## Daily Weather Summaries for June 2022

**If you have any questions or feedback about this product or wish to obtain further data please contact the Met Office.**

This document contains daily weather summaries for each day of June 2022. The Met Office National Meteorological Library and Archive holds a continuous record of daily weather summaries or daily weather reports from 1860, and these daily weather summaries form a continuation of that series.

The purpose of each summary is to provide an overview of the weather conditions across the UK on that day, with the historical emphasis mainly based on observations from surface network of weather stations, although the format has varied over the decades. While the emphasis remains on observations from the surface network, the current daily weather summaries supplement these by including satellite and rain-radar imagery to provide a more complete overview. The current format of the daily weather summaries is as follows:

1. Text summary of the main characteristics of the weather during the day, written by an operational meteorologist in the Met Office operations centre.
2. Table of daily extremes for the UK for key climate variables including temperature, rainfall, sunshine and gust speeds.
3. Overview of the synoptic situation at 00 and 12 UTC comprising: analysis charts showing the surface pressure pattern and associated weather fronts; North Atlantic and European infra-red satellite images showing cloud-cover; combined infra-red and rain-radar images of the UK; maps of wind speed and direction at 00 and 12 UTC; observations of pressure, wind speed and direction, cloud cover, air and dewpoint temperature at selected UK and European stations in data tables.
4. UK maps of key climate variables from observing stations including maximum, minimum and grass minimum temperature, rainfall, sunshine, gust speed and snow.
5. Further guidance notes

If you spot any data errors or omissions in this product please contact the Met Office.

## Daily Weather Summary for Wednesday 01 June 2022

This day's summary created 08/06/2022 03:03

### Summary of the UK Weather for Wednesday 01 June 2022

Much of the country remained dry throughout the night. The only areas of precipitation were patchy showers moving across eastern Scotland, and a heavier band of rain moving down from Northern Ireland across Wales in the early hours. Isolated fog patches and rural frost were reported in Southeast England overnight, which lifted by dawn. The clearest spells were in the southwest; thicker cloud was prevalent across the north and central parts of the country. The fog cleared in most places by dawn but persisted in Inverness until midmorning. Wales and the north of England experienced patchy rain through the morning, which stretched down to Oxfordshire in parts. This developed into a more organised band of rain, and travelled southeastwards through the morning, reaching the southeast by midday. Into the afternoon, Northern Ireland, north Scotland, and the southwest remained dry. Meanwhile, north, central, and southeast England continued experiencing patchy rain. The band of rain dissipated into the early evening and cleared later into the night. It was generally cloudy for most throughout the day, in particular medium level cloud.

### Summary of the UK Weather for Thursday 02 June 2022

It was a calm and dry start for most of the UK, except for the odd isolated shower in Scotland and Northern Ireland. It was chilly at first with widespread mist and shallow fog. An occluded front approaching from the northwest began to bring some rain to Northern Ireland and the Western Isles into the morning. The fog and mist cleared by midmorning, leaving clear skies for most. An organised band of rain approached the northwest in the late morning, bringing showers to southwest Scotland and Northern Ireland, where it was locally heavy in parts. Travelling eastwards, scattered showers spread across Scotland into the afternoon, while Northern Ireland saw persistent rain throughout. It remained fine and dry for most, but fairly cloudy with sunny spells, particularly in the north of England. Into the evening, the rain mostly cleared over Northern Ireland, but the north and northwest in particular saw heavy showers through the night.

### Summary of the UK Weather for Friday 03 June 2022

It was a wet start to the morning for north Wales, northwest England, and Scotland, with rain that was quite heavy in places. The clearest spells were in the southwest of the UK, while cloud in the west spread eastwards overnight. Winds were fairly light, and temperatures were mild. Through the morning, the rain over northern Wales and England began to break up. This brought a few light showers over Northern Ireland and central England by midday, and some locally heavy and thundery showers had developed over the northwest coast of Wales. These were slow moving and caused some localised disruption through the afternoon. There were also some thundery showers for the west midlands and Somerset. Most of Scotland and Northern Ireland remained dry into the afternoon, with just a few localised showers for the west coast of Scotland. Into the evening most places experienced some drier weather, with the only showers lingering around the Bristol Channel.

### Summary of the UK Weather for Saturday 04 June 2022

It was a dry and clear start for most; however, the south of England saw thick cloud cover and patchy rain, heavy in places. Early mist was seen in northern Scotland, and partial fog was reported in Lossiemouth and Orkney. The rain travelled northwards through the morning, reaching Oxfordshire before dawn, and Wales also saw some scattered showers across the morning. There was a clear north/south split for the UK during the morning, with thundery showers for the south, and drier and sunnier weather in the north. There was a particularly heavy and thundery shower that moved north over the Devon-Cornwall border before easing by noon. Into the afternoon the showers continued to move northwards into central England, leaving the south coast mainly clear. The northwest also saw some showers into the early evening. Scotland and Northern Ireland had a warm, fine, and dry day, with plenty of sunshine and light winds throughout. A few showers broke out in Wales and Hampshire later in the evening, but it was a mainly dry evening for most.

## Daily Weather Summary for Sunday 05 June 2022

This day's summary created 12/06/2022 03:03

### Summary of the UK Weather for Sunday 05 June 2022

It was a wet start to the day across Wales, the southeast and central England, as a thick band of rain travelled northwards. The rain was locally heavy in places, with parts of Cambridgeshire seeing 24mm/hr. Northern Ireland saw patchy rain, while it remained dry across Scotland, the southwest and the north of England. The rain reached the northwest by dawn, allowing for a drier morning in the south. Mist was seen along the south coast, and fog was reported along the east coast of Scotland. The rain band continued to move northwards slowly dissipating into scattered but thundery showers through the day. After a chilly start, Scotland had a much brighter day, with patchy cloud and sunny spells. Much of England and Wales were overcast throughout the day, and as such remained fairly cool, whereas Scotland saw slightly higher temperatures. A second band of rain developed around midday and moved northeastwards over the southwest and southern Wales in the afternoon, bringing isolated thunderstorms with it. This then dissipated in the evening, to leave clearer skies in the far south.

## Daily Weather Summary for Monday 06 June 2022

This day's summary created 13/06/2022 03:03

### Summary of the UK Weather for Monday 06 June 2022

It was a wet start for the northeast of England, with persistent rain all morning. There was also a band of showers that moved eastwards across central England through the morning, but the rest of the UK remained mainly dry. It was clear for Scotland and the southwest, with some thicker cloud elsewhere. Winds were generally light and variable throughout.

Generally, the day was very overcast for much of the country. A low pressure system sat to the east of England for most of the day, bringing bands of rain over eastern parts of the country. Elsewhere it was mostly dry, save for a few scattered showers over the south coast of England, southern Wales and west parts of the Boarder counties. Northern Scotland experienced the most sunshine, although it gradually clouded over through the course of the afternoon. Winds were light, although very variable in direction.

## Daily Weather Summary for Tuesday 07 June 2022

This day's summary created 14/06/2022 03:03

### Summary of the UK Weather for Tuesday 07 June 2022

It was a dry start to the day for most, with just the odd patch of rain in Northern Ireland, southern England, and East Anglia. Some fog was reported in Wales and the southwest, whilst it was mainly clear elsewhere. An occluded front brought cloud and patchy rain to the southernmost counties through the morning. Further north, it was clearer under the influence of high pressure especially across central England and parts of the north of Scotland, where there were sunnier spells and some convective showers. A more defined occluded front pushed northeastwards across the UK through the late afternoon and into the evening, bringing further rain to Northern Ireland, Wales, and western England.

### Summary of the UK Weather for Wednesday 08 June 2022

It was a wet night for many in central and northern England, Northern Ireland and southern Scotland, as two slow-moving occluded fronts pushed a band of rain, heavy at times, northeastwards over the country in the early hours. Once the fronts had passed, it was drier in southern and western areas, however there was still the odd scattered shower towards dawn. The northeast of Scotland also remained dry throughout the night. The remaining frontal wave continued to push northeastwards through the day and into the evening, and a line of slow-moving showers across Northern Ireland, southern Scotland and northern parts of England contributed to some locally high rainfall totals. Convective clouds produced scattered showers affecting Wales and the south, though here there were more bright spells through the afternoon, and spherics were produced in many parts of England.

### Summary of the UK Weather for Thursday 09 June 2022

It was a dry night for most; while much of the country was covered in cloud, the south and east experienced some clear spells. The southwest also saw some lightning after midnight. A scattering of showers passed the southwest of Scotland over the early morning, but these mostly cleared by dawn. Shortly afterwards, a band of rain brought in by a warm front reached western parts of Northern Ireland. Frontal rain continued to move through the country later in the morning, reaching Wales and northwest coasts of England and Scotland by lunchtime. Meanwhile, east and southeast England saw fine and dry conditions with plenty of sunshine through the first half of the day. The rain began to disperse in the afternoon, leaving scattered precipitation affecting central and northwest England, and parts of Scotland and Wales. The rain cleared for most by late afternoon. The passage of warm front led to often large amounts of cloud causing overcast skies over the UK by dawn. Any light rain or drizzle became confined to the far SE at the end of the day.

### Summary of the UK Weather for Friday 10 June 2022

Drizzle and light rain were confined to upslope areas of Scotland and the southeast as fronts associated with a weakening low moved eastwards across the UK through the early hours. It was cloudy away from Northern Ireland to start, with some mist forming on southern and western coasts, but clearer spells were seen in eastern Scotland and the Midlands towards dawn. Winds were fairly light and generally southwesterly. After dawn, showery precipitation emerged over Northern Ireland and northern Scotland. These showers reached central parts of Scotland by lunchtime and spread to its eastern coast by late afternoon. Elsewhere, it was a fine and dry day, except for an odd shower seen in central Wales and northeast England in the morning. The best of any sunny spells were seen over coastal southern England in the afternoon. Strong southerly winds (>28 kts) emerged on the northwest coast of Scotland by the evening due to a low pressure system building up to the northwest of the UK. Rain and showers persisted over western Scotland and Northern Ireland into the night.

### Summary of the UK Weather for Saturday 11 June 2022

A low to the northwest of the UK pushed a band of rain and cloud eastwards over Scotland and Northern Ireland through the early hours. Scattered showers also affected parts of Wales, and northern and southwestern England. It was clearer away from the northwest with some mist forming along southwestern coasts. It was unseasonably windy with gusts exceeding 30-35KT in many places in the north. Scotland saw persistent, locally heavy rain travelling eastwards throughout the morning. Meanwhile, scattered showers were seen across the north of England and Wales, and Northern Ireland. This continued throughout most of the day. Into the afternoon, the band of rain became more broken across Scotland and brought patchier rain, except over the Hebrides, where it remained locally heavy through the afternoon. Unseasonably strong wind continued throughout the day, with gusts as high as 54 KT in Kinloss, Scotland. Into the evening, patchier rain persisted across Northern Ireland and northern England, and travelled to the northeast, while Scotland continued to see heavy rainfall.

### Summary of the UK Weather for Sunday 12 June 2022

A low pressure system situated to the north of the UK and a series of occlusions brought showers over Northern Ireland, western and central Scotland, and northwest England in the early hours. Elsewhere, it was a dry start to the day, except for the occasional shower spotted in Snowdonia and Cornwall. Clear spells were seen over central and southeast England. Strong winds in western Scotland and northern England eased through the night, becoming moderate by dawn. A weak band of scattered showers persisted across the west of the UK, travelling southeastwards. This brought rain to parts of western Scotland, Northern Ireland, the northwest and southwest of England throughout the morning, reaching Yorkshire by midday. The scattered showers continued over Scotland, Northern Ireland, and the northwest into the afternoon. It was a mostly cloudy day for the south and central regions, with occasional sunny spells. The winds eased further throughout the day, but a keen breeze remained in northwestern regions. The weak band of rain persisted into the evening over the northwest, meanwhile the south remained mostly dry.

This day's summary created 22/06/2022 13:33

### Summary of the UK Weather for Monday 13 June 2022

Most of the country saw a fine and dry start to the day under the influence of high pressure. Patchy light rain was observed in parts of northwest England, Wales, Northern Ireland, and the Western Isles of Scotland in the early hours. Some fog and mist developed locally in western Scotland and northwest England. The patchy rain persisted over Scotland for most of the day, with some spreading into Northern Ireland and the northwest of England. The rest of the UK remained largely dry but cloudy, with haze being reported in Bristol at mid-morning. The south coast of England generally saw the best of any clear spells, and this continued into the afternoon. Meanwhile, patchy rain persisted across Scotland and Northern Ireland, stretching to the northeast of England for a time. Into the evening, cloud generally cleared for Wales, and central and southern England, but it remained cloudy in northern regions, with some isolated fog patches forming over western Scotland. Winds were generally light and westerly, but moderate in Northwest Scotland and Northern Ireland.

## Daily Weather Summary for Tuesday 14 June 2022

This day's summary created 22/06/2022 13:31

### Summary of the UK Weather for Tuesday 14 June 2022

A band of rain travelling northeastwards brought patchy rain across Northern Ireland, western Scotland, and parts of the north of England in the early hours. This became more organised by dawn, bringing more persistent rain, heavy in parts, to western Scotland. It was a fine and dry morning elsewhere, with some early mist on the southeast coast in Kent. The rain continued travelling northeastwards into the afternoon across northern parts of Scotland, becoming very light and patchy by mid-afternoon. It was a fine and dry day for the rest of the UK, with the cloud clearing in the northeast leaving a sunny afternoon for much of England and Wales. Despite a mostly dry morning for Northern Ireland, some more organised showers developed into the afternoon travelling northeastwards, but generally started dispersing again after dusk. A heavier band of rain moved east into Scotland later in the evening, bringing some locally heavy rain overnight.

This day's summary created 22/06/2022 13:29

### Summary of the UK Weather for Wednesday 15 June 2022

It was a fine and dry start to the day across England and Wales, with haze reported in rural Suffolk, and little cloud cover except for in far northern regions. In the early hours, a band of rain travelled northeastwards across Scotland and Northern Ireland, bringing persistent rain to northern and eastern parts of Scotland. This was heavy in parts. Northern Ireland and the rest of Scotland saw lighter patchy rain throughout the morning. The cloud and patchy rain continued to affect the north and west of Scotland through the rest of the day, and a cold front brought scattered showers to Northern Ireland until the mid-afternoon, when a more organised band of rain passed over the area. The rest of the country saw much drier conditions with plenty of sunshine, however some high cloud created hazy conditions and some light rain over central England and Wales by the afternoon. The dry conditions continued for most through the evening and patchy cloud with clear spells covered much of the country. It felt warmer than previous nights. Winds were light.

### Summary of the UK Weather for Thursday 16 June 2022

The day started with scattered showers for Scotland and Northern Ireland, whilst the rest of the UK remained mainly dry. Western Isles of Scotland experienced some poor visibility in mist and fog, but elsewhere there was only patchy high cloud. It was another clear, dry and sunny day for most, with a high pressure system sat directly over the east of England. Patchy cloud moved in from the west over the course of the day bringing precipitation in the form of a few disorganised bands of rain to western Scotland, one of which affected parts of central and eastern Scotland in the afternoon. Northern Ireland, and parts of southwest England and Wales also saw some scattered showers. By the evening, patchy cloud covered much of the country, leaving most feeling very warm and muggy, especially in the south and east. Winds were light for most, but stronger through the evening in western parts.

## Daily Weather Summary for Friday 17 June 2022

This day's summary created 24/06/2022 03:03

### Summary of the UK Weather for Friday 17 June 2022

It was a wet start to the day for Scotland and Northern Ireland as a frontal system moved in from the west, bringing persistent rain that was heavy at times over higher ground. Other than the far northeast, England and Wales remained mainly dry, with cloud clearing eastwards leaving widespread clear skies by dawn. Some isolated light mist was reported in west Cornwall around dawn. A combination of high pressure, which covered much of the south, and southwesterly winds resulted in a very mild start for much of England and Wales. By contrast, it felt fresher in Northern Ireland and Scotland behind the band of frontal rain and cloud that pushed southeastwards through the morning. Elsewhere it was mostly clear with intense sunshine across much of the south. The frontal rain faded over northern England through the afternoon, leaving the cloud to continue slowly moving towards the midlands through the evening.

This day's summary created 25/06/2022 03:03

### Summary of the UK Weather for Saturday 18 June 2022

There was a northwest-southeast split through the early hours of the morning, with cloudier conditions over Scotland, Northern Ireland and the north of England, and clearer conditions influenced by a high-pressure system further south. Most areas did experience a dry night though, with the odd scattered shower over the northwest of Scotland and localised parts of England. Closer to dawn another band of cloud crept over the southwest and Wales leading to poor visibility and fog in these areas. A front moved southwards over Wales and England throughout the day. Behind the front there was a mix of sunshine and showers. To the south of the frontal band there were sunnier skies, some of which lasted into the afternoon. Cloud and rain, heavy at times, continued in the south through the evening, and spherics were reported in the southwest.

### Summary of the UK Weather for Sunday 19 June 2022

A long section of warm and cold fronts brought thunderstorm activity to the southeast of England in the first part of the night and scattered showers to the rest of the south through the rest of the early hours. The northwest of Scotland and Northern Ireland were the only other places to experience showers, brought on by two occlusions surrounding the low-pressure system sat over the Faroes. Elsewhere it was dry and cloudy with light winds. Later in the morning, a few light showers still lingered to northern parts of Scotland. These mostly died out by lunchtime. Otherwise, largely dry conditions with broken cloud and sunny spells were seen across the UK. A band of showers arrived at the southern coast of England around midday and persisted until late afternoon. Winds were generally light to moderate and varying in direction across the country. Any showery outbreaks remaining in southern England dispersed by midnight. Elsewhere, it was a dry evening with clear spells.

### Summary of the UK Weather for Monday 20 June 2022

It was a dry start for most of the UK, excluding a band of showery rain that lingered in the far south of England and the odd convective shower in northeastern England. It was mild overnight in the south and southeast under cloud but much chillier further north, particularly in Scotland, where skies were clearer. As the morning progressed, a frontal zone pushing in from the Atlantic introduced more stratus for the northwest. Spherics were reported in Devon in the early morning and fog was reported in the Scottish Highlands towards dawn. Most of the country saw long sunny periods throughout the day. Some cloud lingered to eastern and central regions in the morning but cleared after midday. Cloudier conditions with some light rain and drizzle prevailed in the far northwest. A warm front reached the northwestern coast of Scotland in the afternoon, followed by heavier bursts of rain later in the day. Cloud and outbreaks of rain spread further southeastwards across Scotland and Northern Ireland in the evening. Elsewhere, it was a dry and clear evening with light winds.

### Summary of the UK Weather for Tuesday 21 June 2022

It was a fine, dry, and generally clear start to the morning across England and Wales, with mist reported in the far south and along western coasts. In the early hours a band of low cloud and rain, which was heavy in parts, travelled southeastwards across Scotland and Northern Ireland. Towards dawn, the rain became lighter and a few isolated shallow fog patches formed under light winds in Cornwall, Cumbria, and the Shetland Islands. The frontal rain across southern Scotland and Northern Ireland continued to disperse through the morning, whilst it remained mostly dry elsewhere. By mid-morning almost all the rain had passed, and it was mainly clear skies across the UK, except for some high cloud seen across the South. Into the afternoon, a lot of the cloud dissipated, leaving a fine and dry afternoon for most, with light and variable winds. This benign weather continued through the evening.

### Summary of the UK Weather for Wednesday 22 June 2022

It was a dry start for the whole of the UK but the Orkney Islands, where some light showers emerged shortly after dawn. Clear skies dominated for most of England and Wales in the small hours, while Scotland and Northern Ireland saw a layer of low cloud. Winds were light and varying in direction across the country in the early morning. Another benign day of weather followed, with clear skies for most of England and Wales throughout the day. Despite a dry morning, there was the odd patch of rain for northern Scotland in the afternoon, with widespread broken cloud. This rain cleared for the evening leaving the UK dry through until midnight. Winds were light and variable for most, but for a moderate southwesterly affecting northern coastal areas.

This day's summary created 30/06/2022 03:03

### Summary of the UK Weather for Thursday 23 June 2022

A warm frontal system approached the far southeast of England in the small hours, bringing low cloud and showers to parts of Kent and East Sussex. The rest of the UK saw a fine and dry start with plenty of bright spells. Winds were very light and varying in direction in most areas. The morning remained dry for most with patchy cloud and sunny spells for much of the country. There was a yellow thunderstorm warning out for south and central England and Wales. A frontal system moved northwestwards over the course of the day, bringing heavy rain to the southeast at first, and later to Wales and the midlands, where it became thundery at times. Spherics were also recorded over Wales. Later in the afternoon, a second band of rain moved northwards over the south coast, merging with the original band. This slowly decayed over the course of the evening. Winds were light, but gusty in thundery areas. It was another hot day everywhere except the south.

### Summary of the UK Weather for Friday 24 June 2022

The day started with rain for eastern Scotland and southwest England, whereas it was mainly dry elsewhere. It was cloudy for much of the UK, but with only scattered amounts for many. However, some fog was reported in Wales and northeast Scotland for a time. Winds were light to moderate southerlies in England and Wales, but light and variable for Scotland and Northern Ireland. Variable amounts of patchy cloud covered much of the UK for the rest of the day, and while many stayed dry, there were isolated scattered showers over parts of England and Scotland at various times in the day. These became thundery at times, particularly over the northeast of England, where an intense thunderstorm broke out in the early afternoon bringing hail and lightning to the area. An organised band of rain also hit the southwest around midday, and moved northeastwards over the course of the afternoon, reaching up into Northern Ireland and the midlands by the evening. The northernmost part of Scotland and the Shetlands reported fog and mist for much of the day. Areas which saw some sun still felt warm, although cooler than previous days.

This day's summary created 02/07/2022 03:03

### Summary of the UK Weather for Saturday 25 June 2022

A band of patchy rain associated with several frontal features moved northeastwards across northern and eastern England in the early hours. This soon cleared but some more persistent rain occurred in Northern Ireland and western Scotland, which was heavy at times. Around dawn a trough moved in to the southwest bringing widespread showers, reaching as far as north Wales and Dorset. A low pressure system sat over the west of Northern Ireland for much of the day bringing widespread cloud and heavy showers to northern and western regions. Elsewhere experienced a brighter start, with the Midlands and northeast of England getting the best of any morning sunshine and patchy cloud affected much of England and Wales through the rest of the day. Showers, that were heavy and thundery at times, affected most of the UK, except the far south-east of England and northern Scotland remained dry. Spherics associated with these showers were produced up much of the west coast and over Wales in the afternoon, and these travelled into southeastern Scotland in the evening.

This day's summary created 03/07/2022 03:03

### Summary of the UK Weather for Sunday 26 June 2022

The low pressure system and wrap-around occlusion to the west of the country continued to edge eastwards through the early hours, bringing persistent heavy rain to Northern Ireland. The west coast of Great Britain also experienced some showers and strong southerly winds, while eastern parts experienced much drier and clearer weather along with some patchy cloud. Spherics were briefly reported in the southwest a few hours after midnight. Throughout the day it was generally unsettled, with the low pushing the band of rain northwards into Scotland. Showers in Wales and northwestern England moved slowly eastwards and were heavy at times, whilst the southeast stayed mostly dry and pleasant. Spherics were reported around noon in Northern Ireland, where a trough was positioned, and to the south of Anglesey. Winds were moderate and southerly to southwesterly with the strongest gusts felt along the coasts, and close to gale force winds in the Irish Sea. Through the evening and overnight, showers continued across western areas, but winds became lighter.

## Daily Weather Summary for Monday 27 June 2022

This day's summary created 04/07/2022 03:03

### Summary of the UK Weather for Monday 27 June 2022

A low pressure system to the west of the country moved east overnight bringing scattered showers, heavy and thundery at times, to the west coast, Northern Ireland and Wales. These areas also experienced stronger southwesterly winds, although these eased in the early hours. Eastern areas and parts of northern Scotland saw a drier and clearer night. Two occluded frontal systems and an associated band of showery rain moved eastwards through the day, bringing locally heavy precipitation to western and southwestern parts at first. The rain reached central and northern England shortly before midday, and eastern England and parts of Scotland in the afternoon. It continued to weaken through the day, leaving many with dry conditions by the evening, although Northern Ireland saw arrival of heavy rain associated with a warm front in the early evening. Any remaining showers in the eastern parts died out by dusk, leaving a clear evening for central and eastern England. Meanwhile, cloud and rain continued to affect Northern Ireland and western Scotland.

This day's summary created 05/07/2022 03:03

### Summary of the UK Weather for Tuesday 28 June 2022

A frontal wave to the west of the country moved slowly eastwards through the early hours, causing cloud to thicken, winds to strengthen and increasingly heavy rain to push across Northern Ireland, northern England and much of Scotland. For Wales and the rest of England, it was a decent start with only a few scattered showers in the west, and clearer conditions in the south and east. A series of occluded fronts and associated band of rain, heavy on hills, continued to push eastwards through the day. As a result, northern and western parts saw gradually wetter conditions as the day progressed. Rainfall was heaviest in Northern Ireland in the morning and on the hills of western Scotland through the afternoon. Central and eastern England remained dry with occasional sunny spells seen through the day. Winds were moderate to locally strong in the west, reaching gale force gusts at western coast of Scotland. The band of rain moved into central areas in the evening, bringing progressively weakening precipitation, while eastern regions remained dry.

### Summary of the UK Weather for Wednesday 29 June 2022

A series of occluded fronts edged eastwards across the country overnight, with the forwardmost front clearing Scotland and the northeastern coast of England by dawn. It was cloudy for most with scattered showers in Northern Ireland and western Scotland, and rain that moved from southwestern England to northeastern Scotland, becoming lighter and patchier as the morning progressed. Winds were generally light southeasterlies and visibilities were low under any heavier bursts of rain. As the rain cleared eastern parts by mid-morning, a heavier band of rain moved into eastern Scotland. There were also outbreaks of showers in the southwest. It was also a wet start to the day for southeastern England and Northern Ireland with widespread rain. A similar story continued throughout the day, with more troughs moving in from the west bringing organised bands of persistent showers, the heaviest of which were in southwestern England, Northern Ireland and eastern Scotland. Into the evening, many of these showers cleared, with just a few lingering in northwestern and southwestern England. A more organised band of rain moved into the far southeast just before midnight.

### Summary of the UK Weather for Thursday 30 June 2022

A band of rain moved northwards through the country in the early hours, initially affecting Wales and eastern England. It reached northern England shortly after dawn and continued to move further north to Scotland. Meanwhile, another band of rain extended to eastern parts of Northern Ireland, bringing heavy precipitation for many. It was a relatively dry start for central and southwest England, where only occasional showers were seen locally. Winds were light and variable throughout the early morning. The band of rain cleared Scotland by mid-morning, by which point several showers began to move into Wales and western England. Despite a relatively dry morning, there were also several showers in Scotland this afternoon. Eastern areas remained mainly dry but saw a widely cloudy day. Into the afternoon, showers in Wales and England became heavy and thundery with several slow-moving thunderstorms. Winds remained light as the showers mostly died off by midnight.

## Daily Weather Summary for Thursday 30 June 2022

## Daily Weather Summary for Thursday 30 June 2022

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Guidance Notes

UTC = Universal Coordinated Time. For the UK UTC is the same as GMT (Greenwich Mean Time).

National boundaries shown on the European station map are for illustrative purposes only.

### Daily extremes

- Daily extremes have been manually confirmed by Met Office Observations Quality Management as valid observations from the live database at the time of checking. However, more extreme values may still be possible if they occur after the time of production.
- Mountain stations above 500 masl are excluded from lowest temperatures, highest gust speeds and greatest snow depths at 0900 UTC. This is because they are not considered representative of low level areas.
- Counties quoted against each station are based on historical county boundaries pre-1974 and may not reflect current administrative boundaries.

### Analysis charts and satellite imagery

- The satellite imagery is infra-red imagery from the geostationary MSG satellite.
- The rainfall image is derived from satellite data from MSG and rain-radar data. This represents a snapshot of instantaneous rain-rates at 0000 UTC and 1200 UTC and so does not necessarily reflect daily accumulations in the rainfall station map.
- Any analysis charts or satellite images which are unavailable will be displayed as white space.

### Station maps

- The UK maps show station data for the same set of stations presented UK data table. These stations are selected to provide good spatial coverage across the UK; they represent only a fraction of the overall UK observing network.
- Wind speed maps show wind speed in Kt and direction both averaged over the hour up to the time of observation. 1 Kt = 1.151 mph.

### Hourly station data

- The data tables provide spot hourly observations from synoptic messages at 0000 and 1200 UTC. Missing data are denoted by '-'.

- Pressures are mean sea level pressure in hPa.
- For UK stations, Gibraltar and Jersey, the wind speeds and directions are both averaged over the hour up to the time of observation. However, for European stations wind speeds and directions are both averaged over a 10-minute period up to the time of observation.
- Wind speeds are in Kt. Wind directions are stored in the database every 10 degrees and have been converted to the nearest point of the compass. These give the direction the wind is blowing from, not to.
- Cloud amounts are in Oktas from 0 (clear) to 8 (overcast). 9 indicates sky obscured (eg by fog).
- Air temperature and dew point temperature are in Celsius.

### **Temperature maps**

- Daily maximum, minimum and grass minimum temperatures are in Celsius.
- The period for the daily maximum temperature on day D is defined from 0900 UTC day D to 0900 UTC day D+1.
- The period for the daily minimum and grass minimum temperatures on day D is defined as 0900 UTC day D-1 to 0900 UTC day D.
- On any given day D the minimum will typically occur in the early hours of the morning and the maximum in early afternoon.

### **Rainfall, sunshine and max gust speed maps**

- Daily rainfall is in mm from 0900 UTC day D to 0900 UTC day D+1.
- Daily sunshine is in hours from Kipp and Zonen CSD1 automatic sunshine records. Bright sunshine is defined as exceeding 120 W/m<sup>2</sup>.
- Max gust speeds are the daily max gust in Kt from 0000-0000 UTC

### **Snow maps**

- The day of snow falling map displays data from present weather sensors, showing stations which have recorded sleet or snow falling at any point in the day (0000-0000 UTC).
- The snow lying map shows level snow depth as recorded by the automatic snow depth sensors at 0900 UTC. These snow depth sensors do not record snow depth if this is less than 1cm.
- Snow depth sensors are normally operational from October to April, in the event of snow falling outside this period data availability may be limited.
- Snow maps will only be displayed if one or more of the selected stations on that date have recorded either snow falling or non-zero snow depths. If snow maps are not

displayed it is still possible that other stations in the network have recorded a day of sleet or snow falling or non-zero snow depth.
