0600 GMT 02 JANUARY 2017 SIG WEATHER	1200 GMT 02 JANUARY 2017 SIG WEATHER	<p><b>Summary of UK Weather for Monday 02 January 2017.</b>                      For many it was a cold, mainly dry and clear night. There were isolated wintry showers for some, particularly for northern and eastern coastal parts.                      The far south-east of England saw some rain initially, but this slowly moved south, with some clear spells and misty patches developing behind.                      It was a cold night for many parts, away from the far south.                      Through the daytime, skies stayed clear across the U.K., with just isolated cloud for some.                      A few showers affected parts of Scotland, the north-east coast of England, and Northern Ireland at times, and these turned wintry as they moved inland.                      It was a cold day for most despite the sunshine, with the majority of places remaining in mid single figures Celsius.</p>
1800 GMT 02 JANUARY 2017 SIG WEATHER	0000 GMT 03 JANUARY 2017 SIG WEATHER	<p><b>EXTREMES</b>  <b>Highest Maximum:</b>                      10.0 Forrest Lodge, Burnhead, Ayrshire  <b>Lowest Maximum:</b>                      2.5 High Mowthorpe, North Yorkshire  <b>Lowest Minimum:</b>                      -6.2 Lacock, Wiltshire  <b>Lowest Grass Minimum:</b>                      -9.8 Whitechurch, Dyfed  <b>Most Rain:</b>                      19.9 Achfary, Sutherland  <b>Most Sun:</b>                      7.5 Preston, Cove House, Dorset</p>

0600 GMT 03 JANUARY 2017 SIG WEATHER	1200 GMT 03 JANUARY 2017 SIG WEATHER	<p><b>Summary of UK Weather for Tuesday 03 January 2017.</b>                      It was dry across most of the U.K. during the early hours, although there was a little patchy rain at times across the north of Scotland. Increasing amounts of cloud and moister air gradually drifted south, limiting a widespread hard frost to many central and southern areas, where skies remained clear.                      The coldest spots were across the south-west of England.                      Through the day it stayed sunny across southern and especially south-western parts of England and Wales.                      However, elsewhere the cloud thickened up, with outbreaks of rain continuing across Scotland.                      It was windy across the north of the country, especially across the Northern Isles where, during the evening, there were gales, with gusts in excess of 50 knots.                      It stayed mostly dry and cloudy during the evening, but clearer skies followed across Scotland, allowing temperatures to fall.                      Daytime temperatures were around average across the southern half of the country, but a few degrees above further north.</p>
		
1800 GMT 03 JANUARY 2017 SIG WEATHER	0000 GMT 04 JANUARY 2017 SIG WEATHER	<p><b>EXTREMES</b>  <b>Highest Maximum:</b>                      11.4 Forrest Lodge, Burnhead, Ayrshire  <b>Lowest Maximum:</b>                      4.4 Kenley Airfield, Greater London  <b>Lowest Minimum:</b>                      -6.8 Exeter Airport No2, Devon  <b>Lowest Grass Minimum:</b>                      -10.5 Wallingford, Oxfordshire  <b>Most Rain:</b>                      15.0 Langwell Lodge, Ross-Shire  <b>Most Sun:</b>                      7.6 Camborne, Cornwall                      7.6 Guernsey Airport, Guernsey</p>

0600 GMT 04 JANUARY 2017 SIG WEATHER	1200 GMT 04 JANUARY 2017 SIG WEATHER	<p><b>Summary of UK Weather for Wednesday 04 January 2017.</b>                      Through the early hours the north and north-east of the U.K. saw clear skies, allowing temperatures to fall away, with a patchy frost developing by dawn. A scattering of wintry showers affected the far north of Scotland, and it also remained windy there.                      Elsewhere there was a lot of cloud, and this was thick enough in places to give some light rain and drizzle.                      During the day the clearer skies in the north slowly filtered further southwards, bringing plenty of sunshine across Northern Ireland, northern England, and southern and western Scotland. Despite this a stream of wintry showers affected many North Sea coasts, driven in on a strong and biting cold northerly wind.                      Wales, the Midlands and southern parts of England remained cloudier though, with only a few breaks at times. The cloud remained thick enough to give further patches of light rain and drizzle, but winds were lighter, so it was slightly less cold.                      Through the evening, where skies were clear, temperatures began to fall rapidly. Overall, daytime temperatures were close to average in the south, but elsewhere they remained below average.</p>
		
1800 GMT 04 JANUARY 2017 SIG WEATHER	0000 GMT 05 JANUARY 2017 SIG WEATHER	<p><b>EXTREMES</b>  <b>Highest Maximum:</b>                      11.0 Tenby, Dyfed  <b>Lowest Maximum:</b>                      2.1 Balmoral, Aberdeenshire  <b>Lowest Minimum:</b>                      -5.5 Lacock, Wiltshire  <b>Lowest Grass Minimum:</b>                      -9.3 Lacock, Wiltshire  <b>Most Rain:</b>                      1.6 Bridlington MRSC, North Yorkshire  <b>Most Sun:</b>                      6.1 Hazelrigg, Lancashire                      6.1 Morecambe No2, Lancashire</p>

0600 GMT 05 JANUARY 2017 SIG WEATHER	1200 GMT 05 JANUARY 2017 SIG WEATHER	<p><b>Summary of UK Weather for Thursday 05 January 2017.</b>                      A scattering of showers and some patchy cloud continued to affect eastern parts through the early hours of the morning.                      Elsewhere, the skies were clear, allowing a sharp frost to form as temperatures plummeted. The exception to this was the far west of the U.K., where cloud persisted, and as a result, temperatures did not fall as far.                      It was therefore a chilly and frosty start for many, especially in central and eastern parts.                      Isolated showers clipped the east coast of England during the day. Otherwise, there was plenty of unbroken sunshine across England and Wales.                      Meanwhile, Northern Ireland saw increasingly cloudy skies during the afternoon. Likewise, cloud arrived in the west and north-west later on.                      However, it was a chilly day for all areas.</p>
1800 GMT 05 JANUARY 2017 SIG WEATHER	0000 GMT 06 JANUARY 2017 SIG WEATHER	<p><b>EXTREMES</b>  <b>Highest Maximum:</b>                      11.1 Belfast Newforge, Co. 0600 GMT 06 JANUARY 2017 SIG WEATHER	1200 GMT 06 JANUARY 2017 SIG WEATHER	<p><b>Summary of UK Weather for Friday 06 January 2017.</b>                      It was cloudy and windy across Scotland and Northern Ireland overnight, with outbreaks of rain spreading south-eastwards through the early hours. Further south and east, cloud spilled across northern England and Wales.                      However, clear skies across central and southern England allowed mist and fog patches to form in places, accompanied by a sharp frost.                      It was a cold start to the day for many areas.                      Through the day the rain slowly moved south-eastwards across England and Wales. There were some heavy outbreaks, and extensive hill fog too.                      By the afternoon it became mostly dry across Scotland and Northern Ireland, but the low cloud lingered.                      It was dry through daylight hours in the south-east corner though, with some brightness.</p>
1800 GMT 06 JANUARY 2017 SIG WEATHER	0000 GMT 07 JANUARY 2017 SIG WEATHER	<p><b>EXTREMES</b>  <b>Highest Maximum:</b>                      12.1 Belfast Newforge, Co. 0600 GMT 08 JANUARY 2017 SIG WEATHER	1200 GMT 08 JANUARY 2017 SIG WEATHER	<p><b>Summary of UK Weather for Sunday 08 January 2017.</b>                      It was a dry night for many, with cloudy skies. The cloud was low enough to give hill fog in places, and in other areas where there were some cloud breaks, radiation fog formed with the light winds. There were freezing fog patches in the Vale of York too.                      Towards dawn there were odd spots of rain and drizzle where the cloud was thickest. It was a frost free night for many, however under some clearer spells in the north, temperatures fell below freezing.                      It was then a rather cloudy day across most areas of the U.K., with mist and fog persisting in some places, especially the Vale of York.                      There were some brighter spells too, with a little sunshine for some, particularly in southern and eastern areas.                      The cloud was thick enough for a little light rain or drizzle across many western coasts and hills at times, and more persistent rain edged into north-west Scotland through the evening. It was mild for the time of year for most areas too.</p>

0600 GMT 11 JANUARY 2017 SIG WEATHER	1200 GMT 11 JANUARY 2017 SIG WEATHER	<p><b>Summary of UK Weather for Wednesday 11 January 2017.</b>                      A band of low cloud and rain moved south-eastwards across eastern parts of England overnight, with some associated mist and hill fog across the south-east.                      Elsewhere, winds gradually increased overnight as an area of low pressure to the north of the U.K. tracked eastwards. This brought widespread gales across the north, with severe gales over the Pennines. Scattered showers also started to filter across the north, turning to snow over high ground in Scotland.                      Patchy cloud and strong winds kept temperatures above freezing overnight in most places.                      Very strong winds continued in the north all morning, causing trucks to be blown over, and power line damage.                      There were showers in the north, which became increasingly wintry as the day progressed. Snow fell over the mountains in Scotland, Northern Ireland and the north of England.                      The rest of England and Wales stayed breezy but dry.                      It became distinctly cooler than of late, but temperatures held up in the far south.</p>

0600 GMT 12 JANUARY 2017 SIG WEATHER	1200 GMT 12 JANUARY 2017 SIG WEATHER	<p><b>Summary of UK Weather for Thursday 12 January 2017.</b>                      It was a cold and icy night across northern areas, as frequent snow showers affected many northern and western parts, with heavy showers and thunder in places.                      Further south, a lot of cloud brought heavy showers into Wales and south-west England.                      Temperatures generally held up above freezing in the south under the cloud cover.                      Winds remained strong throughout the night in the north, gusty at times, particularly across western Scotland.                      Snow showers continued in the north-west all day, but north-eastern parts stayed mainly dry with some sunshine.                      A broad band of heavy rain arrived in the south-west, and worked its way eastwards during the day. This fell as snow on the Brecon Beacons from the Morning, and became increasingly wintry as the day went on.                      Widespread sleet fell in the central southern parts of England. Where the rain/sleet was heavy, it turned to snow, with a couple of centimetres settling in parts of the south-east; including High Wycombe, Bromley and Farnborough.                      It was a very cold day for most places.</p>

0600 GMT 13 JANUARY 2017 SIG WEATHER	1200 GMT 13 JANUARY 2017 SIG WEATHER	<p><b>Summary of UK Weather for Friday 13 January 2017.</b>                      Rain, sleet and snow across the south-east cleared away during the evening, with a little snow accumulating through parts of Kent. Frequent sleet and snow showers affected Scotland, Northern Ireland, Wales and parts of south-west England, with hail in places.                      Widespread frost affected many parts, with icy stretches on some untreated surfaces.                      Much of Scotland continued to see more persistent sleet and snow, accompanied by strong northerly winds, leading to blizzard conditions for the Highlands, with snow also reaching lower levels. The sleet and snow moved southwards into northern England and the north Midlands by the end of the night, bringing a slight covering in places.                      Through the morning, the band of rain, sleet and snow moved further south, to bring a covering of snow across most central and eastern parts of England, and the far east of Wales.                      Elsewhere, there was plenty of sunshine, but coastal showers affected the north, east and west. Many of these showers fell as sleet or snow inland, giving further slight accumulations.                      It was another windy day for all areas, with a significant wind chill.</p>

0600 GMT 18 JANUARY 2017 SIG WEATHER	1200 GMT 18 JANUARY 2017 SIG WEATHER	<p><b>Summary of UK Weather for Wednesday 18 January 2017.</b>                      Most parts of the U.K. were rather cloudy through the early hours, with low cloud and hill fog affecting many central, northern and western areas. Some light rain and drizzle also affected north-western parts of England and Scotland.                      It was fairly mild under the cloudy areas, but there were clearer spells across eastern Scotland, England and particularly south-east England, where it was much colder.                      Through the day time, it was still cloudy and mostly dry across the country, but with some patchy light rain and drizzle at times. This was mainly over the hills, particularly through Wales, north-west England, and through the Midlands.                      Meanwhile, it was a sunnier day across southern parts of England, but despite the sunshine it was cold.                      It was cloudy and breezy across northern and western parts of Scotland, although much of eastern Scotland stayed dry with plenty of sunshine.                      However, thicker cloud and more persistent rain affected the Shetland Isles during the day.                      It was cold for the time of year across the south, but mild for the time of year across the north.</p>

# SIGNIFICANT WEATHER

**Summary of UK Weather for Sunday 22 January 2017.**  
 Across south-east England it was dry with clear skies through the early hours, allowing a widespread and sharp frost to form, with temperatures falling below freezing.  
 Elsewhere, there were varying amounts of cloud, which brought some outbreaks of showery rain across south-west England, Wales and southern parts of Scotland. Over higher ground this rain turned to sleet and snow, although there were no significant accumulations.  
 Much of southern and south-eastern England, as well as Northern Ireland and parts of northern England, then had a dry day with plenty of sunshine.  
 Elsewhere it was rather cloudy, and there were a few light showers and the odd wintry flurry.  
 Into the evening temperatures started to plummet rapidly under clearing skies, and more widespread patches of fog began to form as well.  
 Temperatures on the whole were below average across most of the U.K., however south-west England saw some milder conditions, bringing temperatures closer to average.

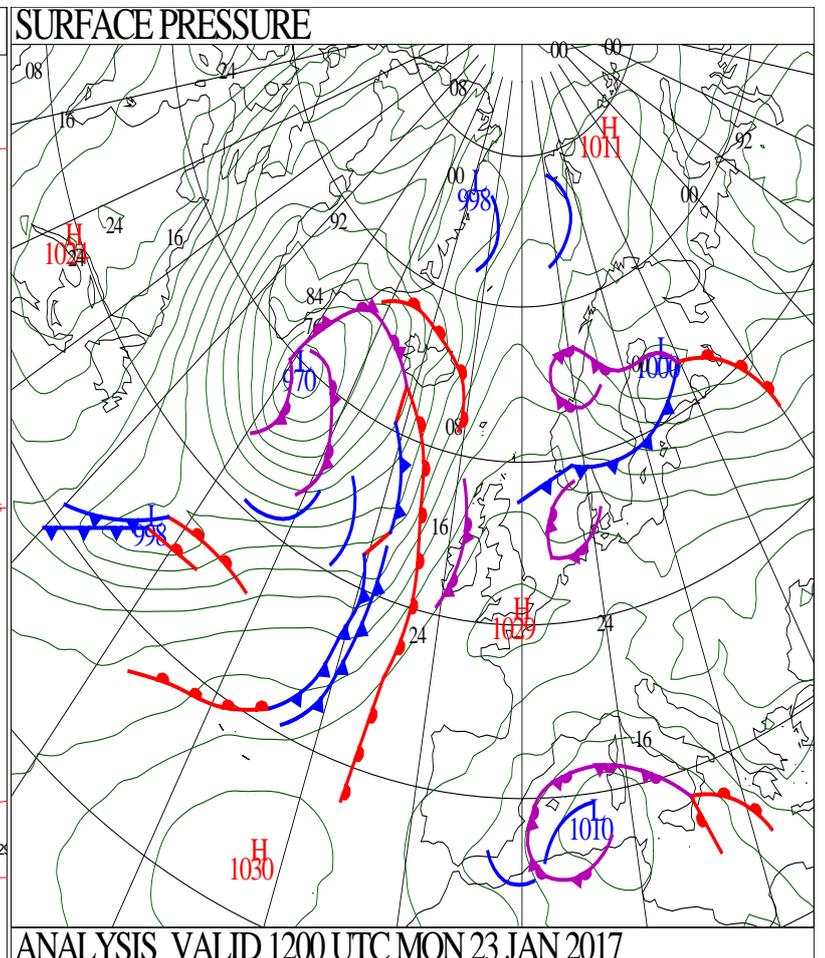

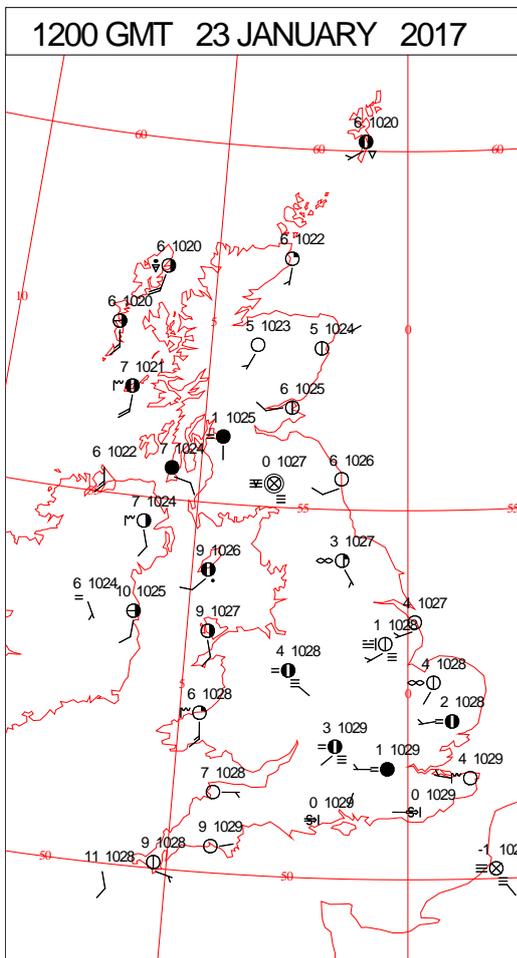

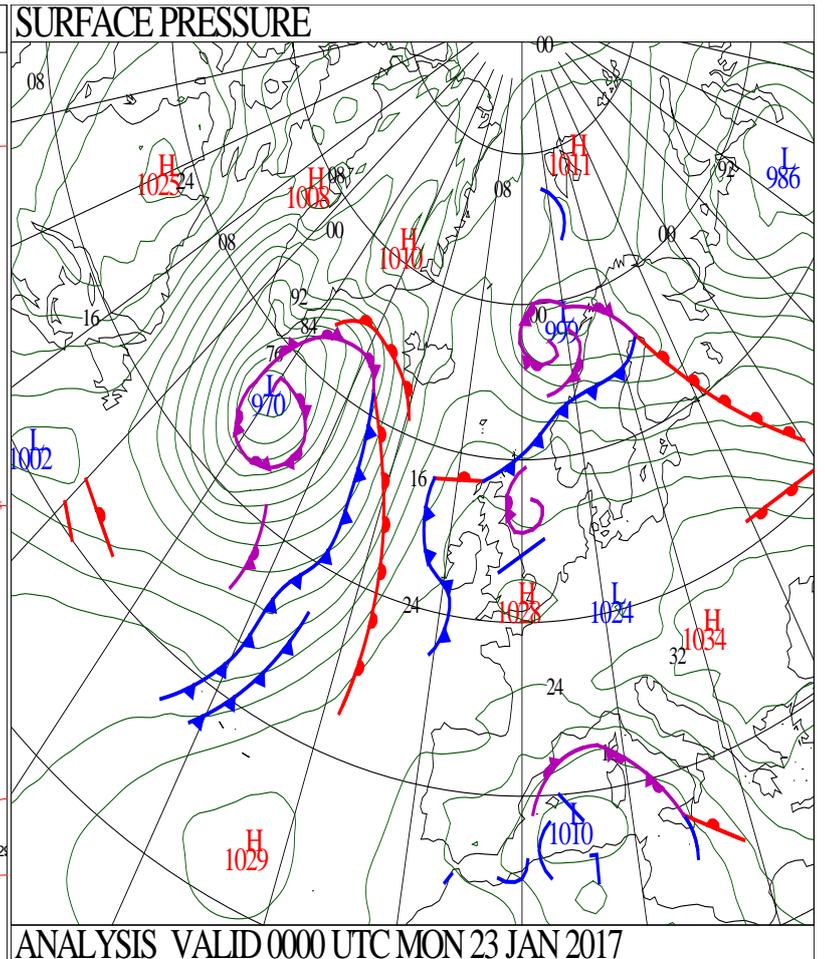

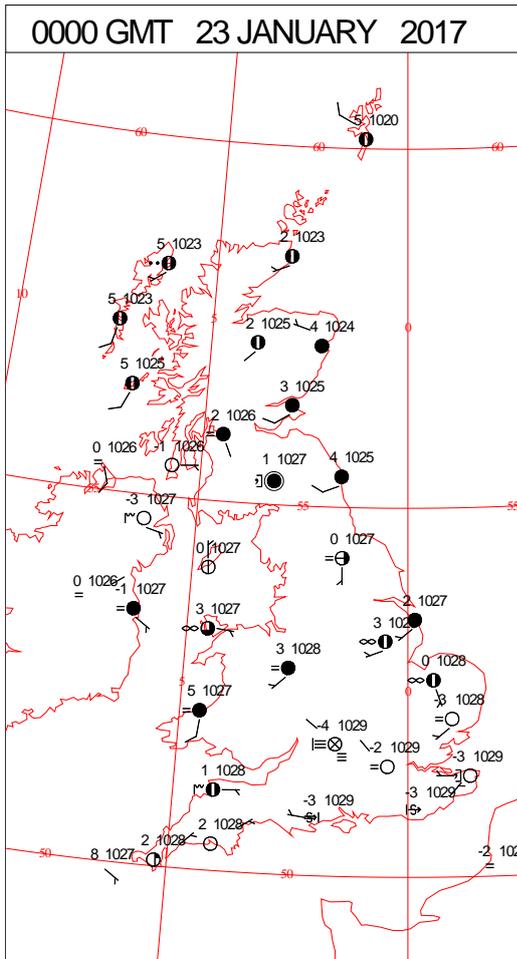

**EXTREMES**  
**Highest Maximum:**  
 10.8 St. Mary's Airport, Isles of Scilly

0600 GMT 26 JANUARY 2017 SIG WEATHER	1200 GMT 26 JANUARY 2017 SIG WEATHER	<b>Summary of UK Weather for Thursday 26 January 2017.</b>
		<p>The early hours were largely cloudy across England and Wales, with widespread mist and haze. The cloud was also thick enough in places to give some outbreaks of drizzle or snow grains.</p> <p>Scotland and Northern Ireland saw some clearer skies overnight, giving a much brighter start to the day.</p> <p>Despite the cloud across England and Wales, many eastern and central parts also started the day below freezing.</p> <p>With the exception of north-west Wales, north-west England, and the south coast of England later in the day, skies across England and Wales remained largely cloudy, giving a rather dull and grey day across many parts. A cold and brisk south-easterly wind also developed throughout the day across England and Wales, giving a very cold day for many parts, with some places staying below freezing during the entire day.</p>
1800 GMT 26 JANUARY 2017 SIG WEATHER	0000 GMT 27 JANUARY 2017 SIG WEATHER	<p>Northern Ireland also saw a rather cloudy day, but some brighter spells did develop, especially in the west later in the day.</p> <p>Scotland on the other hand saw a largely sunny day, and with some milder air across the north of the country, temperatures climbed to above average by the afternoon, giving a very pleasant day.</p>
		<p><b>EXTREMES</b></p> <p><b>Highest Maximum:</b> 13.6 Poolewe, Ross-Shire</p> <p><b>Lowest Maximum:</b> -2.3 Middleton, Hillside, Greater Manchester</p> <p><b>Lowest Minimum:</b> -4.9 Redesdale Camp, Northumberland</p> <p><b>Lowest Grass Minimum:</b> -9.1 Kindrogan, Perthshire</p> <p><b>Most Rain:</b> 13.2 St. Marys Airport, Isles of Scilly</p> <p><b>Most Sun:</b> 7.7 Valley, Gwynedd</p>

0600 GMT 27 JANUARY 2017 SIG WEATHER	1200 GMT 27 JANUARY 2017 SIG WEATHER	<b>Summary of UK Weather for Friday 27 January 2017.</b>
		<p>The early hours saw largely clear skies across many parts of the U.K., although areas of low cloud formed across parts of Wales and northern England. Northern Ireland and south-west England also saw skies turn cloudier, as a band of patchy rain moved in by dawn.</p> <p>Towards dawn some patchy rain and sleet also moved into south-eastern areas, allowing some patchy ice to develop.</p> <p>Temperatures overnight were below average for the time of year, with a widespread frost across England and Scotland.</p> <p>The rest of the day stayed fairly dry with partly cloudy skies for many, and a good deal of low cloud across the south.</p> <p>There was a little more in the way of brightness across Scotland, however in parts of the east, such as Dundee, fog or freezing fog persisted all afternoon and into the evening.</p> <p>Patchy rain started to push into western and southern parts during the afternoon, slowly spreading north and east through the evening.</p> <p>It was generally milder across the U.K. compared to yesterday, however, persistent cloud across north-east England suppressed temperatures, with a few places struggling to get above freezing.</p>
		<p><b>EXTREMES</b></p> <p><b>Highest Maximum:</b> 11.4 Kinlochewe, Ross-Shire</p> <p><b>Lowest Maximum:</b> 0.2 Strathallan, Perthshire</p> <p><b>Lowest Minimum:</b> -7.6 Cromdale, Nairnshire -7.6 Bowhill, Berwickshire</p> <p><b>Lowest Grass Minimum:</b> -11.7 Balmoral, Aberdeenshire</p> <p><b>Most Rain:</b> 20.0 Eallabus, Isle of Islay 20.0 Sidmouth, Devon</p> <p><b>Most Sun:</b> 5.7 Aviemore, Inverness-Shire</p>

0600 GMT 28 JANUARY 2017 SIG WEATHER	1200 GMT 28 JANUARY 2017 SIG WEATHER	<p><b>Summary of UK Weather for Saturday 28 January 2017.</b>                      Rain spread north-eastwards across the U.K. during the early hours, giving hill snow across parts of Scotland.                      Eastern and south-eastern parts of England stayed mostly dry, but cloudy with some fog.                      By dawn, rain had cleared from Northern Ireland and the far west of Wales and south-west England, with a few showers following.                      The rain moved further north-eastwards through the day, with sleet and snow continuing over high ground in Scotland. Snow fell generally over 300 metres, although there was some wet snow to lower levels at time in places.                      Showers followed behind the rain, turning wintry at times over the hills of northern England and Wales. Apart from any showers, it was a generally dry day for many in the south, with sunny spells.                      Temperatures were around average for the time of year.</p>
1800 GMT 28 JANUARY 2017 SIG WEATHER	0000 GMT 29 JANUARY 2017 SIG WEATHER	<p><b>EXTREMES</b>  <b>Highest Maximum:</b>                      11.1 Northolt, Greater London  <b>Lowest Maximum:</b>                      1.6 Tyndrum No3, Perthshire  <b>Lowest Minimum:</b>                      -7.6 Kindrogan, Perthshire  <b>Lowest Grass Minimum:</b>                      -16.4 Kindrogan, Perthshire  <b>Most Rain:</b>                      27.4 Weisdale Mill, Shetland  <b>Most Sun:</b>                      6.3 Yeovilton, Somerset</p>

0600 GMT 29 JANUARY 2017 SIG WEATHER	1200 GMT 29 JANUARY 2017 SIG WEATHER	<p><b>Summary of UK Weather for Sunday 29 January 2017.</b>                      Skies were largely clear across the U.K. through the early hours, although there were some scattered showers, mainly across England and Wales.                      It was a grey and damp day for much of the southern half of the country.                      In contrast, the north was generally dry and bright with sunny spells, although a chilly feel.                      A band of persistent and locally heavy rain gradually moved north-eastwards from the far south-west through the day, to lie south of a line from Liverpool to Hull by evening. Drier conditions did follow from the south-west from late afternoon.                      Most of northern England and Scotland had a dry day, with the best of the sunny spells across eastern areas. However, isolated showers did affect the northern and western coasts of Scotland at times.</p>

0600 GMT 31 JANUARY 2017 SIG WEATHER	1200 GMT 31 JANUARY 2017 SIG WEATHER	<p><b>Summary of UK Weather for Tuesday 31 January 2017.</b>                      It was mostly frost-free through the early hours of the morning, as cloud continued to build across most of the U.K., preventing temperatures from dropping too far.                      Where the cloud thickened, mist formed quite widely by dawn, as well as some hill fog. It stayed dry across many eastern parts, though patchy rain and drizzle sat across the far south.                      Further north, a band of persistent and locally heavy rain sat across Northern Ireland and western Scotland.                      England and Wales also saw outbreaks of rain and drizzle, although it was generally light and patchy. However, more persistent rain spread across south-western parts during the evening.                      Overall, most areas saw a day of low cloud and hill fog, however brighter conditions spread across Northern Ireland and western Scotland later on, accompanied by an occasional shower in places too.</p>
