

THE DAILY WEATHER REPORT

1st April to 30th June

1954

METEOROLOGICAL OFFICE
LONDON, W.C.2

5371
12

INTRODUCTION

On 1st January, 1950, the present form of the Daily Weather Report replaced the British and International Sections of the former Report which had been issued in three sections since 1919. The third Section now appears as a separate publication under the name of the Daily Aerological Record. A brief history of changes in contents and format between 1st April, 1919, and December, 1949, will be found in the Introduction to the British Section for 1st October to 31st December, 1949.

The present revision has made it possible to include a selection of ships' reports for each of the main synoptic hours along with corresponding reports from most of the Stations in Great Britain and Ireland which provide full reports. On page 2 will be found a weather chart for mid-day of the previous day covering most of the Northern Hemisphere, and on page 3 charts for 1800 h. of the preceding day and for 0000 h. and 0600 h. of the day of issue. By this arrangement the more valuable features of the former British and International Sections have been combined in a single publication.

Barometer Readings.—The readings are in millibars and tenths with the initial 9 or 10 omitted. Thus readings of 989.4 and 1021.5 are printed as 89.4 and 21.5 respectively.

Barometric Tendency.—(Columns 6 and 22). The Barometric tendency is expressed in tenths of a millibar.

Code for state of ground (E)—Column 33

- | | |
|--|---|
| 0 ... Ground dry. | 7 ... Ice, slush or firm or settled snow covering ground completely. |
| 1 ... " moist. | 8 ... Loose dry snow covering more than one half of surface (but not completely). |
| 2 ... " wet. | 9 ... Loose dry snow covering surface completely. |
| 3 ... " dry and frozen (not covered by ice or snow). | |
| 4 ... Glaze on ground but no slush or snow. | |
| 5 ... Ice, slush or snow covering less than one-half of ground. | |
| 6 ... Ice, slush or firm or settled snow covering more than one-half of ground (but not completely). | |

WIND SPEED AND DIRECTION

From 1st January, 1949, the speed of the wind is given in knots and the direction in degrees from true north, measured clockwise to nearest 10 degrees.

The following tables show (a) the approximate equivalents in knots, measured at 30–40 ft. above ground in an unobstructed situation, of the Beaufort numbers previously used for reporting wind force, (b) the equivalents in degrees of true wind direction expressed in compass points.

Table (a) Wind Speed

Beaufort number	Description	Speed in Knots
0	Calm	Less than 1
1	Light air	1–3
2	Light breeze	4–6
3	Gentle breeze	7–10
4	Moderate breeze	11–16
5	Fresh breeze	17–21
6	Strong breeze	22–27
7	Moderate gale	28–33
8	Fresh gale	34–40
9	Strong gale	41–47
10	Whole gale	48–55
11	Storm	56–63
12	Hurricane	64–71

Table (b) Wind Direction

Compass Points	Degrees (nearest 10)	Compass Points	Degrees (nearest 10)
Calm	00	SSW	200
NNE	20	SW	230
NE	50	WSW	250
ENE	70	W	270
E	90	WNW	290
ESE	110	NW	310
SE	130	NNW	340
SSE	160	N	360
S	180		

Form of Low Cloud* (C_L)—Columns 9 and 25

- No low cloud.
- Cumulus with little vertical development.
- Cumulus of considerable development with or without other Cumulus or Stratocumulus.
- Cumulonimbus, tops not cirriform or anvil-shaped; with or without other forms of low cloud.
- Stratocumulus formed by spreading out of Cumulus; Cumulus also often present.
- Stratocumulus other than Type 4.
- Stratus and/or Fractostratus but not of bad weather.
- Fractostratus or Fractocumulus of bad weather ("scud") usually under Nimbostratus.
- Cumulus and Stratocumulus other than Type 4.
- Cumulonimbus, with cirriform top, often anvil-shaped. Other types of low cloud may be present.

/or—Low clouds not visible owing to darkness, fog, sandstorm or other phenomena

* Abbreviated definitions. For full text see "Handbook of Weather Messages," Part II, MO.510(b)

Form of Medium Cloud* (C_M)—Columns 10 and 26

- No medium cloud.
- Semi-transparent Altostratus through which sun or moon are visible.
- Thick Altostratus or Nimbostratus through which position of sun or moon is indicated by a light patch.
- Semi-transparent Altocumulus of unchanging elements; at a single level.
- Semi-transparent Altocumulus in patches; elements continually changing; possibly at more than one level.
- Semi-transparent Altocumulus in bands or in an increasing layer.
- Altocumulus formed by spreading out of Cumulus.
- Any of the following:—
 - Double-layered Altocumulus not increasing.
 - Thick layer of Altocumulus not increasing.
 - Altostratus and Altocumulus both present.
- Altocumulus tufted or turretted.
- Altocumulus at different levels giving chaotic appearance to the sky. (Patchy dense Cirrus usually present).

/or—Medium cloud not visible owing to darkness, fog, sandstorm, etc., or owing to existence of a complete layer of lower cloud.

Form of High Cloud* (C_H)—Columns 11 and 27

- No Cirriform Cloud.
 - Scattered Cirrus not increasing.
 - Dense Cirrus in patches; usually not increasing.
 - Cirrus often anvil-shaped; usually associated with Cumulonimbus.
 - Tufted Cirrus increasing and thickening.
 - Cirrus and/or Cirrostratus increasing but the continuous layer not reaching above 45° altitude.
 - Cirrus and/or Cirrostratus increasing with the continuous layer reaching above 45° altitude.
 - Complete layer of Cirrostratus covering whole sky.
 - Cirrostratus not increasing and not a complete layer covering whole sky.
 - Cirrocumulus alone or with Cirrus or Cirrostratus where the Cirrocumulus predominates. (Cirrocumulus may also be present with C 1 and C 8.)
- /or— High cloud not visible owing to darkness, fog, sandstorm, etc., or owing to the existence of a complete layer of lower cloud.

CLOUD HEIGHT—Columns 14, 16, 30 and 32

Code figures 01–80 = cloud height in 100s of feet

CODE FIGURES 81–89

- 81 = 9,000 feet
82 = not used
83 = 10,000 feet
84 = 13,000 "
85 = 16,000 "
86 = 20,000 "
87 = 23,000 "
88 = 26,000 "
89 = 30,000 " or higher

CODE FIGURES 90–99*

- 90 = less than 150 feet
91 = 150–300 "
92 = 300–600 "
93 = 600–1,000 "
94 = 1,000–2,000 "
95 = 2,000–3,000 "
96 = 3,000–5,000 "
97 = 5,000–6,500 "
98 = 6,500–8,000 "
99 = 8,000 feet or higher or no clouds.

*Only used when cloud height cannot be determined with greater accuracy.

Beaufort Notation and Symbols for Weather—

Columns 4, 20, 34 and 35 on page 1, and 4, 20, 39 and 40 on page 4.

- b, blue sky (not more than a quarter covered with cloud).
bc, sky partly cloudy (one half covered). c, generally cloudy.
d, drizzle. e, wet air.
f, fog, visibility 220–1,100 yds.
F, thick fog, visibility less than 220 yds.
fs, low fog over sea (coast station).
fg, low fog over land (inland station).
g, gale.
m, mist, visibility 1100–2200 yds.
h, hail. i, intermittent.
h(r), "hail" or "rain and hail."
jf, fog in the vicinity but not at station.
jp, precipitation within sight of station.
ks, storm of drifting snow.
kso, slight storm of drifting snow (generally low).
kS, heavy storm of drifting snow (generally low).
kzo, slight duststorm or sandstorm.
kZ, severe duststorm or sandstorm.
- KQ, line squall. l, lightning.
o, overcast. p, passing showers.
q, squalls. r, rain. s, snow.
rs, sleet. t, thunder.
u, ugly, threatening sky.
v, unusual visibility. w, dew.
x, hoar frost. y, dry air.
z, dust haze: the turbid atmosphere of dry weather.
- Capital letters indicate intense; suffix, indicates slight; repetition of letters indicates continuity: thus R, heavy rain. ro, slight rain.
rr, continuous rain.
<, less than (for cloud height).
e, Solar halo. o, lunar halo. A, Aurora.
- With present weather is combined, whenever possible, the general character of the weather.
A "solidus" divides actual existing weather from preceding conditions thus: bc/r, fair weather after rain; —, has decreased; +, has increased.

VISIBILITY—Columns 3 and 19

In the range 01 to 80 the figures give the actual visibility in fifths of kilometres, or furlongs. Thus 20 = 4 kms. or 2½ miles. The following Table gives the visibility for the ranges X0 to X9 and 80 to 89:—

Second code figure

First code figure	0	1	2	3	4	5	6	7	8	9
X	22	22	44	66	88	110	132	154	176	198 yards
8	10	12½	25	37	50	62	93	125	187	310 miles

GENERAL SYNOPTIC DEVELOPMENT, FORECAST AND FURTHER OUTLOOK

Below the weather charts on page 3 will be found a statement which describes the main features in the evolution of the synoptic situation over the British Isles during the preceding 24 hours together with an indication of the manner in which it is expected to develop during the succeeding 24 hours. On the right of this statement is a forecast of the weather expected during a period of 24 hours from noon on the day of issue, followed by an outlook for a further period, the duration of which is normally 24 hours but may be longer in certain weather situations.

NOTES ON THE INFORMATION CONTAINED IN THE DAILY WEATHER REPORT

Standard of Time.—Greenwich Mean Time is exclusively used throughout the Report.

Hours of Observation.—From 1st August, 1944, the times of the observations published in the Report were changed to 0000, 0600, 1200 and 1800 G.M.T., and from the same date until 31st December, 1944, the morning readings of minimum and grass minimum temperature and rainfall were made at 0600 G.M.T. instead of at 0700 G.M.T. From 1st January, 1945, minimum temperatures have been read at 0900 G.M.T., and maximum temperatures at 2100 G.M.T., and rainfall at 0900 and 2100 G.M.T.

Stations.—Kew.—Temperature readings at Kew are taken in a large louvered screen placed against the north wall of the observatory. The thermometer bulbs are at a height of 10 feet above the ground immediately surrounding the building. This ground is raised a few feet above the general level of the Old Deer Park in which the observatory stands.

Heights of Stations.—The heights of British Stations above M.S.L. refer to the plot of ground on which the rain gauge is situated.

Pressure.—The distribution of barometric pressure at Mean Sea Level is shown on the charts on Pages 2 and 3 of the Report by means of isobars drawn at intervals of 4 mb.

The wind at a height of 1,500–2,000 feet above the ground usually blows along the isobars and, for the same temperature, pressure and latitude, the speed of the wind is inversely proportional to the distance between the isobars, e.g., for isobars 1 inch apart for the charts on Page 3 the speed of the upper wind is about 10 knots in latitude 55°, with a temperature of 50° F. and a pressure of 1,000 mb.; if, however, the isobars are $\frac{1}{2}$ inch apart the corresponding speed is 20 knots.

The scale below can be used to determine the theoretical wind as deduced from the pressure distribution on either chart. On the assumption that the path of the air is straight this theoretical wind is called the Geostrophic Wind.

If the distance between consecutive isobars is measured along the scale from the left-hand extremity the geostrophic wind is shown by the scale in knots.

GEOSTROPHIC WIND SCALE (Knots)

For 8 mb. isobars on $1:4 \times 10^7$ Charts.
and for 4 mb. „ „ $1:2 \times 10^7$ „

This scale applies under the following conditions:—

Pressure, 1,000 mb. Temperature, 50° F. Latitude, 55°.

Corrections.—For an increase of 10 mb. pressure, subtract 1% from velocity; for an increase of 10° F. add 2%. From Latitude 55° to Latitude 65° subtract 1% for each degree above 55°. From Latitude 55° to Latitude 45° add 1½% for each degree below 55°.

Temperature.—Temperature is specified in degrees Fahrenheit, and is shown on the charts by means of figures written alongside the positions of the stations.

Dew Point.—The values of Dew Point given in columns 8 and 24 are derived from the original readings of dry-bulb and wet-bulb temperature and are correct to 1° F. Prior to 1st January, 1949, values below 32° F. gave the "Hoar Frost Point" that is to say the temperature for which the actual vapour pressure is equal to the saturation pressure over ice. Since 1st January, 1949, the true Dew Point and not the Hoar Frost Point has been included in synoptic reports in circumstances where the actual vapour pressure is lower than the saturated water vapour pressure of 32° F., in accordance with Washington, 1947, Resolution No. 184.

Rainfall.—Columns 38, 43.—Tr = rain has fallen, but amount less than 0.1 mm.

Wind.—All wind directions specified in the reports are "true," as distinguished from "magnetic." The arrows indicating wind direction are drawn to fly with the wind. Each feather denotes two steps on the Beaufort Scale; thus force 5 is indicated by two whole feathers and one half feather.

Adjusted Readings.—Where an instrumental reading is found to be in error and some adjustment is necessary, such adjusted reading is published in brackets thus (59).

Particulars of Codes and Specifications which were adopted on 1st January, 1949, will be found in "Handbook of Weather Messages, Codes and Specifications," Part II, obtainable from H.M. Stationery Office, price 2s. 8d. post free.

N.B.—Readers of the Report who are unacquainted with the method of construction and the use of weather charts are recommended to read "The Weather Map. An introduction to Modern Meteorology," (3rd Edition, 1939), to be purchased from H.M. Stationery Office, York House, Kingsway W.C.2, price 3s. 3d. post free.

Changeable: cool: rainy periods.

Early in the month an anticyclone to northward of Scotland gave rise to dry weather almost everywhere. It was dull and cool in eastern districts, with morning drizzle, and fog on parts of the coast, but in the west it was sunny and warm. At Prestwick (Ayrshire) the temperature reached 75°F. on the 4th, and over 15 hours of sunshine were recorded daily from the 1st to the 3rd at some places in the Hebrides and West Scotland. Brighter weather occurred in Eastern England on the 3rd and 4th, but on the latter day there were isolated thunderstorms in the South Midlands. On the 5th a trough of low pressure moved into the British Isles from the Atlantic, and it was preceded by an extensive outbreak of thunderstorms particularly in the Midlands and Southeast: at Wyton (Huntingdonshire) about 80mm. of rain fell in under two hours. A depression formed in this trough over England and gave rise to widespread rain, heavy in places over the Whitsun holiday; at Ross-on-Wye over 50mm. of rain fell on the 5th; the most in any June day since records began in 1859.

During the ensuing week further depressions moved from the Atlantic into the South of the British Isles bringing much rain, particularly to Southern and Western England, with thunderstorms in places, but there were sunny periods especially in East England and Northwest Scotland. Strong winds occurred in the Channel on the 9th.

From the 6th to the 12th London had its wettest June week since 1905.

From the 14th to the 24th a sequence of small but active depressions moving East brought cloudy rainy weather with only brief intermissions, to much of Scotland, with rain at times also in Northern England and Northern Ireland. In the South the associated fronts were very weak, and fine rather warm weather occurred in many places, especially in the eastern half of the country. On the 25th one of these fronts became more active over Southern England and gave rise to several hours rain in many places. A depression formed South of Iceland on the 25th and moved slowly to Scandinavia, and a ridge of high pressure spread into the British Isles from the Atlantic. Cool northerly winds spread to all areas on the 26th and 27th and persisted until the 29th, and there were rain and showers in places chiefly in the North. In the Southeast it was sunny on the 26th and 27th but later it became cloudy and very cool; there were however some sunny periods in the West. Ground frost occurred in the Glasgow area on the night of the 28th.

† The readings used are the maximum for the period 09h-21h and the minimum for the period 21h-09h. British station averages for temperature and sunshine are based on data for the years 1921-1950. Birr Castle and Valentia averages are for period 07 18h and 18-07h. Rainfall averages in all cases are based on data covering at least 10 years (see M.O. 364).

METEOROLOGICAL OFFICE, AIR MINISTRY, KINGSWAY, LONDON, W.C.2.
O.G. SUTTON, C.B.E., D.Sc., F.R.S. Director.

CODE for State of Ground.

- 0 = Surface of ground dry (no appreciable amount of dust or loose sand).
- 1 = Surface of ground moist.
- 2 = Surface of ground wet (standing water in small or large pools on surface).
- 3 = Surface of ground dry and frozen (not covered by ice or snow).
- 4 = Ice on ground but no slush or snow.
- 5 = Ice, slush or snow covering less than one-half of ground.
- 6 = Ice, slush, or firm or settled snow covering more than one-half of ground (but not completely).
- 7 = Ice, slush, or firm or settled snow covering ground completely.
- 8 = Loose dry snow covering more than one-half surface (but not completely).
- 9 = Loose dry snow covering surface completely.

The definitions for code figures 0 to 4 apply to representative bare ground and for code figures 5 to 9 to an open representative area. During the occurrence of hoar frost or dew the state of the ground is determined as though those were absent.

* Code figures 8 and 9 may be used to indicate dust or loose sand on the surface of the ground in the proportions indicated.

- (1) Averages computed from values for Sealand 1921-43 and Hawarden 1944-50; extremes are for Sealand.
- (2) Averages and extremes are those for Cranwell about 25 miles South south east of Scampton.
- (3) Extremes for sunshine and averages and extremes for rainfall are supplemented by those for Plymouth Hoe.
- (4) Averages computed from values for Dyce, Craibstone and Aberdeen; extremes are for Aberdeen.

†† Based in part on reports made by telegraph in which the day and night measurements are rounded off to the nearest whole millimetre. Small discrepancies may arise between these totals and those given in the Monthly Weather Report which are based on readings taken to 0.1.

Chart of Weather in the Northern Hemisphere.

GENERAL SYNOPTIC DEVELOPMENT:-

Pressure remained high to northward of Scotland and relatively low over Northwest Europe. Only minor changes are expected in this general pattern, though the north-easterly gradient is expected to weaken.

Issued at mid-day today Tuesday 1st June, 1954

FORECAST FOR BRITISH ISLES until noon tomorrow :-

Eastern districts of Great Britain will have cool cloudy weather with some light rain or drizzle in places. In the West it will be mainly fine and warm but a few isolated thunderstorms may develop in South Wales and Southwest England.

OUTLOOK FOR the following 48 hours:-
Probably similar.

† CLOUD AMOUNT in eighths (9=sky obscured). CLOUD HEIGHT 01-80 in 100's of feet. VISIBILITY 01-80 in eighths of a mile. X1-X9 in 1/80ths of a mile. For higher numbers and codes for cloud form and state of ground see Introduction.

* Information not usually received

O. G. SUTTON, C.B.E., D.Sc., F.R.S. Director.
Meteorological Office, Air Ministry, Kingsway London, W.C.2.

Chart of Weather in the Northern Hemisphere.

GENERAL SYNOPTIC DEVELOPMENT:-

An anticyclone remained centred to the north of Scotland moving only slowly southward.

Issued at mid-day today Wednesday 2nd June 1954

FORECAST FOR BRITISH ISLES until noon tomorrow:-

In most eastern districts and the Midlands, cool cloudy weather will continue with drizzle in places in Eastern England and some hill and coastal fog patches morning and night. There will be bright periods in western districts and also in Northern Scotland and in these areas it will continue rather warm.

OUTLOOK FOR the following 48 hours:-
Probably similar.

Prestwick	020																																											

Chart of Weather in the Northern Hemisphere.

GENERAL SYNOPSIS DEVELOPMENT:-

The anticyclone which yesterday was centred to the North of Scotland has moved slowly Southwards. Another anticyclone has moved to Norway from the northwest and this high pressure system may well absorb the one over Scotland and become the main anticyclone by Friday morning.

Issued at mid-day today Thursday 3rd June 1954

FORECAST FOR BRITISH ISLES until noon tomorrow:-

Most Western and Midland districts will have fine rather warm weather. In many Eastern districts of England it will be mainly cloudy and rather cool though sunny periods are likely this afternoon and again tomorrow morning except in coastal districts. There may be some fog patches for a time around dawn tomorrow in Northern and Western districts of Great Britain.

OUTLOOK FOR following 24 hours:- Probably fine and rather warm in many places.

Chart of Weather in the Northern Hemisphere.

An anticyclone over the Northern North Sea is expected to persist during the next 24 hours though it is likely to become somewhat less strong.
A trough of low pressure is moving towards Southern Ireland from the Atlantic.

FORECAST FOR BRITISH ISLES until noon tomorrow :-
Many places in the British Isles will have fine rather warm weather though there is a chance that some thundery showers may in districts from the continent during this evening and tonight. low cloud in places in the East tonight and at first tomorrow morning.

OUTLOOK FOR following 24 hours: - Fine and rather warm in many districts. Rather doubtful in the South where there may be some rain or thundery showers.

Chart of Weather in the Northern Hemisphere.

Issued at midday today Saturday 5th June 1954

FORECAST FOR BRITISH ISLES until noon tomorrow :-
 Many places in the British Isles will have fine warm weather at first this afternoon but outbreaks of thundery rain or thunderstorms are likely in many parts of England, Wales, Northern Ireland and Southwest Scotland later today and tomorrow morning. In coastal areas of Northeast and East England it will remain cloudy and cool throughout the period.

OUTLOOK FOR the following 24 hours:- Rain at times in many Eastern districts but bright though rather showery weather spreading slowly eastwards from Southwest England and South Wales.

GENERAL SYNOPSIS DEVELOPMENT:-
 The anticyclone which was centred over the Northern North Sea yesterday has continued to decline. The trough of low pressure which was moving towards southwestern districts from the Atlantic has reached the Scilly Isles and continues to move slowly eastward. It is being followed by a weak ridge of high pressure.

Chart of Weather in the Northern Hemisphere.

Mean Sea surface isotherms for JUNE are shown thus — 50° —

SCALE 1:250,000
Nautical Miles
Statute Miles

GENERAL SYNOPSIS DEVELOPMENT:-
The trough of low pressure has moved eastwards, more slowly in the north than in the south, and now extends from Northern Ireland to the Low Countries with a small closed centre over the Midlands. This centre is expected to develop somewhat and to move slowly northwards.

Issued at midday to-day Sunday 6th June, 1954

FORECAST FOR BRITISH ISLES until noon tomorrow :-
Rain at times in Wales, North and West Midlands, northern districts of England, and Northern Ireland, spreading slowly north across much of Scotland. Mainly cloudy over other parts of England with occasional showers and perhaps thunder in places. These conditions spreading north to most parts of England and Wales. Mainly rather cool.

OUTLOOK FOR the following 24 hours:-
Bright intervals and showers in the south. Cloudy with rain at times in north.

Chart of Weather in the Northern Hemisphere.

All times are G.M.T. Add one hour to get summer time.

Issued at Mid-day to-day Monday 7th June 1954

FORECAST FOR BRITISH ISLES until noon tomorrow :-

Occasional rain and showers in most places, with more general rain already affecting South-west England expected to spread Northeast over much of the country. Temperatures will be mainly below normal.

OUTLOOK FOR the following 24 hours: Periods of rain or showers in most places, with perhaps thunder in the South-west. probably becoming somewhat warmer in some Central and Eastern Areas.

Chart of Weather in the Northern Hemisphere.

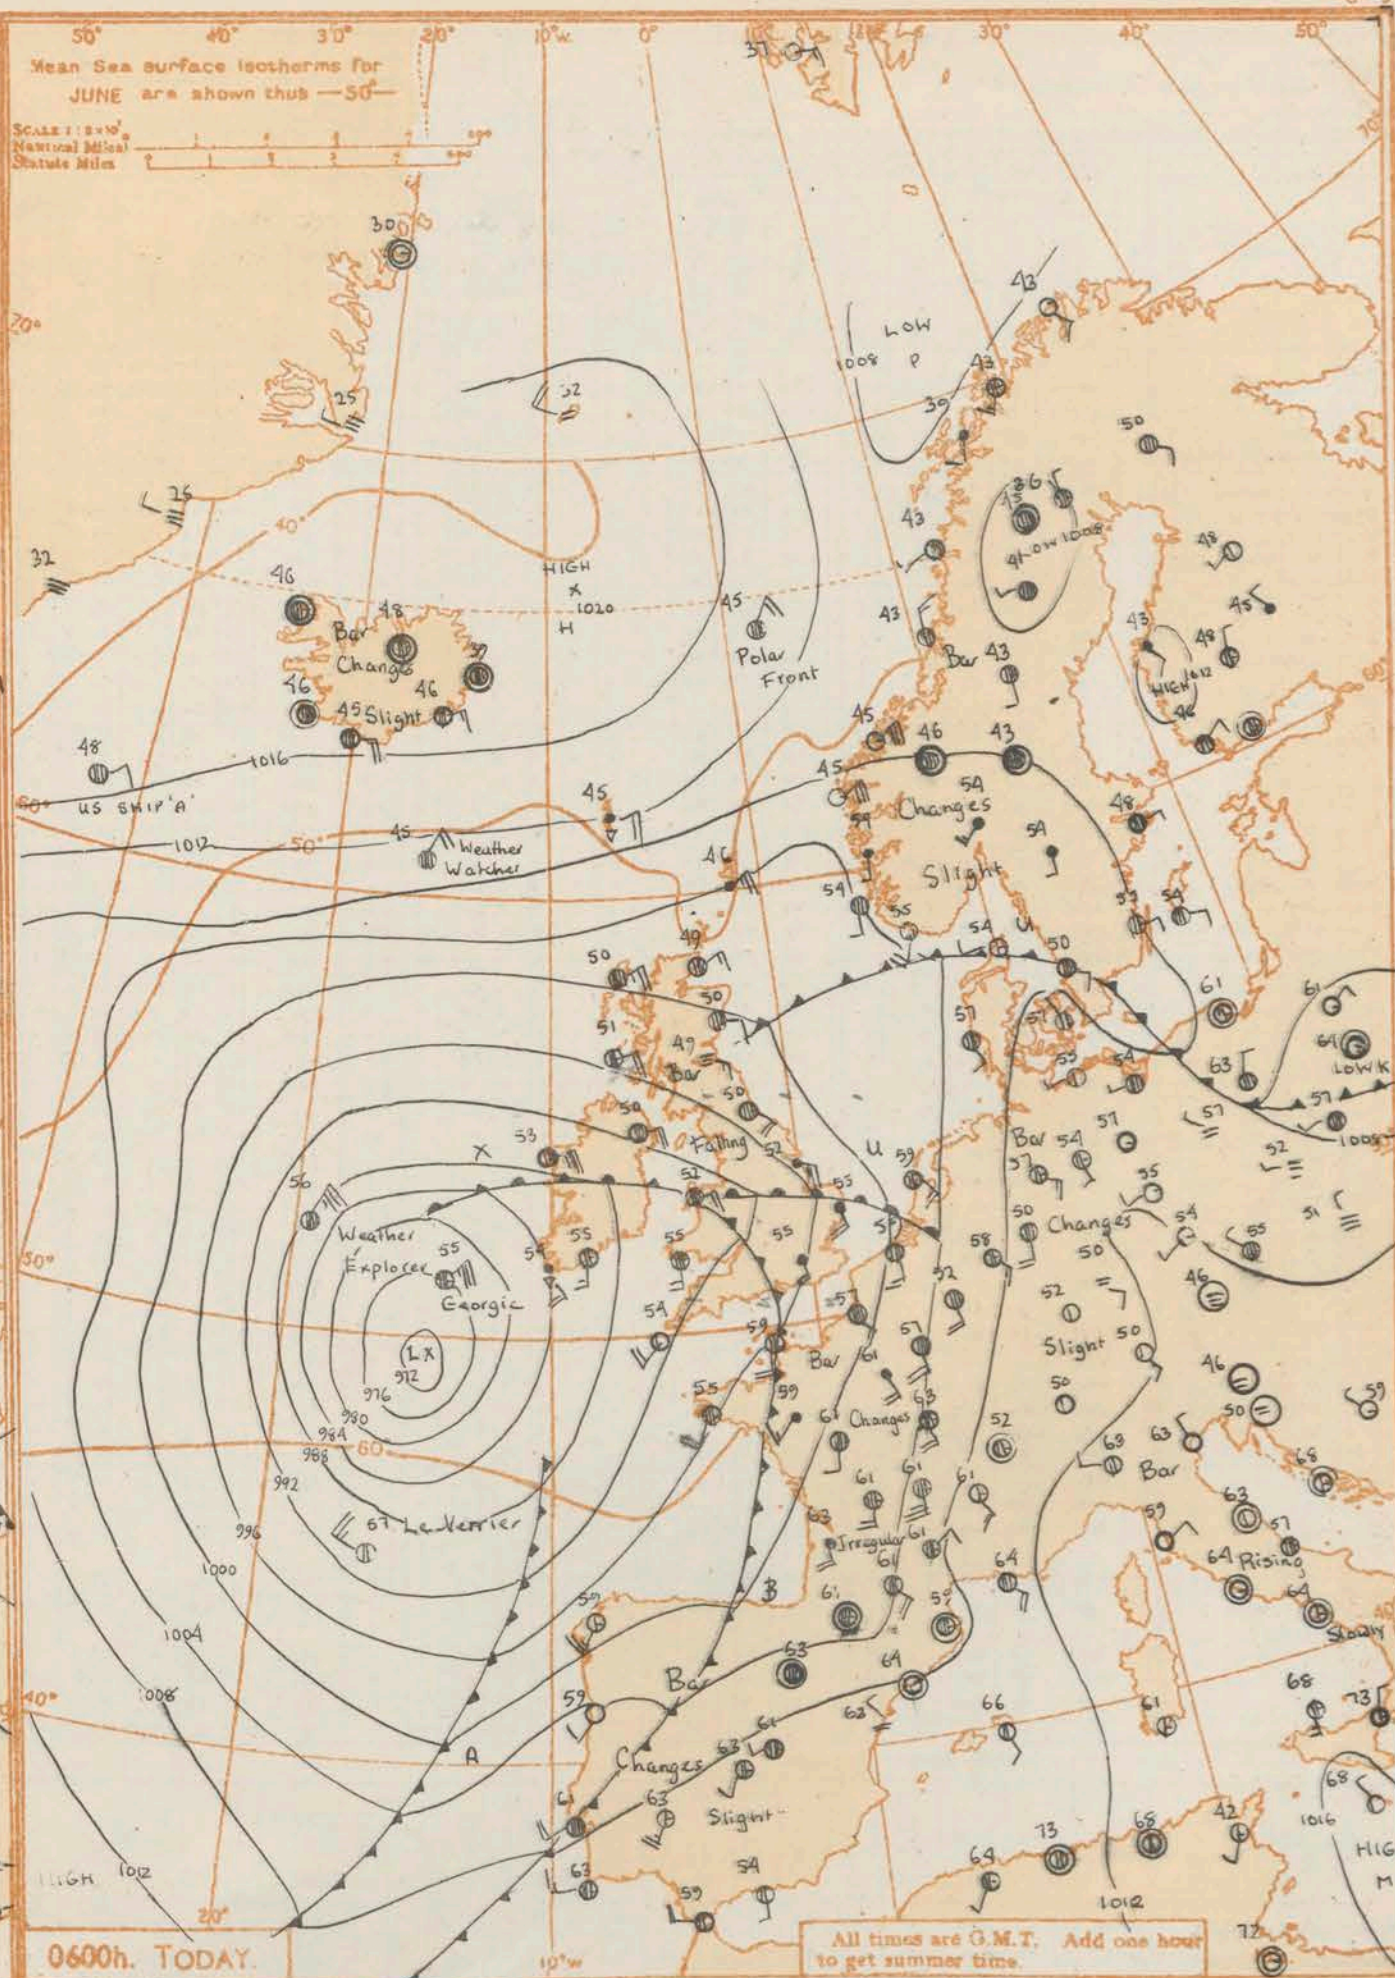

GENERAL SYNOPTIC DEVELOPMENT:-

GENERAL SYNOPTIC DEVELOPMENT:-
The shallow depression which was over North England drifted Northwards and filled up. The deepening depression Southwestwards of the British Isles moved Northeast, then turned North to Northwest to off Southwest Iceland, where it is likely to remain slow moving during the next 24 hours.

Issued at Mid-day to-day Tuesday 8th June, 1954

All times are G.M.T. Add one hour to get summer time.

FORECAST FOR BRITISH ISLES until noon tomorrow :-

Wednesday 3rd June, 1954. Rain at times in many places, with moderate or heavy falls in Northern England and Southern Scotland: bright periods and scattered showers over Southwestern districts extending Northeast over England into South Scotland later, but thundery showers developing in the Southwest. Temperatures mainly near normal, but below in some Northeastern areas.

OUTLOOK FOR the following 24 hours:- Occasional rain or showers, especially in the West, with chance of thunder; bright intervals; temperatures near normal.

Chart of Weather in the Northern Hemisphere.

EXPLANATION OF CHART

BAROMETER. Isobars are drawn for intervals of four millibars.

WIND. Arrows by with wind. A full length feather indicates two steps on the Beaufort Scale, and a short feather one step. Calm is indicated by circle outside weather symbol.

TEMPERATURE is given in degrees F.

CLOUD SYMBOLS ○ Clear sky ○ Sky 1/4 covered ○ Sky 1/2 covered ○ Sky 3/4 covered

○ Sky 1/4 covered ○ Sky 1/2 covered ○ Sky 3/4 covered ○ Sky 1/4 covered

○ Sky obscured. WEATHER SYMBOLS ● Rain falling * Snow * Sleet

△ Hail ≡ Fog = Mist T Thunder TS Thunderstorm

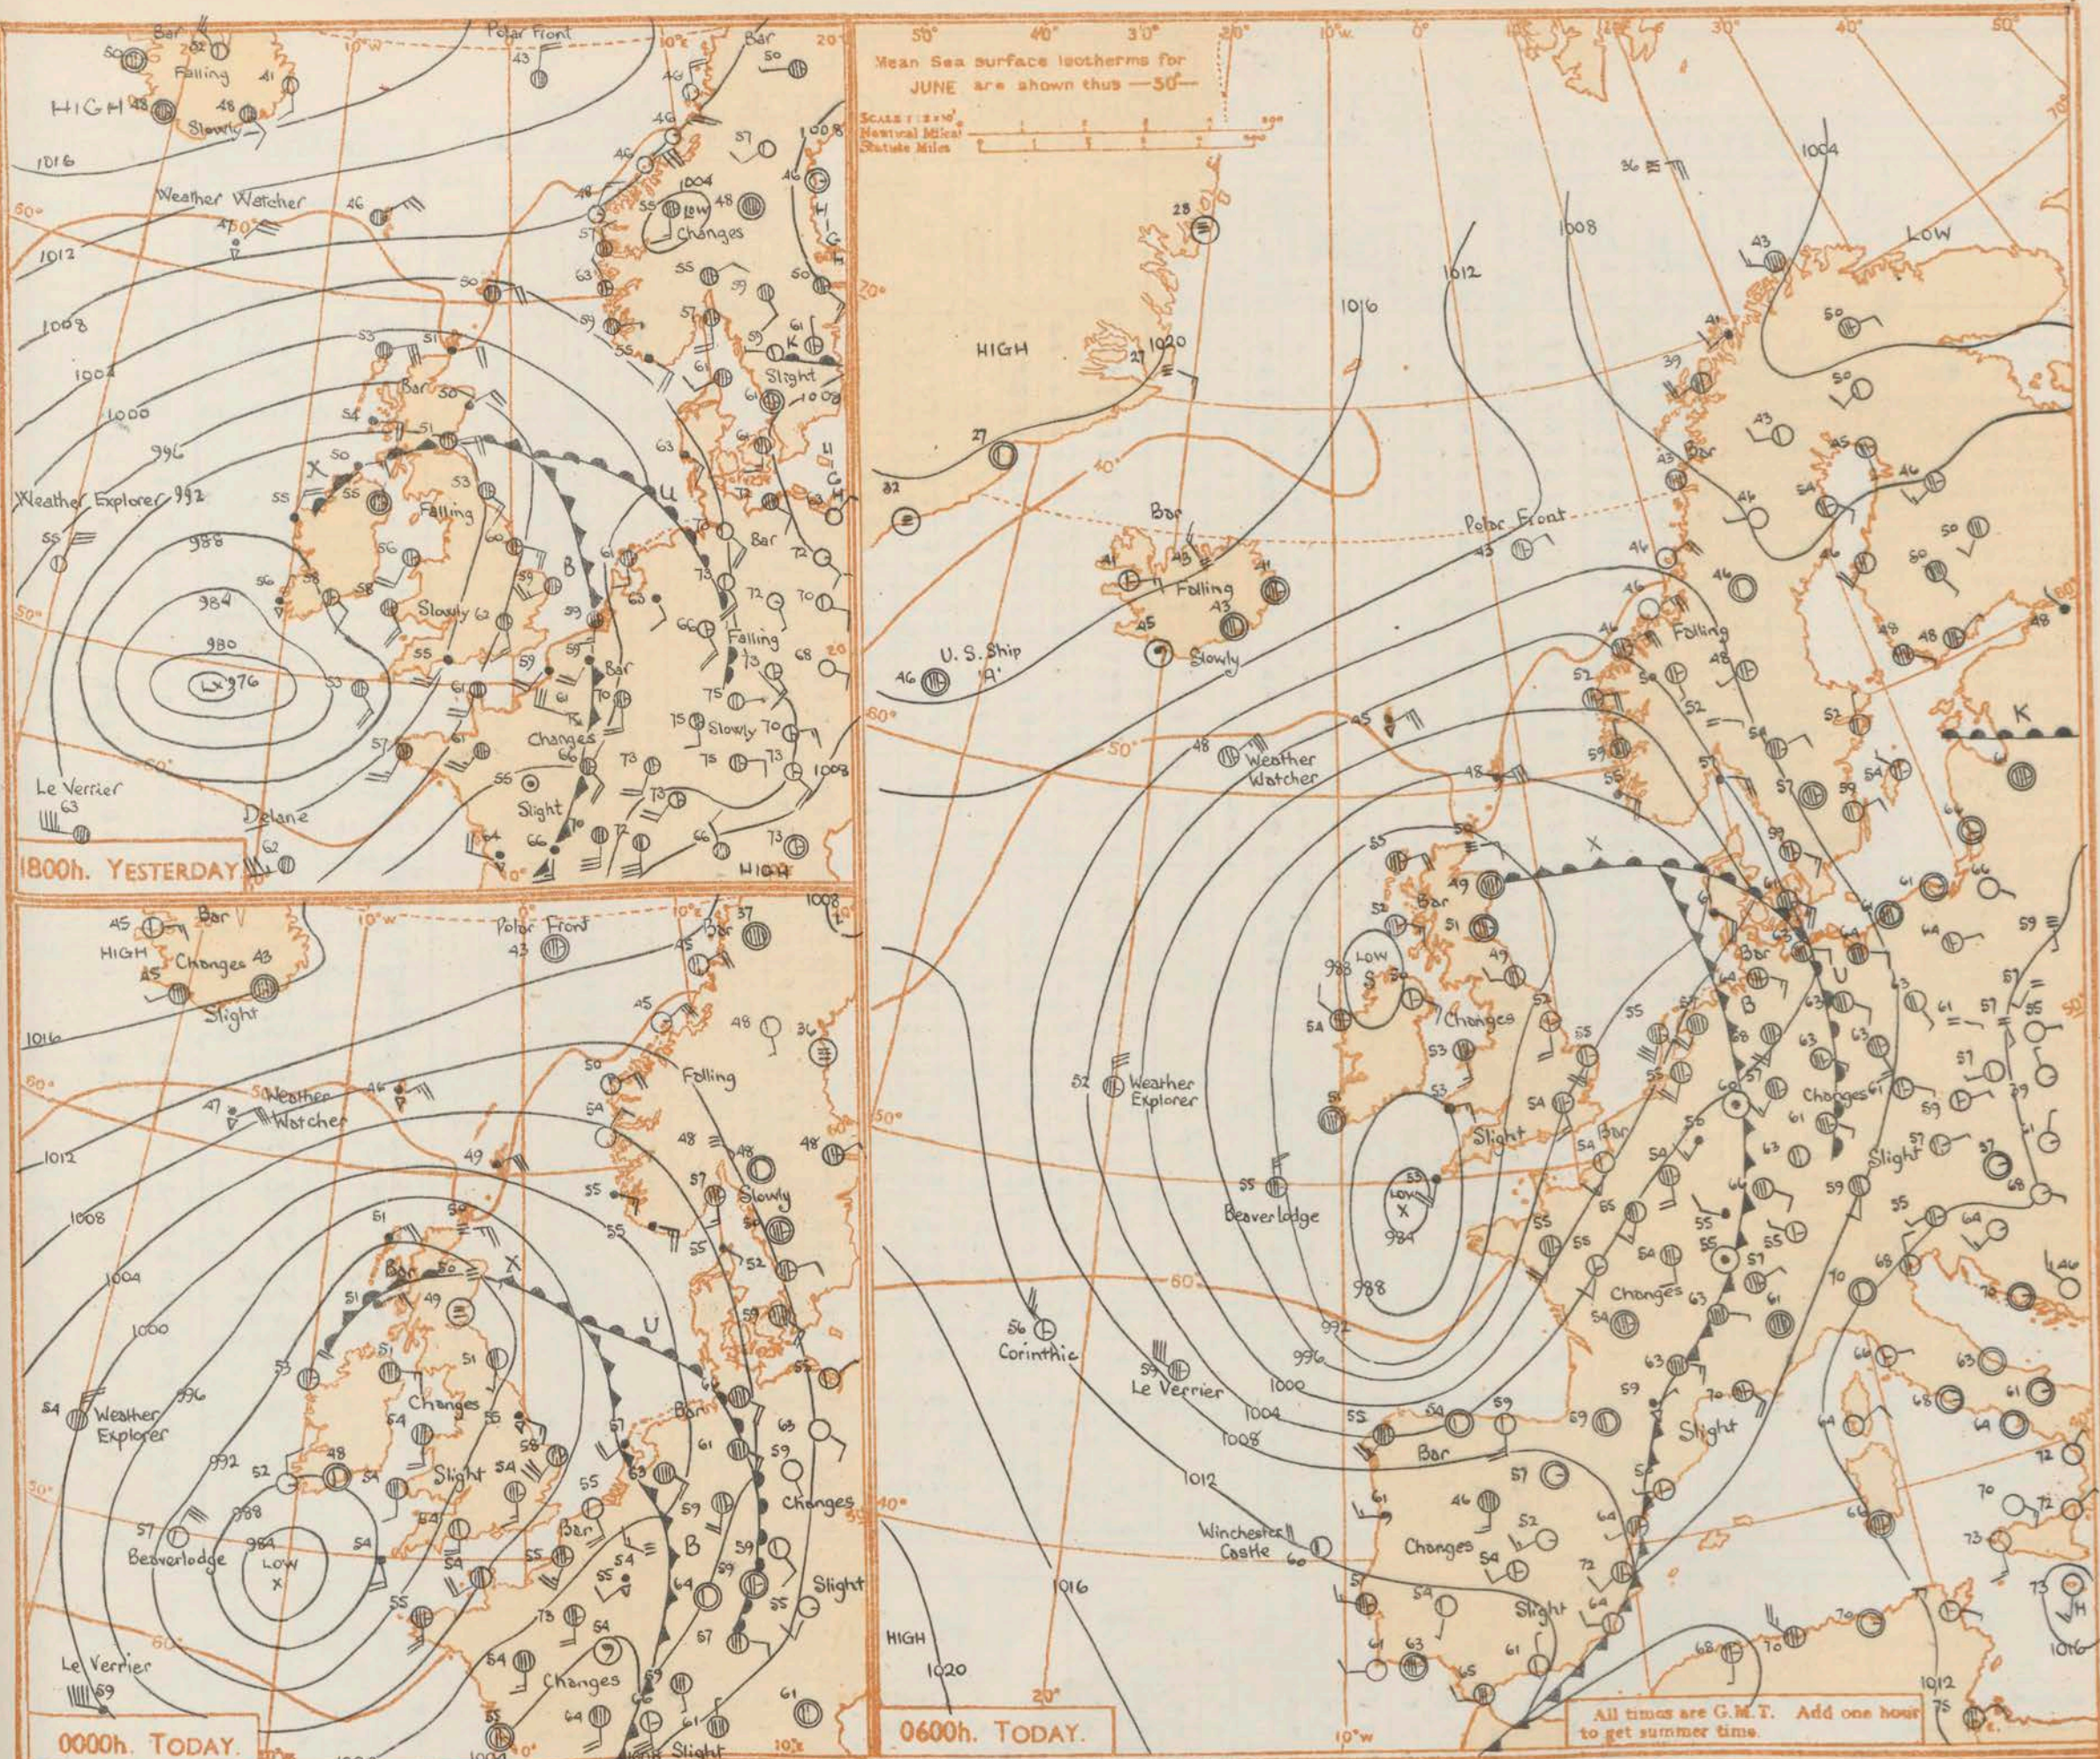

FRONTS or boundaries between masses of air of different origin are indicated, wherever their characteristics are well pronounced in the following way:
 - Warm Front on the surface
 - Warm Front above the ground
 - Cold Front on the surface
 - Cold Front above the ground
 - Occluded Front (or Occlusion)
 Short strokes across the frontal line indicate Frontolysis.

NOTE.—The symbols are placed on the side of the line towards which the front is moving. When the front is stationary the symbols are placed alternately on both sides of the line. Identification letters are inserted on fronts and in systems.

All times are G.M.T. Add one hour to get summer time.

Mean Sea surface isotherms for JUNE are shown thus —50—

SCALE 1:1250
Nautical Miles
Statute Miles

GENERAL SYNOPSIS DEVELOPMENT:-

A depression to southward of Ireland has moved slowly eastward and associated frontal troughs moved northward over Scotland and eastward over England and Wales. The British Isles will remain under the influence of this slow moving complex depression for the next 24 hours.

Issued at mid-day today Wednesday 9th June 1954

FORECAST FOR BRITISH ISLES until noon tomorrow:-

There will be frequent showers and more continuous rain at times in all areas, with thunder in places, but also bright intervals. It will be generally rather cool.

OUTLOOK FOR following 24 hours:- Changeable weather continuing, with rain at times in most areas but also bright periods.

All times are G.M.T. Add one hour to get summer time.

Chart of Weather in the Northern Hemisphere.

GENERAL SYNOPSIS DEVELOPMENT:-

A complex depression covered the British Isles; one centre was slow moving near North Scotland and another centre moved northeast from the Bay of Biscay to Northern England. The main centre is expected to become slow moving over Scotland and minor troughs of low pressure circulating round it will affect most areas of the British Isles.

Issued at Mid-day, today Thursday 10th June, 1954

FORECAST FOR BRITISH ISLES until noon tomorrow:-

There will be bright periods and showers in all areas and the showers will be heavy in places with thunder this afternoon and evening. In Scotland and northern parts of England and Ireland the showers will merge at times into areas of more continuous rain. It will be generally rather cool.

OUTLOOK FOR the following 24 hours:-

Changeable rather cool weather continuing with occasional rain in most areas but some bright periods.

MM50 A-815, MO. Duralab's

Chart of Weather in the Northern Hemisphere.

Mid-day (12h) of
Thursday, 10th June
1954

Clark's Projection Scale. 1 : 4 x 10⁴ along meridian at 55° N.
Statute Miles 0 1 2 3 4 500

EXPLANATION OF CHART

BAROMETER. Isobars are drawn for intervals of four millibars.

WIND. Arrows fly with wind. A full length feather indicates two steps on the Beaufort Scale, and a short feather one step. Calm is indicated by circle outside weather symbol :-

TEMPERATURE is given in degrees F.

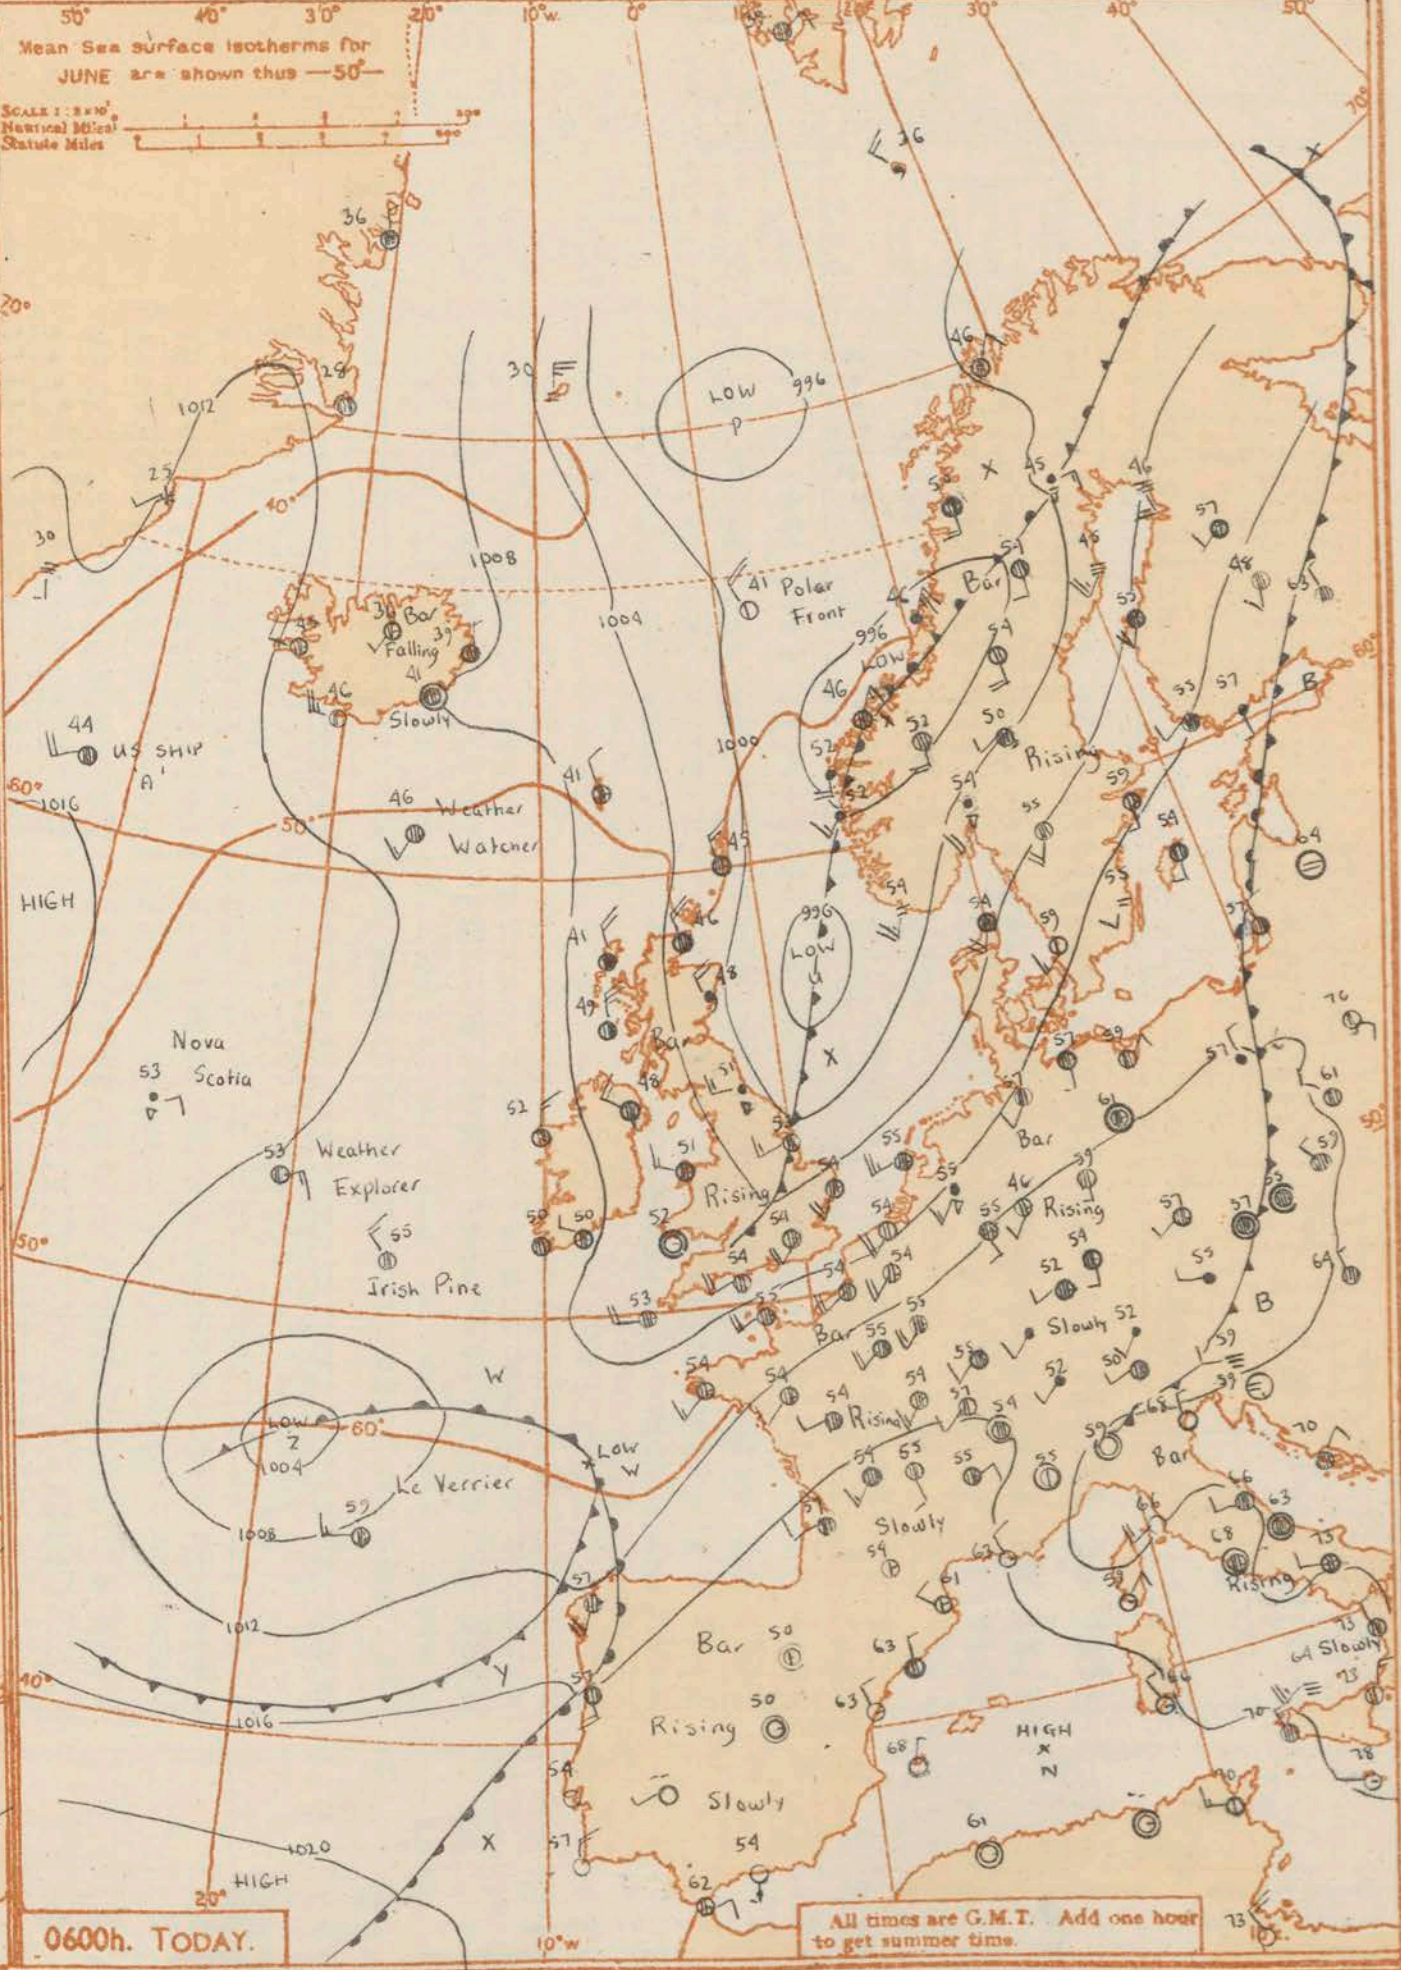

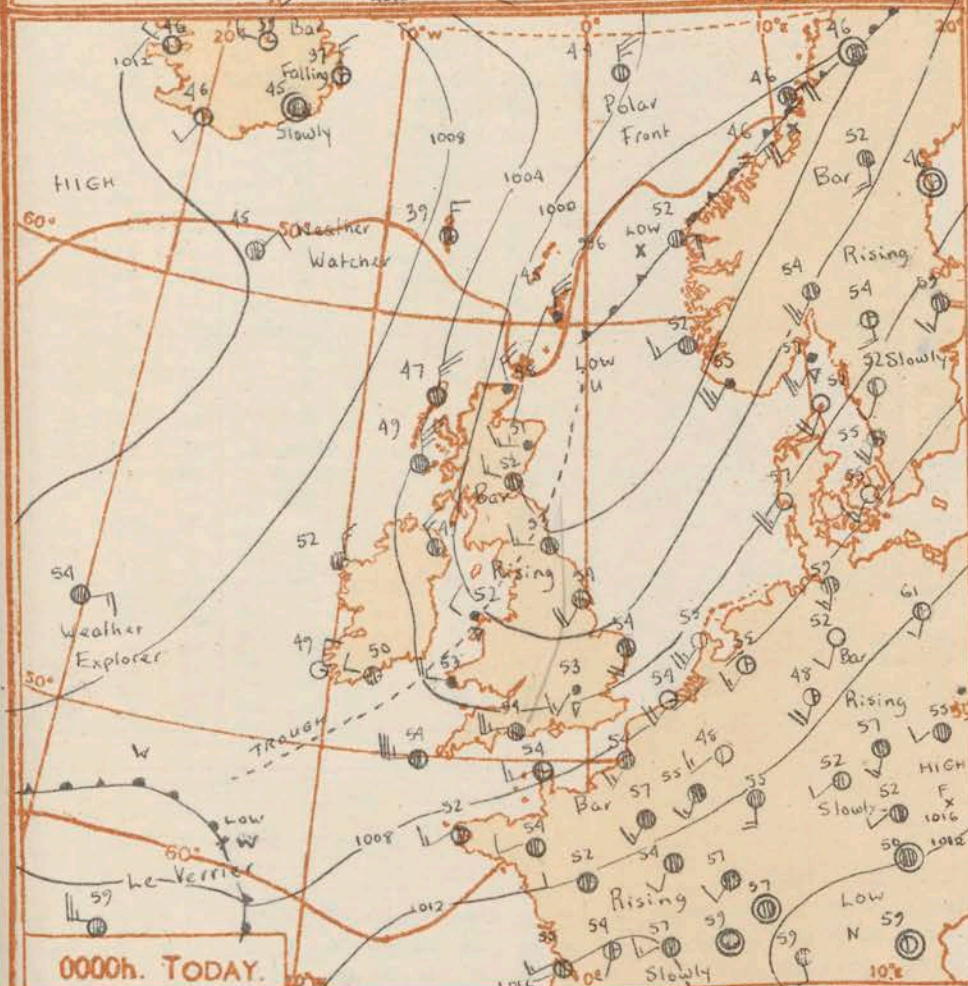

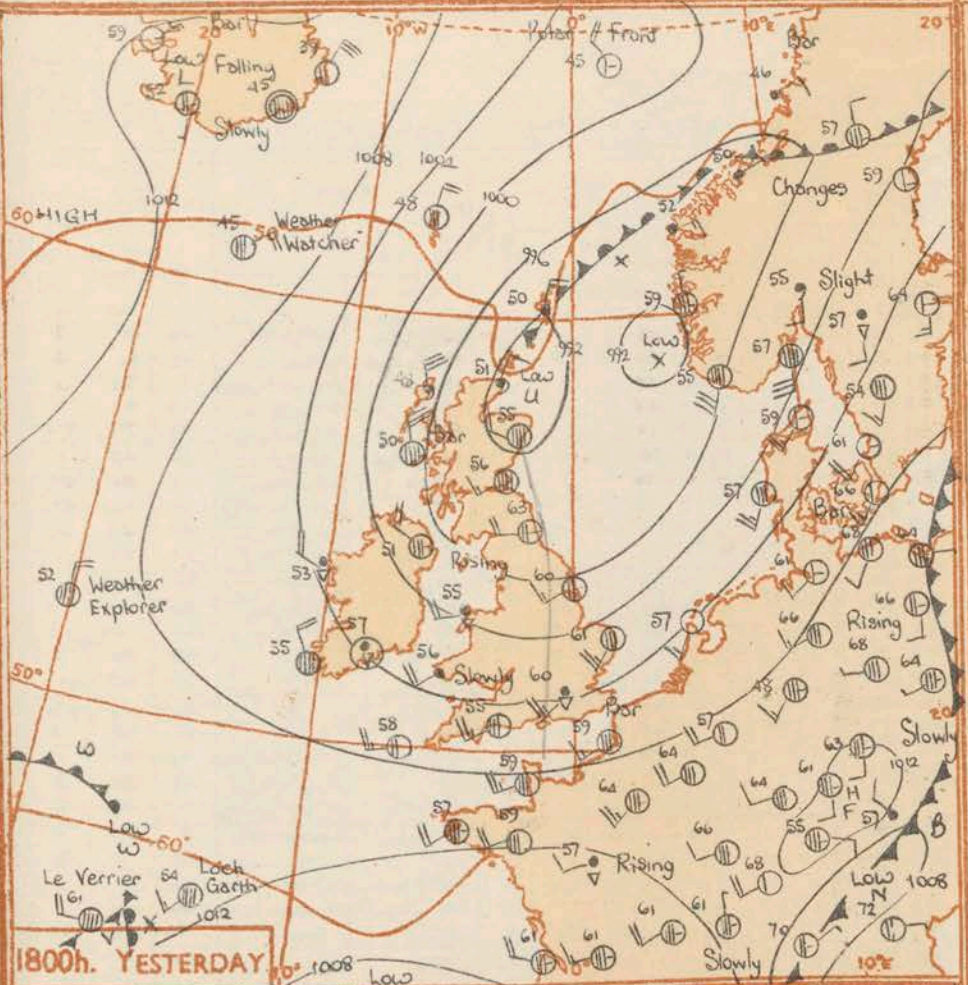

CLOUD SYMBOLS ○ Clear sky ○ Sky 1/8 covered ○ Sky 1/4 covered ○ Sky 1/2 covered
○ Sky 3/4 covered ○ Sky obscured. **WEATHER SYMBOLS** ● Rain falling * Snow * Sleet
△ Hail ≡ Fog = Mist T Thunder T Thunderstorm

FRONTS or boundaries between masses of air of different origin are indicated, wherever their characteristics are well pronounced in the following way:-
- Warm Front on the surface
- Warm Front above the ground
- Cold Front on the surface
- Cold Front above the ground
- Occluded Front (or Occlusion)
- Lines of Frontogenesis
Short strokes across the frontal line indicate Frontolysis.
NOTE.—The symbols are placed on the side of the line towards which the front is moving. When the front is stationary the symbols are placed alternately on both sides of the line. Identification letters are inserted on fronts and in systems.

All times are G.M.T. Add one hour to get summer time

Mean Sea surface isotherms for JUNE are shown thus — 50° —

SCALE 1:2500
Nautical Miles
Statute Miles

All times are G.M.T. Add one hour to get summer time.

GENERAL SYNOPSIS DEVELOPMENT:-

A depression was almost stationary off East and Northeast Scotland and partially filled, and a shallow trough of low pressure moved south or southeast over the British Isles. Another depression to Southwest of Ireland will move east or southeast perhaps affecting southern areas of England tomorrow.

Issued at mid-day. to-day. Friday. 11th. June, 1954

FORECAST FOR BRITISH ISLES until noon tomorrow :-

In most districts of the British Isles the weather will be cloudy with a little drizzle or light rain here and there, but there will also be bright intervals. More general rain is likely at first in parts of East Anglia, Southern England and Northeast Scotland, and further rain will perhaps occur in Southern England tomorrow. It will be cool generally.

OUTLOOK FOR the following 24 hours:-

Showers or occasional rain, especially in the South. Bright intervals chiefly in the West.

O. G. SUTTON, C.B.E., D.Sc., F.R.S. Director
Meteorological Office, Air Ministry Kingway, London, W.C.2

Chart of Weather in the Northern Hemisphere.

GENERAL SYNOPSIS DEVELOPMENT:-

A depression over the North Sea moved eastward filling, an associated trough swinging southeast across England. Another depression southwest of Ireland has moved into the western English Channel and is expected to move east-north-east probably deepening later over Scandinavia or the Baltic.

Issued at midday to-day Saturday 12th June 1954

FORECAST FOR BRITISH ISLES until noon tomorrow:-

Rain over Southwestern England will extend east and north over England but over most of Wales and Northwest England, in Scotland and Northern Ireland it will be mostly dry with sunny periods. In the extreme northeast of Scotland a few showers will occur. Brighter weather will reach southwestern districts of England later today. In most areas temperatures will reach the normal but it will be cool over most of England. Areas in the northwest will become warm.

OUTLOOK FOR the following 24 hours:- Some rain or showers in many parts of England but particularly in the east. Probably dry in much of Scotland, N.W. England, and Wales.

† CLOUD AMOUNT in eighths (9=sky obscured). CLOUD HEIGHT 01-80 in 100's of feet. VISIBILITY 01-80 in eighths of a mile, X1-X9 in 1/80ths of a mile. For higher numbers and codes for cloud form and state of ground see Introduction.

* Information not usually received

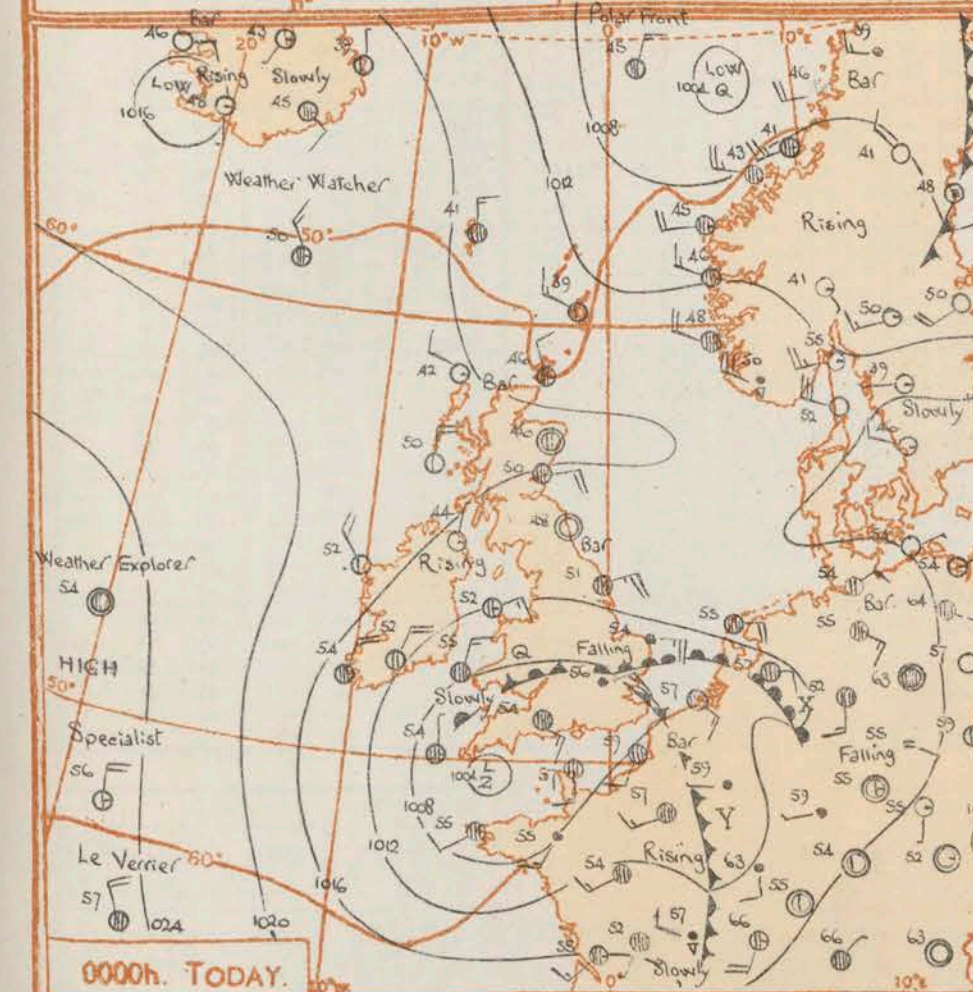

O. G. SUTTON, C. B. E., D. Sc., F. R. S. Director
Meteorological Office, Air Ministry, Kingsway London, W.C.2

Chart of Weather in the Northern Hemisphere.

1800h. YESTERDAY.

0000h. TODAY.

GENERAL SYNOPSIS DEVELOPMENT:-

A depression extended northeastward over the English Channel though the movement of the central area was erratic. It is now expected to be transferred northeastward, moving more rapidly than yesterday.

Issued at mid-day to-day Sunday 13th June 1954

0600h. TODAY.

All times are G.M.T. Add one hour to get summer time.

FORECAST FOR BRITISH ISLES until noon tomorrow:-

Rain over eastern districts of England and the Midlands will die out very gradually today and bright periods are probable inland tomorrow morning. Near the east coast it will remain cloudy. Over the rest of the British Isles there will be bright periods and it will be dry apart from some scattered showers. It will continue cool in eastern districts of England. Elsewhere temperatures will reach normal.

OUTLOOK FOR the following 24 hours:-
Mainly fine but some scattered showers

Chart of Weather in the Northern Hemisphere.

Mean Sea surface isotherms for JUNE are shown thus — 50°

SCALE: 1:250,000
Nautical Miles
Statute Miles

GENERAL SYNOPSIS DEVELOPMENT:

A depression over the English Channel was transferred north-eastward by the development of additional cells, and a ridge moved eastward from the Atlantic to cover much of British Isles.

A new depression is developing westward of Ireland and this will probably move eastward.

Issued at Mid-day, today Monday 14th June 1954

FORECAST FOR BRITISH ISLES until noon tomorrow:-
Today there will be bright periods everywhere, but showers will develop in many areas, particularly in the North, and thunder will occur in places. Tonight rain will reach Ireland and will probably extend to Wales and western districts of England by noon tomorrow. Temperatures will reach the normal generally but slight ground frost may occur in places in England and Scotland tonight.

OUTLOOK FOR the following 24 hours:- Some rain or showers in most areas but also brighter intervals. Little change of temperature.

0600h. TODAY.

All times are G.M.T. Add one hour to get summer time.

GENERAL SYNOPTIC DEVELOPMENT:-

The depression which was developing westward of Ireland yesterday has moved east-northeast to a position to the north of Ireland and this motion is expected to continue.

An anticyclone over the continent is intensifying, and moving northeast.

Issued at mid-day, to-day Tuesday 15th June, 1954.

FORECAST FOR BRITISH ISLES until noon tomorrow:-

Over East Anglia, Southeast England and the East Midlands it will be bright this afternoon. However, dull weather with perhaps a little drizzle or light rain which now prevails in southwestern districts will move across during this evening and tonight. Elsewhere in the British Isles there will be periods of rain or drizzle.

OUTLOOK FOR the following 24 hours:- Probably some rain or showers at times in many places. In Southern England however, any rain will be only slight and tomorrow afternoon it will be warm and, often sunny.

Chart of Weather in the Northern Hemisphere.

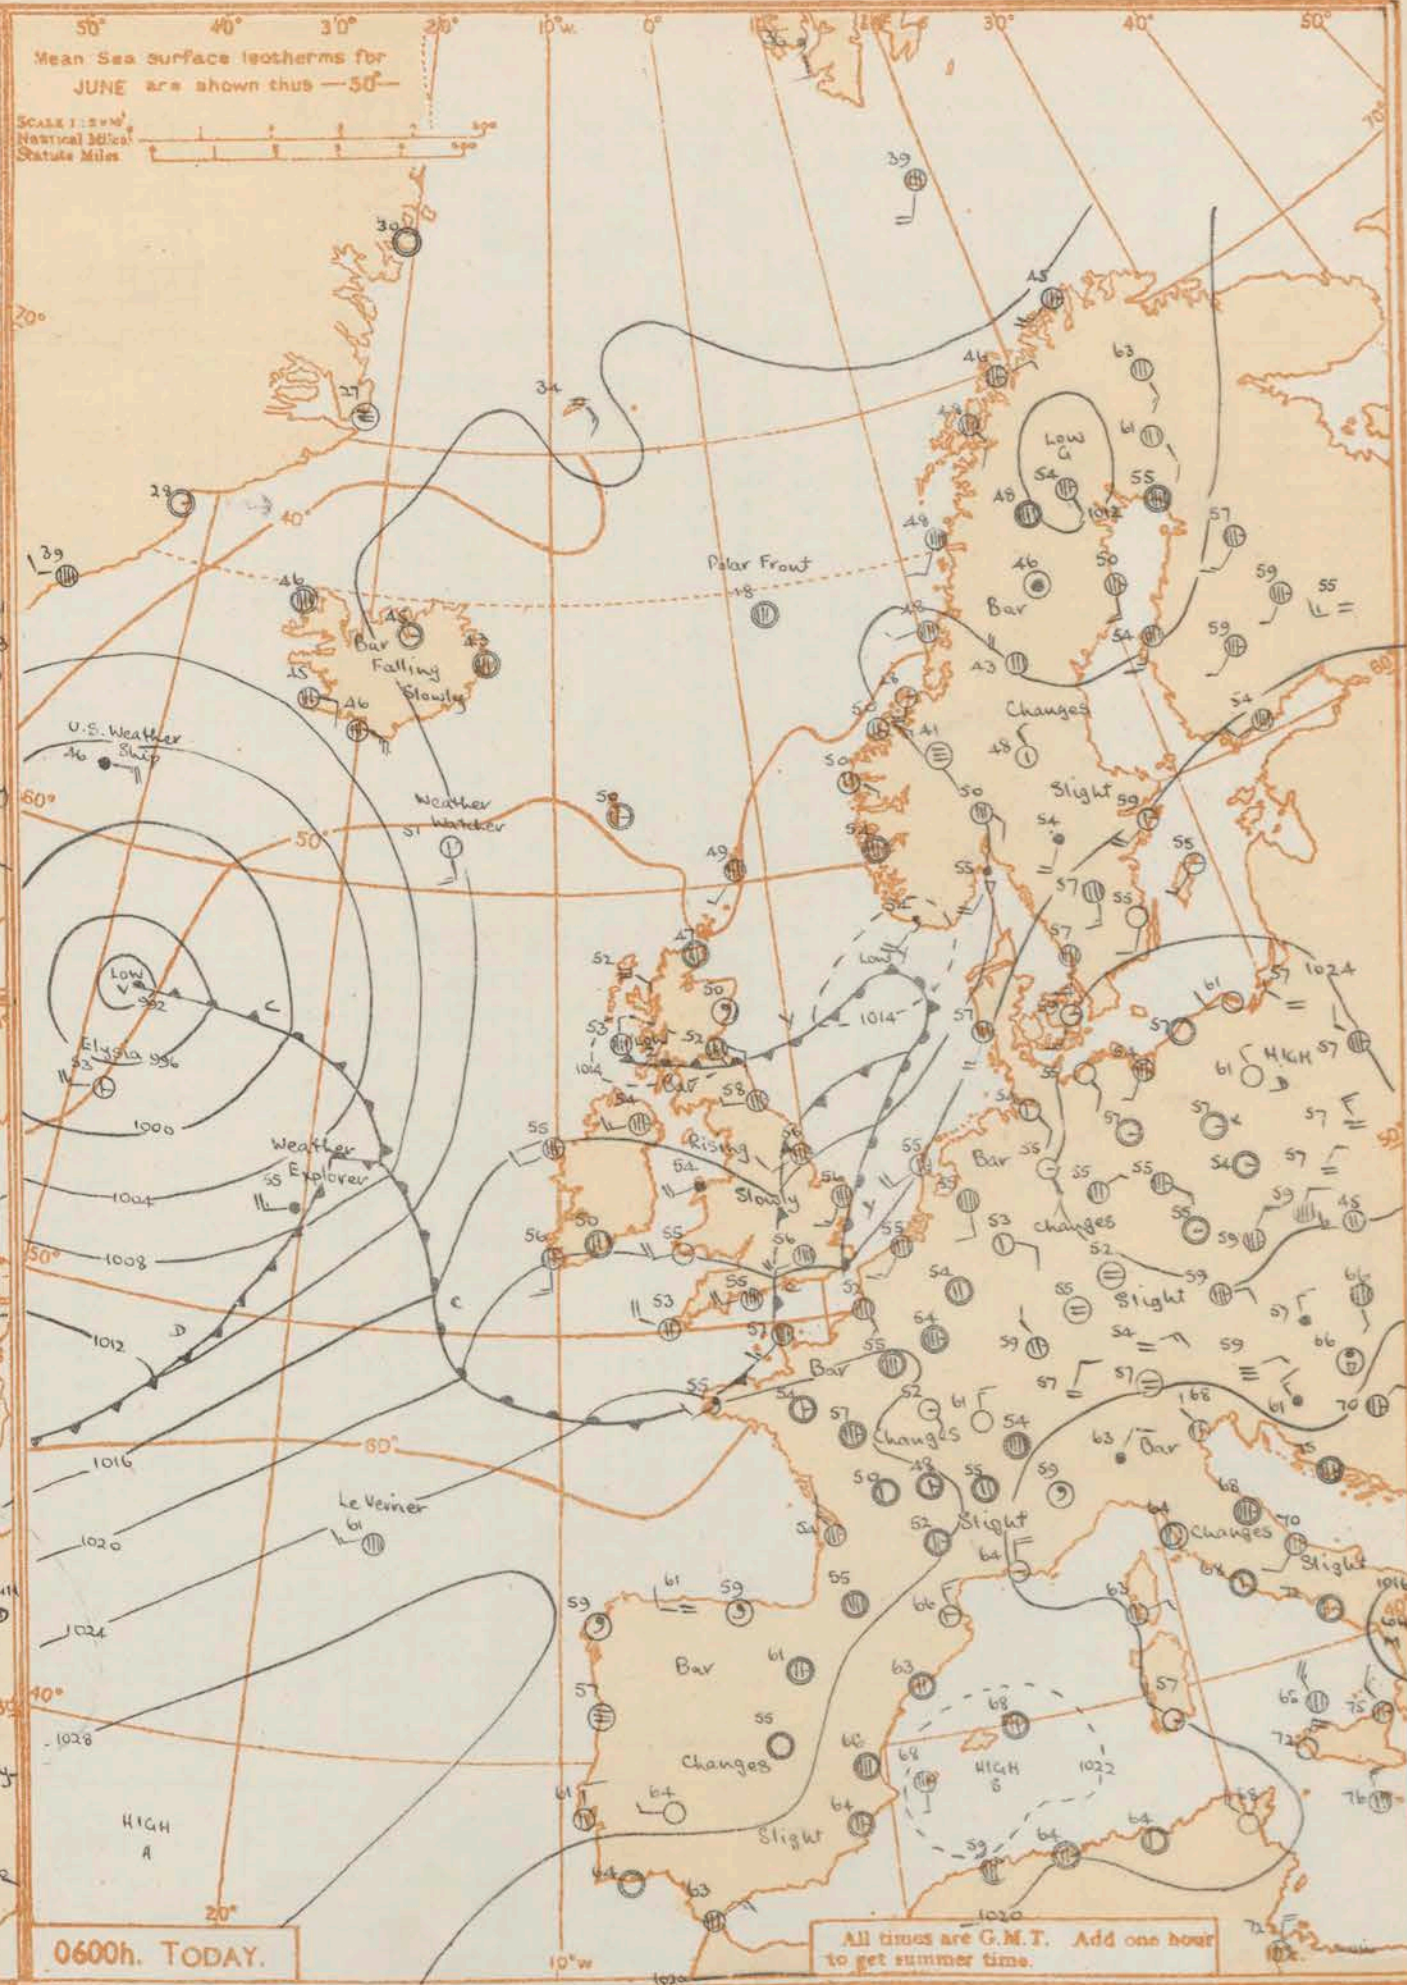

1800h. YESTERDAY.

0000h. TODAY.

0600h. TODAY.

All times are G.M.T. Add one hour to get summer time.

GENERAL SYNOPSIS DEVELOPMENT: The shallow depression which was centred to the north of Ireland yesterday morning has moved to a position near Southern Norway and is likely to continue its east-northeastward motion. A weak ridge of high pressure is crossing the British Isles, but fronts associated with a depression on the Atlantic are expected to affect many parts of the British Isles during tonight and tomorrow morning. In Southern districts however, they are likely to be only weak.

Issued at Mid-day today Wednesday 16th June 1954

FORECAST FOR BRITISH ISLES until noon tomorrow: Many places will have mainly fine weather this afternoon and evening, though there may be a few showers in the North. During tonight and tomorrow morning cloudy or dull weather with rain or drizzle will spread across the British Isles from the Atlantic. In many Southern and Midland districts however there is likely to be only slight rain or drizzle.

OUTLOOK FOR the following 24 hours: Occasional rain or showers in many Northern districts but also bright periods. Sunny and warm on Thursday afternoon in many places in the South, but dull night and morning with a little drizzle.

Chart of Weather in the Northern Hemisphere.

Mean Sea surface isotherms for JUNE are shown thus — 50°

SCALE 1:500,000
Nautical Miles
Statute Miles

1800h. YESTERDAY

0600h. TODAY

All times are G.M.T. Add one hour to get summer time.

GENERAL SYNOPSIS DEVELOPMENT:-

A complex depression to the South of Iceland is moving North and its associated fronts are affecting many parts of the British Isles.
A wave depression to the West of Ireland is expected to move North-eastwards towards Northern Scotland during the next 24 hours.

Issued at Mid-day today Thursday 17th June, 1954

FORECAST FOR BRITISH ISLES until noon tomorrow:-
Over much of England and Wales it will be cloudy or dull with a little rain or drizzle in places and with much hill and coast fog in the South and West. During this afternoon and evening, however, there will be sunny periods in some Eastern and Midland districts of England.
In Scotland and Northern Ireland it will be mainly fine this afternoon but the cloudy weather with rain or drizzle will spread back this evening and tonight.

OUTLOOK FOR the following 24 hours:-
Mainly dry with sunny periods but a little rain or drizzle in places.

GENERAL SYNOPSIS DEVELOPMENT:-

The wave depression westward of Ireland moved northeast to northward of Scotland: it is expected to turn more northerly to Northeast Iceland. Minor troughs will move eastwards across the British Isles during the next 24 hours.

Issued at midday. today Friday 18th June 1954

FORECAST FOR BRITISH ISLES until noon tomorrow:-

There will be occasional rain or showers in many places, but rainfall will be slight in the South. There will be coastal fog along the English Channel today. Bright intervals will occur in most areas. Temperatures will be mainly near normal.

OUTLOOK FOR the following 24 hours:-

Rather changeable, with occasional rain, chiefly in the West.

Chart of Weather in the Northern Hemisphere.

Mean Sea surface isotherms for JUNE are shown thus — 50°

SCALE 1 : 2 x 10⁶
Nautical Miles
Statute Miles

1800h. YESTERDAY

0000h. TODAY.

0600h. TODAY.

All times are G.M.T. Add one hour to get summer time.

GENERAL SYNOPTIC DEVELOPMENT:-

The depression which was northwest of Scotland moved slowly northwards to Southeast of Iceland, and it is expected to drift north or northwest with some filling. A trough of low pressure now west of Ireland is likely to move east over most of the British Isles during the next 24 hours.

Issued at mid-day to-day Saturday 19th June. 1954

FORECAST FOR BRITISH ISLES until noon tomorrow :-

Friday 19 June. 1954. FORECAST FOR BRITISH ISLES until noon tomorrow:-
There will be occasional rain in many places, more especially in
Northwest districts. Bright periods will also occur, particularly in the East and
Midlands today. Temperatures will be near normal.

OUTLOOK FOR Following 24 hours:- Some rain now and then, chiefly in the West.

Chart of Weather in the Northern Hemisphere.

GENERAL SYNOPTIC DEVELOPMENT:-

GENERAL SYNOPSIS DEVELOPMENT
The depression off Southeast Iceland yesterday moved northwards and filled somewhat. A trough of low pressure to westward of the British Isles moved into Ireland and Western Scotland and this trough will continue its slow eastward motion. A depression well out in the North of the Atlantic will move towards northwest of the Hebrides.

Issued at mid-day to-day Sunday 20th June 1954

FORECAST FOR BRITISH ISLES until noon tomorrow :-

Friday 20th June 1954
In Southeastern districts it will be fine and warm. In most Western and Northern areas it will be cloudy, with occasional rain or drizzle in places, and with temperatures near normal.

OUTLOOK FOR following 24 hours: - Probably mainly dry in the South, some rain or drizzle elsewhere.

Chart of Weather in the Northern Hemisphere.

GENERAL SYNOPTIC DEVELOPMENT:-

A depression yesterday morning centred some 300 miles southwest of Iceland moved southeast to the west of Scotland and is now filling up. A complex system of fronts has moved slowly east across all districts except east and Southeast England. During the next 24 hours a complex trough is expected to move east across the British Isles followed by a weak ridge.

Issued at midday, today Monday 21st June 1954

FORECAST FOR BRITISH ISLES until noon tomorrow:-

It will be mainly cloudy with occasional rain, thundery at times, in most places. It will probably become dry later today and tonight but further rain will probably spread from the west across Northern Ireland and much of Scotland tomorrow morning. It will be close with temperatures near normal.

OUTLOOK FOR the next 24 hours:-

Rain at times in most places though rainfall will probably be slight in southern districts

Chart of Weather in the Northern Hemisphere.

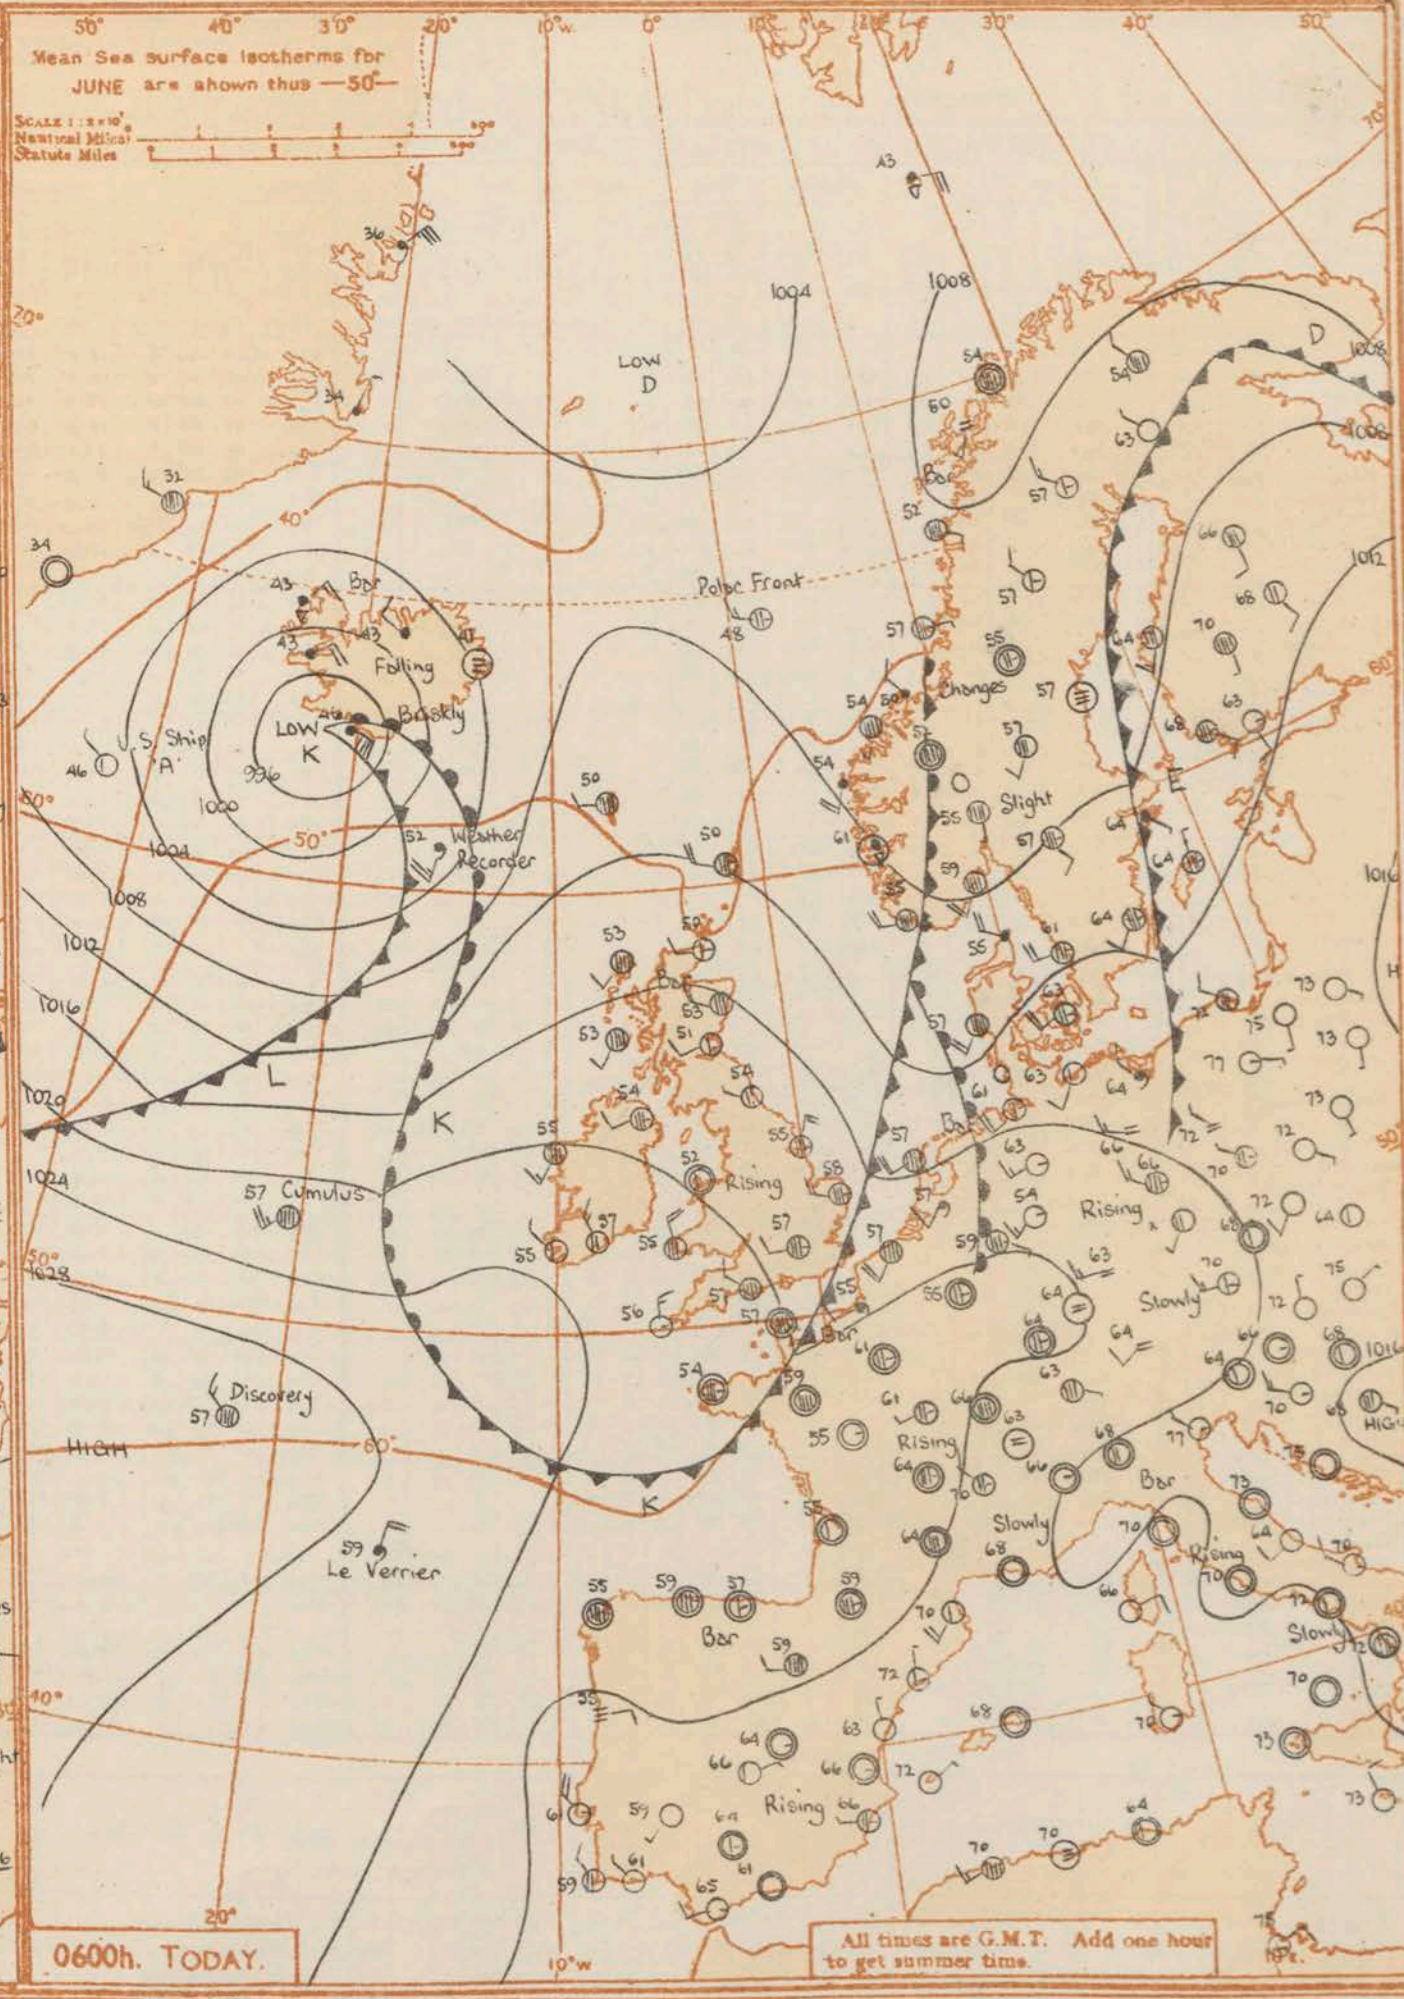

1800h. YESTERDAY

0000h. TODAY.

0600h. TODAY.

All times are G.M.T. Add one hour to get summer time.

GENERAL SYNOPSIS DEVELOPMENT:-

The complex trough over the British Isles yesterday morning has moved into the North Sea and filled up considerably. It has been followed by a ridge of high pressure. This ridge will probably intensify somewhat over Southern England while a trough associated with a depression near Iceland will move east across Northern districts of the British Isles.

Issued at mid-day today Tuesday 22 June. 1954

FORECAST FOR BRITISH ISLES until noon tomorrow:-

There will be sunny periods over England and Wales today but it will become cloudy with occasional rain during tonight. Over Scotland and Northern Ireland it will be cloudy with occasional rain today but brighter weather will spread across these areas tonight and into Northern England and North Wales tomorrow morning. Temperatures will be near normal.

OUTLOOK FOR following 24 hours:-

Dry in most places with sunny periods.

Chart of Weather in the Northern Hemisphere.

Mean Sea surface isotherms for JUNE are shown thus — 50°

SCALE 1:250000
Nautical Miles
Statute Miles

GENERAL SYNOPSIS DEVELOPMENT:-

A ridge over the British Isles yesterday moved southeast and was followed by a trough associated with a depression moving east south east over the Norwegian Sea. This trough will clear the British Isles during the morning and will be followed by another fast moving ridge. The warm front of a depression now near Southern Greenland will be approaching our western seaboard tomorrow morning.

Issued at midday... today Wednesday 23rd June 1954

FORECAST FOR BRITISH ISLES until noon tomorrow :-

Apart from scattered showers in Northern Scotland it will be dry with sunny intervals today. Cloudy weather with occasional rain will spread east across Ireland and Scotland and into parts of Wales and Northern England tomorrow morning. Temperatures will be near normal.

OUTLOOK FOR the next 2 or 3 days:- Continuing changes with bright spells alternating with cloudy, rainy periods but rainfall is likely to be only slight in the south.

Chart of Weather in the Northern Hemisphere.

Mean Sea surface isotherms for JUNE are shown thus — 50°

Scale: 1 inch = 100 Nautical Miles
Statute Miles

All times are G.M.T. Add one hour to get summer time

GENERAL SYNOPSIS DEVELOPMENT:-

The depression, which yesterday was near Southern Greenland, has moved to South of Iceland but its associated warm front has moved quickly Eastwards and is crossing Scotland and Northern Ireland this morning. The warm front will continue moving quickly East: colder air will spread across Scotland later today and tonight and small disturbances may well move quickly East along the cold front over Scotland.

Issued at Mid-day today Thursday 24th June, 1954

FORECAST FOR BRITISH ISLES until noon tomorrow:-

Over most Southern districts of England it will remain dry and there will be bright periods. Elsewhere it will be cloudy for the most part and there will be rain or drizzle at times more particularly over Scotland. Temperatures will be a little above normal in the South, but generally a little below normal elsewhere.

OUTLOOK FOR the following 24 hours:-
Similar.

† CLOUD AMOUNT in eighths (9=sky obscured). CLOUD HEIGHT 01-80 in 100's of feet. VISIBILITY 01-80 in eighths of a mile, X1-X9 in 1/80ths of a mile. For higher numbers and codes for cloud form and state of ground see Introduction.

* Information not usually received

D. G. SUTTON, C.B.E., D.Sc., F.R.S. Director.
Meteorological Office, Air Ministry, Kingsway, London, W.C.

Chart of Weather in the Northern Hemisphere.

GENERAL SYNOPTIC DEVELOPMENT :-

A depression which is centred south of Iceland at present is intensifying and moving eastwards. Colder air will spread across much of the country during tonight and tomorrow. The anticyclone been centred to northward of the Azores for some time is now weakening.

This image shows a blank, aged, cream-colored page, likely an endpaper or flyleaf of a book. The paper has a slightly textured appearance with some minor discoloration and a small dark stain near the top center. The left edge of the page is bound, showing the inner hinge and some stitching. There is no text or other markings on the page.

Chart of Weather in the Northern Hemisphere.

GENERAL SYNOPTIC DEVELOPMENT:-

The depression which developed yesterday and moved over Northern Scotland is becoming slowly moving near Southern Norway and will also gradually fill up. An anticyclone is almost stationary to the Northwest of the Azores and a ridge of high pressure over Central Atlantic will move East.

Issued at mid-day today Saturday 26th June 1954

FORECAST FOR BRITISH ISLES until noon tomorrow:-

over Scotland, Northern Ireland and Northern England there will be occasional showers but also bright intervals. The showers will be rather frequent and heavy in places, especially in Scotland, perhaps with thunder. Elsewhere in England and Wales there will be scattered showers but also bright intervals. Rather cool generally.

OUTLOOK FOR following 24 hours:- Occasional showers chiefly in the North and East. Brighter periods will also occur and may be prolonged in the West.

† CLOUD AMOUNT in eighths (9=sky obscured). CLOUD HEIGHT 01-80 in 100's of feet. VISIBILITY 01-80 in eighths of a mile, X1-X9 in 1/80ths of a mile. For higher numbers and codes for cloud form and state of ground see Introduction.

* Information not usually received

O. G. SUTTON, C. B. E., D. Sc., F. R. S., Director,
 Meteorological Office, Air Ministry, Kingsway, London, W.C.2

Chart of Weather in the Northern Hemisphere.

All times are G.M.T. Add one hour to get summer time.

Issued at mid-day to-day Sunday 27th June 1954

All districts

will have bright periods and showers, and there may be thunder in places. During tonight and at first tomorrow however, there will be long clear periods in many Southern Midland and Eastern districts of England. It will be rather cool generally.

OUTLOOK FOR the following 24 hours:- Bright periods and showers in most districts but long clear periods at night.

Chart of Weather in the Northern Hemisphere.

EXPLANATION OF CHART

BAROMETRES. Isobars are drawn for intervals of four millibars.

WIND. Arrows fly with wind. A full length feather indicates two steps on the Beaufort Scale, and a short feather one step. Calm is indicated by circle outside weather symbol.

TEMPERATURE is given in degrees F.

CLOUD SYMBOLS ☉ Clear sky ☉ Sky 1/4 covered ☉ Sky 1/2 covered ☉ Sky 3/4 covered ☉ Sky 1/4 covered ☉ Sky 1/2 covered ☉ Sky 3/4 covered ☉ Sky obscured.

WEATHER SYMBOLS ☉ Rain falling * Snow * Sleet
 △ Hail ≡ Fog = Mist T Thunder ⚡ Thunderstorm

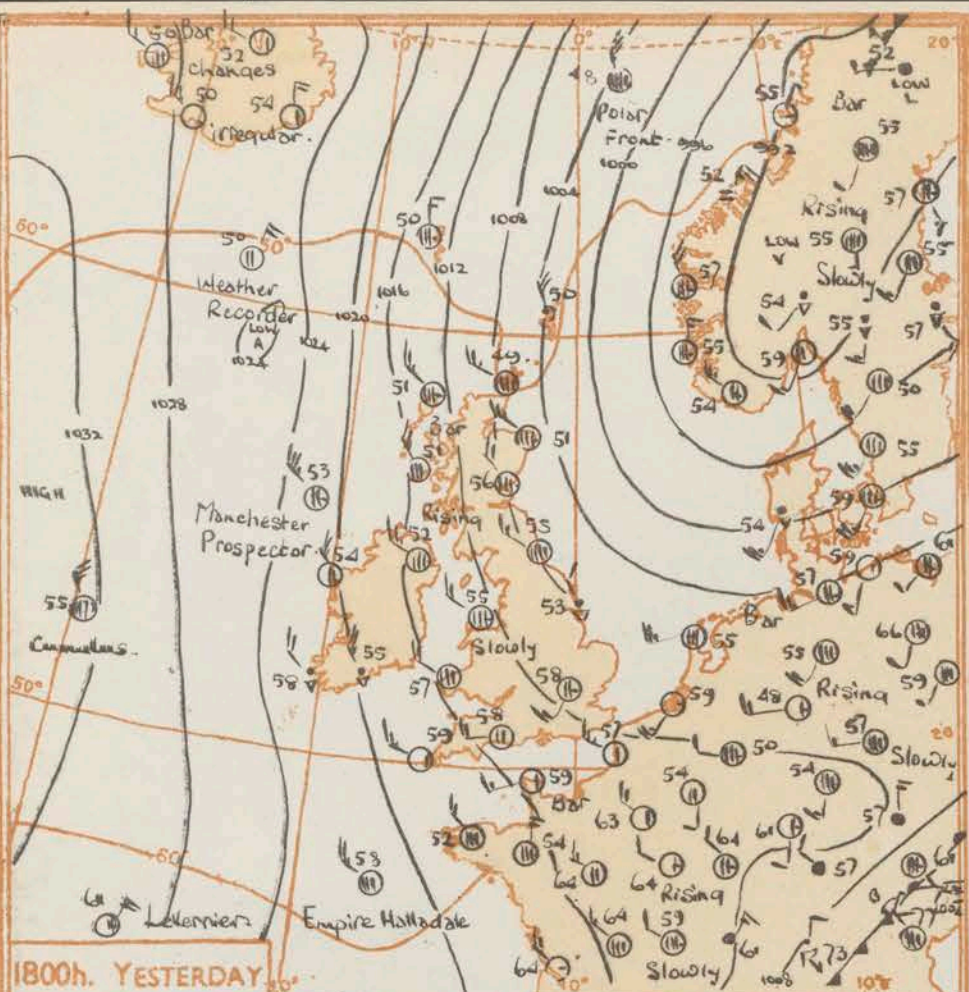

FRONTS or boundaries between masses of air of different origin are indicated, wherever their characteristics are well pronounced in the following way—
 — Warm Front on the surface
 — Warm Front above the ground
 — Cold Front on the surface
 — Cold Front above the ground
 — Occluded Front (or Occlusion)
 — Lines of Frontogenesis
 Short strokes across the frontal line indicate Frontolysis.

NOTE.—The symbols are placed on the side of the line towards which the front is moving. Where the front is stationary the symbols are placed alternately on both sides of the line. Identification letters are inserted on fronts and in systems.

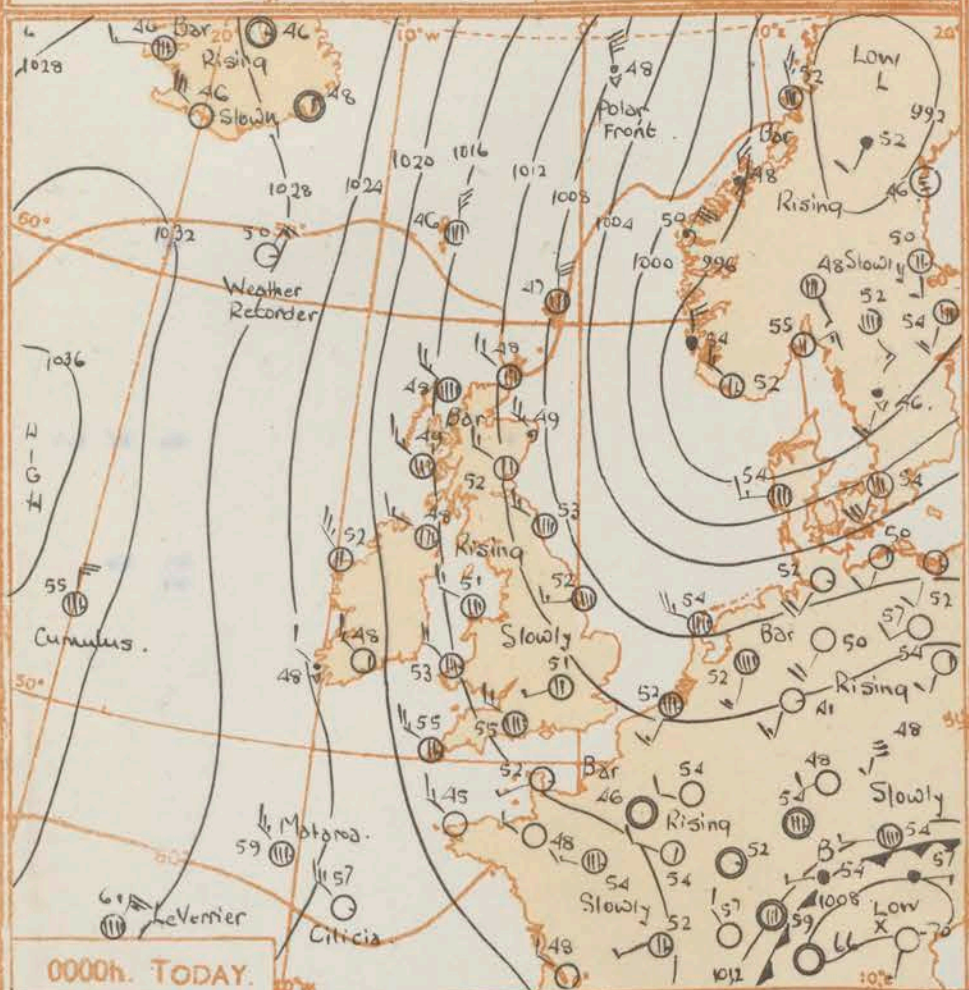

All times are G.M.T. Add one hour to get summer time.

Mean Sea Surface Isotherms for JUNE are shown thus — 50°

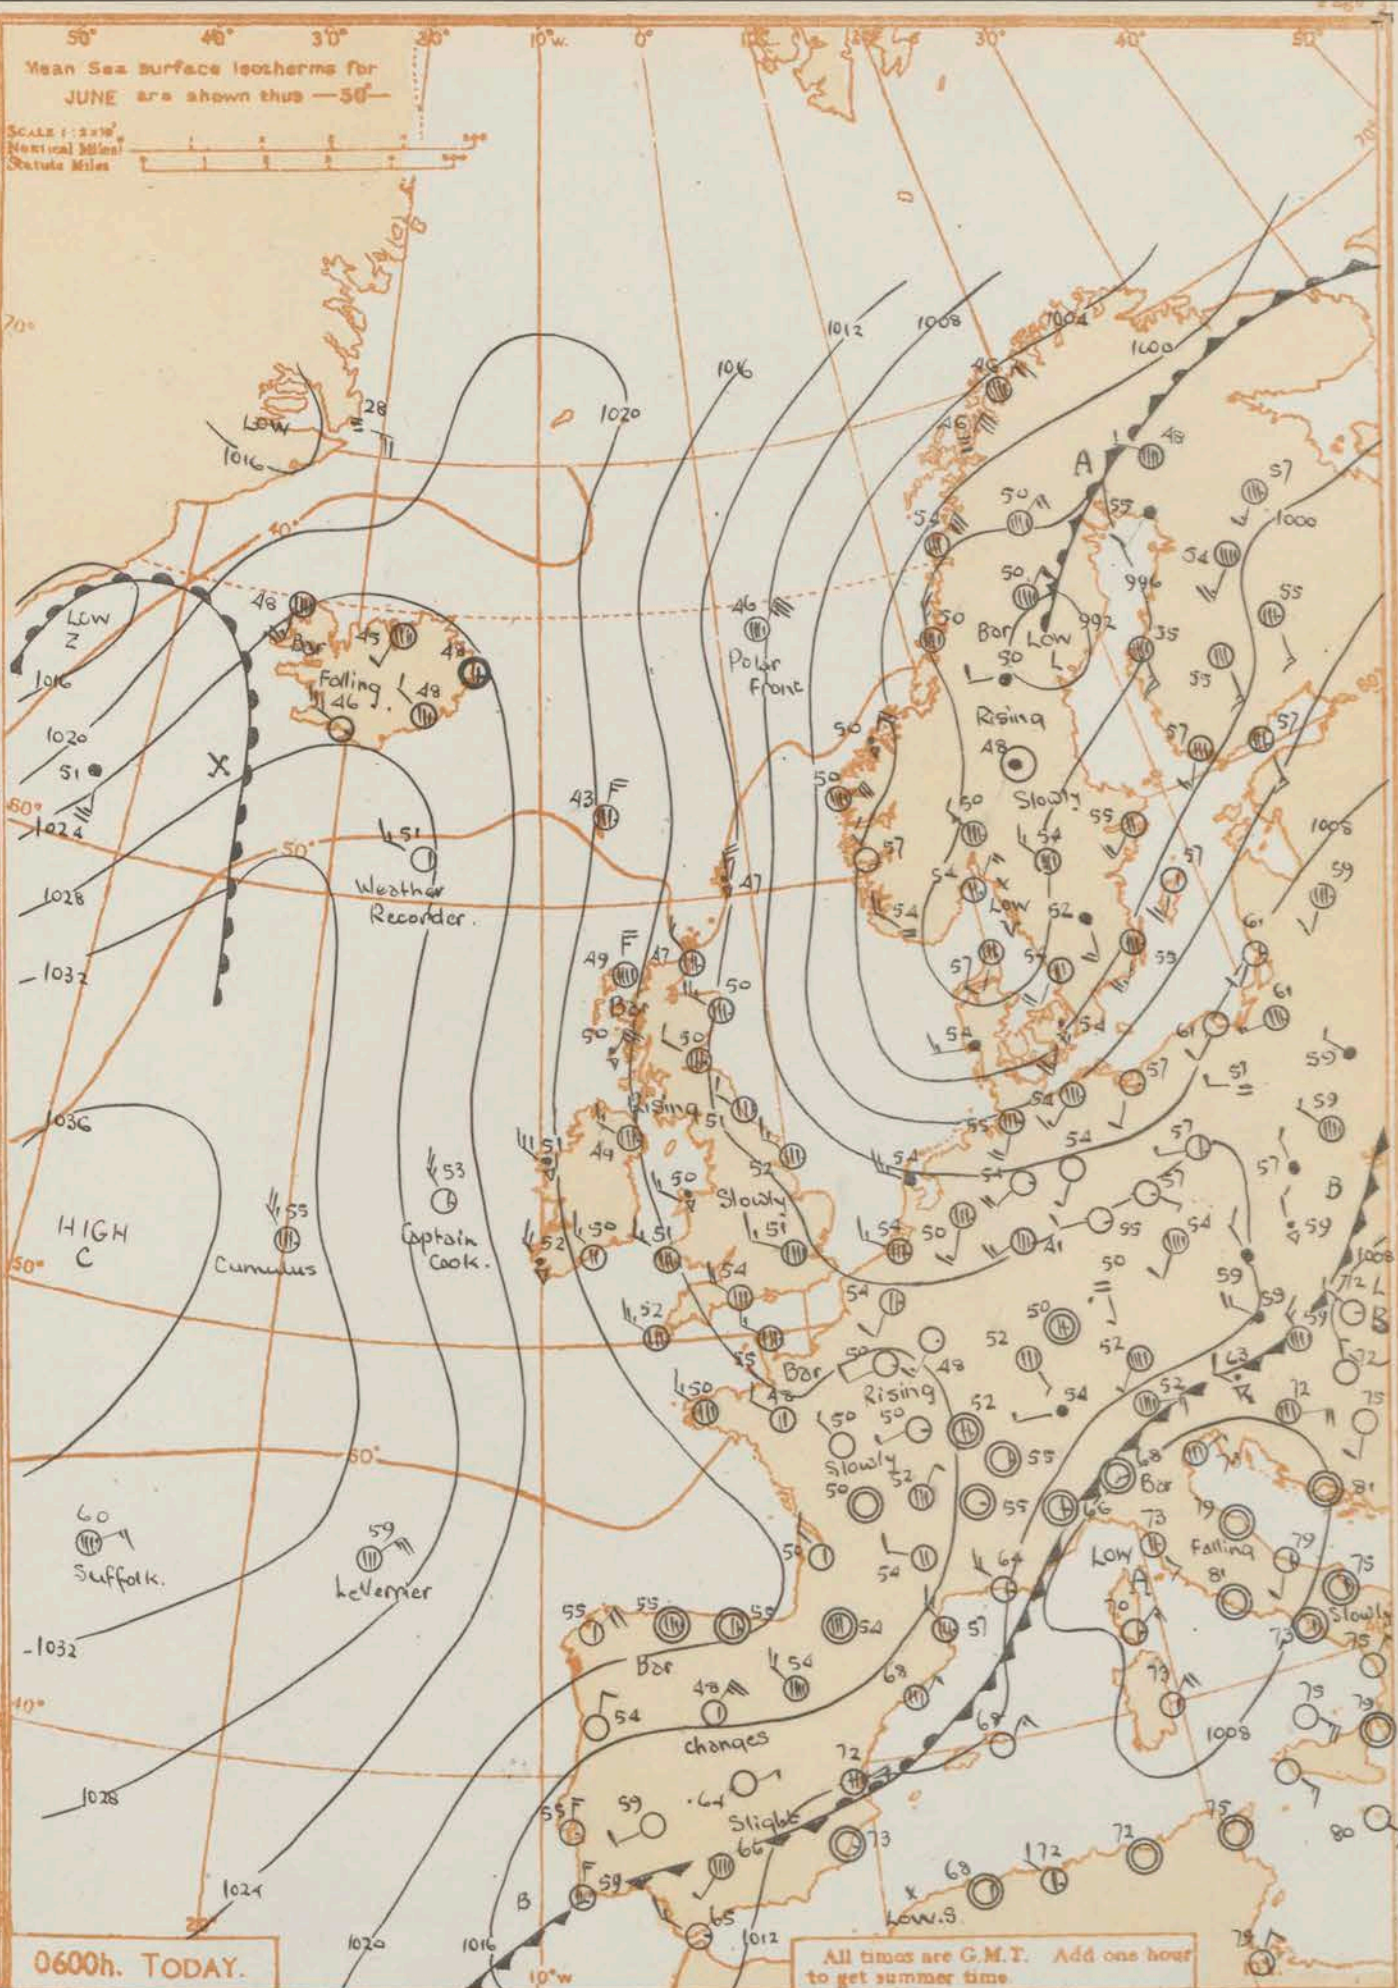

SCALE 1:2500
Nautical Miles
Statute Miles

1800h. YESTERDAY

0000h. TODAY

0600h. TODAY

All times are G.M.T. Add one hour to get summer time

GENERAL SYNOPSIS DEVELOPMENT:-

A depression over Scandinavia and an anticyclone on the Atlantic are both slow moving, and a cool north to northwest airstream covers the British Isles.
A depression to the west of Iceland is deepening and moving northeastwards.

Issued at mid-day today Monday 28th June 1954

FORECAST FOR BRITISH ISLES until noon tomorrow:- Most places

will have mainly cloudy cool weather though some short bright intervals will occur in places. There will also be occasional light rain rain here and there.

OUTLOOK FOR the following 24 hours:- Dry in most places but mainly cloudy and cool.

Chart of Weather in the Northern Hemisphere.

A ridge of high pressure over the British Isles is intensifying and moving south.

A depression to the northeast of Iceland is expected to move east-southeast and become less deep, but its warm front is likely to cross Scotland during tonight and tomorrow morning.

Issued at mid-day to-day Tuesday 29th June 1954

FORECAST FOR BRITISH ISLES until noon tomorrow :-

Tuesday 20th June 1954. FORECAST FOR BRITISH ISLES. 09.00 AM WINDFOW. Many places in England and Wales will have sunny periods, but there may also be some scattered showers this afternoon, more especially in southern districts. Cloudy weather with occasional rain will soon reach northern districts of Scotland from the northwest and will spread across Scotland, Northern Ireland and into some northern districts of England by mid-day tomorrow. It will be rather cool today.

OUTLOOK FOR the following 24 hours:- Becoming warmer in most places. Probably dry over much of England and Wales. Some rain or showers in Scotland.

Eskdale																																							

Chart of Weather in the Northern Hemisphere.

[illegible]

GENERAL SYNOPTIC DEVELOPMENT :-

A ridge of high pressure moved south over the British Isles and a warm front moved over Scotland and into extreme north of England. The warm front will continue to move south in a weak form. A cold front is expected to move southeast later over Scotland.

Issued at midday to day Wednesday 30th June 1954

FORECAST FOR BRITISH ISLES until noon tomorrow :-

Wednesday 30th June 1954. It will be mainly cloudy with occasional rain or drizzle, but sunny periods will occur today over Southern districts and tomorrow over parts of Scotland. Temperatures will be mainly near normal or a little below.

OUTLOOK FOR the following 24 hours:-

Probably mainly dry but occasional rain in some places. Becoming somewhat warmer especially in the south.
