Daily Weather Summaries for August 2023

If you have any questions or feedback about this product or wish to obtain further data please contact the Met Office.

This document contains daily weather summaries for each day of August 2023. The Met Office National Meteorological Library and Archive holds a continuous record of daily weather summaries or daily weather reports from 1860, and these daily weather summaries form a continuation of that series.

The purpose of each summary is to provide an overview of the weather conditions across the UK on that day, with the historical emphasis mainly based on observations from surface network of weather stations, although the format has varied over the decades. While the emphasis remains on observations from the surface network, the current daily weather summaries supplement these by including satellite and rain-radar imagery to provide a more complete overview. The current format of the daily weather summaries is as follows:

1. Text summary of the main characteristics of the weather during the day, written by an operational meteorologist in the Met Office operations centre.
2. Table of daily extremes for the UK for key climate variables including temperature, rainfall, sunshine and gust speeds.
3. Overview of the synoptic situation at 00 and 12 UTC comprising: analysis charts showing the surface pressure pattern and associated weather fronts; North Atlantic and European infra-red satellite images showing cloud-cover; combined infra-red and rain-radar images of the UK; maps of wind speed and direction at 00 and 12 UTC; observations of pressure, wind speed and direction, cloud cover, air and dewpoint temperature at selected UK and European stations in data tables.
4. UK maps of key climate variables from observing stations including maximum, minimum and grass minimum temperature, rainfall, sunshine, gust speed and snow.
5. Further guidance notes

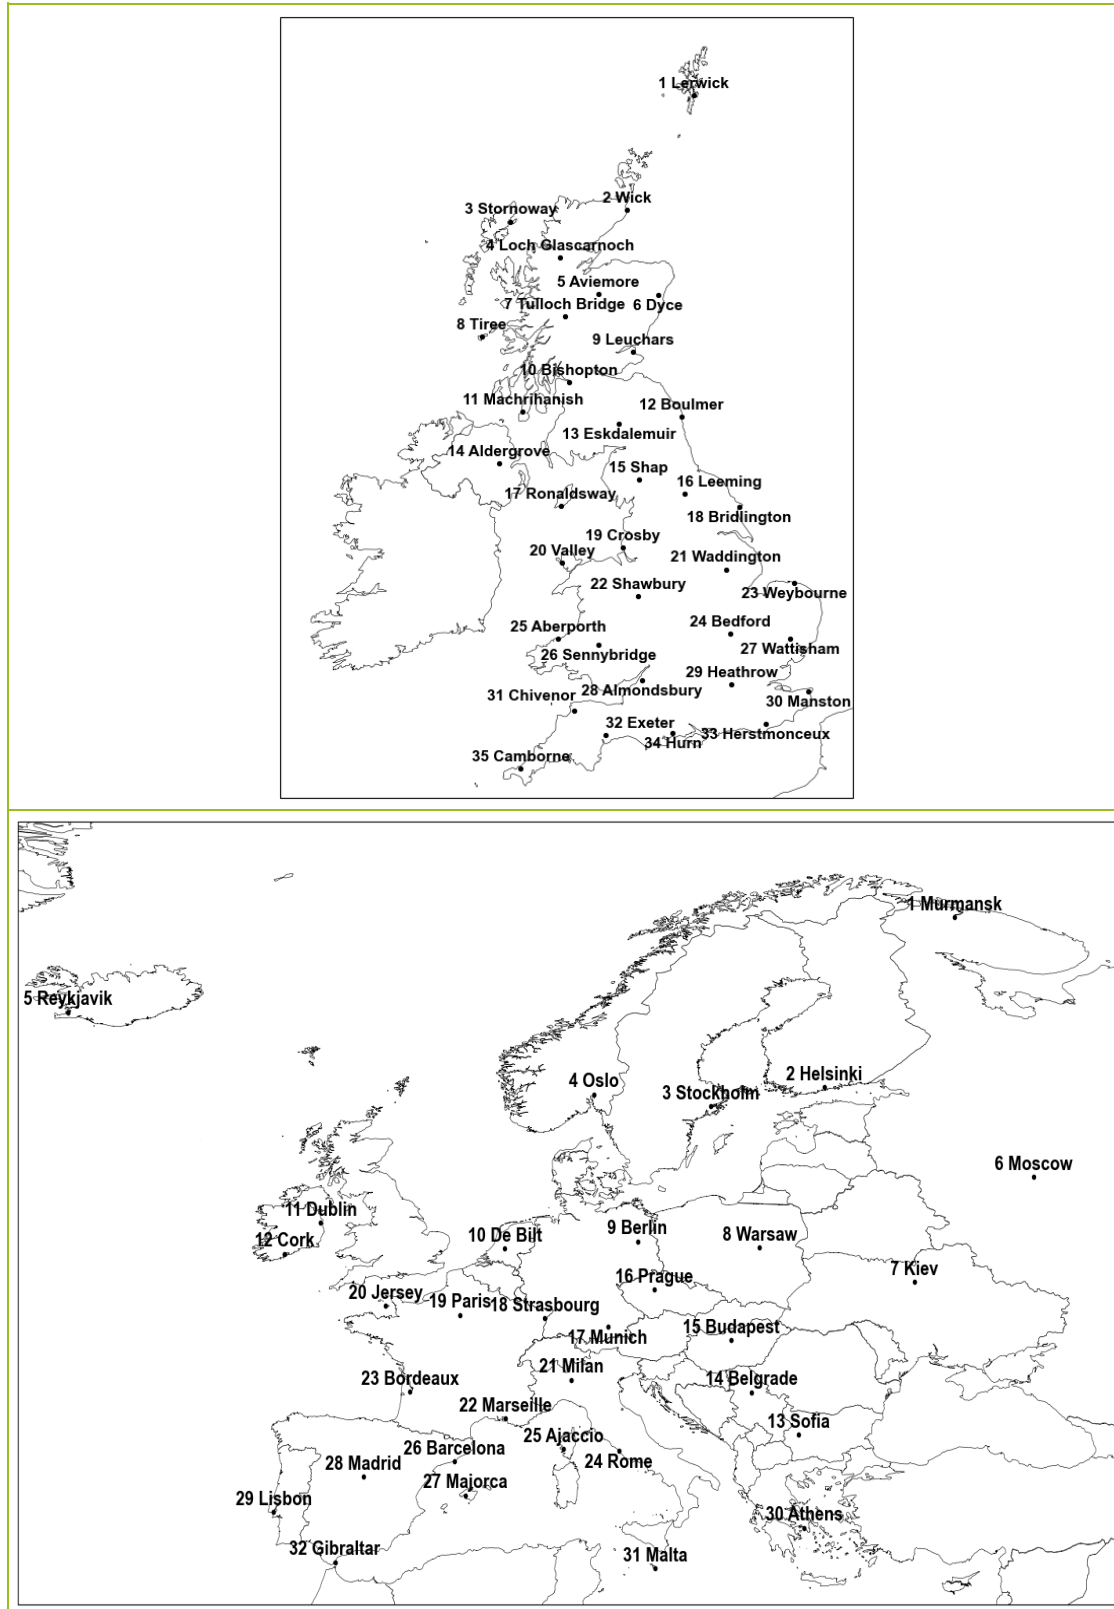

If you spot any data errors or omissions in this product please contact the Met Office.

Station Network Maps

This issue of the daily weather summary provides data for the following UK and European locations (Reykjavic (5) also included):

Daily Weather Summary for Tuesday 01 August 2023

This day's summary created 08/08/2023 04:03

Summary of the UK Weather for Tuesday 01 August 2023

Overnight, rain easing off into the early hours of Tuesday, however some patchy rain and showers remained, most notably for northwest England and southwest England. Some clearer spells developed, mainly in central and eastern areas. Winds were generally westerly, but light northeasterly in northern Scotland. Overnight temperatures were not far from average. Through the morning a decaying wrap around occluded front dominated much of the weather across the UK. This brought patchy rain, drizzle or showers across parts of Scotland and northern England. In the afternoon a few showers across northern England and southern England turned locally heavy and slow moving. Remaining dry but mostly cloudy elsewhere, although with some sunny intervals. Towards later afternoon and through the evening, Cloud thickened in the southwest of England and western Wales as a band of rain associated with a deep low pressure system moved northeastwards towards the UK. This brought widespread rain across southern parts and Wales, as well as increasing winds southern coasts. Daytime temperatures remained below average for many, though near average for some in the southeast.

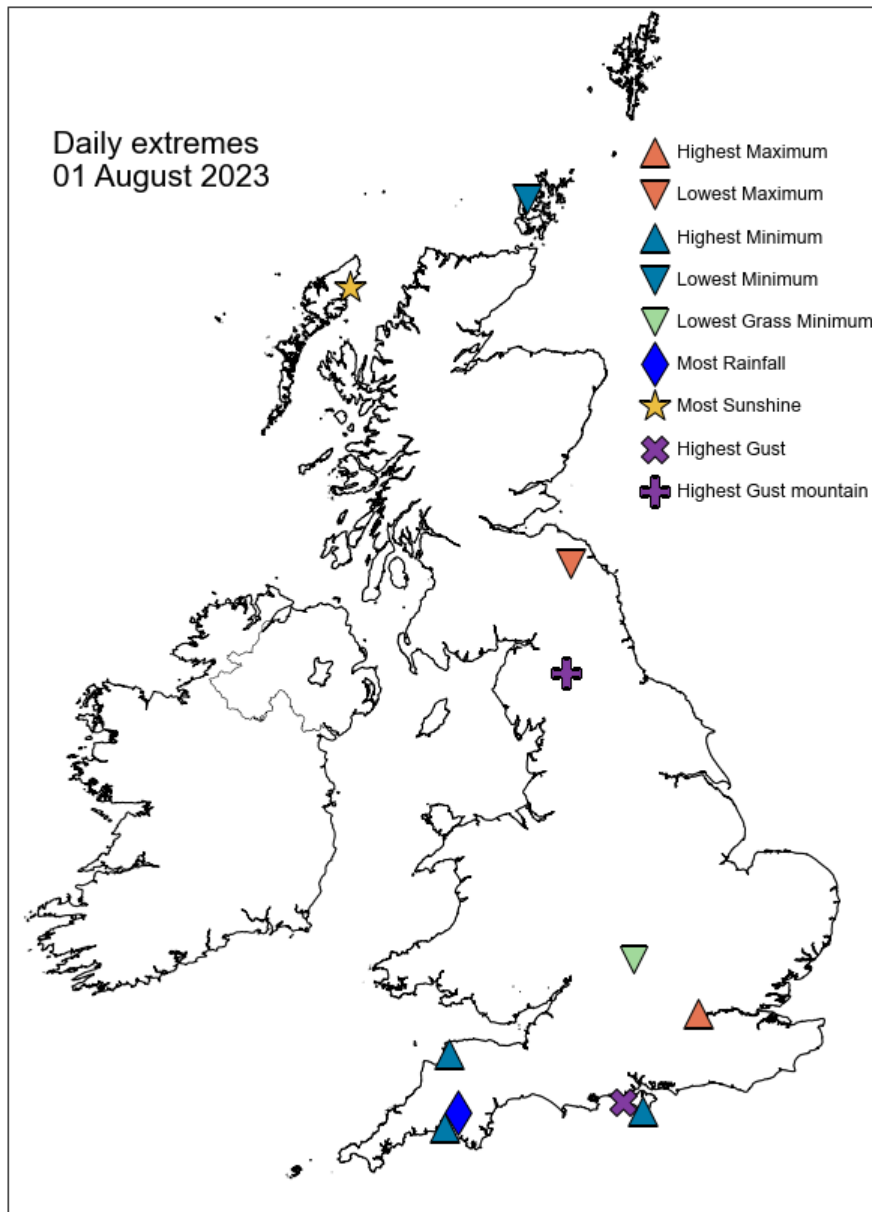

Daily Extremes

<i>Highest Maximum</i>	24.5°C Heathrow (Greater London, 25mAMSL)
<i>Lowest Maximum</i>	14.4°C Charterhall (Berwickshire, 115mAMSL)
<i>Highest Minimum</i>	15.4°C Plymouth, Kinterbury Point (Devon, 0mAMSL) also Wight: St Catherines Point (Isle Of Wight, 20mAMSL) also Chivenor (Devon, 6mAMSL)
<i>Lowest Minimum</i>	8.5°C Orkney: Loch Of Hundland (Orkney, 28mAMSL)
<i>Lowest Grass Minimum</i>	6.4°C South Newington (Oxfordshire, 105mAMSL)
<i>Most Rainfall</i>	27.6mm Princetown, Prison No 2 (Devon, 420mAMSL)
<i>Most Sunshine</i>	14.7hr Stornoway Airport (Western Isles, 15mAMSL)
<i>Highest Gust</i>	42Kt 48mph Wight: Needles Old Battery (Isle Of Wight, 80mAMSL)
<i>Highest Gust (mountain*)</i>	35Kt 40mph Great Dun Fell No 2 B (Cumbria, 847mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

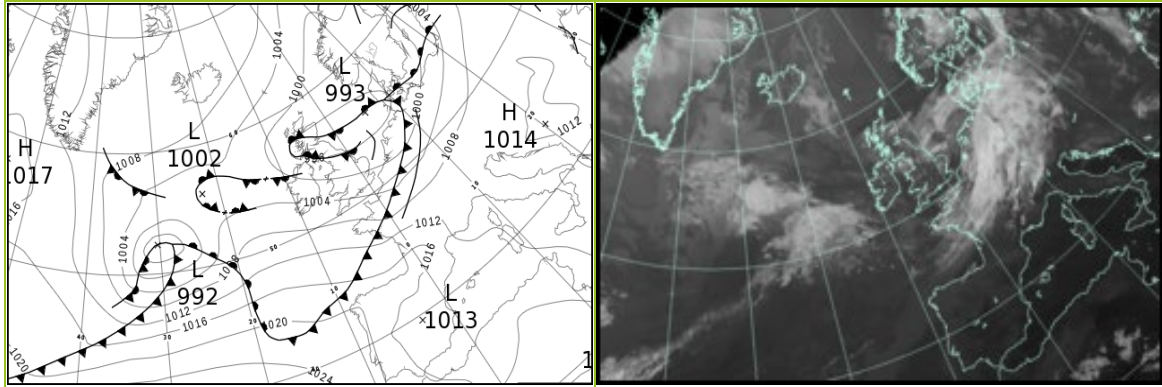

*Mountain stations are above 500mAMSL.

Daily Weather Summary for Tuesday 01 August 2023

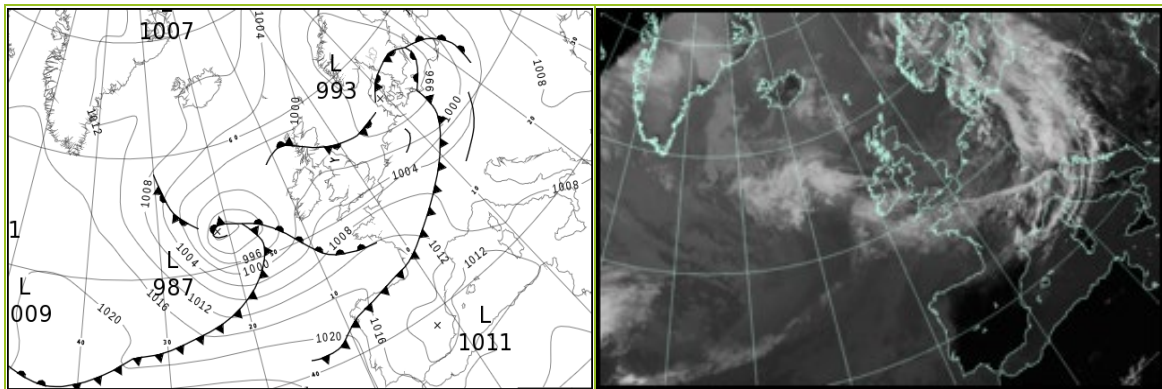

Daily Weather Summary for Tuesday 01 August 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Daily Weather Summary for Wednesday 02 August 2023

This day's summary created 09/08/2023 08:47

Summary of the UK Weather for Wednesday 02 August 2023

Overnight, the rain brought by fronts ahead of a deep low continued to move northeast, through southern and central areas of the UK, reaching northern England and northern Ireland in the early hours. There was also some lightning detected across North Wales and northwest England. By dawn, the main rain band was lying across Northern Ireland, Northern England, and East Anglia, heavy in places. Showers followed into the southwest England and Wales, crossing much of southern England. Through the day the deep low pressure system across the UK continued to dominate. It became very slow moving over the north of England leading to persistent rain through the day here with larger rainfall totals. Further south across much of the rest of the UK we saw a day of showers with some brighter interludes, particularly in the Midlands. These showers were often heavy and at times thundery. A wrap around occlusion located in the southwest of the UK brought some more persistent showery rain to these areas. Winds remained strong and blustery particularly across southern coasts.

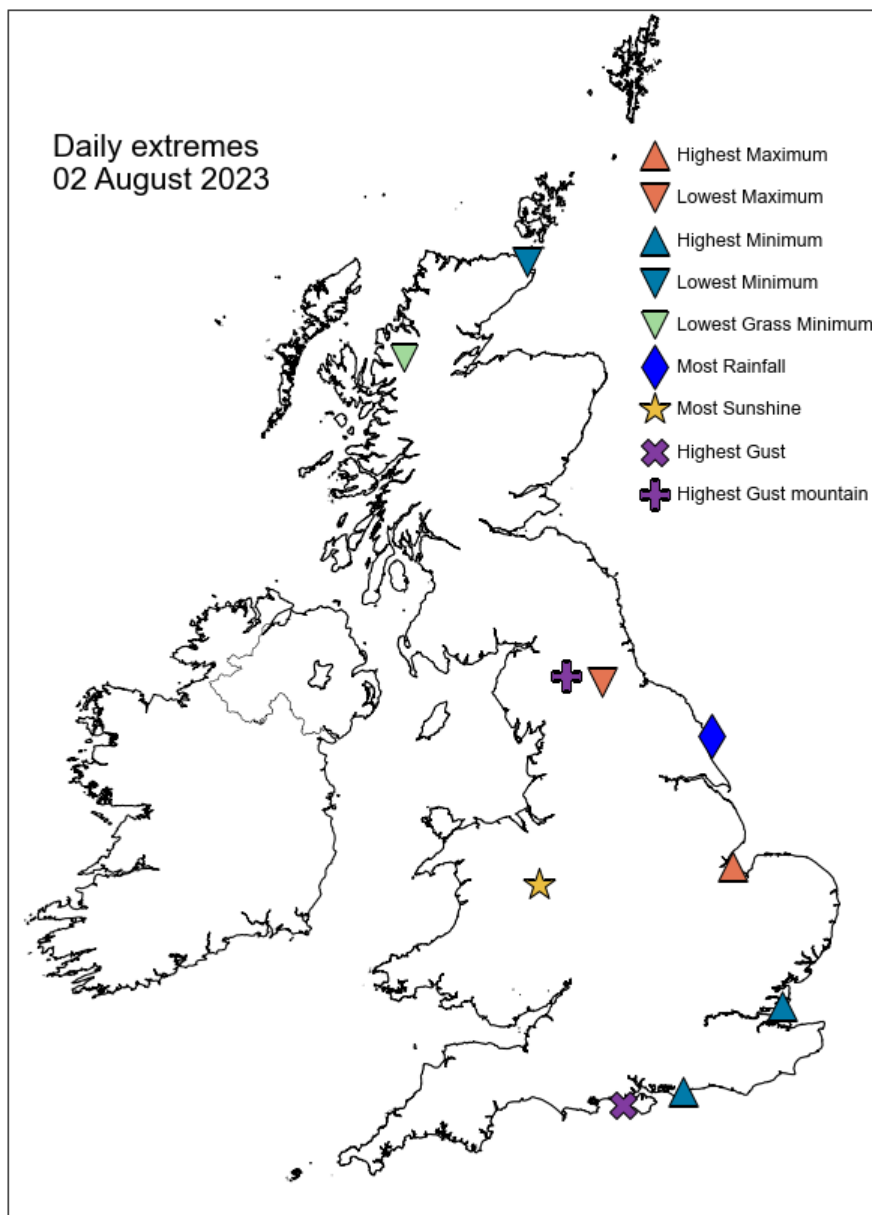

Daily Extremes

<i>Highest Maximum</i>	23.5°C Holbeach No 2 (Lincolnshire, 3mAMSL)
<i>Lowest Maximum</i>	14.0°C Copley (Durham, 253mAMSL)
<i>Highest Minimum</i>	15.5°C Bognor Regis (West Sussex, 7mAMSL) also Shoeburyness, Landwick (Essex, 2mAMSL)
<i>Lowest Minimum</i>	6.9°C Lyth No 2 (Caithness, 24mAMSL)
<i>Lowest Grass Minimum</i>	2.9°C Kinlochewe (Ross & Cromarty, 25mAMSL)
<i>Most Rainfall</i>	37.0mm Flamborough S Wks (Yorkshire, 38mAMSL)
<i>Most Sunshine</i>	8.1hr Preston Montford (Shropshire, 71mAMSL)
<i>Highest Gust</i>	53Kt 61mph Wight: Needles Old Battery (Isle Of Wight, 80mAMSL)
<i>Highest Gust (mountain*)</i>	53Kt 61mph Great Dun Fell No 2 B (Cumbria, 847mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

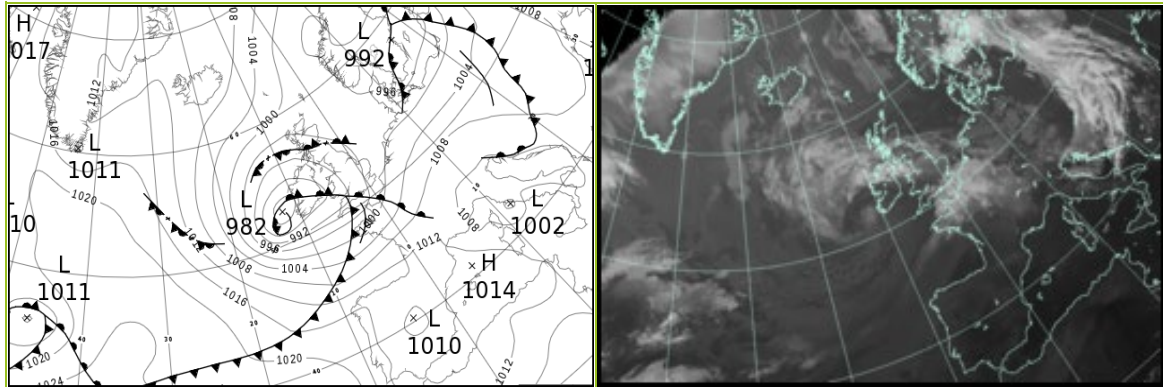

*Mountain stations are above 500mAMSL.

Daily Weather Summary for Wednesday 02 August 2023

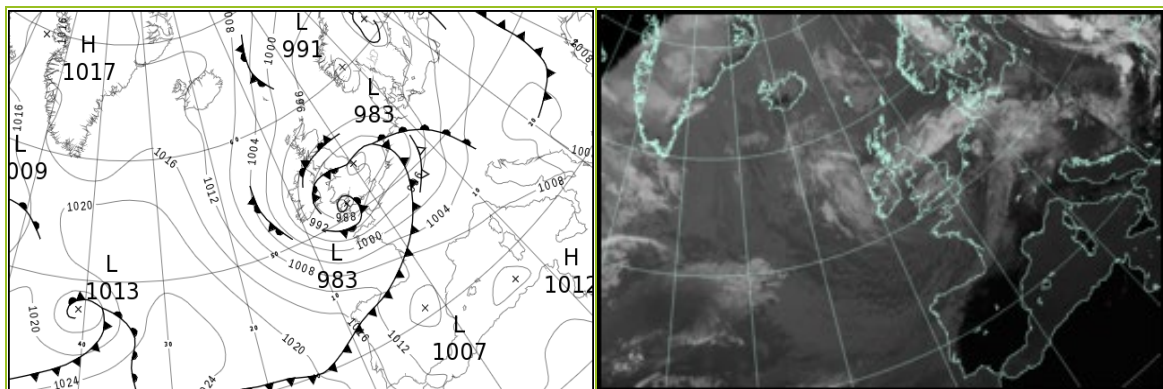

Daily Weather Summary for Wednesday 02 August 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Daily Weather Summary for Thursday 03 August 2023

This day's summary created 10/08/2023 04:02

Summary of the UK Weather for Thursday 03 August 2023

At midnight, the centre of a deep low had moved off the east coast of the UK. Continuing to move eastwards throughout the night. Winds were fairly strong across the country especially in coastal areas on the south and east coasts. It was a much drier night than the previous one with showers mostly confined to the southwest, southeast and western parts of Scotland. Showers eased through the night, leaving dry conditions for most of the country by dawn. Northerly winds effected the UK through Thursday. The wettest conditions were observed across northern areas where the remnants of an occlusion lingered, resulting in outbreaks of showery rain across Scotland. Further south an arctic maritime air mass led to a showery regime across much of the rest of the UK, with bright and often sunny interludes. Daytime showers slowly subsided, leaving a dry and bright evening for some southern and southwestern locations. Breezy at times, especially in the western regions. Temperatures remained close to slightly below average, feeling cool in places.

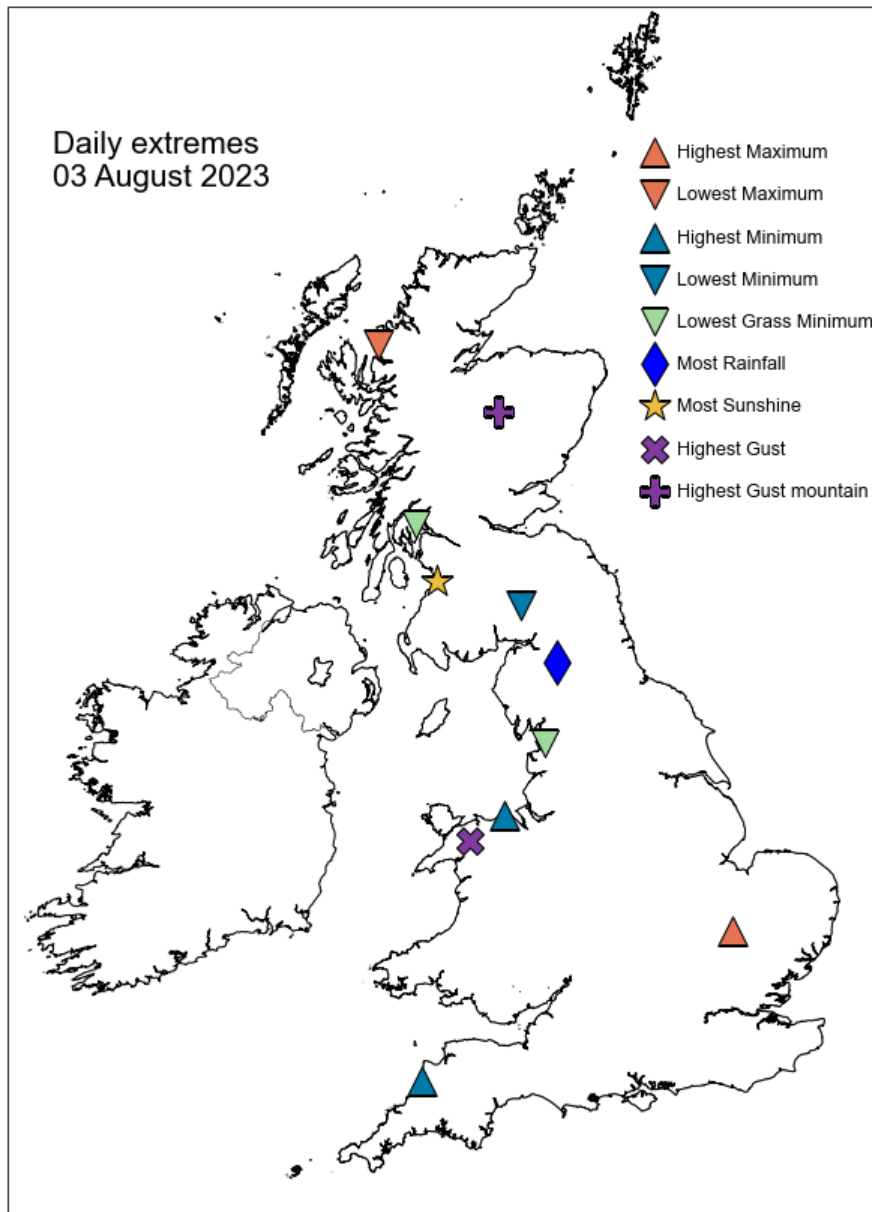

Daily Extremes

<i>Highest Maximum</i>	22.8°C Cambridge, Niab (Cambridgeshire, 26mAMSL)
<i>Lowest Maximum</i>	12.9°C Port Henderson (Ross & Cromarty, 18mAMSL)
<i>Highest Minimum</i>	15.7°C Bude (Cornwall, 15mAMSL) also Prestatyn (Clwyd, 4mAMSL)
<i>Lowest Minimum</i>	9.2°C Eskdalemuir (Dumfriesshire, 236mAMSL)
<i>Lowest Grass Minimum</i>	6.2°C Hazelrigg (Lancashire, 95mAMSL) also Benmore, Younger Botanic Garden (Argyll (in Strathclyde Region), 12mAMSL)
<i>Most Rainfall</i>	25.0mm Haresceugh Castle (Cumbria, 244mAMSL)
<i>Most Sunshine</i>	11.8hr Prestwick, Gannet (Ayrshire, 27mAMSL)
<i>Highest Gust</i>	39Kt 45mph Capel Curig No 3 (Gwynedd, 216mAMSL)
<i>Highest Gust (mountain*)</i>	43Kt 49mph Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

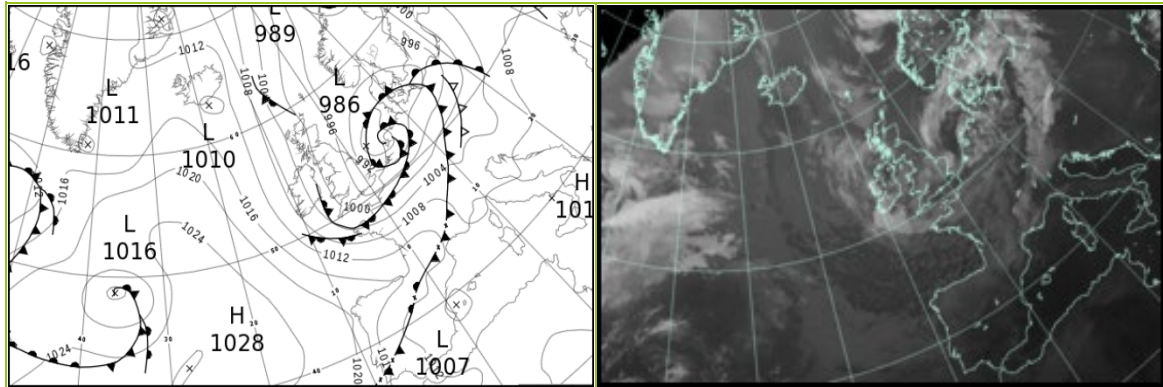

*Mountain stations are above 500mAMSL.

Daily Weather Summary for Friday 04 August 2023

This day's summary created 11/08/2023 04:03

Summary of the UK Weather for Friday 04 August 2023

A northerly flow continued to effect the UK from midnight Friday. This brought showers too many eastern parts with the heaviest and most frequent showers across eastern Scotland, the east midlands and East Anglia. Lighter showers and drizzle effected parts of Wales and Northern Ireland. Elsewhere saw a mainly dry night with some clear spells, the best of which were across western areas away from the showers. Winds remained light with a moderate breeze along coasts. Temperatures were slightly below average. Thursday morning central and southeastern England saw outbreaks of rain and showers, locally heavy and slow moving at times, elsewhere across the UK experienced cloudy but dry conditions, this regime persisted through to the afternoon. Through the late afternoon approaching Storm Antoni brought heavy rain across of North Ireland persisting through to midnight, a band of cloud ahead of this effected western parts by evening. Rain reached Irish Sea coasts of Wales, northwest England and the far southwest by midnight. Temperatures remained slightly below average, warmest in the southeast.

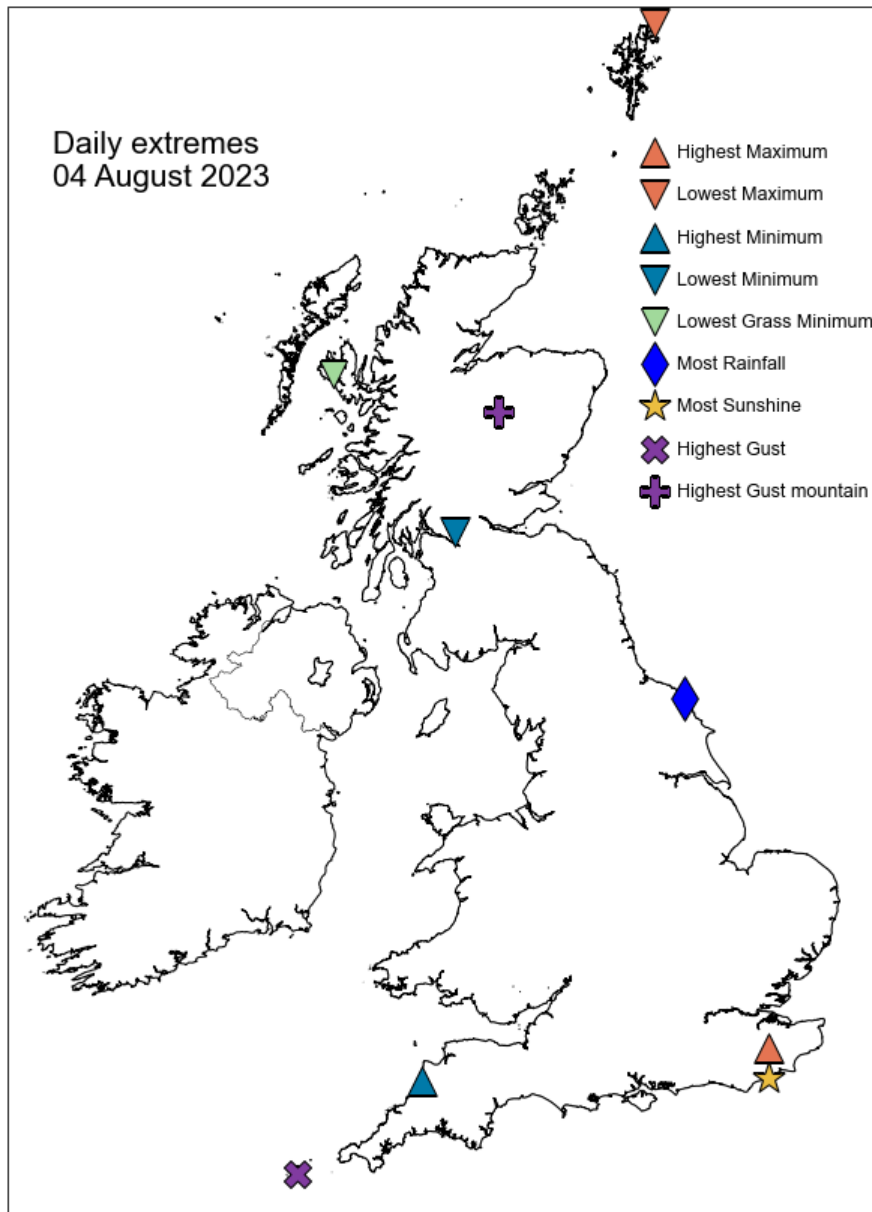

Daily Extremes

<i>Highest Maximum</i>	22.9°C Frittenden (Kent, 38mAMSL)
<i>Lowest Maximum</i>	12.7°C Baltasound No 2 (Shetland, 15mAMSL)
<i>Highest Minimum</i>	15.1°C Bude (Cornwall, 15mAMSL)
<i>Lowest Minimum</i>	7.0°C Mugdock Park (Stirling (in Central Region), 165mAMSL)
<i>Lowest Grass Minimum</i>	1.9°C Skye: Harlosh (Inverness-shire, 20mAMSL)
<i>Most Rainfall</i>	41.6mm Robin Hoods Bay (Yorkshire, 95mAMSL)
<i>Most Sunshine</i>	9.0hr Hastings (East Sussex, 45mAMSL)
<i>Highest Gust</i>	33Kt 38mph Scilly: St Marys Airport (Isles Of Scilly, 31mAMSL)
<i>Highest Gust (mountain*)</i>	42Kt 48mph Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

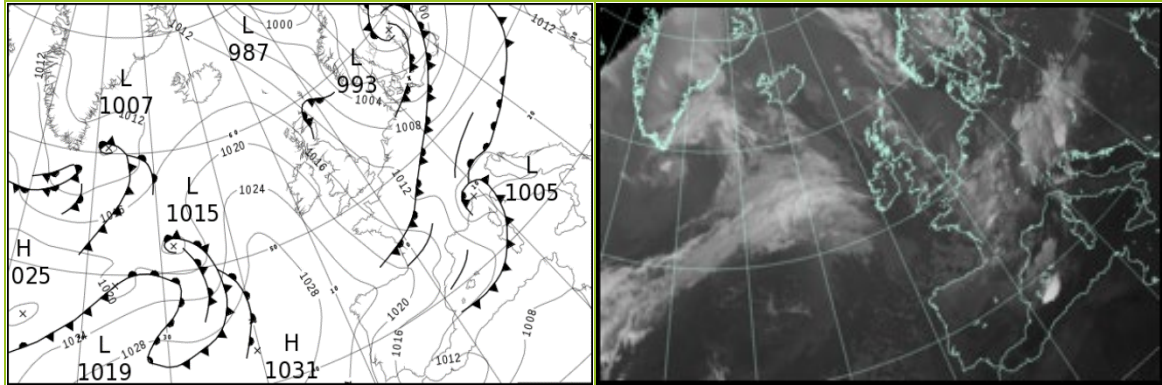

*Mountain stations are above 500mAMSL.

Daily Weather Summary for Friday 04 August 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Daily Weather Summary for Saturday 05 August 2023

This day's summary created 12/08/2023 04:02

Summary of the UK Weather for Saturday 05 August 2023

Storm Antoni was the main system impacting UK from midnight Saturday, The unseasonably low system brought heavy and persistent rain to Northern Ireland. From midnight it continued to push eastward effecting western Scotland, Northwest England, Wales and the southwest from midnight, patchy at first for many but becoming more persistent into the early hours. The wet weather effected most parts of the UK through the early hours, with only northern Scotland and the southeast of England clinging to the drier conditions. Winds remained light ahead of the frontal rain, beginning to pick up on southwestern and Irish Sea coasts in the early morning. Temperatures were again a touch below average. By the morning, Storm Antoni continued to affect UK mainland, it has brought rainfalls and showers for most and heavier for a few with some spells of dry and sunny conditions. This condition has lasted throughout the day, as Storm Antoni passed by the UK, reducing in intensity subsequently into the evening. Strong winds were blowing north to northeast in the in the southern part of the country and west to northwest in the northern part of the country.

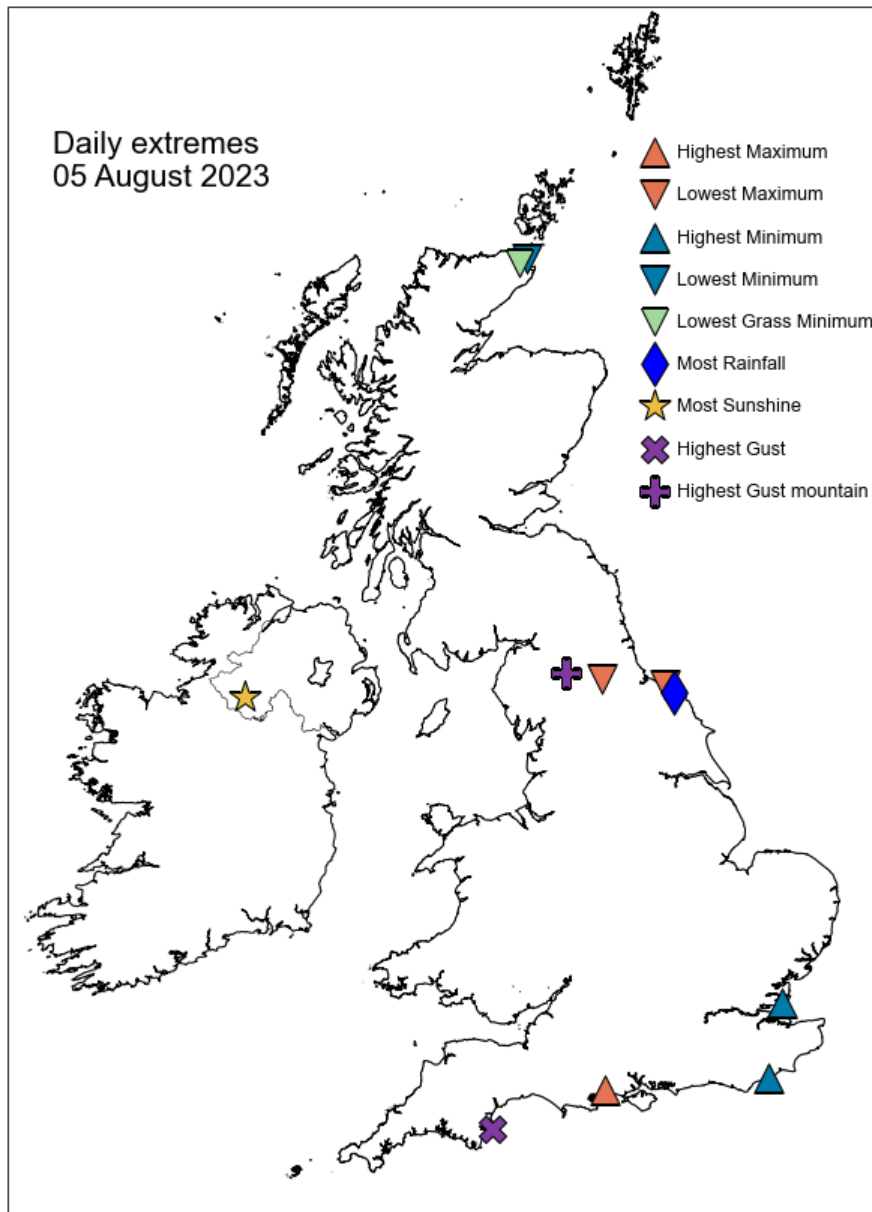

Daily Extremes

<i>Highest Maximum</i>	20.9°C Hurn (Dorset, 10mAMSL)
<i>Lowest Maximum</i>	12.5°C Loftus (Cleveland, 158mAMSL) also Copley (Durham, 253mAMSL)
<i>Highest Minimum</i>	14.1°C Hastings (East Sussex, 45mAMSL) also Shoeburyness, Landwick (Essex, 2mAMSL)
<i>Lowest Minimum</i>	3.5°C Lyth No 2 (Caithness, 24mAMSL)
<i>Lowest Grass Minimum</i>	1.8°C Lyth No 2 (Caithness, 24mAMSL)
<i>Most Rainfall</i>	37.2mm Sandsend (North Yorkshire, 121mAMSL)
<i>Most Sunshine</i>	6.9hr Thomastown (Fermanagh, 72mAMSL)
<i>Highest Gust</i>	68Kt 78mph Berry Head (Devon, 58mAMSL)
<i>Highest Gust (mountain*)</i>	42Kt 48mph Great Dun Fell No 2 B (Cumbria, 847mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

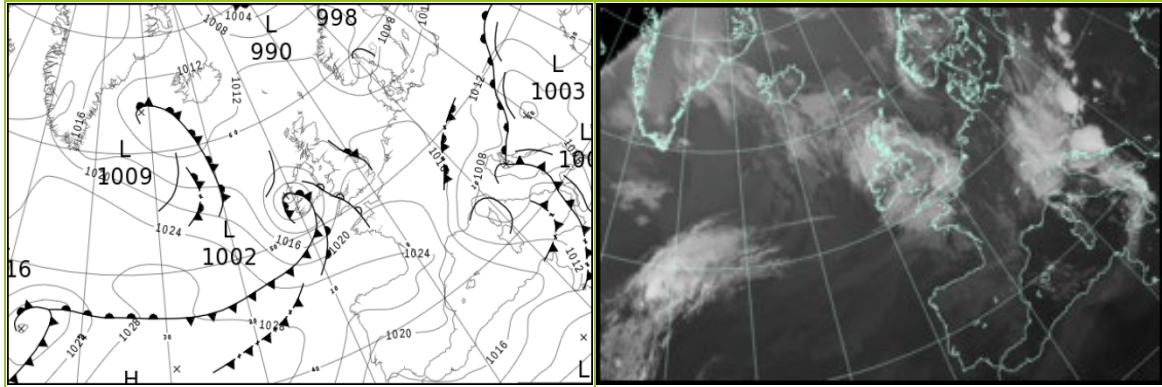

*Mountain stations are above 500mAMSL.

Daily Weather Summary for Sunday 06 August 2023

This day's summary created 13/08/2023 04:02

Summary of the UK Weather for Sunday 06 August 2023

The synoptic picture by the beginning of Sunday was the result of Storm Antoni southeastward journey across the UK, which was situated off the southeast coast of the UK by this point. Generally dry overnight, excluding places such as Wales and southwest England where some scattered showers happened, as well as eastern coastal areas where showers and outbreaks of rain will persist due to Storm Antoni. Cloudy for most, except from central and northern parts of England, where clear skies were observed. This theme continued through the morning, however scattered showers developed over the north and most western parts of the UK into midday, this accompanied by sunny spells at times. Moderate to fresh northerly winds were predominant, feeling breezier on the south, through the period. Temperatures remained below average for most. During the day time, it was generally clear and sunny for most across the country, this was the result of the high pressure that was carried as Storm Antoni passed by. However, some heavy showers were experienced at times throughout the country but especially central areas to the Pennines and into the north. Wind were light for most and the temperature was below average.

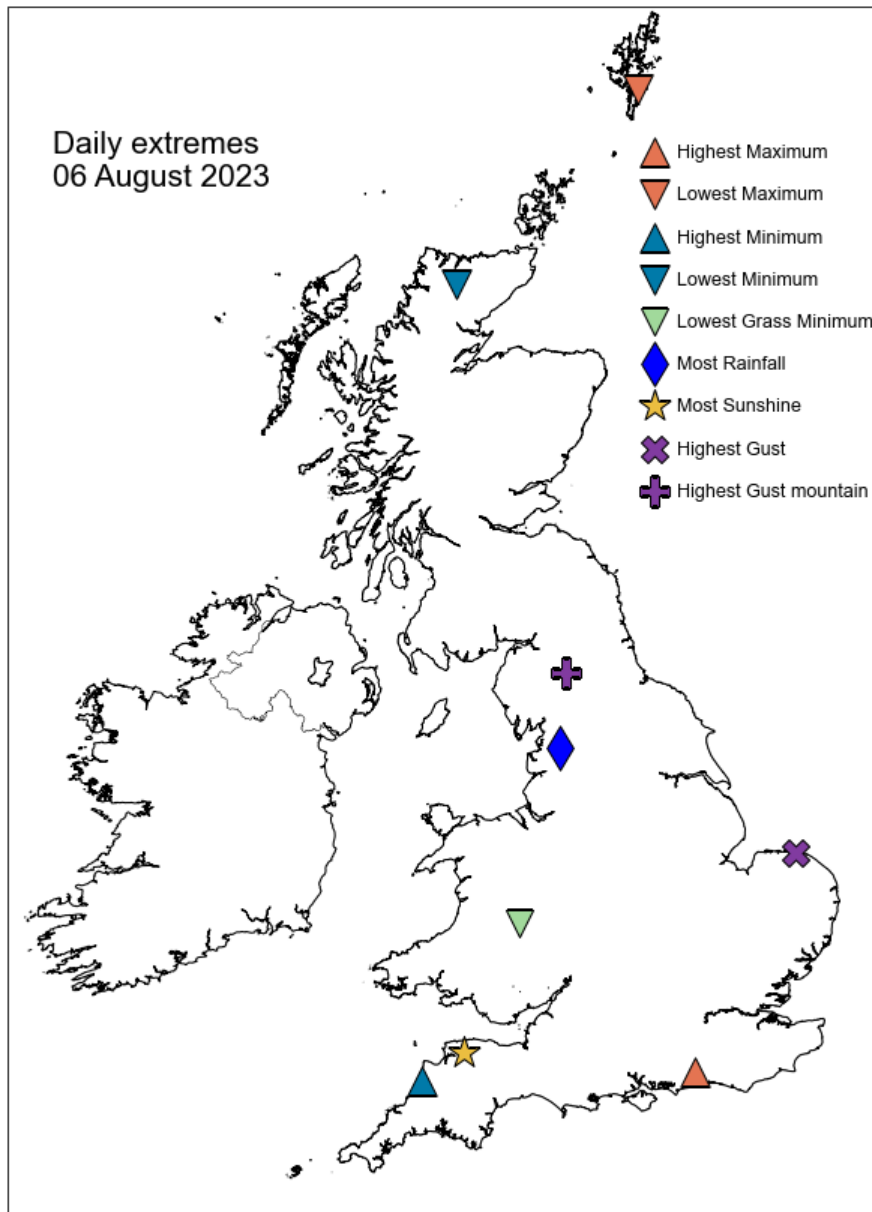

Daily Extremes

<i>Highest Maximum</i>	21.9°C Wiggonholt (West Sussex, 28mAMSL)
<i>Lowest Maximum</i>	13.8°C Lerwick (Shetland, 82mAMSL)
<i>Highest Minimum</i>	14.8°C Bude (Cornwall, 15mAMSL)
<i>Lowest Minimum</i>	1.4°C Altnaharra No 2 (Sutherland, 81mAMSL)
<i>Lowest Grass Minimum</i>	-0.9°C Llangunllo, Cefnysur (Powys (south), 310mAMSL)
<i>Most Rainfall</i>	28.6mm Footholme (Lancashire, 167mAMSL)
<i>Most Sunshine</i>	12.5hr Bratton Fleming, Haxton (Devon, 200mAMSL)
<i>Highest Gust</i>	39Kt 45mph Weybourne (Norfolk, 21mAMSL)
<i>Highest Gust (mountain*)</i>	17Kt 20mph Great Dun Fell No 2 B (Cumbria, 847mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

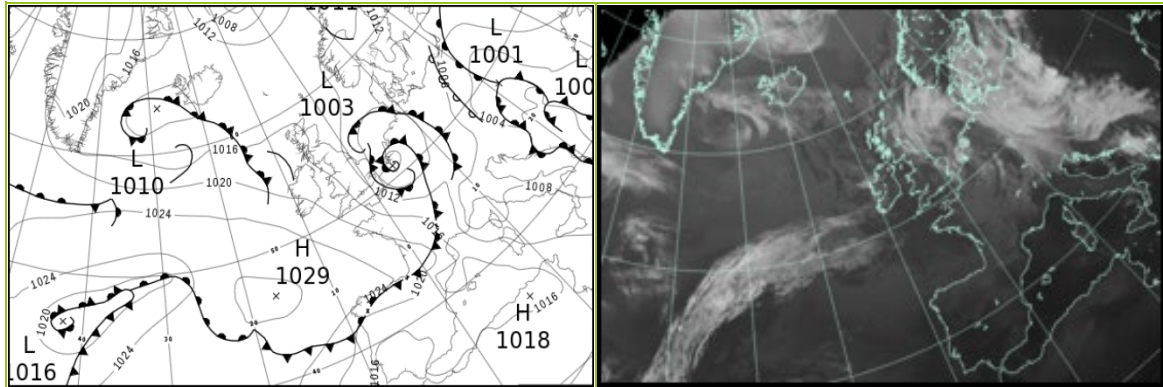

*Mountain stations are above 500mAMSL.

Daily Weather Summary for Sunday 06 August 2023

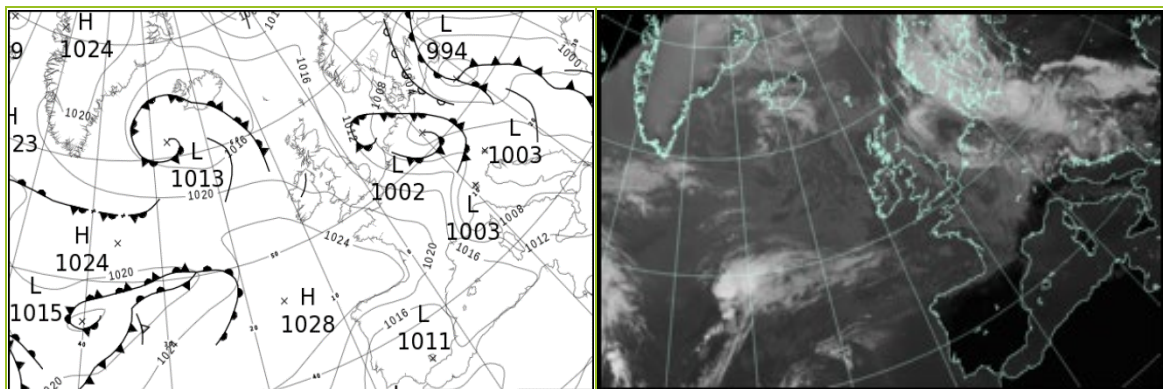

Daily Weather Summary for Sunday 06 August 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Daily Weather Summary for Monday 07 August 2023

This day's summary created 14/08/2023 04:03

Summary of the UK Weather for Monday 07 August 2023

The beginning of Monday saw an overall dry picture for most parts of the UK, excluding places such as Wales where few showers happened, as well as Scotland which saw a band of precipitation moved eastwards, caused by an occlusion. The synoptic picture was mostly governed by a couple of low-pressure systems, to the north of the British Isles and over southern Sweden. Which induced a predominant northerly flow, of light to moderate winds. However, a high-pressure ridge started to form affecting the southwest of the UK.

Temperatures remained slightly below average for many. The morning started dry and sunny for many, though with some patchy cloud in places, and patchy fog in the south west. There were a few showers in Scotland, Northern Ireland, and Northwest England. With daytime heating, some cloud bubbled up, and scattered showers developed over Scotland, Northern Ireland and the far north of England by midday. These continued through the afternoon, some heavy, and locally thundery in east Scotland. Most of England remained fine and dry during the afternoon, with sunny intervals and fair weather cloud. However, an increase in cloud occurred towards the south and west, with some patchy light rain in the southwest by evening. Temperatures were slightly below average.

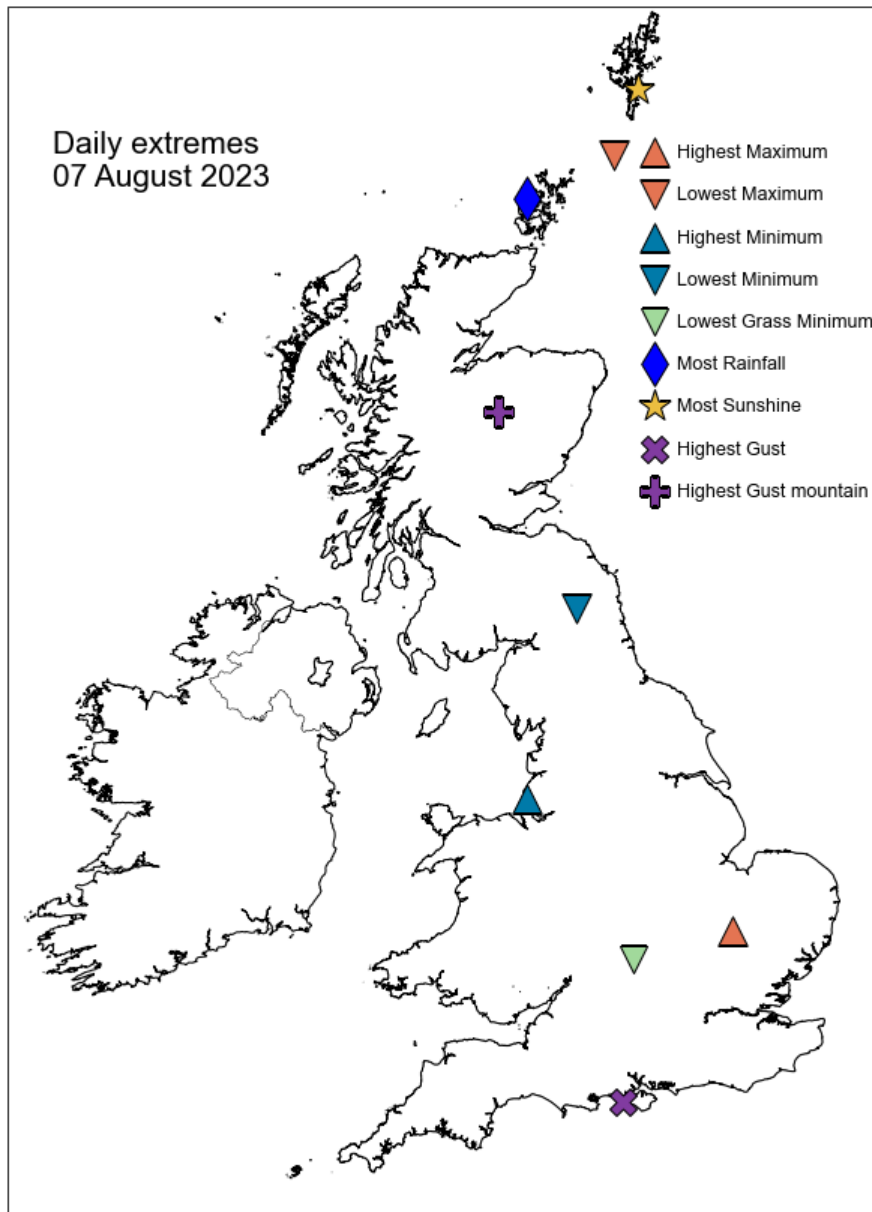

Daily Extremes

<i>Highest Maximum</i>	23.0°C Cambridge, Niab (Cambridgeshire, 26mAMSL)
<i>Lowest Maximum</i>	13.8°C Fair Isle (Shetland, 57mAMSL)
<i>Highest Minimum</i>	14.7°C Crosby (Merseyside, 9mAMSL)
<i>Lowest Minimum</i>	2.9°C Redesdale Camp (Northumberland, 211mAMSL)
<i>Lowest Grass Minimum</i>	1.1°C South Newington (Oxfordshire, 105mAMSL)
<i>Most Rainfall</i>	19.6mm Orkney: Loch Of Hundland (Orkney, 28mAMSL)
<i>Most Sunshine</i>	14.5hr Lerwick (Shetland, 82mAMSL)
<i>Highest Gust</i>	32Kt 37mph Wight: Needles Old Battery (Isle Of Wight, 80mAMSL)
<i>Highest Gust (mountain*)</i>	42Kt 48mph Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

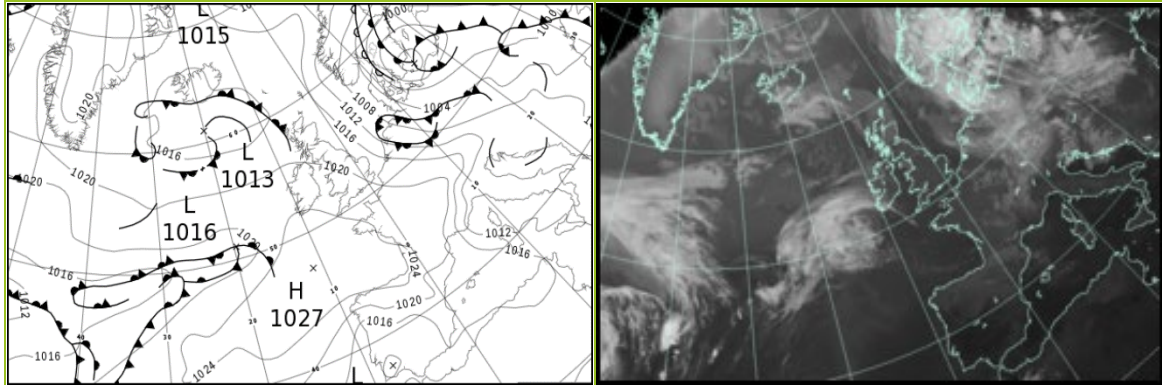

*Mountain stations are above 500mAMSL.

Daily Weather Summary for Monday 07 August 2023

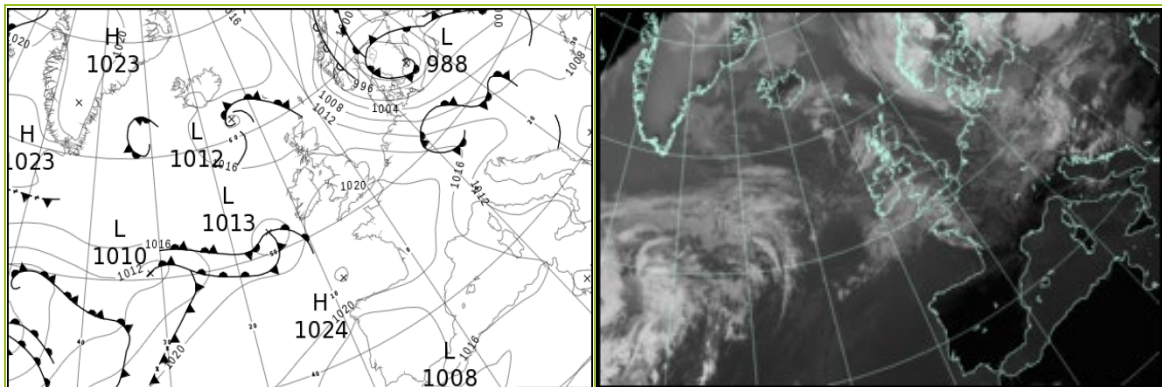

Daily Weather Summary for Monday 07 August 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Daily Weather Summary for Tuesday 08 August 2023

This day's summary created 15/08/2023 04:02

Summary of the UK Weather for Tuesday 08 August 2023

The start of Tuesday was generally clear and dry for most in the UK. However, parts of Scotland, Pennines and the southwest experienced some heavy showers at times, more persistent in the north. This is caused by two low pressure system towards the northeast of UK over in Scandinavia and west over in the southwest of Ireland, which produced more settled and mild conditions. The winds was light and calm. Temperature remained lower than average. Scattered showers and rain continued to move eastward across southern and central England and Wales over the course of the day, with widespread cloud covering much of the southern half of the UK. Further north, cloud was patchier, allowing for some dry and sunny spells across northern England and Scotland, although showers developed over parts of northeastern Scotland in the late morning and into the afternoon. Most of the rain and cloud cleared to the east in the evening, leaving a largely dry and clear start to the night for much of the UK. Winds were generally light, but strong across Shetland and northeast Scotland throughout the day. Temperatures generally remained in the mid to high teens, though slightly cooler in the far north and along parts of southern coastal areas.

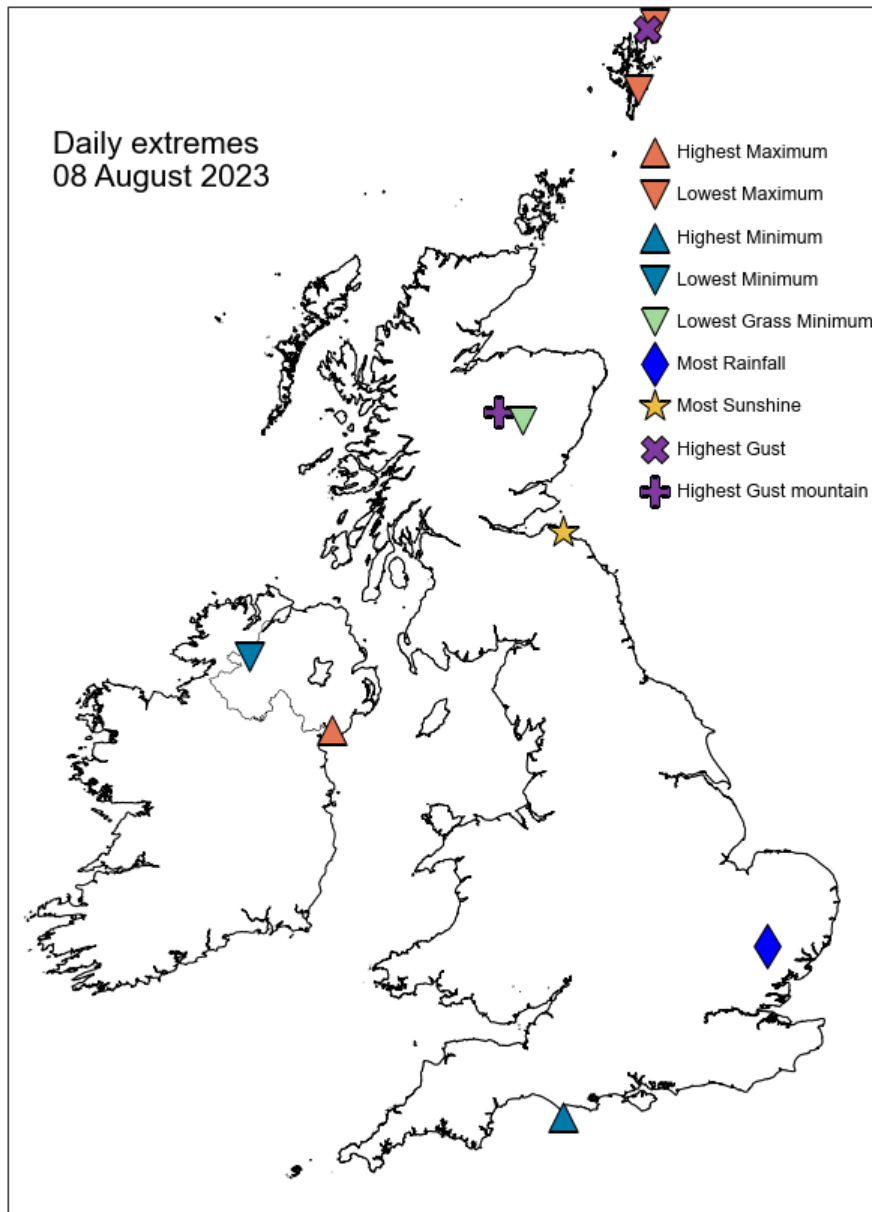

Daily Extremes

<i>Highest Maximum</i>	22.5°C Killowen (Down, 4mAMSL)
<i>Lowest Maximum</i>	12.3°C Lerwick (Shetland, 82mAMSL) also Baltasound No 2 (Shetland, 15mAMSL)
<i>Highest Minimum</i>	14.8°C Isle Of Portland (Dorset, 52mAMSL)
<i>Lowest Minimum</i>	4.3°C Castlederg (Tyrone, 49mAMSL)
<i>Lowest Grass Minimum</i>	-0.1°C Balmoral (Aberdeenshire, 283mAMSL)
<i>Most Rainfall</i>	10.2mm Cavendish (Suffolk, 55mAMSL)
<i>Most Sunshine</i>	13.5hr Dunbar (East Lothian, 23mAMSL)
<i>Highest Gust</i>	45Kt 52mph Baltasound No 2 (Shetland, 15mAMSL)
<i>Highest Gust (mountain*)</i>	45Kt 52mph Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

*Mountain stations are above 500mAMSL.

Daily Weather Summary for Wednesday 09 August 2023

This day's summary created 16/08/2023 04:02

Summary of the UK Weather for Wednesday 09 August 2023

Storm Hans continued to cause strong winds over the northern north sea, bringing windy conditions to the northern isles. Elsewhere, it was a quiet night with clear spells in places and scattered cloud, along with some patchy fog forming in central areas. This theme continued into the early morning giving a bright start for many central and eastern areas, cloudier in the west, with some low cloud and fog in the south west. Winds were generally light away from the far north. The morning was generally quiet, with sunshine for many. The west of the UK was mostly cloudy, with some patchy drizzle and light rain in places. Low cloud and sea fog lingered around some western coasts. During the afternoon, cloud thinned and broke for some in the west, while other areas remained mostly cloudy. Cloud also moved across Scotland and Northern England, with Northern Ireland remaining cloudy. Much of central and southern England was mostly sunny, where it was warmer than recently.

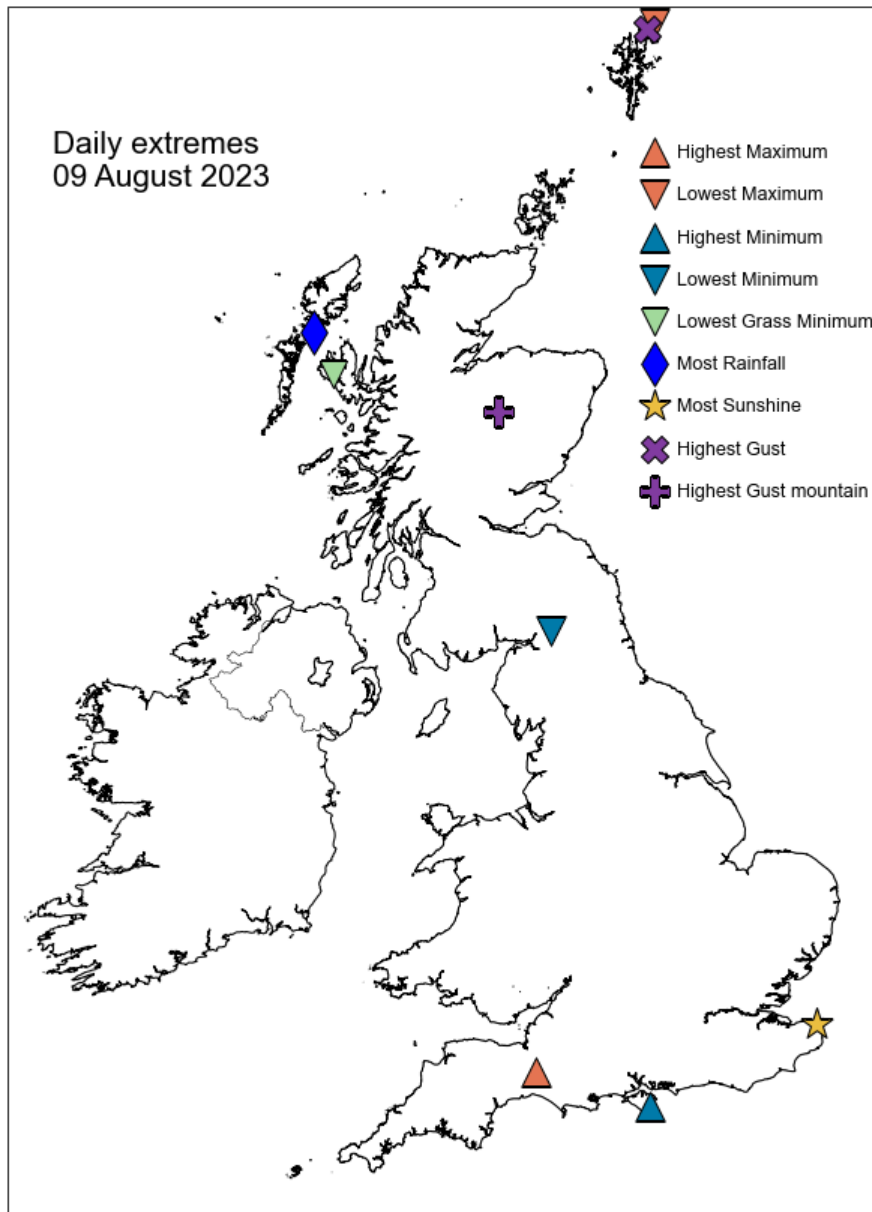

Daily Extremes

<i>Highest Maximum</i>	26.2°C Seavington, Hurcott Farm (Somerset, 85mAMSL)
<i>Lowest Maximum</i>	12.9°C Baltasound No 2 (Shetland, 15mAMSL)
<i>Highest Minimum</i>	15.8°C Wight: Shanklin (Isle Of Wight, 55mAMSL)
<i>Lowest Minimum</i>	3.5°C Bewcastle (Cumbria, 133mAMSL)
<i>Lowest Grass Minimum</i>	0.8°C Skye: Harlosh (Inverness-shire, 20mAMSL)
<i>Most Rainfall</i>	2.6mm Harris: Quidnish (Western Isles, 13mAMSL)
<i>Most Sunshine</i>	13.9hr Manston (Kent, 49mAMSL)
<i>Highest Gust</i>	46Kt 53mph Baltasound No 2 (Shetland, 15mAMSL)
<i>Highest Gust (mountain*)</i>	48Kt 55mph Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

*Mountain stations are above 500mAMSL.

Daily Weather Summary for Wednesday 09 August 2023

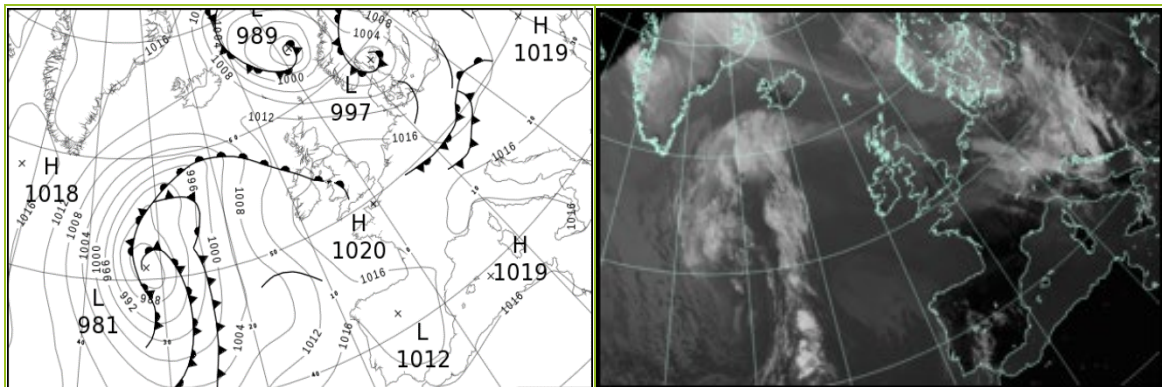

Daily Weather Summary for Wednesday 09 August 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Daily Weather Summary for Thursday 10 August 2023

This day's summary created 17/08/2023 04:03

Summary of the UK Weather for Thursday 10 August 2023

It was a dry and largely clear night across the UK and felt rather muggy for many. Coastal spots saw mist and fog patches developing in the early hours. After dawn, cloud started to cover southwestern England, giving a rather murky start to the day. Cloud continued to build through the morning across much of northern and central England, and Scotland, but still, plenty of sunny spells. The far north of Scotland and southeast England saw lengthy spells of sunshine with little cloud around. Cloud continued to affect southwest England and west Wales. Conditions continued through the afternoon, with some patchy cloud continuing to affect northern and central parts of England and parts of Scotland, however it remained dry and sunny. Later Thursday, a band of cloud and showers arrived at Northern Ireland ahead of a cold front coming from the west. This continued to travel across the UK through the evening, bringing more widespread cloud and outbreaks of showers further into Thursday night.

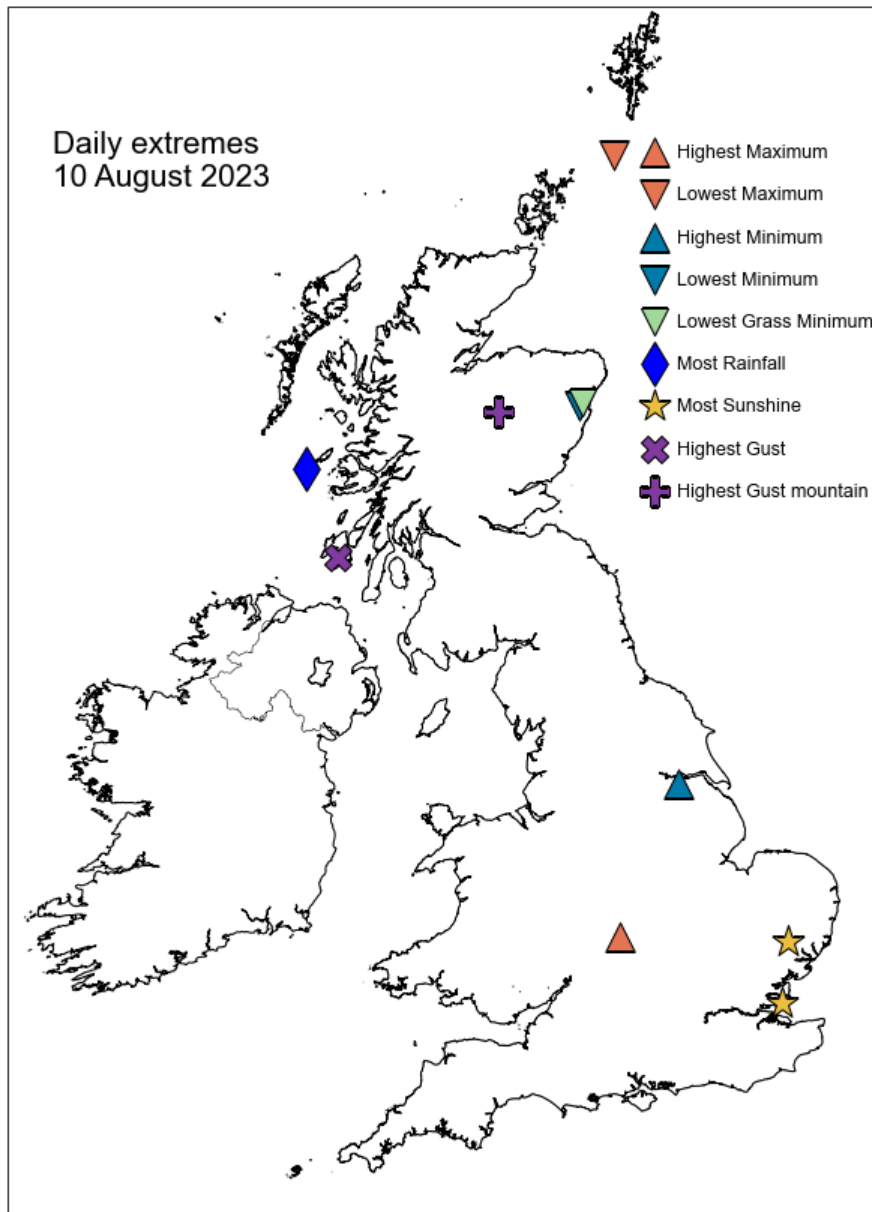

Daily Extremes

<i>Highest Maximum</i>	28.4°C Wellesbourne (Warwickshire, 47mAMSL)
<i>Lowest Maximum</i>	15.0°C Fair Isle (Shetland, 57mAMSL)
<i>Highest Minimum</i>	17.1°C Normanby Hall (Humberside, 47mAMSL)
<i>Lowest Minimum</i>	8.5°C Craibstone No 2 (Aberdeenshire, 134mAMSL)
<i>Lowest Grass Minimum</i>	5.2°C Dyce (Aberdeenshire, 65mAMSL)
<i>Most Rainfall</i>	16.4mm Tiree (Argyll (in Strathclyde Region), 9mAMSL)
<i>Most Sunshine</i>	13.7hr Wattisham (Suffolk, 89mAMSL) also Shoeburyness, Landwick (Essex, 2mAMSL)
<i>Highest Gust</i>	36Kt 41mph Islay: Port Ellen (Argyll (in Strathclyde Region), 17mAMSL)
<i>Highest Gust (mountain*)</i>	45Kt 52mph Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

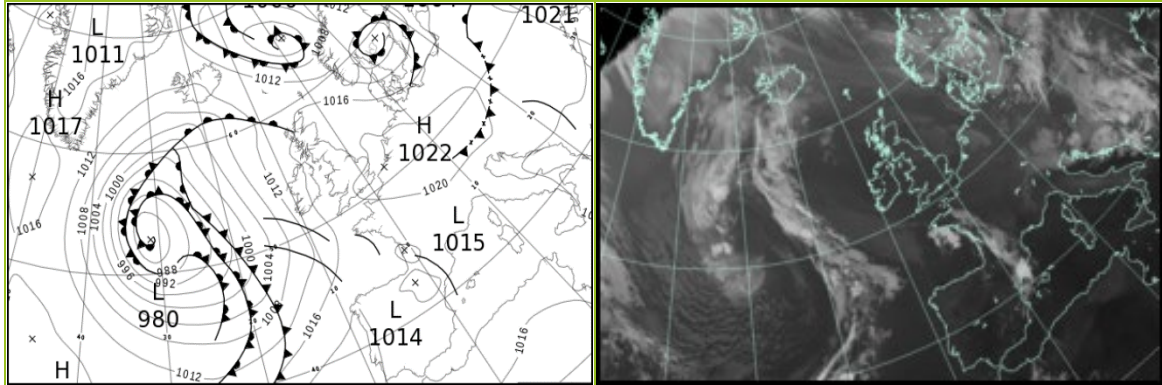

*Mountain stations are above 500mAMSL.

Daily Weather Summary for Thursday 10 August 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Daily Weather Summary for Friday 11 August 2023

This day's summary created 18/08/2023 04:03

Summary of the UK Weather for Friday 11 August 2023

After a warm and rather muggy night, the early hours saw a cold front tracking eastwards across the UK. This brought a band of cloud and rain that stretched from northwestern Scotland, through northern and central England, down to the southwest, giving a rather murky start for most. The cold front continued clearing eastwards, restricting showers to the east of Scotland and northeast England. This was followed by a weakening occluded front, which brought another band of rain and cloud to western Scotland. Parts of the southwest and south coast saw poor visibility in a southerly flow. The cold front and trailing occlusion continued on an eastward track through the morning, bringing generally cloudy conditions across much of the UK, and outbreaks of light rain across northern and western parts, along with moderate southeasterly winds. A low pressure centre sitting to the northwest edged across the UK into the afternoon, bringing heavier showers across western Scotland and Northern Ireland, and stronger winds. This continued eastwards into the evening, sweeping cloud and scattered showers, reaching central England through Thursday night.

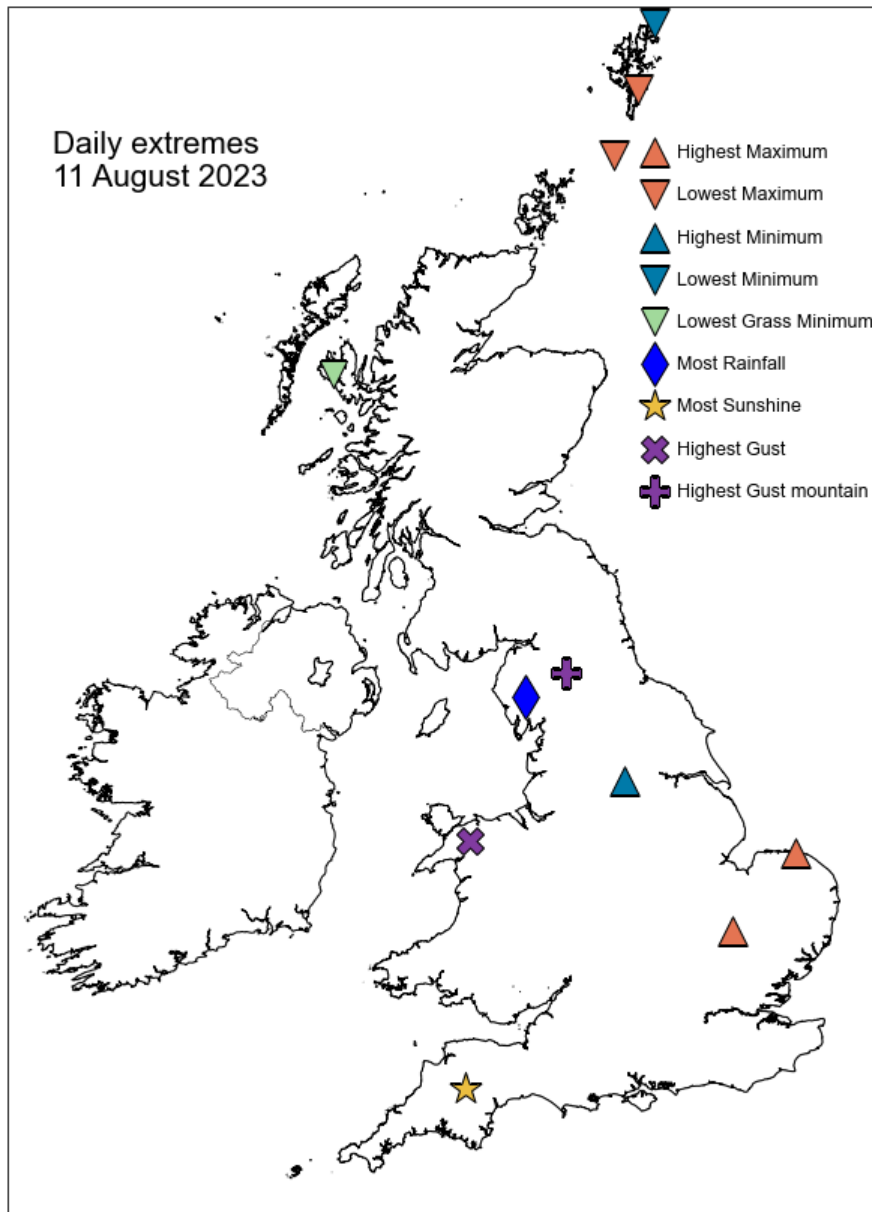

Daily Extremes

<i>Highest Maximum</i>	26.5°C Cambridge, Niab (Cambridgeshire, 26mAMSL) also Weybourne (Norfolk, 21mAMSL)
<i>Lowest Maximum</i>	14.5°C Fair Isle (Shetland, 57mAMSL) also Lerwick (Shetland, 82mAMSL)
<i>Highest Minimum</i>	18.9°C Thornes Park (West Yorkshire, 35mAMSL)
<i>Lowest Minimum</i>	11.3°C Baltasound No 2 (Shetland, 15mAMSL)
<i>Lowest Grass Minimum</i>	7.1°C Skye: Harlosh (Inverness-shire, 20mAMSL)
<i>Most Rainfall</i>	50.0mm Mickleden, Middlefell Farm (Cumbria, 99mAMSL)
<i>Most Sunshine</i>	12.3hr North Wyke (Devon, 177mAMSL)
<i>Highest Gust</i>	40Kt 46mph Capel Curig No 3 (Gwynedd, 216mAMSL)
<i>Highest Gust (mountain*)</i>	50Kt 58mph Great Dun Fell No 2 B (Cumbria, 847mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

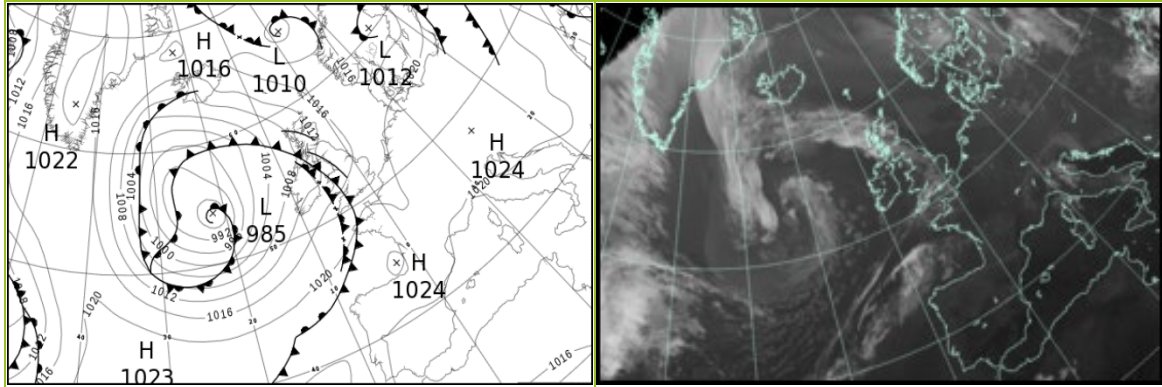

*Mountain stations are above 500mAMSL.

Daily Weather Summary for Friday 11 August 2023

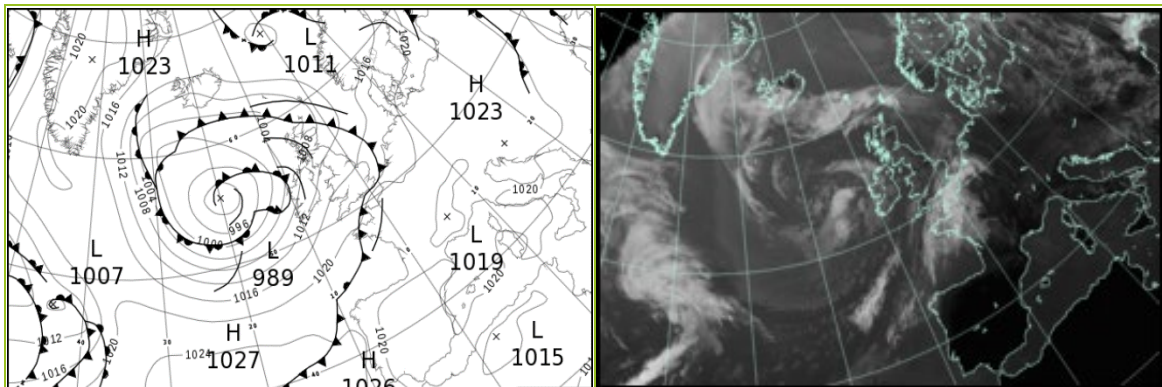

Daily Weather Summary for Friday 11 August 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Daily Weather Summary for Saturday 12 August 2023

This day's summary created 19/08/2023 04:03

Summary of the UK Weather for Saturday 12 August 2023

With a low pressure system to the northwest, the early hours saw a wraparound occlusion approach the UK. This brought patchy light rain to western Scotland, Wales and the southwest, followed by a thick rain band over Northern Ireland. This continued tracking eastwards, bringing more widespread rain to the northwest, locally heavy in parts of western Scotland. Elsewhere saw a cloudy but dry start. This low pressure system remained off the coast of the UK through the day. The morning started bright in the south east, but cloud and patchy rain moved into the northwest spreading eastward through the day. The rain cleared most areas by late afternoon leaving sunshine with scattered showers. Some heavy and thundery. These initially in western regions, but spread to cover most of Scotland. Heaviest in the north. England had a cloudy night. Winds were moderate with some fresh gusts with the rain, slackening off with its passing. Temperatures were cooler than average, held up into the evening to give a mild night.

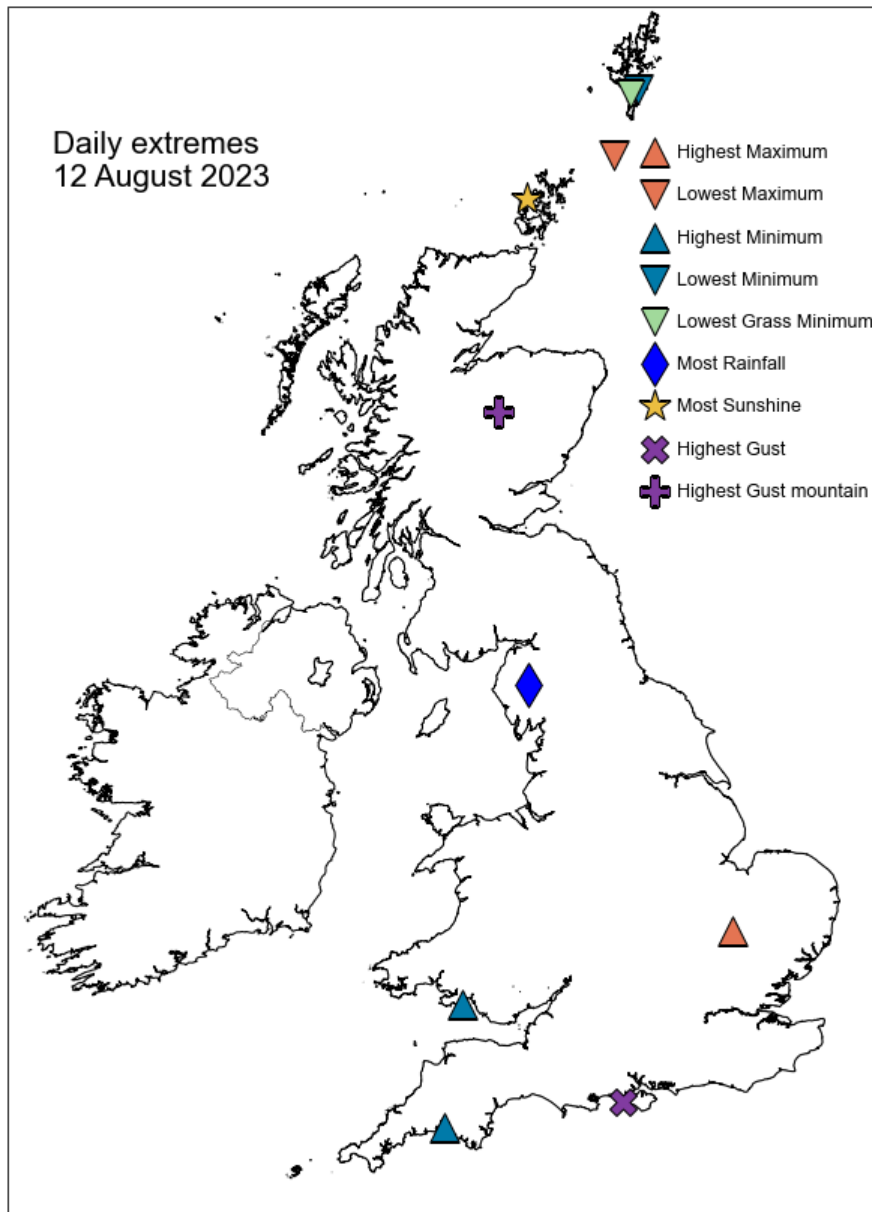

Daily Extremes

<i>Highest Maximum</i>	24.3°C Cambridge, Niab (Cambridgeshire, 26mAMSL)
<i>Lowest Maximum</i>	15.4°C Fair Isle (Shetland, 57mAMSL)
<i>Highest Minimum</i>	16.5°C Plymouth, Kinterbury Point (Devon, 0mAMSL) also Mumbles Head (West Glamorgan, 44mAMSL)
<i>Lowest Minimum</i>	9.3°C Lerwick (Shetland, 82mAMSL)
<i>Lowest Grass Minimum</i>	5.8°C Lerwick (Shetland, 82mAMSL)
<i>Most Rainfall</i>	46.2mm Thirlmere, St Johns Beck (Cumbria, 165mAMSL)
<i>Most Sunshine</i>	9.1hr Orkney: Loch Of Hundland (Orkney, 28mAMSL)
<i>Highest Gust</i>	44Kt 51mph Wight: Needles Old Battery (Isle Of Wight, 80mAMSL)
<i>Highest Gust (mountain*)</i>	55Kt 63mph Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

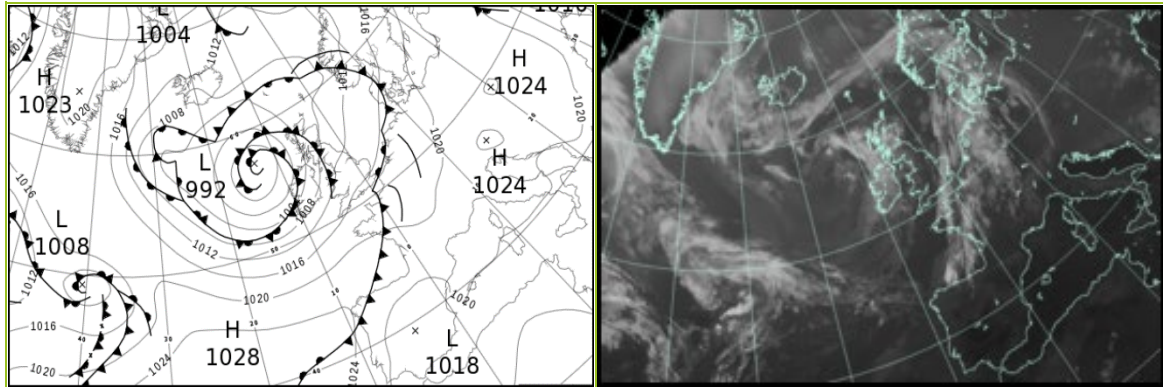

*Mountain stations are above 500mAMSL.

Daily Weather Summary for Saturday 12 August 2023

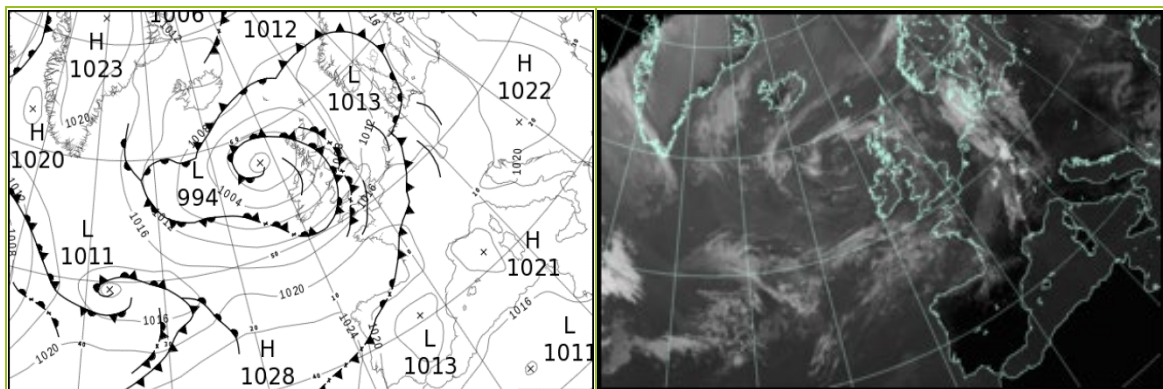

Daily Weather Summary for Saturday 12 August 2023

North Atlantic and Europe analysis charts and satellite images at 0000 UTC

North Atlantic and Europe analysis charts and satellite images at 1200 UTC

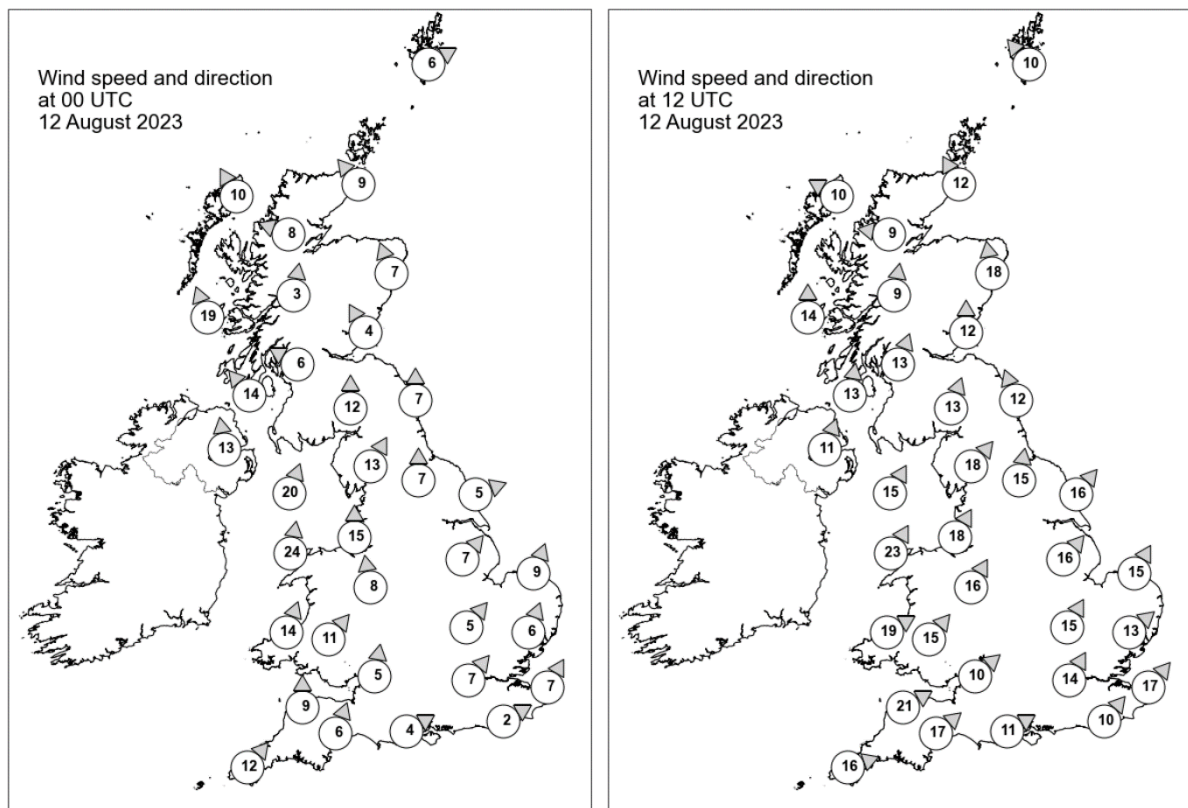

All satellite imagery copyright Met Office and EUMETSAT (European Organisation for the Exploitation of Meteorological Satellites). These show infra-red images from the geostationary MSG satellite. The rainfall rates are derived from both rain-radar and satellite data.

Daily Weather Summary for Saturday 12 August 2023

Daily Weather Summary for Saturday 12 August 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Daily Weather Summary for Sunday 13 August 2023

This day's summary created 20/08/2023 04:02

Summary of the UK Weather for Sunday 13 August 2023

The beginning of Sunday saw a mature low pressure system with a wrap-around occlusion situated to the northwest of the UK. This brought patchy outbreaks of rain, drizzle and thick cloud to Northern Ireland, Wales, the southwest of the UK, and across the Pennines. Rain across the central belt of Scotland, associated with a trough, was heavy to begin with before pushing eastward off the coast. The slow moving nature of the system kept conditions rather consistent across the UK but with cloud thickening through the early hours. Rather breezy at times overnight, particularly in coastal locations. Temperatures remained mild, particularly under thick cloud cover. Occlusions slowly crossed the country through the day bringing some cloudy spells and scattered showers, heaviest in the north of Scotland. Sunshine did break out at times however. Later, a depression approached the southwest, bringing heavy rain initially to this area and spreading northeastwards through the night. Winds were initially moderate, but slackened in the evening to be light overnight. Temperatures were around average.

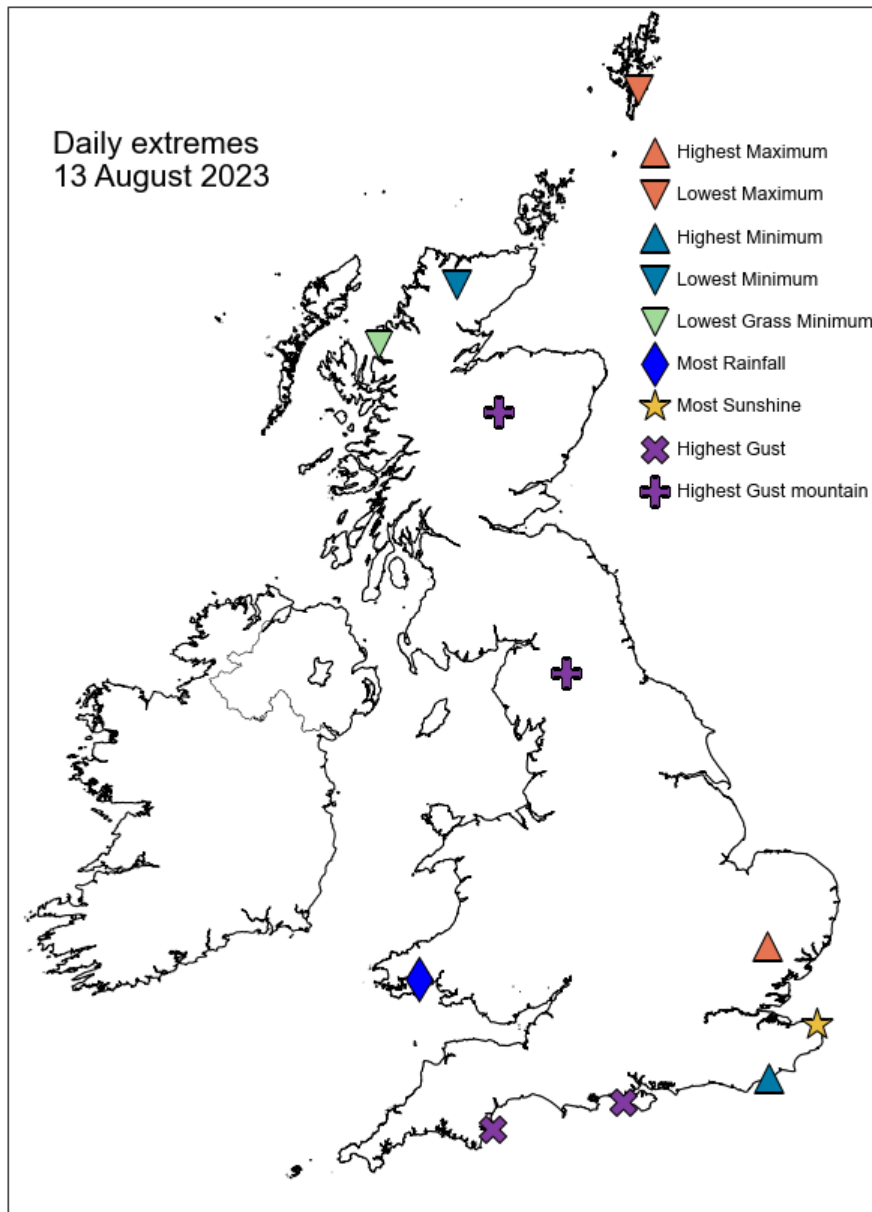

Daily Extremes

<i>Highest Maximum</i>	24.4°C Cavendish (Suffolk, 55mAMSL)
<i>Lowest Maximum</i>	16.1°C Lerwick (Shetland, 82mAMSL)
<i>Highest Minimum</i>	16.8°C Hastings (East Sussex, 45mAMSL)
<i>Lowest Minimum</i>	9.1°C Altnaharra No 2 (Sutherland, 81mAMSL)
<i>Lowest Grass Minimum</i>	5.5°C Port Henderson (Ross & Cromarty, 18mAMSL)
<i>Most Rainfall</i>	56.6mm Tavernspite (Carmarthenshire, 153mAMSL)
<i>Most Sunshine</i>	8.7hr Manston (Kent, 49mAMSL)
<i>Highest Gust</i>	37Kt 43mph Berry Head (Devon, 58mAMSL) also Wight: Needles Old Battery (Isle Of Wight, 80mAMSL)
<i>Highest Gust (mountain*)</i>	37Kt 43mph Great Dun Fell No 2 B (Cumbria, 847mAMSL) also Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

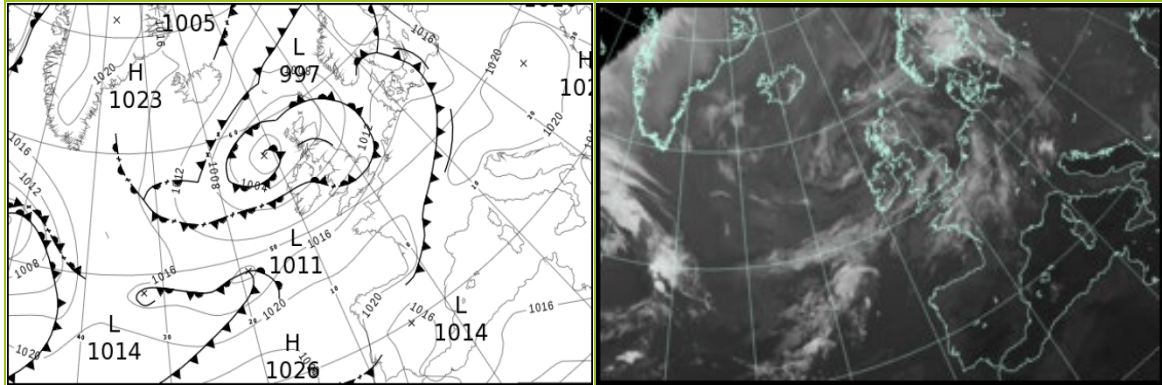

*Mountain stations are above 500mAMSL.

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Daily Weather Summary for Monday 14 August 2023

This day's summary created 21/08/2023 04:03

Summary of the UK Weather for Monday 14 August 2023

A depression approached the south-west of the UK in the early hours, accompanied by widespread rainfall across the southwest, Wales and the Midlands. The rainfall continued to spread eastwards through the night. Meanwhile, occlusions across central Scotland brought more rain and cloud to these regions. The far southeast and northern parts of England remained largely overcast but otherwise dry. Winds were mostly light, but slightly stronger in the southwest, around and behind the fronts. The widespread cloud cover meant the night remained fairly mild, with temperatures generally staying in the mid-teens. Most of England continued to be affected by heavy rainfall which cleared gradually towards the north but lingered in northern England at the end of the day. Elsewhere, the UK largely saw clear and settled conditions with plenty of sunshine as the rain cleared, with occasional showers. In Scotland, the occlusion clearing northwards continued to bring showers and cloudy conditions to the area, dissipating slowly. Throughout the day, wind were generally calm blowing north-easterly, with around-average temperatures.

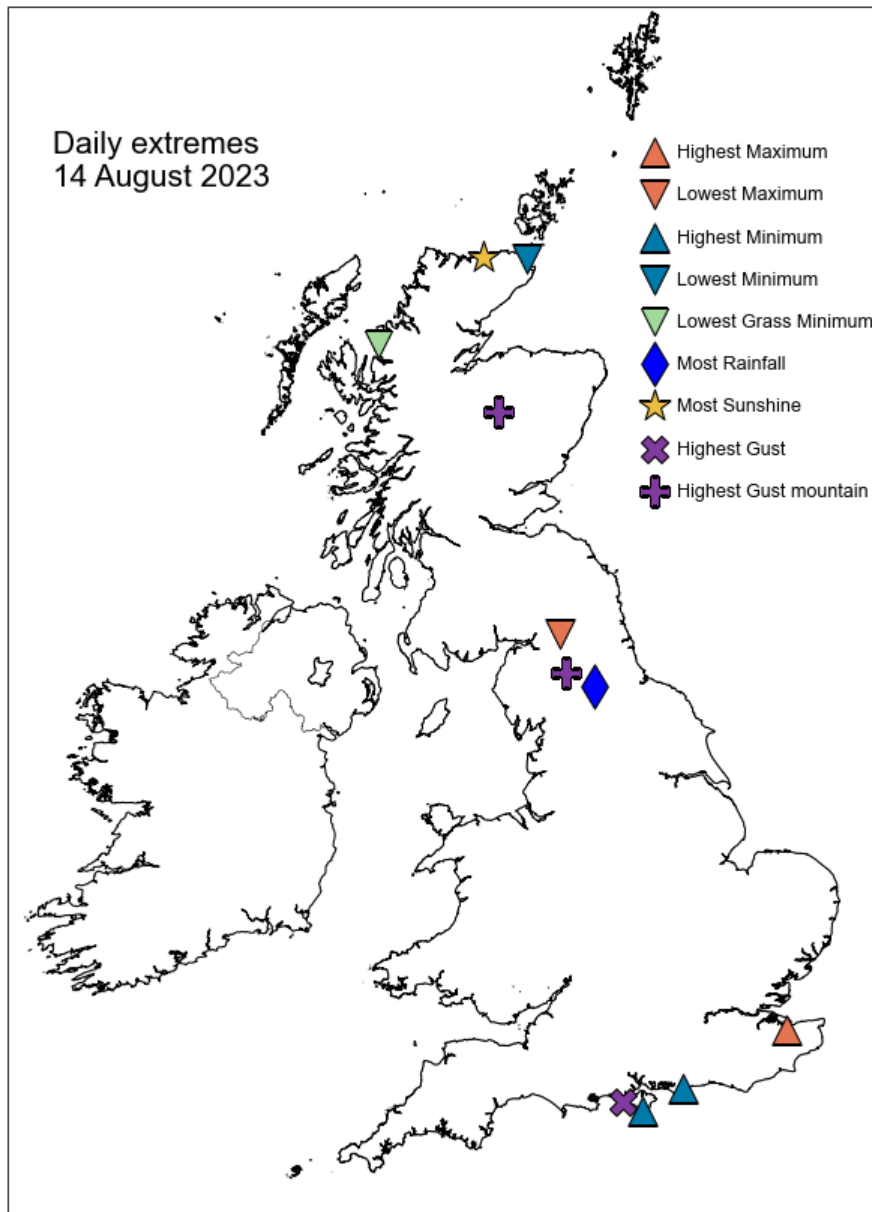

Daily Extremes

<i>Highest Maximum</i>	25.8°C Faversham (Kent, 46mAMSL)
<i>Lowest Maximum</i>	15.1°C Spadeadam No 2 (Cumbria, 285mAMSL)
<i>Highest Minimum</i>	16.5°C Bognor Regis (West Sussex, 7mAMSL) also Wight: St Catherines Point (Isle Of Wight, 20mAMSL)
<i>Lowest Minimum</i>	6.0°C Lyth No 2 (Caithness, 24mAMSL)
<i>Lowest Grass Minimum</i>	4.9°C Port Henderson (Ross & Cromarty, 18mAMSL)
<i>Most Rainfall</i>	50.6mm Lartington Filters (Durham, 220mAMSL)
<i>Most Sunshine</i>	13.1hr Strathy East (Sutherland, 68mAMSL)
<i>Highest Gust</i>	39Kt 45mph Wight: Needles Old Battery (Isle Of Wight, 80mAMSL)
<i>Highest Gust (mountain*)</i>	30Kt 35mph Great Dun Fell No 2 B (Cumbria, 847mAMSL) also Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

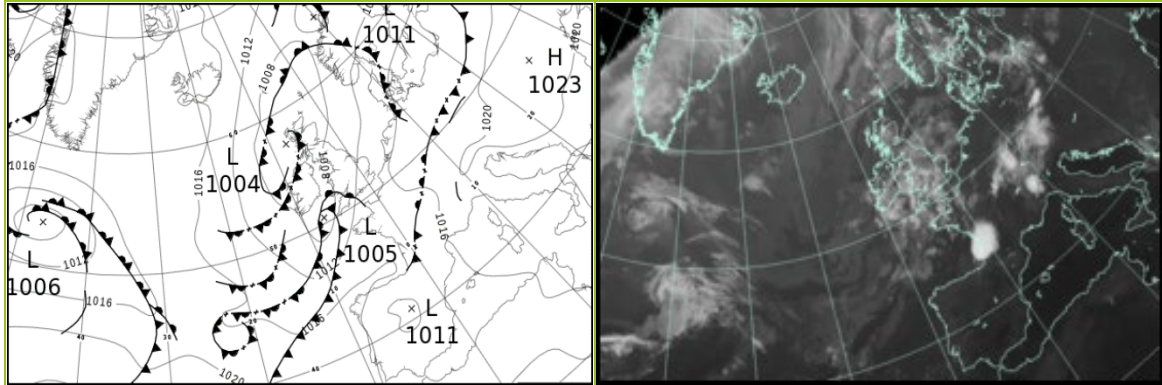

*Mountain stations are above 500mAMSL.

Daily Weather Summary for Monday 14 August 2023

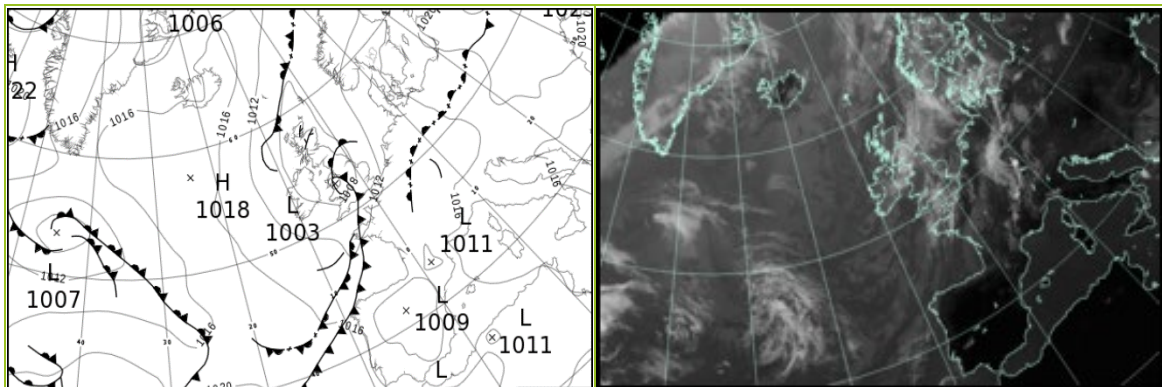

Daily Weather Summary for Monday 14 August 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Daily Weather Summary for Tuesday 15 August 2023

This day's summary created 22/08/2023 04:02

Summary of the UK Weather for Tuesday 15 August 2023

The low pressure that brought heavy rainfall on Monday had moved off the east coast of England by the early hours of the morning. Some rain and showers lingered in northeast England, but the majority of the UK stayed largely dry through the night. A few showers also remained over parts of Scotland and Northern Ireland. Patchy cloud covered northern and central parts of the country, while most of southern England remained clear through the night. Some areas of fog developed towards dawn, particularly over parts of northern Scotland and western coasts. With the rain clearing east, the winds calmed, and temperatures remained mild under the cloud. During the day, majority of the country remained dry and settled with plenty of sunshine and an odd spot of shower. However, the low pressure that moved off to the east coast has continued to linger east of Scotland which has brought heavy downpour and showers to the area especially southeast of Scotland and parts of northeast England. Wind remained light during the day.

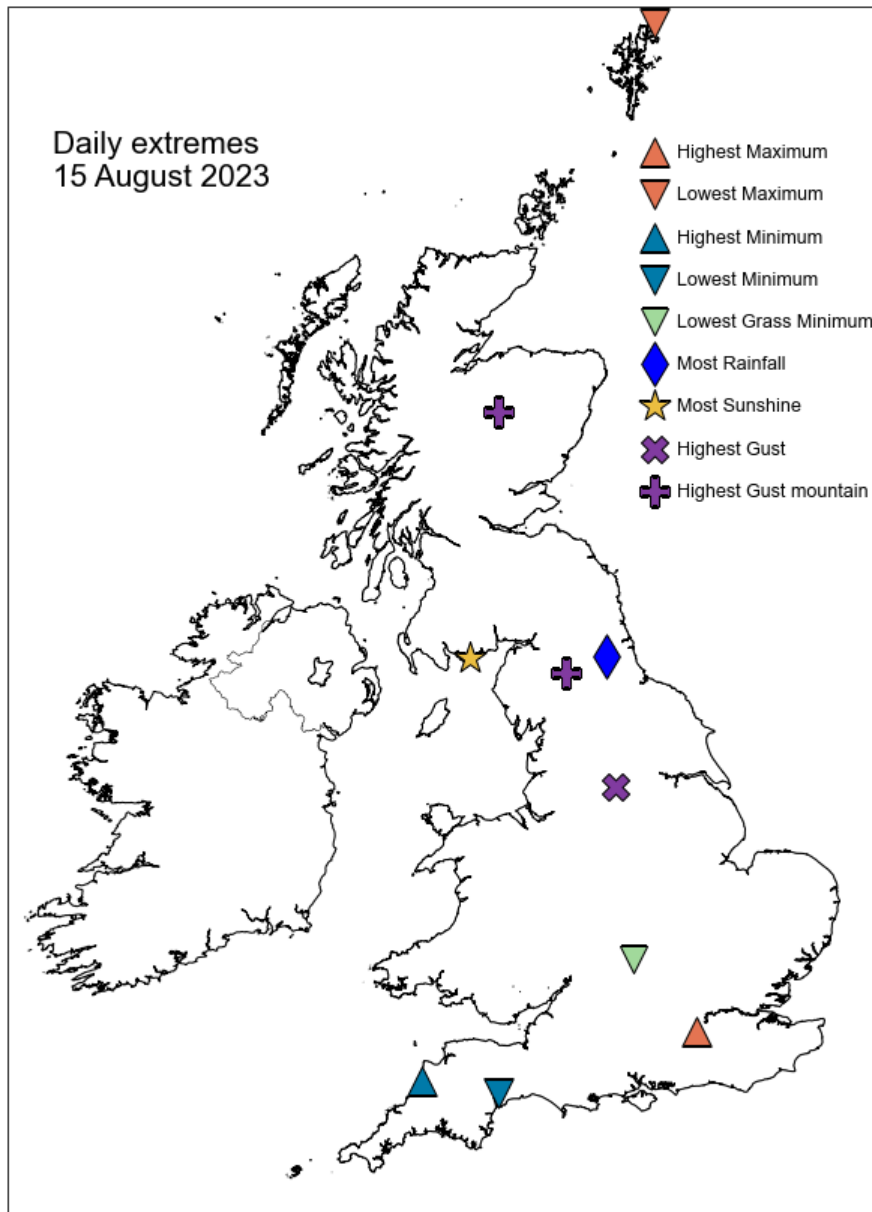

Daily Extremes

<i>Highest Maximum</i>	25.8°C Wisley (Surrey, 38mAMSL)
<i>Lowest Maximum</i>	14.5°C Baltasound No 2 (Shetland, 15mAMSL)
<i>Highest Minimum</i>	16.2°C Bude (Cornwall, 15mAMSL)
<i>Lowest Minimum</i>	6.8°C Exeter Airport No 2 (Devon, 27mAMSL)
<i>Lowest Grass Minimum</i>	2.8°C South Newington (Oxfordshire, 105mAMSL)
<i>Most Rainfall</i>	20.6mm Knitsley S Wks (Durham, 168mAMSL)
<i>Most Sunshine</i>	13.0hr Dundrennan (Kirkcudbrightshire, 113mAMSL)
<i>Highest Gust</i>	28Kt 32mph Emley Moor No 2 (West Yorkshire, 267mAMSL)
<i>Highest Gust (mountain*)</i>	23Kt 26mph Cairngorm Summit (Inverness-shire, 1237mAMSL) also Great Dun Fell No 2 B (Cumbria, 847mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

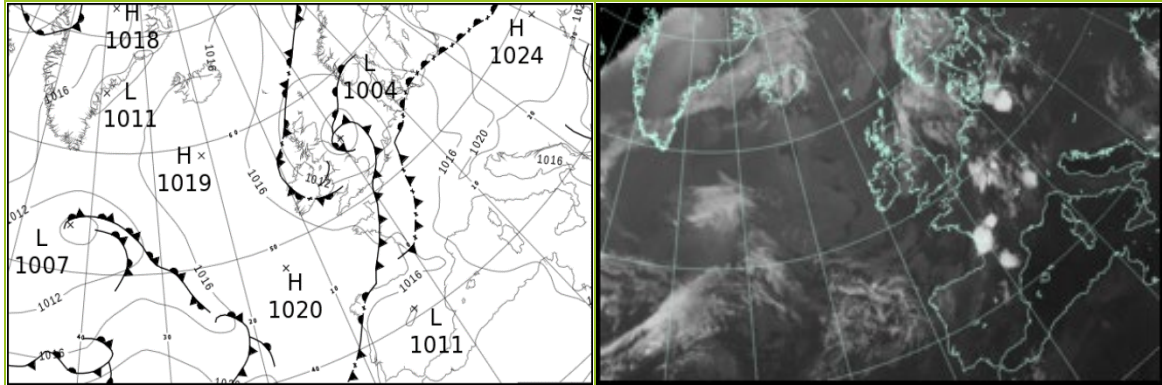

*Mountain stations are above 500mAMSL.

Daily Weather Summary for Wednesday 16 August 2023

This day's summary created 23/08/2023 04:02

Summary of the UK Weather for Wednesday 16 August 2023

The synoptic situation at the beginning of Wednesday was mostly governed by high pressure, especially across the southwest, although low pressure was not too far away located over the North Sea. Fog developed overnight, mainly affecting northern and western parts of the UK, but this cleared through the early morning. Broadly dry overnight excluding central Scotland, where outbreaks of rain persisted due to frontal activity. This set up changed into midday, with scattered showers across most parts of the UK. It remained broadly clear across the south and central parts of England, otherwise generally cloudy. Wind direction was fairly variable initially, but remained mostly northwesterly and light through the period. Close to slightly below average temperatures were recorded, with peaks in the southeast. The morning started bright and sunny for most with high pressure in charge. Scotland and the north had some cloud with scattered showers. As the day progressed, the cloud cover increased in Scotland and England became speckled with bubbling cumulus. Eastern coasts picked up a little haar with the southeasterly breeze off the isolated funnel clouds were spotted in the northeast. The cloud thinned into the evening and overnight. Winds were generally light. The day felt warm with temperatures into the twenties widespread. Cooler under the cloud. The temperature held up overnight giving a warm night for most.

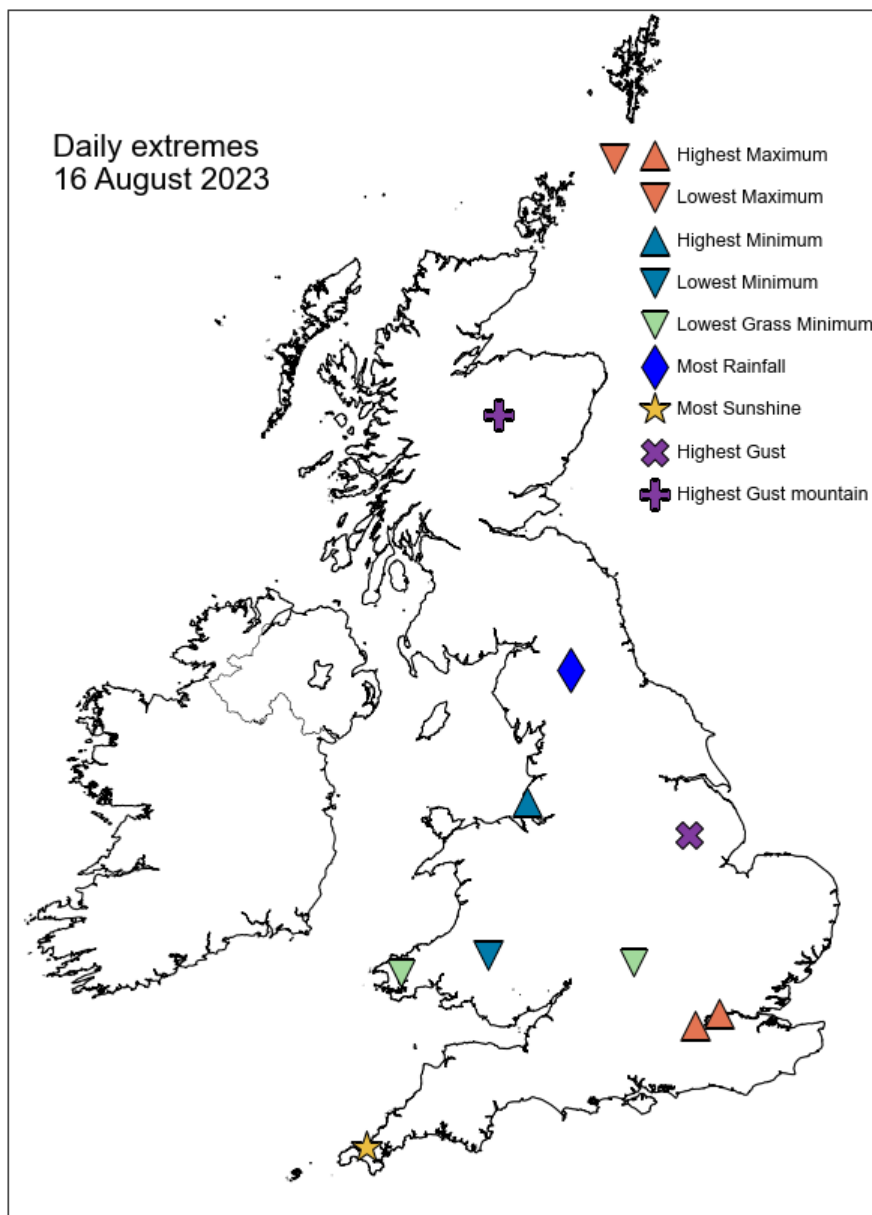

Daily Extremes

<i>Highest Maximum</i>	26.9°C Chertsey, Abbey Mead P Sta (Surrey, 12mAMSL) also London, St James's Park (Greater London, 5mAMSL)
<i>Lowest Maximum</i>	14.5°C Fair Isle (Shetland, 57mAMSL)
<i>Highest Minimum</i>	15.3°C Crosby (Merseyside, 9mAMSL)
<i>Lowest Minimum</i>	5.6°C Sennybridge No 2 (Powys (south), 307mAMSL)
<i>Lowest Grass Minimum</i>	3.0°C Scolton Country Park (Dyfed, 75mAMSL) also South Newington (Oxfordshire, 105mAMSL)
<i>Most Rainfall</i>	10.8mm Garrigill, Noonstones Hill (Cumbria, 481mAMSL)
<i>Most Sunshine</i>	13.6hr Camborne (Cornwall, 87mAMSL)
<i>Highest Gust</i>	21Kt 24mph Waddington (Lincolnshire, 68mAMSL)
<i>Highest Gust (mountain*)</i>	19Kt 22mph Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

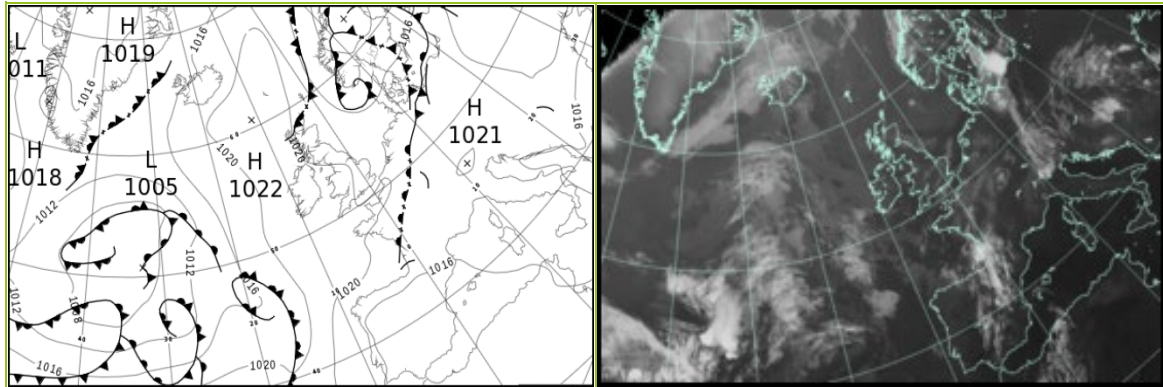

*Mountain stations are above 500mAMSL.

Daily Weather Summary for Wednesday 16 August 2023

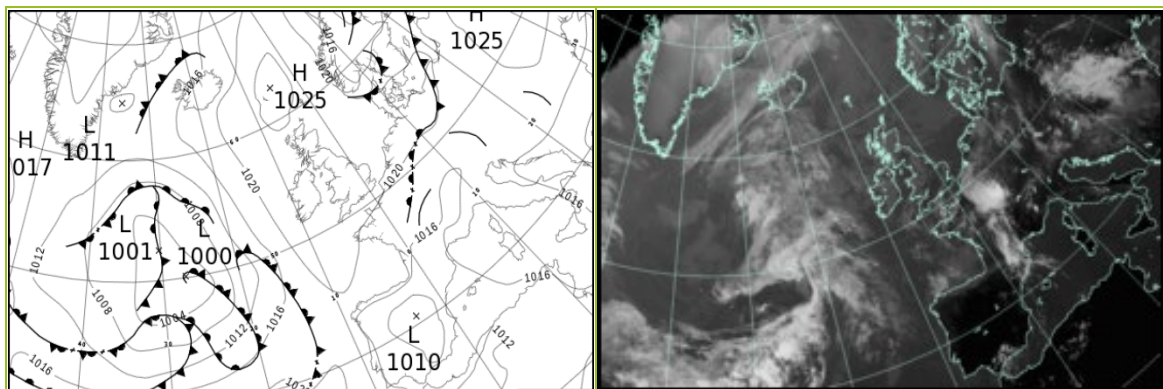

Daily Weather Summary for Wednesday 16 August 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Daily Weather Summary for Thursday 17 August 2023

This day's summary created 24/08/2023 04:04

Summary of the UK Weather for Thursday 17 August 2023

The general picture at the beginning of Thursday was dry and clear for most across the country. Some localised showers in northern Scotland, northern England and central England. This was generally due to the high pressure zone lingering northeast to the UK, which brought settled conditions throughout. Wind was generally calm and temperature remained mild. High pressure to the north was in charge with a depression moving eastwards to the west of Ireland. It was cloudy for most with scattered showers but brighter, sunnier in places. Sunniest in the southeast and some western fringes. Low cloud affecting some eastern coasts. Scattered showers in Scotland and the West Country. Rain moved into the southwest in the early evening and spread eastwards covering the south, Wales, and Northern Ireland by midnight. The wind was light, but picked up in western regions towards the end of the period. Temperatures were generally warm through the day. It was mild and humid overnight.

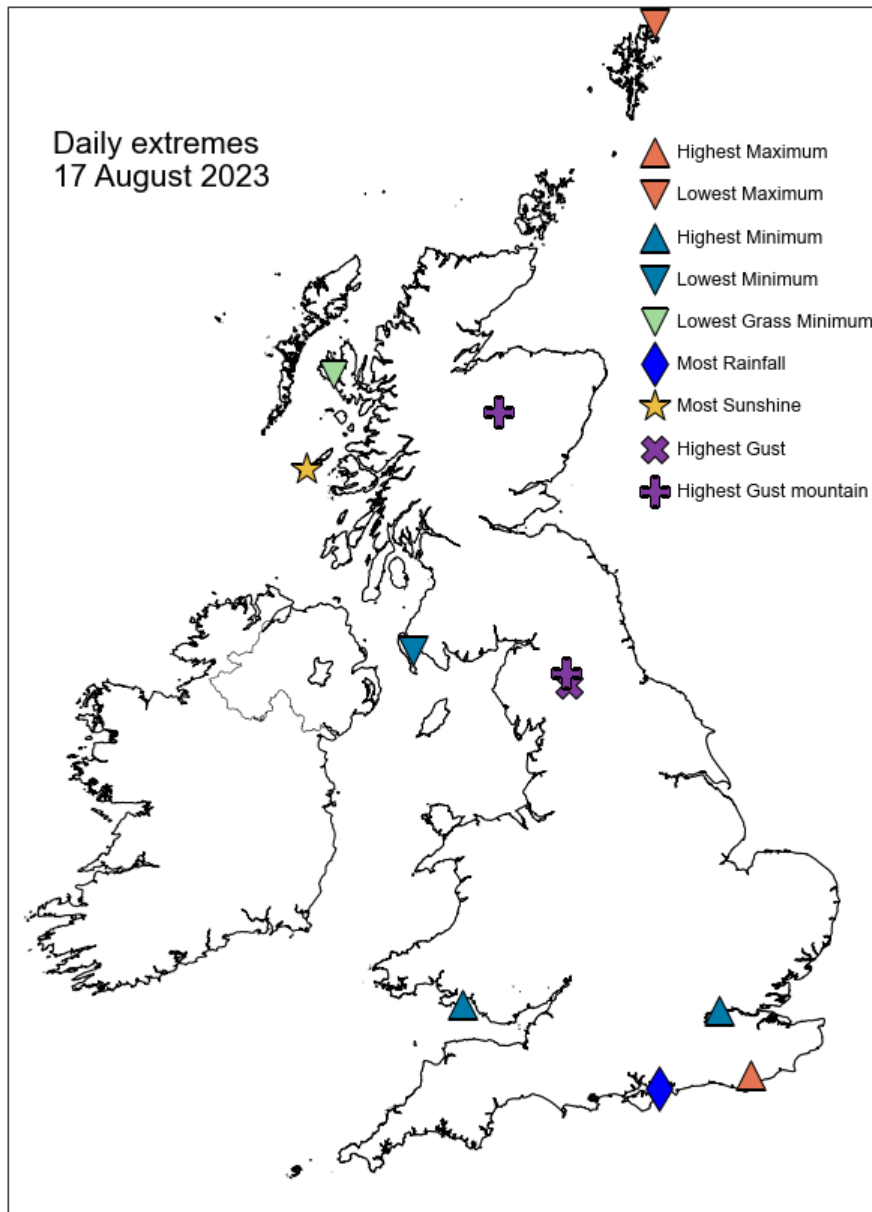

Daily Extremes

<i>Highest Maximum</i>	25.8°C Herstmonceux, West End (East Sussex, 52mAMSL)
<i>Lowest Maximum</i>	14.8°C Baltasound No 2 (Shetland, 15mAMSL)
<i>Highest Minimum</i>	16.7°C Mumbles Head (West Glamorgan, 44mAMSL) also London, St James's Park (Greater London, 5mAMSL)
<i>Lowest Minimum</i>	6.3°C West Freugh (Wigtownshire, 11mAMSL)
<i>Lowest Grass Minimum</i>	0.4°C Skye: Harlosh (Inverness-shire, 20mAMSL)
<i>Most Rainfall</i>	29.9mm Portsea: Eastney P Sta (Hampshire, 4mAMSL)
<i>Most Sunshine</i>	13.7hr Tiree (Argyll (in Strathclyde Region), 9mAMSL)
<i>Highest Gust</i>	37Kt 43mph Warcop Range (Cumbria, 227mAMSL)
<i>Highest Gust (mountain*)</i>	35Kt 40mph Great Dun Fell No 2 B (Cumbria, 847mAMSL) also Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

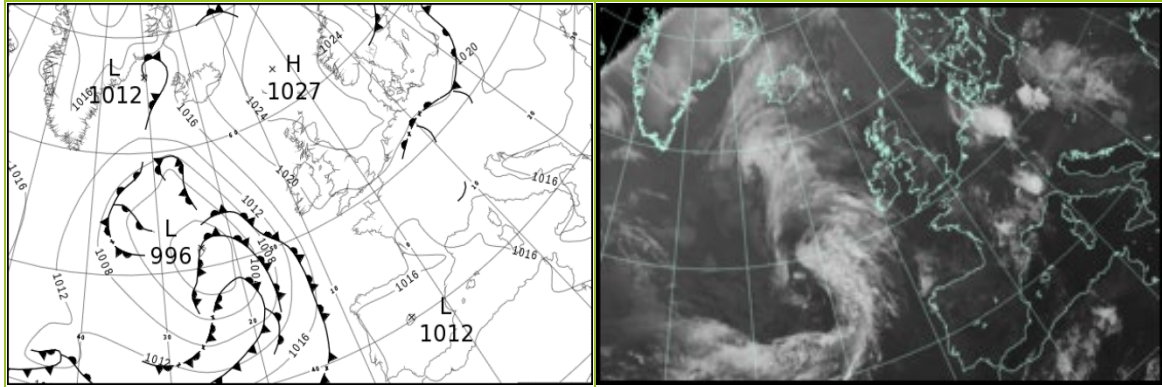

*Mountain stations are above 500mAMSL.

Daily Weather Summary for Thursday 17 August 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Daily Weather Summary for Friday 18 August 2023

This day's summary created 25/08/2023 04:02

Summary of the UK Weather for Friday 18 August 2023

The night was mild and cloudy for many, especially further south. A few patches of light rain affected southwest England, Northern Ireland and Wales through the early hours, and later in the night some heavy showers broke out in southern England and the English Channel, merging into a band of heavy, showery rain associated with a trough which slowly moved northwards. There was some lightning activity, although mostly offshore. Shortly after dawn, hill fog lingered in some parts of the southeast and northwest. During the morning, the band of rain moved into the midlands, getting lighter, and fragmenting by noon. Meanwhile, some patchy rain moved out of Northern Ireland into western Scotland and weakened, however some showering lingered. Central southeastern parts of England saw decent amounts of sunshine, with some western and highland parts of Scotland seeing sunny intervals, otherwise it was mostly cloudy. During the afternoon, a band of rain associated with Storm Betty (named yesterday by Met Eirann) moved into southwest England, and slowly moved northeastwards, covering most of Wales and western England by evening.

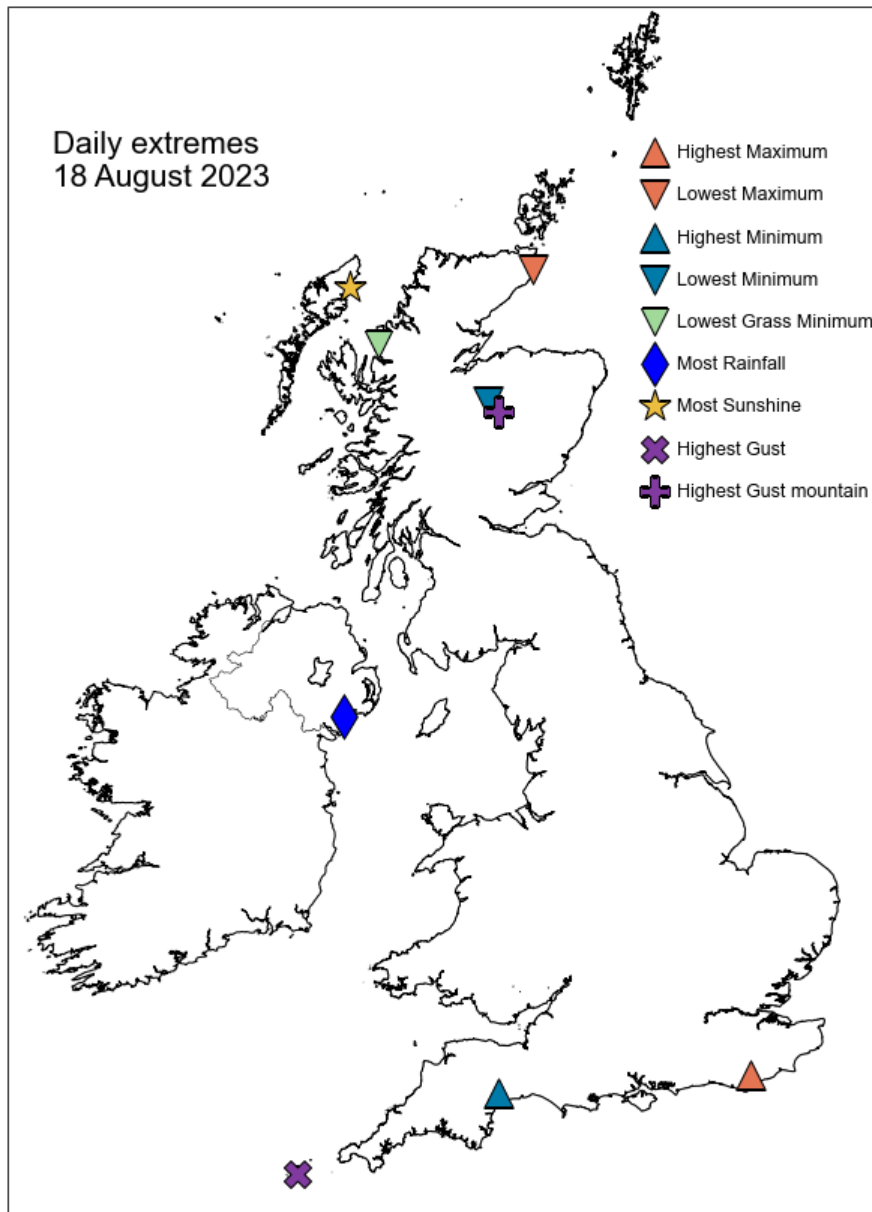

Daily Extremes

<i>Highest Maximum</i>	25.9°C Herstmonceux, West End (East Sussex, 52mAMSL)
<i>Lowest Maximum</i>	15.1°C Wick Airport (Caithness, 36mAMSL)
<i>Highest Minimum</i>	18.5°C Exeter Airport No 2 (Devon, 27mAMSL)
<i>Lowest Minimum</i>	5.3°C Aviemore (Inverness-shire, 228mAMSL)
<i>Lowest Grass Minimum</i>	1.2°C Port Henderson (Ross & Cromarty, 18mAMSL)
<i>Most Rainfall</i>	83.0mm Trassey Slievenaman (Down, 220mAMSL)
<i>Most Sunshine</i>	9.8hr Stornoway Airport (Western Isles, 15mAMSL)
<i>Highest Gust</i>	50Kt 58mph Scilly: St Marys Airport (Isles Of Scilly, 31mAMSL)
<i>Highest Gust (mountain*)</i>	85Kt 98mph Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

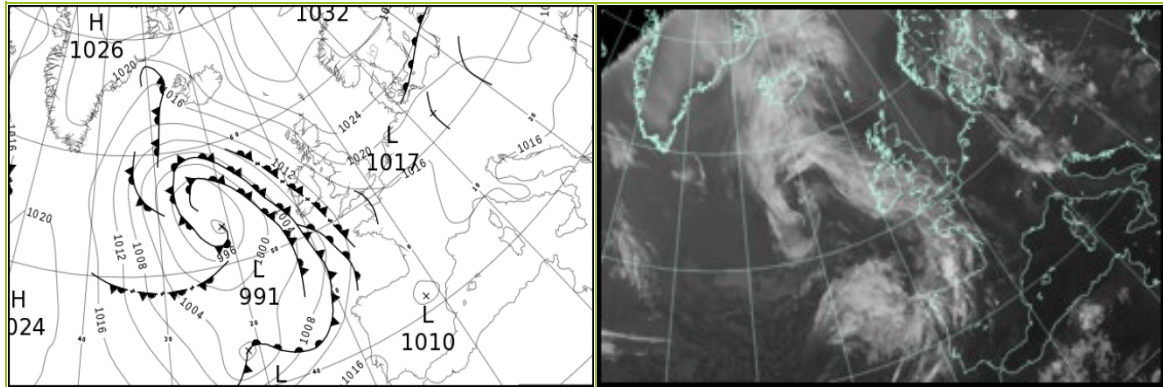

*Mountain stations are above 500mAMSL.

Daily Weather Summary for Friday 18 August 2023

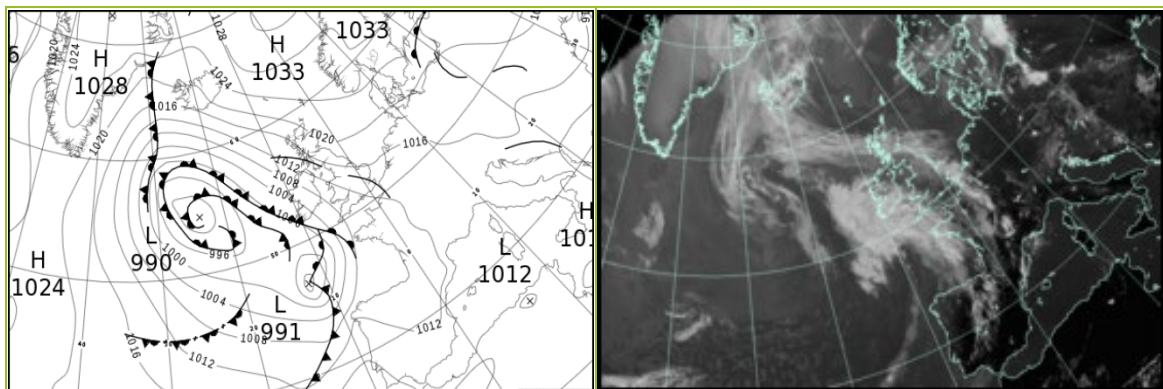

Daily Weather Summary for Friday 18 August 2023

Daily Weather Summary for Friday 18 August 2023

Daily Weather Summary for Friday 18 August 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Daily Weather Summary for Saturday 19 August 2023

This day's summary created 26/08/2023 04:02

Summary of the UK Weather for Saturday 19 August 2023

Storm Betty was the dominant system overnight, as the low centre moved slowly northwards up the Irish Sea and into Scotland. This brought widespread rain to Northern Ireland and Scotland through the early hours, which then mostly cleared into the North Sea by dawn. Thunderstorms followed the rain across southeast England and East Anglia with lightning and hail reported in the heaviest showers. Cornwall, Wales and Northern Ireland saw some the strongest winds from the storm, particularly at coasts. During the morning, rain cleared the north of Scotland, however further showery rain associated with a wraparound occlusion moved into Northern Ireland and then Western Scotland. Once this cleared there were further showers in Northern Ireland and some other northern and western regions during the afternoon, often over uplands, with a few further south in the West Country. Northwestern upland areas were mostly cloudy, however sunny spells developed for many other areas, especially towards the south coast. Winds began strong to gale force around Irish Sea coasts, slowly easing as Storm Betty moved north and weakened. Elsewhere, winds were moderate to fresh. Temperatures were near average for many, slightly warmer eastern England.

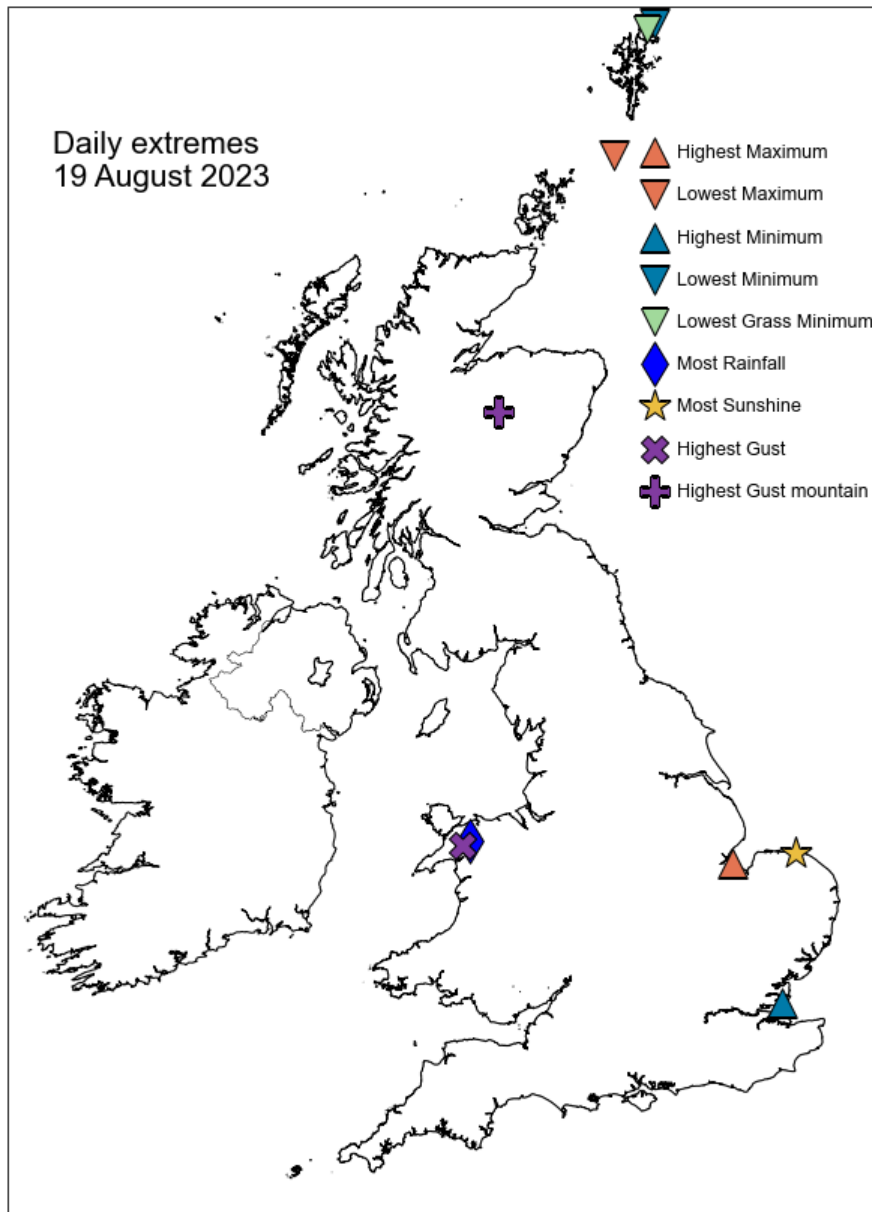

Daily Extremes

<i>Highest Maximum</i>	25.9°C Holbeach No 2 (Lincolnshire, 3mAMSL)
<i>Lowest Maximum</i>	16.1°C Fair Isle (Shetland, 57mAMSL)
<i>Highest Minimum</i>	18.6°C Shoeburyness, Landwick (Essex, 2mAMSL)
<i>Lowest Minimum</i>	11.8°C Baltasound No 2 (Shetland, 15mAMSL)
<i>Lowest Grass Minimum</i>	9.6°C Baltasound No 2 (Shetland, 15mAMSL)
<i>Most Rainfall</i>	19.6mm Capel Curig No 3 (Gwynedd, 216mAMSL)
<i>Most Sunshine</i>	10.6hr Weybourne (Norfolk, 21mAMSL)
<i>Highest Gust</i>	57Kt 66mph Capel Curig No 3 (Gwynedd, 216mAMSL)
<i>Highest Gust (mountain*)</i>	82Kt 94mph Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

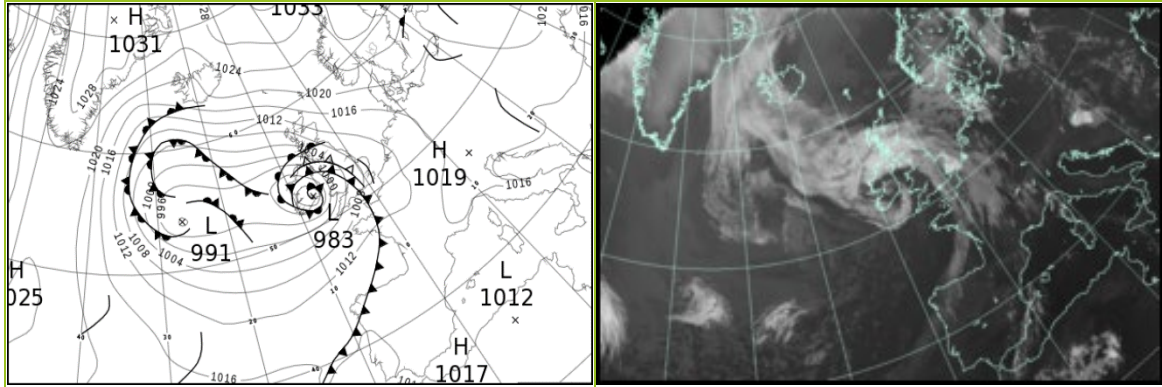

*Mountain stations are above 500mAMSL.

Daily Weather Summary for Saturday 19 August 2023

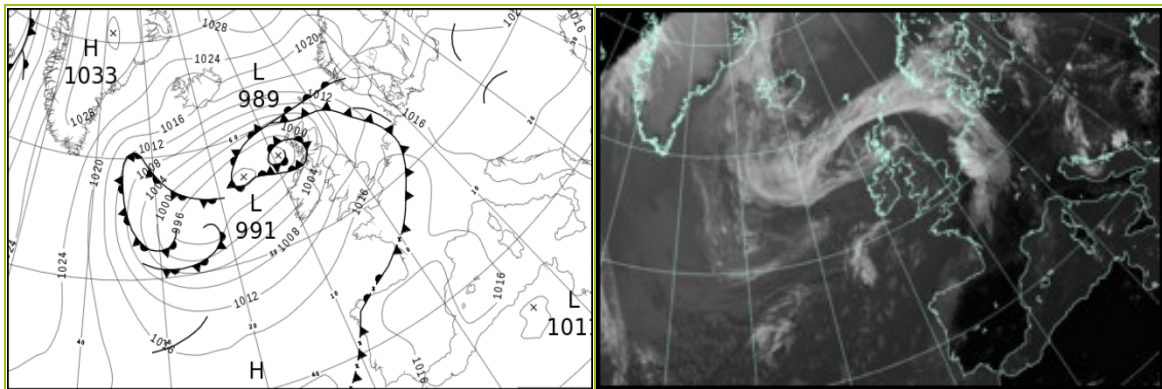

Daily Weather Summary for Saturday 19 August 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Daily Weather Summary for Sunday 20 August 2023

This day's summary created 27/08/2023 04:04

Summary of the UK Weather for Sunday 20 August 2023

Former Storm Betty was centred off the Western Isles with high pressure to the southeast. Most of the country had light cloud with clear spells. Western Scotland, Northern England, Northern Ireland and Wales had rain on upland areas. Cloud cover increased in central England overnight, but the east coast remained clear through to daybreak. Winds were light for most except for the Western Isles where they were strong initially. These had calmed significantly by the end of the period. It was a mild night for most. Early Sunday saw some low cloud and coastal fog, particularly in southern areas, but this cleared during the morning to leave sunny spells for most of the UK. Northern England, southern Scotland, Wales and the southwest peninsula saw some scattered showers during the morning, which faded eastward through the afternoon. Although a few lingered in central and southwest England, the evening was dry for most. However, increased cloud and some heavier showers moved across Northern Ireland and Western Scotland. Temperatures were fairly average for many, although the south-east was rather warm into the afternoon.

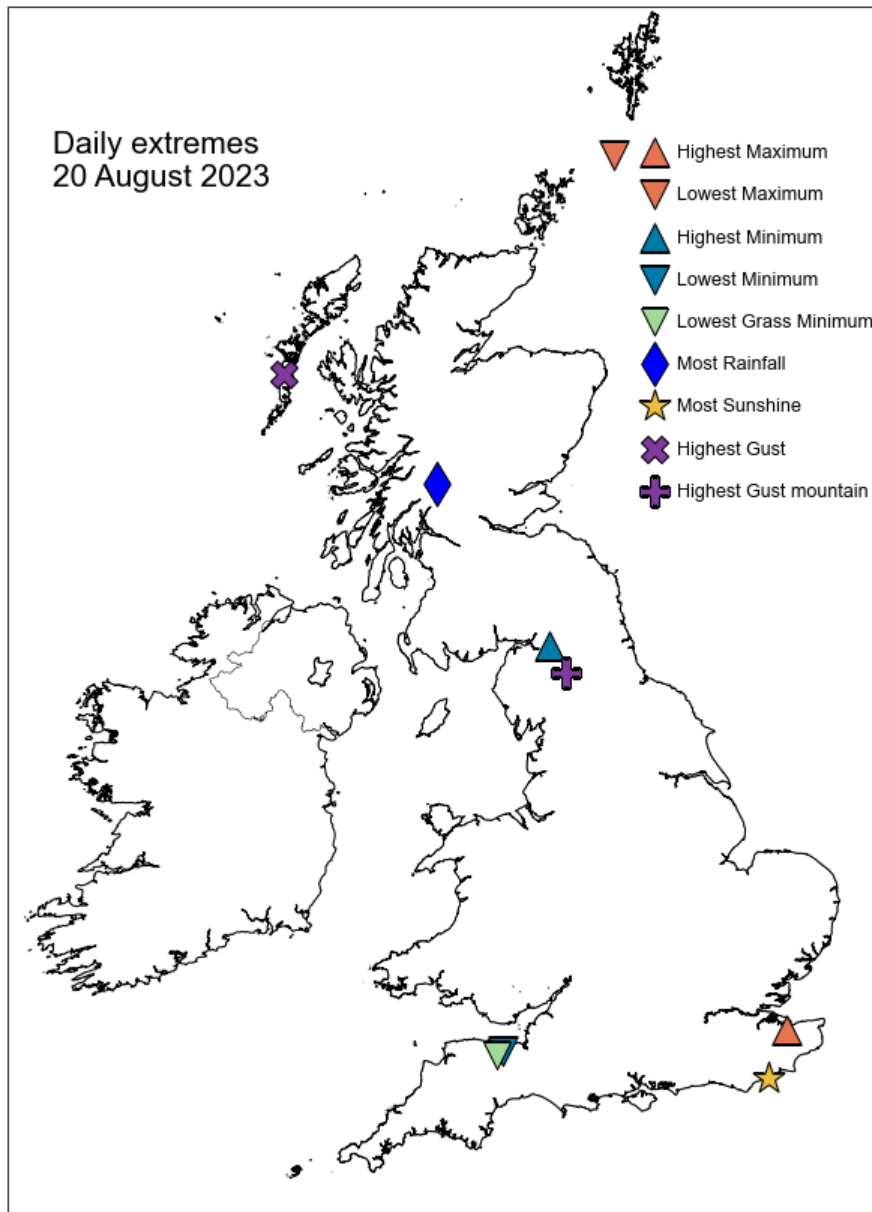

Daily Extremes

<i>Highest Maximum</i>	26.4°C Faversham (Kent, 46mAMSL)
<i>Lowest Maximum</i>	17.1°C Fair Isle (Shetland, 57mAMSL)
<i>Highest Minimum</i>	16.9°C Brampton No 3 (Cumbria, 117mAMSL)
<i>Lowest Minimum</i>	9.6°C Nettlecombe (Somerset, 96mAMSL)
<i>Lowest Grass Minimum</i>	3.9°C Nettlecombe (Somerset, 96mAMSL)
<i>Most Rainfall</i>	19.4mm Tyndrum No 3 (Perthshire (in Central Region), 168mAMSL)
<i>Most Sunshine</i>	13.4hr Hastings (East Sussex, 45mAMSL)
<i>Highest Gust</i>	36Kt 41mph South Uist Range (Western Isles, 4mAMSL)
<i>Highest Gust (mountain*)</i>	49Kt 56mph Great Dun Fell No 2 B (Cumbria, 847mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

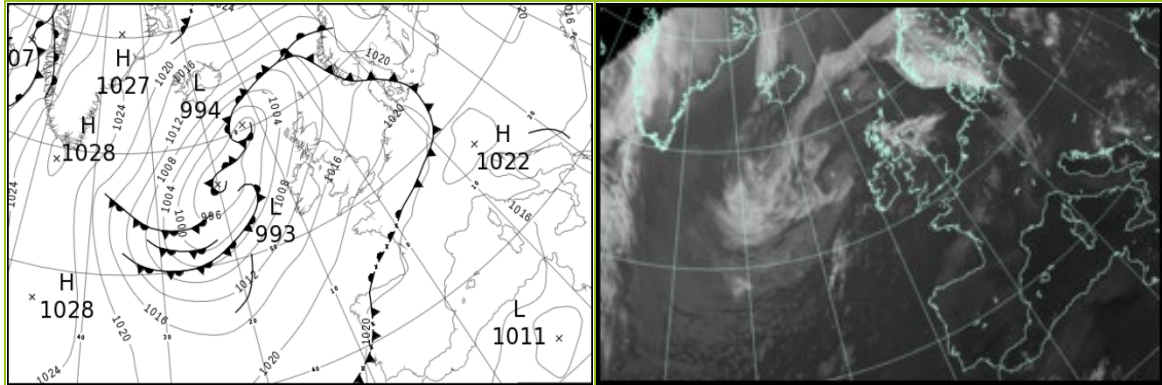

*Mountain stations are above 500mAMSL.

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Daily Weather Summary for Monday 21 August 2023

This day's summary created 28/08/2023 04:03

Summary of the UK Weather for Monday 21 August 2023

Low pressure sat to the northwest of the UK and high pressure to the south. During the early hours, it was dry across most of England and Wales, with clear spells. Later on in the night some mist and fog patches, along with low cloud formed across southern counties. Northern Ireland and Scotland remained rather cloudy, with showers here through the night. Early fog cleared and then for much of the country it was a warm day, with sunny spells. A few showers developed, largely in the north and west. A band of persistent rain moved in across into the Highlands as the afternoon and evening progressed. Temperatures were near average for most, but slightly above in the southeast of England. It remained breezy across the northwest of the UK throughout the day.

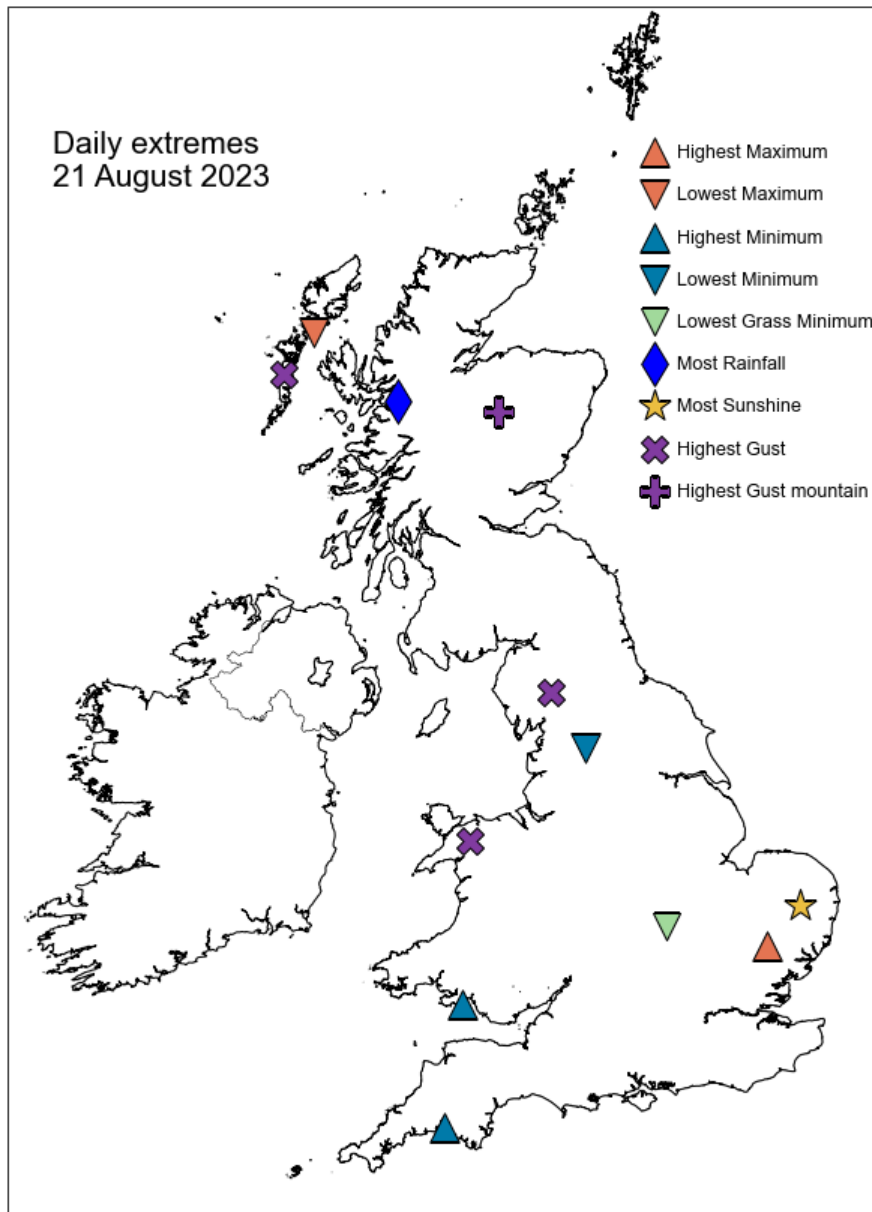

Daily Extremes

<i>Highest Maximum</i>	26.0°C Cavendish (Suffolk, 55mAMSL)
<i>Lowest Maximum</i>	15.5°C Harris: Quidnish (Western Isles, 13mAMSL)
<i>Highest Minimum</i>	16.9°C Plymouth, Kinterbury Point (Devon, 0mAMSL) also Mumbles Head (West Glamorgan, 44mAMSL)
<i>Lowest Minimum</i>	7.7°C Bank Newton No 2 (North Yorkshire, 128mAMSL)
<i>Lowest Grass Minimum</i>	3.3°C Pitsford (Northamptonshire, 114mAMSL)
<i>Most Rainfall</i>	53.2mm Achnagart (Ross & Cromarty, 15mAMSL)
<i>Most Sunshine</i>	12.1hr Tibenham Airfield (Norfolk, 52mAMSL)
<i>Highest Gust</i>	40Kt 46mph Shap (Cumbria, 263mAMSL) also South Uist Range (Western Isles, 4mAMSL) also Capel Curig No 3 (Gwynedd, 216mAMSL)
<i>Highest Gust (mountain*)</i>	62Kt 71mph Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

*Mountain stations are above 500mAMSL.

Daily Weather Summary for Monday 21 August 2023

Daily Weather Summary for Monday 21 August 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Daily Weather Summary for Tuesday 22 August 2023

This day's summary created 29/08/2023 04:03

Summary of the UK Weather for Tuesday 22 August 2023

Across Scotland, Northern Ireland, northern England and north Wales there was a mixture of clear spells and scattered showers overnight. The rest of England and Wales was dry with some low cloud across southern counties. It remained breezy across the north of the UK and it was a mild night for all. Sunshine, showers and patchy cloud were the theme of the day, with the majority of the showers restricted to western and central Scotland, Northern Ireland and northern England. As the day went on, most of the showers over England and Wales faded, but they remained scattered over Scotland and Northern Ireland through to the evening. For most of the country there were plenty of bright spells, with the best of the dry and sunny weather in the east and south. Winds were mostly westerly and light, though at times turned brisk, especially in the north of Scotland. It was warm in places, particularly the south and east under the sunshine; however, temperatures under cloud and in the northwest were closer to average.

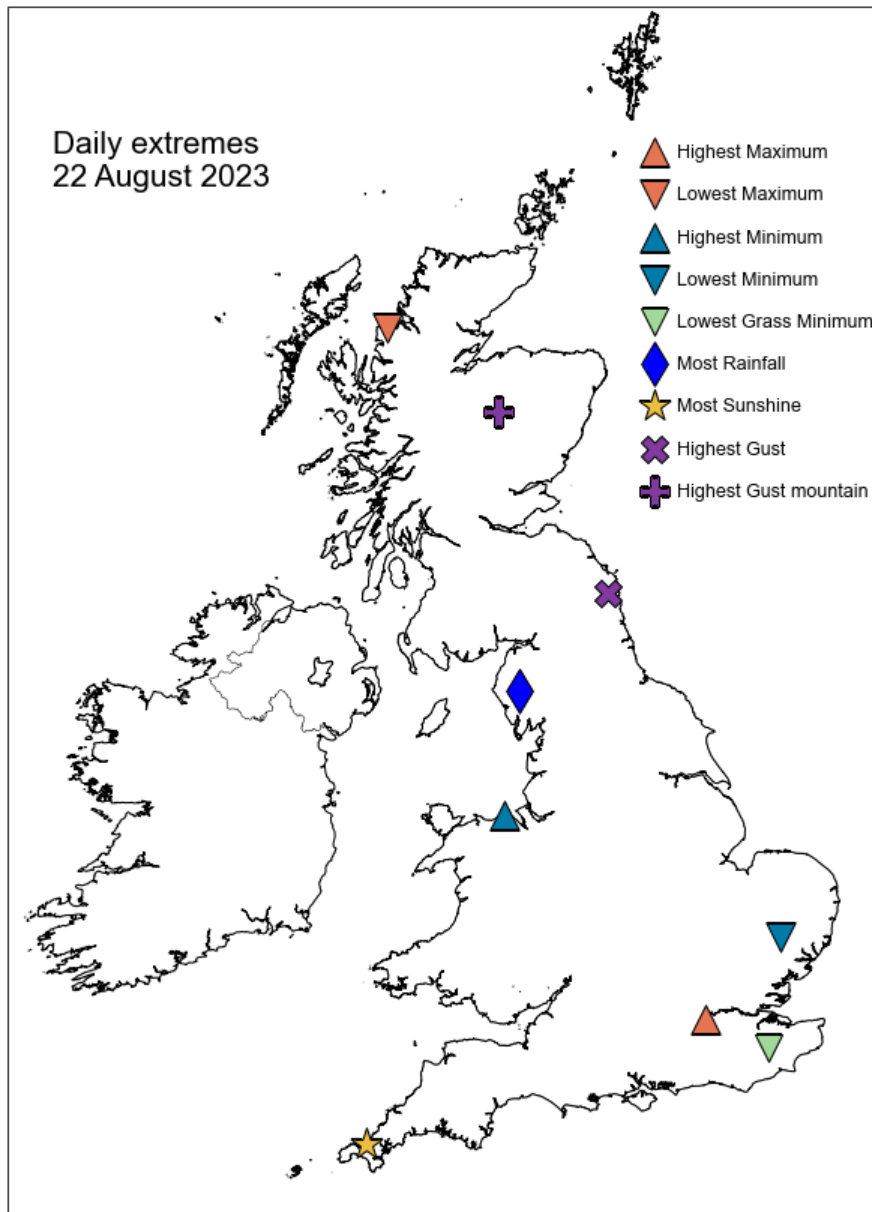

Daily Extremes

<i>Highest Maximum</i>	26.6°C Teddington, Bushy Park (Middlesex, 9mAMSL)
<i>Lowest Maximum</i>	15.4°C Aultbea No 2 (Ross & Cromarty, 11mAMSL)
<i>Highest Minimum</i>	17.5°C Prestatyn (Clwyd, 4mAMSL)
<i>Lowest Minimum</i>	11.2°C Felsham (Suffolk, 92mAMSL)
<i>Lowest Grass Minimum</i>	8.2°C Frittenden (Kent, 38mAMSL)
<i>Most Rainfall</i>	8.8mm Honister Pass (Cumbria, 358mAMSL)
<i>Most Sunshine</i>	12.4hr Camborne (Cornwall, 87mAMSL)
<i>Highest Gust</i>	36Kt 41mph Brizlee Wood (Northumberland, 250mAMSL)
<i>Highest Gust (mountain*)</i>	50Kt 58mph Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

*Mountain stations are above 500mAMSL.

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Daily Weather Summary for Wednesday 23 August 2023

This day's summary created 30/08/2023 04:02

Summary of the UK Weather for Wednesday 23 August 2023

It was a predominately dry start to Wednesday with clear spells and some patchy outbreaks of rain across Northern Ireland, the border regions and East Scotland. Through the early hours a band of rain associated with an occlusion pushed in from the west; initially effecting parts of western Wales, before pushing further north and west across northwest England, eventually reaching eastern areas. A secondary area of rain affected Northern Ireland through the early hours locally heavy at time, later pushing into Scotland. Winds remained light throughout, remaining mild. The band of rain continued to push east across Wales and northern England throughout the morning, breaking up by midday. Sporadic showers affected Northern Ireland and southwest Scotland for much of the day, and spread into central Scotland by afternoon. Further south in central and southern England it was dry for most of the day with plenty of cloud around. Into the evening further patchy rain and drizzle arrived from the west into north Wales and northwest England, as some heavy showers reached the far southeast of England.

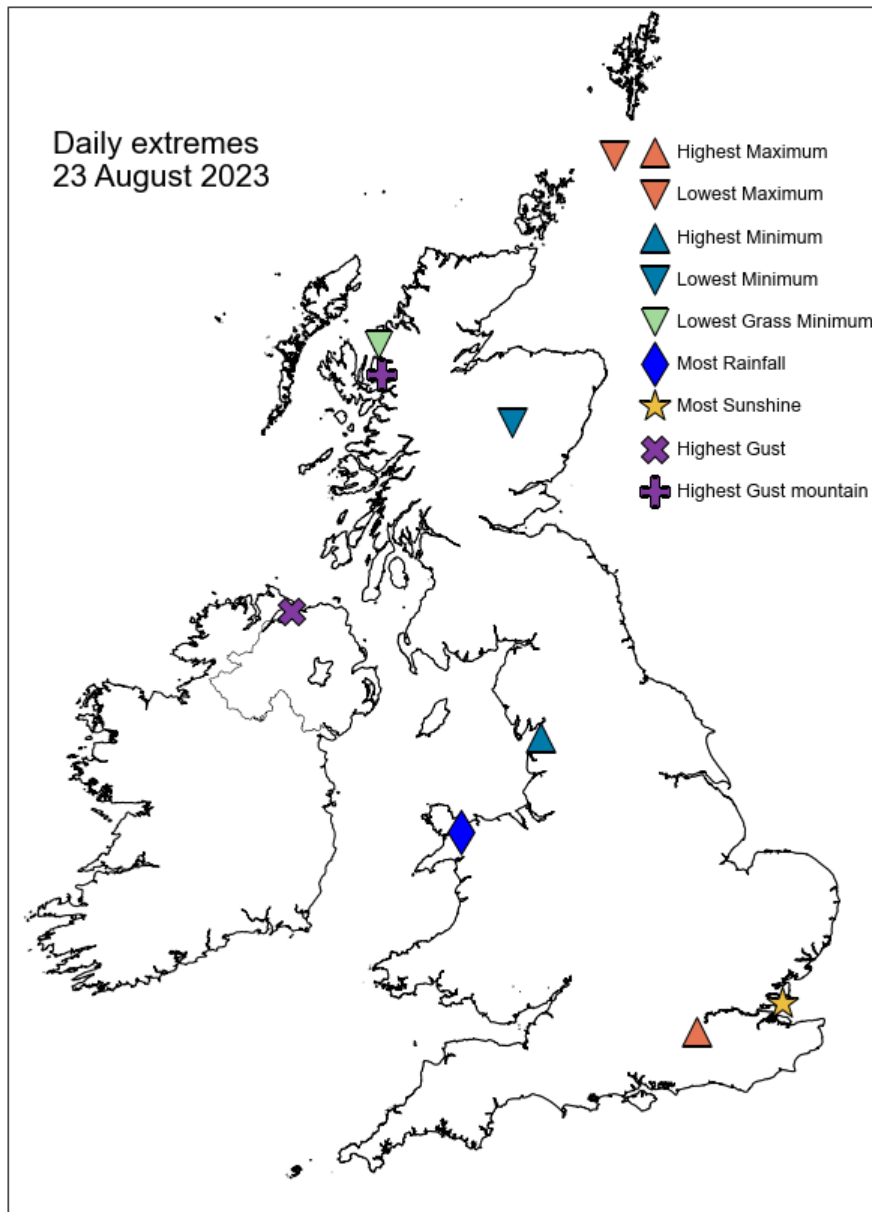

Daily Extremes

<i>Highest Maximum</i>	27.9°C Wisley (Surrey, 38mAMSL)
<i>Lowest Maximum</i>	15.1°C Fair Isle (Shetland, 57mAMSL)
<i>Highest Minimum</i>	16.4°C Morecambe No 2 (Lancashire, 7mAMSL)
<i>Lowest Minimum</i>	3.9°C Braemar No 2 (Aberdeenshire, 327mAMSL)
<i>Lowest Grass Minimum</i>	0.1°C Port Henderson (Ross & Cromarty, 18mAMSL)
<i>Most Rainfall</i>	18.0mm Bethesda Quarry (Gwynedd, 242mAMSL)
<i>Most Sunshine</i>	12.2hr Shoeburyness, Landwick (Essex, 2mAMSL)
<i>Highest Gust</i>	29Kt 33mph Magilligan No 2 (Londonderry, 6mAMSL)
<i>Highest Gust (mountain*)</i>	42Kt 48mph Bealach Na Ba No 2 (Ross & Cromarty, 773mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

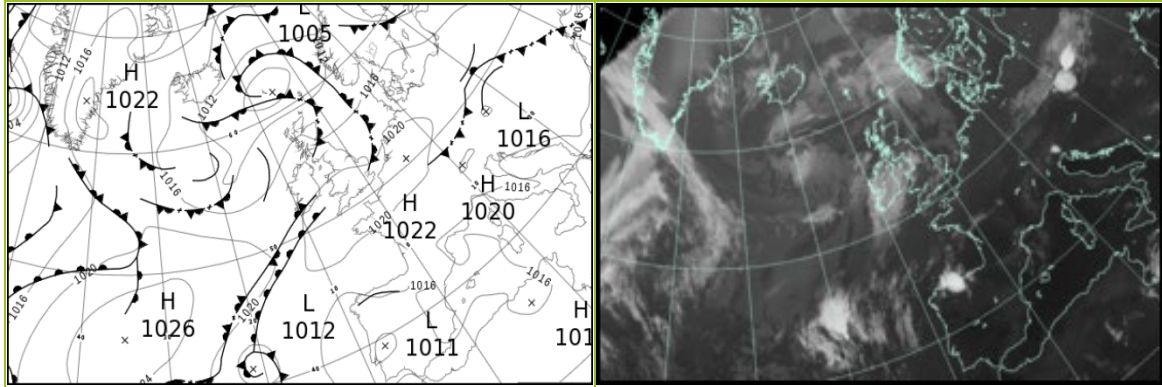

*Mountain stations are above 500mAMSL.

Daily Weather Summary for Wednesday 23 August 2023

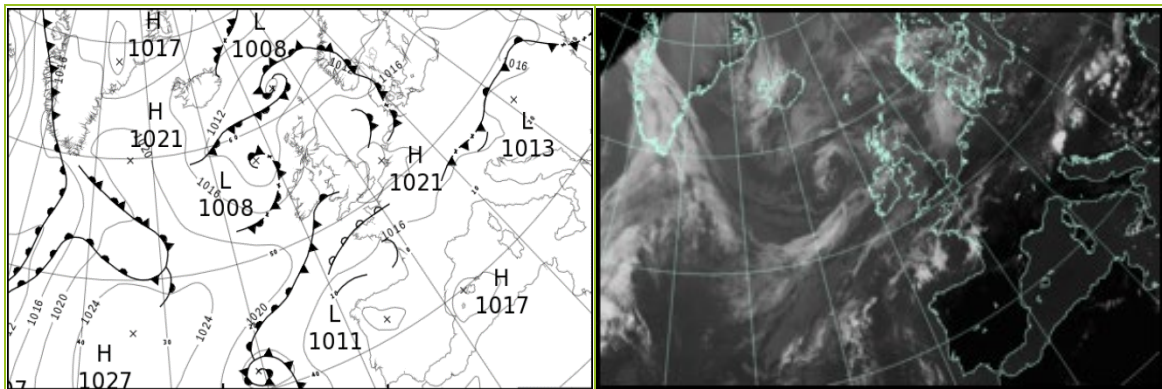

Daily Weather Summary for Wednesday 23 August 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Daily Weather Summary for Thursday 24 August 2023

This day's summary created 31/08/2023 04:02

Summary of the UK Weather for Thursday 24 August 2023

The heavy showers moved off the east coast in the early morning, but further bands of rain approached the south and southwest, shifting eastward towards dawn. Scotland also saw scattered showers, some heavy through the night. Much of the rest of the country remained largely dry, though with large amounts of cloud overhead, becoming patchier in Northern Ireland shortly before dawn. Winds were light across the country and the combination of cloud and light winds meant that it stayed fairly warm, especially in the southeast. Heavy showers continued to affected southern England and northeast Scotland through the morning, with light to moderate bands of rain across Wales and northern England. Heavy, thundery showers broke out for a time in Suffolk but quickly cleared to the east. Thundery showers occasionally moved in from the English Channel but made little progress inland. By lunchtime showers had cleared eastern Scotland but a band of heavy rain had reached the west coast. Into the afternoon this band of rain moved further inland, with some thundery showers affecting the far southeast of England. These continued into the evening.

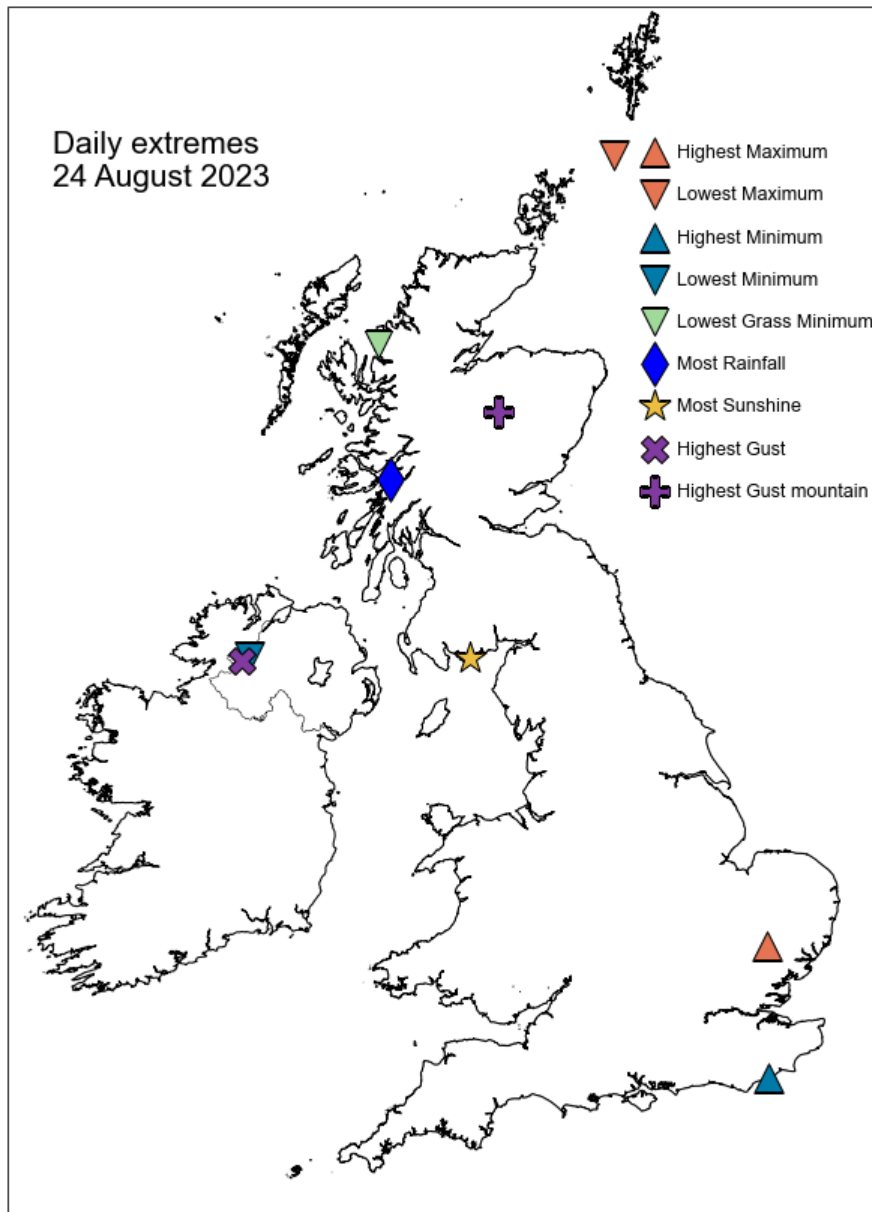

Daily Extremes

<i>Highest Maximum</i>	27.9°C Cavendish (Suffolk, 55mAMSL)
<i>Lowest Maximum</i>	14.1°C Fair Isle (Shetland, 57mAMSL)
<i>Highest Minimum</i>	18.0°C Hastings (East Sussex, 45mAMSL)
<i>Lowest Minimum</i>	5.8°C Castlederg (Tyrone, 49mAMSL)
<i>Lowest Grass Minimum</i>	2.5°C Port Henderson (Ross & Cromarty, 18mAMSL)
<i>Most Rainfall</i>	35.6mm Dunstaffnage (Argyll (in Strathclyde Region), 3mAMSL)
<i>Most Sunshine</i>	11.3hr Dundrennan (Kirkcudbrightshire, 113mAMSL)
<i>Highest Gust</i>	31Kt 36mph Castlederg (Tyrone, 49mAMSL)
<i>Highest Gust (mountain*)</i>	38Kt 44mph Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

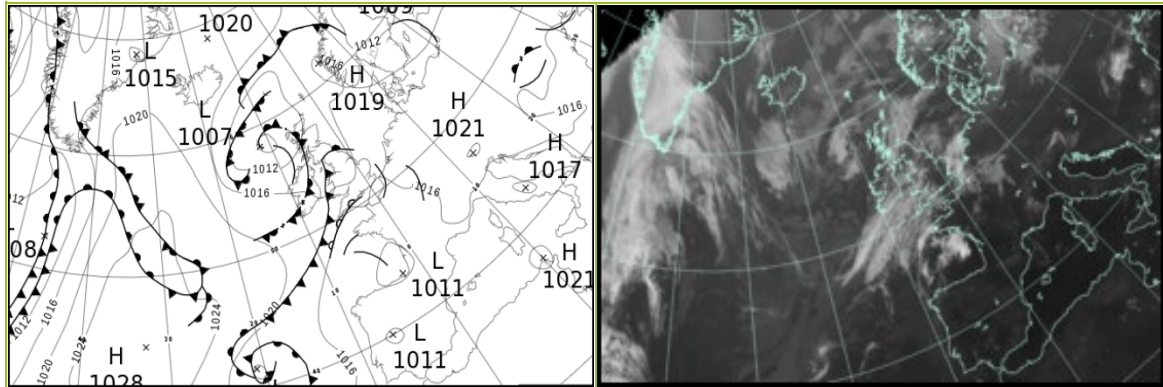

*Mountain stations are above 500mAMSL.

Daily Weather Summary for Thursday 24 August 2023

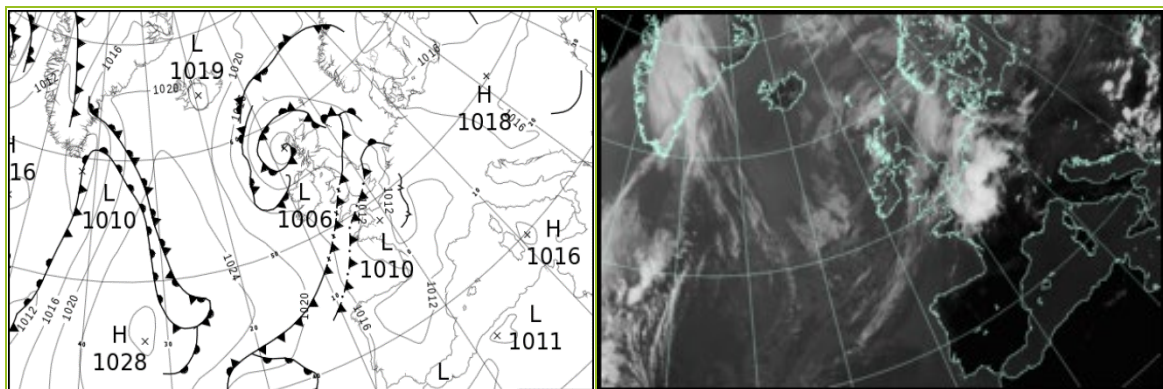

Daily Weather Summary for Thursday 24 August 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Daily Weather Summary for Friday 25 August 2023

This day's summary created 01/09/2023 04:13

Summary of the UK Weather for Friday 25 August 2023

Friday started off to be clear and dry for most across England, with some localised showers brought by the cold front that crossed the country earlier. In Scotland, slow moving showers affected mainly the north and west, some heavy, from the occlusion that is lingering above the area. There were also some showers in Northwest England and near the north coast of Northern Ireland. Winds were mostly light in England, slightly stronger near some northwestern coasts. It was a cooler night for many, although milder in the southeast. Away from the showers in the northwest of the UK, the morning began with variable amounts of cloud cover. The clearest weather was in central and eastern areas. The North of Scotland saw more significant showers. By midday, showers had developed widely across the northern half of the UK. During the afternoon, an area of showers pushed into southwest England and south Wales. Showers were heavy in places, with sporadic thunder having occurred in places within many regions by the end of the day, including Scotland, northern England, and southwest England. East Anglia and southeast England remained mostly dry. Winds were mostly light but moderate around some coasts. It was a relatively cool day for many.

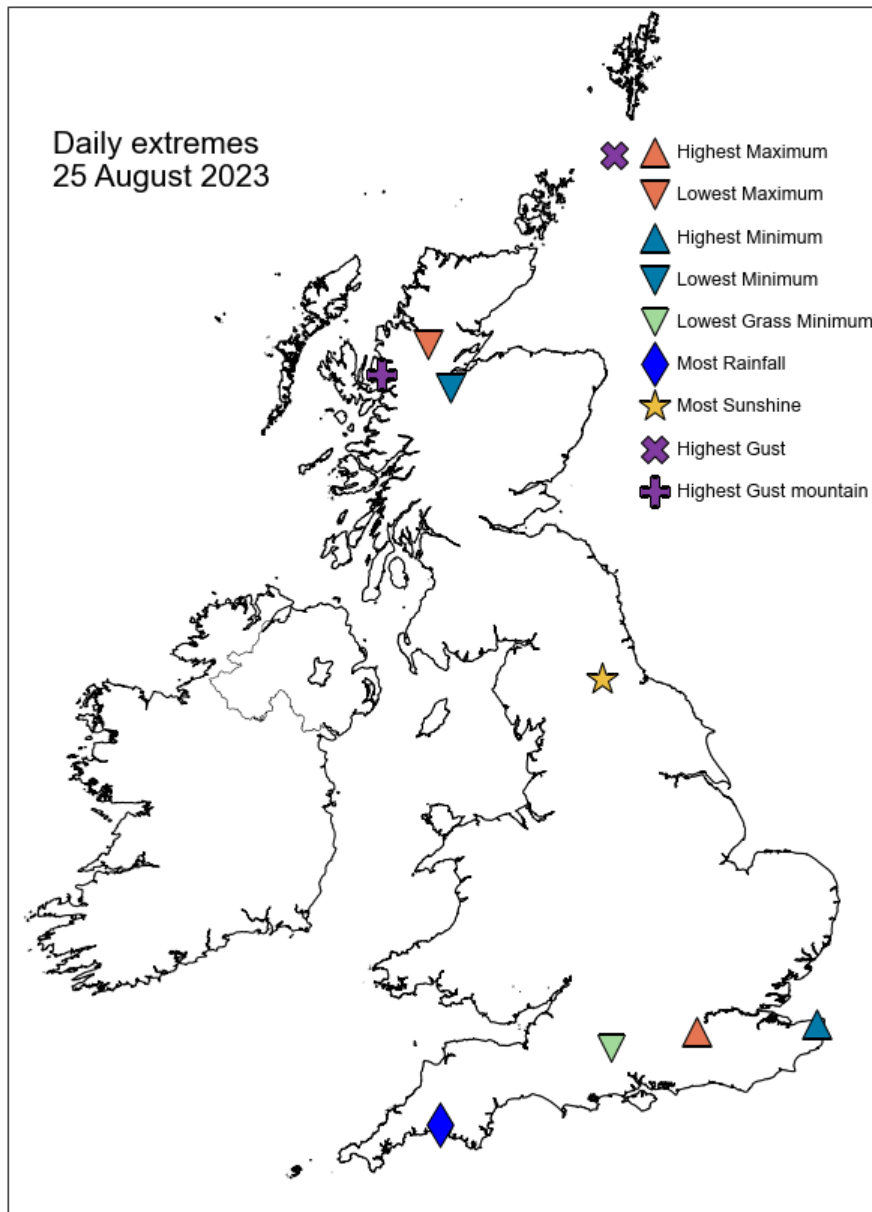

Daily Extremes

<i>Highest Maximum</i>	23.1°C Wisley (Surrey, 38mAMSL)
<i>Lowest Maximum</i>	12.4°C Loch Glascarnoch (Ross & Cromarty, 269mAMSL)
<i>Highest Minimum</i>	16.0°C Manston (Kent, 49mAMSL)
<i>Lowest Minimum</i>	4.6°C Drumnadrochit (Inverness-shire, 53mAMSL)
<i>Lowest Grass Minimum</i>	1.3°C Boscombe Down (Wiltshire, 126mAMSL)
<i>Most Rainfall</i>	45.2mm Hatt S Wks (Cornwall, 22mAMSL)
<i>Most Sunshine</i>	9.1hr Copley (Durham, 253mAMSL)
<i>Highest Gust</i>	34Kt 39mph Fair Isle (Shetland, 57mAMSL)
<i>Highest Gust (mountain*)</i>	44Kt 51mph Bealach Na Ba No 2 (Ross & Cromarty, 773mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

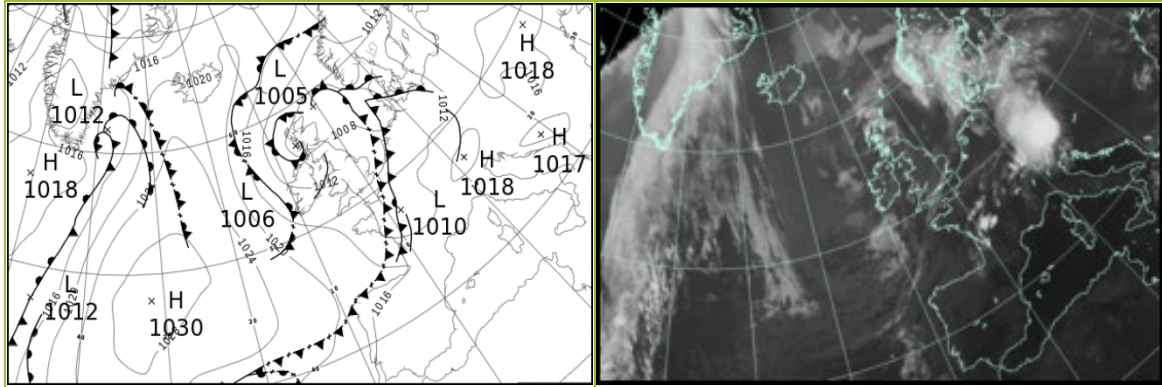

*Mountain stations are above 500mAMSL.

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Daily Weather Summary for Saturday 26 August 2023

This day's summary created 02/09/2023 04:03

Summary of the UK Weather for Saturday 26 August 2023

Heavy, thundery showers affected northwest England, the slow-moving nature of which lead to localised impacts. There were also heavy showers in the far southeast of England, Northern Ireland and eastern Scotland. These tended to ease by the early hours, but remained heavy over Northern Ireland. Elsewhere there were outbreaks of showers over Wales and southwest England. By dawn the showers had cleared the southeast coast of England, but continued to affect Scotland, Northern Ireland, Wales and southwest England. During the morning, showers continued to affect Wales, southwest England, and the south coast, with a heavy band persisting across southeast Scotland, and another area of rain moving south over northern and later western Scotland. Between these areas, many central, eastern and northern areas of England and central Scotland began mostly dry with sunshine in places. However, showers developed widely by late morning, becoming locally heavy and thundery by midday and through the afternoon. Lightning was detected in many showers, mostly across England, especially towards central, eastern and some northern parts. There were also some funnel cloud reports with a waterspout seen off the Isle of Wight. Some western areas near windward coasts, and parts of southern Scotland became mostly dry through the afternoon. Winds were mostly light, more moderate towards the westsouthwest, and around some coasts. Temperatures were generally slightly cooler than average.

Daily Extremes

<i>Highest Maximum</i>	21.8°C Santon Downham (Suffolk, 6mAMSL)
<i>Lowest Maximum</i>	13.3°C Loch Glascarnoch (Ross & Cromarty, 269mAMSL)
<i>Highest Minimum</i>	15.1°C Bude (Cornwall, 15mAMSL)
<i>Lowest Minimum</i>	5.5°C Tyndrum No 3 (Perthshire (in Central Region), 168mAMSL)
<i>Lowest Grass Minimum</i>	0.4°C South Newington (Oxfordshire, 105mAMSL)
<i>Most Rainfall</i>	35.7mm Langley, Bottoms Resr (Cheshire, 209mAMSL)
<i>Most Sunshine</i>	9.5hr Boulmer (Northumberland, 23mAMSL)
<i>Highest Gust</i>	28Kt 32mph Wight: St Catherines Point (Isle Of Wight, 20mAMSL) also Aberdaron (Gwynedd, 86mAMSL) also Orlock Head (Down, 35mAMSL) also South Uist Range (Western Isles, 4mAMSL)
<i>Highest Gust (mountain*)</i>	38Kt 44mph Bealach Na Ba No 2 (Ross & Cromarty, 773mAMSL)

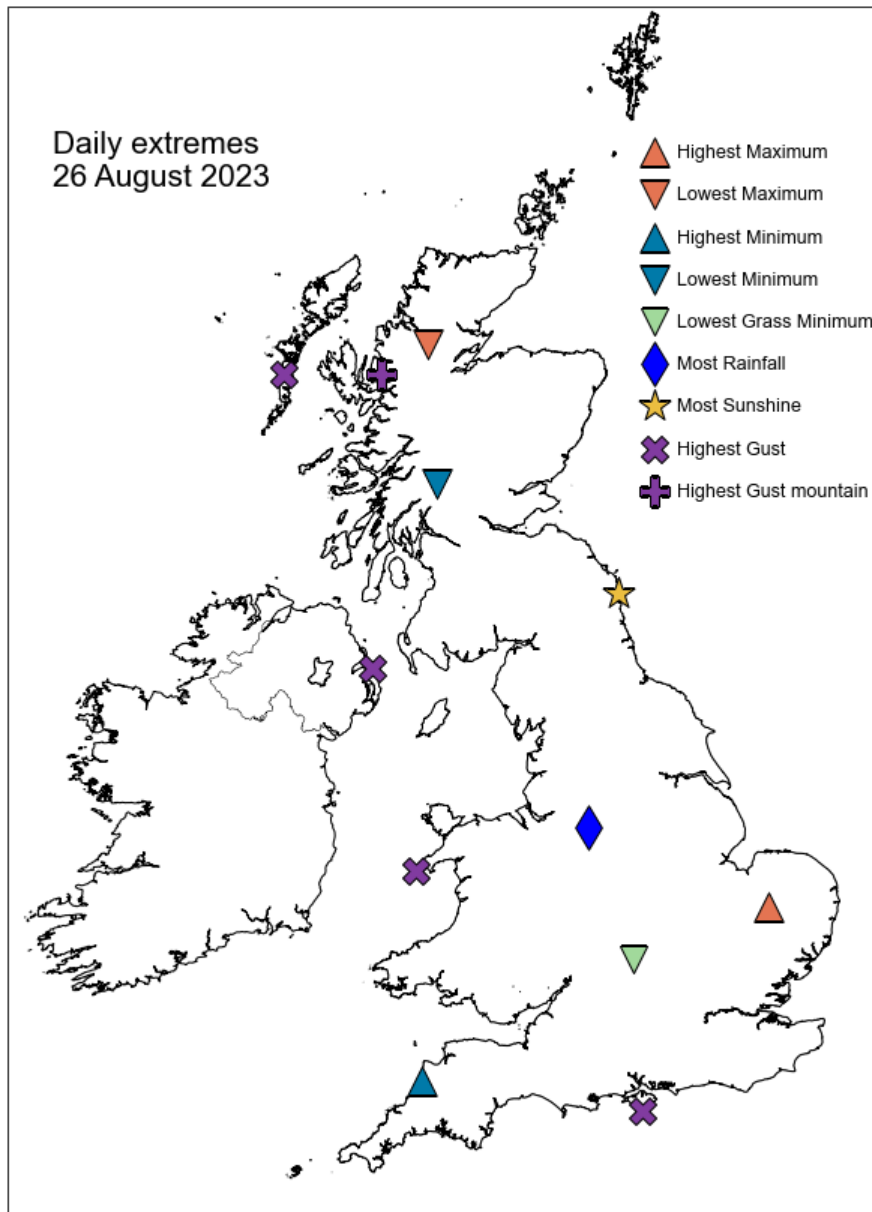

*Greatest Snow
Depth at 0900 UTC*

No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

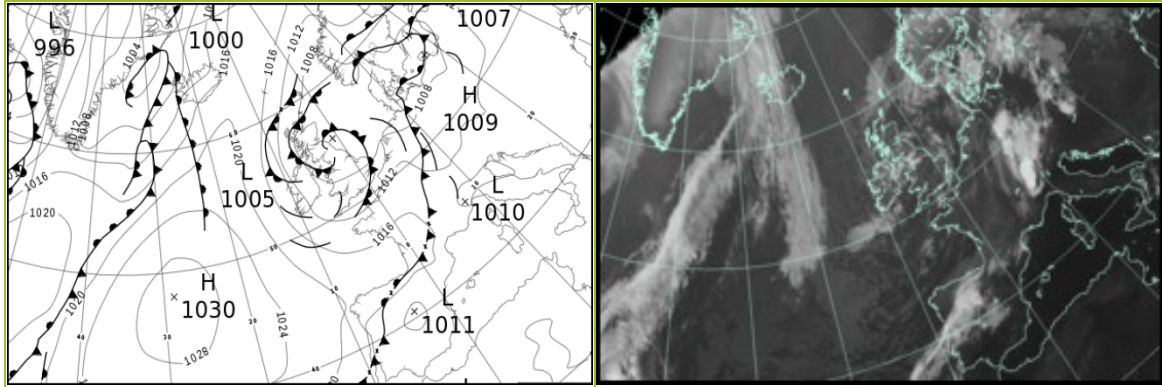

*Mountain stations are above 500mAMSL.

Daily Weather Summary for Saturday 26 August 2023

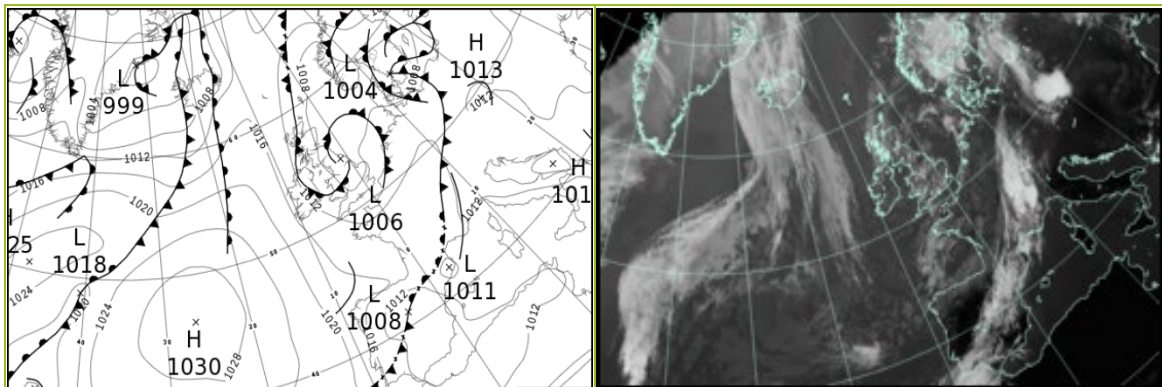

Daily Weather Summary for Saturday 26 August 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Daily Weather Summary for Sunday 27 August 2023

This day's summary created 03/09/2023 04:03

Summary of the UK Weather for Sunday 27 August 2023

Heavy showers affected northwest England through the early hours. Elsewhere, bands of light to moderate rain broke out over many areas, with eastern areas staying driest. A band of moderate frontal rain moved into Northern Ireland around 4am, reaching the western Isles by dawn. During the morning, the frequent, heavy showers affecting parts of northwest England gradually eased, with further showers breaking out across northern England and southeastern Scotland by midday. The band of rain in Northern Ireland continued to progress slowly eastwards, however it weakened to become mostly light by late morning, with other western fringes of Scotland, Wales and southwest England seeing mostly light, patchy rain and drizzle through the afternoon. To the east, many central-western areas were mostly dry, if rather cloudy, although parts of southeast England saw sunnier spells. There were a few showers in the southeast, however eastern England and southeast Scotland saw a line of heavy, slow moving showers stretching from Essex to Aberdeenshire. Many showers in eastern England had lightning detected, so there were localised thunderstorms again. Winds were light in the northeast with a more moderate breeze elsewhere. Temperatures were slightly cooler than average.

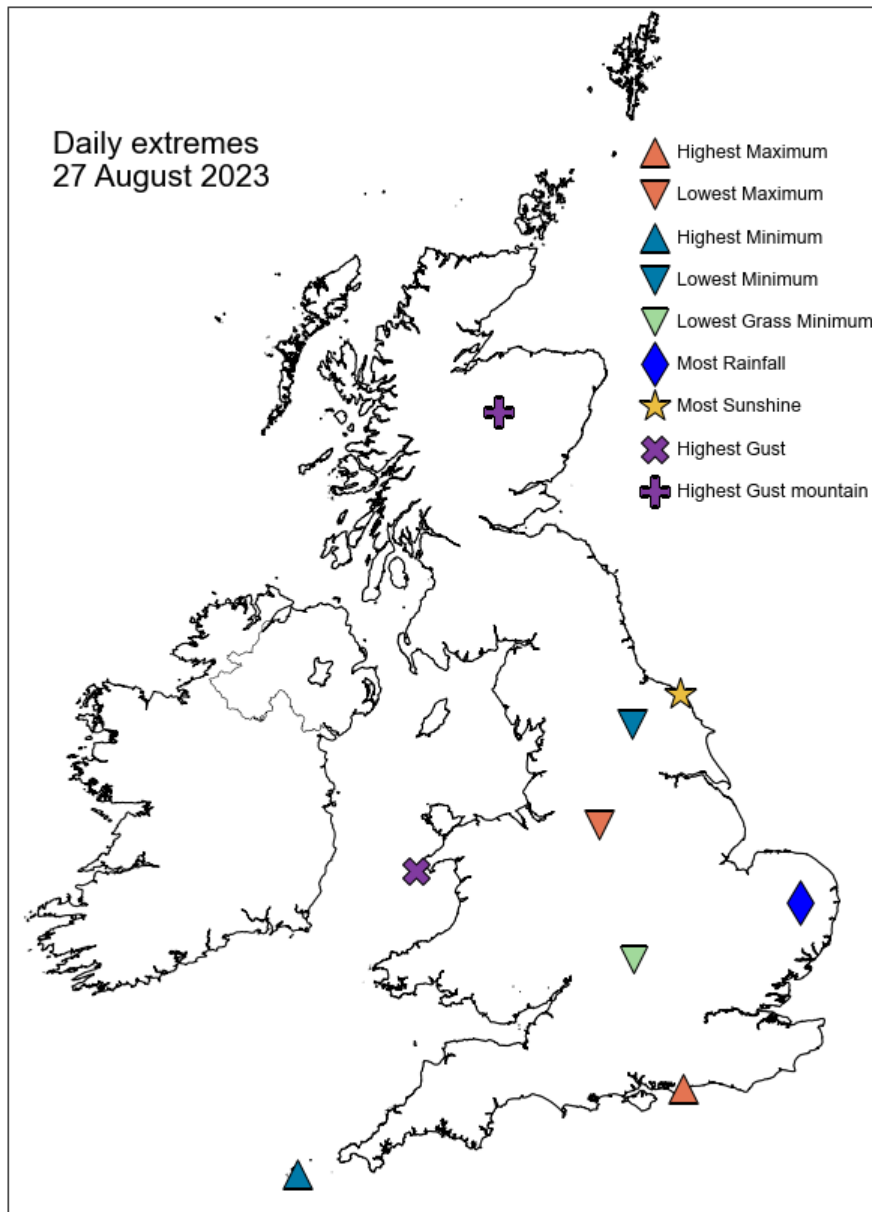

Daily Extremes

<i>Highest Maximum</i>	21.6°C Bognor Regis (West Sussex, 7mAMSL)
<i>Lowest Maximum</i>	13.2°C Buxton (Derbyshire, 307mAMSL)
<i>Highest Minimum</i>	15.5°C Scilly: St Marys Airport (Isles Of Scilly, 31mAMSL)
<i>Lowest Minimum</i>	4.7°C Topcliffe (North Yorkshire, 25mAMSL)
<i>Lowest Grass Minimum</i>	0.7°C South Newington (Oxfordshire, 105mAMSL)
<i>Most Rainfall</i>	25.8mm Fornsett End S Wks (Norfolk, 44mAMSL)
<i>Most Sunshine</i>	10.5hr Whitby (North Yorkshire, 41mAMSL)
<i>Highest Gust</i>	33Kt 38mph Aberdaron (Gwynedd, 86mAMSL)
<i>Highest Gust (mountain*)</i>	31Kt 36mph Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

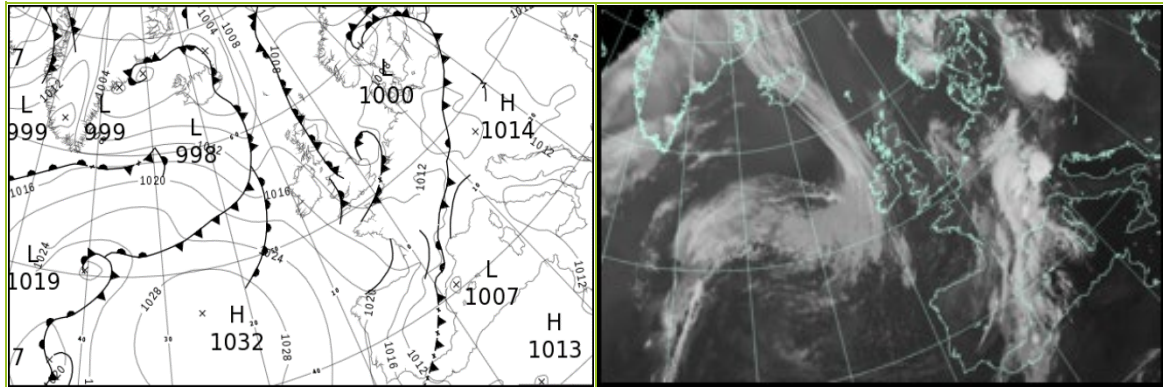

*Mountain stations are above 500mAMSL.

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Daily Weather Summary for Monday 28 August 2023

This day's summary created 05/09/2023 09:27

Summary of the UK Weather for Monday 28 August 2023

It was a fairly benign start to the week as most areas were covered with variable cloud by midnight, brought about by an occlusion running the length of mainland UK. The general northwesterly flow thickened cloud in the northwest, bringing some isolated showers here, drizzly outbreaks along western coasts and patches of mist and fog post-occlusion. Elsewhere remained mostly dry with a few sunny spells by dawn. The minimum recorded temperature was 6.6 degrees Celsius at Aboyne No 2, Aberdeenshire. The morning was fairly cloudy for most, especially in the western half of the UK. A few scattered showers moved eastward across Northern Ireland and Scotland through the day as an occlusion passed through, with a few showers also in northern Wales and north-west England. Most of the UK stayed dry though with some sunny spells, although cloud remained prominent for most. Winds were generally light, with the strongest breezes on the north and north-western coasts of Scotland.

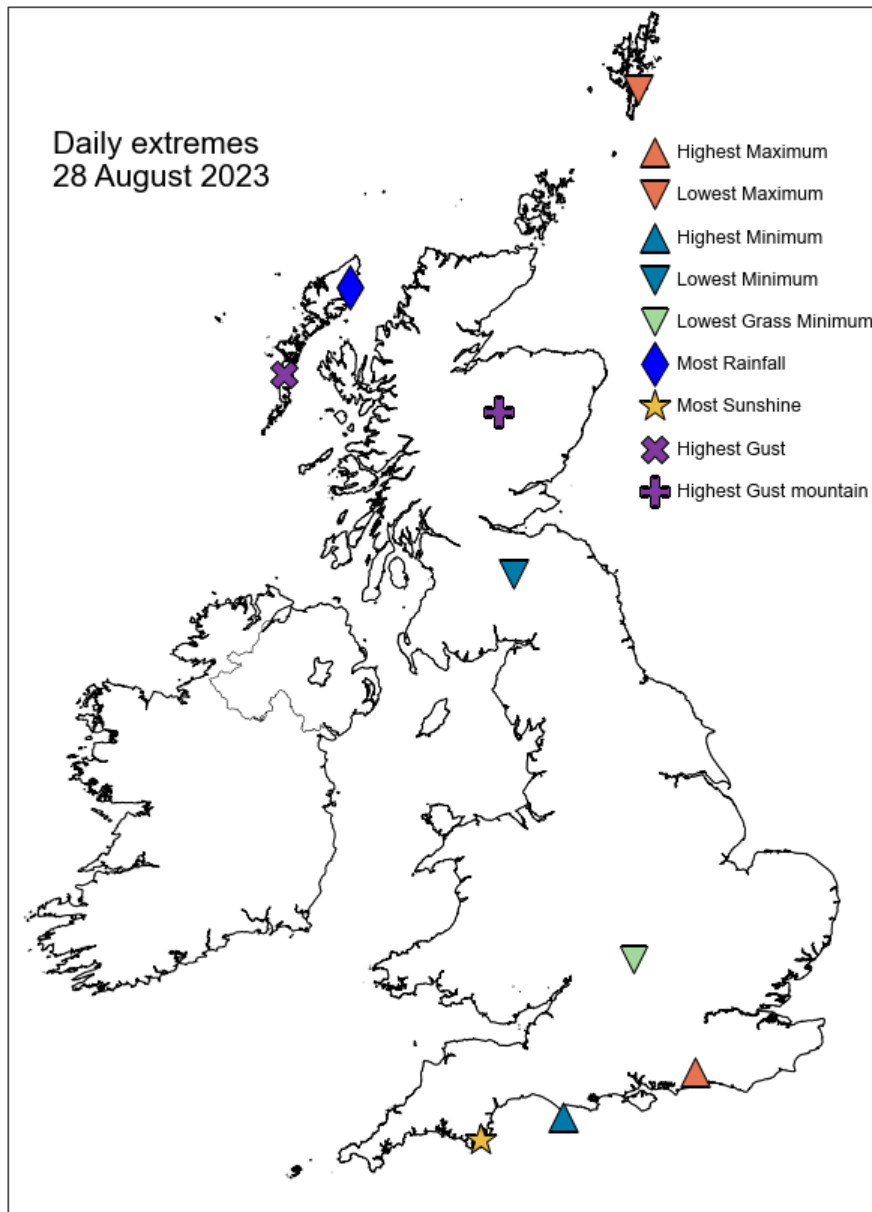

Daily Extremes

<i>Highest Maximum</i>	22.7°C Wiggonholt (West Sussex, 28mAMSL)
<i>Lowest Maximum</i>	13.6°C Lerwick (Shetland, 82mAMSL)
<i>Highest Minimum</i>	15.2°C Isle Of Portland (Dorset, 52mAMSL)
<i>Lowest Minimum</i>	6.4°C Dawyck Botanic Garden (Peebleshire, 183mAMSL)
<i>Lowest Grass Minimum</i>	1.5°C South Newington (Oxfordshire, 105mAMSL)
<i>Most Rainfall</i>	15.4mm Stornoway Airport (Western Isles, 15mAMSL)
<i>Most Sunshine</i>	9.4hr Slapton (Devon, 32mAMSL)
<i>Highest Gust</i>	29Kt 33mph South Uist Range (Western Isles, 4mAMSL)
<i>Highest Gust (mountain*)</i>	46Kt 53mph Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

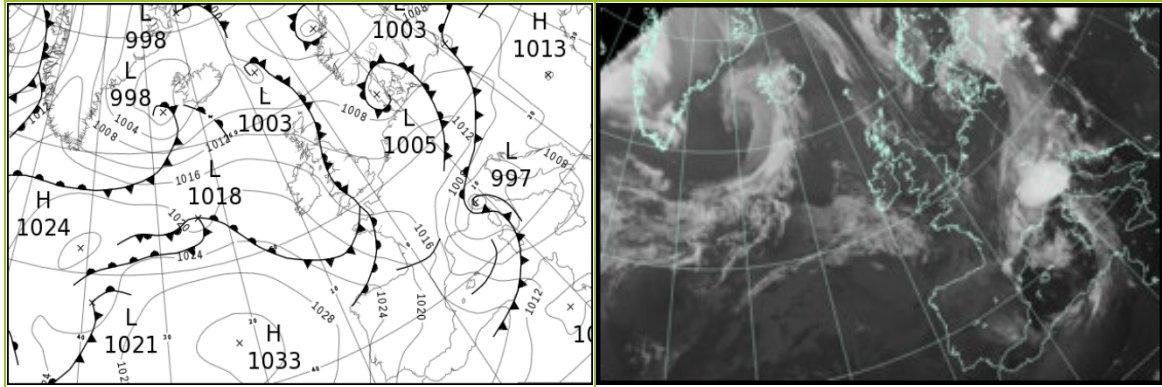

*Mountain stations are above 500mAMSL.

Daily Weather Summary for Monday 28 August 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Daily Weather Summary for Tuesday 29 August 2023

This day's summary created 05/09/2023 04:02

Summary of the UK Weather for Tuesday 29 August 2023

It was largely dry overnight across the UK, with any showers generally restricted to the west. Western Scotland saw showery outbreaks of rain as several occlusions and a trough swept across the area in the early hours. Northern Ireland, southwest England, and Wales saw some showery outbreaks of patchy light rain too. Elsewhere, it was a mostly cloudy picture with a few clearer gaps towards the east. Winds were light across most of the country, picking up in western Scotland. Temperatures were near average, but slightly milder along western coasts under the cloud. While it was a dry start for much of the UK, the theme of the day became rain and showers interspersed with some sunny spells. A thick band of rain, associated with the occlusion, moved southeastwards across Scotland through the day, turning heavy in places. Further occlusions farther south also brought rain and showers across southern Scotland, Wales, and large parts of England, while Northern Ireland also saw showers break out. Southeastern England stayed largely dry but retained patchy cloud through the day. Temperatures for the day were generally around, or a little below, climatological average for the time of year.

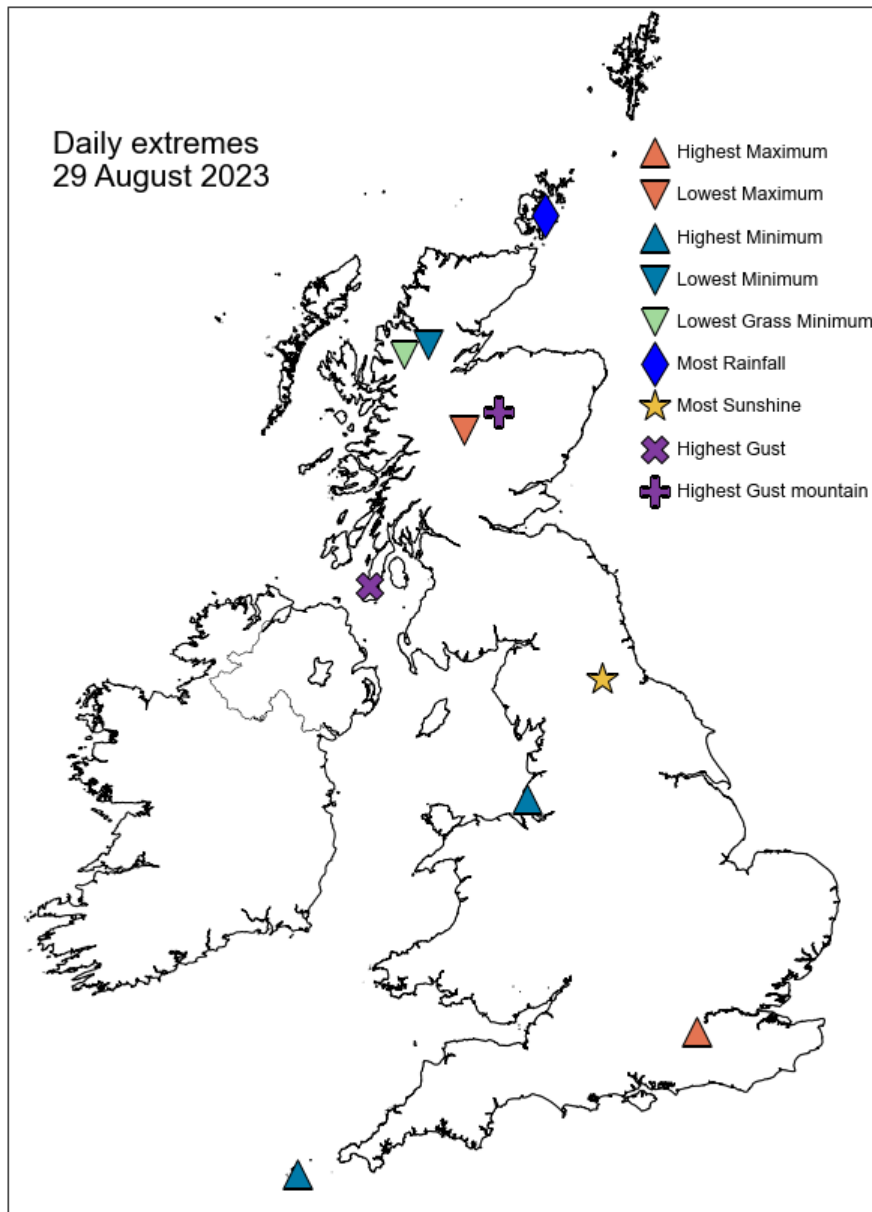

Daily Extremes

<i>Highest Maximum</i>	21.9°C Wisley (Surrey, 38mAMSL)
<i>Lowest Maximum</i>	13.2°C Dalwhinnie No 2 (Inverness-shire, 351mAMSL)
<i>Highest Minimum</i>	14.8°C Crosby (Merseyside, 9mAMSL) also Scilly: St Marys Airport (Isles Of Scilly, 31mAMSL)
<i>Lowest Minimum</i>	4.9°C Loch Glascarnoch (Ross & Cromarty, 269mAMSL)
<i>Lowest Grass Minimum</i>	0.8°C Kinlochewe (Ross & Cromarty, 25mAMSL)
<i>Most Rainfall</i>	32.6mm Kirkwall (Orkney, 26mAMSL)
<i>Most Sunshine</i>	9.9hr Copley (Durham, 253mAMSL)
<i>Highest Gust</i>	33Kt 38mph Machrihanish (Argyll (in Strathclyde Region), 10mAMSL)
<i>Highest Gust (mountain*)</i>	47Kt 54mph Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

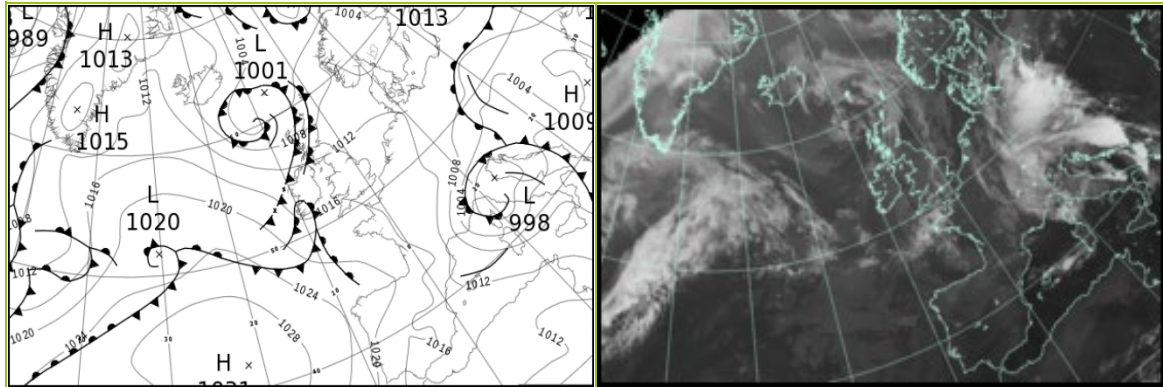

*Mountain stations are above 500mAMSL.

Daily Weather Summary for Tuesday 29 August 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Daily Weather Summary for Wednesday 30 August 2023

This day's summary created 06/09/2023 04:04

Summary of the UK Weather for Wednesday 30 August 2023

Wednesday started with a low pressure centre tracking eastwards across the north of the UK. Wraparound occlusions in association with the low brought occasional outbreaks of patchy light rain, with eastern Scotland experiencing some heavier downpours in the early hours. Much of the east and southeast remained largely dry overnight. Most places experienced variable cloud with some decent clear spells overnight. Showers were the overarching theme for Wednesday morning, affecting Scotland, Wales and southern parts of England. The synoptic situation was governed by low pressure, located over the North Sea. Occluded fronts associated to this low pressure system lingered over northern England and the far northwest of Scotland, contributing to the previously mentioned precipitation. Northerly light winds were observed through the course of the day. A cloudy start for most, but as the day progressed cloud broke up, allowing for clear spells, especially over southern and central parts. Many of the showers died out during the evening and the first part of the night. Temperatures remained below average for the time of the year.

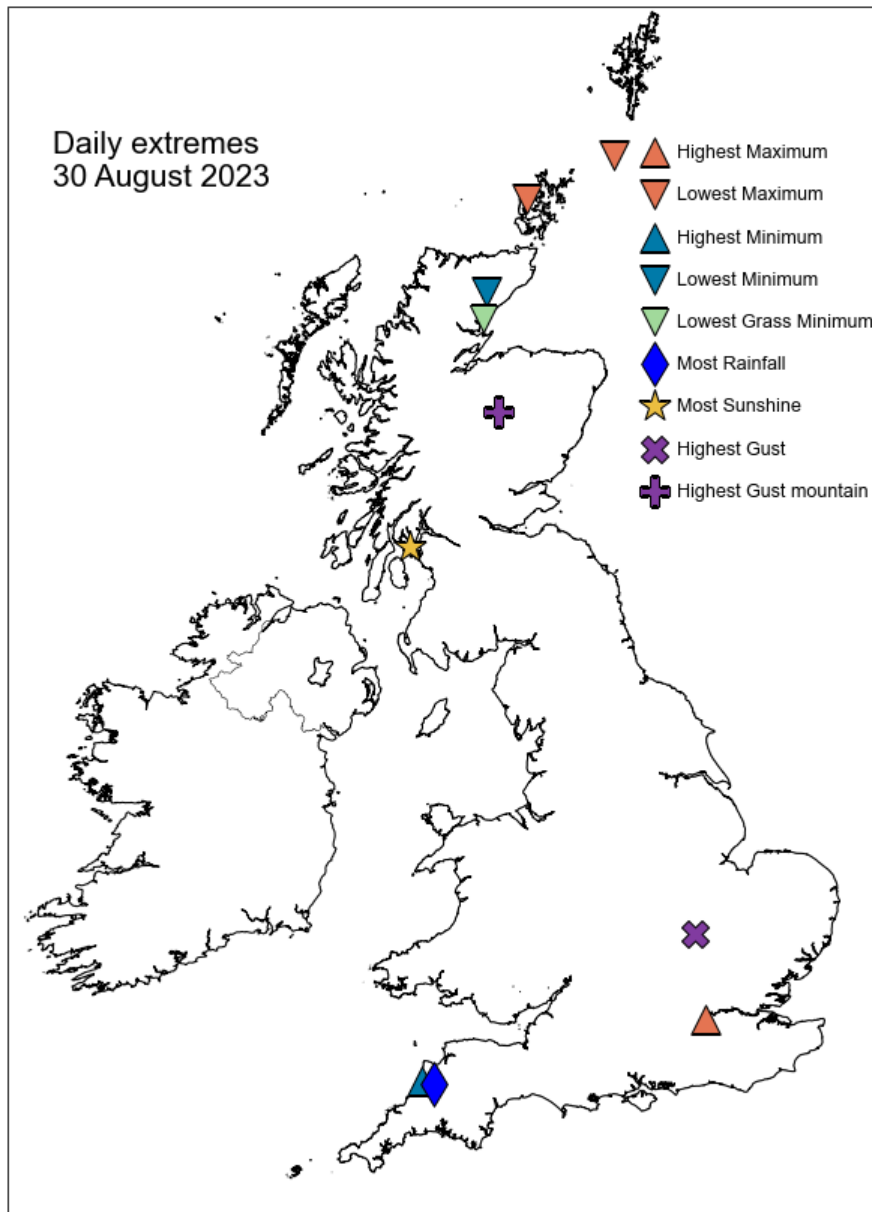

Daily Extremes

<i>Highest Maximum</i>	21.5°C Teddington, Bushy Park (Middlesex, 9mAMSL)
<i>Lowest Maximum</i>	14.8°C Fair Isle (Shetland, 57mAMSL) also Orkney: Loch Of Hundland (Orkney, 28mAMSL)
<i>Highest Minimum</i>	14.3°C Bude (Cornwall, 15mAMSL)
<i>Lowest Minimum</i>	4.0°C Kinbrace, Hatchery (Sutherland, 103mAMSL)
<i>Lowest Grass Minimum</i>	0.2°C Dunrobin Castle Gardens (Sutherland, 6mAMSL)
<i>Most Rainfall</i>	22.5mm Holsworthy S Wks (Devon, 110mAMSL)
<i>Most Sunshine</i>	10.9hr Bute: Rothesay No2 (Buteshire, 36mAMSL)
<i>Highest Gust</i>	34Kt 39mph Bedford (Bedfordshire, 85mAMSL)
<i>Highest Gust (mountain*)</i>	41Kt 47mph Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

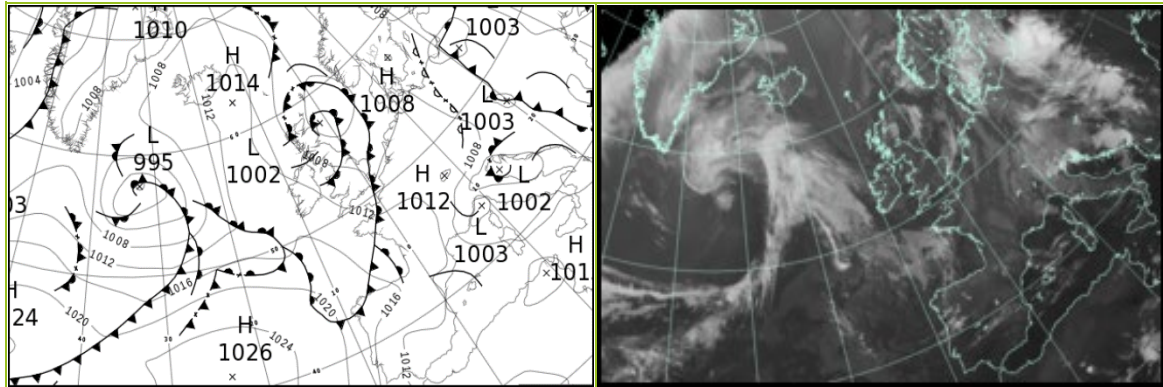

*Mountain stations are above 500mAMSL.

Daily Weather Summary for Wednesday 30 August 2023

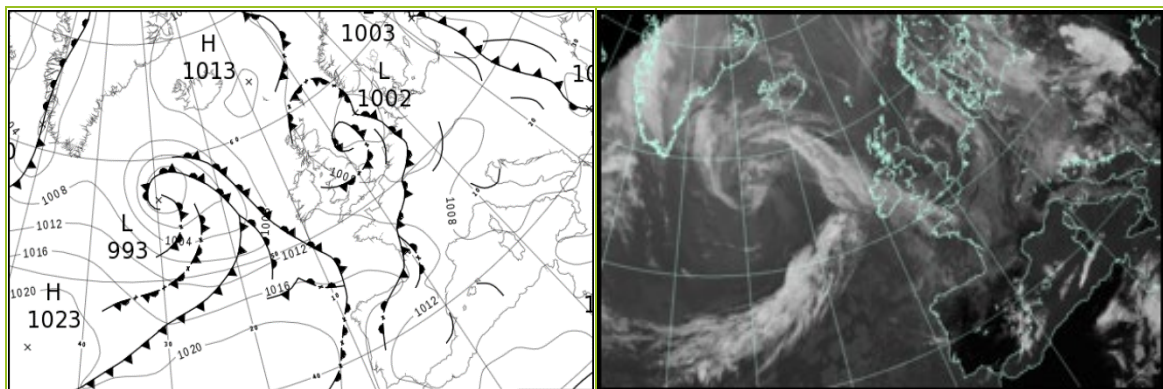

Daily Weather Summary for Wednesday 30 August 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Daily Weather Summary for Thursday 31 August 2023

This day's summary created 07/09/2023 04:03

Summary of the UK Weather for Thursday 31 August 2023

The majority of the showers from the previous evening had died out by the start of Thursday, with plenty of clear spells over the UK in the first part of the night, particularly in eastern areas. Rain, driven by incoming fronts arrived into the southwest of England and southern Wales in the early hours, preceded by thicker cloud. Temperatures dropped in places, especially where the cloud was absent, though it remained in double figures in the southwest. Especially the southwest. The rain in the south progressed eastwards, clearing much of the southeast by evening. More rain and showers moved in to the southwest during the afternoon. Further north, the band of rain had progressed as far as southwestern Scotland running diagonally to the southeast. Much of Scotland remained dry. The later rain cleared the southwest by the end of the period. The morning started with light winds but strengthened in the southwest as the front progressed. It was calm for most by evening. There was an east-west split in the temperatures at the start of the period with warmer temperatures in the west under the cloud. The rain in the southwest brought warmer temperatures, but it was suppressed elsewhere under the cloud. It was a warm day in Scotland where it remained clear.

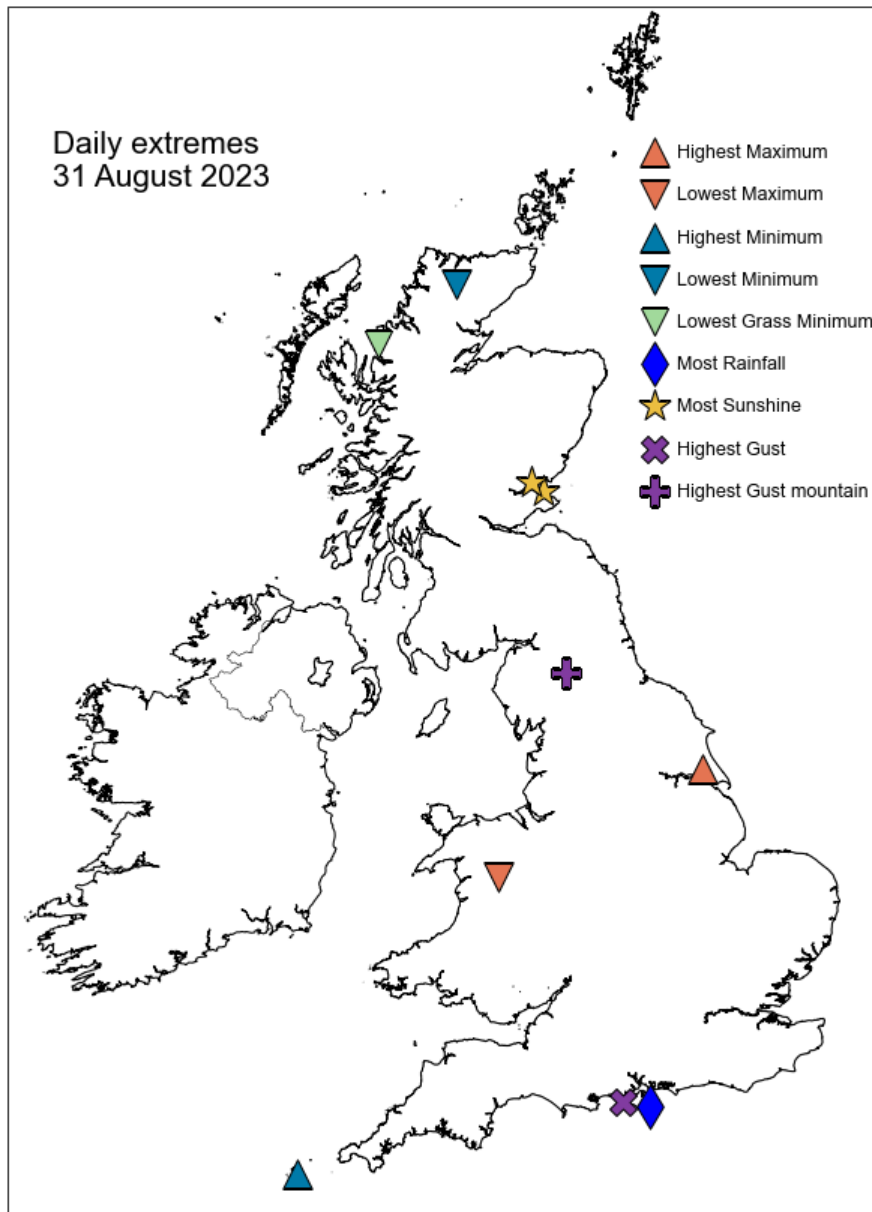

Daily Extremes

<i>Highest Maximum</i>	22.1°C Hull, East Park (Humberside, 2mAMSL)
<i>Lowest Maximum</i>	13.2°C Lake Vyrnwy No 2 (Powys (north), 360mAMSL)
<i>Highest Minimum</i>	15.2°C Scilly: St Marys Airport (Isles Of Scilly, 31mAMSL)
<i>Lowest Minimum</i>	2.3°C Altnaharra No 2 (Sutherland, 81mAMSL)
<i>Lowest Grass Minimum</i>	-2.2°C Port Henderson (Ross & Cromarty, 18mAMSL)
<i>Most Rainfall</i>	24.3mm Wight: Shanklin (Isle Of Wight, 55mAMSL)
<i>Most Sunshine</i>	12.2hr Leuchars (Fife, 10mAMSL) also Mylnefield (Angus, 26mAMSL)
<i>Highest Gust</i>	31Kt 36mph Wight: Needles Old Battery (Isle Of Wight, 80mAMSL)
<i>Highest Gust (mountain*)</i>	23Kt 26mph Great Dun Fell No 2 B (Cumbria, 847mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

*Mountain stations are above 500mAMSL.

Daily Weather Summary for Thursday 31 August 2023

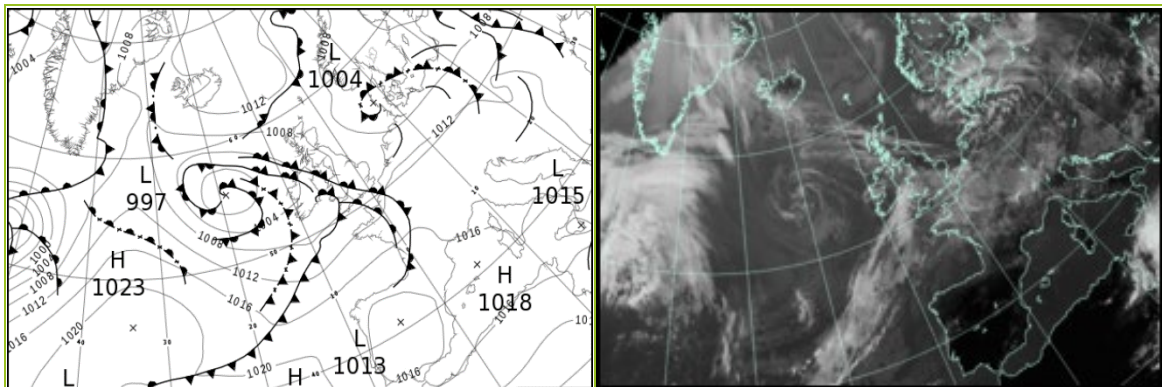

Daily Weather Summary for Thursday 31 August 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Guidance Notes

UTC = Universal Coordinated Time. For the UK UTC is the same as GMT (Greenwich Mean Time).

National boundaries shown on the European station map are for illustrative purposes only.

Daily extremes

- Daily extremes have been manually confirmed by Met Office Observations Quality Management as valid observations from the live database at the time of checking. However, more extreme values may still be possible if they occur after the time of production.
- Mountain stations above 500 masl are excluded from lowest temperatures, highest gust speeds and greatest snow depths at 0900 UTC. This is because they are not considered representative of low level areas.
- Counties quoted against each station are based on historical county boundaries pre-1974 and may not reflect current administrative boundaries.

Analysis charts and satellite imagery

- The satellite imagery is infra-red imagery from the geostationary MSG satellite.
- The rainfall image is derived from satellite data from MSG and rain-radar data. This represents a snapshot of instantaneous rain-rates at 0000 UTC and 1200 UTC and so does not necessarily reflect daily accumulations in the rainfall station map.
- Any analysis charts or satellite images which are unavailable will be displayed as white space.

Station maps

- The UK maps show station data for the same set of stations presented UK data table. These stations are selected to provide good spatial coverage across the UK; they represent only a fraction of the overall UK observing network.
- Wind speed maps show wind speed in Kt and direction both averaged over the hour up to the time of observation. 1 Kt = 1.151 mph.

Hourly station data

- The data tables provide spot hourly observations from synoptic messages at 0000 and 1200 UTC. Missing data are denoted by '-'.

- Pressures are mean sea level pressure in hPa.
- For UK stations, Gibraltar and Jersey, the wind speeds and directions are both averaged over the hour up to the time of observation. However, for European stations wind speeds and directions are both averaged over a 10-minute period up to the time of observation.
- Wind speeds are in Kt. Wind directions are stored in the database every 10 degrees and have been converted to the nearest point of the compass. These give the direction the wind is blowing from, not to.
- Cloud amounts are in Oktas from 0 (clear) to 8 (overcast). 9 indicates sky obscured (eg by fog).
- Air temperature and dew point temperature are in Celsius.

Temperature maps

- Daily maximum, minimum and grass minimum temperatures are in Celsius.
- The period for the daily maximum temperature is defined from 0900 UTC on the day in question to 0900 UTC the following day.
- The period for the daily minimum and grass minimum temperatures is defined as 0900 UTC the previous day to 0900 UTC on the day in question.
- On any given day the minimum will typically occur in the early hours of the morning and the maximum in early afternoon.

Rainfall, sunshine and max gust speed maps

- Daily rainfall is in mm from 0900 UTC on the day in question to 0900 UTC the following day.
- Daily sunshine is in hours from Kipp and Zonen CSD1 automatic sunshine records. Bright sunshine is defined as exceeding 120 W/m².
- Max gust speeds are the daily max gust in Kt from 0000-0000 UTC

Snow maps

- The day of snow falling map displays data from present weather sensors, showing stations which have recorded sleet or snow falling at any point in the day (0000-0000 UTC).
- The snow lying map shows level snow depth as recorded by the automatic snow depth sensors at 0900 UTC. These snow depth sensors do not record snow depth if this is less than 1cm.
- Snow depth sensors are normally operational from October to April, in the event of snow falling outside this period data availability may be limited.

- Snow maps will only be displayed if one or more of the selected stations on that date have recorded either snow falling or non-zero snow depths. If snow maps are not displayed it is still possible that other stations in the network have recorded a day of sleet or snow falling or non-zero snow depth.
