0600 GMT 01 AUGUST 1999	SIG WEATHER	1200 GMT 01 AUGUST 1999	SIG WEATHER	<p><b>Summary of UK weather for Sunday 1 August 1999</b></p> <p>Most places had a dry night, with well-broken cloud. There were, though, isolated showers over the Midlands and Wales. Many places became rather misty, and there was again fog and low cloud near northeastern coasts of England and parts of the east coast of Scotland, as well as around the Channel Islands and some southwestern coasts of Britain.</p> <p>It was a sunny day over the greater part of the British Isles, but there were still a few persistently grey, murky coastal areas - especially around the Fife coast. Showers and thunderstorms developed in various districts during the day, especially in the afternoon over the Midlands, northwest England and southern and western Scotland. Very heavy rain fell in places, with localised flooding - for example, in the Pendeford district of Wolverhampton. Activity mostly weakened from the south in the evening, but lively storms were still affecting central Scotland near midnight.</p> <p>It was mostly a very hot day, although some coastal areas were only warm, whilst those plagued by sea mist were rather cool.</p>

## SIGNIFICANT WEATHER

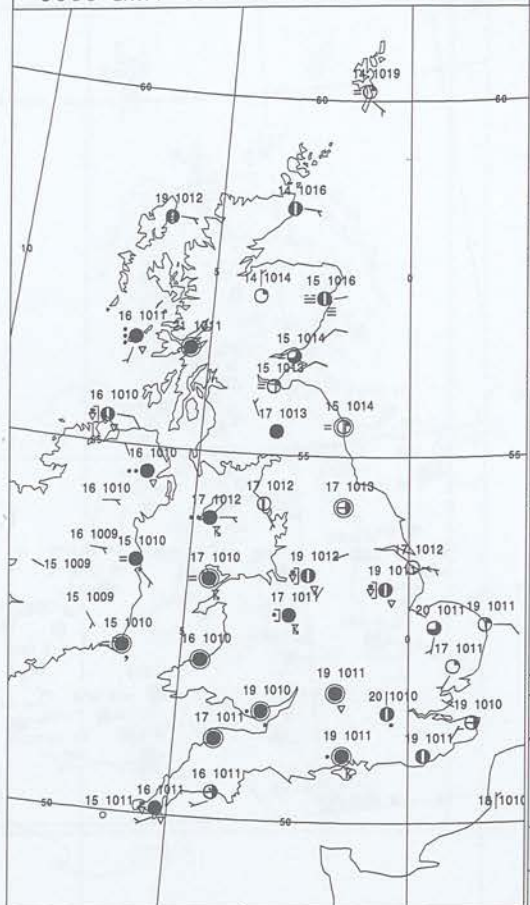

0600 GMT 02 AUGUST 1999	SIG WEATHER	1200 GMT 02 AUGUST 1999	SIG WEATHER	<b>Summary of UK weather for Monday 2 August 1999</b> It was a murky night for the coast of northeast England and eastern Scotland, with sea-fog and low cloud rolling ashore. Some patchy mist formed elsewhere, but generally it was a fine night, with variable cloud and good clear spells. Later in the night, showers reached south Wales and the West country, with showers breaking out across other parts of the country during the day. The showers were scattered at first, but with some thundery ones mixed in, and later in the day a more organised band formed. The band stretched from the Isle of Wight to Northern Ireland and southwest Scotland, with some heavy and prolonged downpours, particularly along the Welsh marches. Parts of the coastal fringe of northeast England and eastern Scotland remain murky all day, but elsewhere, outside the showers there were some good sunny periods. Temperatures were close to normal where the sea-fog and low cloud lingered on the North sea coast. Across the rest of the country it was generally very warm or hot, but very hot across parts of northern Scotland, central and eastern England.

0600 GMT 03 AUGUST 1999	SIG WEATHER	1200 GMT 03 AUGUST 1999	SIG WEATHER	<p><b>Summary of UK weather for Tuesday 3 August 1999</b></p> <p>Overnight, rain affected central southern England, much of Wales and Northern Ireland. Elsewhere it was largely dry although southwest England had occasional light rain and drizzle, especially around the coasts. Mist and fog affected parts of eastern Scotland.</p> <p>During the day, the band of rain edged very slowly northeastwards, but became lighter and more fragmented as it did so. By around midday, the rain affected northern parts of Northern Ireland, southwest Scotland, north Wales, the south Midlands and parts of southeast England. By the evening, the rain was rather patchy and chiefly confined to northern parts of Northern Ireland, southwest Scotland, Lancashire, the north Midlands and parts of East Anglia. Thunder was reported at Marham (Norfolk) during the latter part of the afternoon. To the north of the rain band, there was a good deal of sunshine. To the south, there was also plenty of sunshine, but also a few scattered showers.</p> <p>It was hot or very hot across much of Scotland, northeast England and parts of East Anglia. Elsewhere, it was warm or very warm.</p>

# SIGNIFICANT WEATHER

## Summary of UK weather for Sunday 8 August 1999

A few mainly coastal clear spells developed overnight, but generally rather cloudy skies covered the British Isles, giving a little rain across Northern Ireland and Northern England. Towards morning, outbreaks of more general and occasionally heavy rain edged into Cornwall. Elsewhere across England and Wales, Stratus lowered to give patchy fog around dawn.

The morning was cloudy too, with a few spots of rain in places. That heavier, and locally thundery rain in southwest England spread slowly north to affect all of Central and southern England by midday, although did ease off at times. Meanwhile, drier and brighter weather followed into the southwest.

During the afternoon and early evening brighter spells became apparent between a scattering of thundery showers, across much of southern England. That rain band pepped up and ground to a halt across Wales, central and northern England, bringing locally high rainfall totals, and embedded thunderstorms, to East Anglia in particular. Across Scotland and Northern Ireland it stayed cloudy, but mainly dry.

Temperatures were around normal in southern England and Wales, but rather cool or cool elsewhere.

## EXTREMES

### Highest Maximum:

24.1 Chivenor, Devon

### Lowest Maximum:

12.0 Aviemore, Inverness-Shire

### Lowest Minimum:

6.0 Strathallan, Perthshire (In Tayside Region)

### Lowest Grass Minimum:

1.2 Strathallan, Perthshire (In Tayside Region)

### Most Rain:

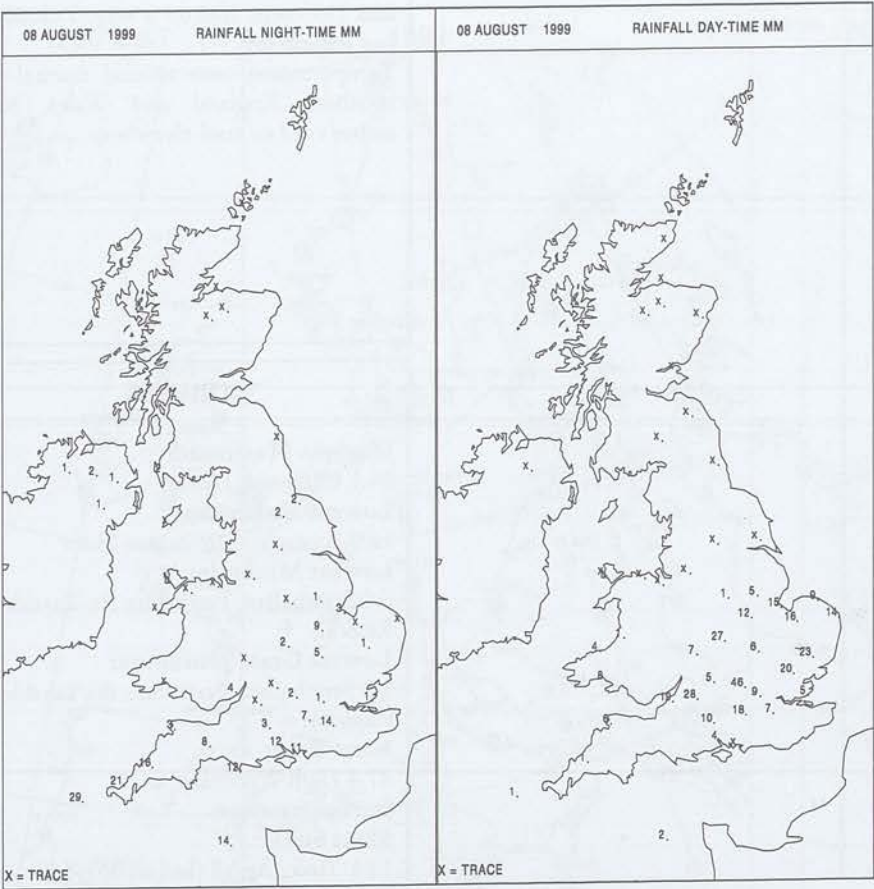

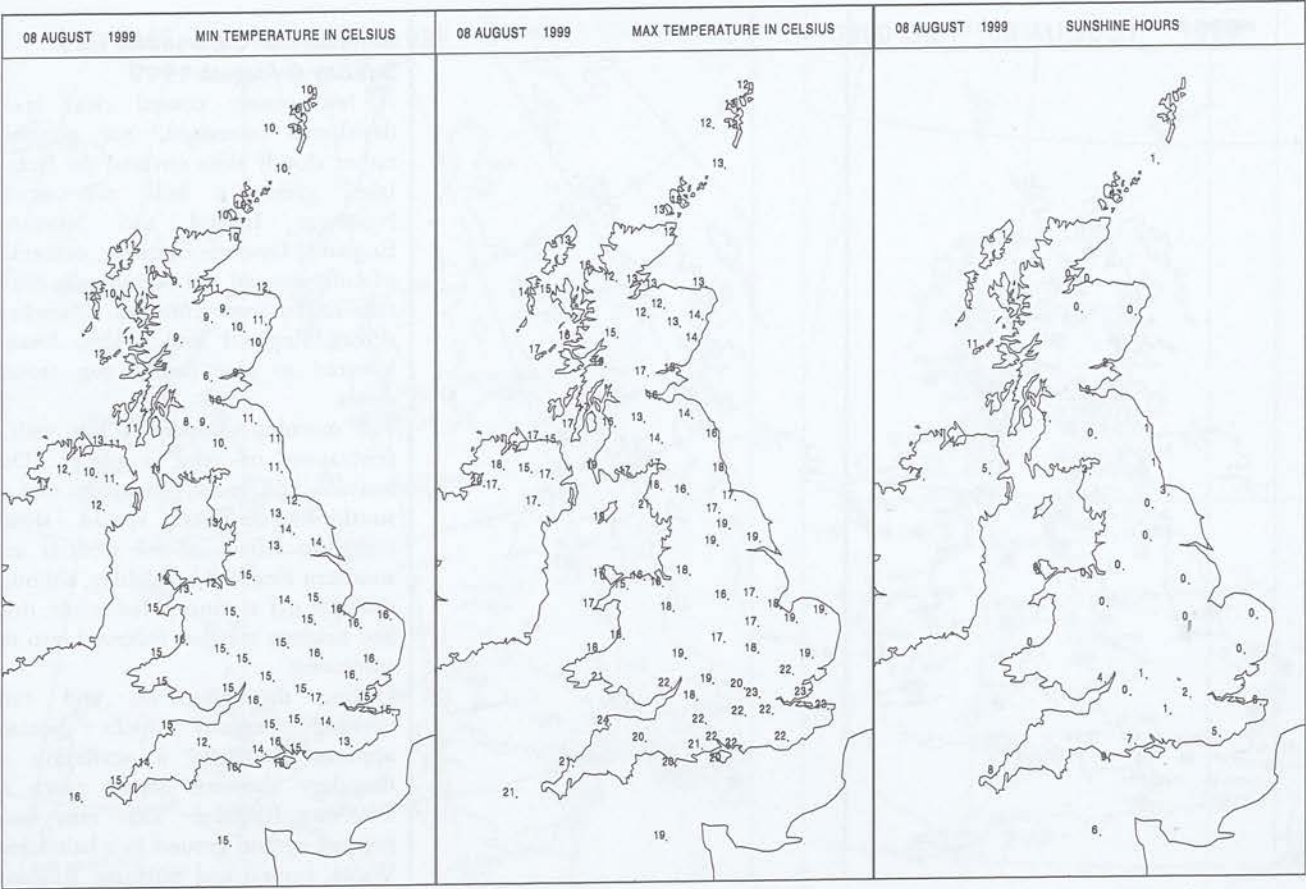

47.8 High Wycombe, Buckinghamshire

### Most Sun:

11.1 Tiree, Argyll (In Strathclyde Region)

0600 GMT 09 AUGUST 1999	SIG WEATHER	1200 GMT 09 AUGUST 1999	SIG WEATHER	<p><b>Summary of UK weather for Monday 9 August 1999</b></p> <p>Most places had a cloudy night. There was persistent rain from North Yorkshire southwestwards to Manchester, Shropshire and northeast Wales, and showers further south. By day, Scotland and Northern Ireland were mostly cloudy and dry; there were a few light showers, mainly over eastern Scotland, whilst parts of southwest Scotland - notably the southern end of the Hebrides - had sunny spells. Northern England, the north Midlands and north and west Wales were mostly dull with a fairly fresh northerly wind and outbreaks of rain; the most persistent rain was over the Yorkshire counties. Southern Britain was rather cloudy and showery; there was some sunshine, and it was sunny over the eastern half of Kent. Very heavy showers and thunderstorms affected areas from Devon through the south Midlands and London area to East Anglia - the thundery activity occurring more especially at the eastern end of this zone, especially towards the East Anglian coast. There was a rapid decay of the heavier downpours in the early evening.</p> <p>It was rather cool in the north and west, and rather warm in the southeast.</p>

SURFACE REPORTS

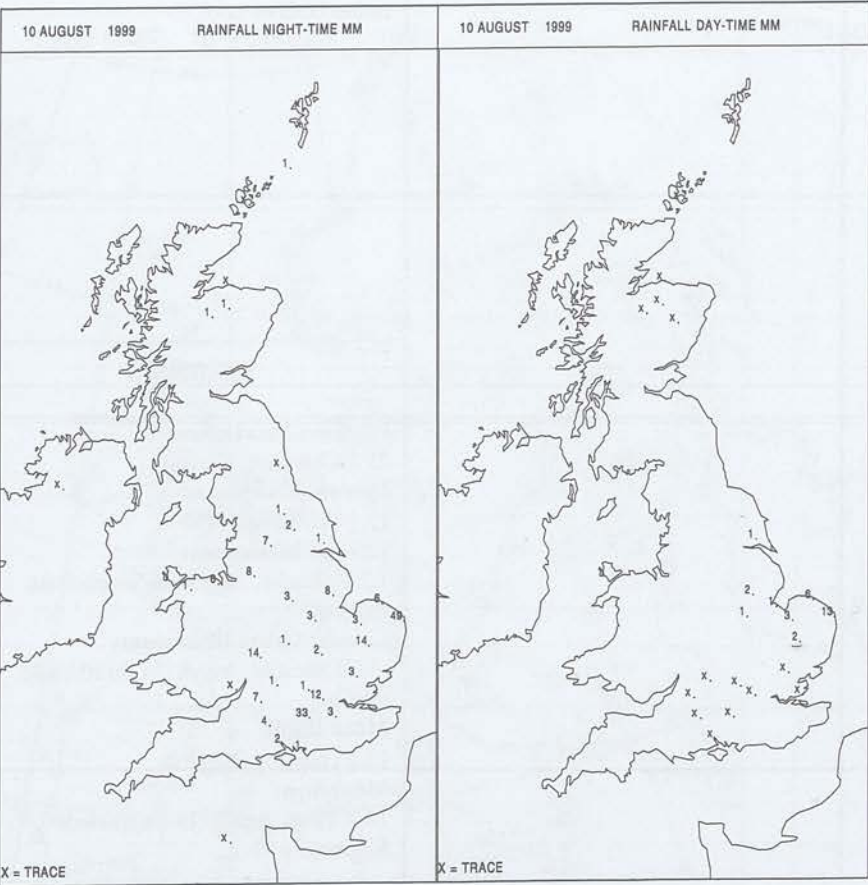

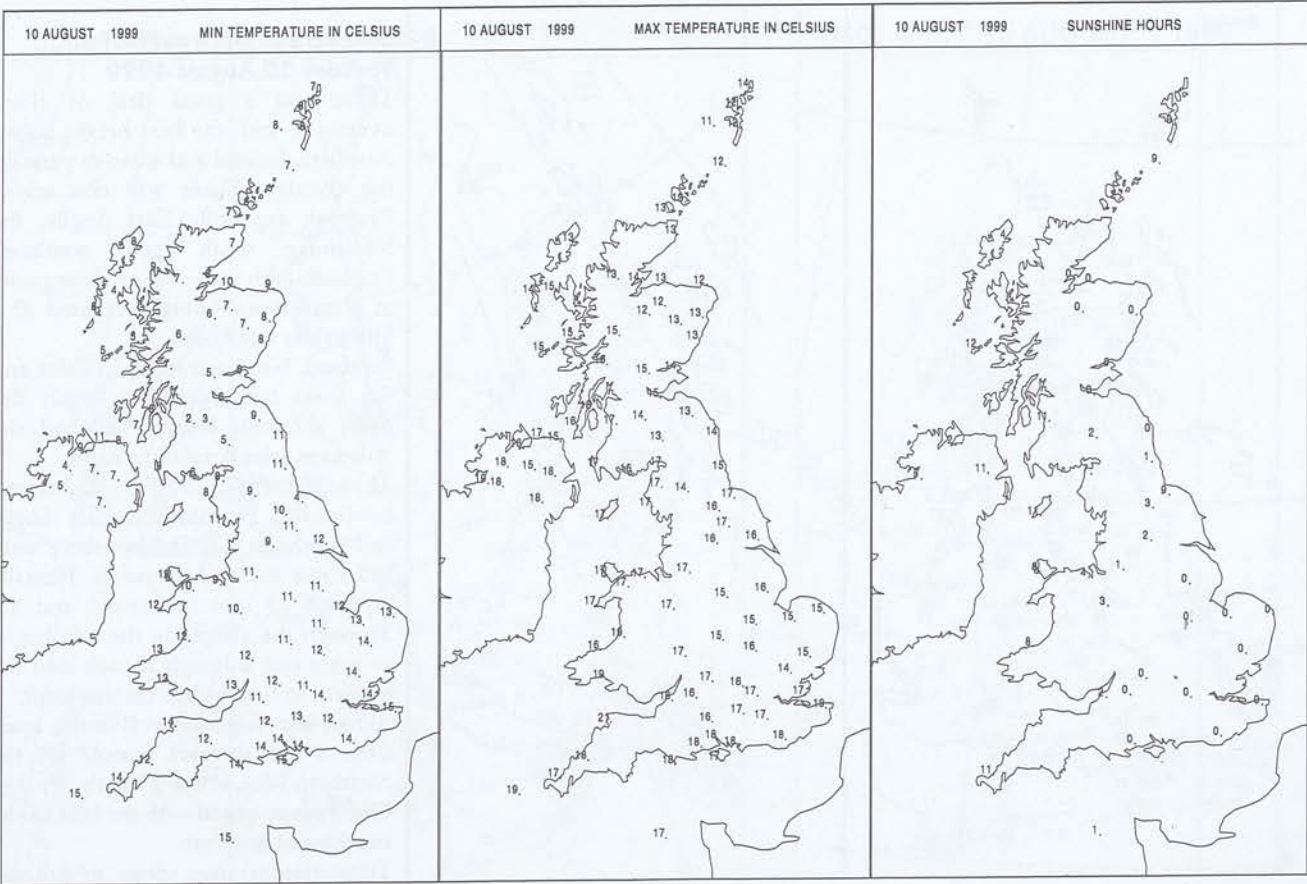

SIGNIFICANT WEATHER

Summary of UK weather for  
Saturday 14 August 1999

Outbreaks of rain, sometimes heavy, over East Anglia and southeast England gradually cleared away eastwards overnight. Elsewhere, it was generally a cloudy night with some showers, especially in the north and west.

During the first part of the morning, most of the showers were confined to Northern Ireland, western Scotland, northwest England and Wales. The showers developed more widely across the rest of the country during the day, and became heavy and thundery in a number of places. A gust of 52 knots was reported at Honington (Suffolk) in a thunderstorm.

Also through the day, an area of rain pushed eastwards through the English Channel and produced some outbreaks of rain across those parts close to the south coast for a time.

During the evening, the showers kept going across western Scotland, northwest England and north Wales, but gradually died away elsewhere. The temperatures were generally close to normal.

0600 GMT 16 AUGUST 1999	SIG WEATHER	1200 GMT 16 AUGUST 1999	SIG WEATHER	<b>Summary of UK weather for Monday 16 August 1999</b> <p>The early hours saw showers affect much of Scotland and Northern Ireland, and towards dawn south Wales and southwest England. Mist patches were reported in parts of central southern England.</p> <p>During the morning the showers become heavy and more widespread across Wales and England, with thunder reported from many places from the Midlands south. Eastern England kept dry the longest. Western Scotland and Northern Ireland were also showery.</p> <p>By early afternoon all but northwest Scotland had widespread showers, these still heaviest with thunder from Lancashire south.</p> <p>By early evening more organised rain arrived into west Scotland from the Atlantic, while the heavy showers across England gradually cleared from the west, East Anglia seeing the last of them in the late evening. Mist formed in the wake of the rain in some rural parts of southern England. By the midnight the rain in Scotland affected parts between the Great Glen and the central Lowlands.</p> <p>Temperatures were generally around normal, though they fell sharply in heavier showers.</p>

0600 GMT 17 AUGUST 1999	SIG WEATHER	1200 GMT 17 AUGUST 1999	SIG WEATHER	<p><b>Summary of UK weather for Tuesday 17 August 1999</b></p> <p>A rather cloudy night across northern and western Scotland with showery outbreaks of rain, and the odd shower cropped up in the east as well. The remnants of Mondays thundery showers finally cleared Lincolnshire and Norfolk during the early hours of the morning. That left good clear spells across eastern counties, allowing mist and patchy fog to form. Rain reached the West Country and south Wales during the early hours, extending across most of Wales and to parts of Northern Ireland before the end of the night.</p> <p>During the day, rain continued to extend slowly north-eastwards, reaching the central belt of Scotland by evening time. More showery conditions followed across Cornwall later in the morning and across all expected northern England, central and southern Scotland by evening. Some of the showers though, were heavy and thundery, sweeping across in more organised bands at times.</p> <p>Temperatures were close to normal across the Northern Isles, northwest Scotland, south Wales and southwest England. Across the rest of the country it was generally rather cool, but cool across parts of East Anglia and southeast England.</p>

0600 GMT 18 AUGUST 1999	SIG WEATHER	1200 GMT 18 AUGUST 1999	SIG WEATHER	<p><b>Summary of UK weather for Wednesday 18 August 1999</b></p> <p>Overnight, there was heavy rain for a time in southeast England, and rain was reported across central and southern Scotland. Elsewhere, the heavy/thundery showers petered out leaving mist patches, although showers continued to affect exposed coasts at times (mainly the English Channel).</p> <p>The mist patches cleared during the morning. Coastal showers persisted, whilst others developed inland, mainly across southern England at first but in other parts of England and Wales by midday. Some were heavy and thundery, with hail in places. Tornadoes were reported in the south. Persistent and occasionally heavy rain affected southern Scotland and northeast England, but apart from scattered showers Northern Ireland and northern Scotland were dry and bright. During the afternoon, the heavy/thundery showers continued across southern parts of the UK, as did the persistent rain across northeast England.</p> <p>During the evening, many parts of Scotland and Northern Ireland were dry, and some of the showers elsewhere petered out as well, but northeast England continued to be plagued by rain. Thundery showers were reported across southwest England before midnight and there were outbreaks of rain in parts of central England and Wales.</p> <p>Temperatures generally were a little below average, and in northeast England it was distinctly cool, but in north and west Scotland they were slightly above average.</p>

0600 GMT 19 AUGUST 1999	SIG WEATHER	1200 GMT 19 AUGUST 1999	SIG WEATHER	<p><b>Summary of UK weather for Thursday 19 August 1999</b></p> <p>During the night, Northern Ireland and much of both Wales and western Scotland remained dry, but there were outbreaks of rain elsewhere, chiefly across northeast England where it was locally heavy at times. Mainly light rain was also reported in the Midlands, East Anglia and central southern England. A funnel cloud was reported near Swansea.</p> <p>Northern Ireland was mainly dry during the morning, but there was some showery rain over parts of northern Scotland and the northern isles. Wales was also generally dry and much of the overnight rain in central southern England petered out as well. However, the slow moving band of rain extending from northeast England down to East Anglia persisted and it turned thundery in Lincolnshire. Another funnel cloud was observed from Cornwall. There was little general change in the afternoon, but one or two showers developed across the west Midlands and a thundery shower was reported in East Sussex. During the evening, a thundery shower cropped up in Hampshire. By midnight, the rain over eastern England had become light and patchy. Temperatures generally were near or a little below average, but it was rather cool in wetter parts of eastern England. Parts of south Wales were warmer than average.</p>

0600 GMT 20 AUGUST 1999	SIG WEATHER	1200 GMT 20 AUGUST 1999	SIG WEATHER	<b>Summary of UK weather for Friday 20 August 1999</b> <p>Areas adjoining the North Sea had a cloudy night with some patchy rain or showers affecting some exposed parts of Scotland but more generally England from the northeast down to Norfolk and Suffolk.</p> <p>By morning the rain was largely confined to Lincolnshire and East Anglia, although a few showers continued to peck at exposed parts of the north and east.</p> <p>Other parts of the country had rather variable cloud overnight, but with clear periods in central and southern areas of England allowing a little temporary shallow fog around dawn. These areas along with much of Wales saw the most prolonged of the sunshine during the day, whereas Northern Ireland and much of Scotland, along with parts of northern England had a rather cloudy day.</p> <p>Towards evening the showery rain near the North Sea extended southeast bringing the odd shower to Thanet as it passed across around mid evening. Some patchy rain still affected Norfolk up to Midnight, however.</p> <p>Temperatures were around average across the south and in a few places slightly above. In the East temperatures were cool and locally very cool, whilst elsewhere values were mostly a little below normal.</p>

## SIGNIFICANT WEATHER

0600 GMT 21 AUGUST 1999	SIG WEATHER	1200 GMT 21 AUGUST 1999	SIG WEATHER	<p><b>Summary of UK weather for Saturday 21 August 1999</b></p> <p>Saturday began rather cloudy down the eastern side of the country, and although mostly dry, there was the odd spot of rain in East Yorkshire and a shower in Shetland. Elsewhere there were clear spells in many places with some localised patches of mist or fog. During the course of the morning the cloud slowly thinned and broke up in eastern England, although by the end of the afternoon, it was still lying from Lincolnshire down through Cambridgeshire to Suffolk and northeast Essex. It remained mostly cloudy across northeast Scotland but elsewhere there was some sunshine at times.</p> <p>The wind steadily increased through the day across the southwest of England and in Cornwall in particular becoming a fresh easterly. This occurred because of an area of low pressure to the southwest of the British Isles which brought showers to the west of Cornwall and the Isles of Scilly late in the evening.</p> <p>Temperatures were cool along the east coast but where there was shelter temperatures were a little below normal. Remaining parts had mostly average temperatures but a few sheltered spots became rather warm.</p>

0600 GMT 24 AUGUST 1999	SIG WEATHER	1200 GMT 24 AUGUST 1999	SIG WEATHER	<div>Summary of UK weather for Tuesday 24 August 1999</div> <p>The night was dry in most places and in northern parts of the UK there were some clear skies. Outbreaks of rain, moderate at times, affected parts of Cornwall initially, but by dawn the rain had edged as far east as Sussex and as far north as Ceredigion.</p> <p>The rain continued moving north and east, reaching a line from Lisburn to Kent by mid-morning. Little further progress was made by midday. Elsewhere, the weather was dry and in parts of central and northern Scotland it was fairly sunny. By mid-afternoon, the rain had extended across Norfolk, Cambridgeshire and Manchester, although by this time it had become light almost everywhere. Many parts of central southern and southeast England were dry by dusk, and it was still dry across Scotland and northern England. However, there was still some rain and drizzle across Wales, Northern Ireland and southwest England. During the evening, some heavy bursts of rain reached Cornwall. By midnight, the rain had become mainly confined to Wales and the West Midlands.</p> <p>It was very warm in Jersey, as well as parts of Moray and Highland. Generally, though, temperatures were near or rather below average.</p>

0600 GMT 25 AUGUST 1999	SIG WEATHER	1200 GMT 25 AUGUST 1999	SIG WEATHER	<p><b>Summary of UK weather for Wednesday 25 August 1999</b></p> <p>At midnight, there were outbreaks of rain over parts of Wales and the West Midlands. Elsewhere, it was mostly dry, but it was rather misty near coasts of Cornwall. The rain spread to the East Midlands and parts of East Anglia as well as Yorkshire and Lancashire, and by dawn it had reached Northern Ireland and southern Scotland. By this time, thundery showers had cropped up in Cornwall, and it was turning misty/hazy across southern England.</p> <p>During the morning, the thundery showers in the southwest drifted north into Wales, and the rain in southern Scotland also moved north into southern Highland. At midday, rain was reported in many western and central parts of the UK, but East Anglia and the East Midlands were essentially dry. During the afternoon, thundery showers developed quite widely across central southern England and east Wales, and these drifted across southeast England, East Anglia, Lincolnshire and northeast England later in the afternoon and evening.</p> <p>Elsewhere, outbreaks of rain continued. During the evening, the rain died out in many western areas, but heavy/thundery rain continued to affect northeast England. Rain developed across eastern Scotland before midnight.</p> <p>It was very warm in southeast England and East Anglia, but elsewhere temperatures were about average.</p>

## SIGNIFICANT WEATHER

**Summary of UK weather for Thursday 26 August 1999**

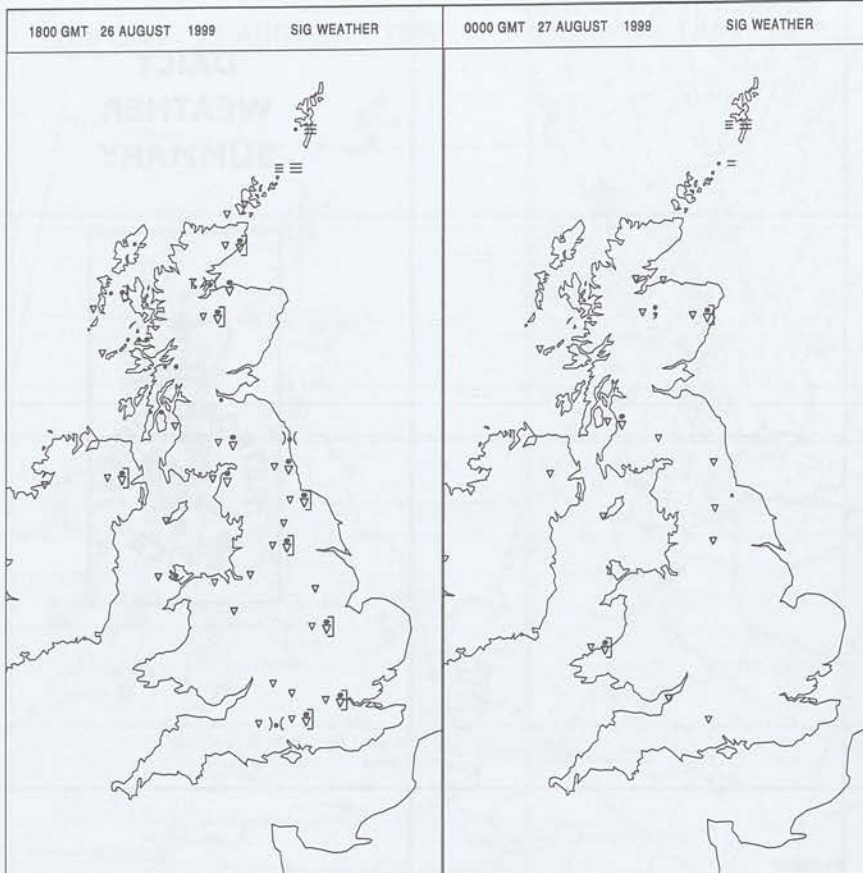

Low cloud covered the British Isles overnight, with locally dense fog patches in eastern areas at first. Light rain affected the coasts of Scotland in particular, and later Northern Ireland. The best of the early clear spells developed across central and eastern England and eastern Northern Ireland, with clearer air slowly tucking into southwestern England.

A few showery bursts of rain affected England and Wales during the morning, but most places saw sunny spells develop. Fog patches affected Scotland, although eastern parts saw some sunshine. There was some rain across Northern Ireland and northern and western Scotland, the worst of this being in Shetland.

England and Wales, and Eastern Scotland saw little change through the afternoon, although sunshine became more limited. The rain eased to light showers across Northern Ireland, and Shetland, and was concentrated to mainland Northern Scotland.

Through the evening, there was a general mix of scattered light showers and clear intervals.

It was a warm night. Daytime maxima were near normal in northern Scotland, and western areas of the British Isles, but warm, locally very warm further east.

**EXTREMES**
**Highest Maximum:**

24.0 Heathrow, Greater London

**Lowest Maximum:**

13.6 Fair Isle, Shetland

**Lowest Minimum:**

7.1 Kilmory, Argyll (In Highland Region)

**Lowest Grass Minimum:**

6.5 Kilmory, Argyll (In Highland Region)

**Most Rain:**

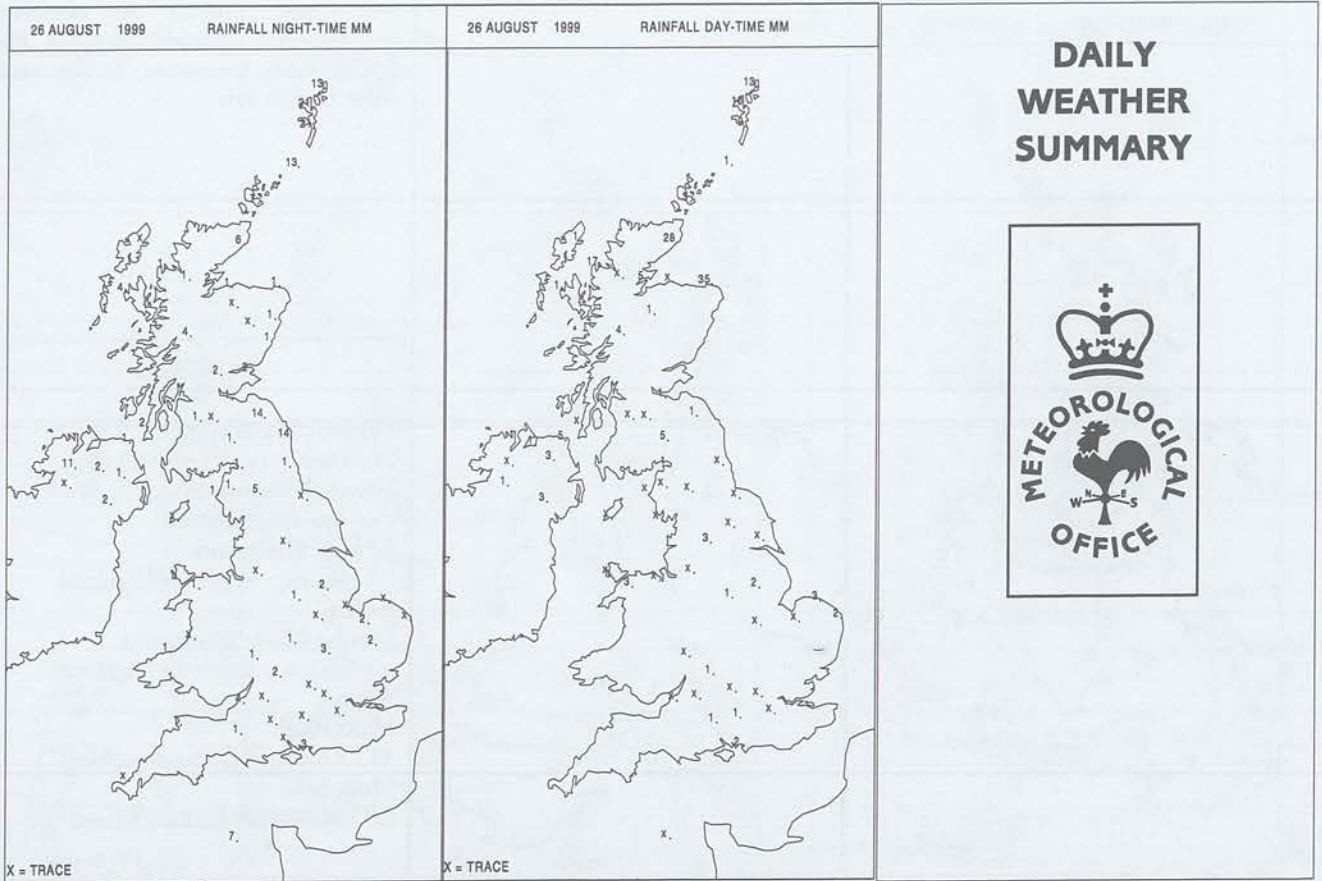

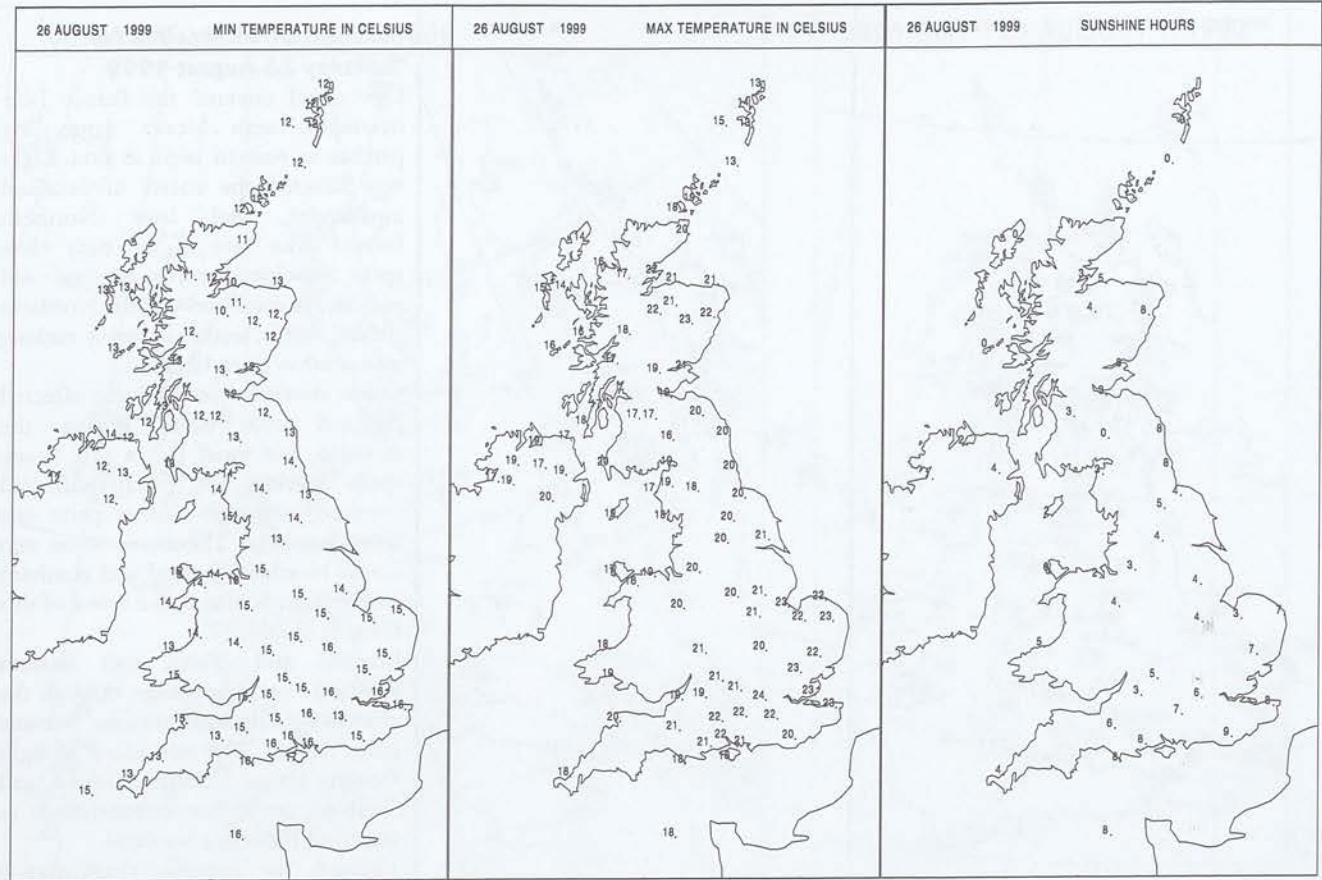

35.2 Rosehearty, Aberdeenshire

**Most Sun:**

9.0 Herstmonceux, East Sussex

SIGNIFICANT WEATHER

Summary of UK weather for  
Saturday 28 August 1999

Clear skies across the southern half of England and over south Wales allowed patchy mist and fog to form during the early hours of the morning. Elsewhere it was mainly dry with variable amounts of cloud, although outbreaks of light rain occurred over Shetland and the Hebrides. During the morning the rain continue over the outer Isles, but this cleared by midday. Northern Ireland together with north and west Scotland remained rather cloudy throughout the day, but the rest of the UK had a dry day with plenty of sunshine.

During the evening thicker cloud started to spread into Northern Ireland and western Scotland but any remaining cloud over England and Wales started to disperse.

Temperatures were around normal across Northern Ireland and western Scotland but warm across the rest of the UK. Over southern and east England, and eastern Scotland a few sunnier spots were very warm.

SIGNIFICANT WEATHER

0600 GMT 31 AUGUST 1999	SIG WEATHER	1200 GMT 31 AUGUST 1999	SIG WEATHER	<p><b>Summary of UK weather for Tuesday 31 August 1999</b></p> <p>There was a good coverage of cloud across many northern and western parts of England and Wales overnight, although the cloud further south and east was fairly high, allowing clear spells. It was also predominantly dry. Low cloud shielded Northern Ireland and much of Scotland, giving light rain or drizzle, especially to western coasts. The morning saw a lot of cloud too, the thickest and lowest being reported the further north and northwest one headed. Light rain and drizzle affected northern and western Scotland and Northern Ireland, whilst the brightest weather developed across southern and eastern England.</p> <p>Eastern Scotland and Northern Ireland, and southern England saw more broken cloud for a time into the early afternoon, and elsewhere cloud lifted a little, with rain easing. Towards evening the best cloud breaks occurred across Wales.</p> <p>The evening itself saw variable cloud across England and Wales, whilst Scotland and Northern Ireland held onto lower cloud and further light rain in the north and west.</p> <p>Temperatures were near normal in northwest Scotland, and near to some western coasts, but generally warm elsewhere.</p>
