Head of Observations, Plans and Requirements Branch.

## 1. INTRODUCTION

Drifting buoys operated by European countries, the United States, Canada and E.G.O.S. (European Group on Ocean Stations) provide valuable meteorological data in the North Atlantic Ocean. This report is a summary of the performance of these buoys giving information on the number of buoys operating, the accuracy of reported locations and data quality, timeliness and availability. It is compiled by looking at observations received in the Met. Office Meteorological Data Bank (Met.D.B.) and by comparisons of observations with background fields from the Met. Office forecast model. Additional information on buoy operations and data quality is extracted from E.G.O.S. Technical Secretariat reports.

## 2. GENERAL PERFORMANCE

The following few sub-sections describe the general performance of the drifting buoys throughout the quarter.

### (a) Location Accuracy

69 out of 71 of the buoys reporting, gave a '% of observations with acceptable positions' greater than 95% (66 out of 73 last quarter).

### (b) Data timeliness

(see note 9 of section 6 for definition of terms.)

Timeliness	Last quarter.	This quarter
Very Good	45	38
Good	14	17
Satisfactory	8	9
Poor	0	3
Very poor	6	4
<b>Total no. of buoys</b>	<b>73</b>	<b>71</b>

(c) Data availability

(see note 9 of section 6 for definition of terms.)

Availability	South of 50 deg N		North of 50 deg N	
	Previous Quarter	Present Quarter	Previous Quarter	Present Quarter
Very Good	7	9	23	20
Good	5	12	6	9
Satisfactory	4	4	4	2
Poor	19	14	1	0
Very Poor	2	1	2	0

The total number of buoy days in the quarter was 5110 [obtained by summing the number of reporting days for each buoy] (last quarter the total was 5025) and the number of 'buoy hours' with at least one observation was 88625 (compared with 76556 last quarter). Thus, the mean number of hours per day, for days with at least one observation (averaged over all buoys operating in the area) was 17.34 (last quarter the figure was 15.24).

### **3. SUMMARY OF PRESSURE PERFORMANCE**

#### **(a) Buoy deployments, etc.**

##### **North of 50deg N**

There were 26 buoys reporting pressure at the beginning of the period. 28 buoys were operating at the end of the period. 5 buoys were deployed during the period (44614, 44625, 64530, 64546 and 65596). 3 buoys ceased reporting pressure (64692, 64696 and 64697).

##### **South of 50deg N**

There were 26 buoys reporting pressure at the beginning of the period. 28 buoys were reporting at the end of the period. 14 buoys were deployed during the period (13504, 41628, 41648, 41649, 41656, 41852, 44626, 44627, 44628, 44629, 44630, 61505, 61502 and 61504). 12 buoys ceased reporting pressure (41502, 41598, 41628, 41656, 44513, 44514, 44515, 44517, 44742, 44764, 62505 and 62901).

#### **(e) Data Quality - Pressure**

##### **Revised RMS Differences**

The technique used to assess the quality of pressure data in this report is based on the Revised RMS differences between the observations and the background field from the Global Forecast Model (see note 8 in Explanatory Notes). For buoys south of 50°N the Revised RMS differences should be less than 2.0 hPa and for buoys north of 50°N they should be below 3.0 hPa. The buoys whose revised RMS difference were found to lie outside these limits have had their performance described as 'suspect' and are included in the section below. Examination of the time-series plots (see Annex B) indicates the performance of these buoys:-

- 41852 - Pressure data from this buoy became erratic from mid September onwards.
- 44629 - Pressure data from this buoy showed an increasing bias throughout August, until it ceased reporting pressure at the beginning of September.
- 44764 - Pressure data from this buoy showed a bias of approximately -9 hPa from the end of July until the end of its reporting life (03/09/99).
- 62506 - Pressure data from this buoy showed a bias of +1.9hPa throughout most of the period.

### Biases

Twenty-one buoys (excluding those mentioned in the previous section) showed pressure biases greater than 0.5 hPa (pressure biases are determined using the mean value for unflagged data from Annex A). Those buoys whose pressure data showed a bias of greater than 0.5 hPa have also had their performance described as 'suspect'.

#### (4) Air Temperatures

The following table shows the mean and standard deviation of observation minus background differences for air temperatures.

(Note : The calculations below exclude the majority of gross errors. However, gross errors within +/-20 °C of the background value are included. Therefore, in some instances, the figures may be slightly misleading.)

#### *Summary*

Buoys 41521(1.14), 41656(1.35), 44742(1.64), 44764(1.21), 44777(1.22) and 65596(2.85) all showed significant air temperature bias.

Although temperature data from buoys 44513(8.83) and 44514(-1.26) showed significant biases, it should be noted that only 34 and 19 reports, respectively, were received.

All temperature data from buoy 44627(-6.97) were erroneous, resulting in all but 9 reports being rejected.

## (5) Winds

The following table shows the mean and standard deviation of observation minus background differences for wind speed and direction.

WMO No.	Wind Speed (kt)			Wind Direction (deg)

65599	0.21	3.88	4170	0.64	20.70	3440

Buoys 41636(-3.94) and 41637(-3.78) both showed a significant **wind speed** bias throughout their reporting lives.

Buoys 41637(-78.75) and 62505(-15.56) both showed significant **wind direction** biases throughout their reporting lives.

Buoys 41636(-25.40) and 41638(48.17) both developed significant **wind direction** biases during August.

Although buoy 41648 showed a significant **wind speed** bias(4.25), it should be noted that very few reports were received.

## 6. EXPLANATORY NOTES:

1. Buoy owners are as follows,

CA	- Canada	P	- Portugal
F	- France	UK	- United Kingdom
D	- Germany	US	- United States
N	- Norway	IC	- Iceland
NL	- Netherlands	EG	- EGOS
IR	- Ireland	??	- unknown

2. Number of observations received is the number received at Bracknell in the Meteorological Data Bank (Met.DB). If identical reports are received which have originated at different Collecting Centres, the earliest one received at Bracknell is stored in the Met.DB.
3. An observation with valid Time and Date is one that contains no coding errors in the Date/Time group.
4. An acceptable position for an observation is within a distance  $d$  of the last acceptable position where  $d=vt$  and,  
 $v = \text{maximum drift speed} = 1/4 \text{ knot}$   
 $t = \text{time between observations.}$
5. The percentage of elements present is calculated from the total number of observations received.
6. The delay is (Time of Receipt at Bracknell) - (Time of Observation).
7. The mean number of observations per day is calculated from the total number of observations received divided by the number of days in the period. It therefore includes 'quasi-identical' observations, i.e. those made within a few minutes of one another. For this reason the mean number of hours per day with at least one observation and the % of hour periods without an observation has been included, where an 'hour period' is defined as the period from HH-30 to HH+29 minutes.

8. Mean (OB-BG) is the mean value of (Observation-Background) Pressure, where the Background is the 6-hour forecast from the Global Forecast Model. RMS (OB-BG) is the Root Mean Square value of (Observation-Background) Pressure differences.

Unflagged data are those data used in model analyses.

Flagged data (i.e. unused observations) are those observations of suspect quality and all observations reported by a buoy at a frequency greater than 5 times every 6 hours, with accepted observations being at least one hour apart. Thus, those buoys which report most frequently have a higher percentage of flagged data.

The Mean calculated over Unflagged Data gives an indication of the instrument bias, since any gross errors have been excluded from the calculation.

The Revised RMS is based on all data except for the few that contain gross errors (as indicated on the time-series graphs - see Annex B).

9. The performance categories are defined in the table below.

Performance	Availability (mean no. of obs/day)	Timeliness (median delay in mins)
Very Good	> 35	< 60
Good	25 - 35	60 - 119
Satisfactory	15 - 24	120 - 179
Poor	5 - 14	180 - 239
Very Poor	< 5	> 240

(N.B. WMO requirements state the need for only 4 observations per day from marine stations.)

The pressure quality is assessed from the Revised RMS and the Mean (for unflagged data).

Performance	Pressure Quality (in hPa)			
	North of 50 degN		South of 50 degN	
	RMS	MEAN	RMS	MEAN
Acceptable	<= 3.0	<= 0.5	<= 2.0	<= 0.5
