuesday 01 November 2022

This day's summary created 24/11/2022 08:32

### Summary of the UK Weather for Tuesday 01 November 2022

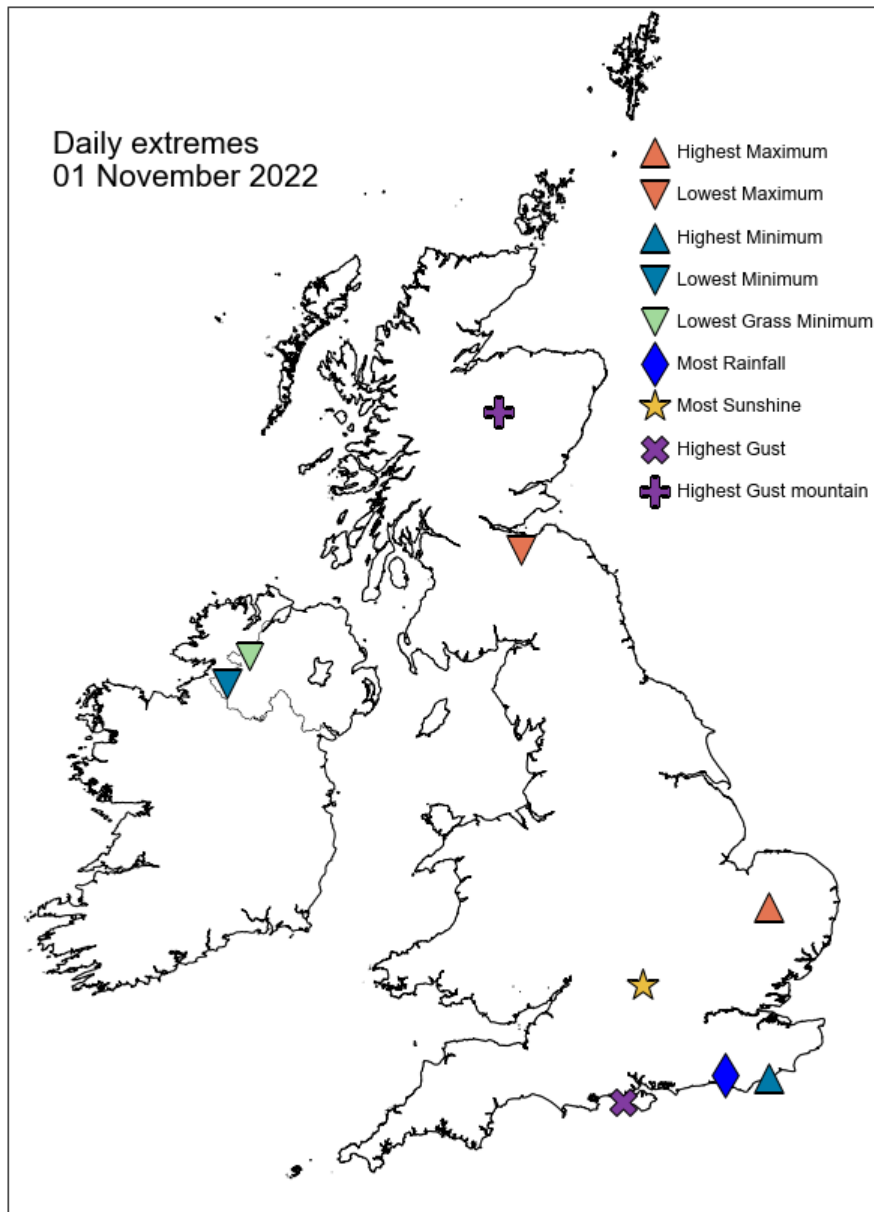

It was a largely wet and windy start to the day with a deep low pressure system situated over the UK, which brought early rain over Scotland and northern England, this being heavy at times. Southern regions saw strong winds and coastal gales brought across the English Channel by storm Claudio overnight, triggering a yellow warning for wind along the far southeast coast until 0800 am. Through the morning, showers and rain were evident in most parts of the UK, particularly in Scotland and along the south coast, where heavy rain dominated in association with the passing of low pressure systems. Widespread rain and cloud persisted through the late morning as frontal zones and bands of rain crossed the UK. Though this gradually cleared for a time in some northern parts for the afternoon, showers continued to scatter the UK through the evening, with longer spells of rain dominating along western coasts overnight. Winds were southwesterly and moderate to strong, with reports of coastal gales in places.

### Summary of the UK Weather for Wednesday 02 November 2022

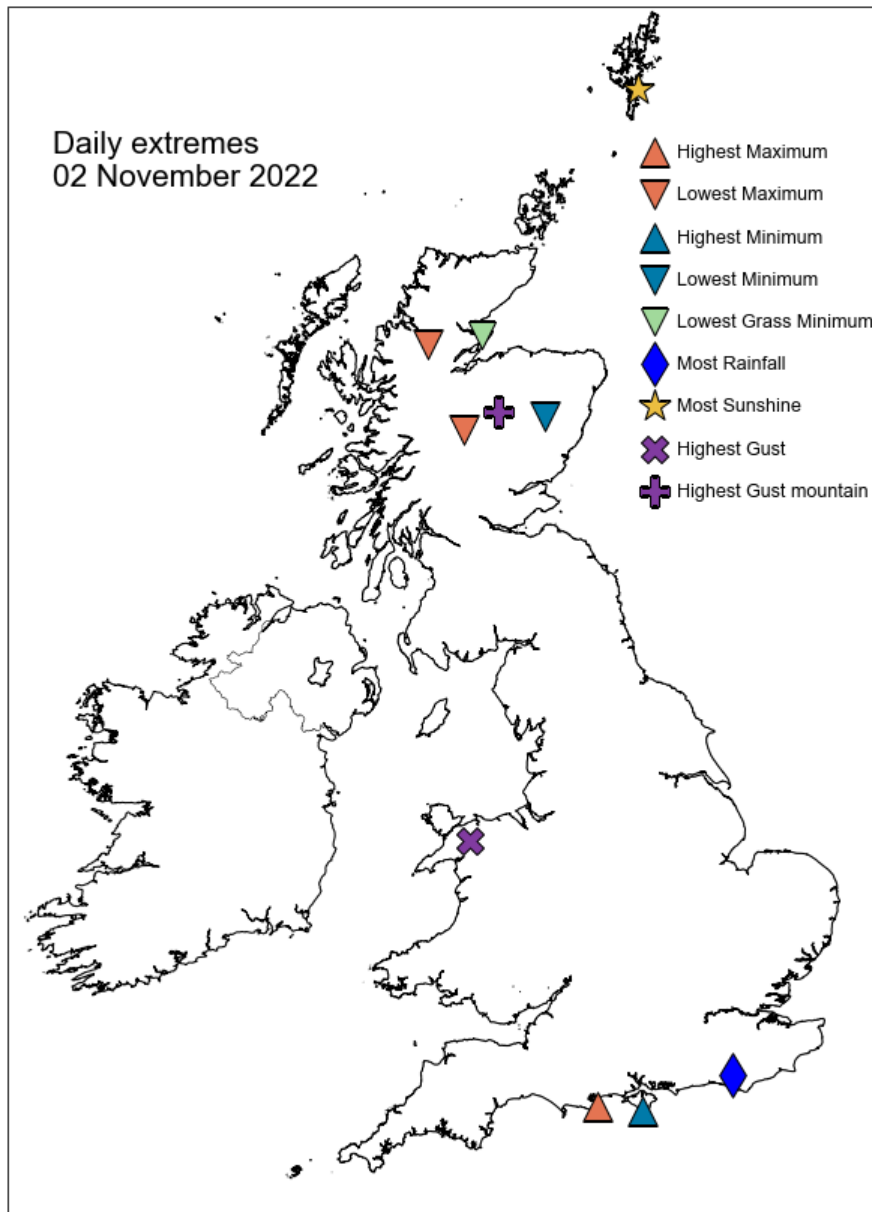

With deep low pressure to the northwest, it was another wet and breezy day across the UK. The early hours saw some scattered showers across western parts, but generally a clear and dry morning for many, making way for some bright spells. A thick rain band approached the UK on an eastwards path covering Northern Ireland by dawn and bringing heavy rain and strong winds. Throughout the morning, Wales was covered with heavy rain which spread eastwards across Scotland, covering most of Scotland by lunchtime. The south remained dry for most of the morning with a few scattered showers further west. Heavy rain continued across Scotland through the afternoon, moving eastwards. The band of rain had cleared the east coast by the evening, with showers, locally heavy, following behind. The band of heavy rain affecting Wales and Scotland in the morning, travelled across the rest of the UK throughout the afternoon reaching the southeast by the evening, leaving the remainder of the country most in dry conditions.

### Summary of the UK Weather for Thursday 03 November 2022

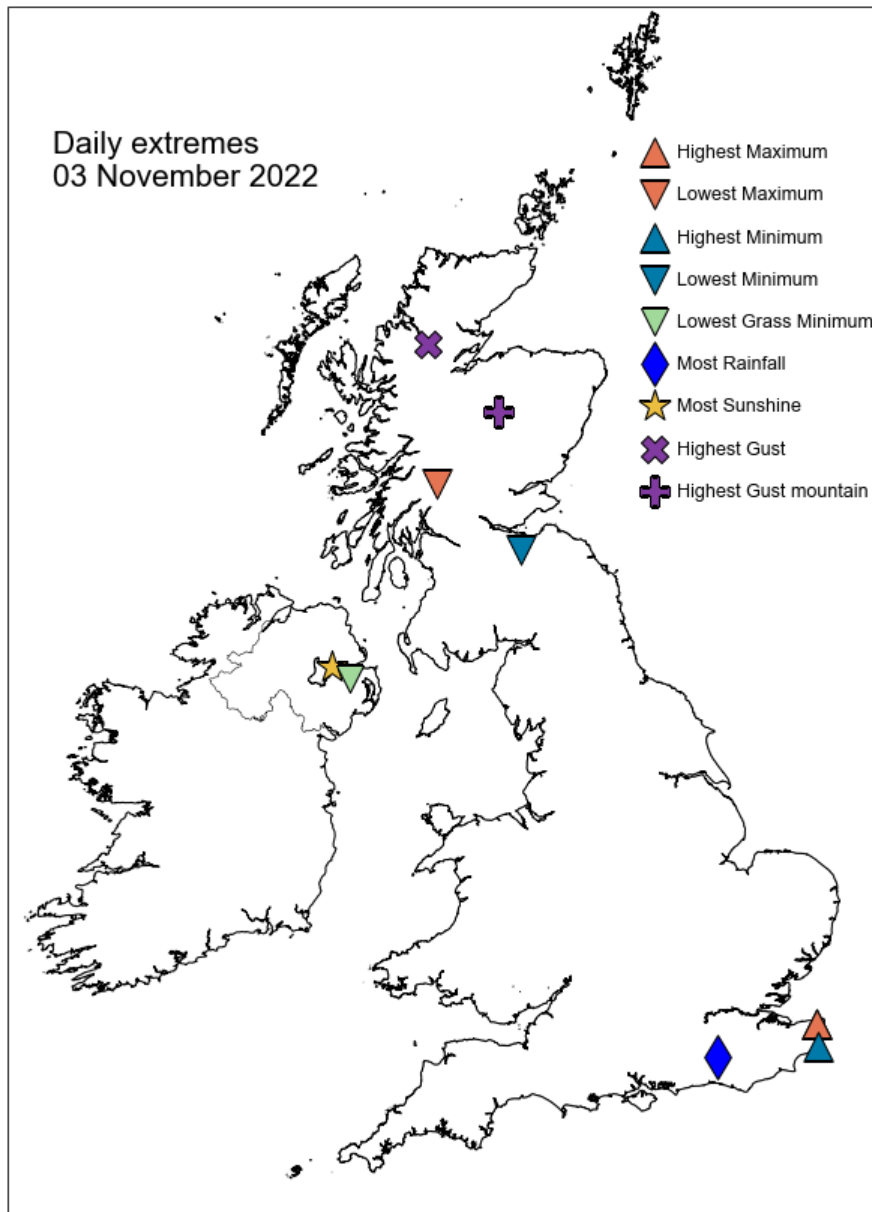

Cloud and rain were observed in most parts of the UK at midnight, which tended to persist across the southwest, highlands of Scotland and northern England into the early hours. Showers and rain were observed through the early morning across the southern and northern parts of the UK, while clearer skies and dry conditions dominated in central areas. To start the morning, a band of heavy rain was dominant over the southeast and eastern parts of the Midlands. This continued to move eastwards with showers following behind. The band of rain had cleared the country by the early afternoon. Throughout the afternoon, scattered showers were spread across the whole country. The northeast, Midlands and south coast predominantly dry. Into the evening, some heavier showers started to spread eastwards across Wales and southwest England. These stayed in the south, spreading across to the southeast into the night. Winds were principally southwesterly.

### Summary of the UK Weather for Friday 04 November 2022

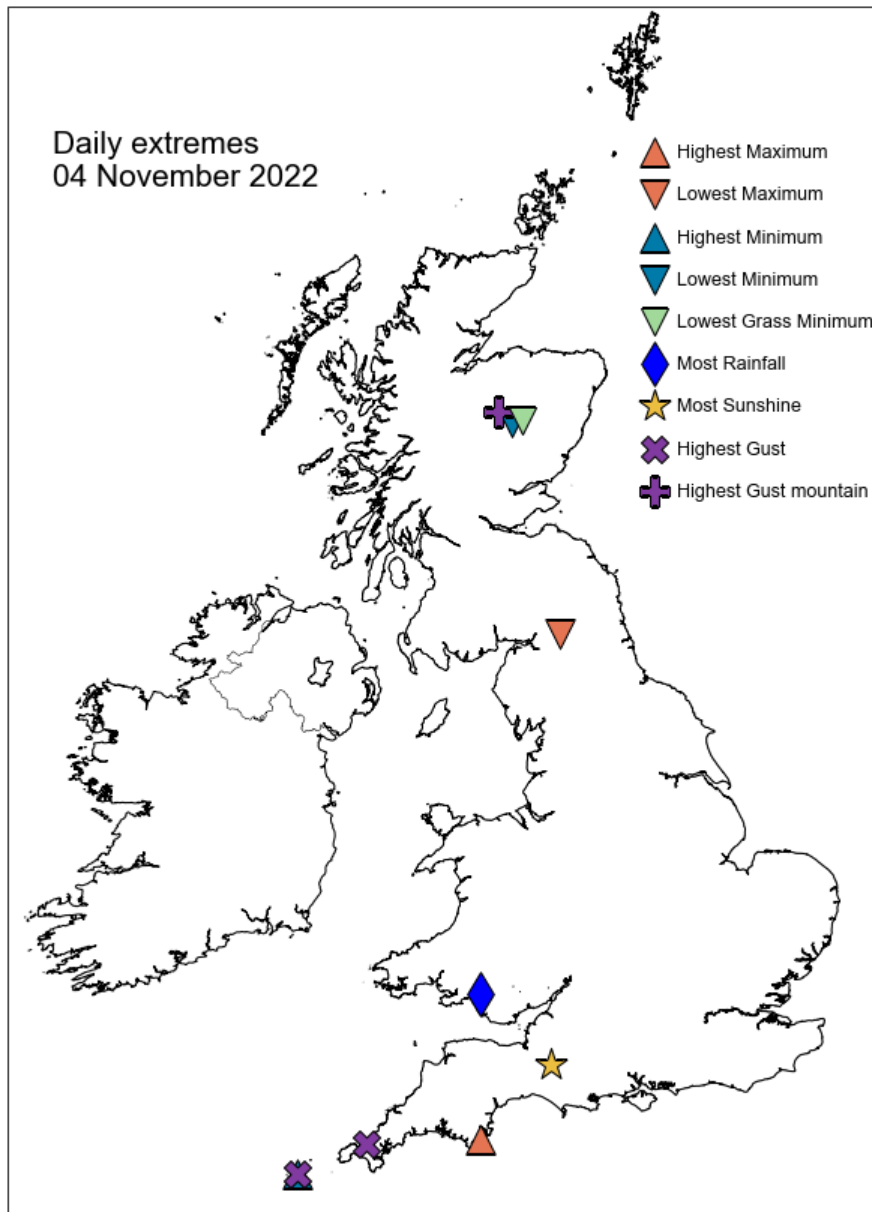

Overnight it was generally fine, dry and cold across most of the UK with the exception of a large band of heavier showers lying across the far southeast coast. Lightning was recorded over the English Channel during the very early hours, however this system quickly pushed southeastwards, clearing the coast by 0530. Clearer skies dominated elsewhere through the early morning with some mist outbreaks in central England. The skies remained clear through the morning, with bands of patchy cloud moving eastwards from lunchtime into the evening. It was a dry day for many across the UK with some isolated showers in northwest England and western Scotland. Winds were predominantly light and northwesterly.

### Summary of the UK Weather for Saturday 05 November 2022

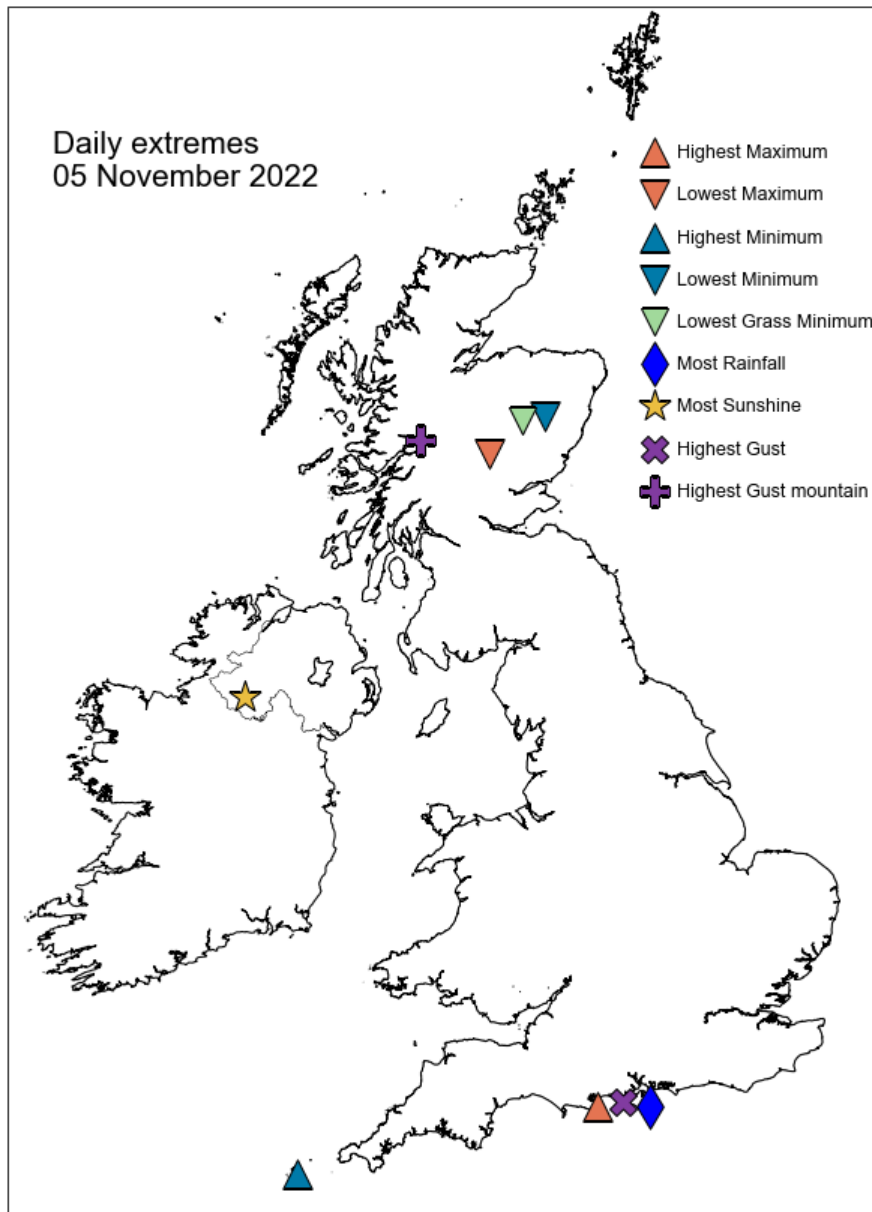

It was a benign start across much of the UK with temperatures dipping under a ridge of high pressure, especially in eastern and northern districts. Some mist and shallow fog were reported in northern England and southern Scotland ahead of a front that approached from the west. As the morning progressed, low cloud pushed into Northern Ireland, parts of Wales and the West Country, accompanied by moderate southerly to southwesterly gusts and outbreaks of rain, which became particularly heavy by dawn. As the morning progressed, this band of rain continued to push eastwards affecting much of the UK, becoming slow-moving by the time it reached the southeast. Here, it persisted into the evening, becoming heavier overnight. Following the passage of this frontal rain, dense cloud remained for much of the day. However, there were occasional clear spells, especially in Northern Ireland and parts of Scotland. Winds were predominantly southwesterly, with stronger breezes in coastal and exposed areas.

### Summary of the UK Weather for Sunday 06 November 2022

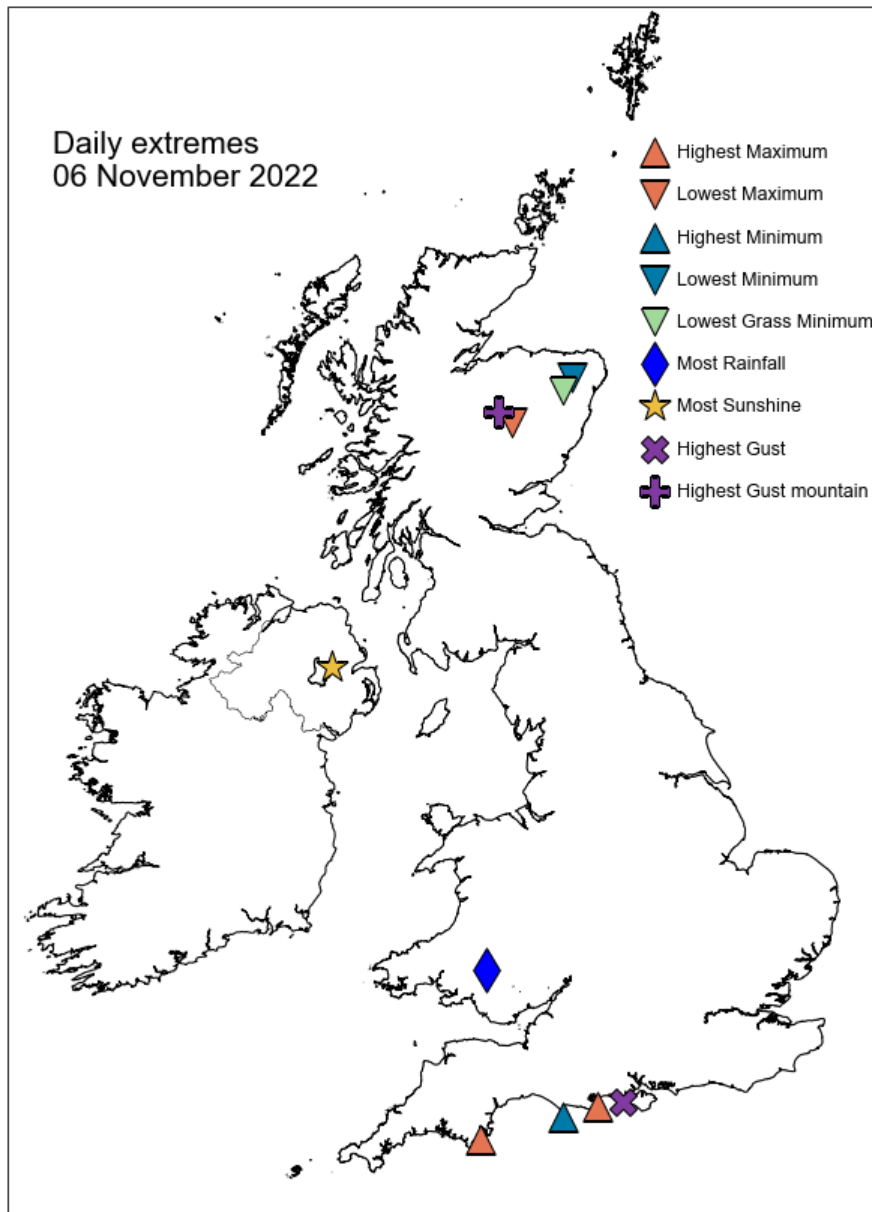

In the early morning, cloud and rain were observed in southern parts of UK while clear and dry conditions were seen elsewhere. Showers and rain persisted over the highlands of Scotland, southern and northern parts of UK until the late morning. Clear skies and dry conditions dominated across central parts. As the morning progressed, showers in the southeast cleared eastwards, followed by further showers, heavy at times with some localised thunderstorm activity, stretching along the western coast. This continued eastwards through the day, becoming scattered in the west but not extended beyond southern and western areas. Clearer spells developed to the east and northeast. Into the evening, cloud and rainfall became more dispersed across much of the UK, although most rainfall was focused in Scotland, Wales, and the west of England. Windy at times, with coastal gales reported. Temperatures were generally mild.

### Summary of the UK Weather for Monday 07 November 2022

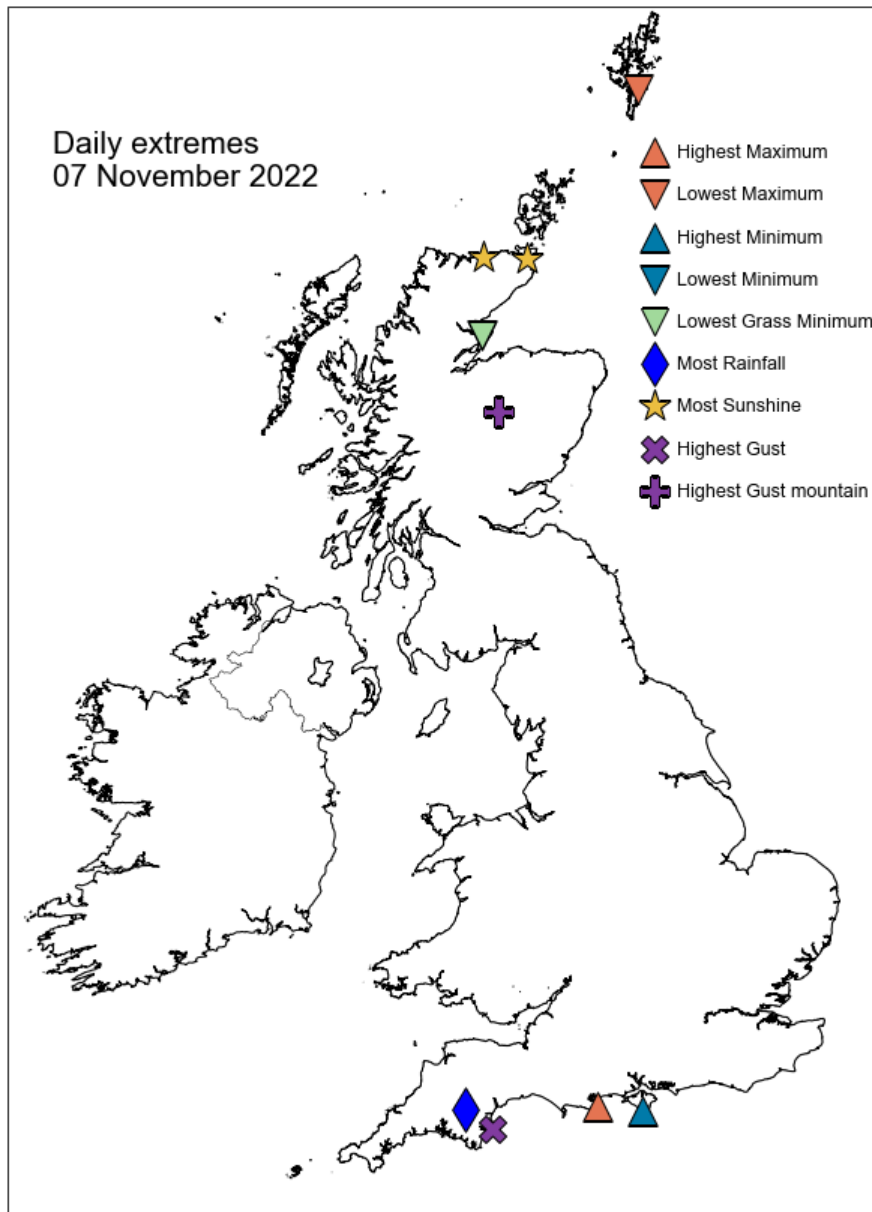

It was a clear and dry start to the day across eastern parts, although scattered showers lingered over northern England and the southern coast for much of the morning. Widespread rainfall quickly arrived in the southwest. A band of intense rainfall passed through Northern Ireland early on, and had reached Wales, western Scotland and the northwest before sunrise, moving gradually eastwards through the day. It remained generally cloudy with sporadic rain and showers persisting, heaviest in the south during the morning. These showers pushed northeastwards, and were followed by a brief pause in conditions before a strong, squally band of rain pushed in and made landfall in the southwest by 1900. This was given a yellow warning. It stretched across Wales and into western Scotland, and brought strong winds and very heavy rain throughout the evening.

### Summary of the UK Weather for Tuesday 08 November 2022

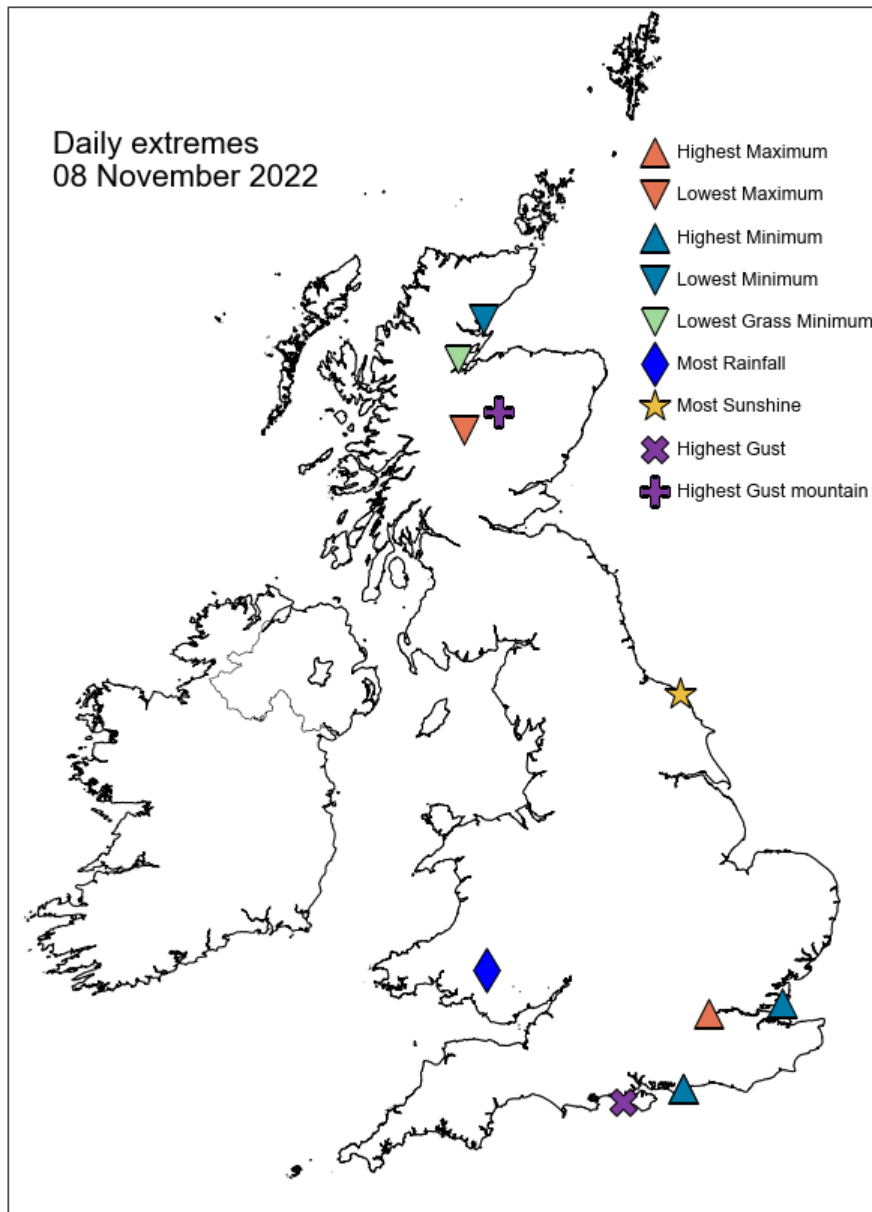

A band of heavy rain and squally winds lay from southwest England, over east Wales, up to southwest Scotland at midnight. The rain eased as it moved quickly eastward, dissipating by 5am. Some less organised showers followed, sporadically affecting many areas. Winds were moderate southerly in most places, but strong in southern and western coastal areas. In the morning, showers and rain were observed in south and central parts of the UK, particularly heavy rain dominated in central areas. Afterwards, the rain continued in central and southern parts of the UK, but gradually cloud and rain moved north over Scotland and northern England. Through the afternoon most parts of the UK experienced showers or longer periods of rain, in between sunny spells. Lightning accompanied the showers in the far southeast in the afternoon.

This day's summary created 23/11/2022 17:43

### Summary of the UK Weather for Wednesday 09 November 2022

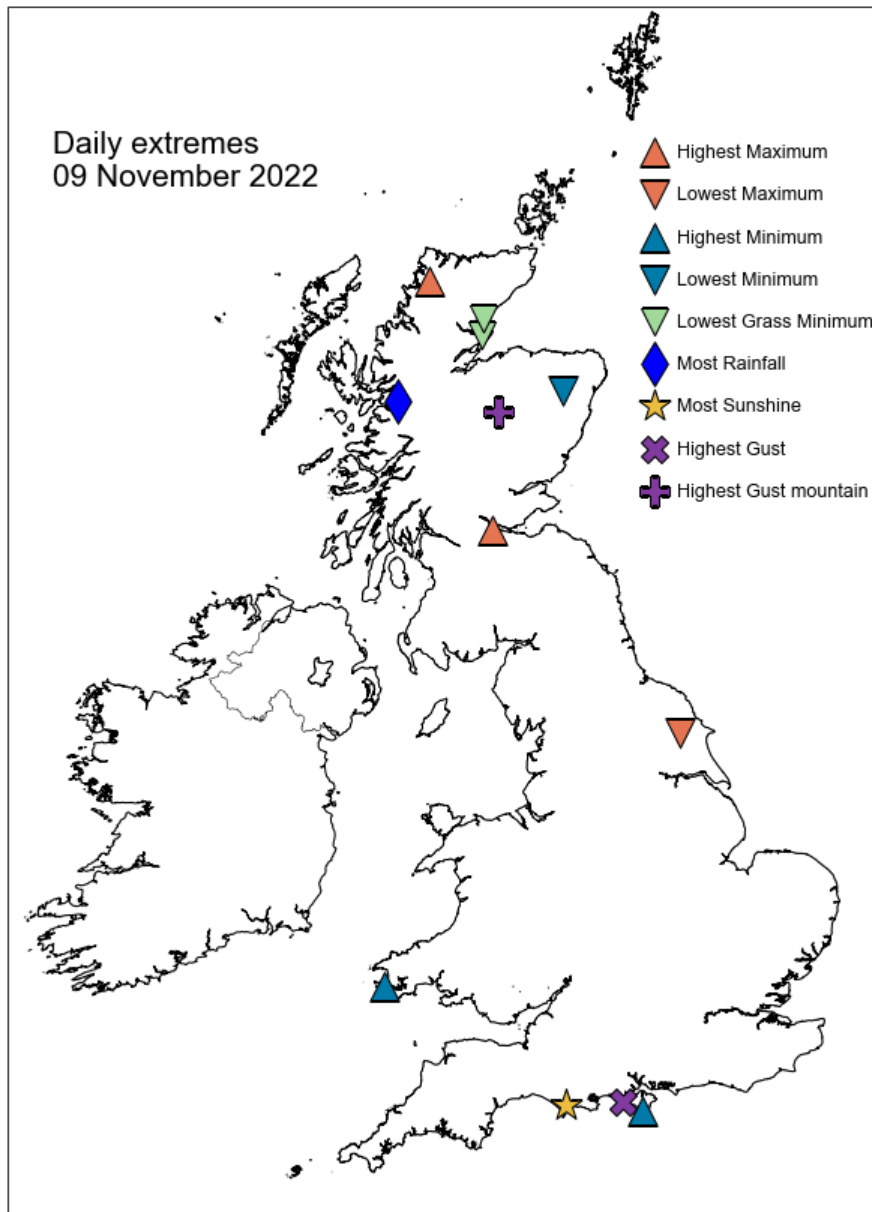

A cloudy start for all with the heaviest showers over the southwest, and lighter, more sporadic showers across Wales and western Scotland at midnight, generally interspersed with clearer, dry spells. These continued eastwards through the early hours, developing heavier downpours over southeast by 0500. It was windiest in the northwest due to a persistent low pressure system towards Iceland, but winds tended to calm into the early morning. In the morning showers and rain were observed in most parts of the UK; particularly heavy rain dominated in northern and southeastern areas. By the late morning the rain gradually faded in central and southern parts, but cloud and heavy showers continued across northern England and Highlands of Scotland. Through the afternoon, central and southern parts of the UK experienced dry and clear conditions, except for the odd light shower in some places. In the evening another larger band of rain moved into the north of England and western Scotland.

### Summary of the UK Weather for Thursday 10 November 2022

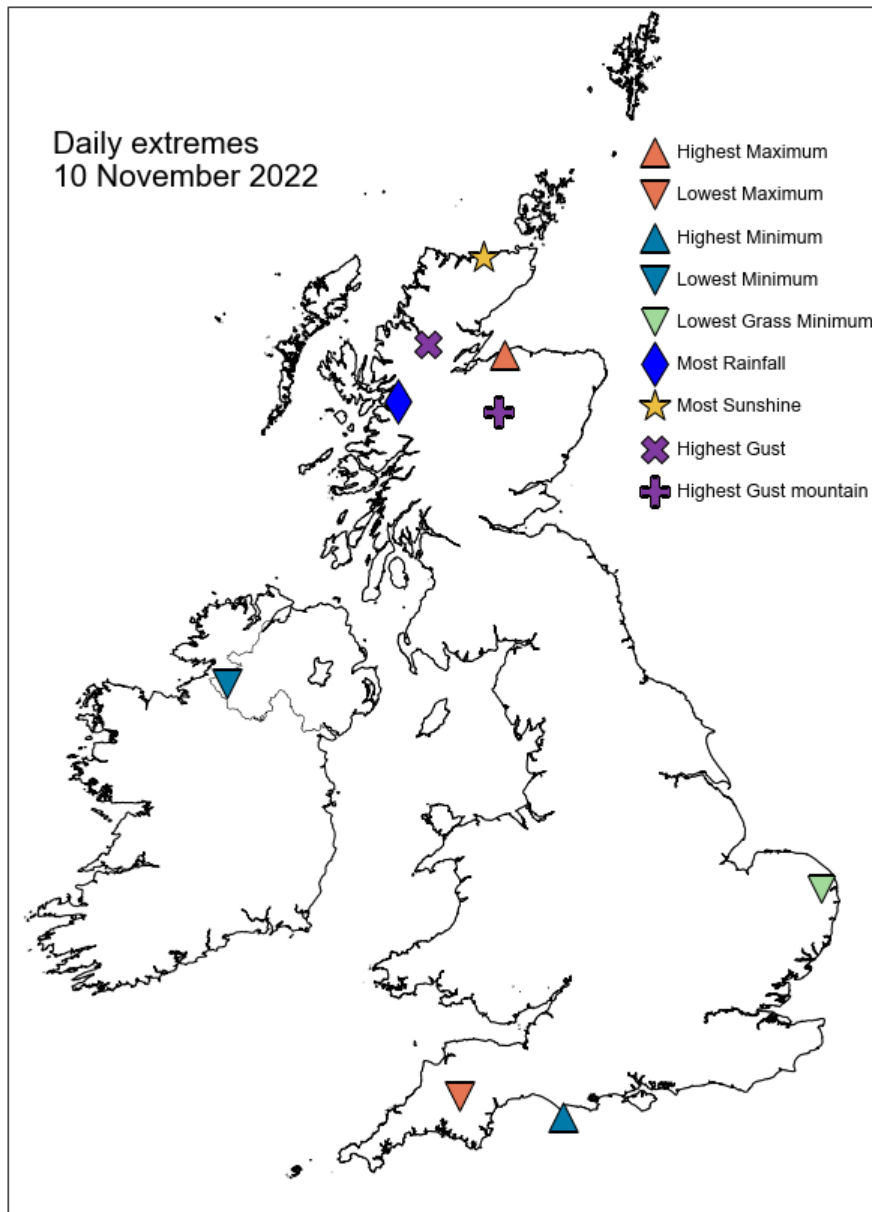

At midnight, a band of rain lay to the northwest, heavy at times particularly in western Scotland. Elsewhere it was largely dry with some drizzle across central England and Wales. Clearer spells for many through the remainder of the morning as that northwestern band of rain cleared by 0200 - followed by some isolated showers, locally heavy at times particularly over higher ground. Generally windy across the UK, with coastal gales in Scotland. Temperatures very mild for November. Heavy rain continued across northern Scotland for much of the day, with locally severe gales easing by the evening. Patchy showers persisted across northern England and Northern Ireland for much of the day, also affecting Wales at times, while much of southern, central and eastern England remained dry. It was a cloudy day across the country, with very few sunny spells. Wind was strongest in the north, particularly over higher ground and in exposed areas.

### Summary of the UK Weather for Friday 11 November 2022

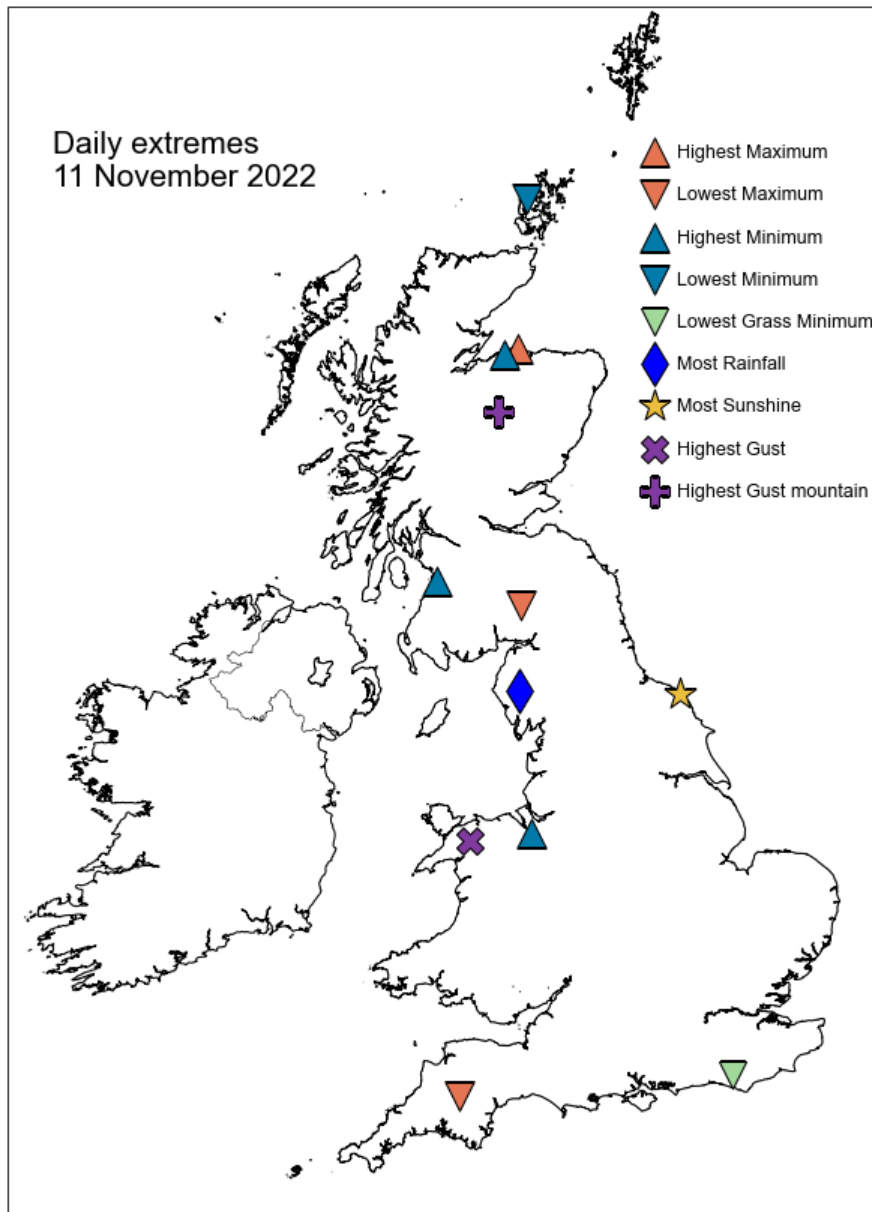

Through midnight cloud and rain were observed in northern parts of the UK, particularly heavy rain dominated in the highlands of Scotland. Clear and dry conditions were exhibited for the rest of the UK. The morning was dry for most of the country with the exception of a few isolated scattered showers in northern England and parts of Wales and Northern Ireland. A heavy band of rain sat over north Scotland throughout the morning. This rain continued into the early afternoon but became more showering, locally heavy, later on. By the early evening, the rain had mostly cleared from Scotland leaving most parts of the UK dry. Further into the evening, southern parts of Scotland and patches in northern Wales had some light rain. The rest of the country remained dry throughout the night. Winds were predominantly southwesterly throughout the day and fairly strong. Particularly strong winds/gales in Scotland and Northern Ireland, as well as coastal areas around the rest of the UK.

### Summary of the UK Weather for Saturday 12 November 2022

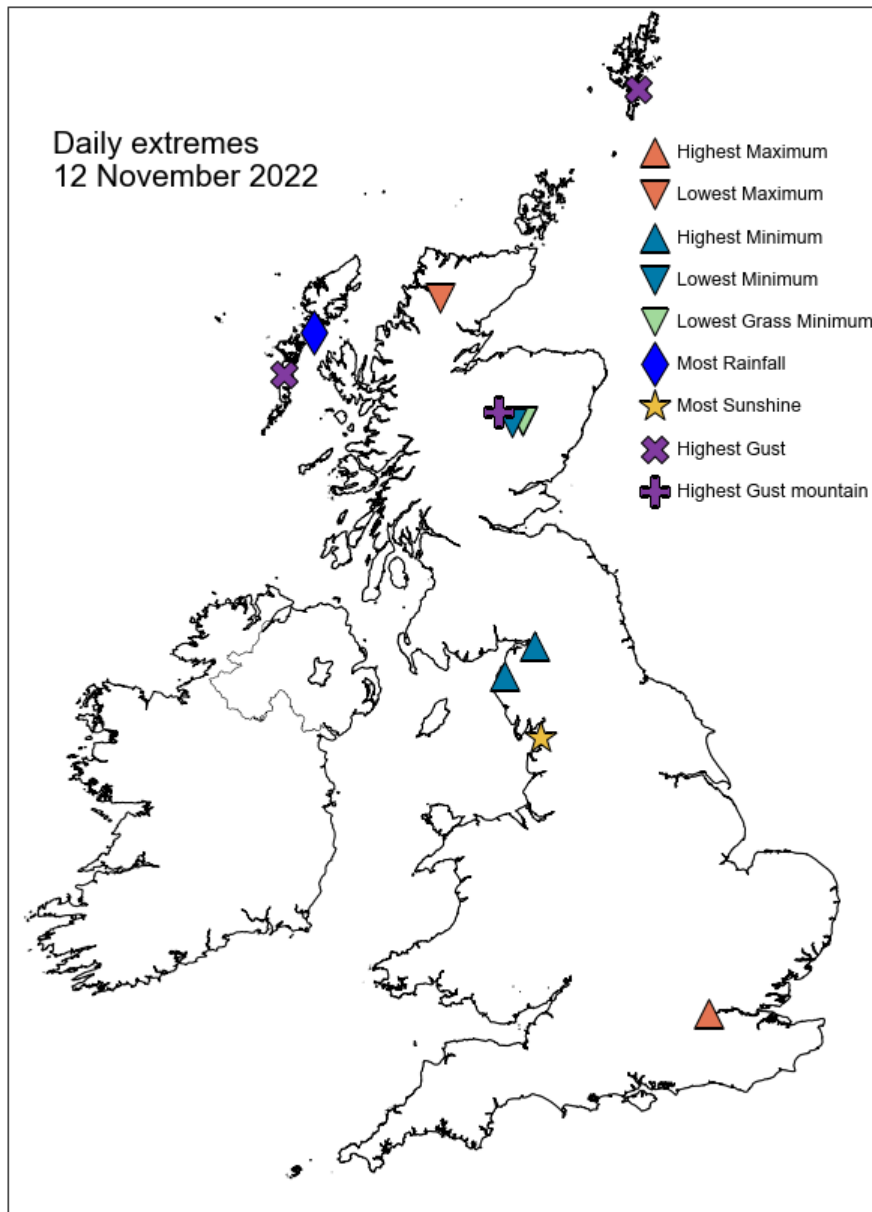

From midnight, patchy cloud and rain were observed in northern parts of England and Northern Ireland. Through the early morning, this extended from northern England towards Scotland, persisting into the afternoon. Elsewhere, it was mostly clear and dry, although with some cloud moving into the southeast as the morning proceeded. It remained dry throughout the day for the majority of the UK. Some rainfall was observed in western Scotland, with isolated showers elsewhere across Scotland, however this rain and showers reduced through the afternoon, resulting in a dry evening for the entire UK. Patchy cloud was experienced for most at times, however clear spells increased in longevity in the afternoon and evening. Winds were southeasterly throughout the day, increasing in strength towards coastal areas.

### Summary of the UK Weather for Sunday 13 November 2022

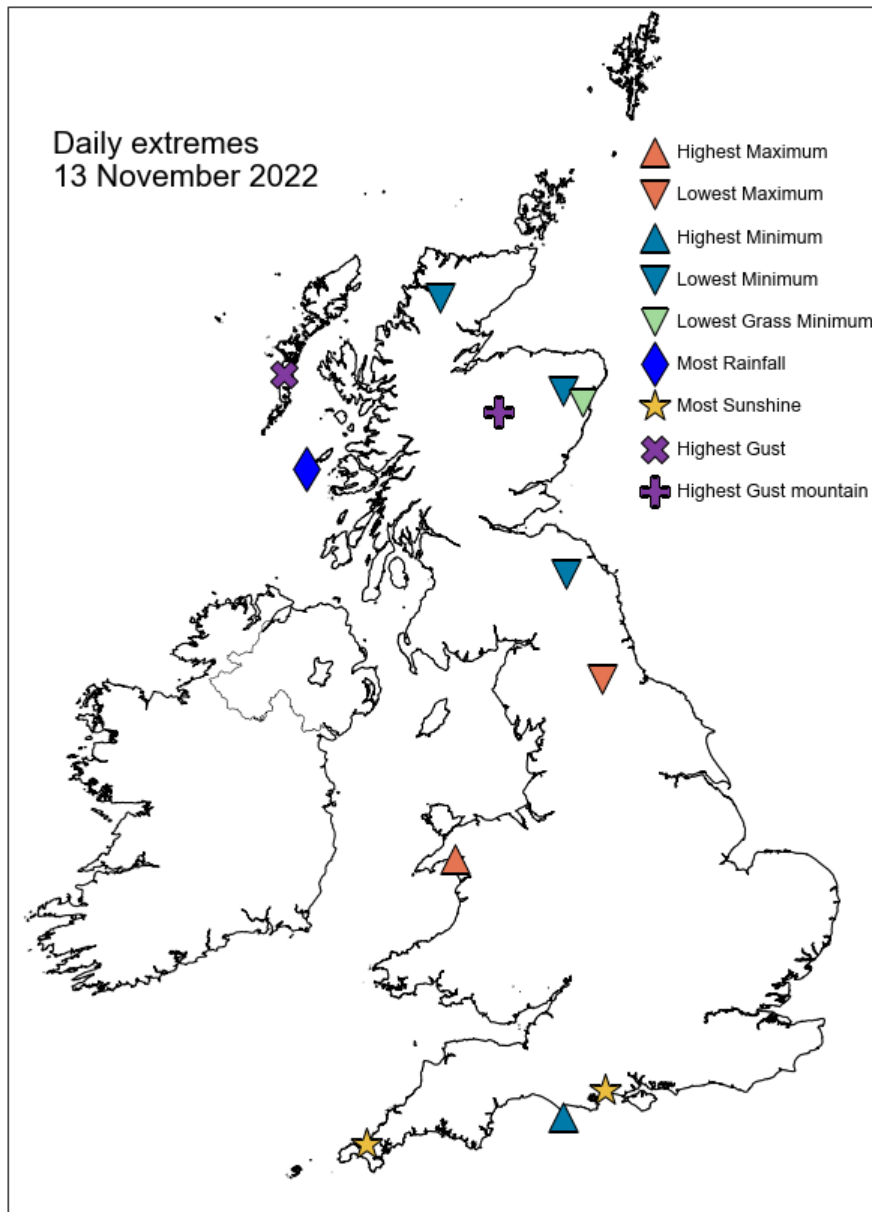

The day started with dry conditions across the whole of the UK. Cloud cover was also minimal with most parts of the country including the Southwest and the Midlands under clear skies throughout the early hours of the morning. Broken cloud sat above Northern Ireland and Scotland, although most of this cloud had cleared Scotland by sunrise with the exception of northern Scotland. Some mist and fog was reported in the north during the morning. It then remained dry throughout most of the day for the entirety of the UK. There were also clear skies for many, with Scotland and the far southeast experiencing the most cloud cover. A thin band of light rain moved eastwards from early evening, starting over Northern Ireland and pushing to cover Scotland and central England by midnight, however it was a decaying feature and by this point little precipitation met the ground.

### Summary of the UK Weather for Monday 14 November 2022

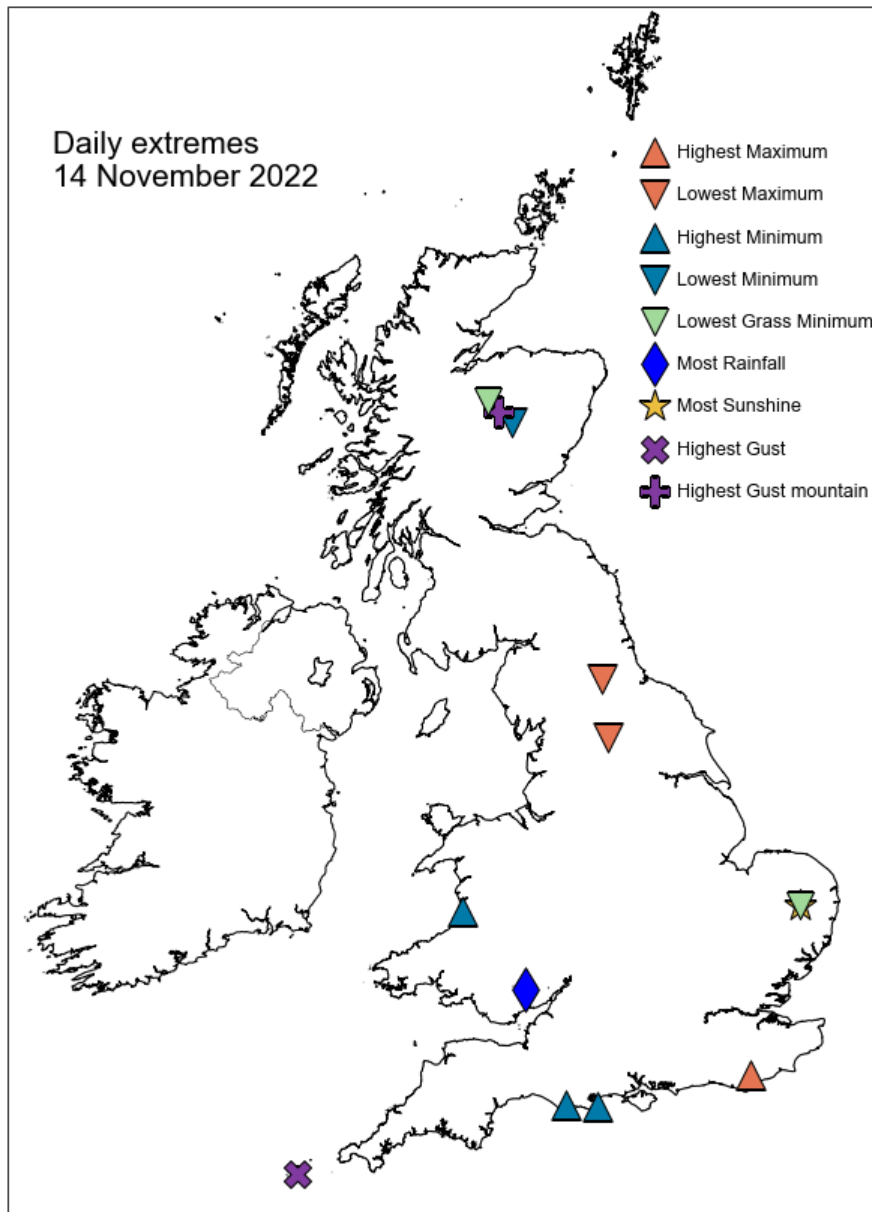

It was a mild start to the week with a warm front positioned to the north of the UK and a cold front to the west, which gradually moved eastwards through the day. The cold front brought rain firstly to southwestern England and Northern Ireland in the early hours, then to western Wales and Scotland towards dawn; elsewhere, it was a largely dry night. Mist and fog were widespread throughout the country, leading to poor visibility for many. As the day progressed, low cloud and fog were slow to clear, particularly in eastern parts where there was a yellow warning for fog in effect until 1000. Heavy rainfall reached western Scotland at midday, with more sporadic showers moving eastwards across much of western England, becoming more intense as the afternoon passed. Into the evening, it was clear in western parts behind the front, but fog began to form in the east as the front continued to pass overhead.

This day's summary created 23/11/2022 17:33

### Summary of the UK Weather for Tuesday 15 November 2022

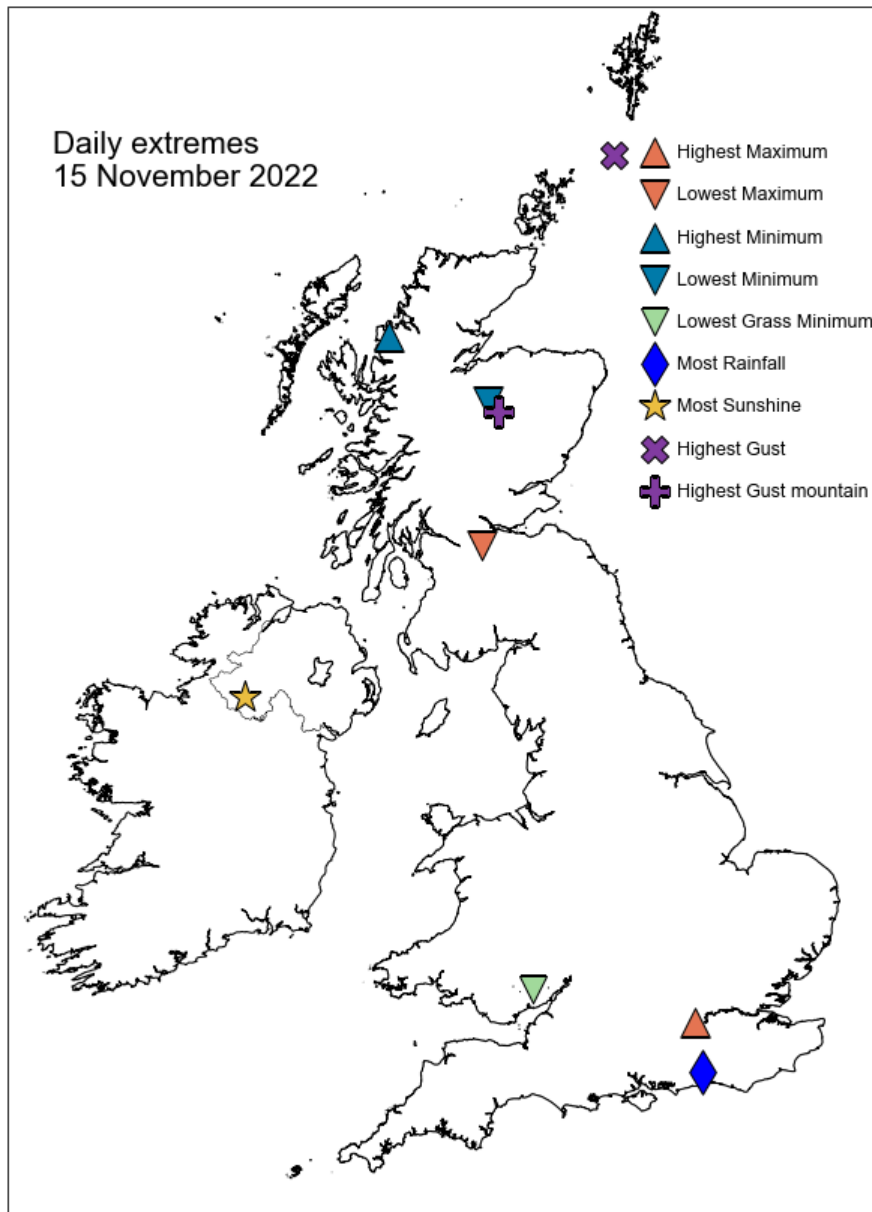

Tuesday started with a complex system of weather fronts over the UK, with a cold front stretching northwards, moving eastwards, from Norfolk to western Scotland, a warm front moving east, initially over western Wales, Devon and northern Ireland, and an occluded system following close behind. This warm front caused significant rainfall for western regions, especially heavy in the south, resulting in a yellow weather warning for rain being issued along the south coast of England and of Wales. The south coast also experienced strong southerly winds. There was some mist and fog in places. In the morning showers and rain were observed in most parts of the UK; particularly heavy rain dominated in northern and central regions. Afterwards, around lunchtime, the rain gradually decreased from southwest and southern parts, but cloud and rain continued across most parts of England and the highlands of Scotland. Into the evening, period central, northern, and southeastern parts of the UK experienced cloud and rainy conditions, with heavy rain in some places, while southwest and south England observed dry and clear conditions.

This day's summary created 23/11/2022 17:31

### Summary of the UK Weather for Wednesday 16 November 2022

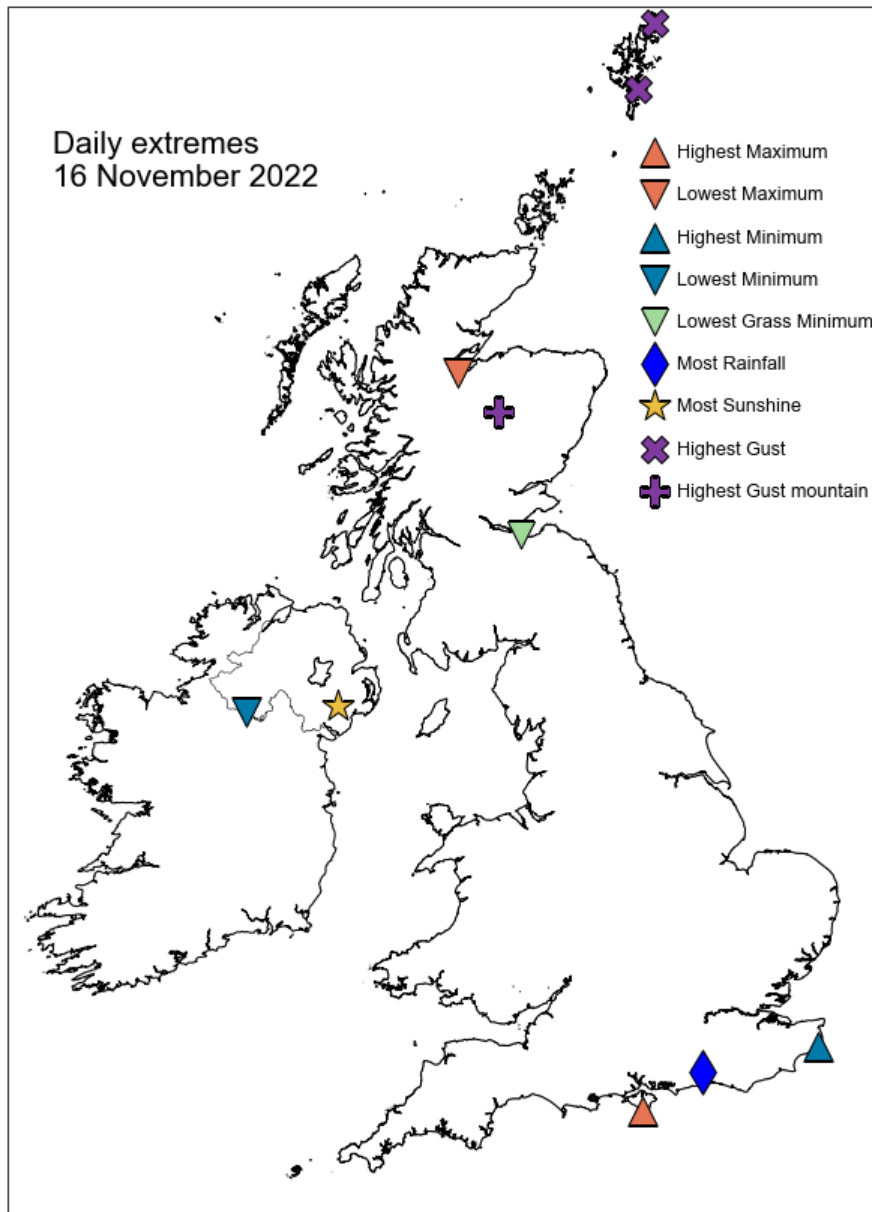

It was a clear start to the day for many, although a series of troughs covered much of mainland UK, bringing organised bands of showery rain. These continued to progress eastwards through the early morning, primarily affecting Wales, central Scotland, and southern England. Under clearer skies, some fog formed in eastern parts, and particularly in the northeast. This was slow to clear in places. Winds were generally moderate southerlies, with southern coasts being the most exposed to the strongest winds. Continuing through the morning, showers tended to ease early on and bring clearer spells for many, with the exception of the Southeast where persistent showers remained until midday. A deep low pressure system brought a thick rain band over the southwest coast into the evening. This pushed over much of southern England and South Wales through the night and brought significant rainfall totals. Elsewhere remained largely dry and clear. Coastal gales were reported along the Southern coast throughout the day.

### Summary of the UK Weather for Thursday 17 November 2022

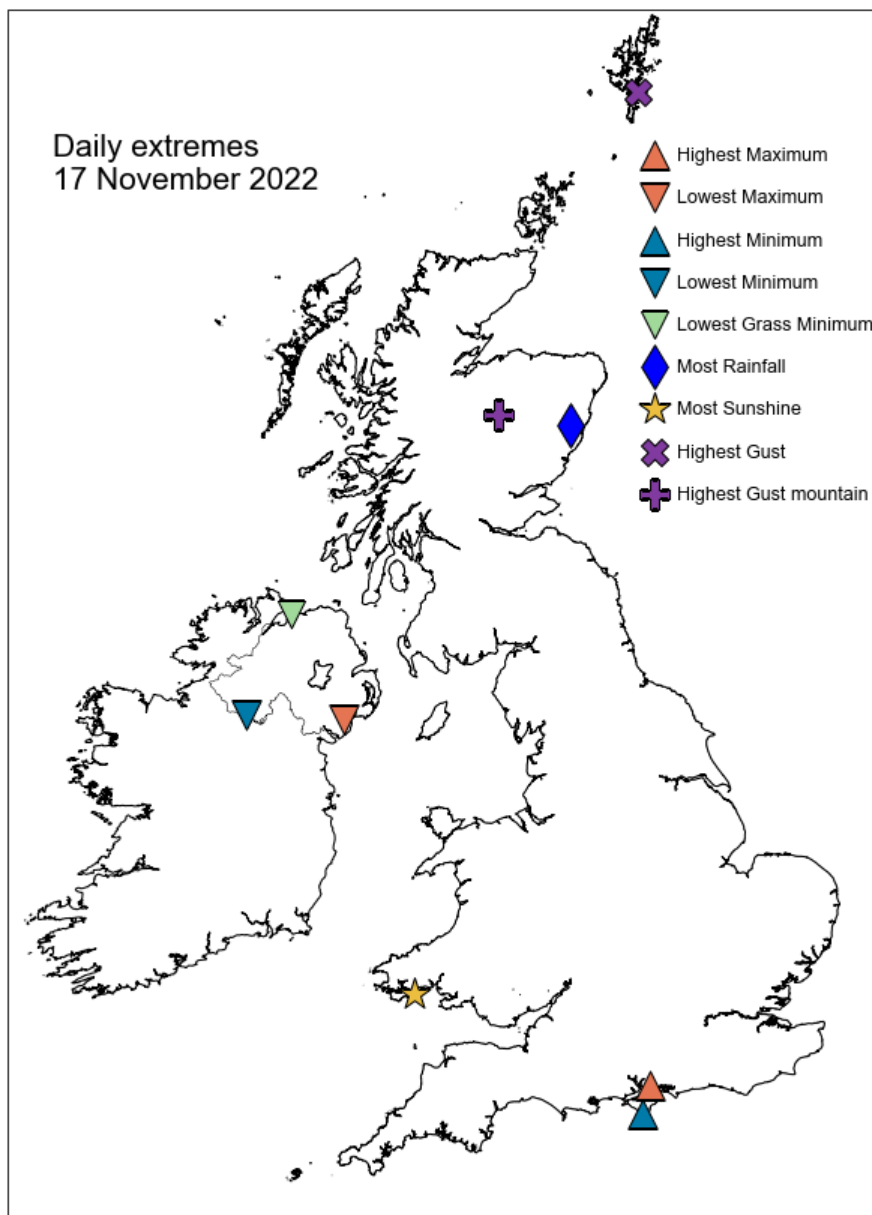

Thursday morning saw persistent rain over central, northern, and eastern areas as a deep low pressure system swept across the country from the south. This spread northeastwards throughout the morning, meanwhile western parts saw early mist and fog, this cleared and made way for some brighter spells into the morning. Fog lingered over Northern Ireland for much of the morning, as well as some western areas of Scotland. Elsewhere, it was a clear and dry start for much of the far south and west of the UK. This was a stark contrast to much of England and Scotland, where there was widespread heavy rain. Despite the rain slowly clearing northwards, giving a drier day to the southeast, it persisted for much of the day for central and northern England, and eastern Scotland. Into the evening, the rain intensified over Aberdeenshire, as it gradually cleared in parts elsewhere.

### Summary of the UK Weather for Friday 18 November 2022

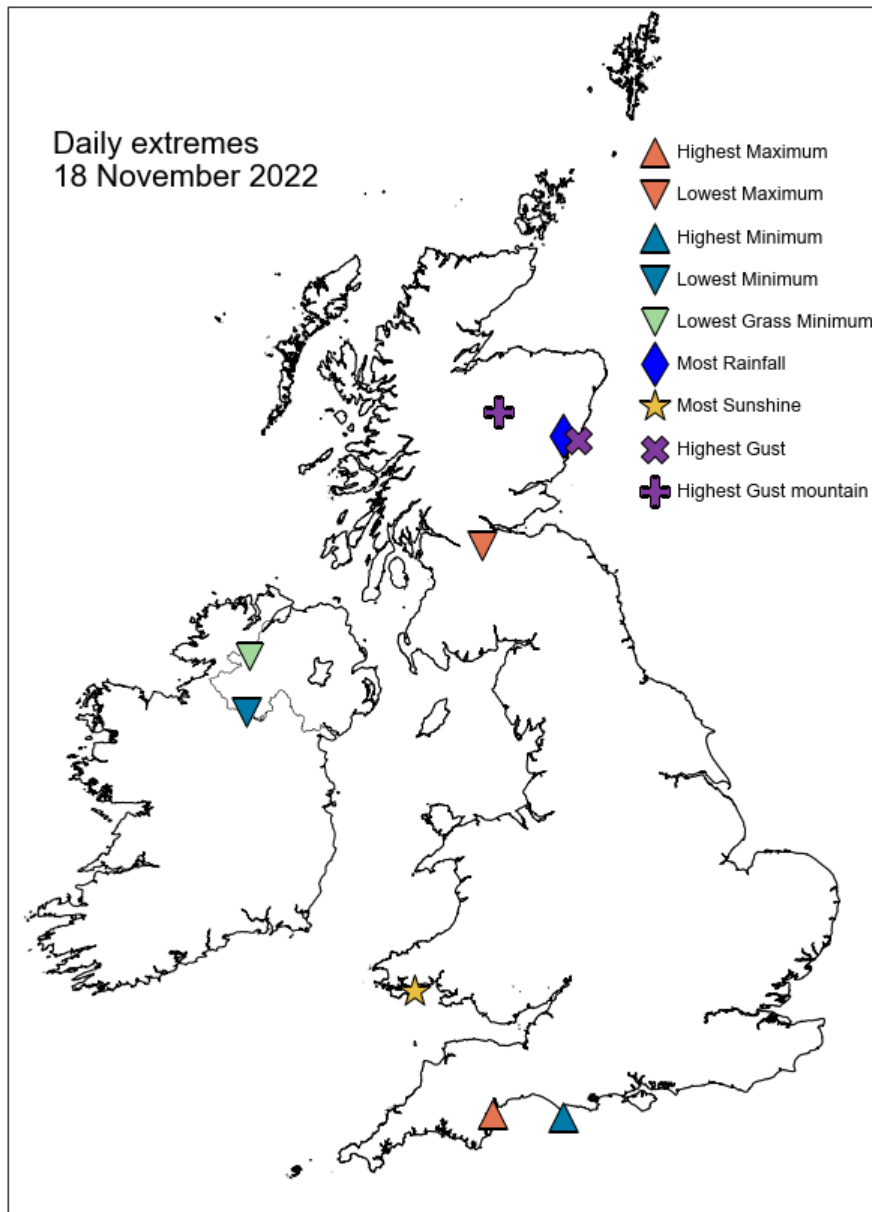

At midnight, a significant low pressure system lay off the northeast coast, bringing clouds and rain, heavy at times, to much of Scotland, northern England, and southeastern England. An amber warning was implemented for eastern Scotland during the day. Clear and dry conditions were exhibited in the rest of the UK. Showers and rain remained through the early morning in Scotland, southeast and northern England, while cloud and rain gradually decreased and clearer skies and dry conditions followed in central and southwest areas of the UK. The large area of heavy rain over much of Scotland and parts of northeast England persisted throughout the morning. Parts of Wales and the western side of the country also experienced some showers whereas the east remained dry throughout. Similar conditions continued through the afternoon with scatter showers across the Midlands but remaining dry across most parts of the country. The south had clear conditions for most of the day. Into the evening, the heavy snow across Scotland started to dissipate, leaving more showery conditions. Most parts of the country remained dry overnight.

### Summary of the UK Weather for Saturday 19 November 2022

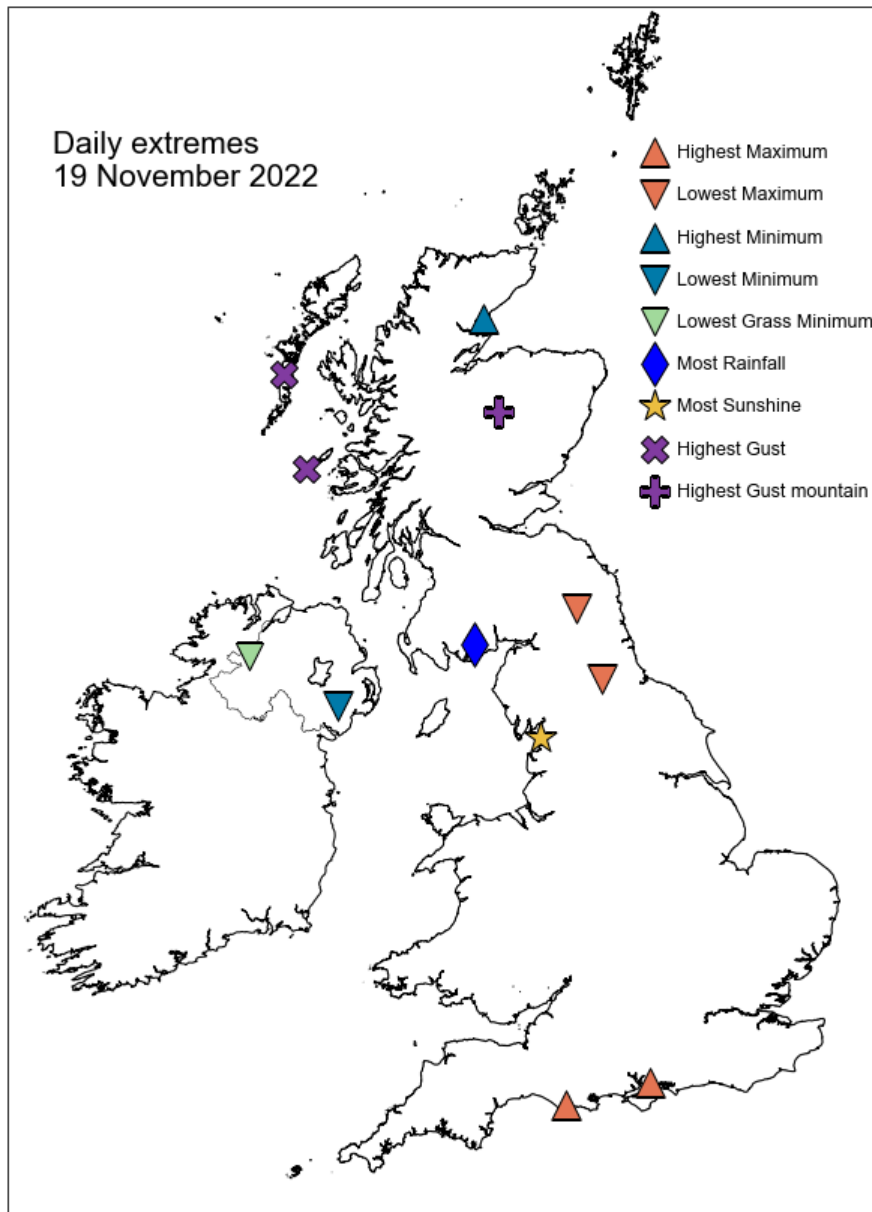

It was a dry and clear night for most western areas, except in Scotland where there was the odd shower over the Islands. Areas which did remain clear saw temperatures drop significantly to the coldest so far this season. In the east, an occluded front stretched along the coast, bringing extensive cloud and heavy rain with it, particularly to eastern Scotland which experienced severe flooding. This all moved slowly southeastwards through the early hours and slightly dissipated, especially across southeastern England where it was dry by late morning. The clearer weather persisted in the west in the morning, allowing these parts to see some sunshine, until a low pressure system to the west of the UK brought a band of thick cloud and heavy rain to the west coast of Northern Ireland mid-morning. This moved eastwards towards the mainland throughout the day, with the rain reaching the west coast in the late afternoon. By the evening, the cloud and rain had reached the central section of the country, leaving showers behind in Northern Ireland.

### Summary of the UK Weather for Sunday 20 November 2022

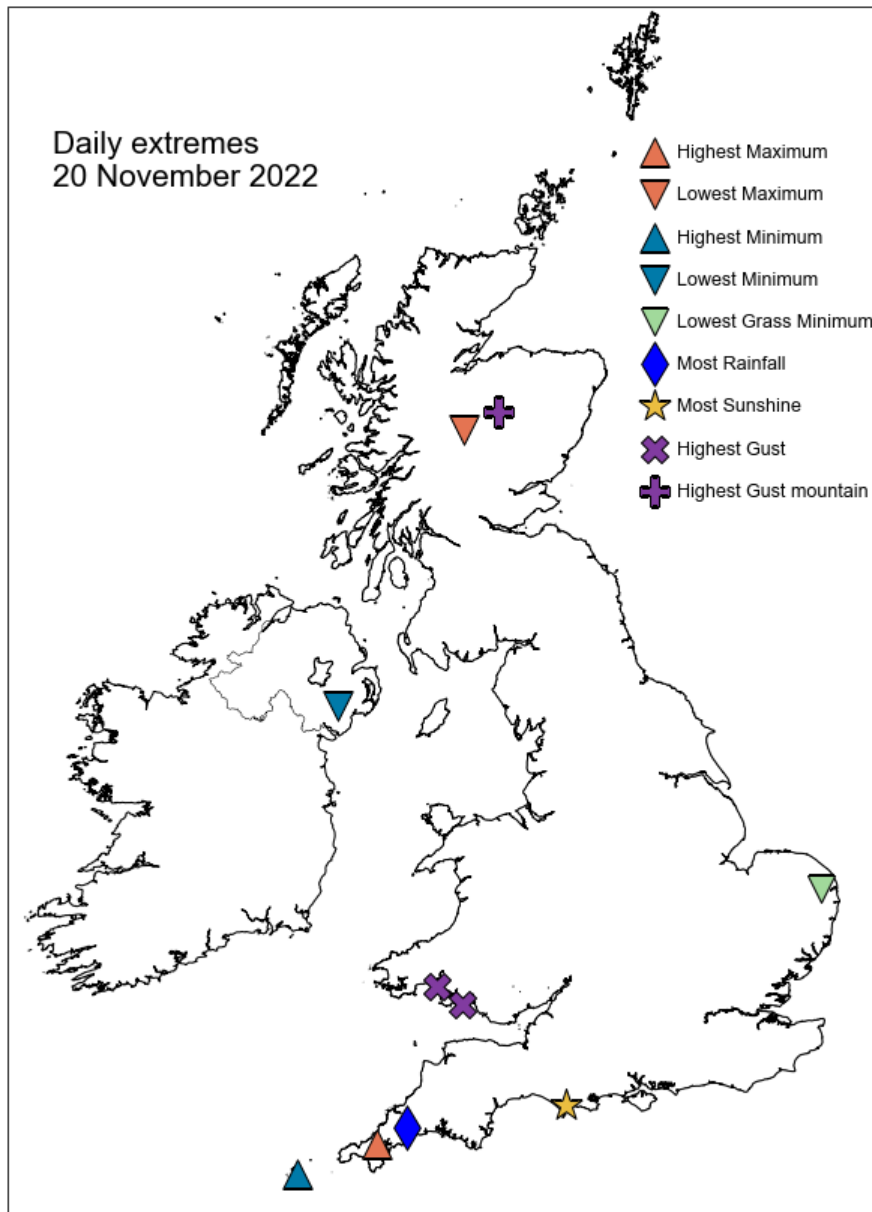

A pair of occluded fronts slowly moved eastwards over the UK in the early hours, with a band of rain in between. This rain was heaviest over northern upland areas, bringing some snow to Scottish Highland areas, but was lighter further south where it fragmented into smaller patches. By dawn the band had reached the east side of the country, leaving clear skies over Wales and the southwest, and scattered, but still heavy showers over the Scottish Islands. The occluded frontal system cleared to the east by late morning, leaving a dry and clear band through the center and much of the east of the UK by lunchtime. However during the morning two troughs moved in from the west, one in the north and another in the south. These troughs resulted in a band of patchy rain and showers moving eastwards over England and Wales and sustained rain over western Scotland. By mid-evening the northern trough decayed and the southern trough cleared the country to the east, resulting in a dry, clear night for the majority of the UK.

### Summary of the UK Weather for Monday 21 November 2022

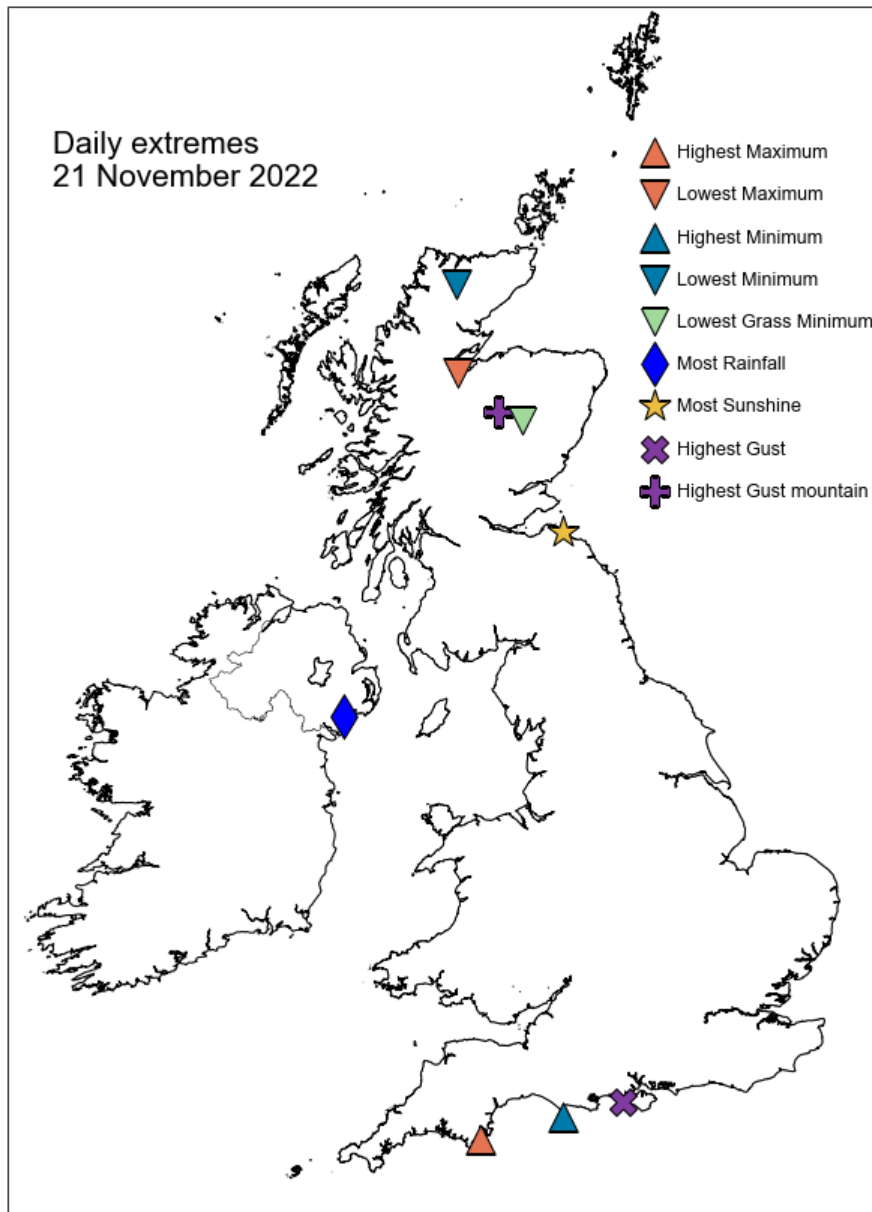

During the early hours, most parts of the UK were clear and dry, with any present cloud dominating in the southeast and over Northern Ireland. A few scattered showers over western parts of southern England and Wales were present through the early morning. Towards dawn, a front bringing a large band of cloud came in from the west, leading to heavy rain in southwest England, much of Wales, as well as a few scattered showers on western coasts of northern England. Most parts of Northern Ireland had heavy rain or showers, although some areas of Scotland and eastern parts of England remained dry. The day continued to be wet for many, with a series of occlusions passing eastwards over mainland UK in quick succession. Clear spells followed this dense band of rain, firstly in the southwest. In the afternoon, some showers began to move over eastern parts of Scotland, continuing to the west into the night. Into the evening, the rain continued in a northeasterly direction, leaving clear skies in southern parts before some convective cloud appeared towards midnight.

### Summary of the UK Weather for Tuesday 22 November 2022

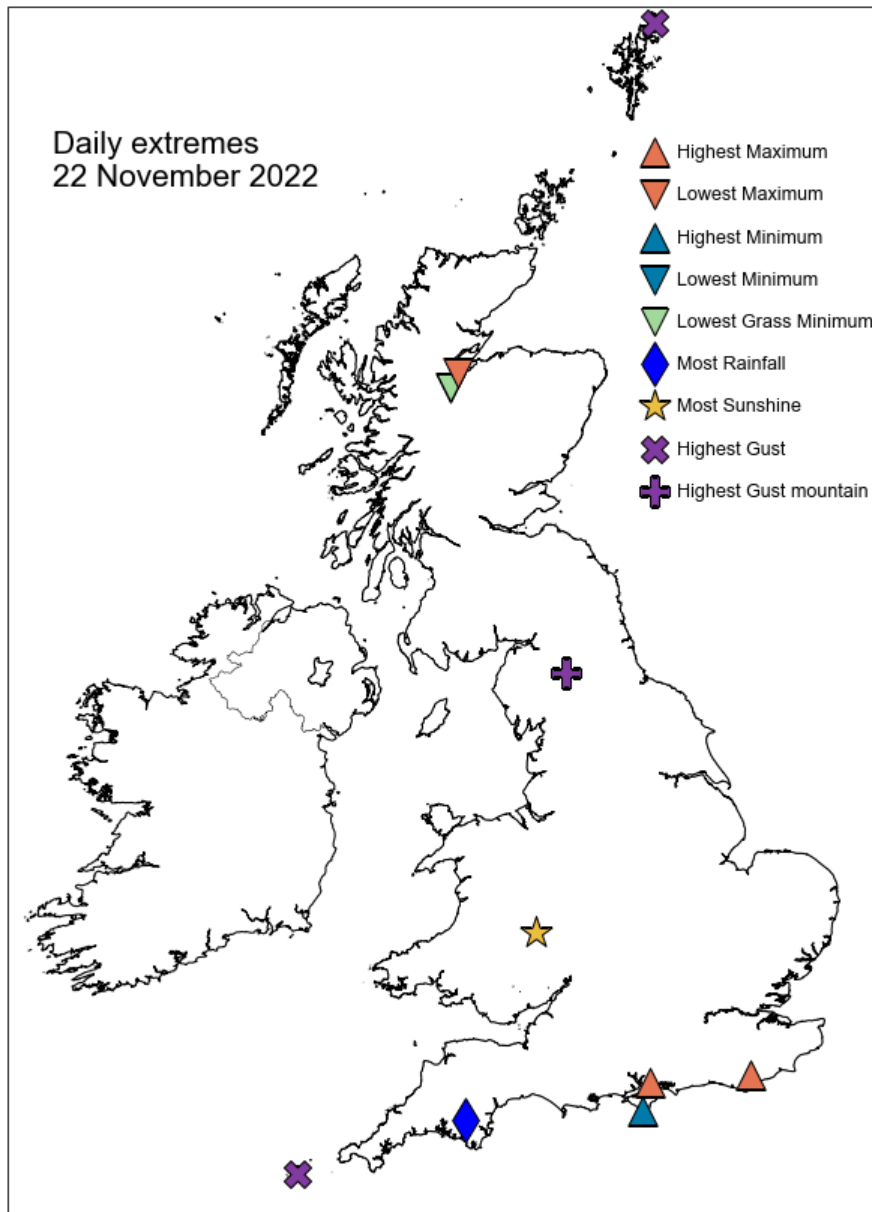

In the early hours a low pressure system sat over Norfolk, bringing rain for much of central and northern England. This rain decayed throughout the morning, reducing to patchy showers. Furthermore an occluded front was located over Cornwall at the start of the morning and subsequently moved slowly eastwards, bringing repeated showers throughout the night for much of the southwest, and southern Wales. Eastern Scotland also experienced persistent rain. Much of the country experienced patchy cloud, interspersed with some clear spells through the morning. The southwest also experienced some strong winds and coastal gales. Later in the morning, showers, heavy at times, impacted the southwest of the UK, becoming sparser through the day. Despite some light rain and drizzle to start much of England, Wales, Northern Ireland and central Scotland had a largely dry day. Some heavy rain affected the west coast of Scotland as well as the Northern Isles. Winds were strong westerlies in the far south, but more light and variable elsewhere.

### Summary of the UK Weather for Wednesday 23 November 2022

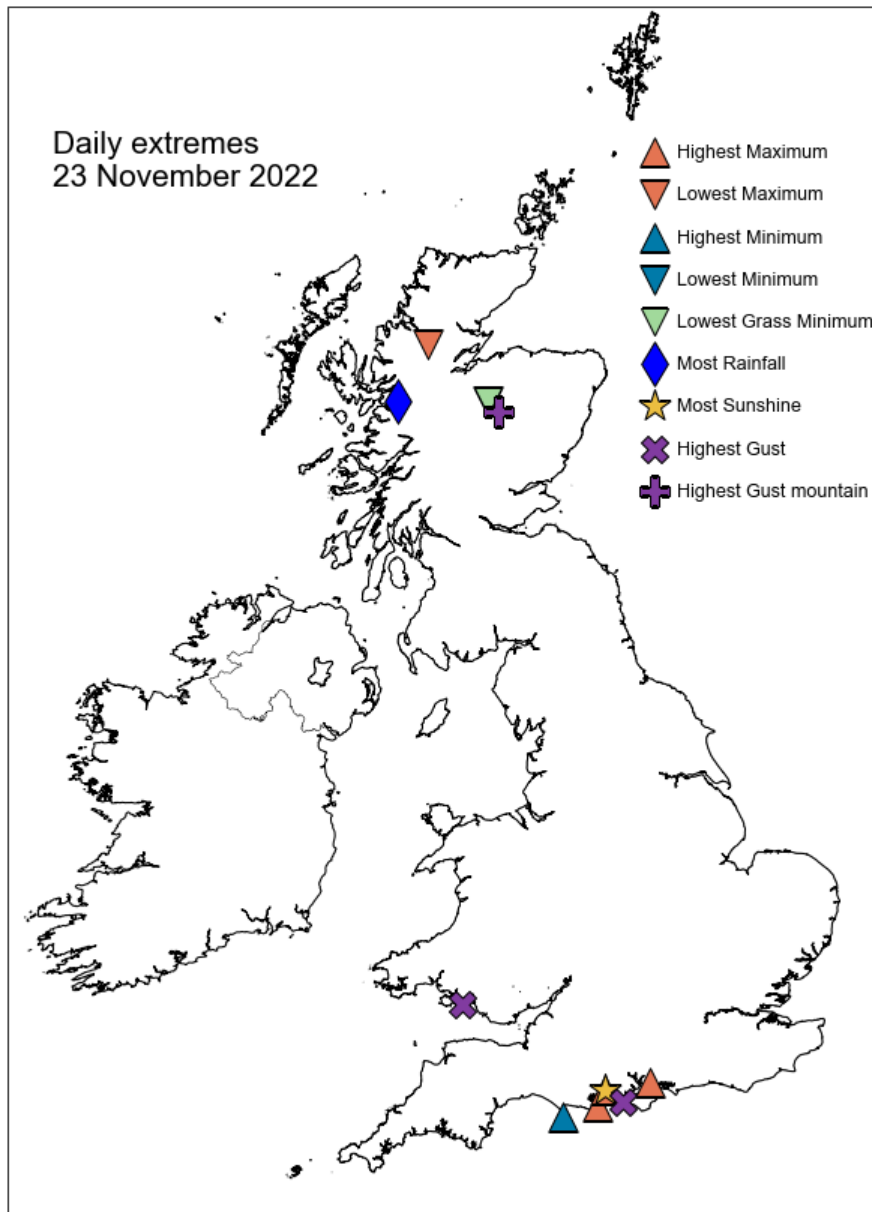

It was a remarkably dry start to the day for the majority of mainland UK, however a large band of cloud and rain moved quickly over Northern Ireland by 0200, continuing to move eastwards through the early hours. By 0400, southwest England and much of Wales were under this occluded front, experiencing heavy rain and strong winds at times. A yellow warning for wind and rain was in place for the region between 0300 and 0800. Some showers were seen over northwestern England and Scotland, soon being replaced by this band of rain. However, eastern parts were primarily clear and dry, although with some early morning fog patches. This occlusion continued eastwards through the day, generally clearing the east coast by 1300 but persisting over northeast Scotland until late afternoon. Blustery showers followed, broken by clearer spells for most of the UK through the afternoon. Some localised thunderstorm activity was reported, predominantly in western and south western areas. These showers gradually became confined to northern and western parts into the evening, with clearer spells elsewhere.

### Summary of the UK Weather for Thursday 24 November 2022

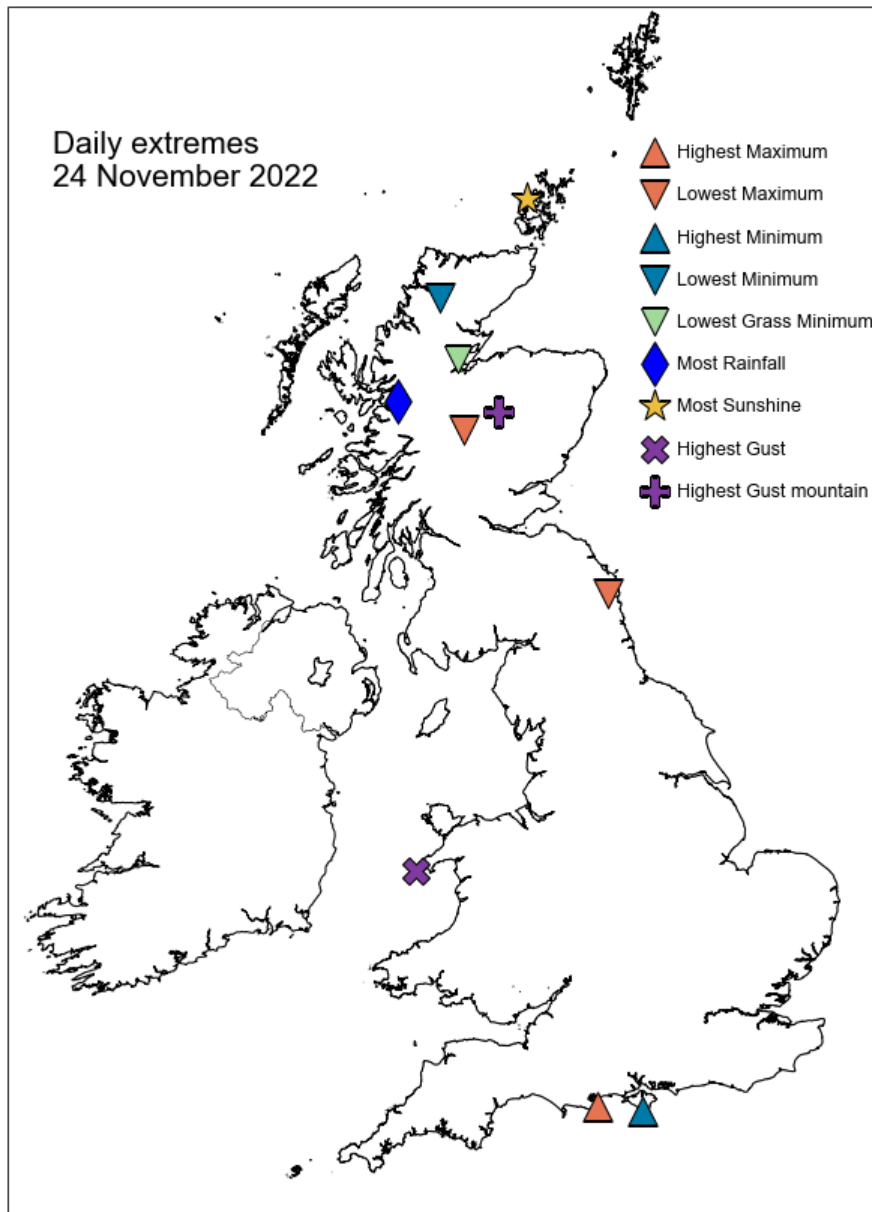

It was a dry start for eastern areas, whilst showers associated with occlusion fragments and troughs affected Northern Ireland and western Great Britain. Showers were particularly heavy through the early hours in western Scotland, though became increasingly patchy towards dawn. It was not particularly cold, despite clear skies for many, and a moderate southwesterly breeze prevented frost from forming in most parts. A cold front bringing with it a band of heavy rain moved across Northern Ireland as dawn broke. This front moved eastwards throughout the morning, hitting the west coast of the UK at around 0900, firstly as showers and then as a heavy band of rain accompanied with lightning. This band of heavy rain was spread across the whole country from the south coast to northern Scotland. The front cleared western areas into the early afternoon leaving clear conditions behind. It cleared eastern areas by 1900. Although most southern and Midlands areas remained dry following the front for the remainder of the night, into the evening and overnight, showers were present across northern England, Wales and western Scotland.

This day's summary created 02/12/2022 03:06

### Summary of the UK Weather for Friday 25 November 2022

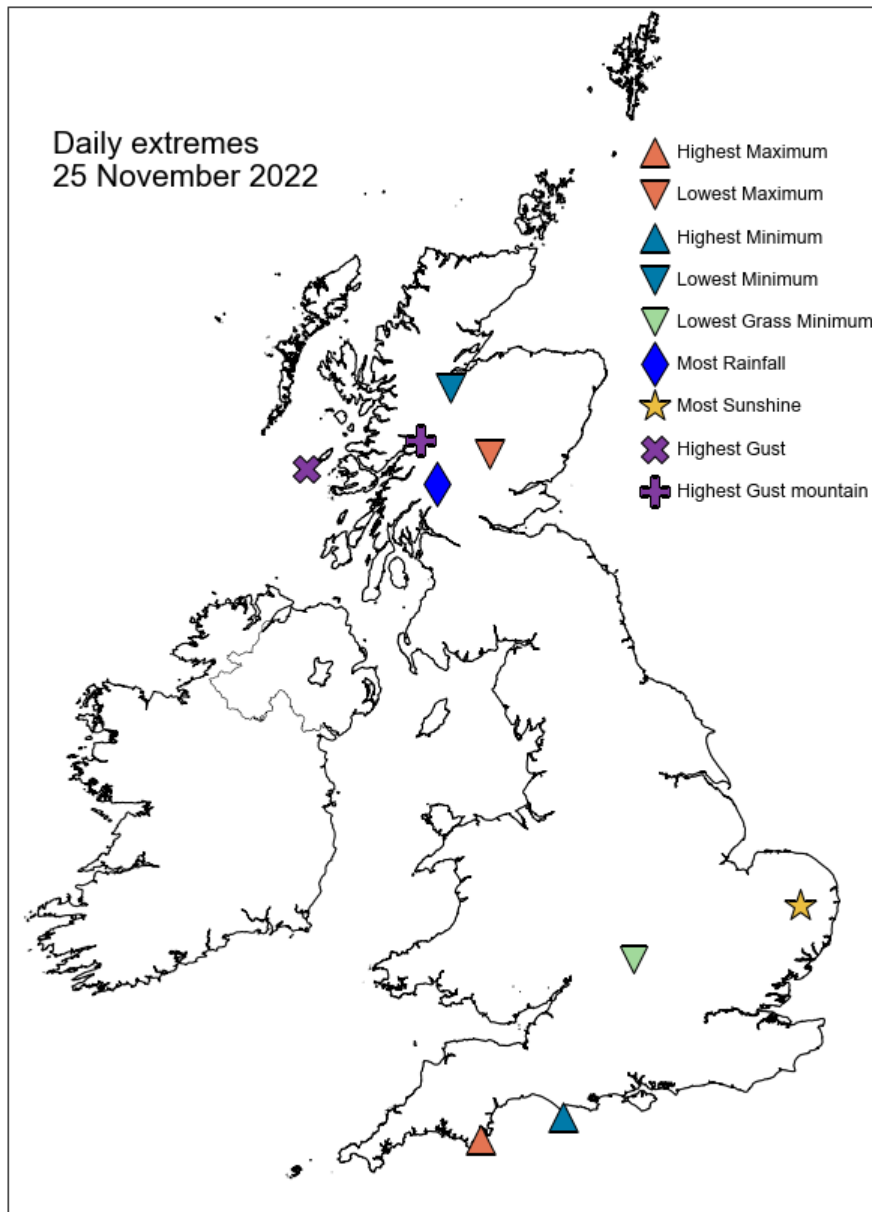

An occluded front cleared away southeastwards through the first part of the morning, bringing with it cloud and showers. Ahead of the front there were some clear spells but, like the previous night, temperatures did not drop too low in the southwesterly breeze. Just before 0500, further occlusion fragments began to push into northern Scotland and western Northern Ireland. This brought occasionally heavy showers here, and spherics were reported. In the early morning showers and rain were observed in most of the north and southeast, and some central and southwest parts of the UK; particularly heavy rain dominated in the highlands of Scotland. After midday, the rain gradually decreased in southern parts of the UK, but clouds and rain continued across northern parts of England and the highlands of Scotland throughout the period. Meanwhile, the rest of the UK observed dry and clear conditions with sunny spells at times. By the early evening, some places in central and southwestern areas started experiencing showers.

### Summary of the UK Weather for Saturday 26 November 2022

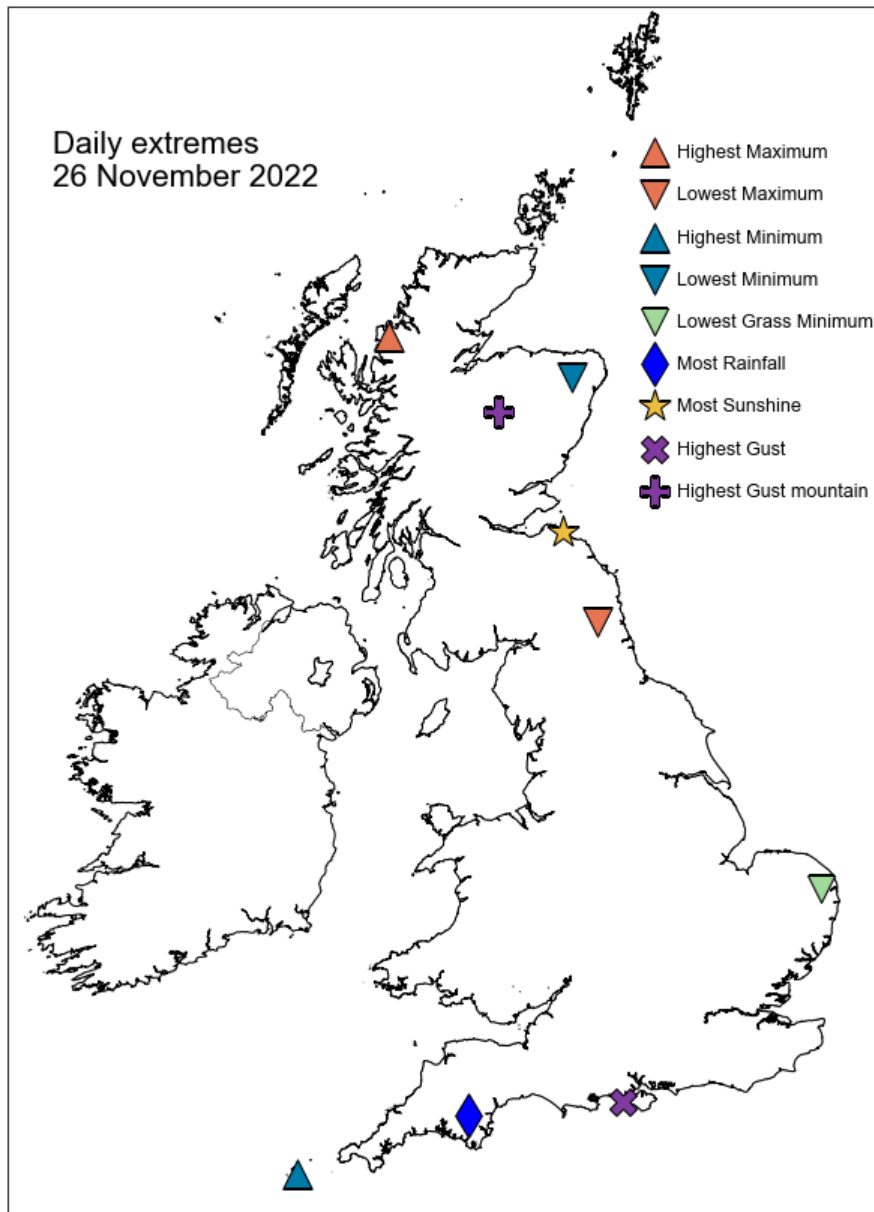

A band of locally heavy rain approached the UK from the west, arriving at Northern Ireland before dawn. Meanwhile, showers were seen across the northwest, although these fragmented as the morning loomed. It was a dry and clear start for the eastern parts, preceding thicker cloud approaching from the west. The band of rain continued eastwards through the morning, covering much of the southwest by midday, becoming heavy at times. Patchy showers continued along the west coast, while the east remained dry. This continued through the remainder of the day, with scattered showers extending far east into the early evening accompanied by a light southerly winds.

### Summary of the UK Weather for Sunday 27 November 2022

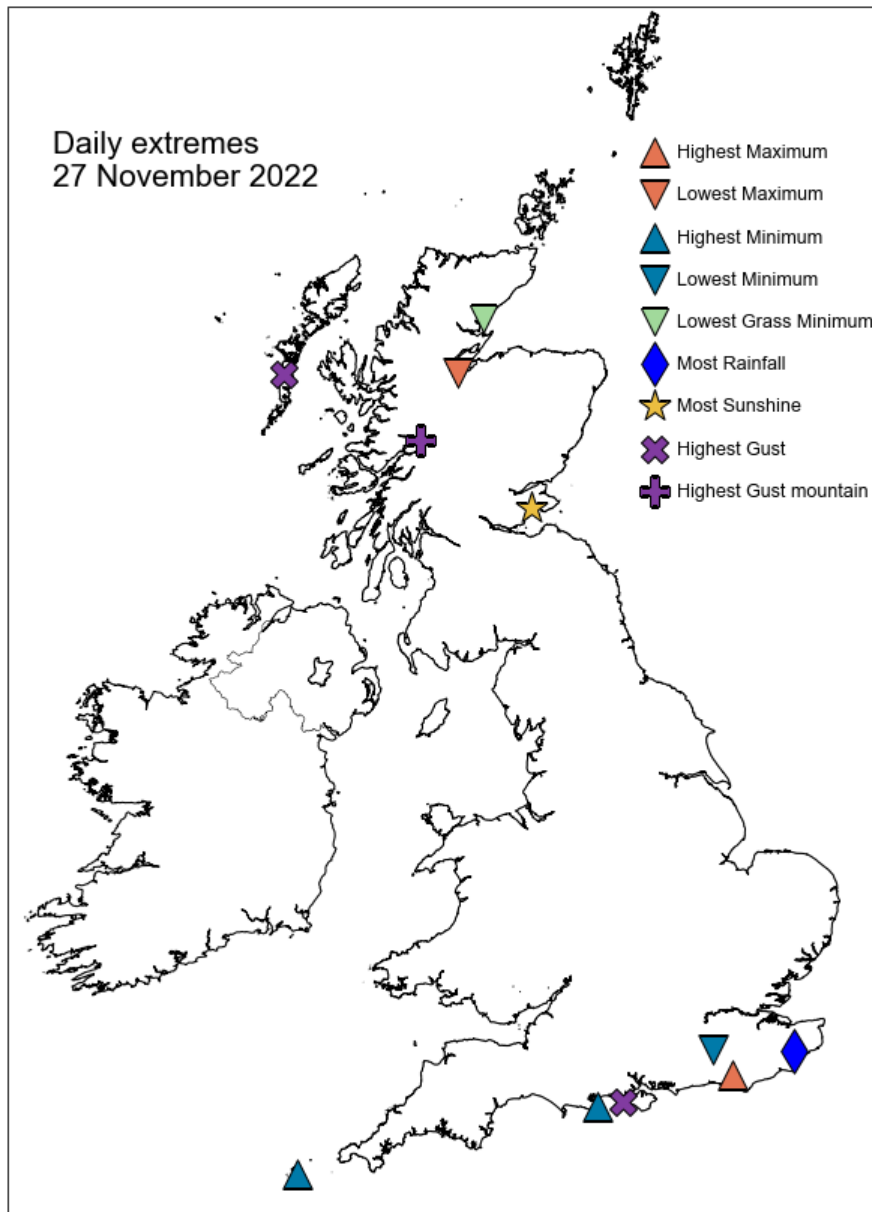

Through midnight, showers and rain were observed in most parts of the UK. However, afterwards, until early morning showers and rain continued to be exhibited in east parts of Scotland and southern England while clear and dry conditions were exhibited in the west Scotland and north and central areas. Prevailing south-easterly winds dominated through the period. Southeastern rain remained persistent throughout the day, briefly fragmenting just after midday however returned heavy at times soon after. Elsewhere stayed largely dry and clear, with a few scattered showers over the northwest and west coast by early afternoon. Also, some localised thunderstorms were recorded just off the west coast of Wales at 1400. Patchy fog developed into the evening, particularly in the east.

### Summary of the UK Weather for Monday 28 November 2022

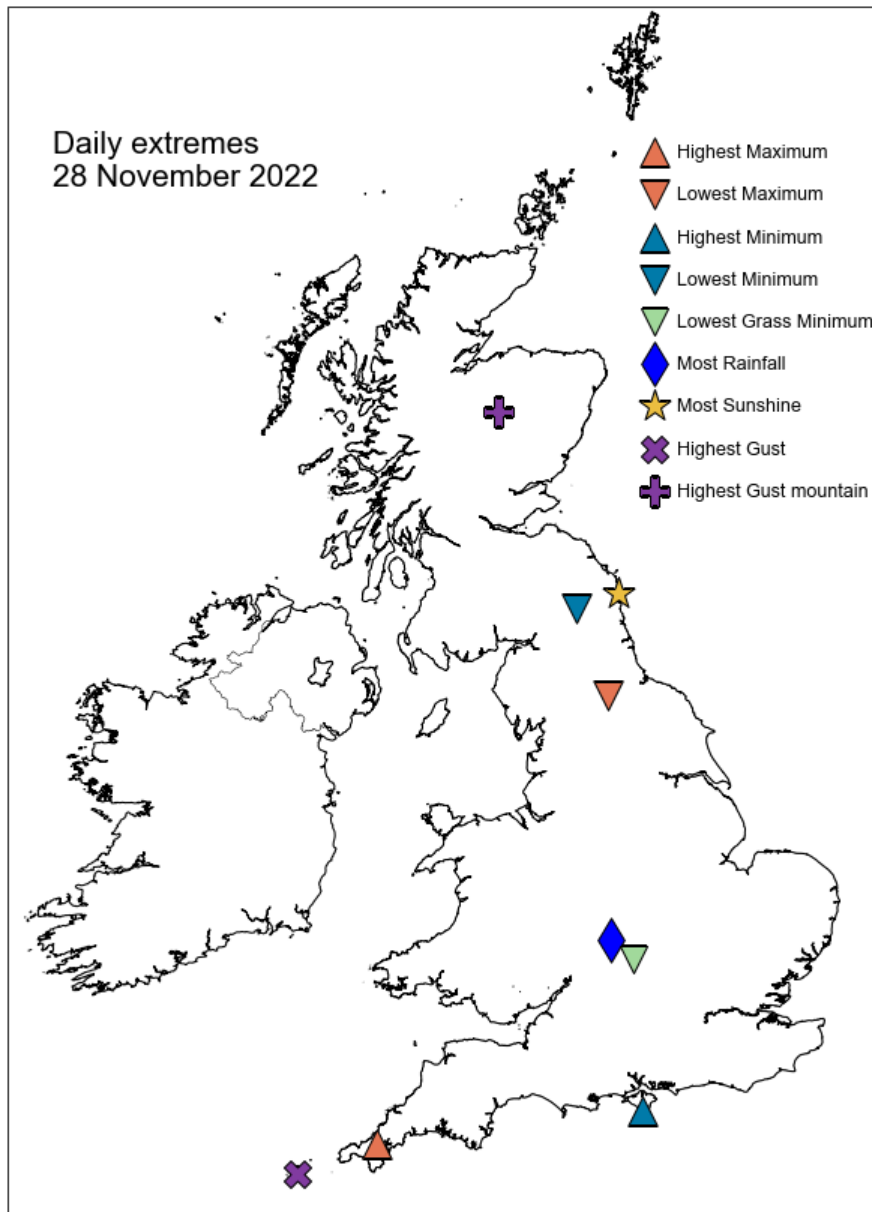

Many areas of England and Wales reported fog throughout the early hours, with just some high cloud blanketing Scotland and Northern Ireland. Showers slowly moved in from the Atlantic affecting northern and western areas. The fog persisted through the night. Throughout the morning, showers dominated on the western coasts of England and Wales, as well as the south coast. Eastern areas saw dry and clear conditions. These showers continued throughout the day, mostly in southwest England and scattered across Wales. They extended to southeastern areas by the early evening. These scattered showers dispersed overnight, leading to dry conditions across the country. Winds were light and variable throughout.

### Summary of the UK Weather for Tuesday 29 November 2022

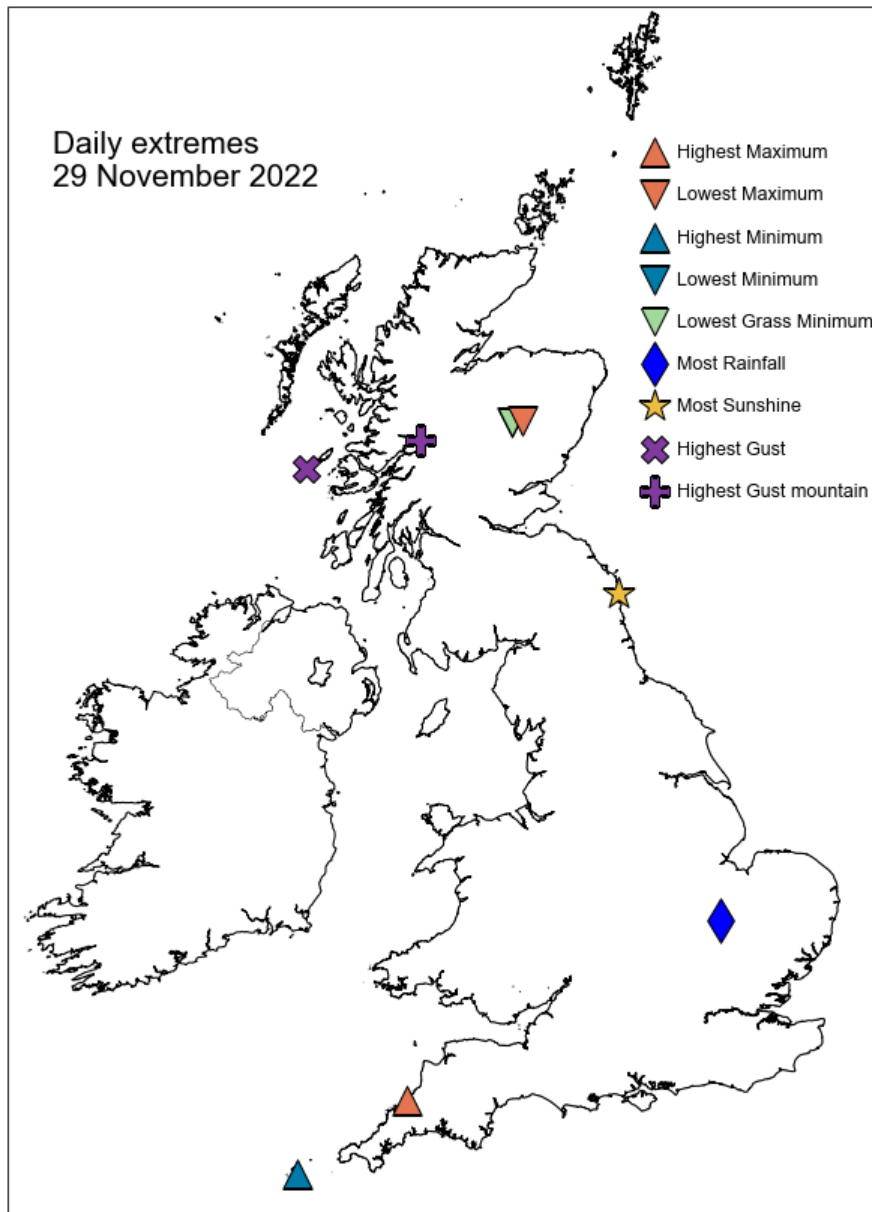

Fog was widespread across much of the UK in the early hours, with a yellow weather warning valid through until mid-morning. Only the southwest, far southeast, and coastal Scotland avoided it, with clear skies and just the occasional shower. Winds were very light and variable. Mist and fog persisted across much of the UK throughout the late morning and into the afternoon. Some sunny spells developed in the north, west and parts of Scotland. Elsewhere it remained generally overcast, with the occasional scattered shower over the far southeast and parts of west Scotland.

### Summary of the UK Weather for Wednesday 30 November 2022

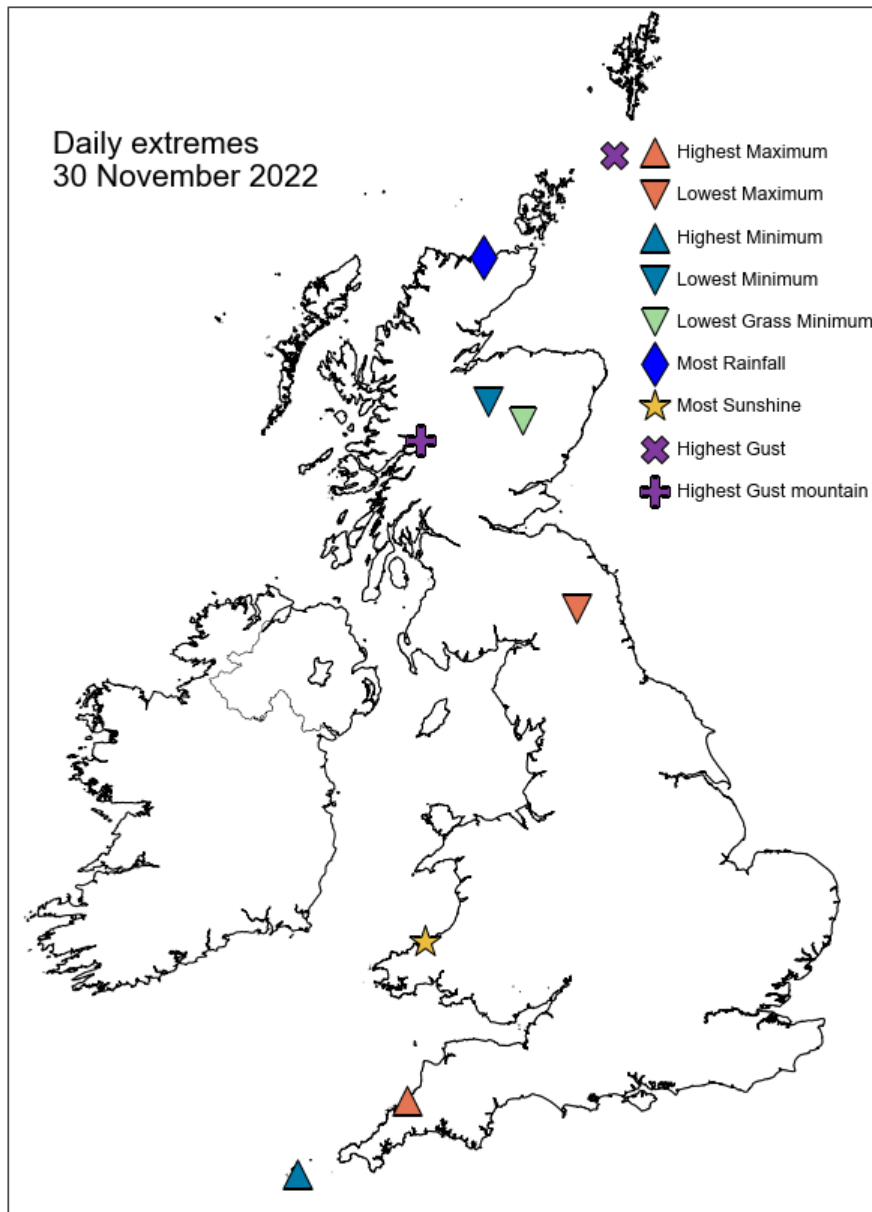

The early hours of the morning were dry across the whole country. Low cloud and fog was present across large parts especially south and southeast England and southeast Scotland. This became more focused on the central south towards dawn. The westernmost areas of the country were not affected. Initial fog and low cloud lifted through the morning to leave bright conditions with scattered cloud over much of the region. Turning sunny and bright in Northern Ireland and southeast England. A band of rain moved westwards over the Western Isles progressing into western Scotland and Northern Ireland through the period. Northeast England remained murky with poor visibility and low cloud.

### Daily Extremes

<i>Highest Maximum</i>	<b>13.9°C</b> Treknow (Cornwall, 100mAMSL)
<i>Lowest Maximum</i>	<b>0.5°C</b> Redesdale Camp (Northumberland, 211mAMSL)
<i>Highest Minimum</i>	<b>9.3°C</b> Scilly: St Marys Airport (Isles Of Scilly, 31mAMSL)
<i>Lowest Minimum</i>	<b>-6.0°C</b> Aviemore (Inverness-shire, 228mAMSL)
<i>Lowest Grass Minimum</i>	<b>-9.6°C</b> Balmoral (Aberdeenshire, 283mAMSL)
<i>Most Rainfall</i>	<b>12.4mm</b> Strathy East (Sutherland, 68mAMSL)
<i>Most Sunshine</i>	<b>6.5hr</b> Aberporth (Dyfed, 133mAMSL)
<i>Highest Gust</i>	<b>34Kt 39mph</b> Fair Isle (Shetland, 57mAMSL)
<i>Highest Gust (mountain)</i>	<b>39Kt 45mph</b> Aonach Mor (Inverness-shire, 1130mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

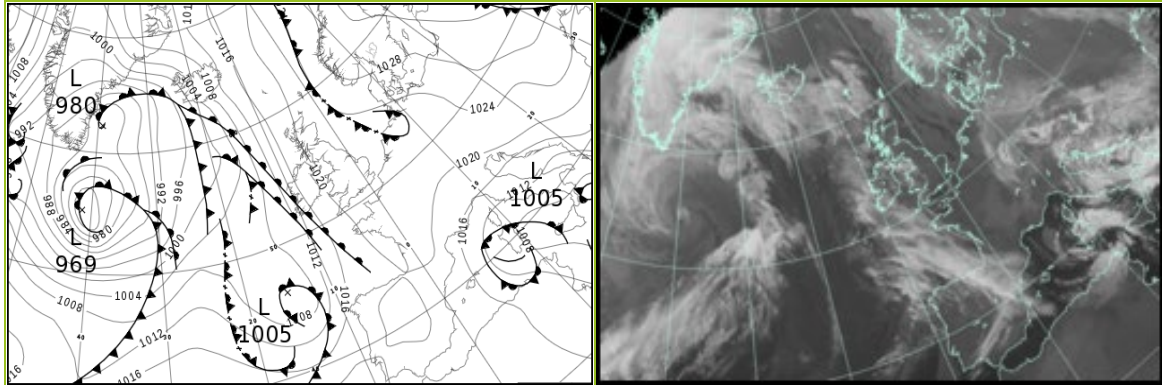

mAMSL refers to station elevation in metres above mean sea level

## Daily Weather Summary for Wednesday 30 November 2022

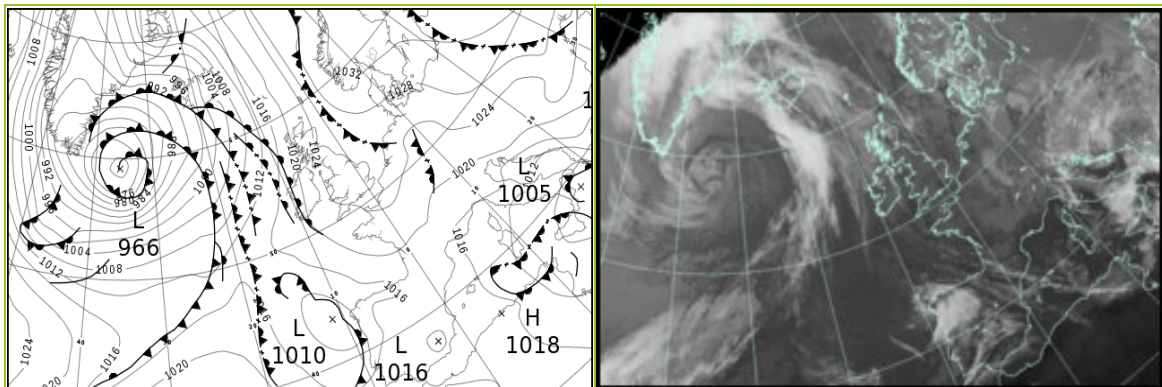

## Daily Weather Summary for Wednesday 30 November 2022

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Guidance Notes

UTC = Universal Coordinated Time. For the UK UTC is the same as GMT (Greenwich Mean Time).

National boundaries shown on the European station map are for illustrative purposes only.

### Daily extremes

- Daily extremes have been manually confirmed by Met Office Observations Quality Management as valid observations from the live database at the time of checking. However, more extreme values may still be possible if they occur after the time of production.
- Mountain stations above 500 masl are excluded from lowest temperatures, highest gust speeds and greatest snow depths at 0900 UTC. This is because they are not considered representative of low level areas.
- Counties quoted against each station are based on historical county boundaries pre-1974 and may not reflect current administrative boundaries.

### Analysis charts and satellite imagery

- The satellite imagery is infra-red imagery from the geostationary MSG satellite.
- The rainfall image is derived from satellite data from MSG and rain-radar data. This represents a snapshot of instantaneous rain-rates at 0000 UTC and 1200 UTC and so does not necessarily reflect daily accumulations in the rainfall station map.
- Any analysis charts or satellite images which are unavailable will be displayed as white space.

### Station maps

- The UK maps show station data for the same set of stations presented UK data table. These stations are selected to provide good spatial coverage across the UK; they represent only a fraction of the overall UK observing network.
- Wind speed maps show wind speed in Kt and direction both averaged over the hour up to the time of observation. 1 Kt = 1.151 mph.

### Hourly station data

- The data tables provide spot hourly observations from synoptic messages at 0000 and 1200 UTC. Missing data are denoted by '-'.

- Pressures are mean sea level pressure in hPa.
- For UK stations, Gibraltar and Jersey, the wind speeds and directions are both averaged over the hour up to the time of observation. However, for European stations wind speeds and directions are both averaged over a 10-minute period up to the time of observation.
- Wind speeds are in Kt. Wind directions are stored in the database every 10 degrees and have been converted to the nearest point of the compass. These give the direction the wind is blowing from, not to.
- Cloud amounts are in Oktas from 0 (clear) to 8 (overcast). 9 indicates sky obscured (eg by fog).
- Air temperature and dew point temperature are in Celsius.

### **Temperature maps**

- Daily maximum, minimum and grass minimum temperatures are in Celsius.
- The period for the daily maximum temperature on day D is defined from 0900 UTC day D to 0900 UTC day D+1.
- The period for the daily minimum and grass minimum temperatures on day D is defined as 0900 UTC day D-1 to 0900 UTC day D.
- On any given day D the minimum will typically occur in the early hours of the morning and the maximum in early afternoon.

### **Rainfall, sunshine and max gust speed maps**

- Daily rainfall is in mm from 0900 UTC day D to 0900 UTC day D+1.
- Daily sunshine is in hours from Kipp and Zonen CSD1 automatic sunshine records. Bright sunshine is defined as exceeding 120 W/m<sup>2</sup>.
- Max gust speeds are the daily max gust in Kt from 0000-0000 UTC

### **Snow maps**

- The day of snow falling map displays data from present weather sensors, showing stations which have recorded sleet or snow falling at any point in the day (0000-0000 UTC).
- The snow lying map shows level snow depth as recorded by the automatic snow depth sensors at 0900 UTC. These snow depth sensors do not record snow depth if this is less than 1cm.
- Snow depth sensors are normally operational from October to April, in the event of snow falling outside this period data availability may be limited.
- Snow maps will only be displayed if one or more of the selected stations on that date have recorded either snow falling or non-zero snow depths. If snow maps are not

displayed it is still possible that other stations in the network have recorded a day of sleet or snow falling or non-zero snow depth.
