THE DAILY WEATHER REPORT

(INTRODUCTION)

1st April to 30th June, 1967

Stations published in the Daily Weather Report

METEOROLOGICAL OFFICE
Bracknell, Berkshire

1. HISTORY

A brief history of changes in contents and format between 1st April, 1919, and December, 1949, will be found in the introduction to the British Section for 1st October to 31st December, 1949. On 1st January, 1950, the British and International Sections of the former Report, which had been issued in three sections since 1919, were combined in a single publication, the present Daily Weather Report. At the same time, the third section was published separately with the title of Daily Aerological Record. A number of changes in meteorological codes and specifications were introduced on 1st January, 1955, and incorporated in the Report. Changes in format introduced on 1st July, 1955, provided for the elements of station and ships' observations to be given in the order of the appropriate meteorological code and for some modification of the scales and projections of charts. On 1st January, 1961, the Celsius scale was adopted for reporting surface temperatures. On 1st January, 1967, the metric system was adopted for all references to heights and distances.

2. FORM OF PRESENTATION

(i) **Observations.**—Pages 1 and 4 of the Daily Weather Report contain reports for the four main hours of observation from a representative number of stations in Great Britain and Ireland which provide full reports together with a selection of reports from ocean weather stations for the same hours. In addition, Beaufort letters (Table 19), mainly describing precipitation, are given for each of the four six-hourly periods, together with reports of maximum and minimum temperature, sunshine, rainfall and state of ground (Table 13), in respect of the land stations listed. Explanations of the codes and specifications used are given below.

(ii) **Charts.**—Page 2 contains a chart of the weather in a large part of the northern hemisphere for mid-day of the previous day. Incorporated in this chart is a line joining the approximate locations of civil twilight (i.e., Sun 6° below horizon) at 1200 h G.M.T. for the mid point of the month indicated. Page 3 contains charts of slightly larger scale, for the British Isles and Western Europe, for 1800 h. of the previous day and for 0000 h and 0600 h on the day of issue.

(iii) **General Synoptic Development, Forecast and Outlook.**—Below the weather charts on page 3 will be found a statement which describes the main features in the evolution of the synoptic situation over the United Kingdom during the preceding 24 hours together with an indication of the manner in which it is expected to develop.

3. NOTES

(i) **Standard of Time.**—Greenwich Mean Time is exclusively used throughout the Report.

(ii) **Rainfall.**—Tr. : = There has been precipitation, but amount less than 0·05 mm.

(iii) **Temperature.**—On pages 1 and 4 temperature is specified in whole degrees Celsius, negative temperatures being coded by removing the minus sign and adding 50. Equivalent values in degrees Fahrenheit can be obtained by reference to the table printed between these pages.

(iv) **Dew Point.**—The values of Dew Point are derived from the original readings of dry-bulb and wet-bulb temperature and are correct to 1° C. Prior to 1st January, 1949, values below 0° C gave the " Hoar Frost Point " that is to say, the temperature for which the actual vapour pressure is equal to the saturation pressure over ice. Since January, 1949, the true Dew Point and not the Hoar Frost Point has been included in synoptic reports in circumstances where the actual vapour pressure is lower than the saturated water vapour pressure of 0° C.

(v) **Adjusted Readings.**—Where an instrumental reading is found to be in error and some adjustment is necessary, the adjusted reading is published in brackets thus (59).

(vi) **Rainfall Readings in Eire.**—The rainfall totals for stations in Eire are for the period 18h—06h G.M.T., reported at 0900h G.M.T,, and for the period 06h—18h G.M.T., reported at 2100h G.M.T.

(vii) Readers of the Report who are unacquainted with the method of construction and the use of weather charts are recommended to read " The Weather Map. An introduction to weather forecasting " (Fourth edition, Second impression 1959), which may be purchased from H.M. Stationery Office, 49, High Holborn, London, W.C.1, price 13s. 6d. post free.

4. EXPLANATION OF CODES AND SPECIFICATIONS

CODE FM 11C—Land Stations

N dd ff	VV ww W	PPP TT	N_h C_L h C_M C_H	T_d T_d a pp	$8N_s$ C h_sh_s	RRT_xT_xE sss RRT_nT_nE T_gT_g
N = Total amount of cloud in eighths (Table 1). dd = Wind direction on scale 01–36 (see also Table 2). ff = Wind speed in knots.	VV = Visibility (Table 3). ww = Present weather (Table 5). W = Past weather (Table 4).	PPP = Last three figures of pressure (reduced to M.S.L.) in millibars and tenths. TT = Temperature in whole degrees Celsius.	N_h = Fraction of celestial dome covered by C_L (or C_M if no C_L). C_L = Form of low cloud (Table 6). h = Height above ground of base of lowest cloud (Table 9). C_M = Form of Medium Cloud (Table 7). C_H = Form of high cloud (Table 8).	T_dT_d = Dew point temperature in whole degrees Celsius. a = Characteristic of barometric tendency (Table 10). pp = Barometric tendency (change of pressure in last three hours in tenths of millibars).	8 = Indicator figure. N_s = Amount in eighths of individual cloud layer or mass (Table 1). C = Type of cloud (Table 11). h_sh_s = Height of base of cloud (Table 12).	RR = Rainfall (Table 18) (Code 3577) (09h–21h) (21h–09h). T_xT_x = Maximum temperature in whole degrees Celsius (09h–21h). T_nT_n = Minimum temperature in whole degrees Celsius (21h–09h). T_gT_g = Minimum temperature on grass in whole degrees Celsius. (21h–09h). sss = Duration of sunshine (in hours and tenths). E = State of ground (Table 13) (Code 0900) (09h–21h) (21h–09h).

CODE FM 21C—Ships

Followed by first four groups as in **FM 11C** above.

YQ$L_aL_aL_a$	$L_oL_oL_oGG$	D_s v_s a pp	O T_sT_s T_dT_d	1 d_wd_w P_w H_w
Y = Day of the week. Q = Octant of the Globe (0 = west, 3 = east). $L_aL_aL_a$ = Latitude in degrees and tenths.	$L_oL_oL_o$ = Longitude in degrees and tenths. GG = Actual time to the nearest whole hour G.M.T.	D_s = Direction of movement of ship (Table 14). v_s = Speed of ship in knots (Table 15). a = Characteristic of barometric tendency (Table 10). pp = Barometric tendency (change of pressure in last three hours in tenths of millibars).	O = Indicator figure. T_sT_s = Difference between air temperature and sea temperature in ½ degrees Celsius. (If the air temperature is less than the sea temperature, 50 is added to the difference.) T_dT_d = Dew point temperature in whole degrees Celsius.	1 = Indicator figure. d_wd_w = Direction (in tens of degrees) from which waves come (Table 2). P_w = Period of waves (Table 16). H_w = Mean maximum height of waves (Table 17). When it is possible to make a clear distinction between sea and swell two 1 d_wd_w P_w H_w groups are reported. The first relates to wind waves, the second to waves of the predominant swell system. In the case of " no sea " with or without swell the first group is reported as 100 / 0.

Table 1.—Code for Cloud Amount (N, N_h, N_s) (Code 2700)

0 = None.

1 = 1 eighth of sky covered or less, but not zero.

2 = 2 eighths of sky covered.

3 = 3 eighths of sky covered.

4 = 4 eighths of sky covered.

5 = 5 eighths of sky covered.

6 = 6 eighths of sky covered.

7 = 7 eighths of sky covered or more, but not 8 eighths.

8 = 8 eighths (sky completely covered).

9 = Sky obscured or cloud amount cannot be estimated.

Note.—" Trace " would be included under Figure 1, which should be used for amounts up to 1/8th (i.e., not up to 3/16ths). " Overcast but with openings " would be included under Figure 7, which should be used for amounts down to 7/8ths (i.e., not down to 13/16ths).

Table 2.—Degrees and Code Figures (dd and d_wd_w) corresponding to compass directions (Codes 0877 and 0885)

Direction (Compass Points)	Exact equivalent in degrees	Code figures dd	Direction (Compass Points)	Exact equivalent in degrees	Code figures dd

			METRES							
9‡	<50	50	200	500	1,000	2,000	4	10	20	50 or over

In the range 01–50 the figures give actual visibility in tenths of kilometres. This table gives the meanings of higher code figures.
†Values not given may be obtained by interpolation.
* Code figures not used.
‡ Decade 90–99 is used when visibility cannot be determined with sufficient accuracy to justify lower code figures.

Table 4.—Code for Past Weather (W) (Code 4500)

0 = Cloud covering ½ or less of the sky throughout the appropriate period.
1 = Cloud covering more than ½ of the sky during part of the appropriate period and covering half or less during part of the period.
2 = Cloud covering more than ½ of the sky throughout the appropriate period.
3 = Sandstorm, duststorm or blowing snow.
4 = Fog, ice fog or thick haze.
5 = Drizzle.
6 = Rain.
7 = Snow, or rain and snow mixed.
8 = Shower(s)
9 = Thunderstorm(s) with or without precipitation.

The code for W covers the weather occurring during the last six hours.

Table 5.—Code for Present Weather (ww) (Code 4677)

00–19 No precipitation at the station at the time of observation.	00	Cloud development not observed.
	01	Clouds generally dissolving or becoming less developed.
	02	State of sky on the whole unchanged.
	03	Clouds generally forming or developing.
		(Characteristic change of the state of the sky during the past hour.)
	04	Visibility reduced by smoke, e.g., veldt or forest fire, industrial smoke or volcanic ashes.
	05	Haze
	06	Widespread dust in suspension in the air, not raised by wind at or near the station at the time of observation
	07	Dust or sand raised by wind at or near the station at the time of observation, but no well-developed dust whirl(s) or sand whirl(s), and no duststorm or sandstorm seen.
	08	Well developed dust whirl(s) or sand whirl(s) seen at or near the station within the last hour, but no duststorm or sandstorm.
	09	Duststorm or sandstorm within sight of the station or at the station during the last hour.
	10	Mist.
	11	Shallow fog or ice fog, in patches.
	12	Shallow fog or ice fog, more or less continuous.
		(Fog not deeper than about 2 metres on land or 10 metres at sea.)
	13	Lightning visible, no thunder heard.
	14	Precipitation within sight, not reaching the ground or the surface of the sea.
	15	Precipitation within sight, reaching the ground or the surface of the sea but distant (estimated to be more than 5 km) from the station.
	16	Precipitation within sight reaching the ground or the surface of the sea near to but not at the station.
	17	Thunder heard but no precipitation at time of observation.
	18	Squalls.
	19	Funnel cloud(s)†
		(during the past hour.)
20–29 Precipitation, fog or thunderstorm at station in past hour but not at time of observation.	20	Drizzle (not freezing), or snow grains.
	21	Rain (not freezing).
	22	Snow.
	23	Rain and snow or ice pellets type (a).
	24	Freezing drizzle or freezing rain.
		(Not falling as shower(s).)
	25	Shower(s) of rain.
	26	Shower(s) of snow, or of rain and snow.
	27	Shower(s) of hail, or of hail and rain.
	28	Fog or ice fog.
	29	Thunderstorm (with or without precipitation).
30–39 Duststorms, Sandstorms, drifting or blowing snow.	30	Slight or moderate duststorm or sandstorm. has decreased during preceding hour.
	31	Slight or moderate duststorm or sandstorm. no appreciable change during preceding hour.
	32	Slight or moderate duststorm or sandstorm. has increased during preceding hour.
	33	Severe duststorm or sandstorm. has decreased during preceding hour.
	34	Severe duststorm or sandstorm. no appreciable change during preceding hour.
	35	Severe duststorm or sandstorm. has increased during preceding hour.
	36	Slight or moderate drifting snow.
	37	Heavy drifting snow. (generally low.)
	38	Slight or moderate blowing snow.
	39	Heavy blowing snow. (generally high.)
40–49 Fog or ice fog at time of observation.	40	Fog or ice fog at a distance at the time of observation, but not at the station during the last hour, the fog or ice fog extending to a level above that of the observer.
	41	Fog or ice fog in patches.
	42	Fog or ice fog, sky discernible.
	43	Fog or ice fog, sky not discernible. (has become thinner during the preceding hour.)
	44	Fog or ice fog, sky discernible.
	45	Fog or ice fog, sky not discernible. (no appreciable change during the preceding hour.)
	46	Fog or ice fog, sky discernible.
	47	Fog or ice fog, sky not discernible. (has begun, or has become thicker during the preceding hour.)
	48	Fog, depositing rime, sky discernible.
	49	Fog, depositing rime, sky not discernible.
50–59 Drizzle at time of observation.	50	Drizzle, not freezing, intermittent.
	51	Drizzle, not freezing, continuous. (slight at time of observation.)
	52	Drizzle, not freezing, intermittent.
	53	Drizzle, not freezing, continuous. (moderate at time of observation.)
	54	Drizzle, not freezing, intermittent.
	55	Drizzle, not freezing, continuous. (heavy (dense) at time of observation.)
	56	Drizzle, freezing, slight.
	57	Drizzle, freezing, moderate or heavy (dense).
	58	Drizzle and rain, slight.
	59	Drizzle and rain, moderate or heavy.
60–69 Rain at time of observation.	60	Rain, not freezing, intermittent.
	61	Rain, not freezing, continuous. (slight at time of observation.)
	62	Rain, not freezing, intermittent.
	63	Rain, not freezing, continuous. (moderate at time of observation.)
	64	Rain, not freezing, intermittent.
	65	Rain, not freezing, continuous. (heavy at time of observation.)
	66	Rain, freezing, slight.
	67	Rain, freezing, moderate or heavy.
	68	Rain or drizzle, and snow, slight.
	69	Rain or drizzle and snow, moderate or heavy.
70–79 Solid precipitation not in showers.	70	Intermittent fall of snow flakes.
	71	Continuous fall of snow flakes. (slight at time of observation.)
	72	Intermittent fall of snow flakes.
	73	Continuous fall of snow flakes. (moderate at time of observation.)
	74	Intermittent fall of snow flakes.
	75	Continuous fall of snow flakes. (heavy at time of observation.)
	76	Ice prisms (with or without fog).
	77	Snow grains (with or without fog).
	78	Isolated starlike snow crystals (with or without fog).
	79	Ice pellets type (a).
80–90 Showery precipitation	80	Rain shower(s), slight.
	81	Rain shower(s), moderate or heavy.
	82	Rain shower(s), violent.
	83	Shower(s) of rain and snow, slight.
	84	Shower(s) of rain and snow, moderate or heavy.
	85	Snow shower(s), slight.
	86	Snow shower(s), moderate or heavy.
	87	Shower(s), or snow pellets or ice pellets type (b) with or without rain or rain and snow mixed. slight
	88	Shower(s), or snow pellets or ice pellets type (b) with or without rain or rain and snow mixed. moderate or heavy.
	89	Shower(s) of hail, with or without rain or rain and snow mixed, not associated with thunder. slight.
	90	Shower(s) of hail, with or without rain or rain and snow mixed, not associated with thunder. moderate or heavy.
91–99 Precipitation with current or recent thunderstorm	91	Slight rain at time of observation.
	92	Moderate or heavy rain at time of observation.
	93	Slight snow, rain and snow mixed, or hail at time of observation.
	94	Moderate or heavy snow, rain and snow mixed or hail at time of observation. (thunderstorm during the preceding hour, but not at time of observation.)
	95	Thunderstorm, slight or moderate, without hail but with rain and/or snow at time of observation.
	96	Thunderstorm, slight or moderate, with hail at time of observation.
	97	Thunderstorm, heavy, without hail, but with rain and/or snow at time of observation.
	98	Thunderstorm combined with duststorm or sandstorm at time of observation.
	99	Thunderstorm, heavy, with hail at time of observation. (thunderstorm at time of observation.)

The expression " at the station " refers to a land station or a ship.

† Tornado cloud or water spout.

* Ice pellets type (a)—Frozen raindrops or largely melted and refrozen snowflakes.

type (b)—Pellets of snow encased in a thin layer of ice.

Table 6.—Code for form of Low Cloud (C_L) (Code 0513)

0 = No stratocumulus, stratus, cumulus or cumulonimbus.

1 = Ragged cumulus other than of bad weather, or cumulus with little vertical extent and seemingly flattened, or both.

2 = Cumulus of moderate or strong vertical extent, generally with protuberances in the form of domes or towers, either accompanied or not by other cumulus or by stratocumulus : all having their bases at the same level.

3 = Cumulonimbus, the summits of which, at least partially, lack sharp outlines, but are neither clearly fibrous (cirriform) nor in the form of an anvil : cumulus, stratocumulus or stratus may also be present.

4 = Stratocumulus formed by the spreading out of cumulus : cumulus may also be present.

5 = Stratocumulus not resulting from the spreading out of cumulus.

6 = Stratus in a more or less continuous sheet or layer, or in ragged shreds, or both, but no stratus fractus of bad weather.

7 = Stratus fractus of bad weather or cumulus fractus of bad weather (pannus), or both ; usually below altostratus or nimbostratus. By " bad weather " is meant the conditions which generally exist before, during or after precipitation.

8 = Cumulus and stratocumulus, other than those formed from the spreading out of cumulus : the base of cumulus is at a different level from that of stratocumulus.

9 = Cumulonimbus, the upper part of which is clearly fibrous (cirriform), often in the form of an anvil ; either accompanied or not by cumulus, stratocumulus, stratus or pannus.

/ = Stratocumulus, stratus, cumulus and cumulonimbus are invisible owing to darkness, fog, blowing dust or sand, or other similar phenomena.

Table 7.—Code for form of Medium Cloud (C_M) (Code 0515)

0 = No altocumulus, altostratus or nimbostratus.

1 = Altostratus, the greater part of which is semi-transparent : through this part the sun or moon may be weakly visible as through ground glass.

2 = Altostratus, the greater part of which is sufficiently dense to hide the sun (or moon), or nimbostratus.

3 = Altocumulus, the greater part of which is semi-transparent, and no part of which is crenelated or in cumuliform tufts : the various elements of the cloud change only slowly and are all at a single level.

4 = Patches (often in the form of almonds or fishes) of altocumulus, the greater part of which is semi-transparent ; the clouds are at one or more levels and the elements are continually changing in appearance.

5 = Semi-transparent altocumulus in bands or altocumulus in one more or less continuous layer progressively invading the sky : these altocumulus clouds generally are growing denser as a whole. The layer may be opaque or may consist of two or more sheets.

6 = Altocumulus resulting from the spreading out of cumulus.

7 = Any one of the following cases :—

(a) Altocumulus in two or more layers, usually opaque in places and not progressively invading the sky.

(b) Opaque layer of altocumulus not progressively invading the sky.

(c) Altocumulus together with altostratus or nimbostratus or both.

8 = Altocumulus with sprouts in the form of small towers or battlements, or altocumulus having the appearance of cumuliform tufts.

9 = Altocumulus, generally at several levels, in a chaotic sky : dense cirrus is usually also present.

/ = Altocumulus, altostratus and nimbostratus are invisible owing to darkness, fog, blowing dust or sand, or other similar phenomena, or more often because of the presence of a continuous layer of lower clouds.

Code 8.—Code for form of High Cloud (C_H) (Code 0509)

0 = No cirrus, cirrocumulus or cirrostratus.

1 = Cirrus in the form of filaments, strands or hooks, not progressively invading the sky (often called " mares' tails ").

2 = Dense cirrus, in patches or entangled sheaves, which usually do not increase and sometimes seem to be the remains of the upper part of a cumulonimbus : or cirrus with sproutings in the form of towers or battlements, or having the appearance of cumuliform tufts.

3 = Dense cirrus, often in the form of an anvil ; either the remains of the upper parts of a cumulonimbus or parts of distant cumulonimbus, the cumuliform portions of which cannot be seen.

4 = Cirrus in the form of hooks or of filaments, or both, progressively invading the sky : they generally become denser as a whole.

5 = Cirrus, often in bands converging towards one point or two points of the horizon, and cirrostratus, or cirrostratus alone : in either case, they are progressively invading the sky, and generally growing denser as a whole, but the continuous veil does not reach 45 degrees above the horizon.

6 = Cirrus, often in bands converging towards one point or two points of the horizon, and cirrostratus, or cirrostratus alone : in either case, they are progressively invading the sky, and generally growing denser as a whole ; the continuous veil extends more than 45 degrees above the horizon, without the sky being totally covered.

7 = Veil of cirrostratus completely covering the celestial dome.

8 = Cirrostratus not progressively invading the sky and not completely covering the celestial dome.

9 = Cirrocumulus alone or cirrocumulus accompanied by cirrus or cirrostratus, or both, but cirrocumulus is the predominant cirriform cloud.

/ = Cirrus, cirrocumulus and cirrostratus are invisible owing to darkness, fog, blowing dust or sand, or other similar phenomena, or more often because of the presence of a continuous layer of lower clouds.

Table 9.—Code for Cloud Height (h) (Code 1600)

Code figure	Height of base of cloud metres
0	0–50
1	50–100
2	100–200
3	200–300
4	300–600
5	600–1,000
6	1,000–1,500
7	1,500–2,000
8	2,000–2,500
9	Above 2,500
/	Height of base of cloud not known or base of clouds at a level lower and tops at a level higher than that of the station.

Note 1.—If there is no cloud at all code figure 9 is reported.

Note 2.—If there is fog, and the sky is discernible through the fog, the cloud form, height and amount are reported as if no fog were present. If the sky is not discernible through the fog the height of the base of the cloud is reckoned as 0.

Note 3.—Height above ground of the base of cloud. If there is cloud of Form C_L reported, h refers to this cloud. If, however, there is no cloud of Form C_L and there is cloud of Form C_M h refers to this cloud.

Table 10.—Code for Characteristic of Barometric Tendency (a) (Code 0200)

0 = Increasing, then decreasing; atmospheric pressure the same as or higher than 3 hrs ago.

1 = Increasing, then steady; or increasing, then increasing more slowly. } atmospheric pressure now higher than 3 hrs ago.

2 = Increasing (steadily or unsteadily). } atmospheric pressure now higher than 3 hrs ago.

3 = Decreasing or steady, then increasing; or increasing, then increasing more rapidly. } atmospheric pressure now higher than 3 hrs ago.

4 = Steady, atmospheric pressure the same as 3 hrs ago.

5 = Decreasing, then increasing; atmospheric pressure the same as or lower than 3 hrs ago.

6 = Decreasing, then steady; or decreasing, then decreasing more slowly. } atmospheric pressure now lower than 3 hrs ago.

7 = Decreasing (steadily or unsteadily). } atmospheric pressure now lower than 3 hrs ago.

8 = Steady or increasing, then decreasing; or decreasing, then decreasing more rapidly. } atmospheric pressure now lower than 3 hrs ago.

Table 11.—Code for Type of Cloud (C) (Code 0500)

0 = Cirrus (Ci).

1 = Cirrocumulus (Cc).

2 = Cirrostratus (Cs).

3 = Altocumulus (Ac).

4 = Altostratus (As).

5 = Nimbostratus (Ns).

6 = Stratocumulus (Sc).

7 = Stratus (St).

8 = Cumulus (Cu).

9 = Cumulonimbus (Cb).

/ = Cloud not visible owing to darkness, fog, duststorm, sandstorm or other analogous phenomena.

Table 12.—Code for Height of Cloud (h_sh_s) (Code 1577)

Code figures 01–50: × 30 = height in metres. Code figures 56–80: − 50 × 3 = height in hundreds of metres.

CODE FIGURES 81–89

Code figures		Metres
81	=	10,500
82	=	12,000
83	=	13,500
84	=	15,000
85	=	16,500
86	=	18,000
87	=	19,500
88	=	21,000
89	=	>21,000

CODE FIGURES 90–99*

Code figures		Metres
90	=	<50
91	=	50–100
92	=	100–200
93	=	200–300
94	=	300–600
95	=	600–1,000
96	=	1,000–1,500
97	=	1,500–2,000
98	=	2,000–2,500
99	=	2,500 or more, or no clouds.

*Only used when cloud height cannot be determined with greater accuracy.

Table 13.—Code for State of Ground (E) (Code 0900)

0 ... Ground dry.
1 ... ,, moist.
2 ... ,, wet.
3 ... ,, frozen.
4 ... Glaze or ice on ground but no snow or melting snow.
5 ... Snow or melting snow (with or without ice) covering less than one half of ground.
6 ... Snow or melting snow (with or without ice) covering more than one-half of ground (but not completely).
7 ... Snow or melting snow (with or without ice) covering ground completely.
8 ... Loose dry snow, dust or sand covering more than one half of ground (but not completely).
9 ... Loose dry snow, dust or sand covering ground completely.

Table 14.—Code for Direction in which Ship has moved (D_s) (Code 0700)

0 = Stationary.
1 = North-east.
2 = East.
3 = South-east.
4 = South.
5 = South-west.
6 = West.
7 = North-west.
8 = North.
9 = No definite direction or unknown.

Table 15.—Code for Speed of Ship (v_s) (Code 4451)

		kt
0	=	0
1	=	1–3
2	=	4–6
3	=	7–9
4	=	10–12
5	=	13–15
6	=	16–18
7	=	19–21
8	=	22–24
9	=	>24

Table 16.—Code for Period of Waves (P_w) (Code 3155)

sec

2 = 5 or less
3 = 6 or 7
4 = 8 or 9
5 = 10 or 11
6 = 12 or 13
7 = 14 or 15
8 = 16 or 17
9 = 18 or 19
0 = 20 or 21
1 = >21
/ = Calm or period not determined.

Table 17.—Code for Mean Maximum Height of Waves (H_w) (Code 1555)

	m
0 =	<½
1 =	½
2 =	1
3 =	1½
4 =	2
5 =	2½
6 =	3
7 =	3½
8 =	4
9 =	4½
/ =	Height not determined.

50 added to d_wd_w

	m
0 =	5
1 =	5½
2 =	6
3 =	6½
4 =	7
5 =	7½
6 =	8
7 =	8½
8 =	9
9 =	9½

Notes :—

(i) The range of heights covered by a number is half a metre, e.g., number 3 applies to waves whose heights are between 1¼ m and 1¾ m.

(ii) Waves whose heights are greater than 9¾ m are reported by coding H_w as 9 and adding after the code group the word WAVE and the actual height in metres; e.g., Wave 40. (This additional information is not given in the Daily Weather Report due to shortage of space.)

(iii) If a wave height comes exactly midway between the heights corresponding to two code figures, the lower code figure is reported.

Table 18.—Code for Amount of Precipitation (RR) (Code 3577)

	mm
01–55	Amount to the nearest whole millimetre.
56	60
57–90	Add 10 mm for each unit above 56 e.g., 73 = 230 mm
91	0·1
92	0·2
93	0·3
94	0·4
95	0·5
96	0·6
97	Trace
98	>400
99	Measurement impossible or inaccurate.

Table 19.—Explanation of Beaufort Letters (pages 1 and 4)

d = drizzle.
f = fog, visibility 200 metres, or more but less than 1 kilometre.
F = thick fog, visibility less than 200 metres.
h = hail.
ks = storm of drifting snow.
l = lightning.
p = shower(s).
r = rain.
s = snow.
rs = rain and snow.
t = thunder.

Intensity is shown by capital letters (" heavy " or " thick ") or suffix " o " (" slight "). Continuous precipitation is shown by repeating the letter and intermittent precipitation by the prefix " i ". The prefix " j " indicates weather near but not at the station.

5. EXPLANATION OF CHARTS

BAROMETER. Isobars are drawn for intervals of four millibars.

WIND. Arrows fly with wind. A full length feather represents 10 Kt and a short feather 5 Kt. A solid pennant represents 50 Kt. Calm is indicated by circle outside weather symbol.

TEMPERATURE is given in degrees C., and is shown on the charts by means of figures alongside the Station circle.

CLOUD SYMBOLS

Clear sky. Sky ⅛ covered. Sky ⅜ covered. Sky ⅝ covered. Sky ⅞ covered.
Sky ⅛ covered. Sky ⅝ covered. Sky ⅞ Covered Sky ⅝ covered. Sky obscured.

WEATHER SYMBOLS

Rain. Drizzle. Snow. Rain and snow. Hail.
Shower. Thunderstorm. Fog. Mist.

FRONTS or boundaries between masses of air of different origin are indicated, wherever their characteristics are well pronounced, in the following way—

Warm Front on the surface.
Cold Front on the surface.
Stationary Front.
Axis of trough.
Occluded Front.
Warm Occlusion.
Cold Occlusion.
Stationary Occlusion.
Lines of Frontogenesis.

Short strokes across the frontal line indicate Frontolysis.

Note.—The symbols are placed on the side of the line towards which the front is moving. Identification letters are inserted in systems.

ALTITUDES OF STATIONS:—The altitudes, in metres, of British and Irish stations are given below. These refer in each case to the datum level of the ground beneath or nearly beneath the thermometer screen. Where the official name of the station differs, this is given in brackets.

DAILY WEATHER REPORT OF THE BRITISH METEOROLOGICAL OFFICE

No. 137 — MONTHLY SUMMARY — For MAY 1967

COOL, CLOUDY AND VERY WET

The northerly situation over the British Isles at the beginning of May quickly gave way as a depression moved southeast from a position southeast of Greenland towards the British Isles, deepening rapidly. The frontal systems of this depression crossed the country on the 4th, the centre being then off southwest Ireland. This centre filled slowly with little movement and dominated the weather until the 9th. The building of high pressure over Germany then led to an easterly flow over the British Isles which gave rather more settled conditions in the south at first but after the 12th the northeast movement of small low pressure systems from the southwest brought periods of rain to most of the country with the exception of north Scotland.

A northerly showery situation was established over the whole country on the 17th but this quickly gave way before a trough of low pressure which crossed the British Isles from the west on the 19th. From this time onwards the weather was determined by a long sequence of depressions and troughs of low pressure which crossed the British Isles from west to east.

Over all areas from 1st to 3rd it was rather cold with frequent showers of rain or sleet, long sunny intervals and, in many places, severe night frosts. Record low night minima were reported from several places in Scotland and Northern Ireland. Rain spread into southwest England on 3rd and became widespread on 4th giving heavy falls in southern counties. Except in the extreme north, temperatures rose to approach the seasonal average. Some western coastal areas became sunny but it was a wet day elsewhere on 5th, particularly so in northeast Scotland.

A succession of sunny, showery days followed and it became steadily warmer. Showers continued in Scotland but on 9th and 10th it was dry and very warm in England and Wales. In several places in southern England temperatures of 26 degrees (79°F) were recorded on 11th but it was much less warm in Scotland and northern England in the circulation of a low pressure system north of the country. Rain associated with a cold front moved southeast over Scotland and Northern Ireland on 11th and thunderstorms were widespread over northern and eastern England extending to southern England on 12th. Manchester rainfall of 2.1 inches on 11th gave the wettest May day there since 1877. Rain affected much of the country on 13th and was widespread and heavy on 14th when temperatures generally had returned to or fallen below mid May average levels. Wet and cool days followed from 15th to 17th. The 18th was sunny nearly everywhere with only isolated showers but the improvement was shortlived and rain affected all parts of the country on 19th. Heavy thundery showers and long bright intervals on 20th were followed on 21st by another day of widespread rain.

During the next week the pattern of weather remained much the same; showers and thunderstorms or longer periods of rain occurred widely. Southwesterly gales which affected much of England on 22nd decreased on 23rd. Most places had long sunny intervals and temperatures generally were on the cool side. It was mostly dry and sunny over Scotland and Northern Ireland on 29th and 30th and this more reasonable weather extended to all parts of the country, accompanied by rising temperatures, on 31st.

Record high May rainfall totals were recorded in many places in western and northern England and parts of Scotland. In particular, totals approached three times the May average at Ross-on-Wye (over 6 inches) and at Elmdon (over 7 inches). Mean daily temperature maxima were below average and it was a cloudy month generally.

PLACE	TEMPERATURE										SUNSHINE											RAINFALL													
	Mean maximum °C	Difference from average	Mean minimum °C	Difference from average	Highest maximum °C	Date	Lowest minimum °C	Date	No. of days with grass minimum below 0° C	No. of air frosts	Days of no sunshine	Maximum duration hrs. LONDON (Kew)

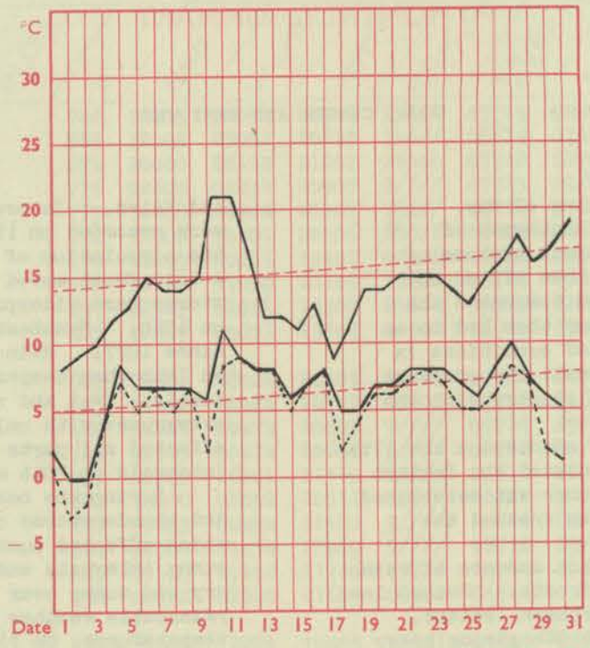
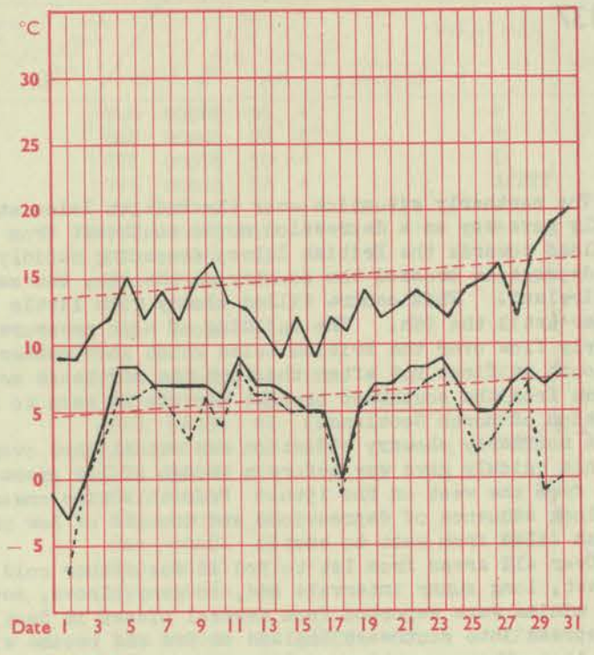
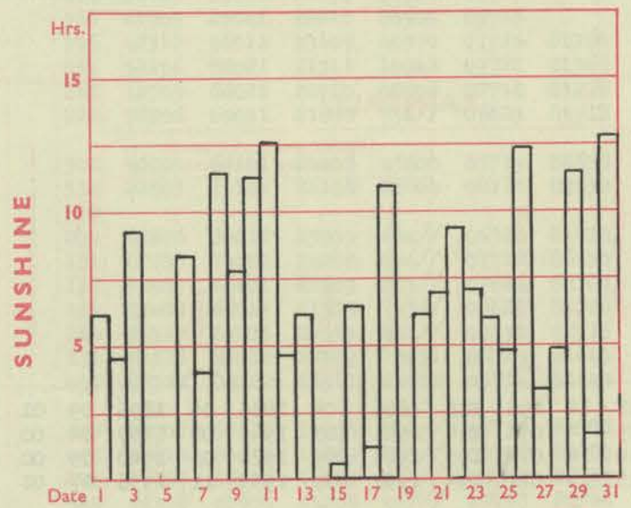
MANCHESTER (Ringway)



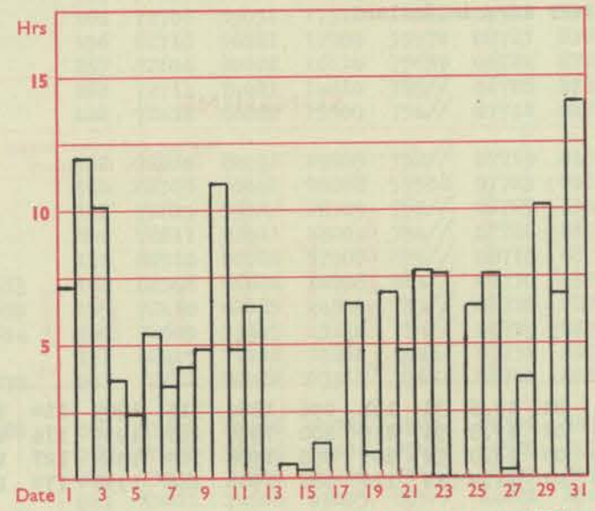
GLASGOW (Abbotsinch)



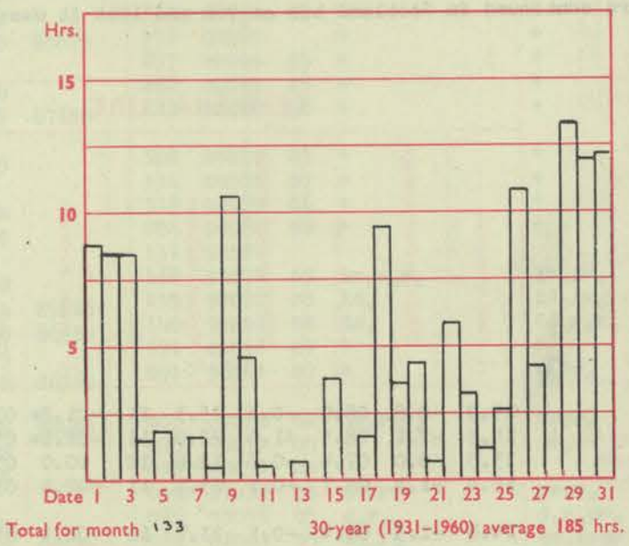
Maximum temperatures read at 21 h. G.M.T. daily, and minimum temperatures, read at 09 h. G.M.T. daily, are shown in full lines.
Grass minimum temperatures, read at 09 h. G.M.T. daily, are shown by a pecked line. Pecked lines in red show normal values. (1931–1960)



Total for month 191 30-year (1931–1960) average 199 hrs.

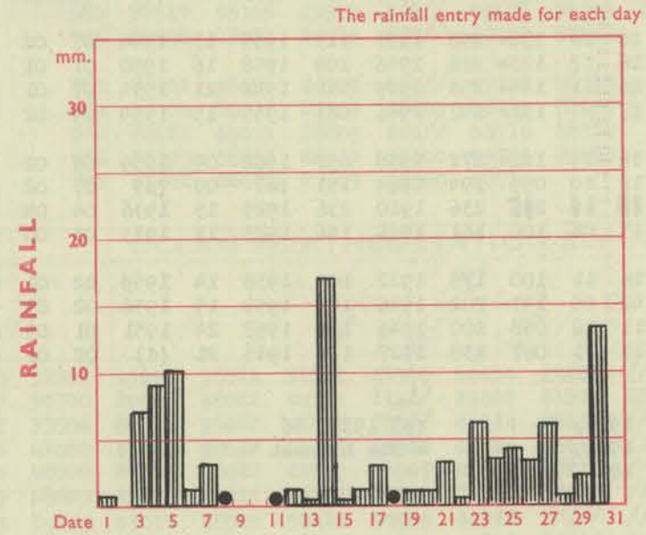


Total for month 165 30-year (1931–1960) average 177 hrs.

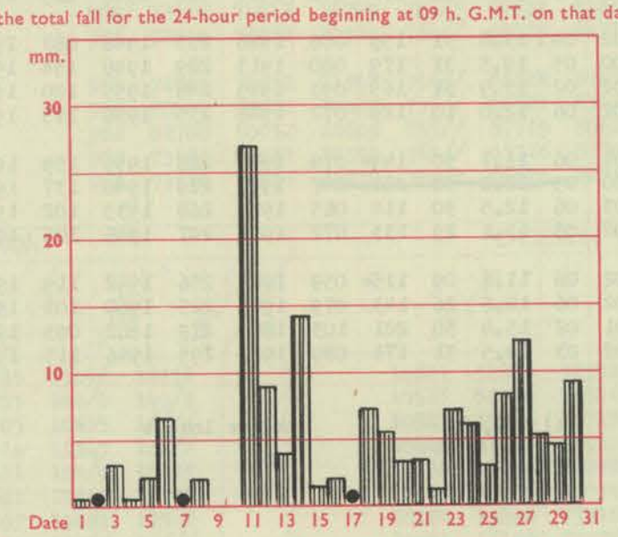


Total for month 133 30-year (1931–1960) average 185 hrs.

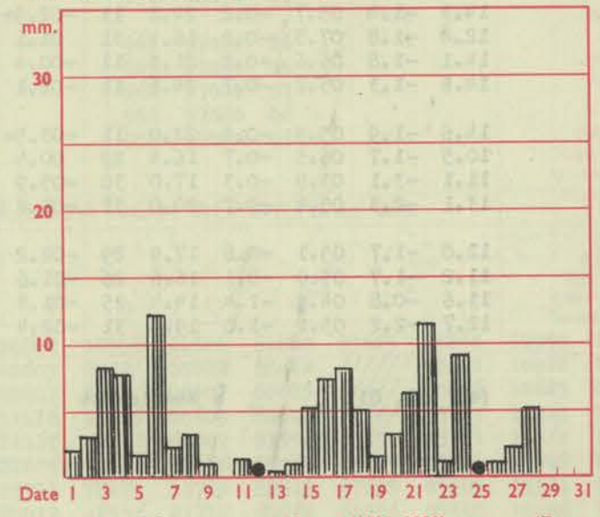
The rainfall entry made for each day represents the total fall for the 24-hour period beginning at 09 h. G.M.T. on that day. Trace (less than 0·05 mm) is indicated by " • "



Total for month 98 35-year (1916–1950) average 46 mm.



Total for month 144 35-year (1916–1950) average 57 mm.



Total for month 108 35-year (1916–1950) average 67 mm.

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday **Monday 1** May 1967

The depression which developed north of Scotland yesterday moved away eastwards and an associated cold front crossed the British Isles during yesterday and last night. A further trough moved southward over Scotland. The cold front will continue slow progress into France while the trough is expected to clear southern England during tomorrow morning. An anticyclone over the Atlantic is slowly declining.

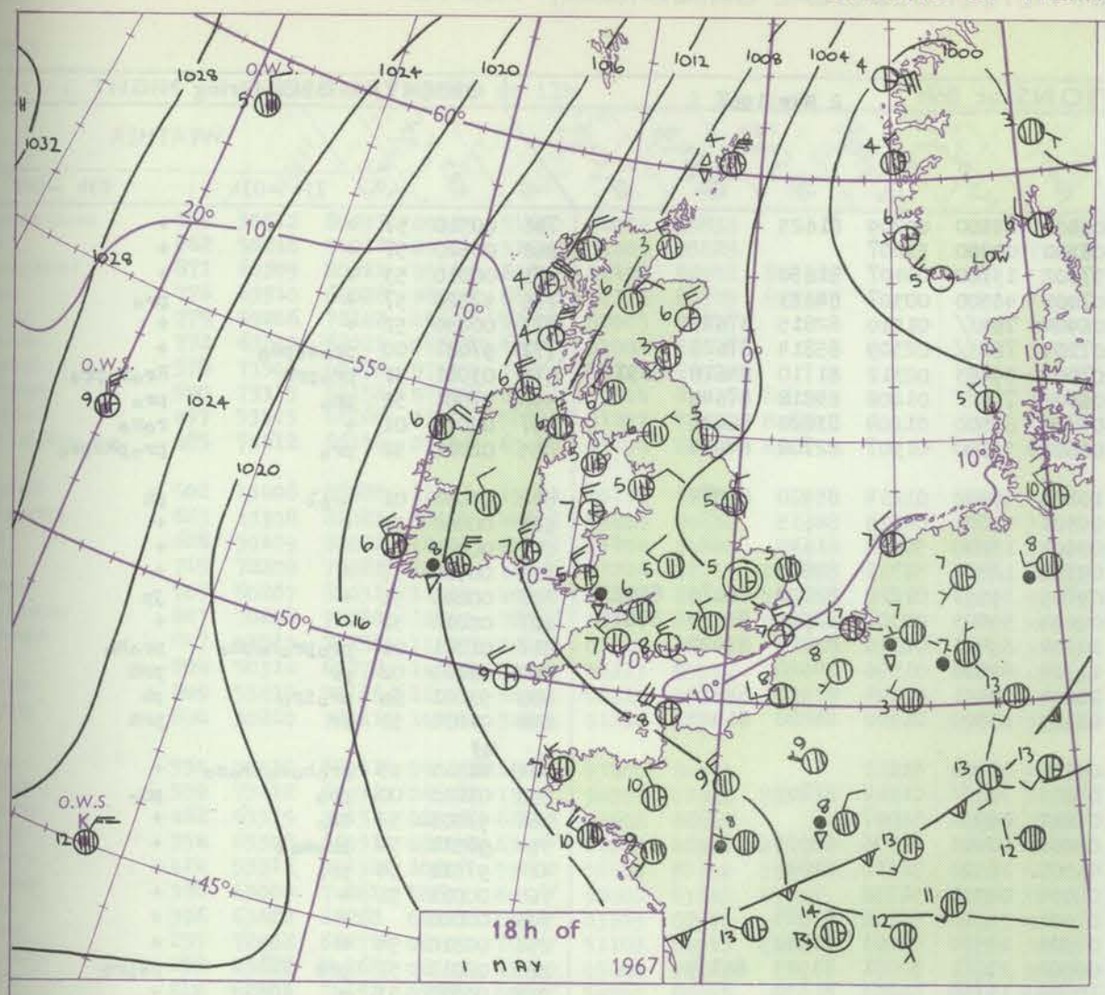
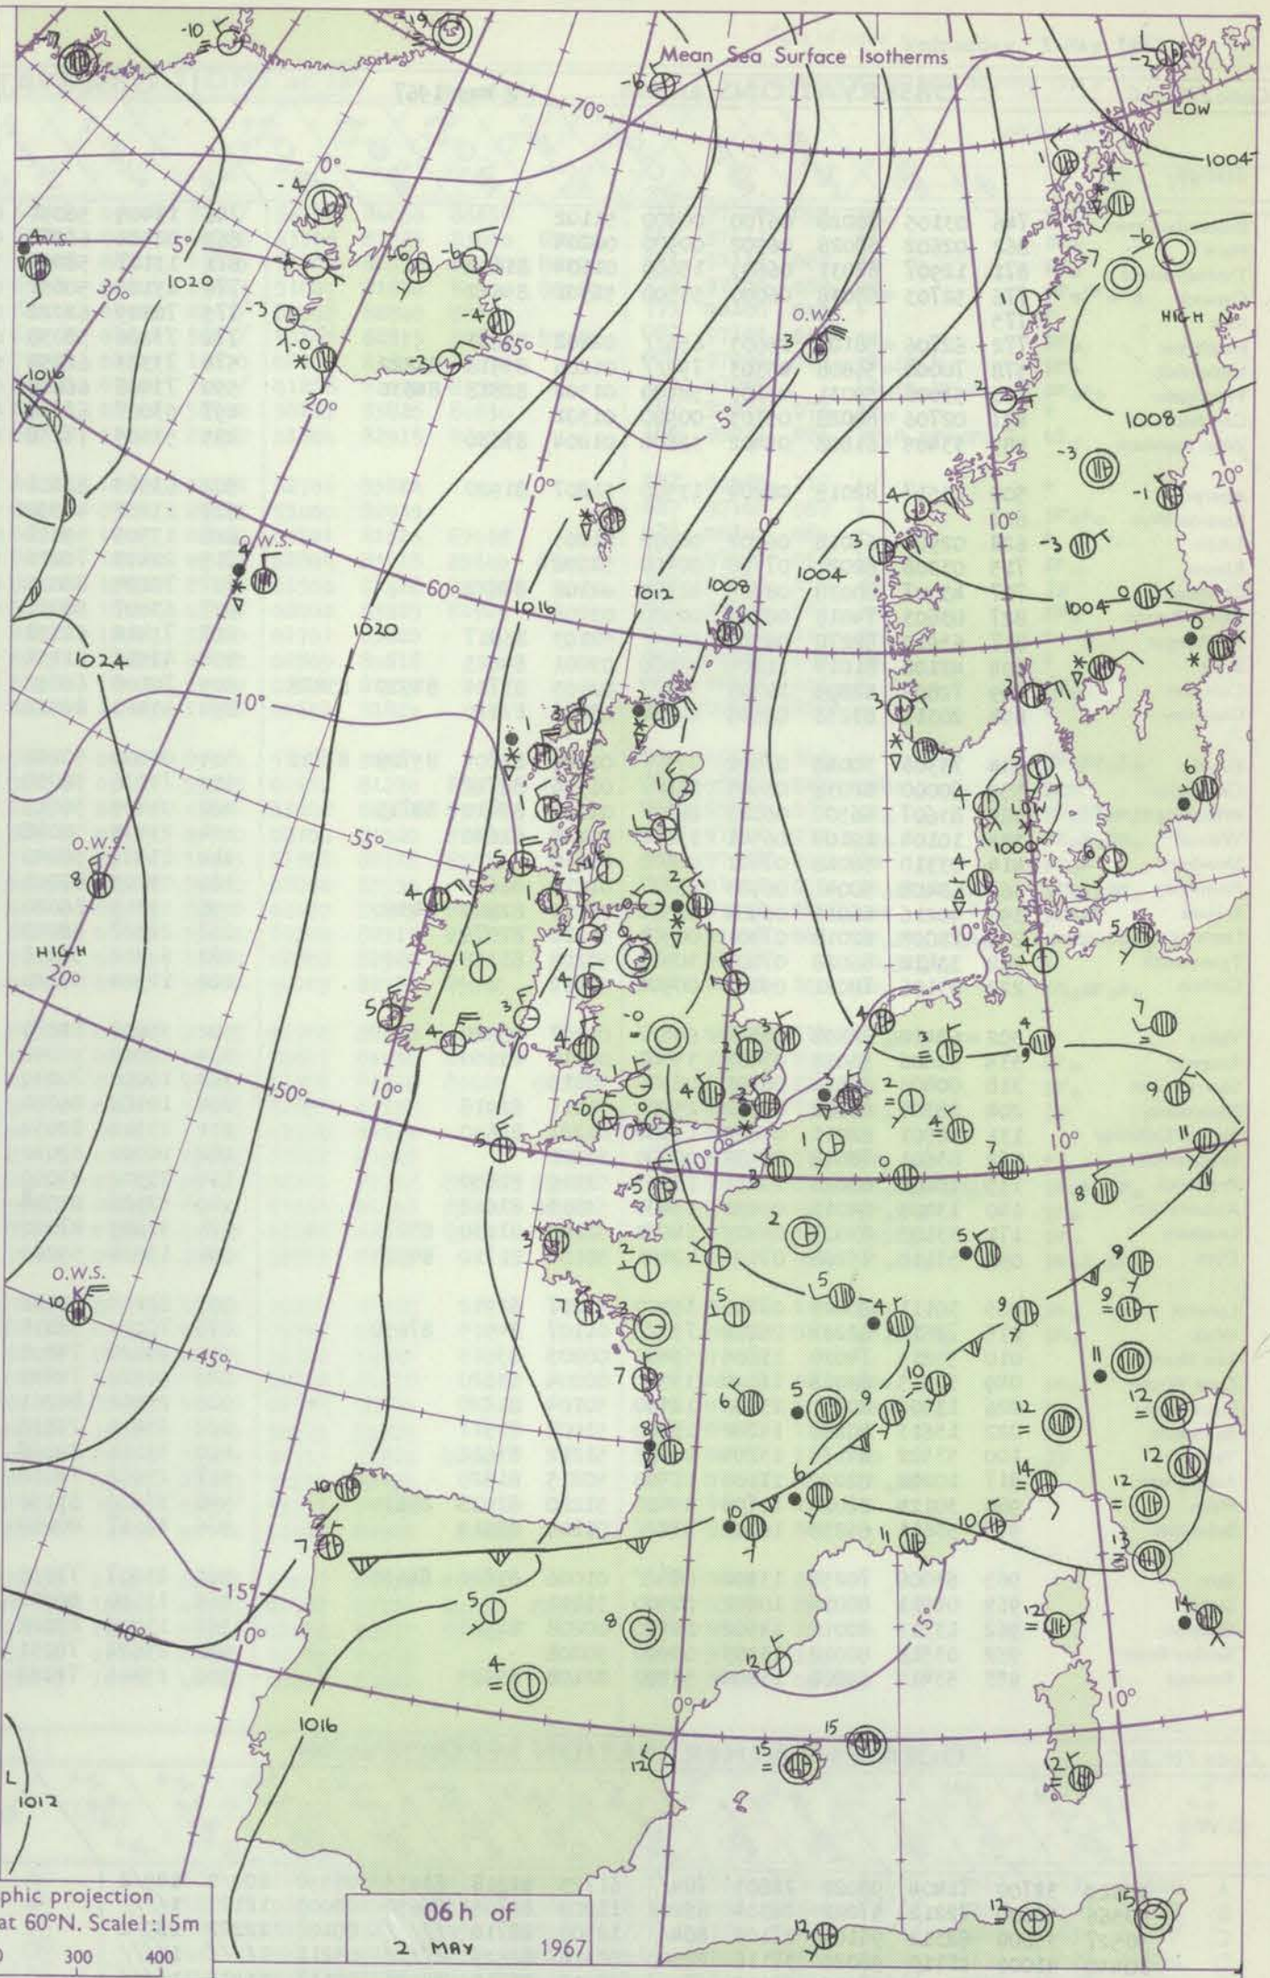
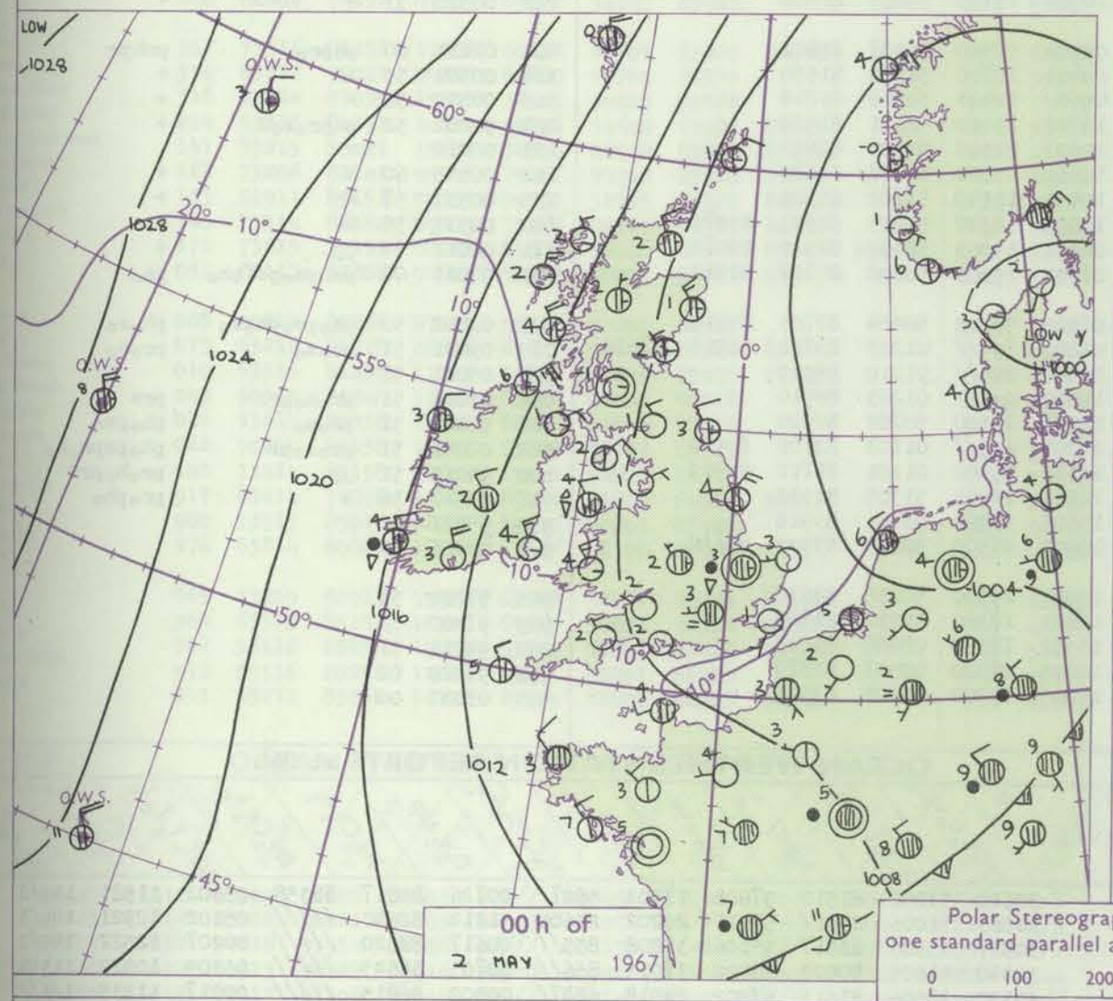
CHARTS OF WEATHER IN WESTERN EUROPE







GENERAL SYNOPTIC DEVELOPMENT

Issued at midday **Tuesday 2** May 1967

The low centred yesterday over southern Scandinavia continued to move away eastward, but another developed in its place during the night, and is not expected to move very much during the next 24 hours. The trough that lay across southern Scotland moved south during the day but lost its identity while the preceding cold front continued southward across France. A small wave depression developed south of Greenland during yesterday and has moved east to a position just southeast of O.W.S. 'A'. The associated warm front will remain west of the British Isles during the next 24 hours while the wave depression moves southeastwards along it.

Code FM 11.C

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday **Wednesday 3** May 1967

The depression which yesterday was over southeast Greenland has deepened rapidly and moved southeastwards absorbing the small warm front wave which was ahead of it. This depression is expected to continue moving southeast though slowing up somewhat, and to deepen a little more. The associated occluding fronts will move in to near southern Ireland and southwest England and become rather slow-moving tonight. A shall depression remains over the eastern North Sea but the cold northerly airstream over the British Isles has been almost completely cut off by the advance of the Atlantic depression, the circulation of which will eventually cover the whole country. The ridge of high pressure from Biscay to northwest Germany is a transient feature which will move southeast into the Mediterranean.

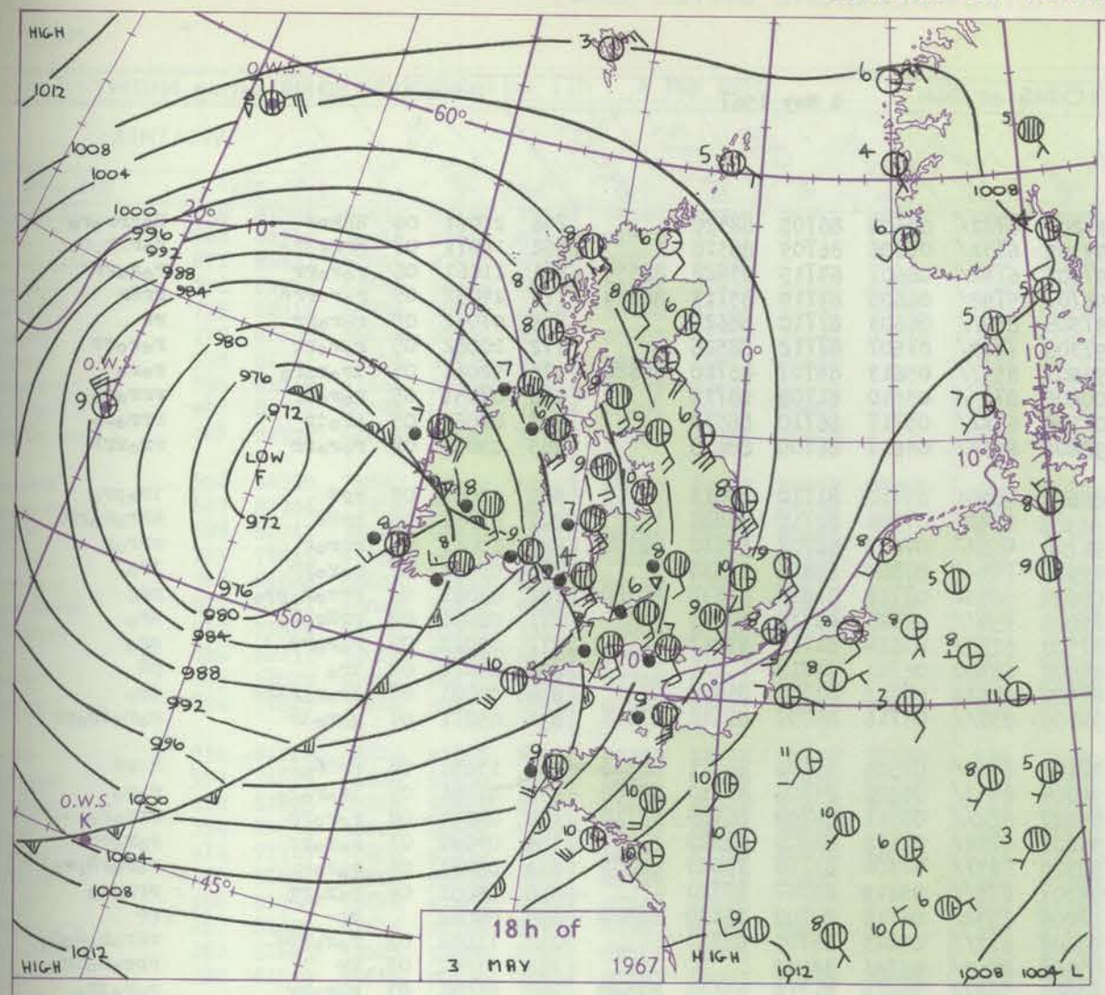
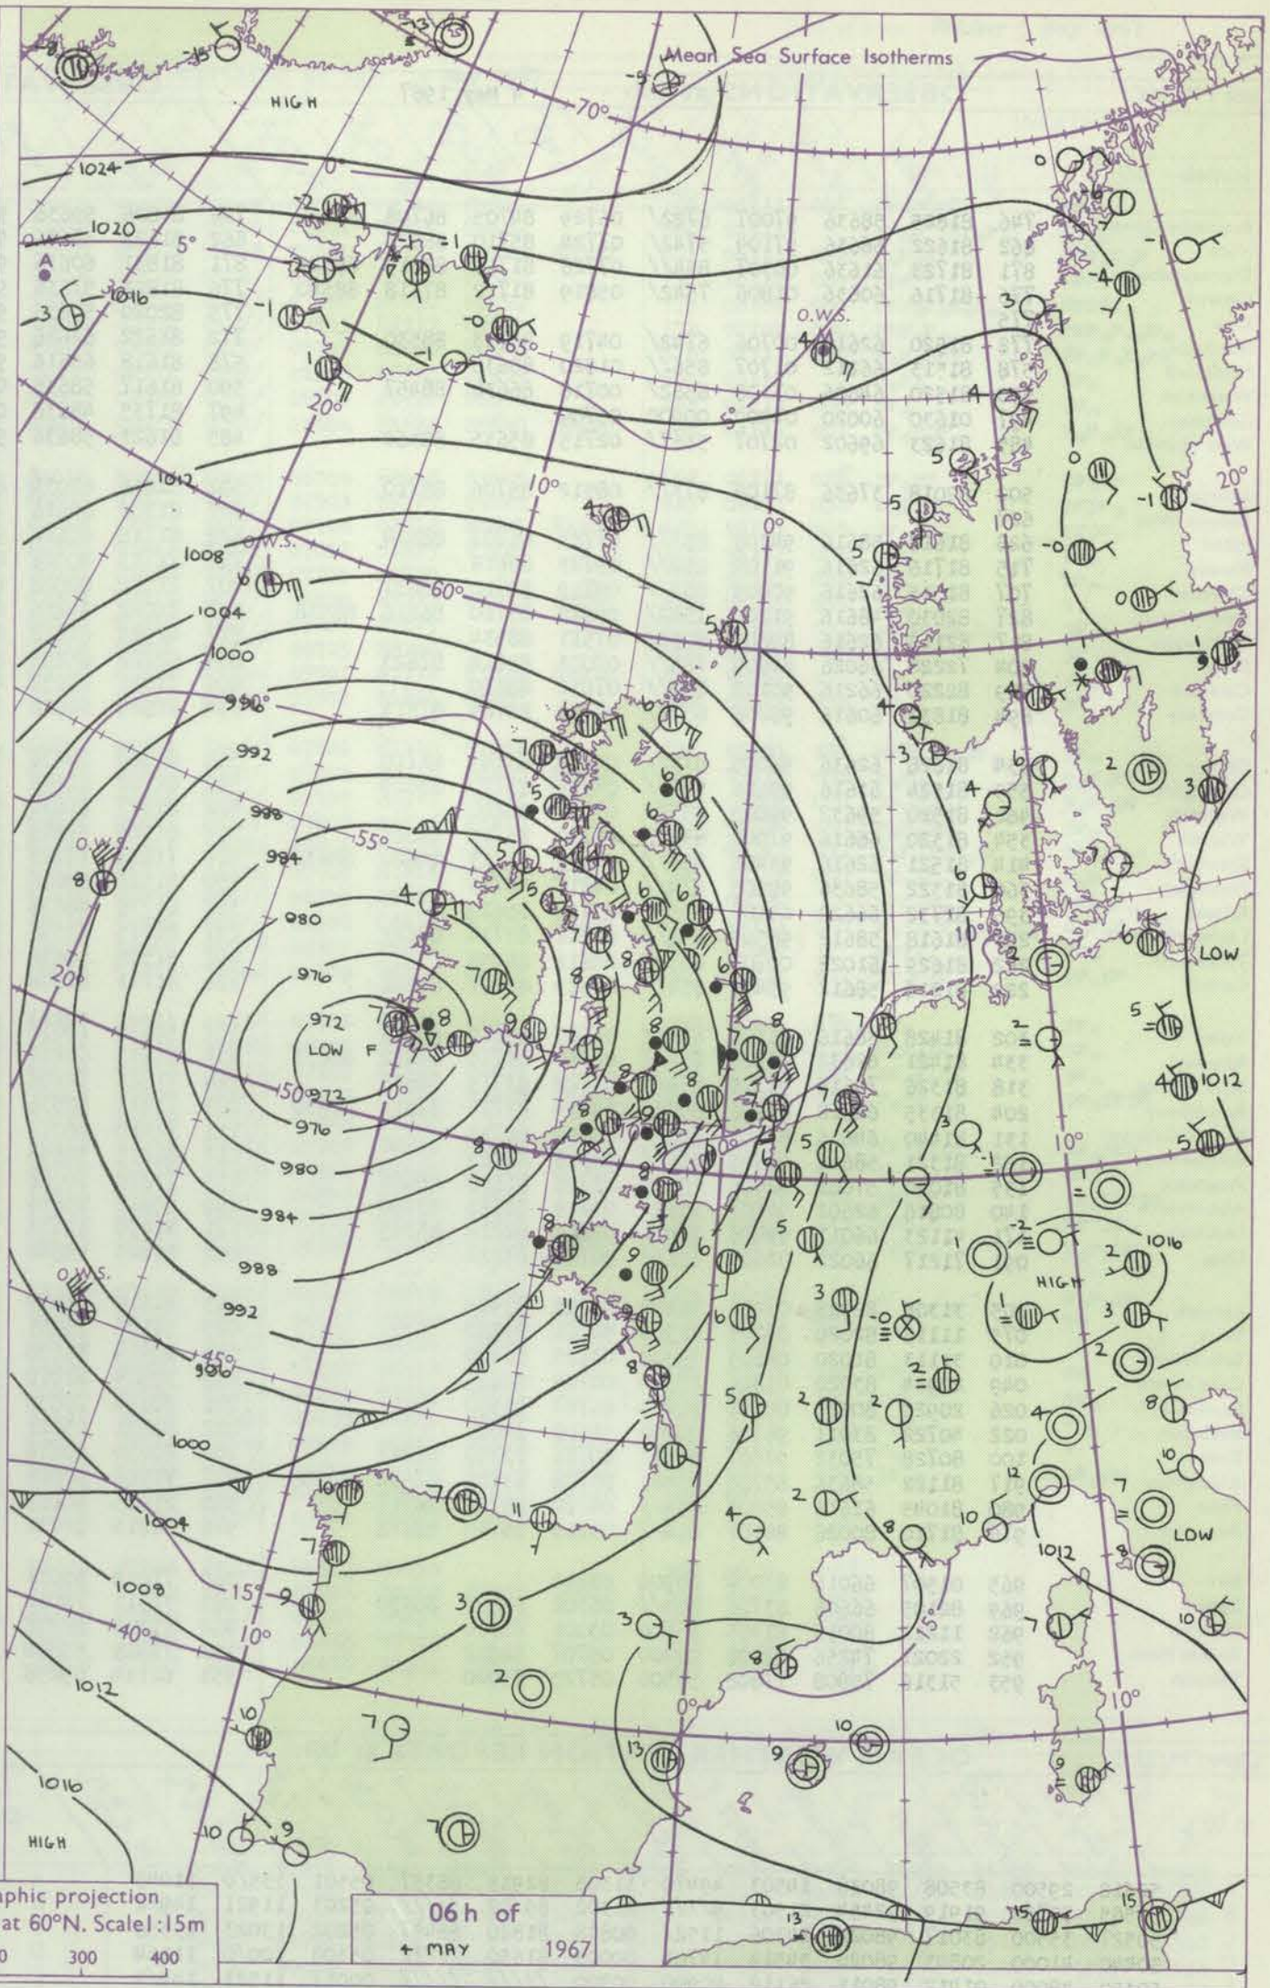
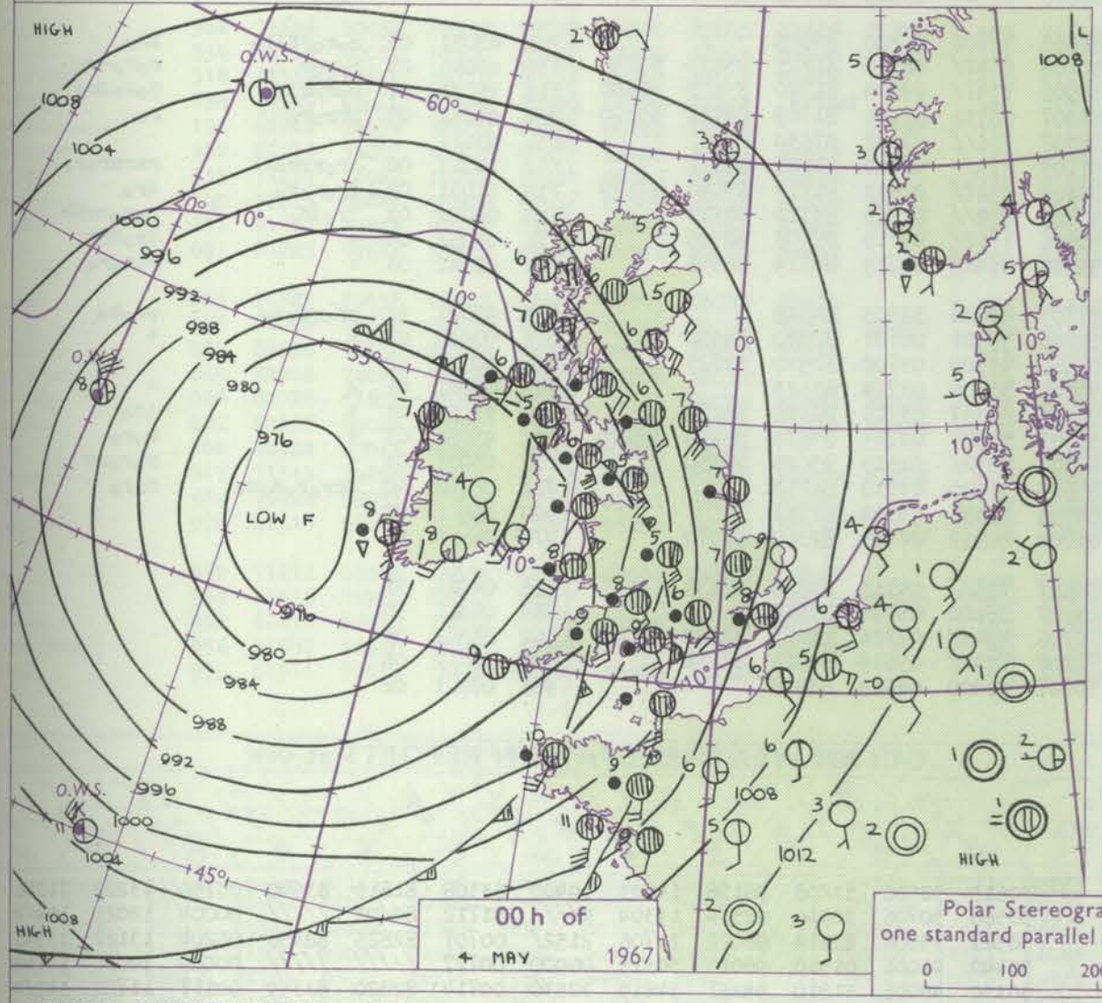
CHARTS OF WEATHER IN WESTERN EUROPE







Polar Stereographic projection
one standard parallel at 60°N. Scale 1:15m
0 100 200 300 400

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday Thursday 4 May 1967

The deepening depression over the eastern Atlantic has moved southeast to a position just off southwest Ireland and deepened considerably. It should soon begin to fill and will remain slow moving near southwest districts. The associated warm front has cleared most of England and will move northeast into the North Sea, but the cold front which moved quickly across Ireland and Wales during the past 24 hours will be slow to cross central and eastern districts of England, and northward penetration of the occlusion will soon slow up to bring the front into north Scotland tomorrow morning.

DAILY WEATHER REPORT OF THE BRITISH METEOROLOGICAL OFFICE (contd.)

Code FM 11.C

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday **Friday 5** May 1967

The deep low has persisted near southern Ireland but has filled a little. It is not expected to move a great deal in the next 24 hours and will continue to dominate the weather over the British Isles although the central pressure will rise a little. Minor disturbances will run north from eastern France to affect the extreme east of Kent and East Anglia.

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday Saturday 6 May 1967

The deep depression centred just west of Ireland has filled a little while drifting very slowly west. No significant movement of the centre is expected during the next 24 hours, though it will continue to fill gradually. The associated cold front which has been almost stationary off the east coasts of Scotland and England is expected to move gradually away to the east and northeast, and the unstable air mass in the circulation of the depression will persist over the British Isles.

Code FM 11.C

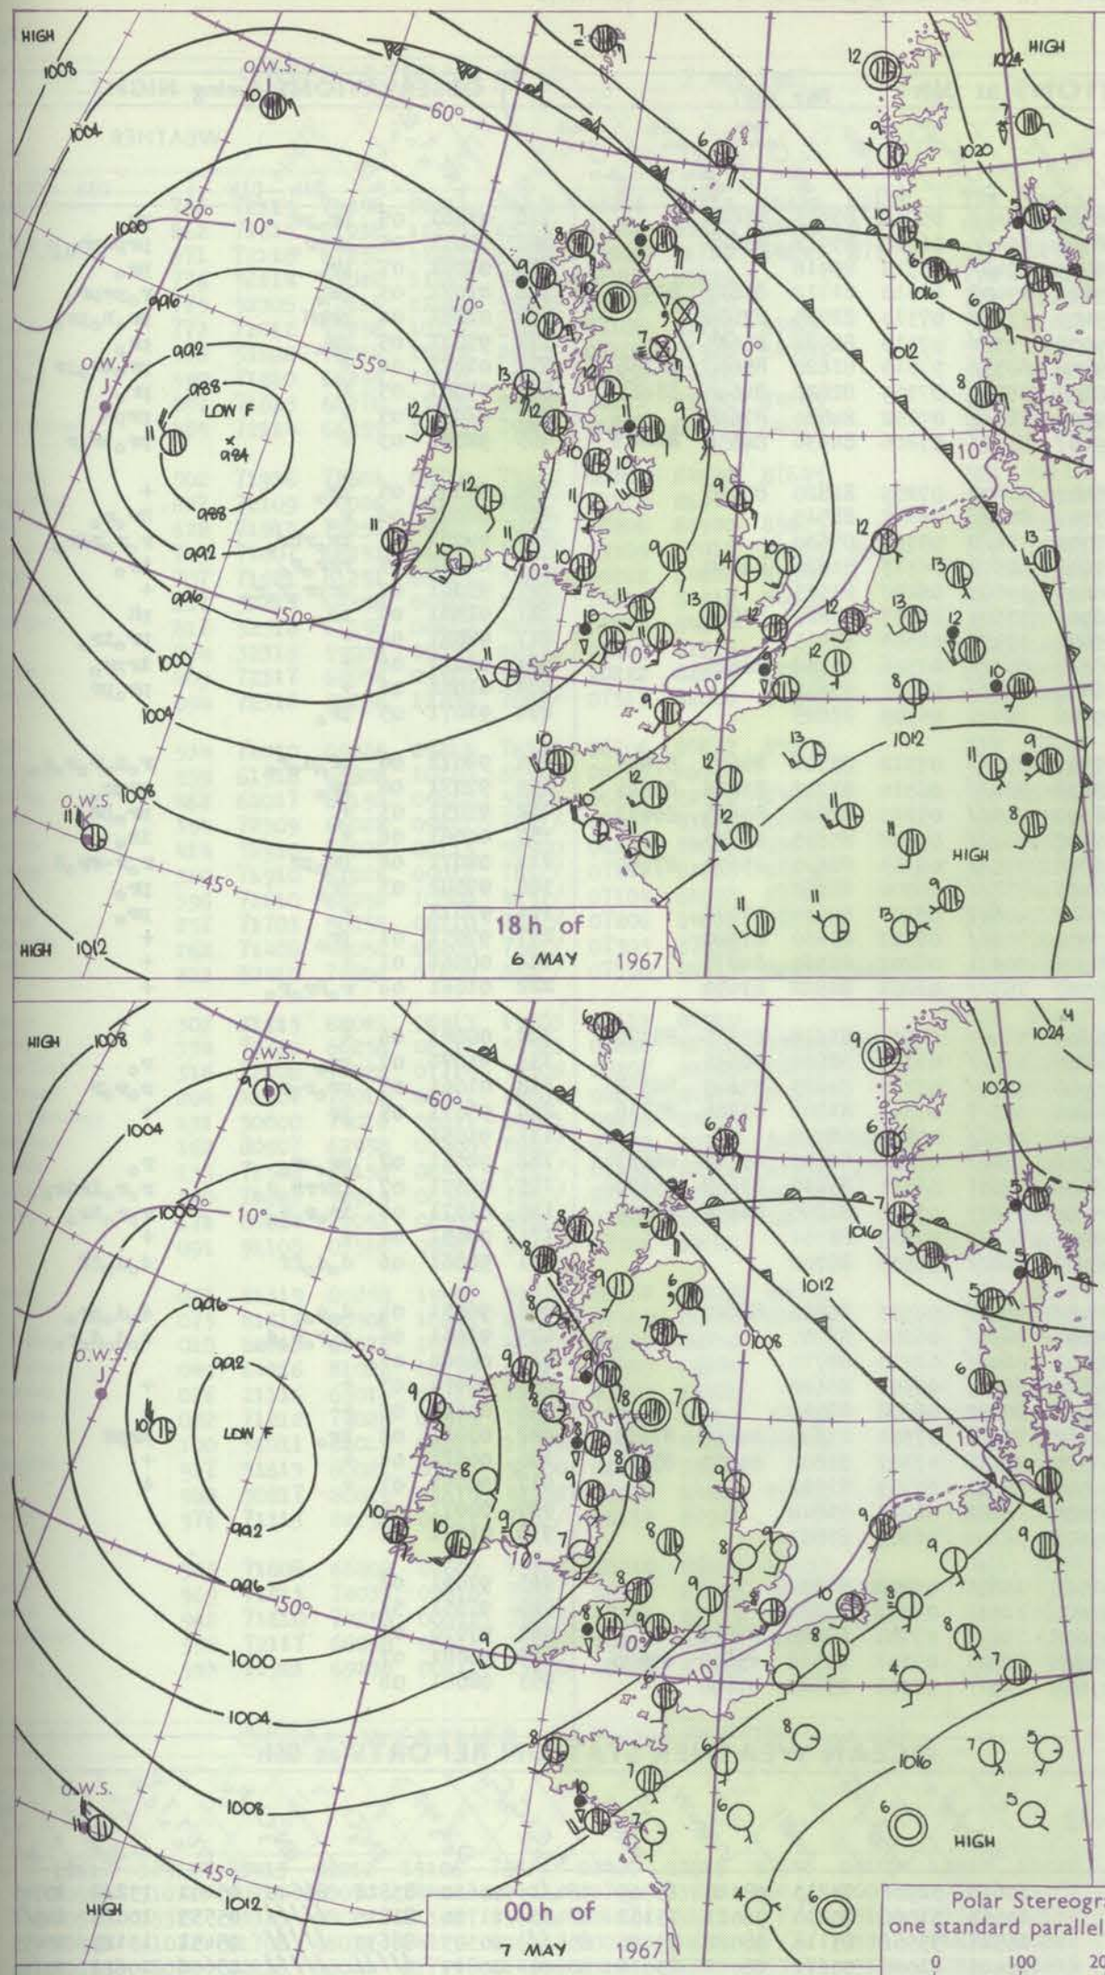
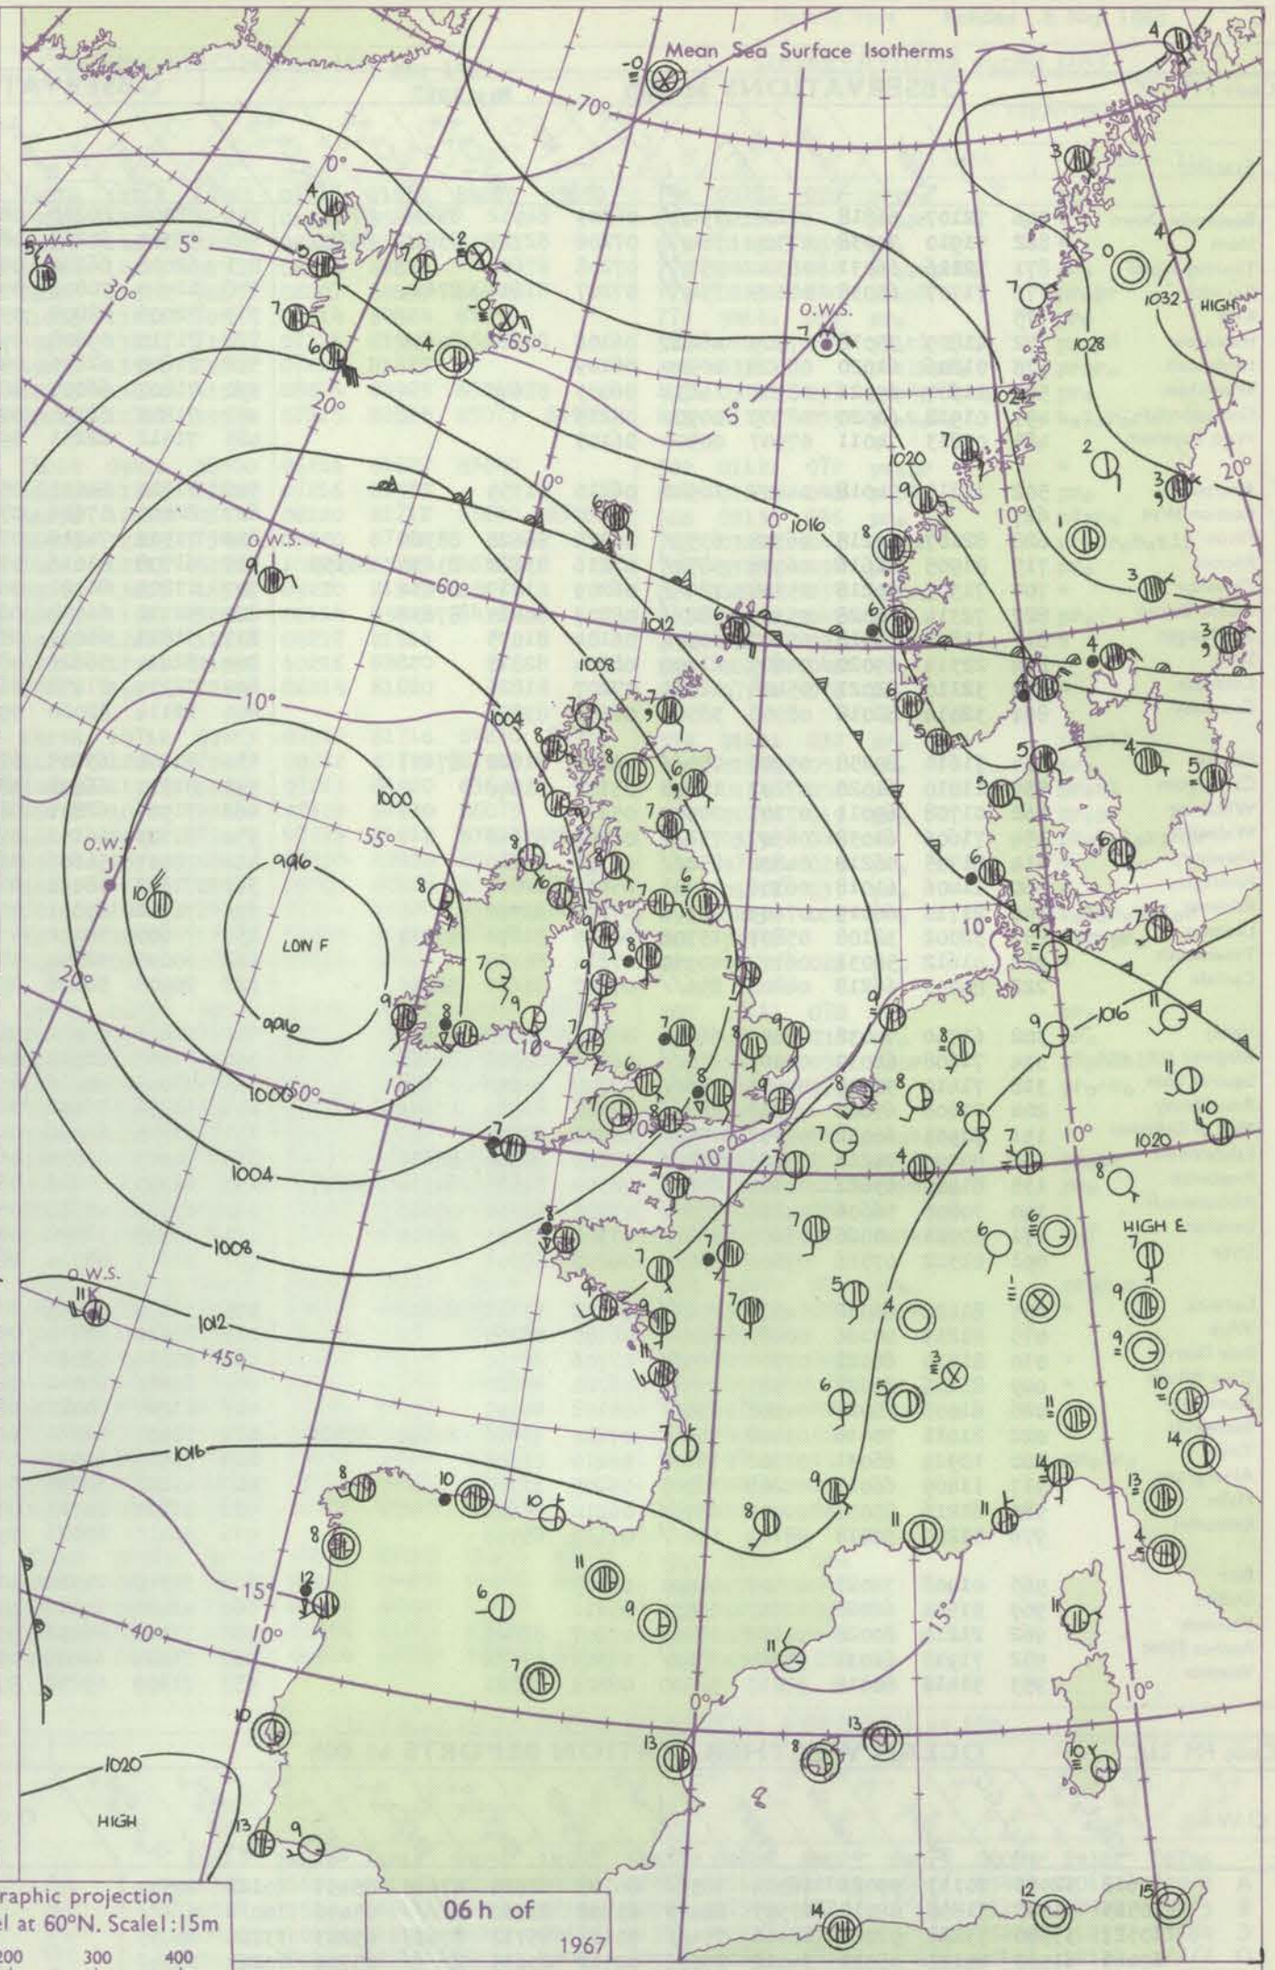
CHARTS OF WEATHER IN WESTERN EUROPE





Polar Stereographic projection
one standard parallel at 60°N. Scale 1:15m
0 100 200 300 400

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday **Sunday 7** May 1967

The depression centred to the west of Ireland has remained almost stationary during the last 24 hours and has continued to fill steadily. The associated frontal system has now cleared most parts of the British Isles except the extreme north of Scotland but the unstable southerly airstream is expected to persist over all districts during today and tomorrow.

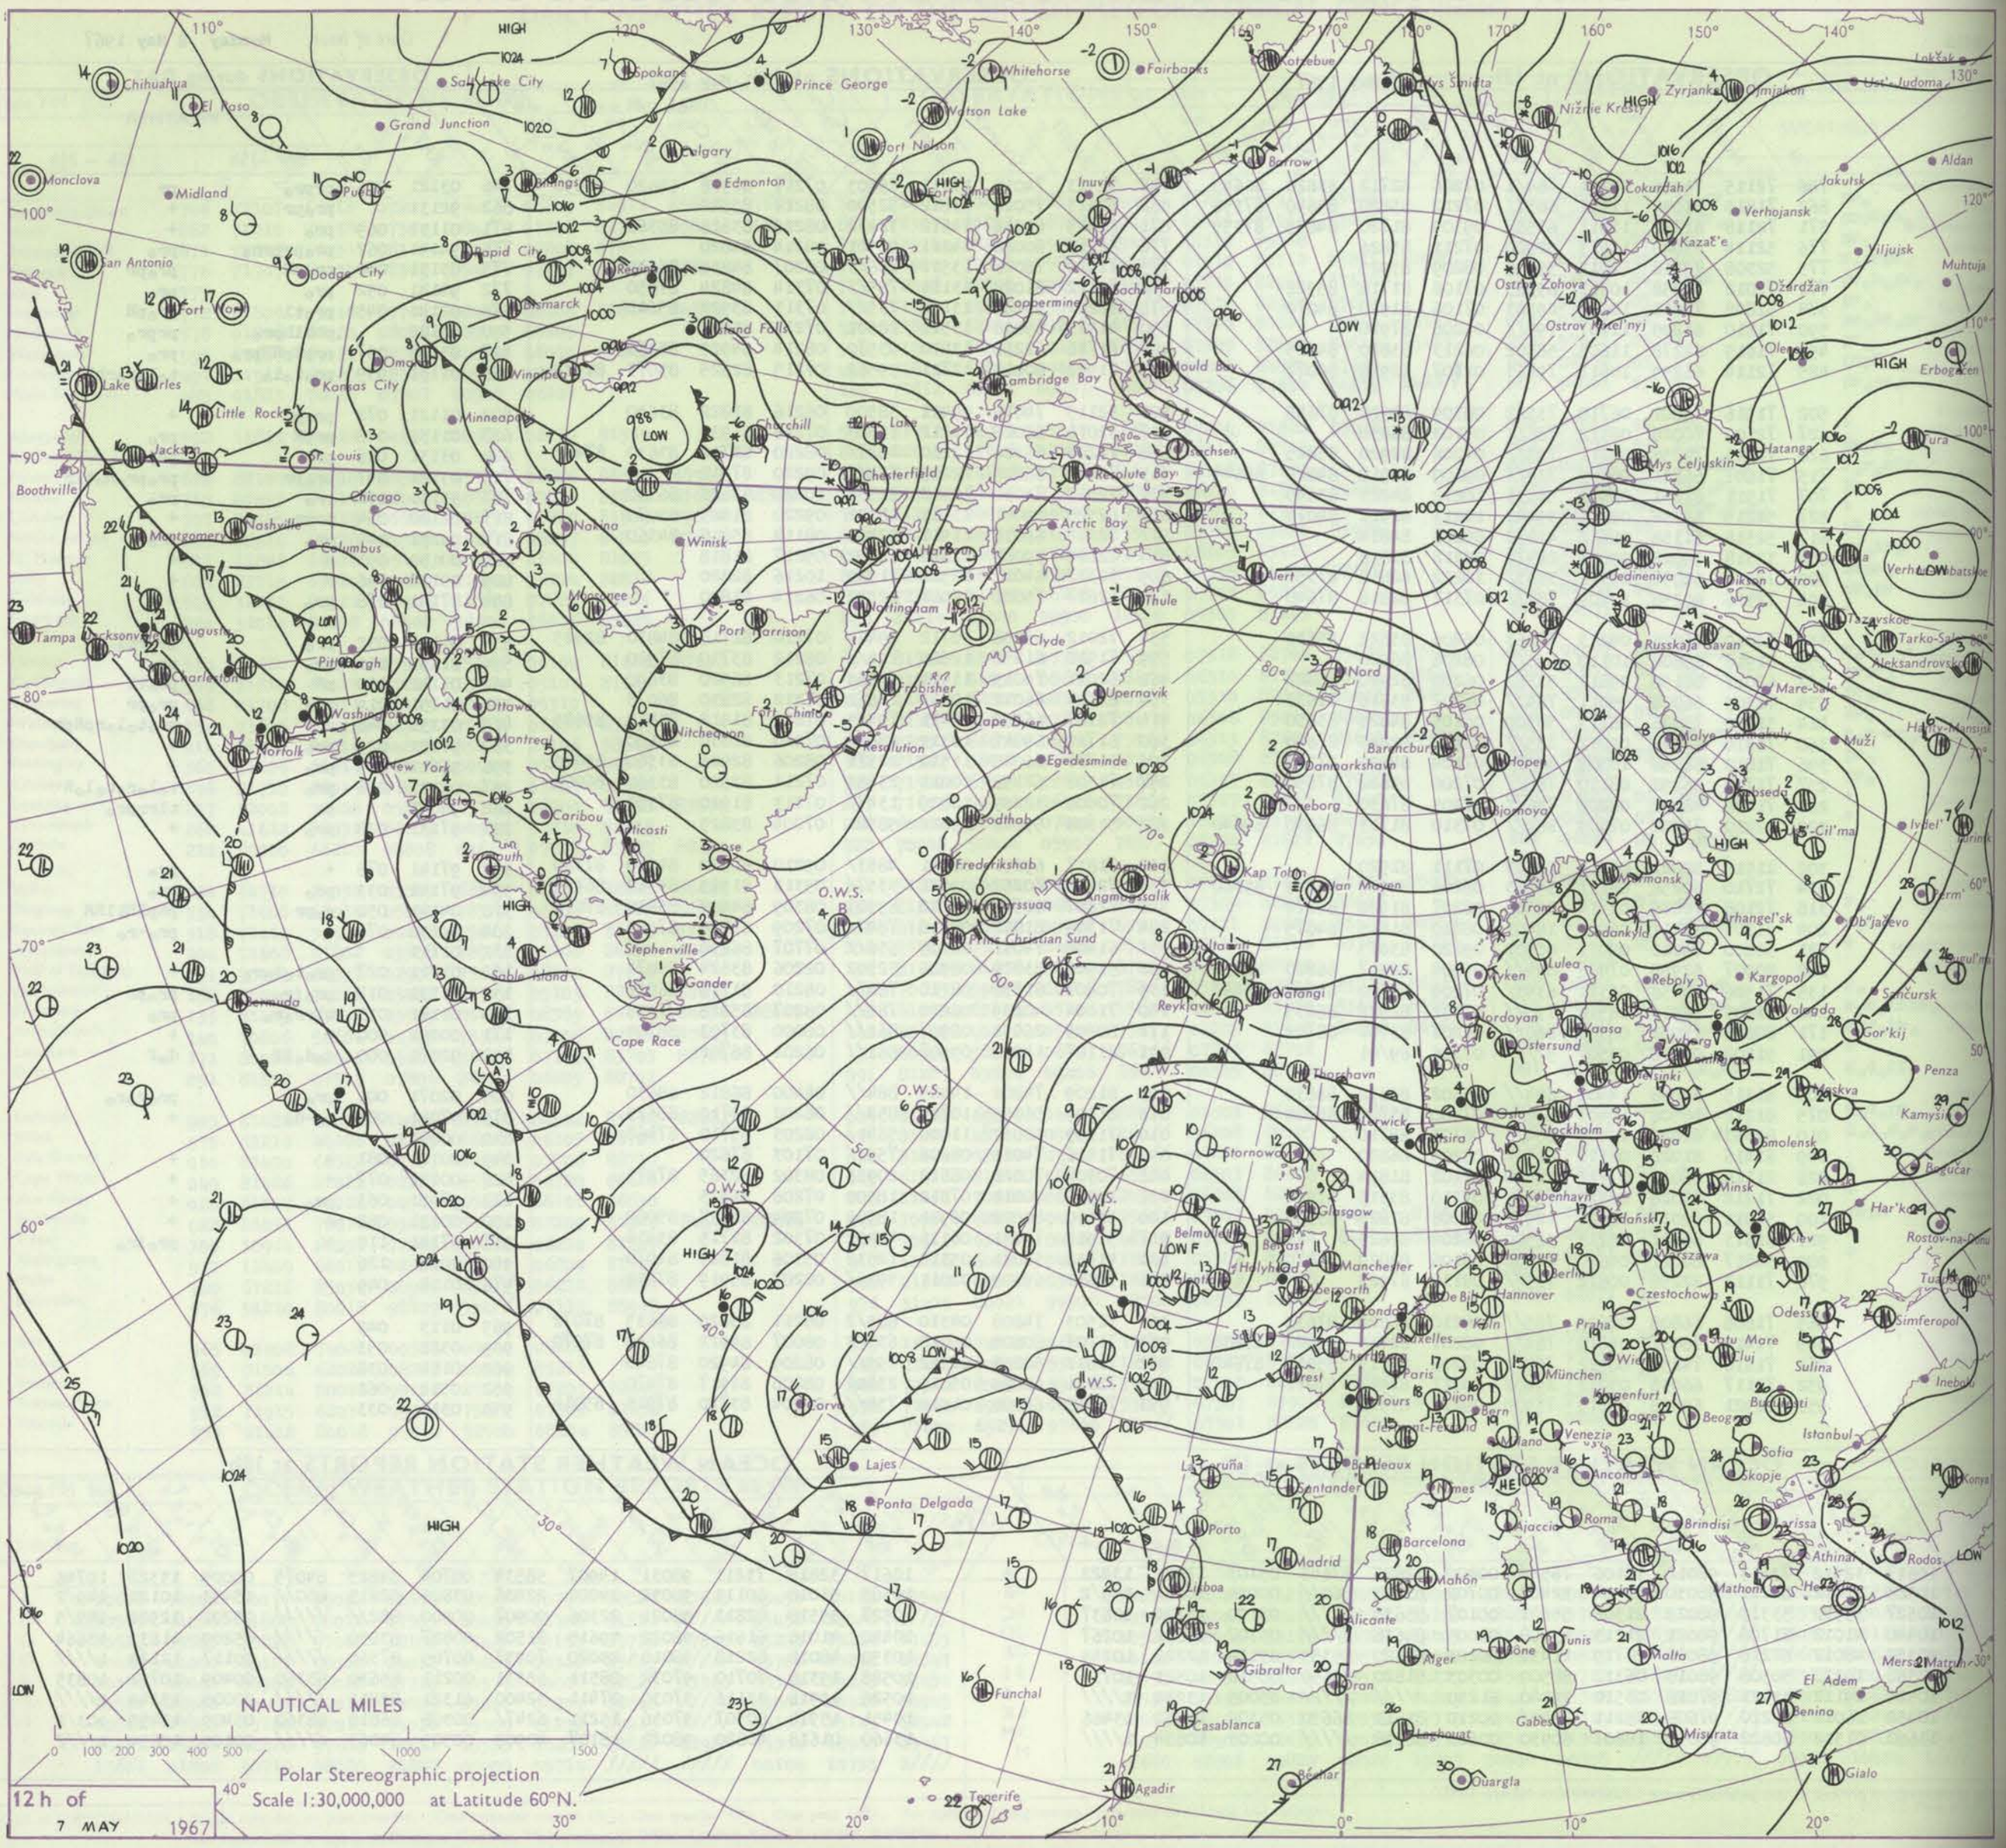
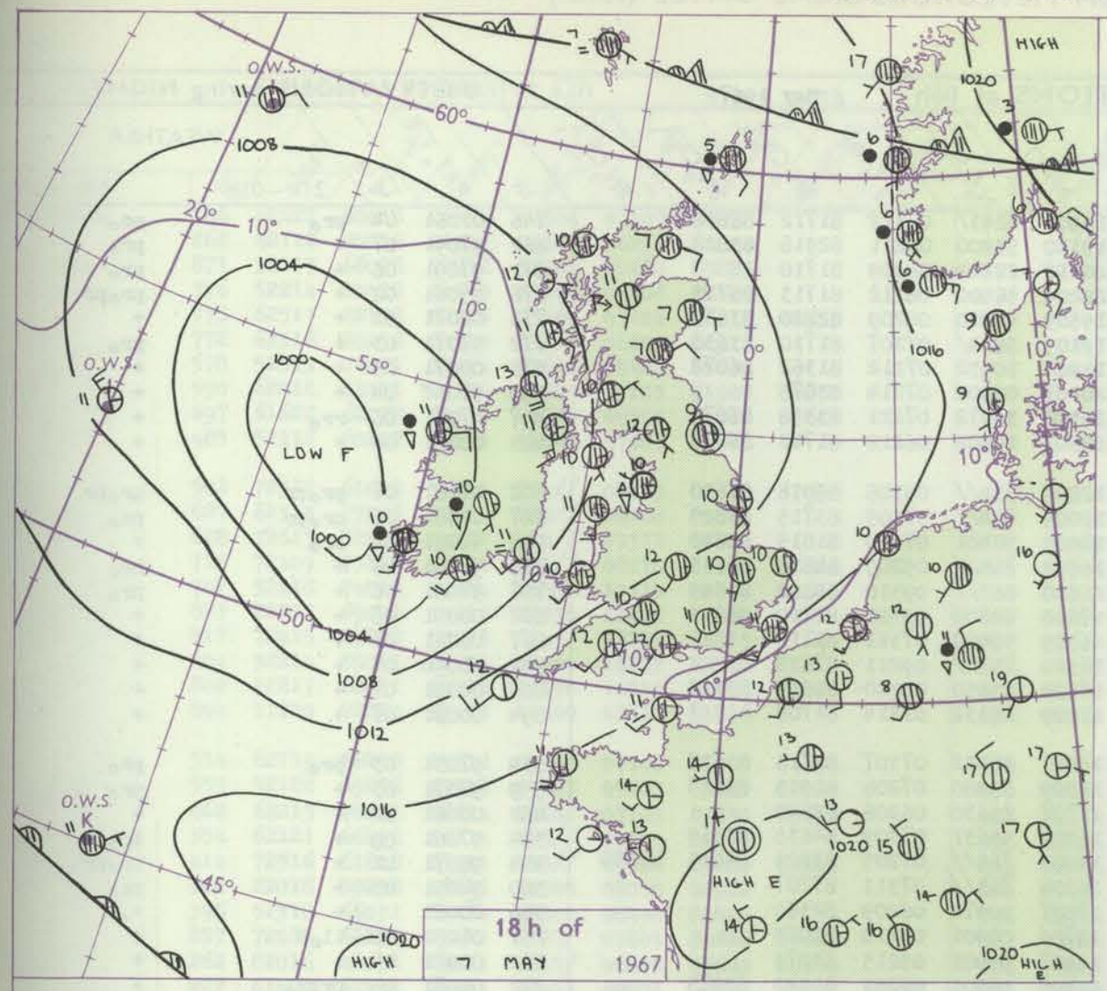
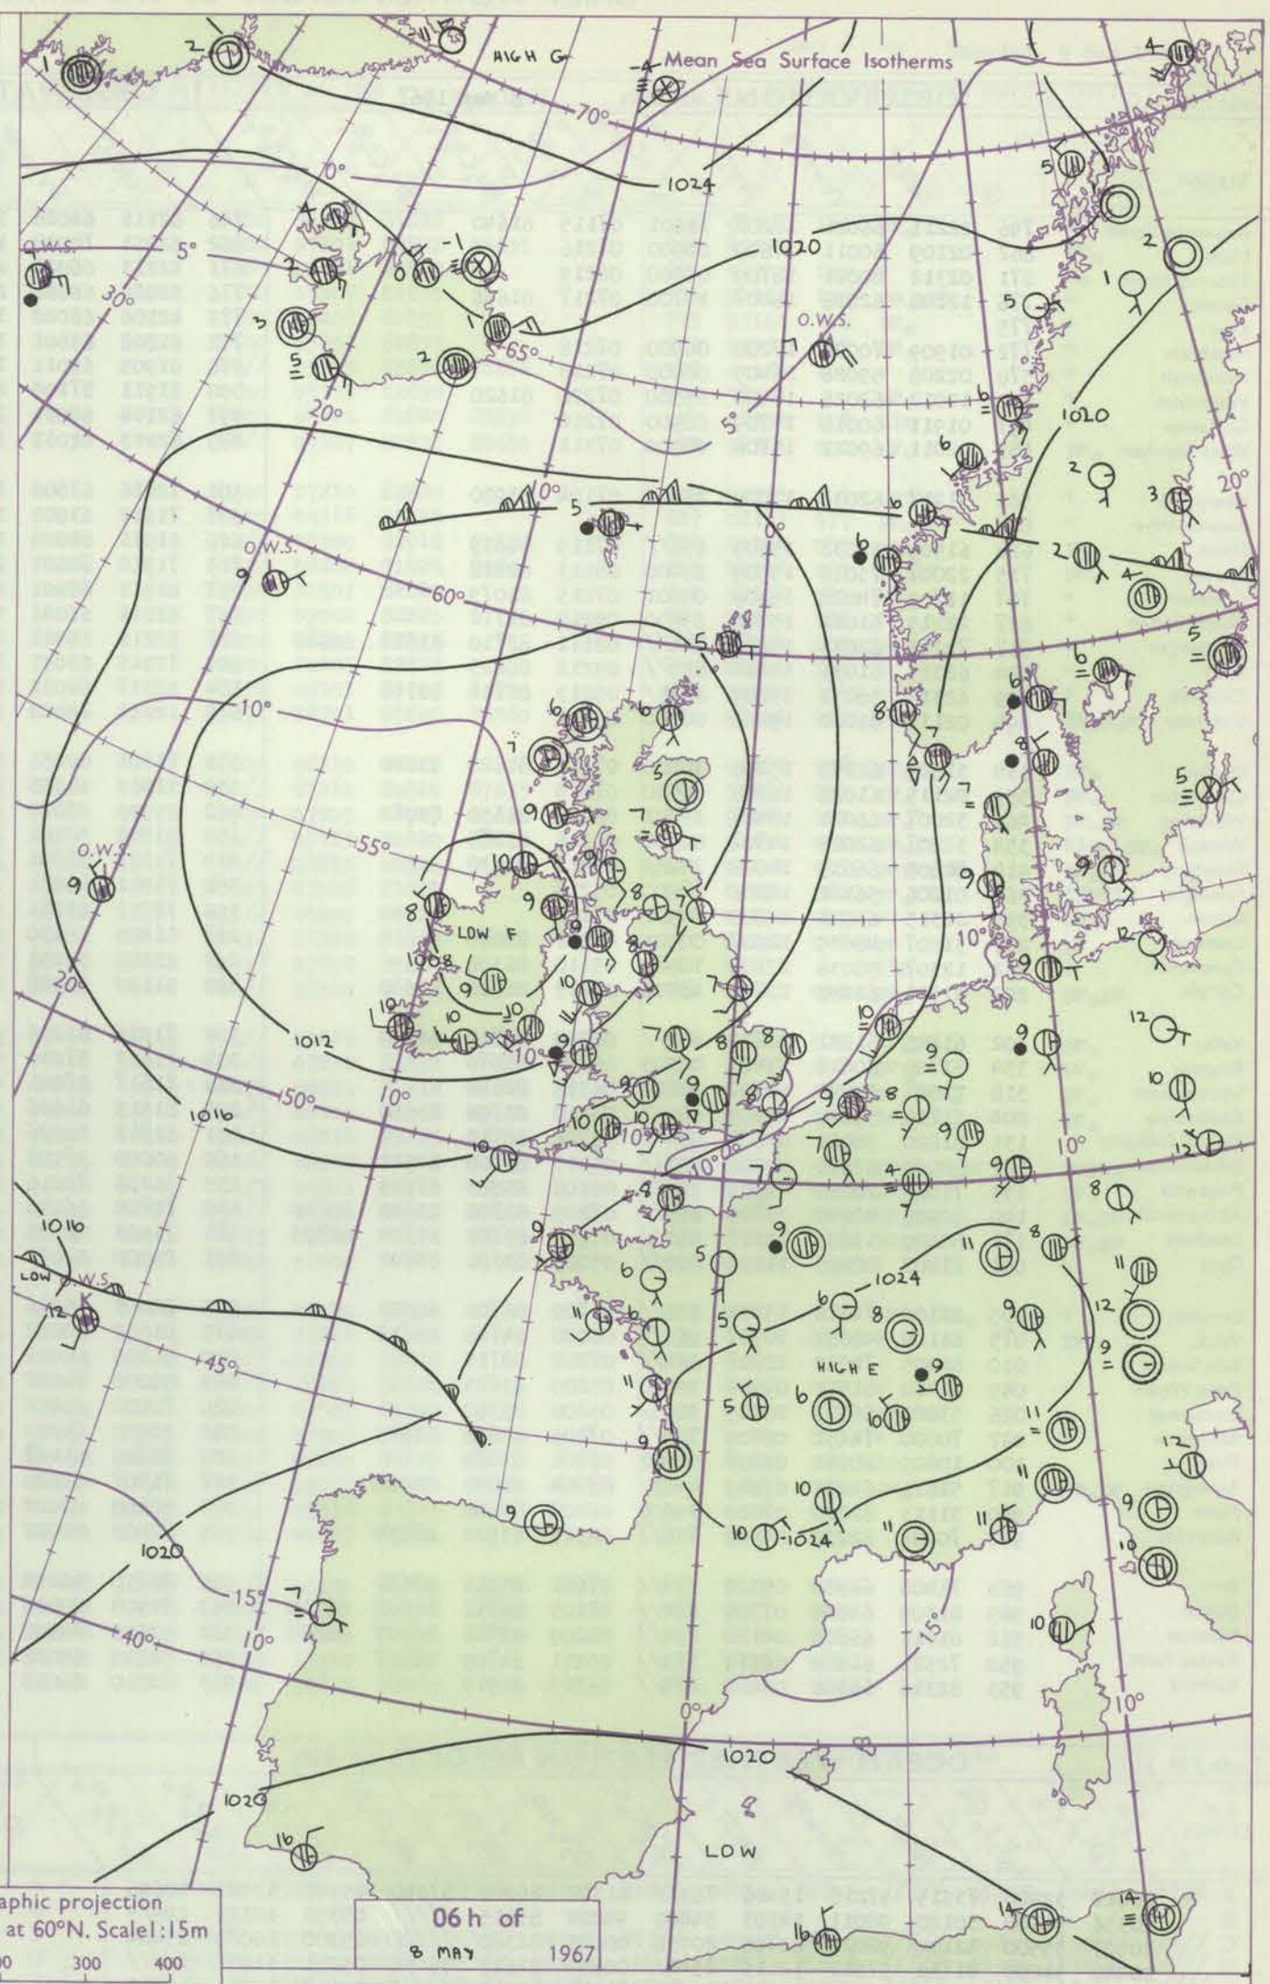
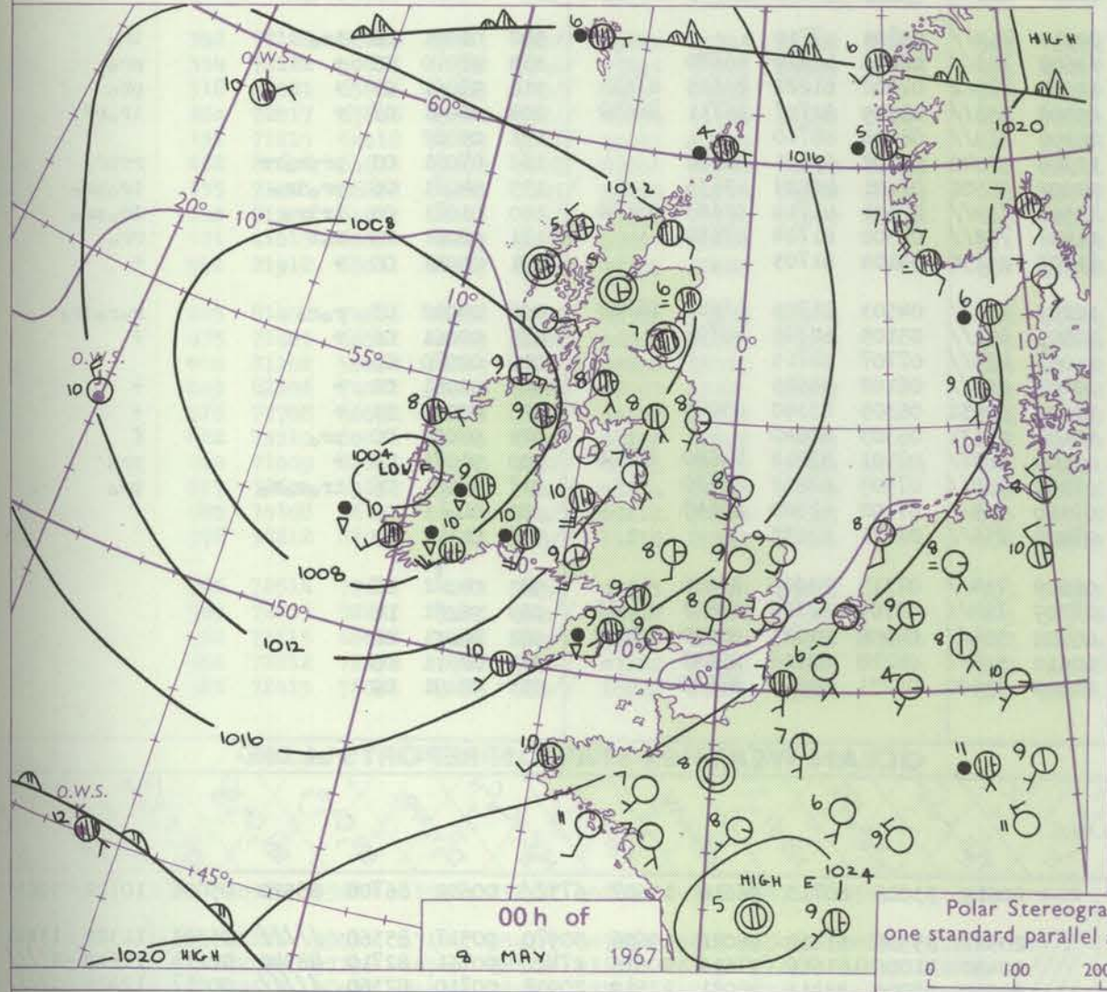
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE









Polar Stereographic projection
one standard parallel at 60°N. Scale 1:15m
0 100 200 300 400

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday **Monday 8** May 1967

The depression to the west of Ireland has continued to fill and whilst remaining slow-moving for much of the time is now beginning to move north to northeast. A secondary depression to the north of the Azores has moved east to southeast whilst its associated relatively weak warm front has moved slowly north. An unstable south to southwest airstream is expected to continue over much of the British Isles during today and most of tomorrow.

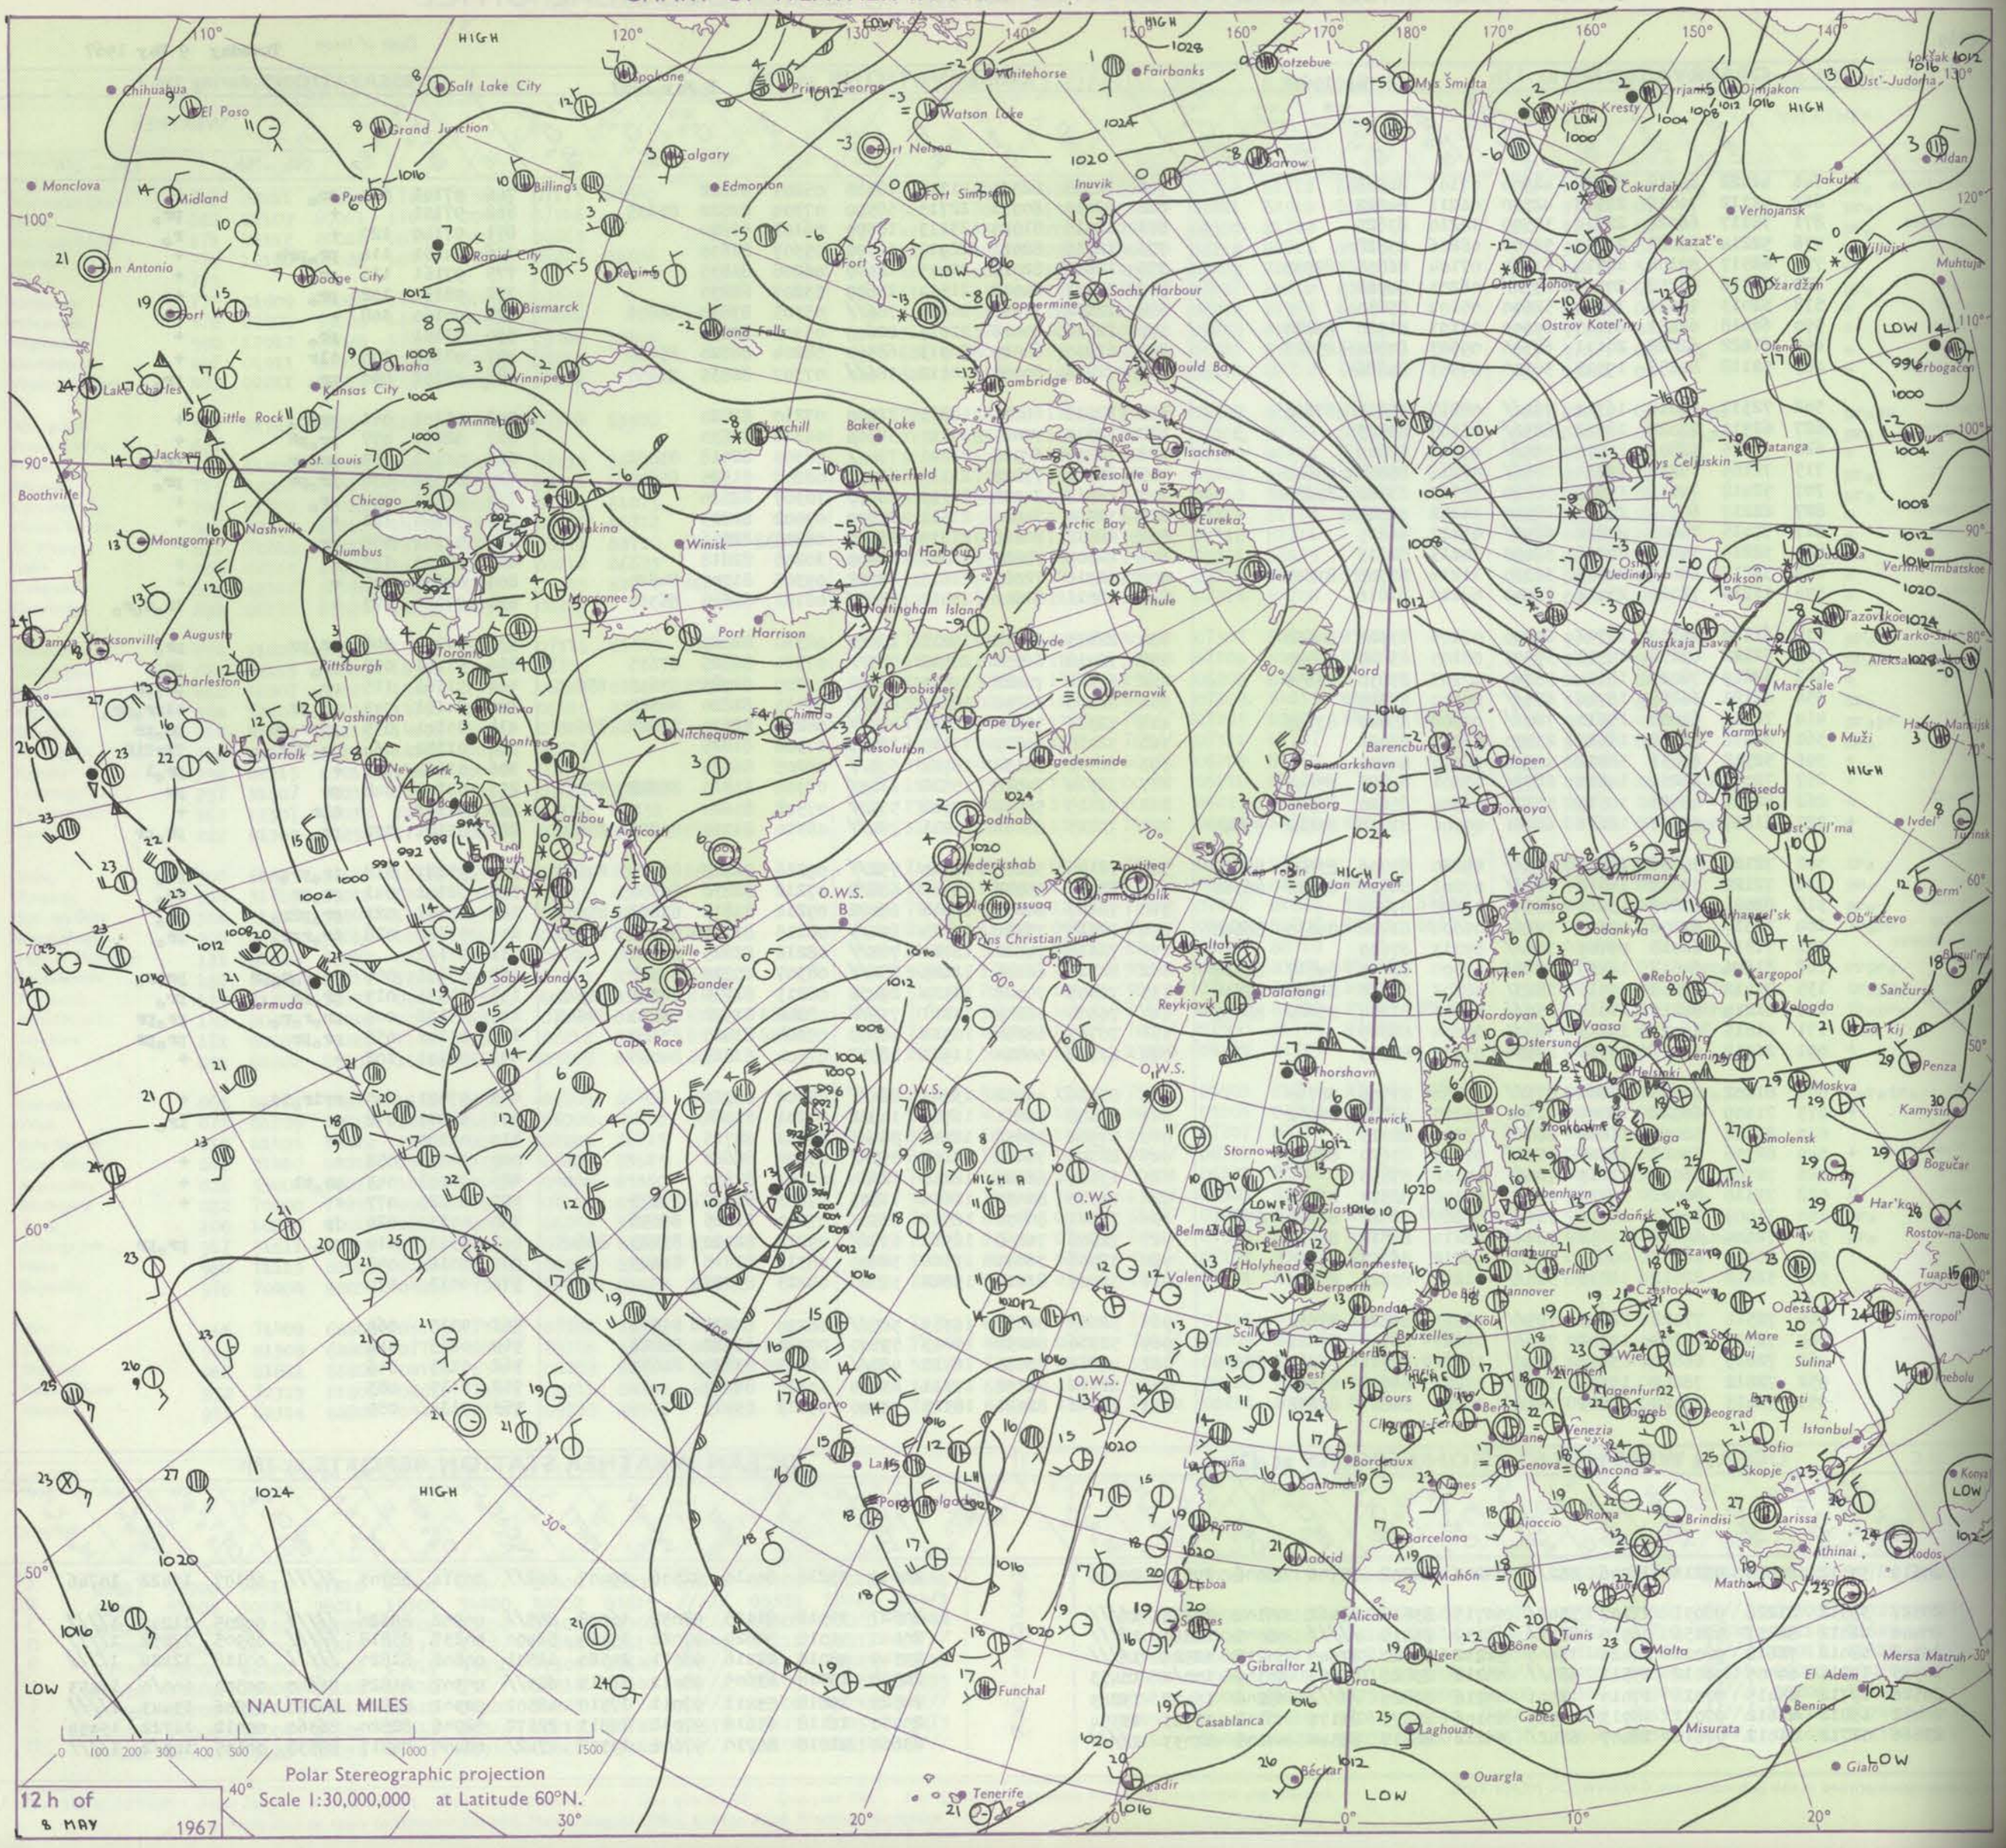
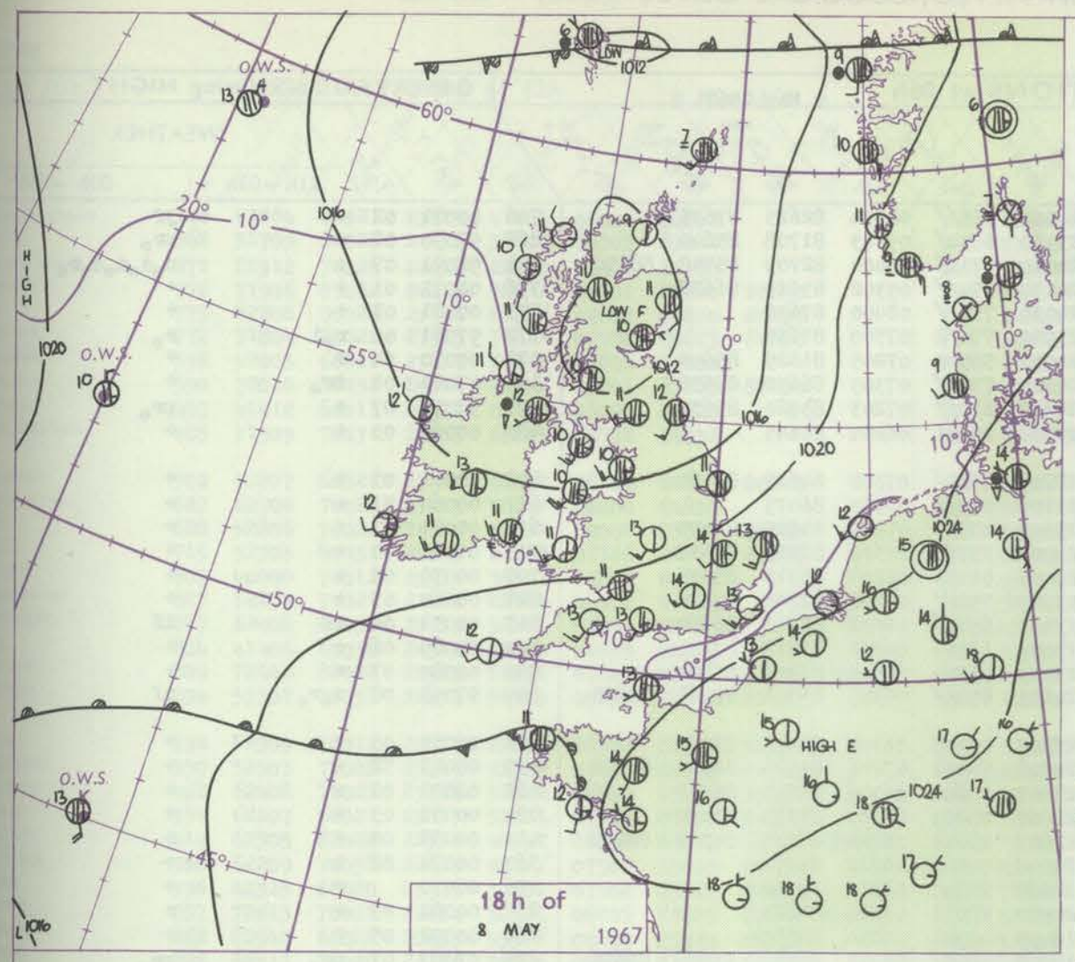
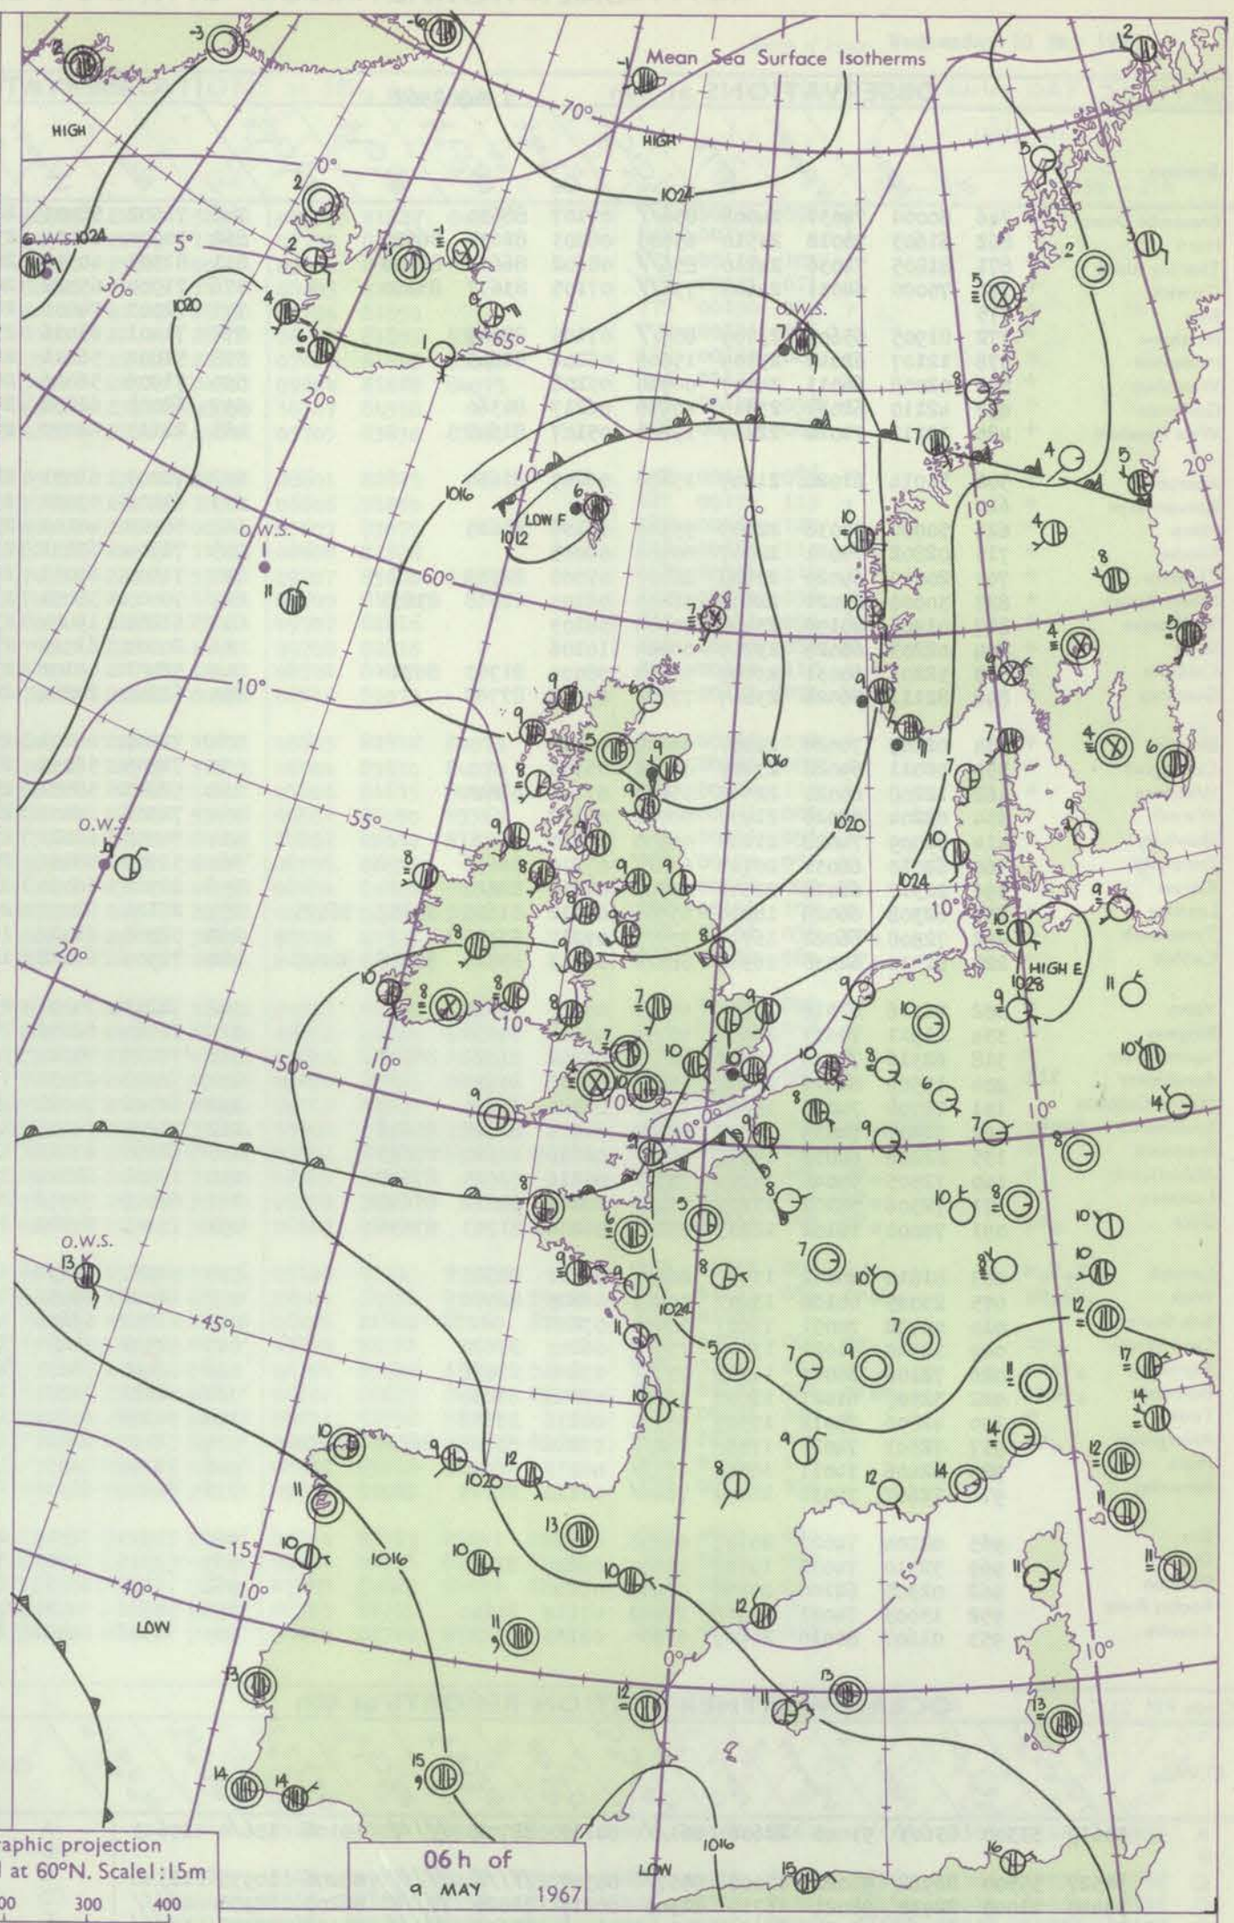
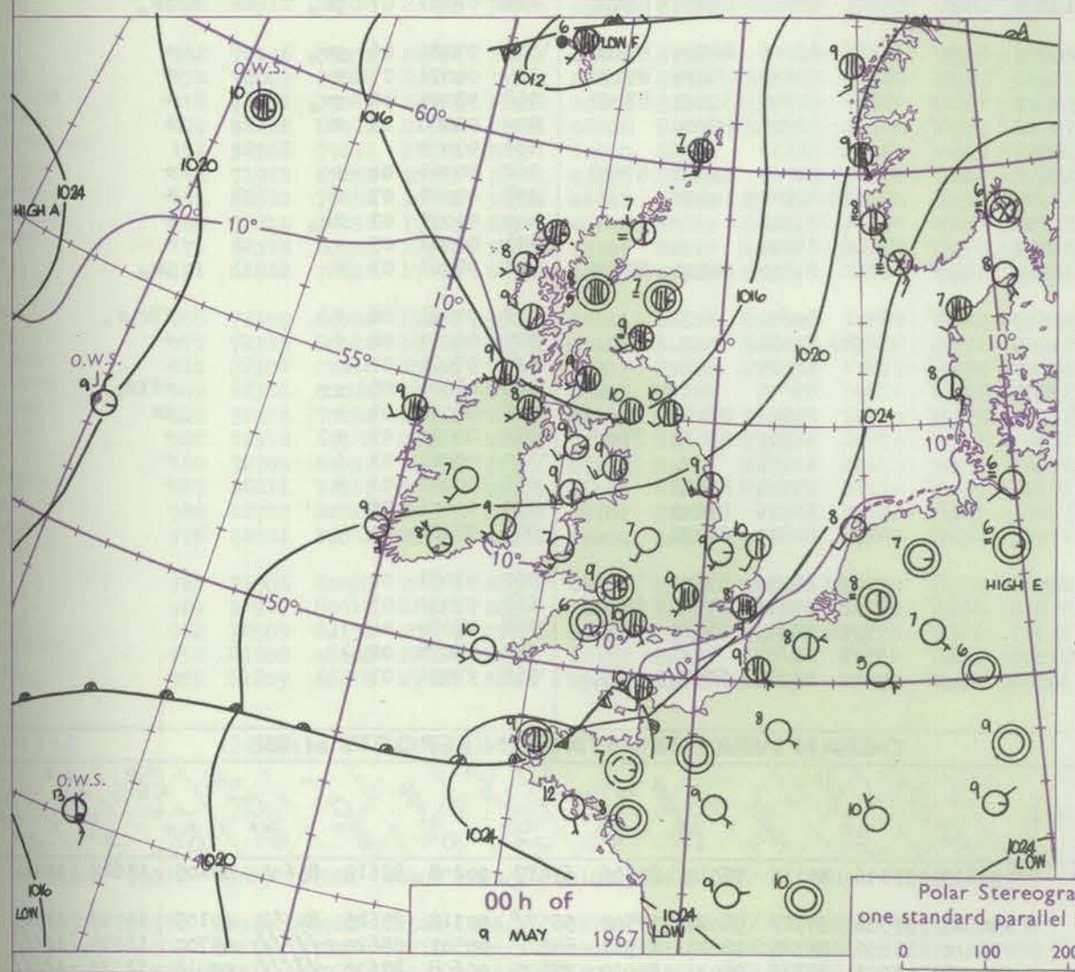
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE









Polar Stereographic projection
one standard parallel at 60°N. Scale 1:15m
0 100 200 300 400

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday **Tuesday 9** May 1967

The depression over Northern Ireland has continued to fill and move slowly northeast. Another depression east of the Azores is also filling and is moving southeast. The warm front associated with this depression is moving slowly north and the weak wave on it affecting the Brest Peninsula will move eastnortheast to affect extreme southern and southeast England. The anticyclone over France is intensifying slightly and will move slowly eastnortheast and is likely to become the dominant feature for the British Isles. The depression north of O.W.S. 'D' is becoming complex with the southern centre moving southeast and the northern centre slow-moving.

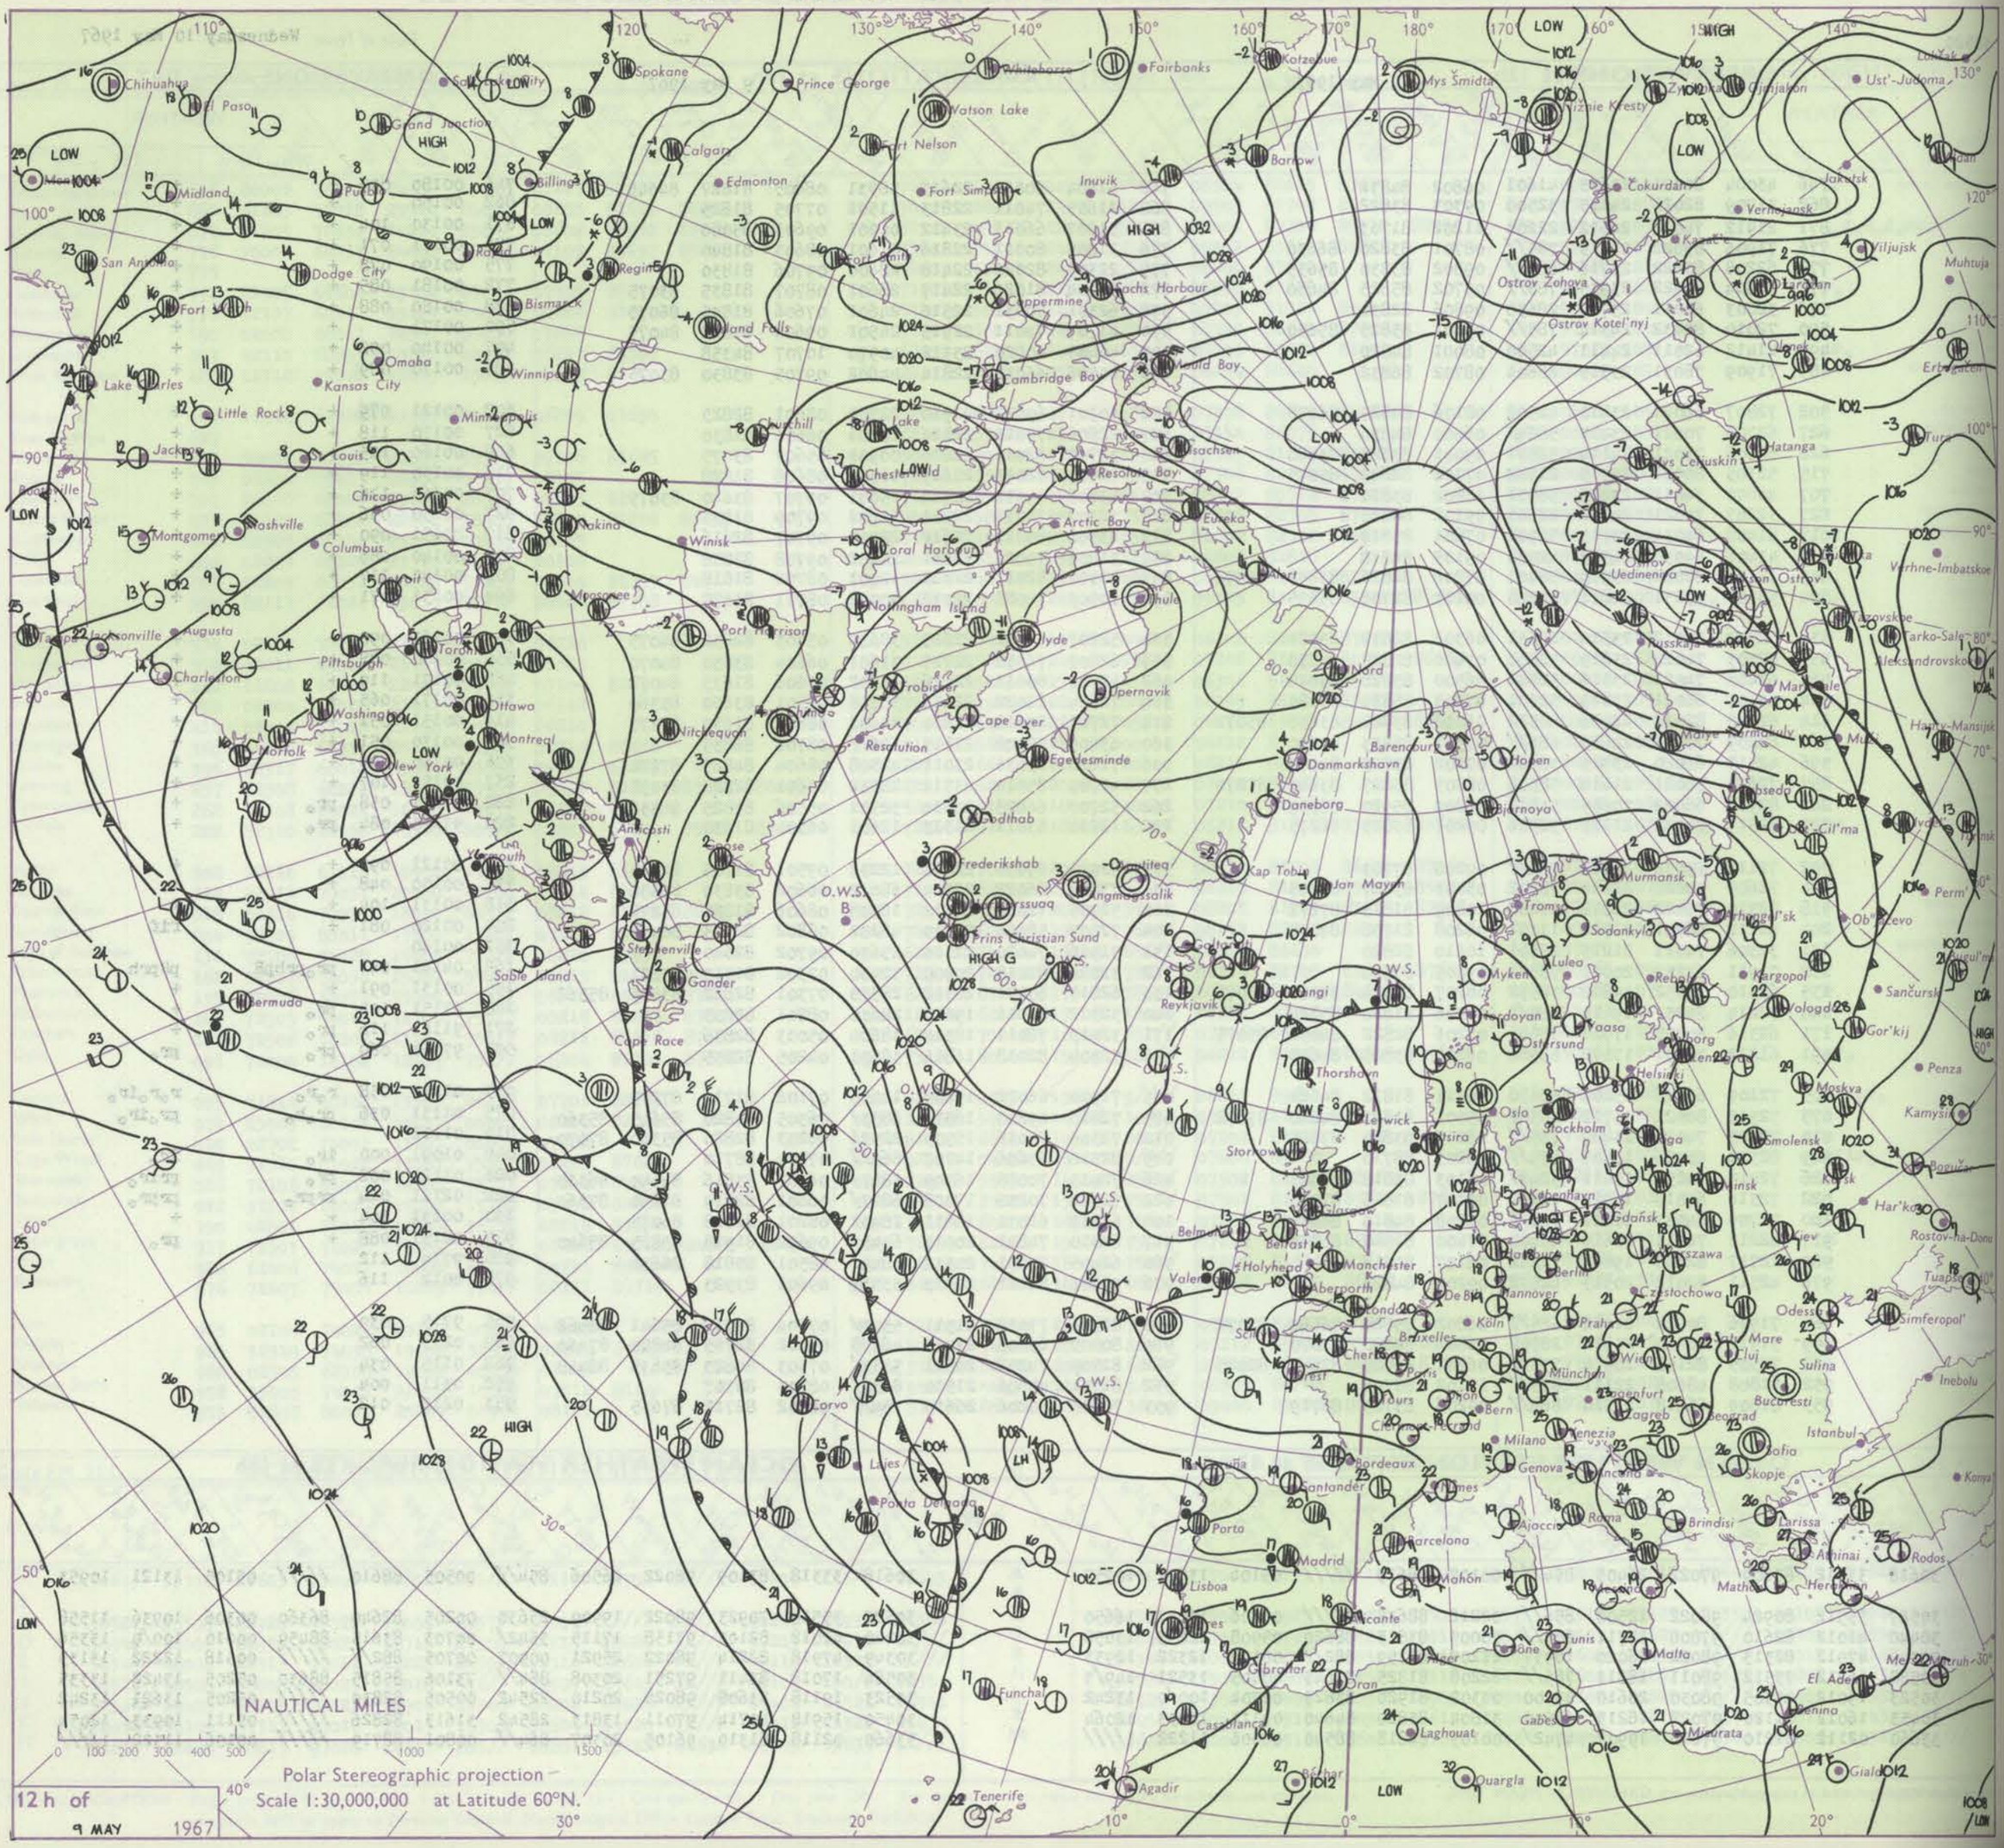
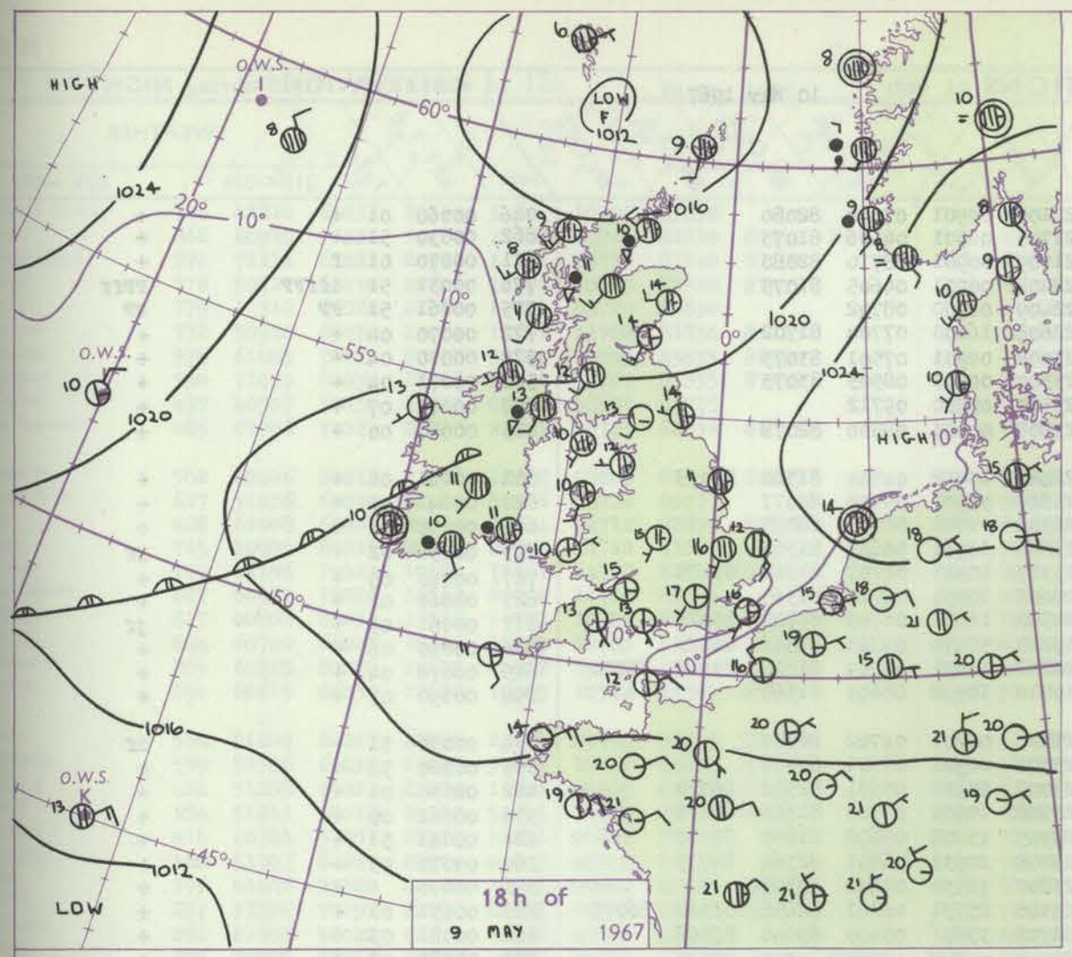
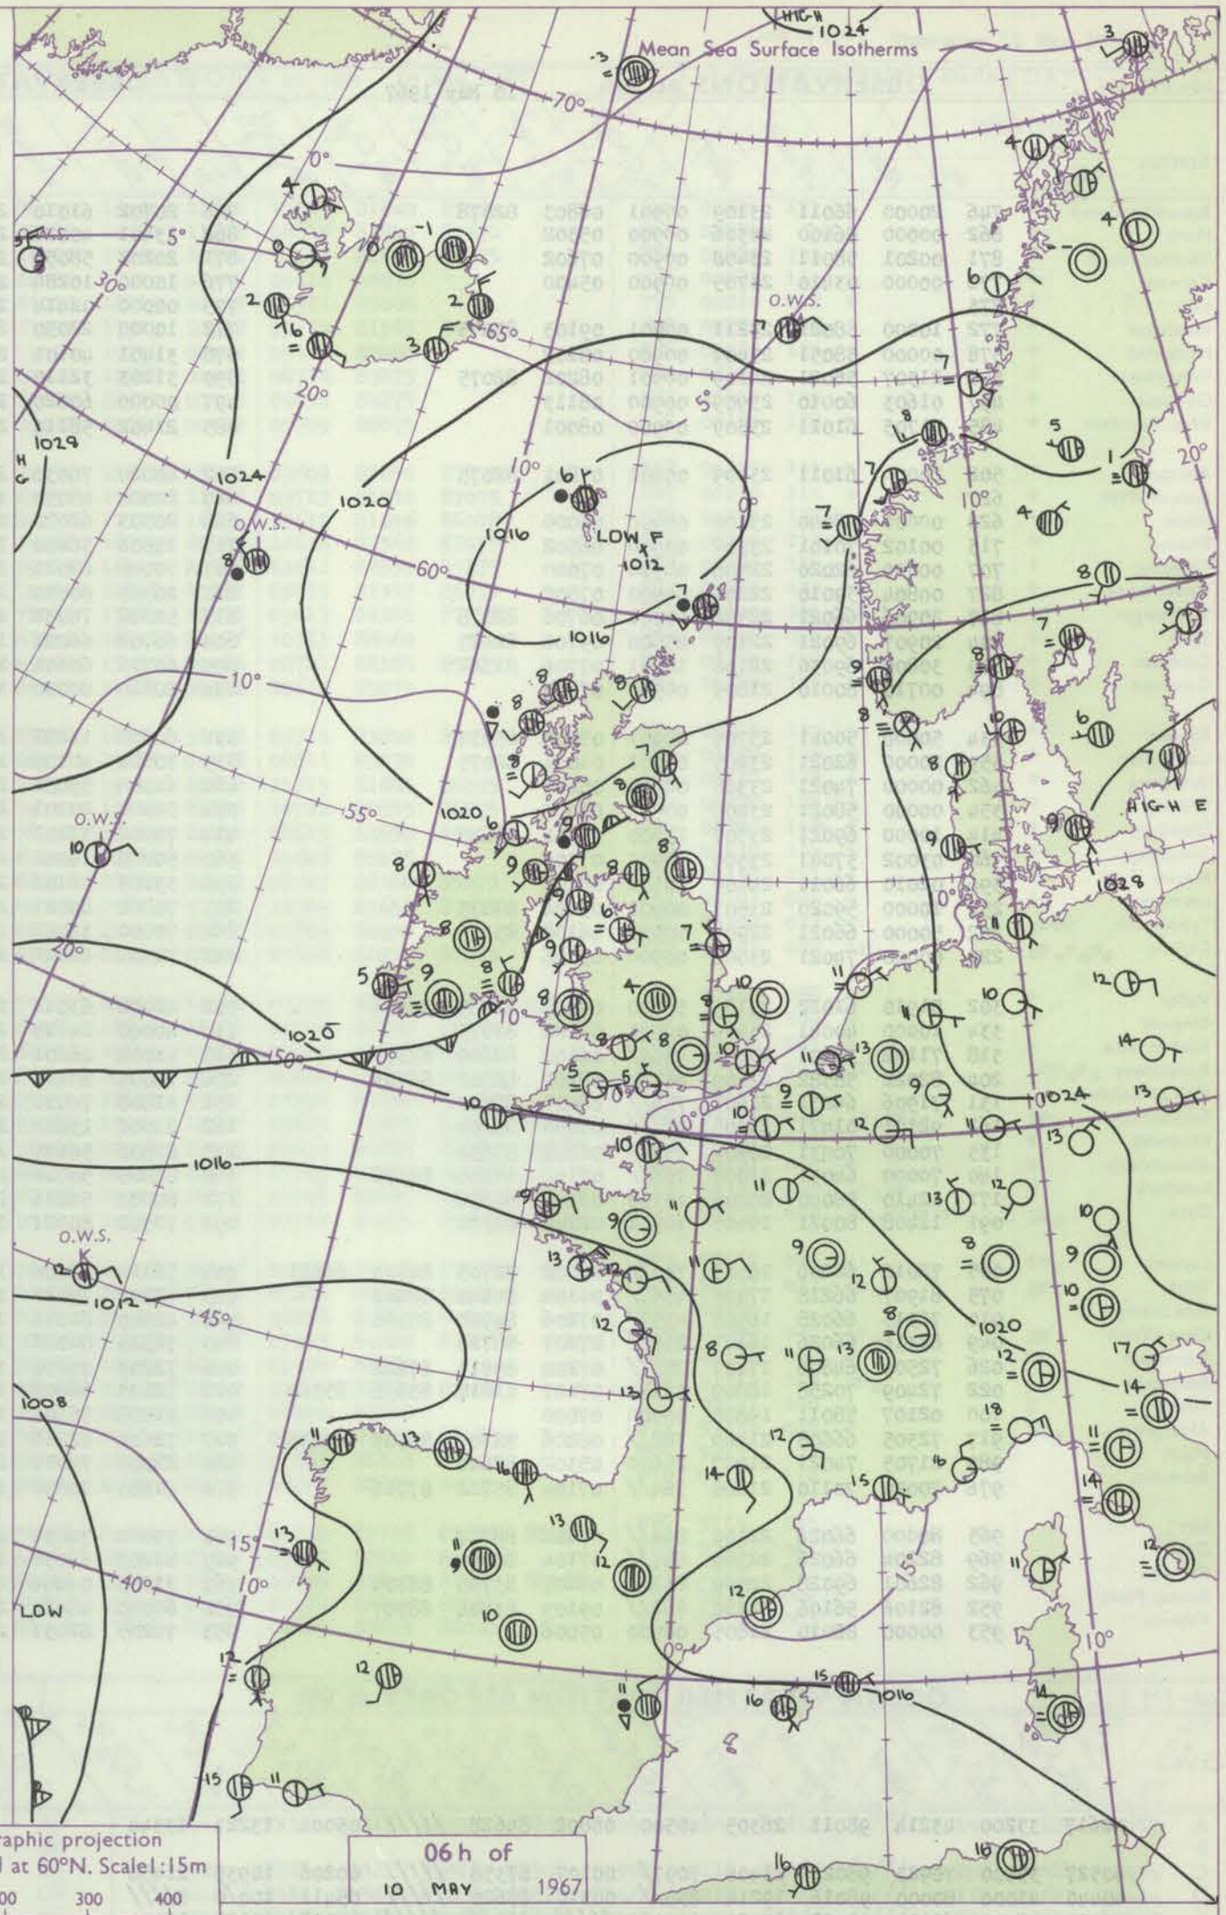
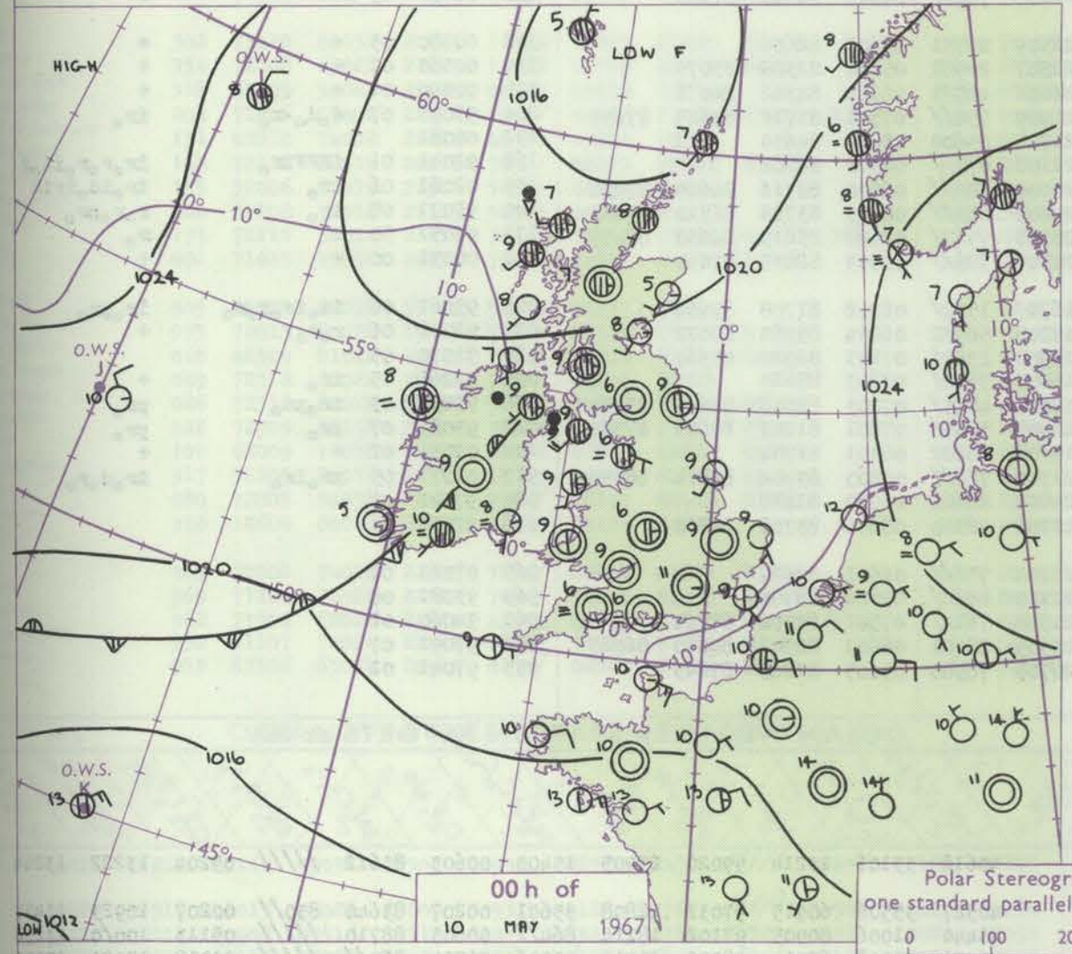
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE









Polar Stereographic projection
one standard parallel at 60°N. Scale 1:15m
0 100 200 300 400

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday **Wednesday 10** May 1967

The rather weak depression centred to the north of Scotland has persisted without much change in position or intensity, but during the next 24 hours is expected to drift slowly northwards. The belt of high pressure across southern parts of the British Isles between highs over the Baltic and near south Greenland has moved slowly north. This trend will continue and the axis of the high pressure belt will reach south Scotland by morning. The low complex which yesterday was over the central Atlantic has moved southeast, and the main centre, now west of Portugal, will move east rather slowly, while a trough of low pressure over Biscay and southern France will move slowly north towards southern England.

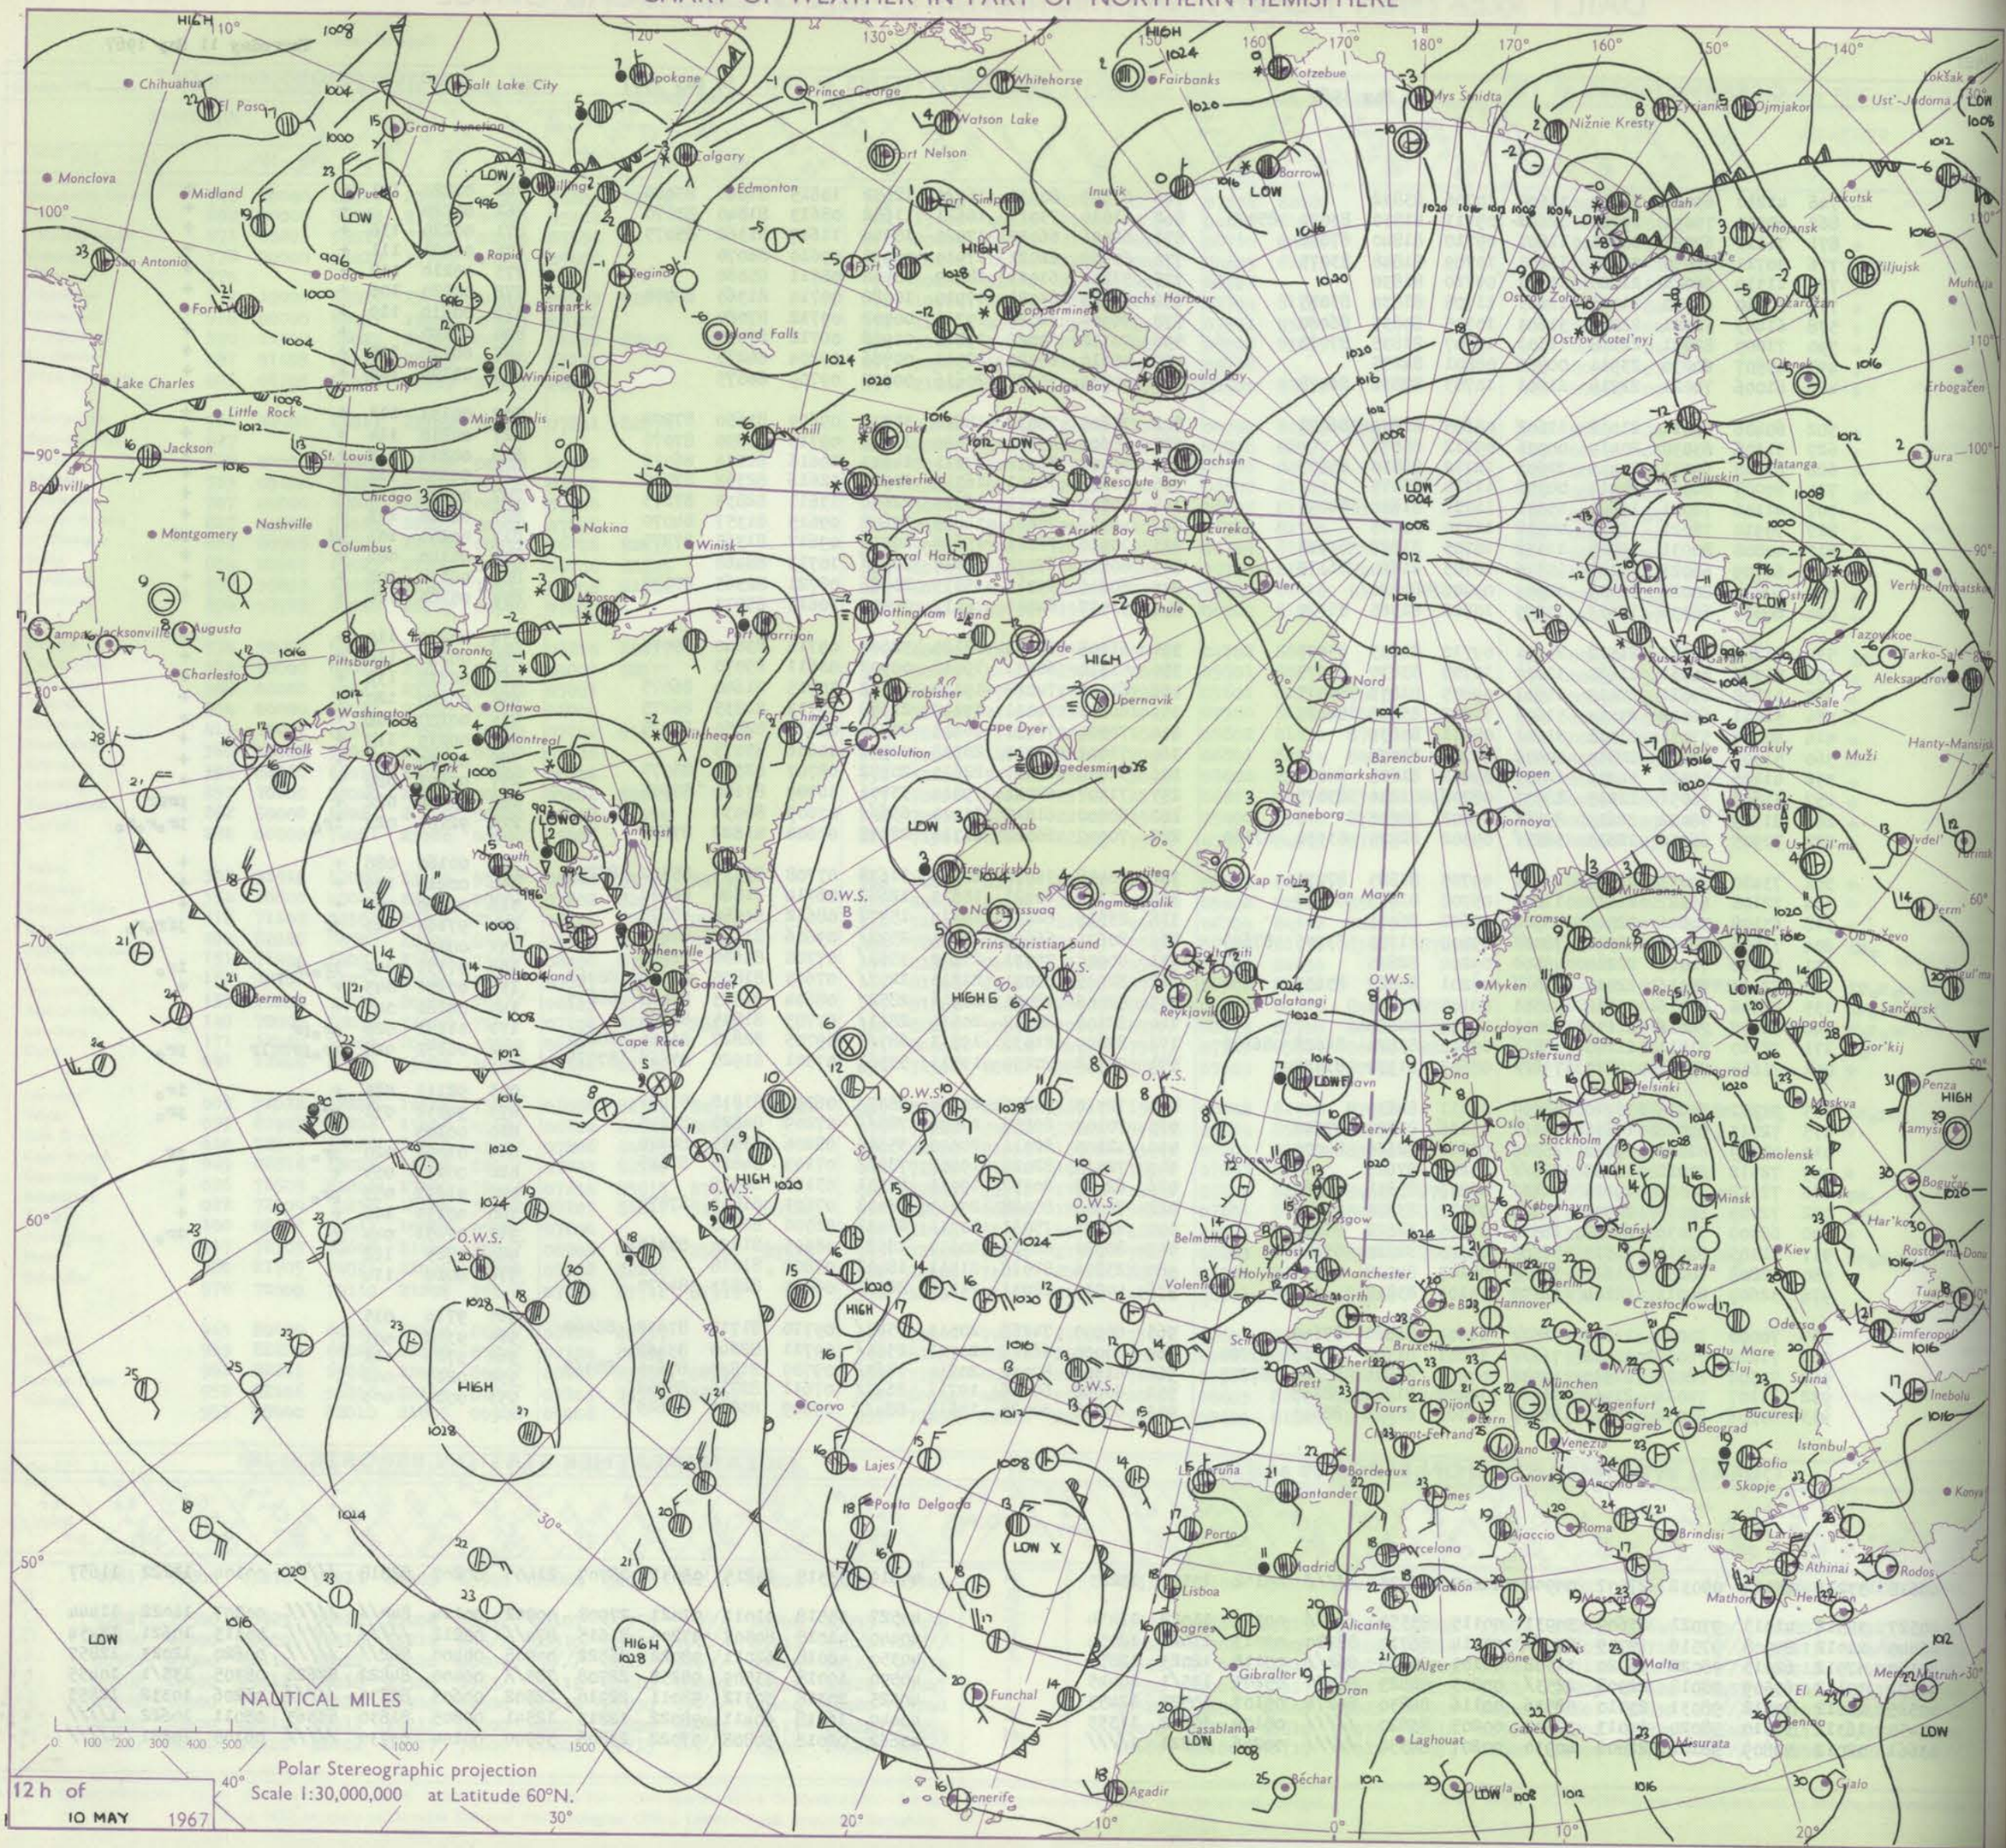
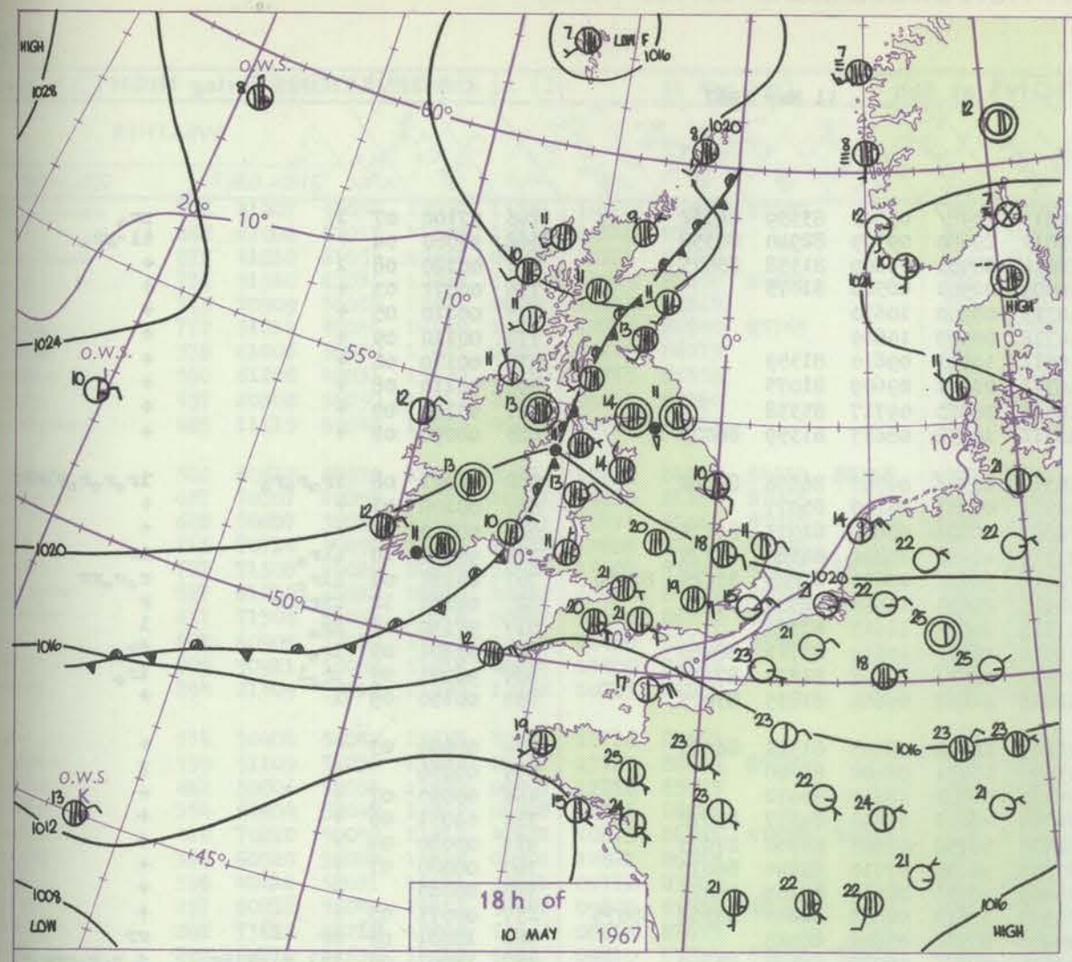
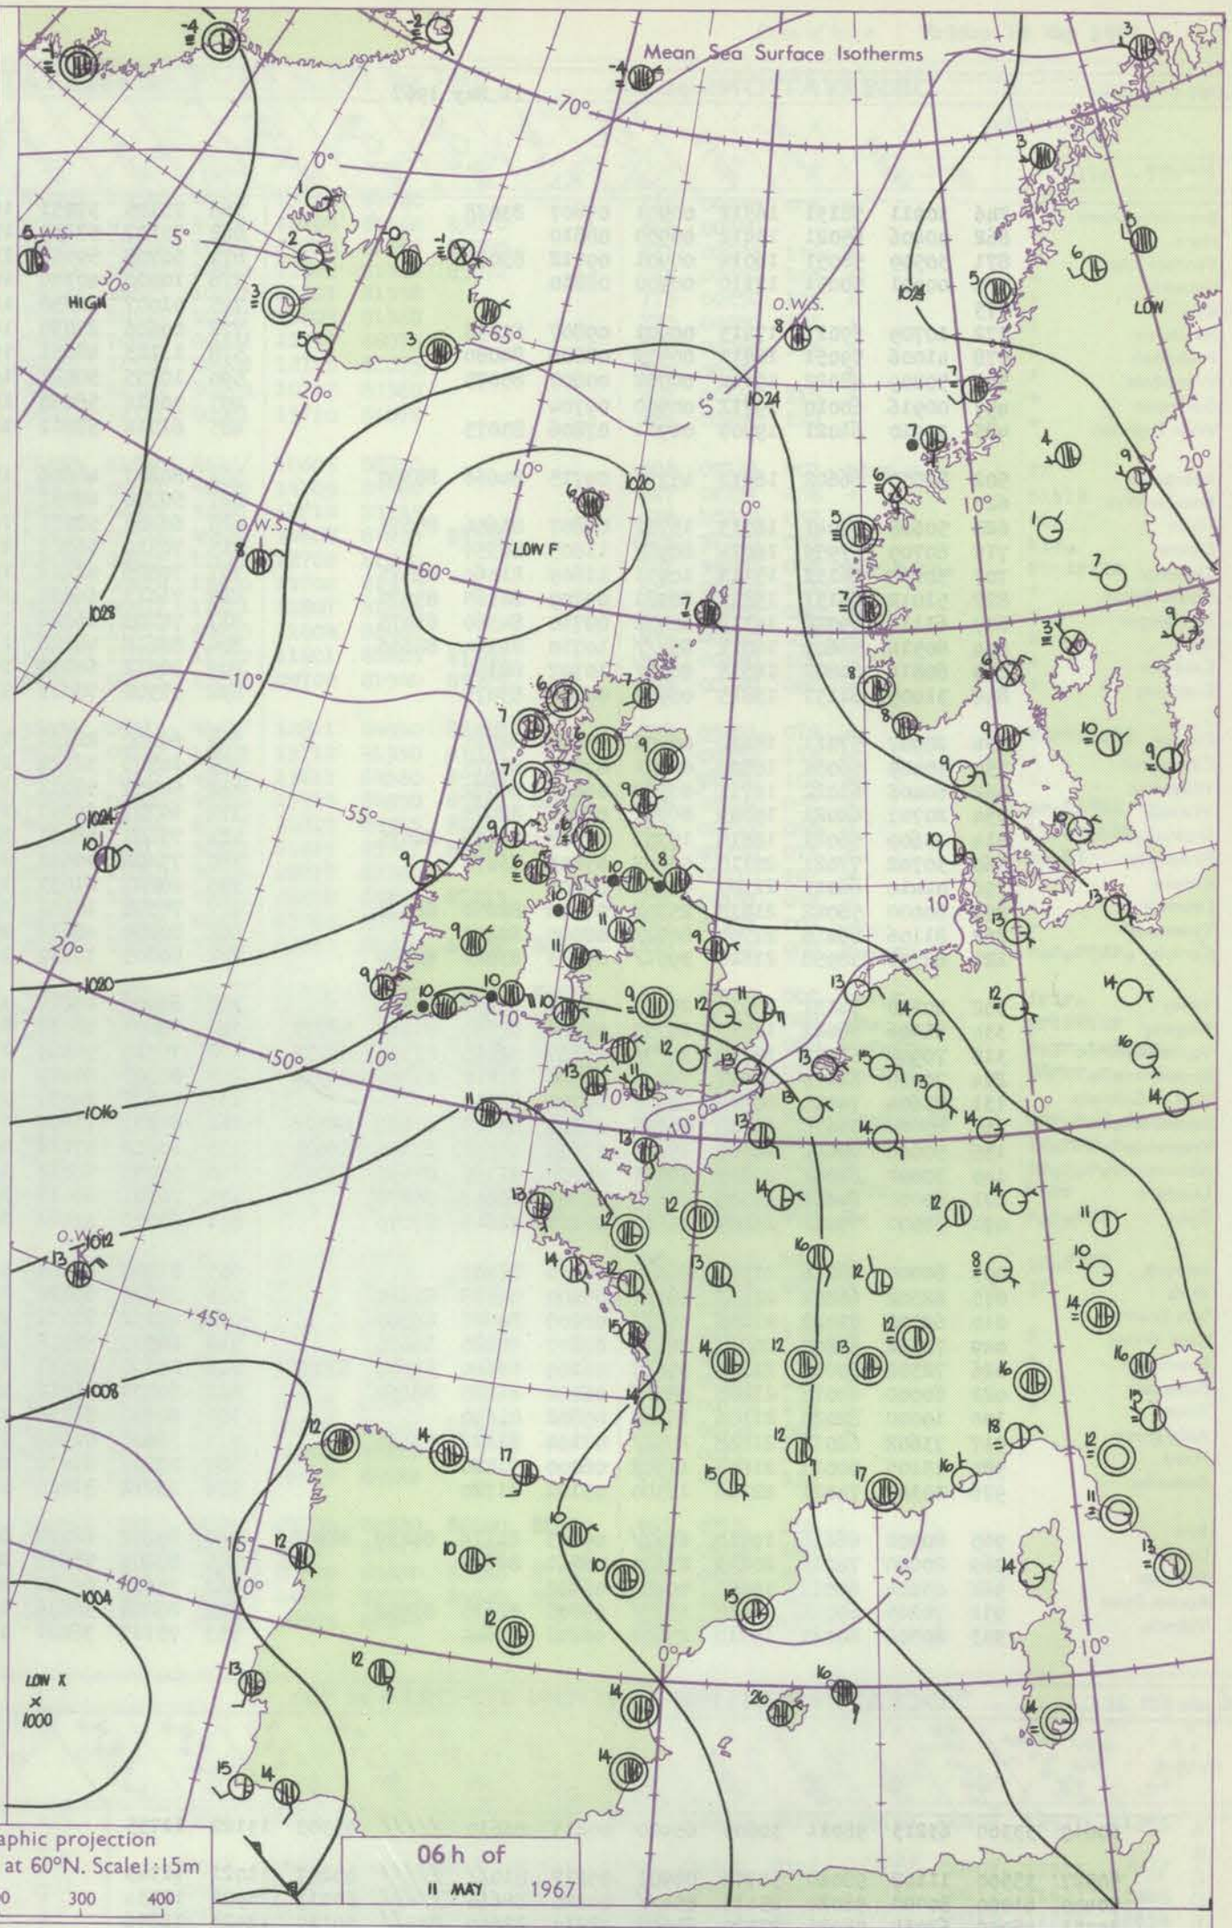
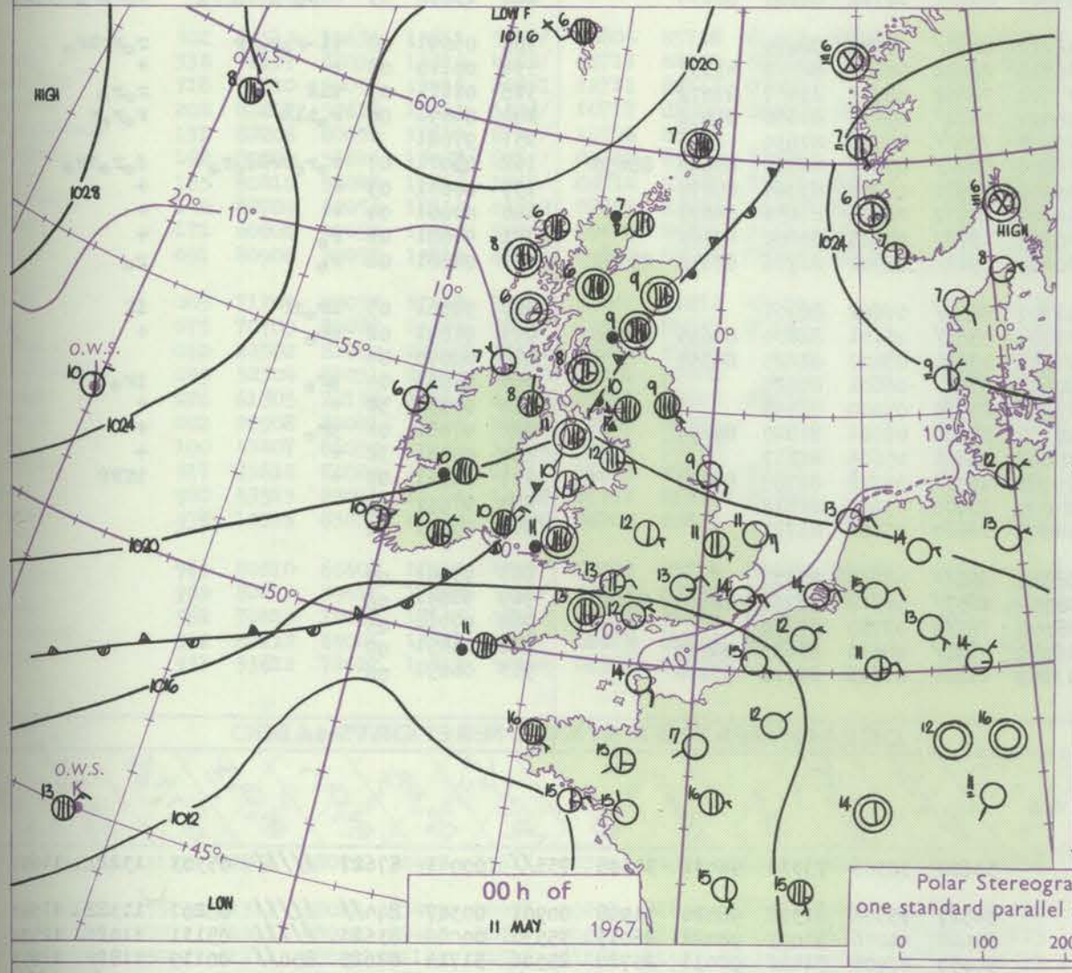
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE









Polar Stereographic projection
one standard parallel at 60°N. Scale 1:15m
0 100 200 300 400

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday **Thursday 11** May 1967

The shallow depression centred near the Faeroes is stationary, and is not expected to move significantly in the next 24 hours while continuing to fill up. The weak belt of high pressure which lay over central districts of the British Isles yesterday has declined and moved north as a broad trough of low pressure extended northeast from the Bay of Biscay. The trough is now expected to become stationary over southern England. A diffuse front lying from near southern Ireland to southeast Scotland has become very weak but yesterday intensified a little. It is expected to remain diffuse but move northwest slowly. The depression west of the Iberian Peninsula will continue drifting east with little change.

DAILY WEATHER REPORT OF THE BRITISH METEOROLOGICAL OFFICE (contd.)

No. 38522

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday **Friday 12** May 1967

The shallow depression centred yesterday near the Faeroes has been absorbed into the trough that runs across the British Isles from a slow-moving low centred off Portugal. The diffuse front across Scotland, the Irish Sea and thence southwestwards has moved a little westward and weakened again, and further frontolysis is expected in the next 24 hours. With very little change forecast in the general isobaric pattern for tomorrow morning, most of England and Wales will remain influenced by air from the Mediterranean, while Scotland and Northern Ireland retains air of more Polar origin.

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday **Saturday 13** May 1967

A complex trough of low pressure from Biscay and Finisterre over England and Wales to the North Sea is almost stationary and little change in the pattern over the British Isles is expected during the next 24 hours. The large anticyclone over mid-Atlantic is drifting slowly southwestwards but the associated ridge lying north-eastwards to Faeroes is declining as a deepening depression over the Denmark Strait moves east towards Iceland. The diffuse, almost stationary front over southern Scotland, northern England, north Wales and the Irish Sea is expected to remain very slow-moving but will probably weaken somewhat during the next 24 hours.

OBSERVATIONS at 00h — 13 May 1967

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday Sunday 14 May 1967

The low near southwest Spain has persisted. The trough extending northeast from this centre across England and Wales to Norway has moved slowly southeast over England, Wales and the southern North Sea. The weak ridge which was northwest of Scotland has moved southeast slowly, weakening steadily as the shallow depression which was near southwest Iceland has moved southeastwards. During the next 24 hours the low near southwest Spain is expected to move slowly northwards into Biscay while the trough extension to the northeast will persist and probably swing slowly northwestwards. The shallow low west of Scotland will move southwards and become absorbed in the general cyclonic development which is expected to cover most of the British Isles.

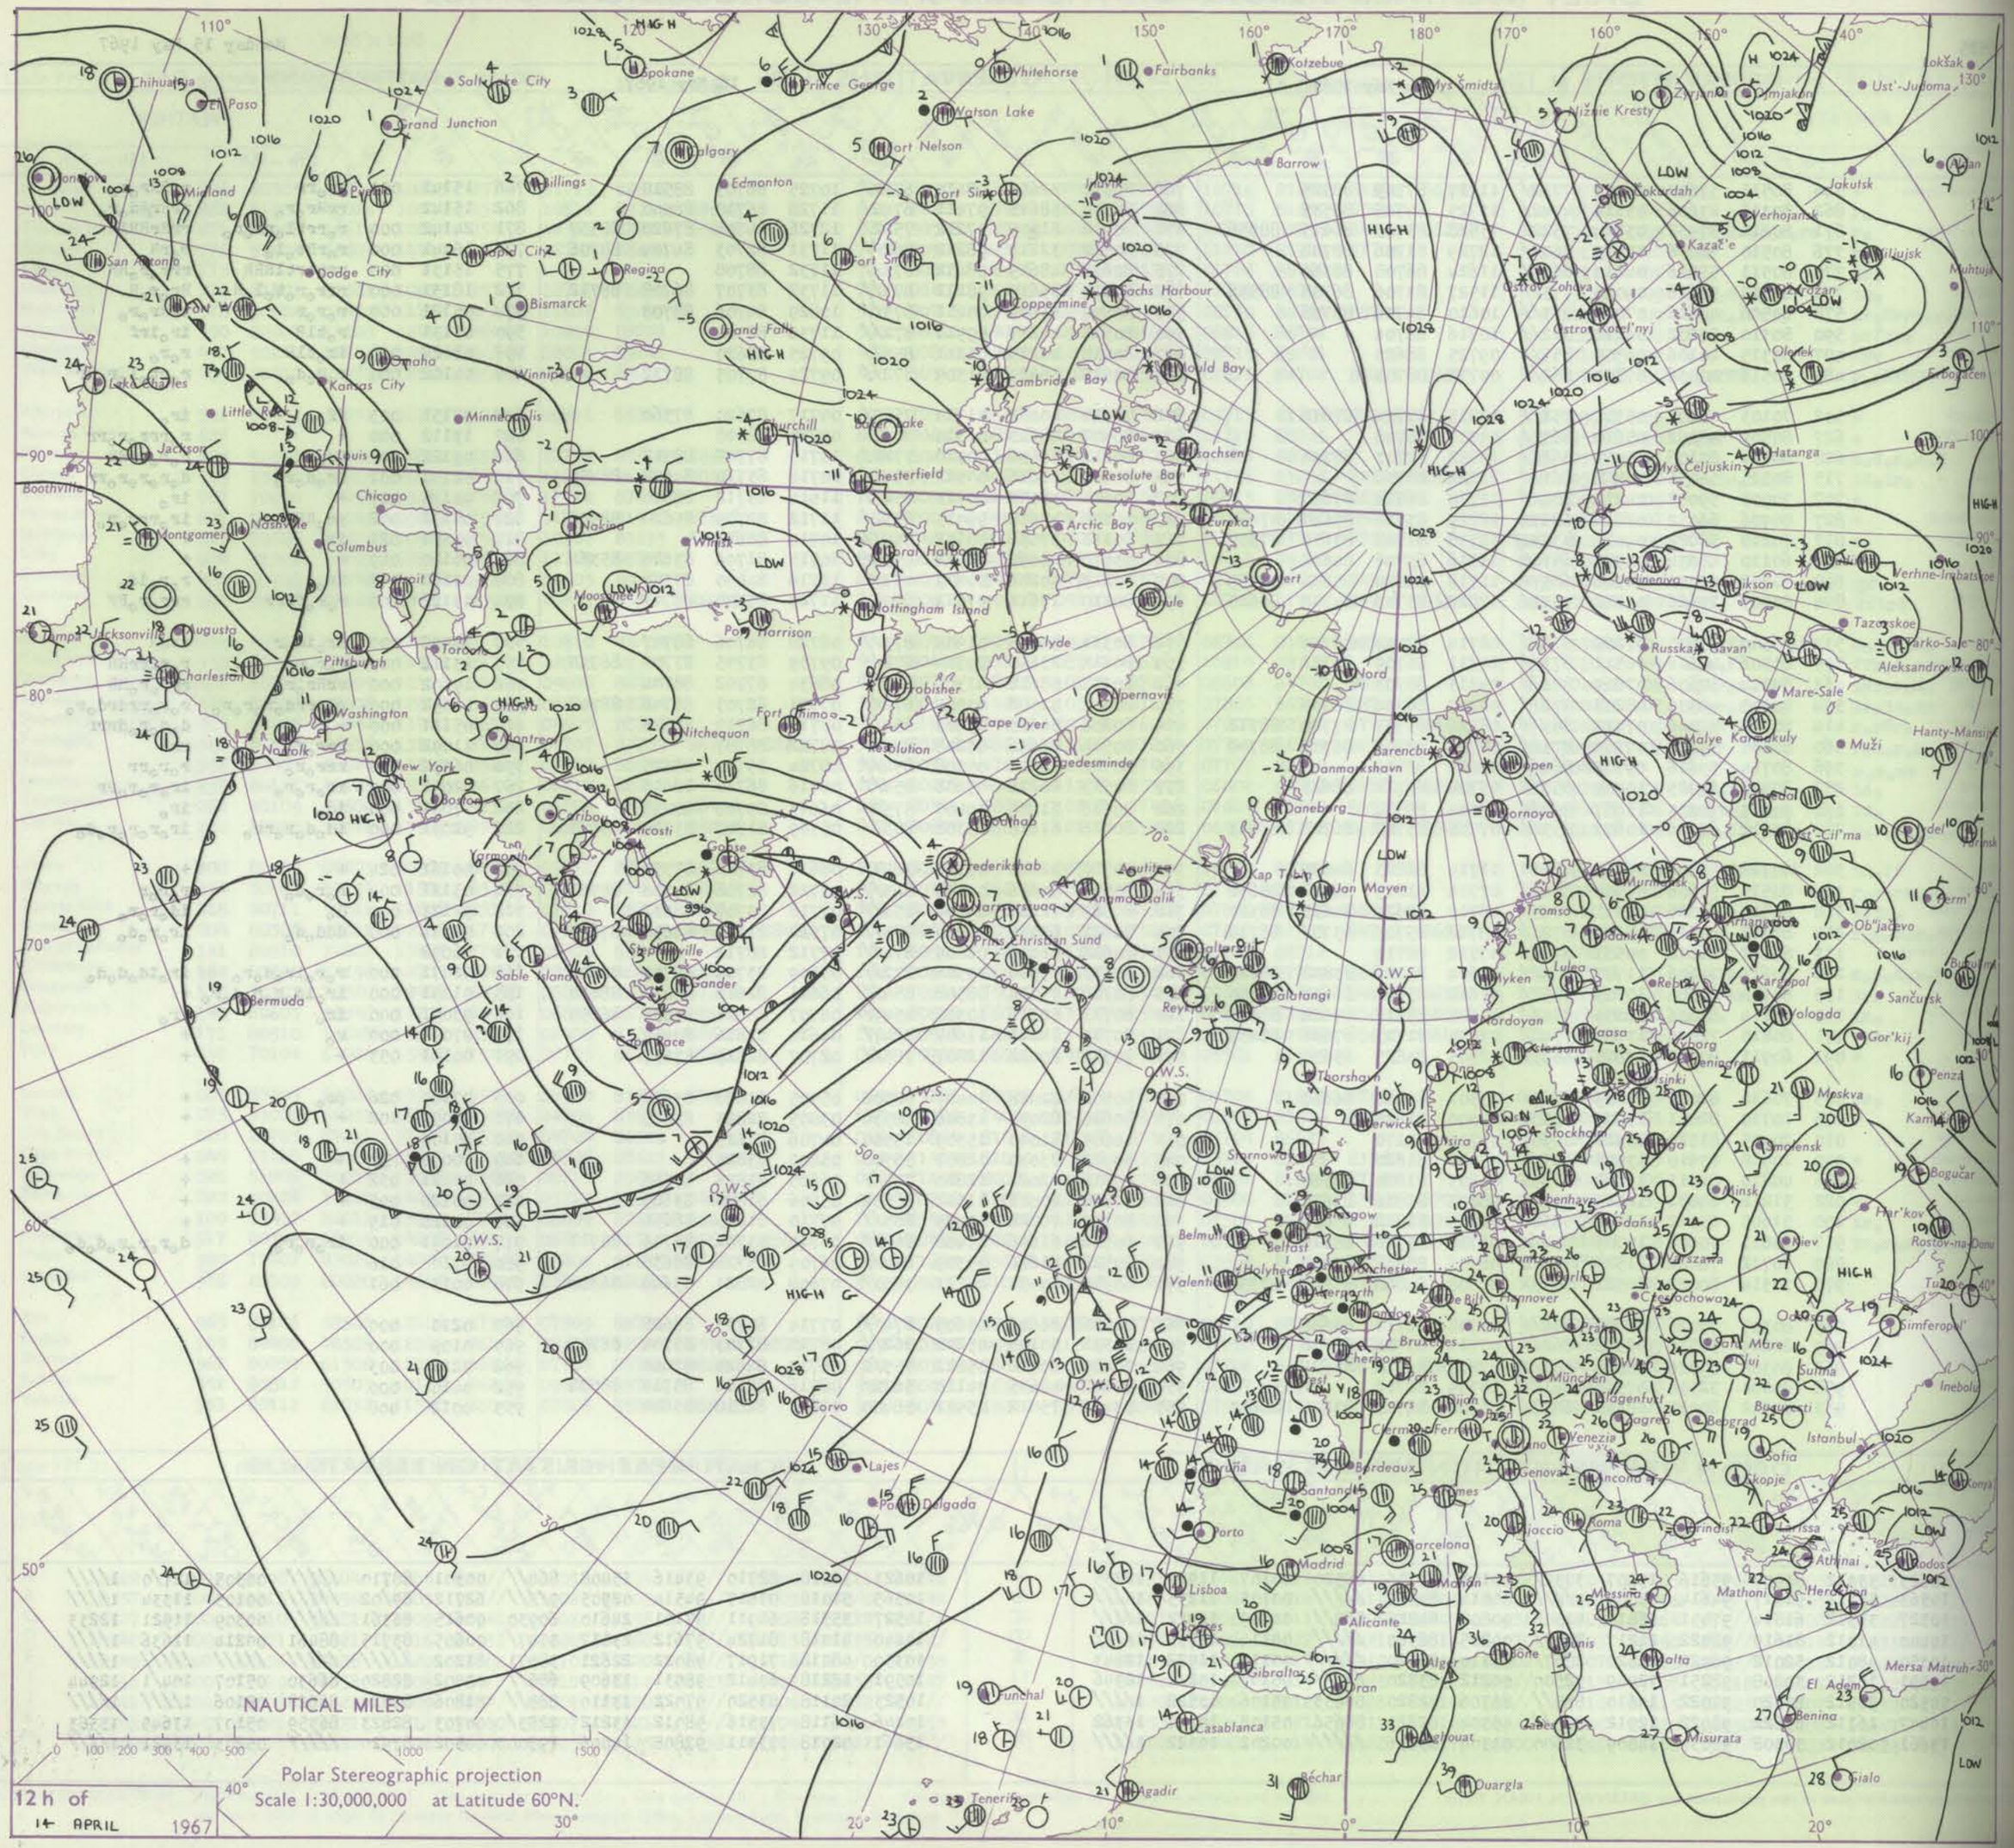
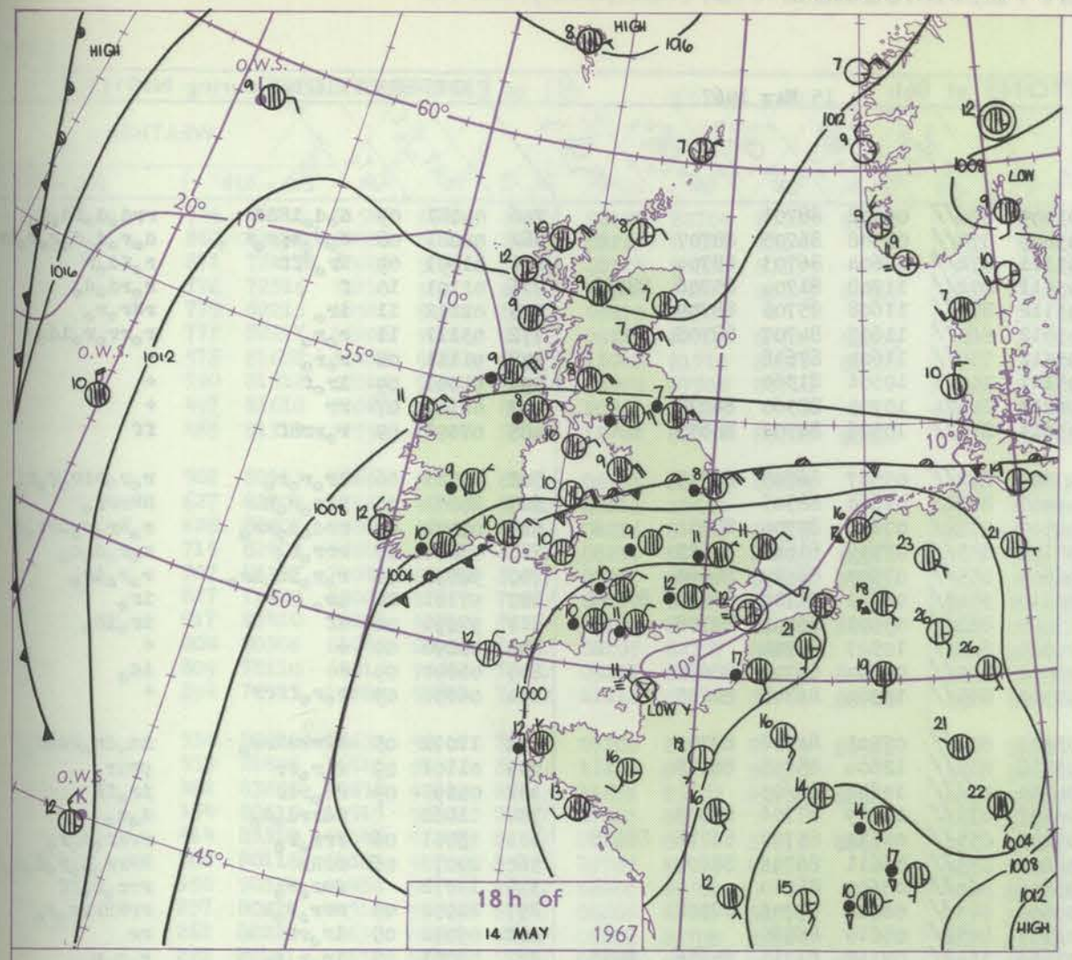
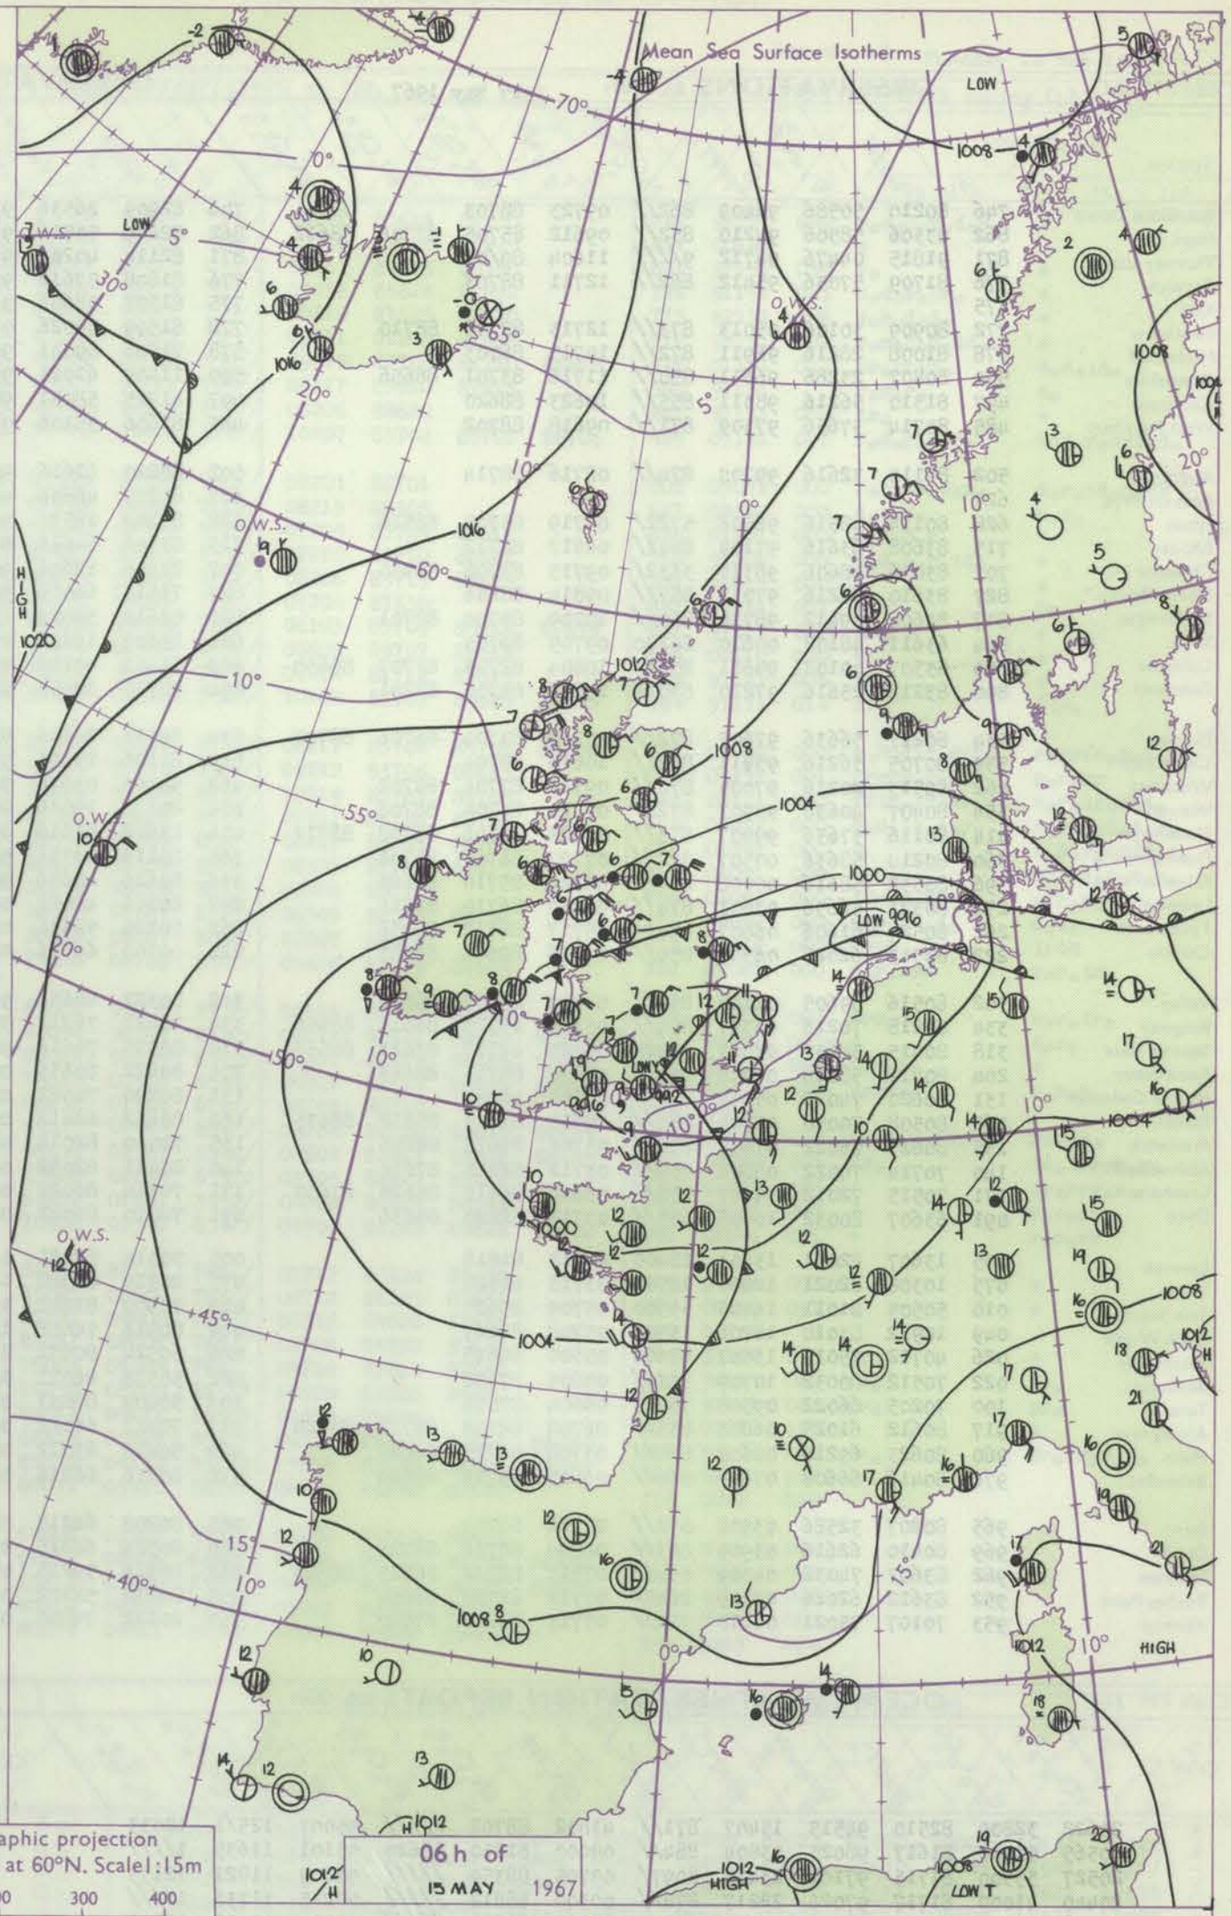
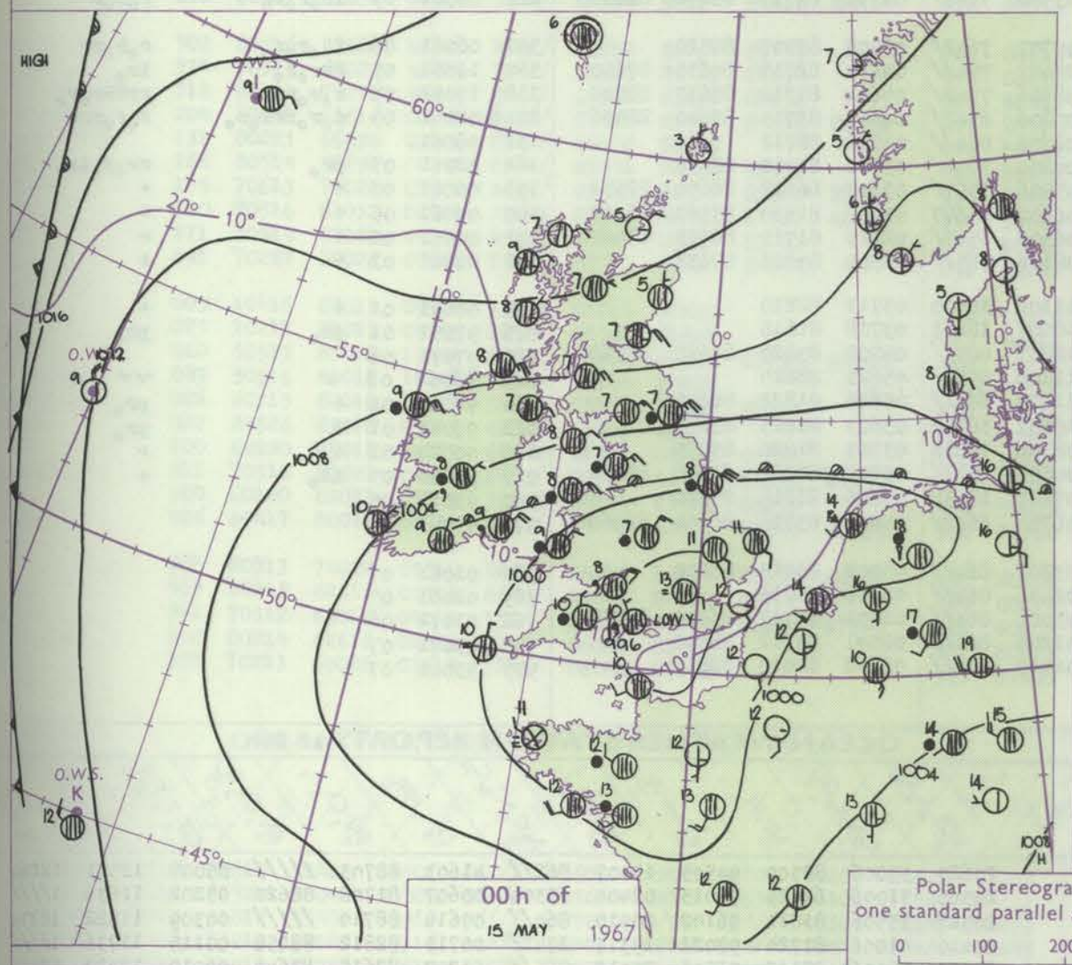
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE









Polar Stereographic projection
one standard parallel at 60°N. Scale 1:15m
0 100 200 300 400

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday **Monday 15** May 1967

The depression which was over northwest France yesterday has moved slowly north-northeast and deepened, and a marked trough has developed to its northeast over the southern North Sea. There is evidence for frontogenisis taking place in association with the depression leading to a warm sector to the southeast of the low centre. The low and the associated front are expected to move slowly northeast into the North Sea, with a cyclonic circulation persisting over much of the British Isles, although a weak ridge of high pressure will remain over north-western districts. The shallow low which was west of Scotland yesterday has moved south and filled up, but cyclogenesis is taking place to the northwest of Spain.

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday **Tuesday 16** May 1967

The depression that yesterday lay over southeast England has continued its movement northeastward and is now centred over north Denmark, while overnight another centre has developed in the trough over southwest England. Fronts associated with this complex have mostly moved away into Scandinavia, but over southern Scotland and the Irish Sea there is still a frontal zone, which is expected gradually to frontolise in the next 24 hours. At the same time the low complex will drift away northeast. The low just north of O.W.S. 'I' has moved down from near Iceland and deepened, but is now expected to fill as it continues southeastward.

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday **Wednesday 17** May 1967

The depression which was over southwest England yesterday has moved slowly northeast and is expected to lie off the northeast coast of England by this time tomorrow. A complex frontal zone persists over much of the British Isles. A depression which was centred to the north of O.W.S.'I' has moved gradually southeast and filled. Its associated troughs of low pressure have weakened in their movement south. A ridge of high pressure is gradually building southwards from Iceland.

Code FM 11.C

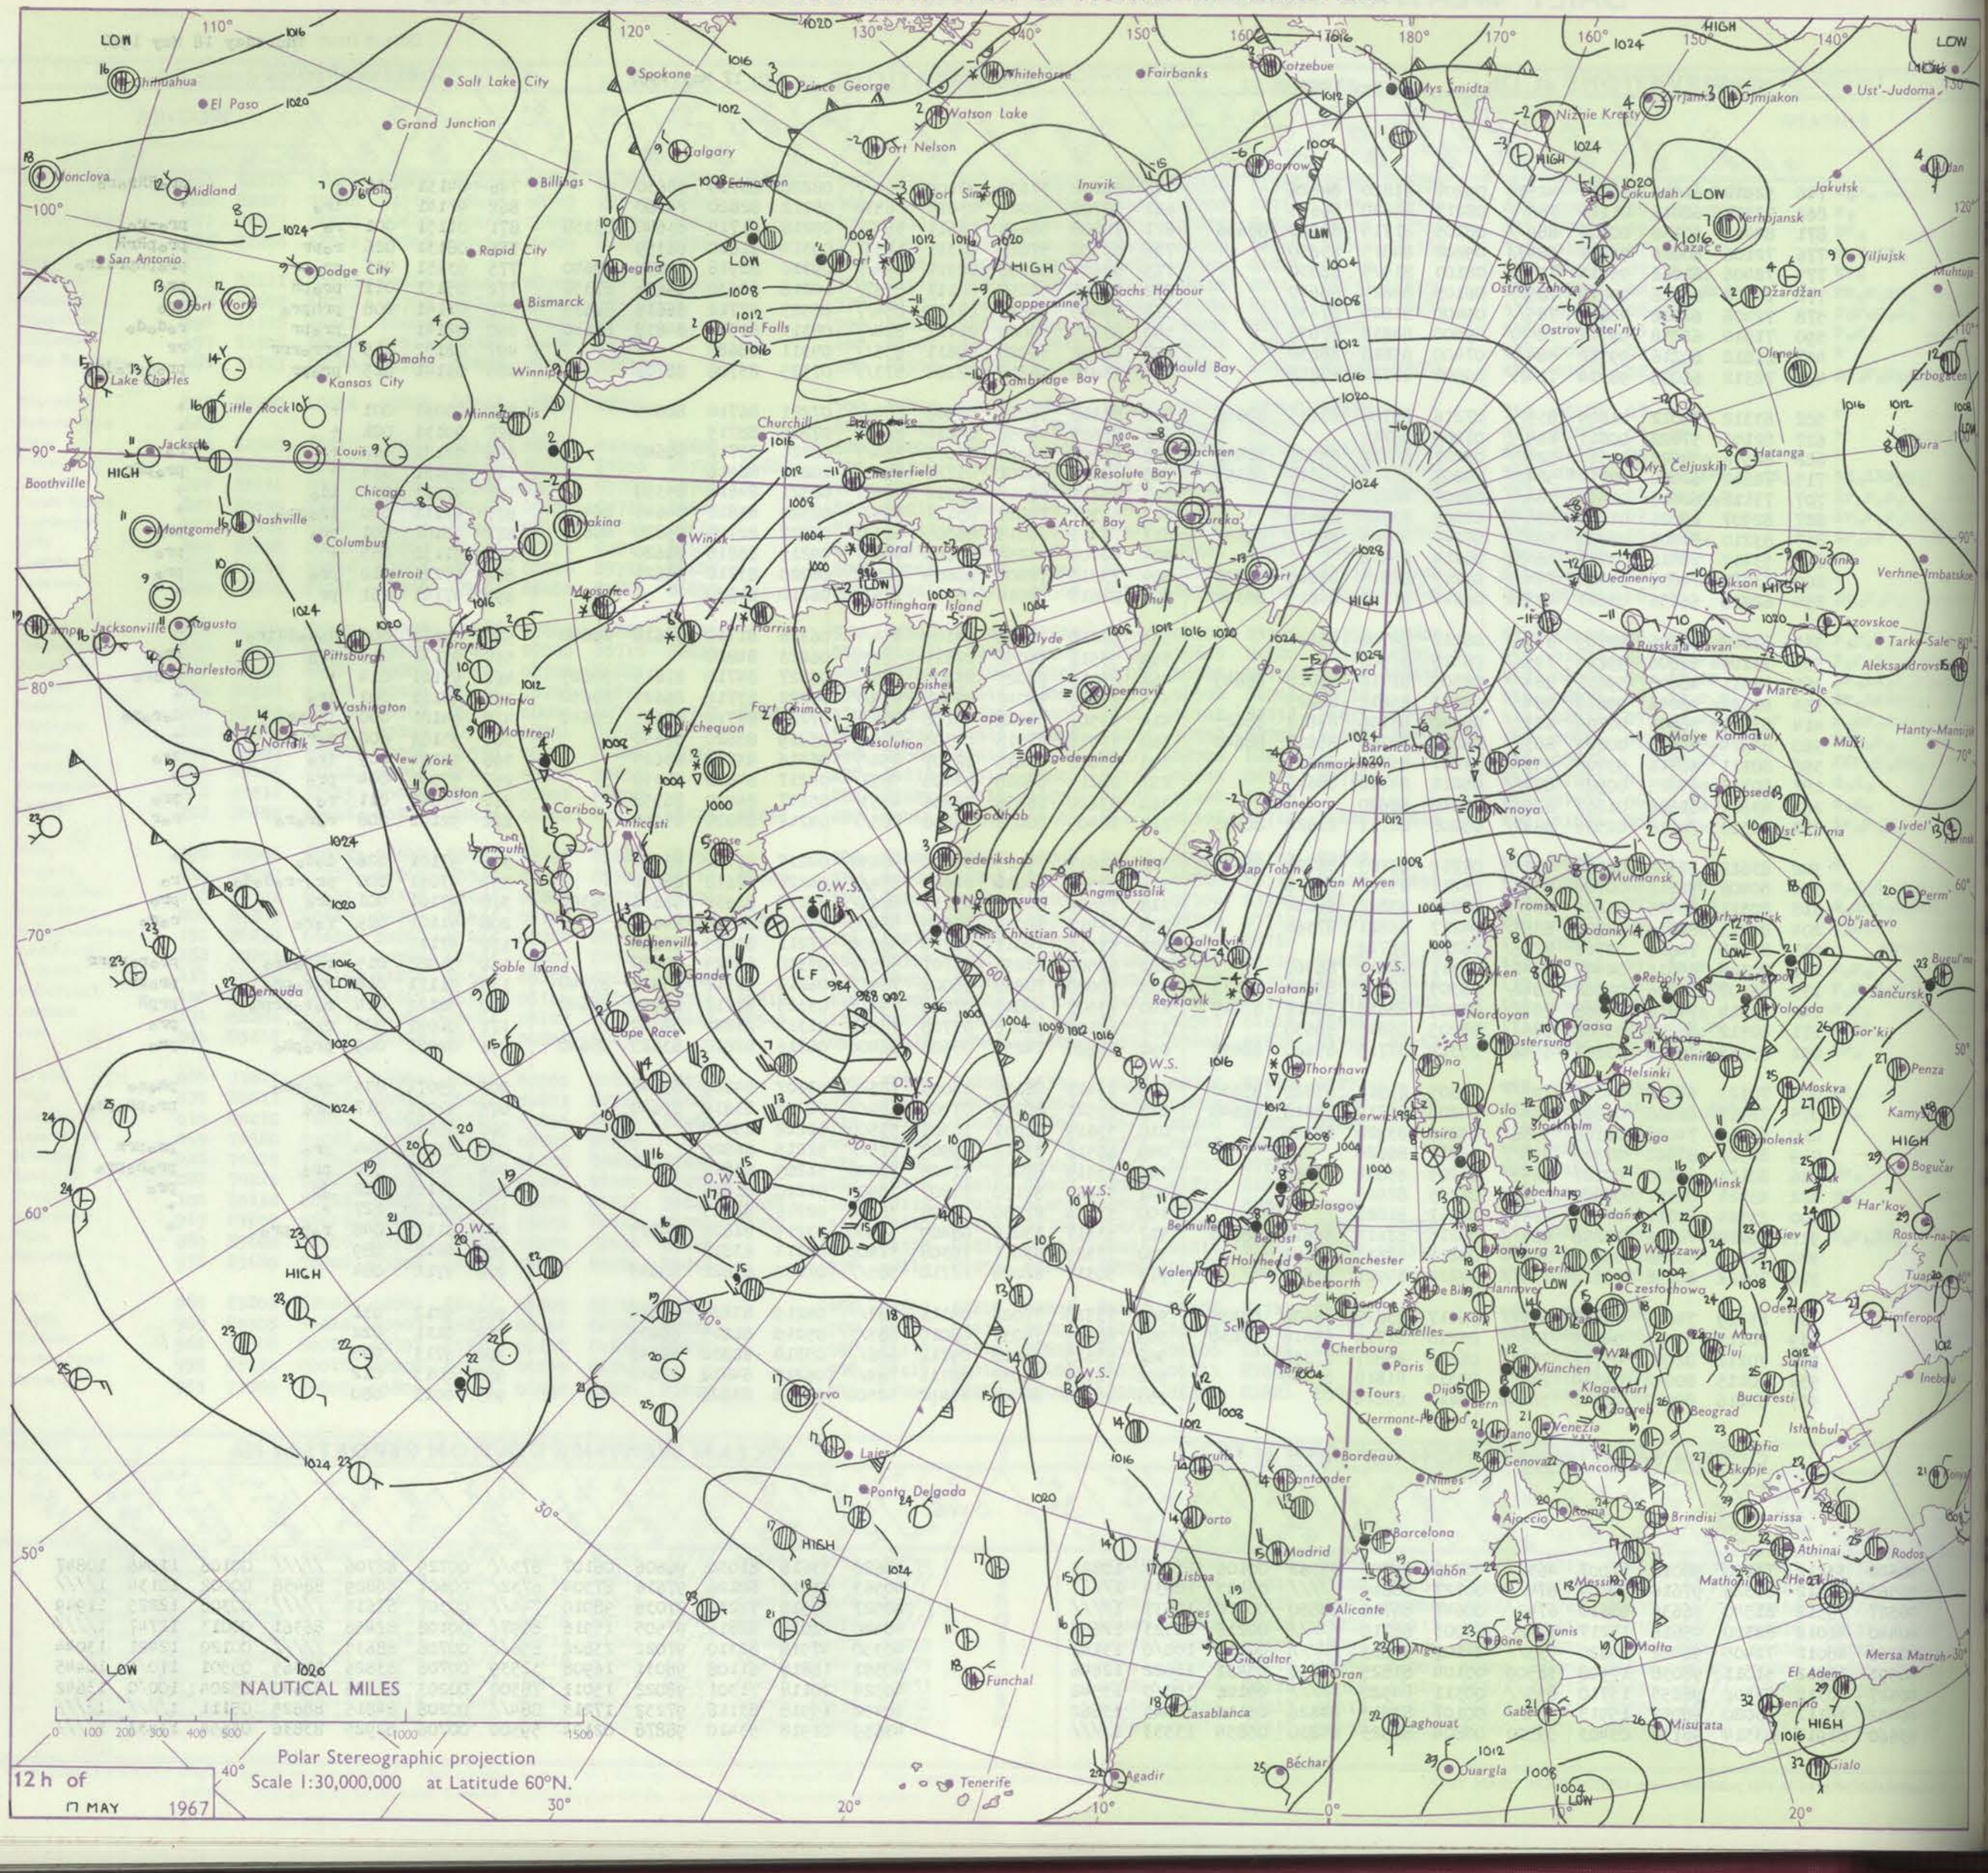
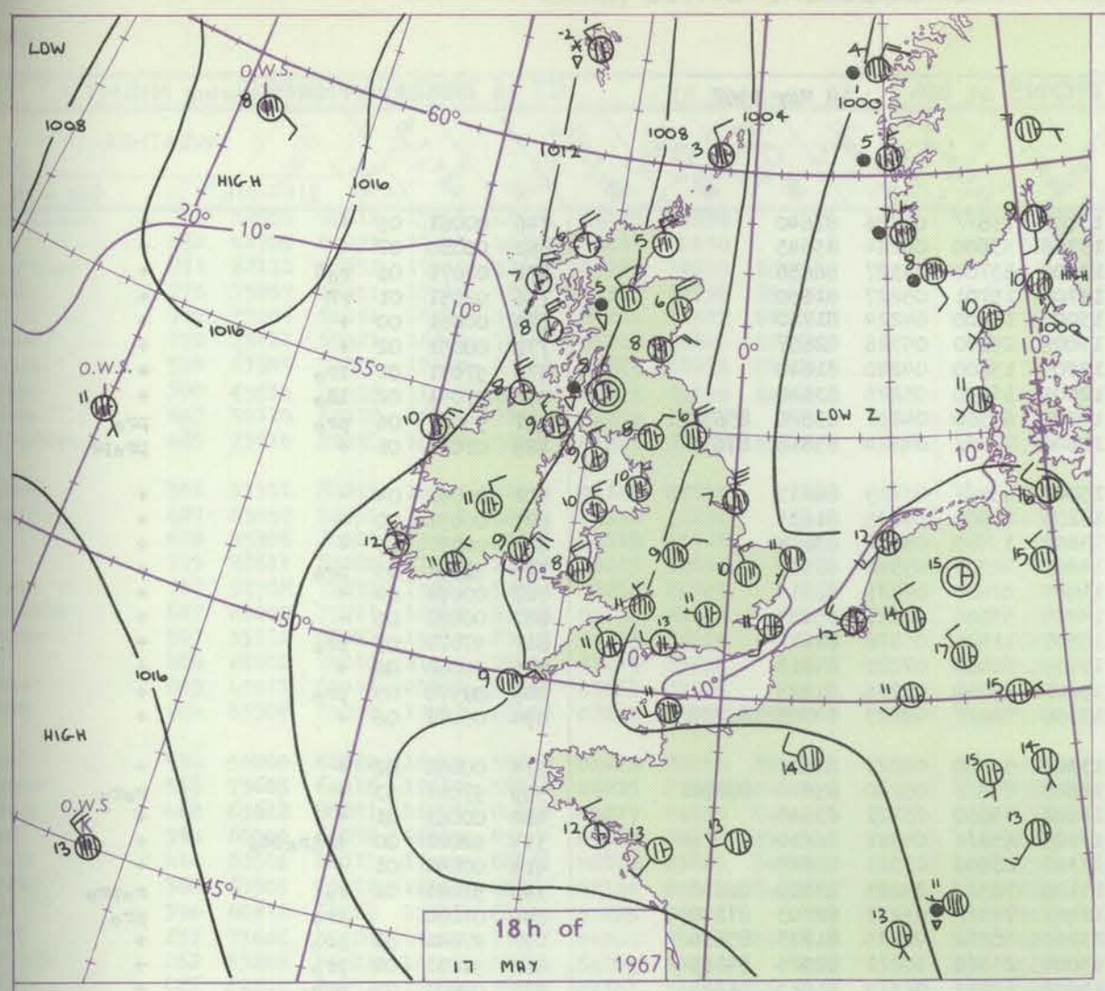
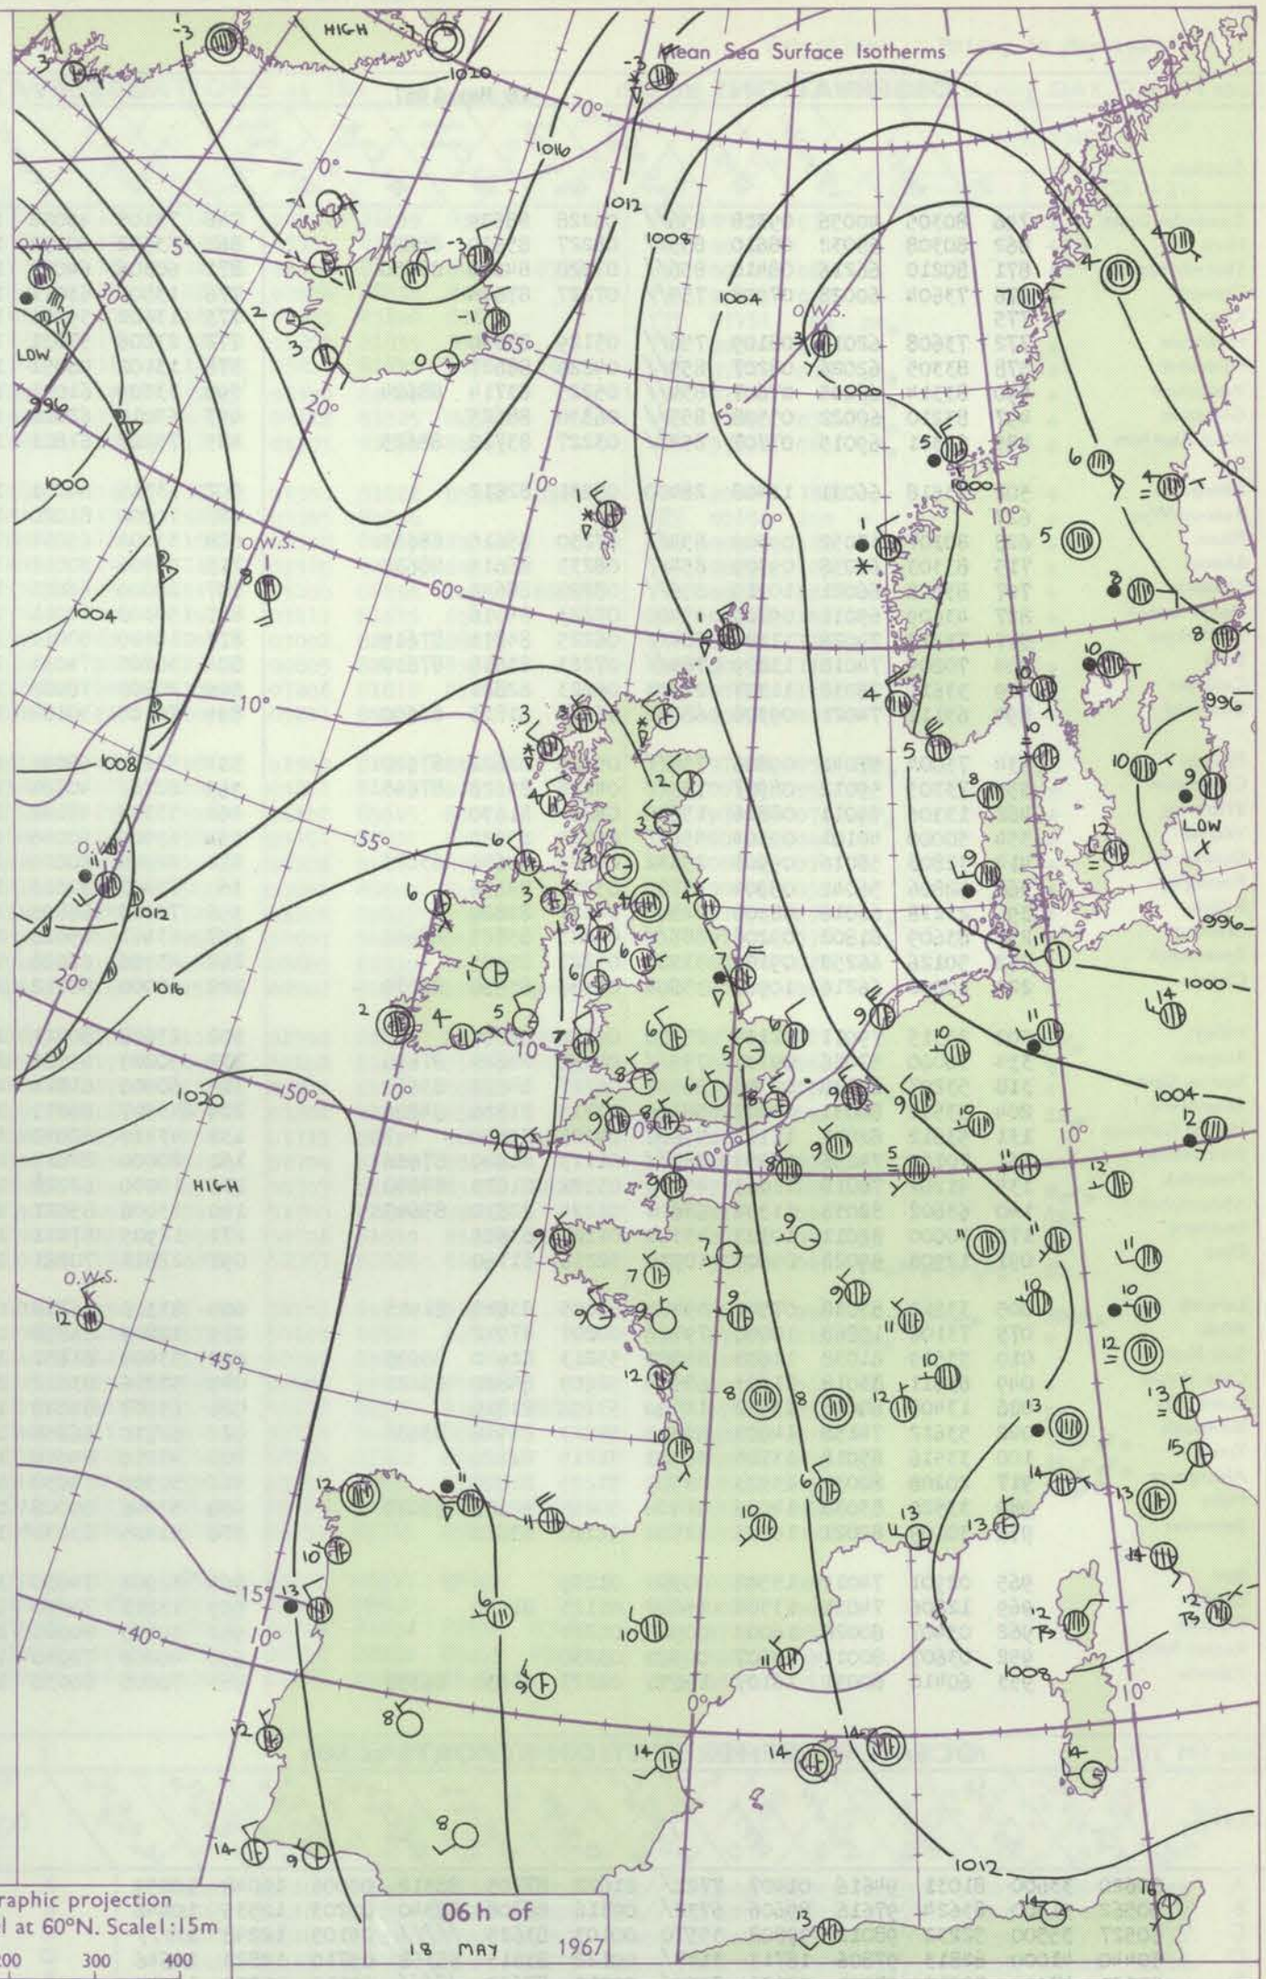
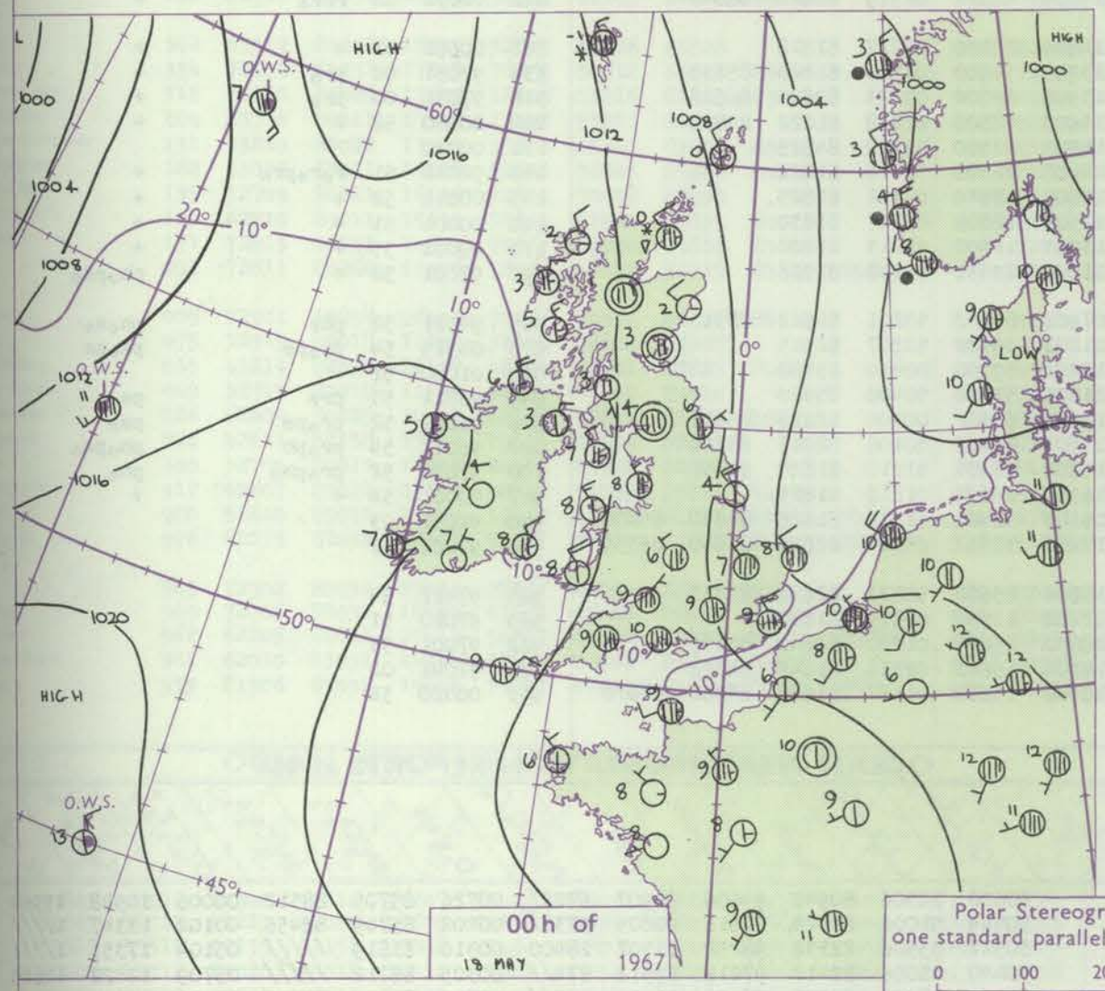
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE



CHARTS OF WEATHER IN WESTERN EUROPE







Polar Stereographic projection
one standard parallel at 60°N. Scale 1:15m
0 100 200 300 400

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday **Thursday 18** May 1967

The depression which extended across the North Sea and along the western coast of Norway, has moved slowly eastward, and the associated trough lying northeast-southwest across southern districts of England has moved away southeastwards to leave the British Isles in a cold northerly airstream. A ridge of high pressure lying from north to south continues to move eastwards into western districts of the country, ahead of a frontal system associated with the main depression near Greenland.

Code FM 11.C

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday **Friday 19** May 1967

The complex low pressure area over Scandinavia yesterday morning has moved away to the north and east and a rather slack ridge of high pressure crossed the British Isles yesterday afternoon. Meanwhile a deep depression near south Greenland was moving slowly east or eastsoutheast and its associated frontal system moved fairly quickly east to reach western Ireland by midnight. This frontal trough will continue to move steadily eastwards, clearing most parts of the British Isles by midnight tonight, and will be followed by an unstable westerly type which will persist throughout the following 24 hours.

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday Saturday 20 May 1967

The depression which yesterday was northeast of O.W.S. 'C' moved eastsoutheast for a time but has now turned northeast and is expected to be centred north of the Faeroes tomorrow morning, filling slowly. The associated fronts crossed all districts of the British Isles by yesterday evening and a strong unstable west to southwesterly airstream now covers the country. Another depression just west of O.W.S. 'C' is expected to move eastwards and deepen slowly, to be centred about 400 miles west of Northern Ireland by tomorrow morning with the associated warm front approaching southern Ireland and southwest England.

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday **Sunday 21** May 1967

The low between north Scotland and O.W.S.'I' is filling rapidly but the depression between O.W.S.'C' and 'J' is deepening and moving fairly quickly east. It is expected to slow down and be centred off Northern Ireland tomorrow morning. The associated fronts are expected to swing east and northeast across the country during today. A fairly deep trough of low pressure will be maintained west of the British Isles and unstable air is expected to affect most districts tomorrow. The ridge of high pressure off the Canadian Seaboard is making only slow progress eastward and will be eroded by the movement eastward of the depressions from the St.Lawrence.

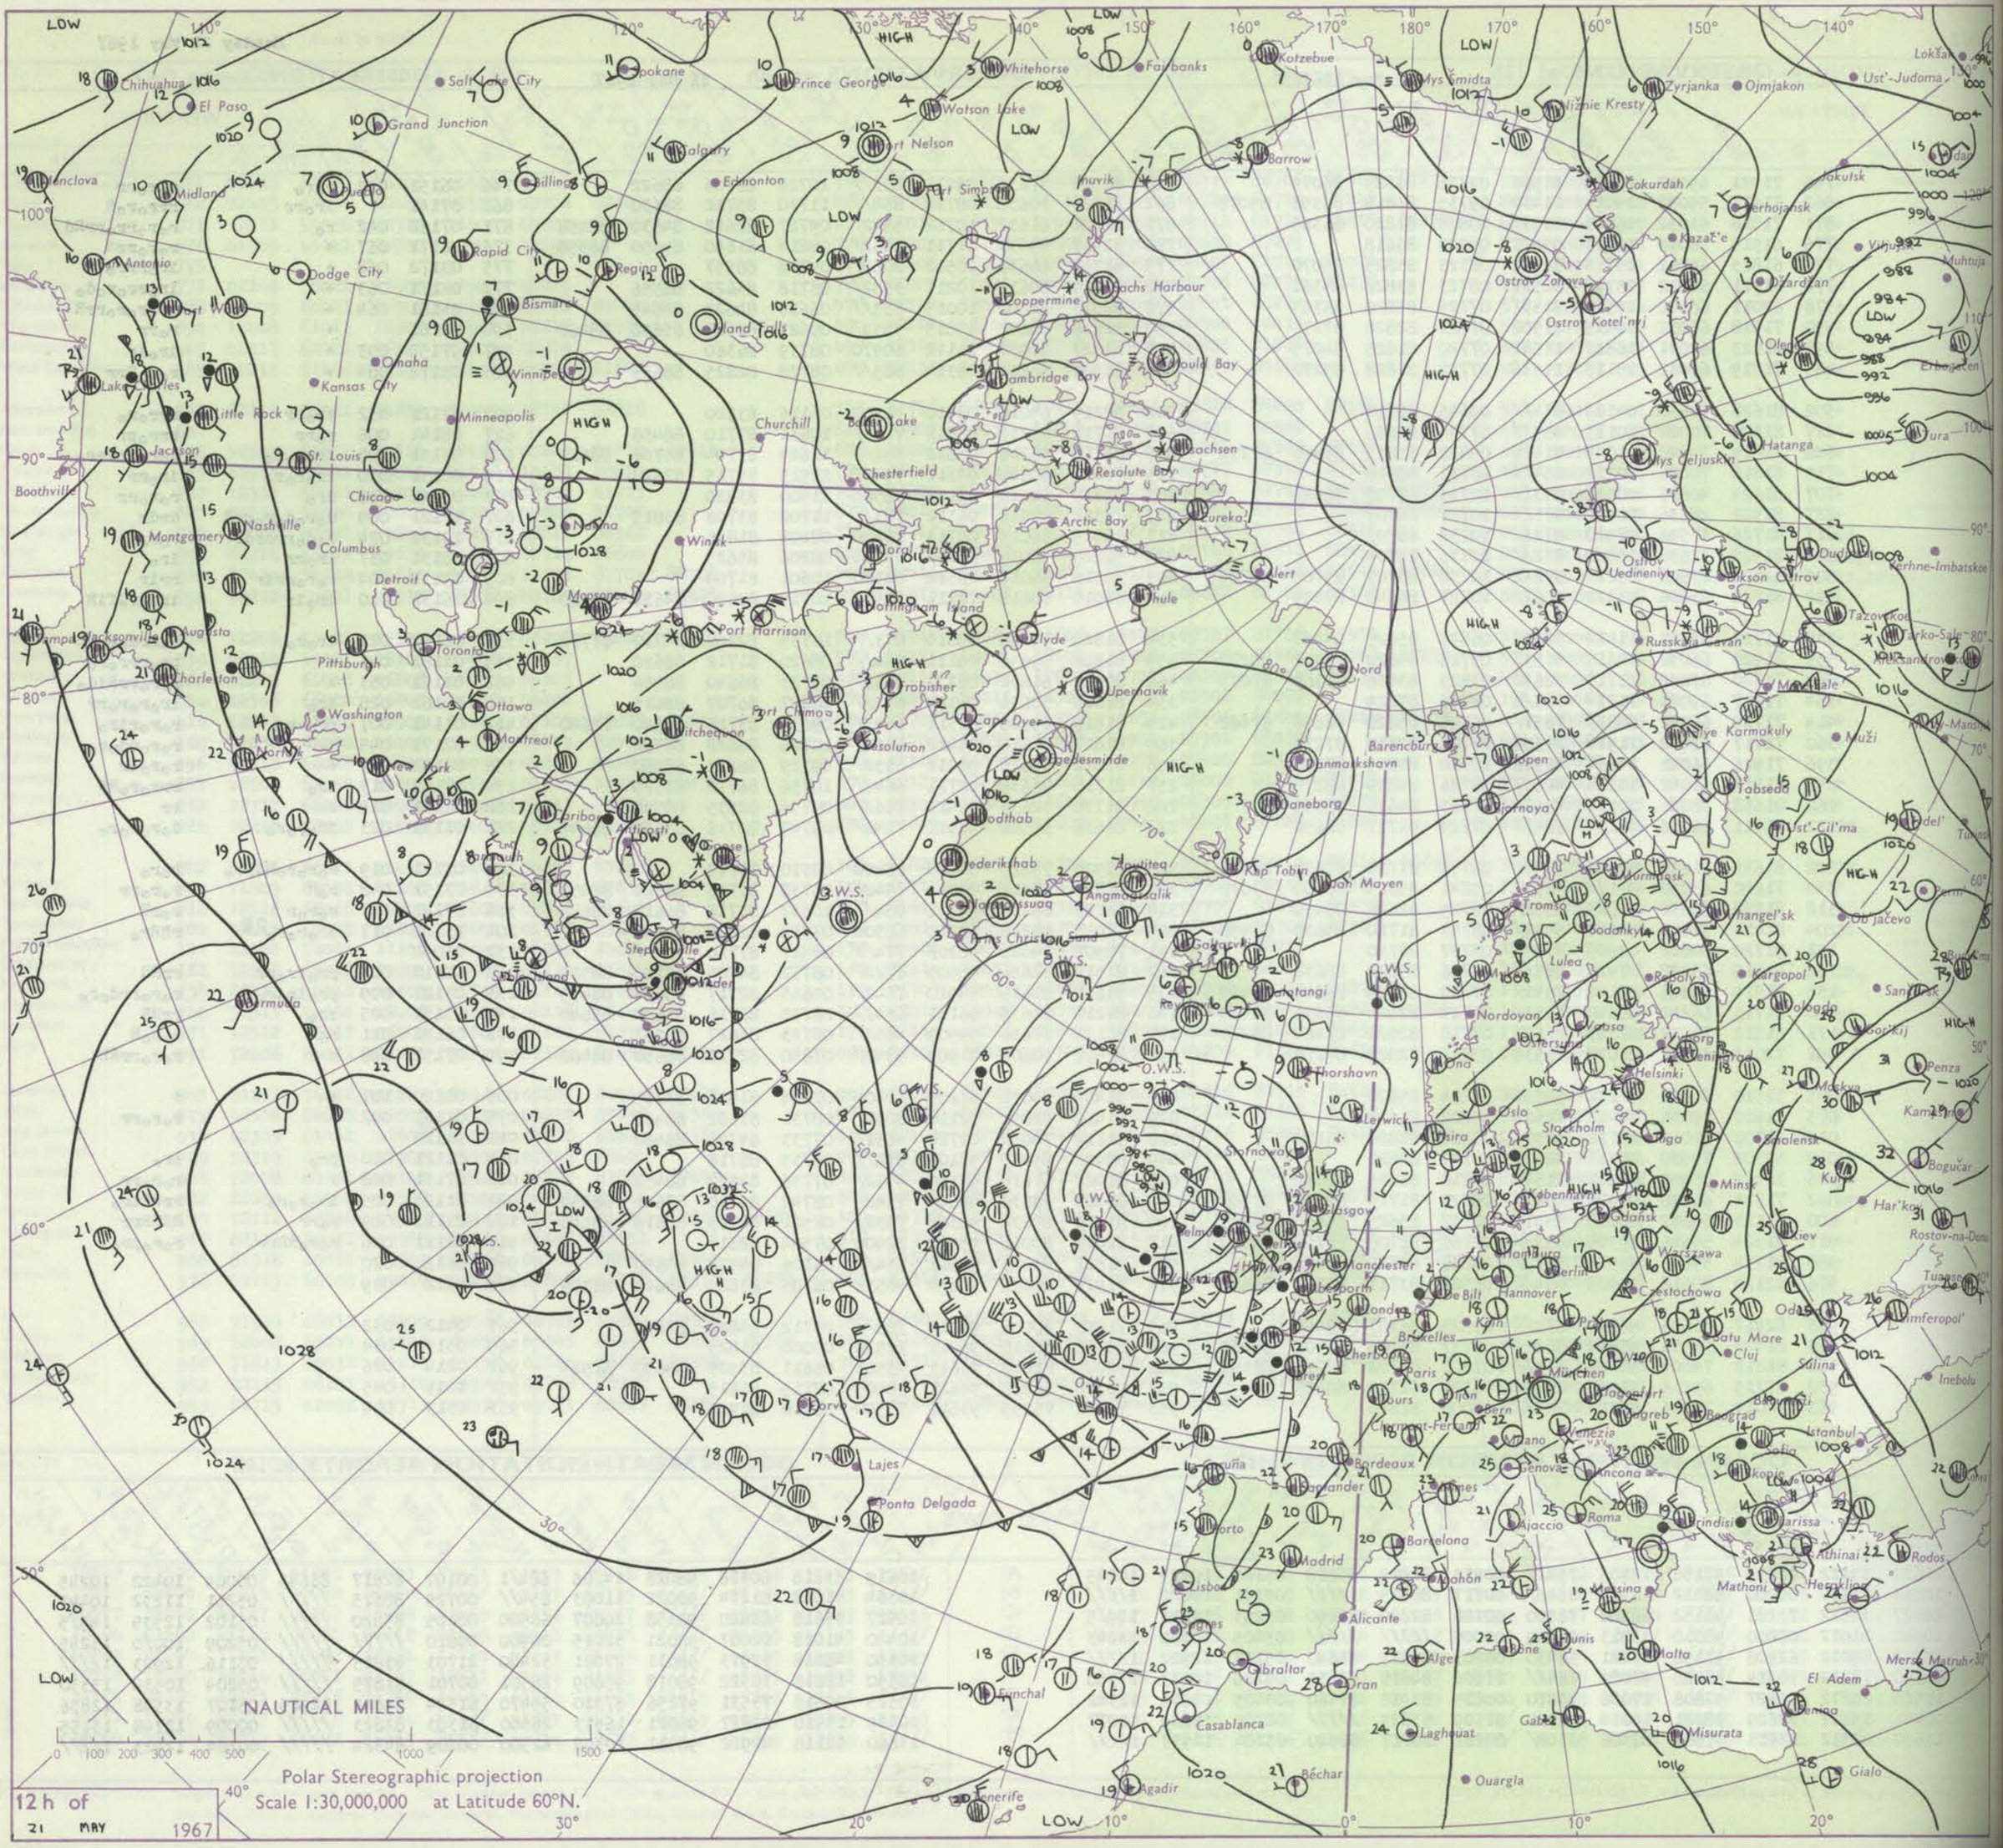
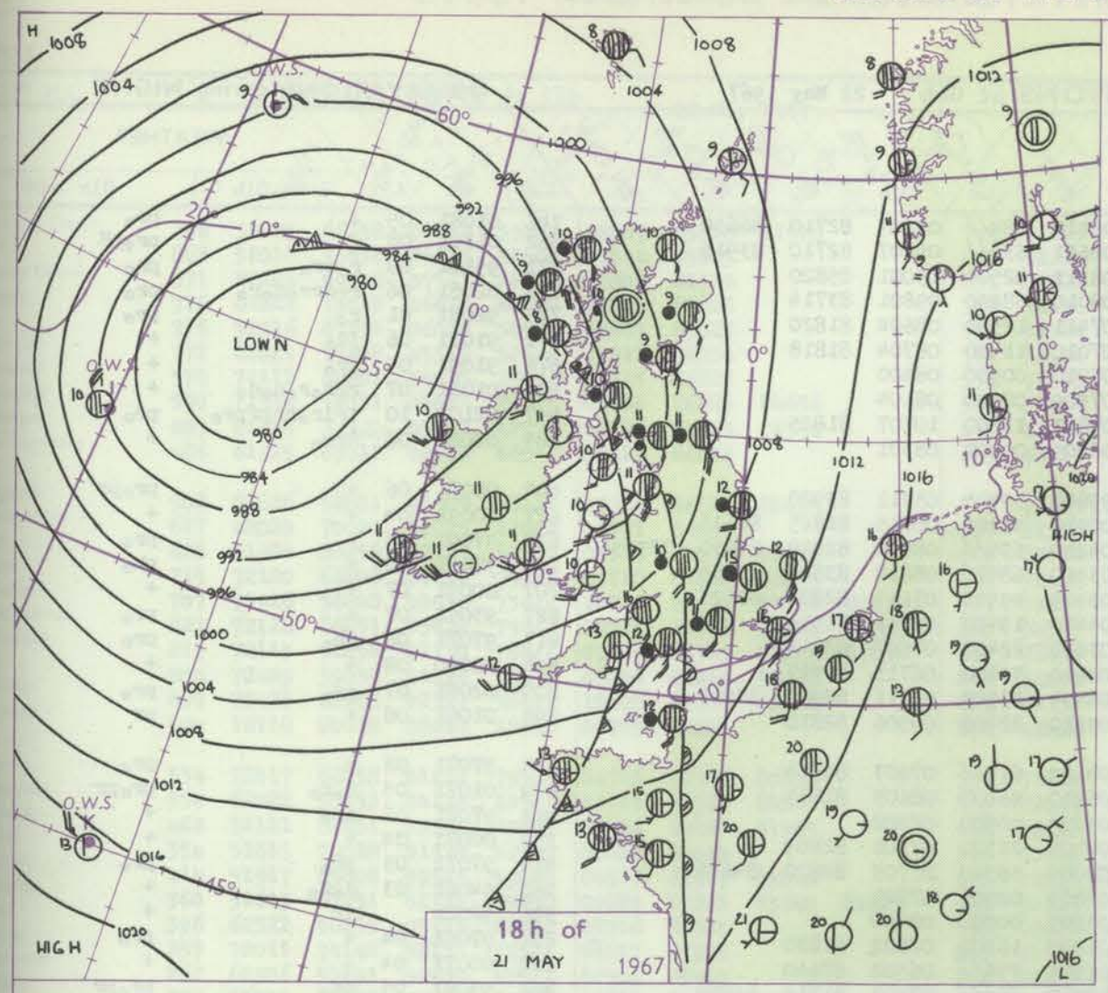
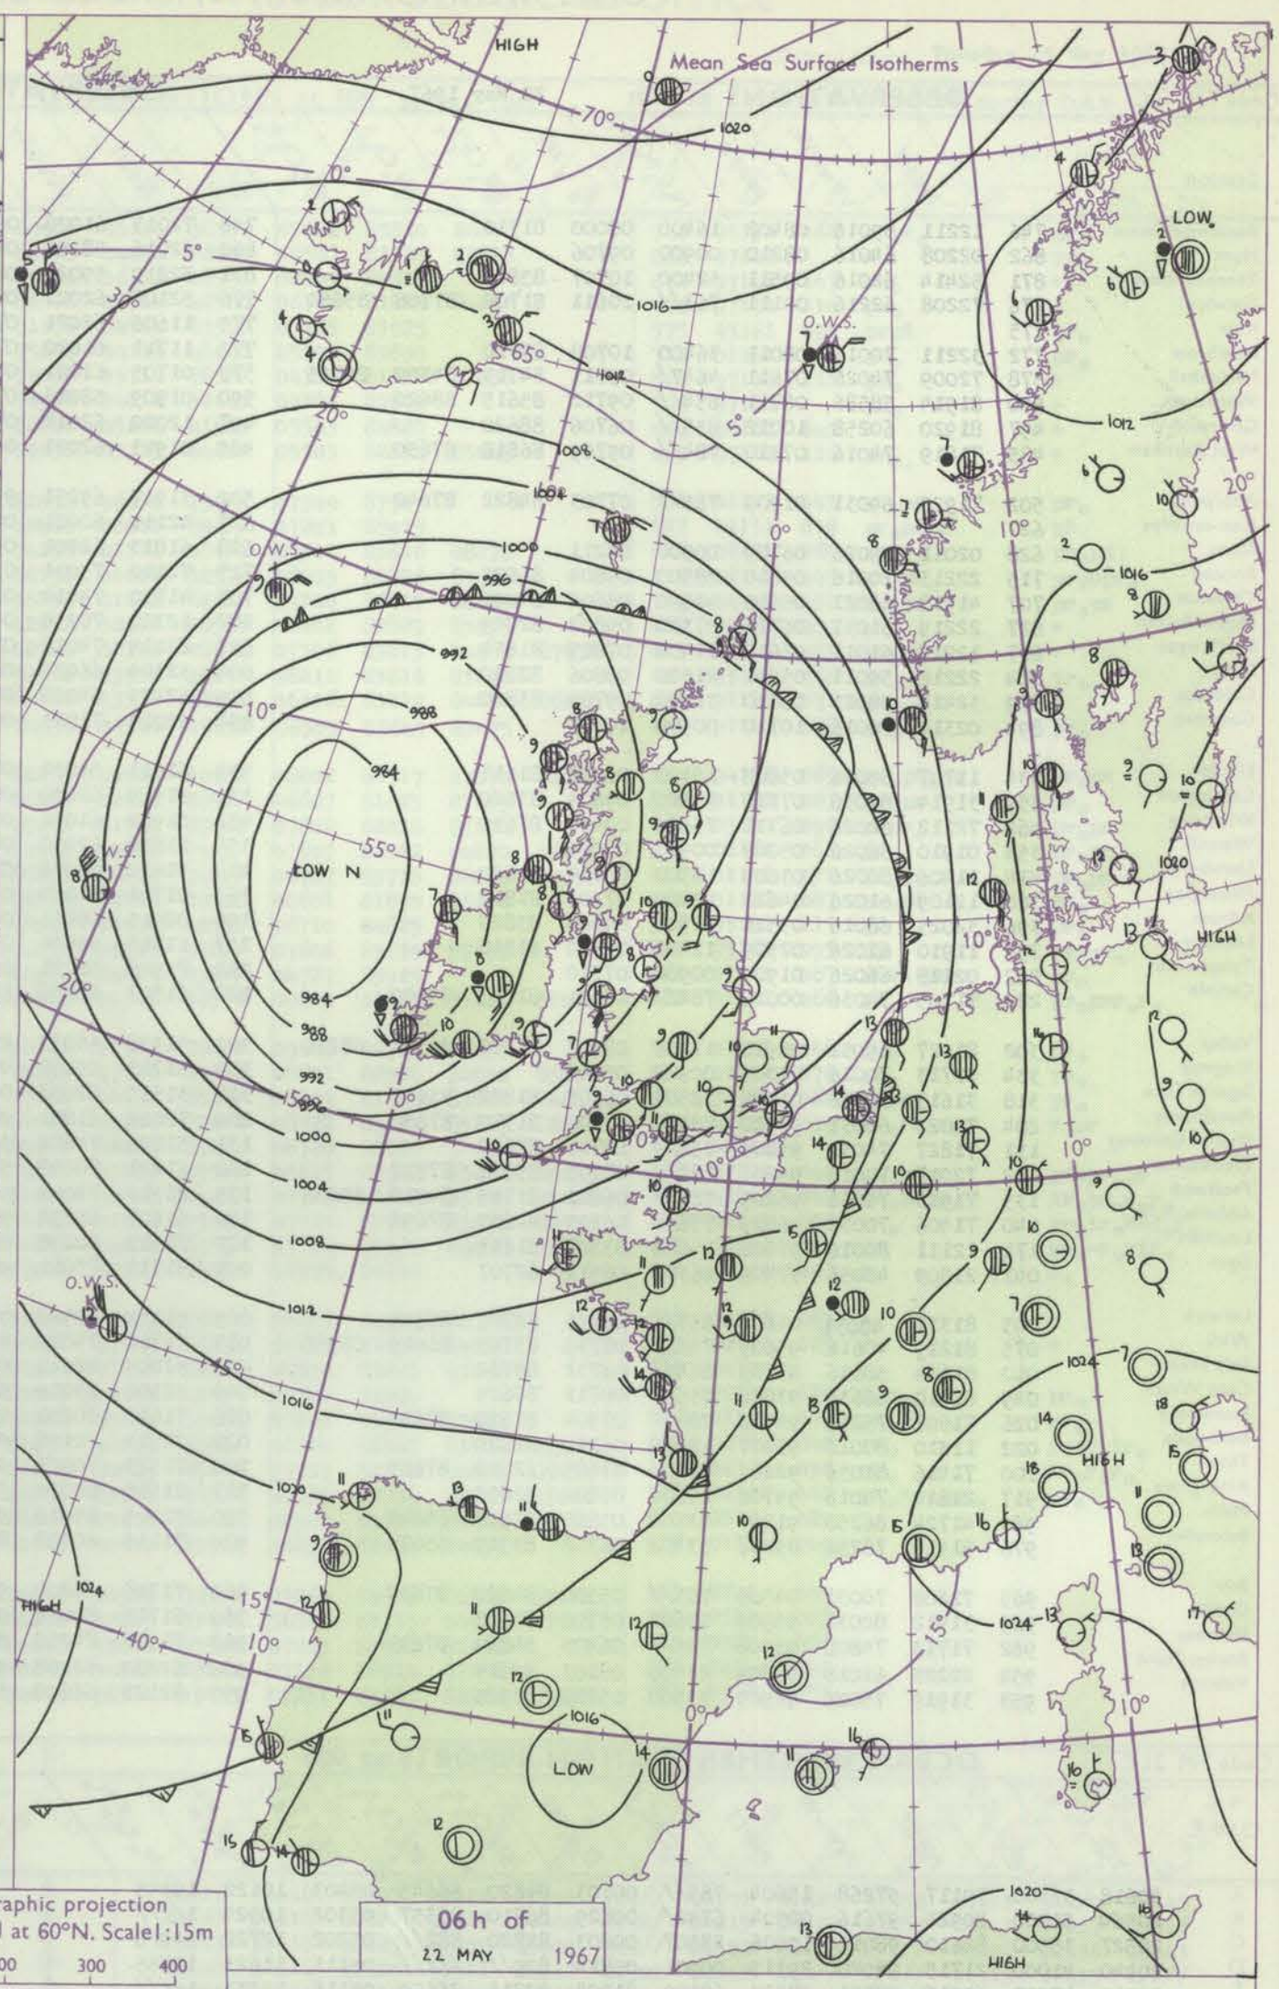
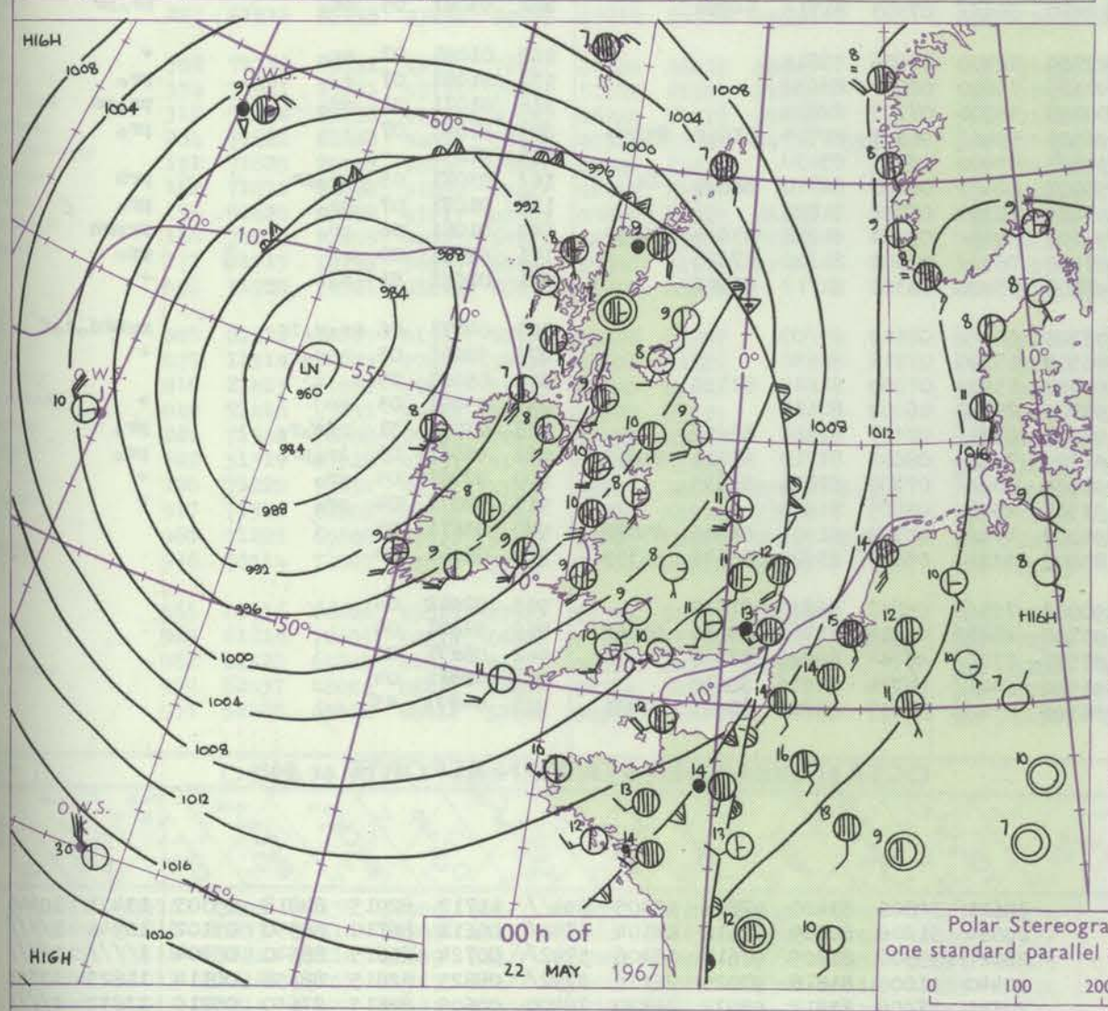
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE









Polar Stereographic projection
one standard parallel at 60°N. Scale 1:15m
0 100 200 300 400

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday **Monday 22** May 1967

The deep low west of Ireland has lost much of its eastward movement and is now almost stationary. Its associated frontal system has been carried clear of the British Isles and cold unstable air in the circulation of the depression now covers all districts. During the next 24 hours the centre of the depression is expected to drift very slowly to a position off Northern Ireland, and it will continue to be the dominant feature of the weather over the British Isles, maintaining an unstable air mass over all districts.

Code FM 11.C

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday **Tuesday 23** May 1967

The deep low which was west of Ireland yesterday curved northeastwards and is now near western Scotland. It is expected to move very slowly westwards in the next 24 hours and to continue to fill. A less intense depression in mid-Atlantic is moving rapidly southsoutheast and deepening. This centre will reach western Ireland early tomorrow with associated fronts moving into southwest England. Cold unstable air will remain over all districts for most of the period but it will become less unstable later in the south as the weak ridge ahead of the frontal system moves across from the west.

one standard parallel at 60°N. Scale 1:15m
0 100 200 300 400

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday Wednesday 24 May 1967

The depression which was near western Scotland yesterday has moved slowly northwest, but will become absorbed in the circulation of the low which has moved slowly east into Ireland. This low complex will remain slow-moving to the west of the British Isles. The associated fronts which moved across much of England and Wales last night will continue northeast and clear most parts of the British Isles tonight. A wave depression which has come quickly east from the western Atlantic is expected to reach the Southwest Approaches tomorrow.

Code FM 11.C

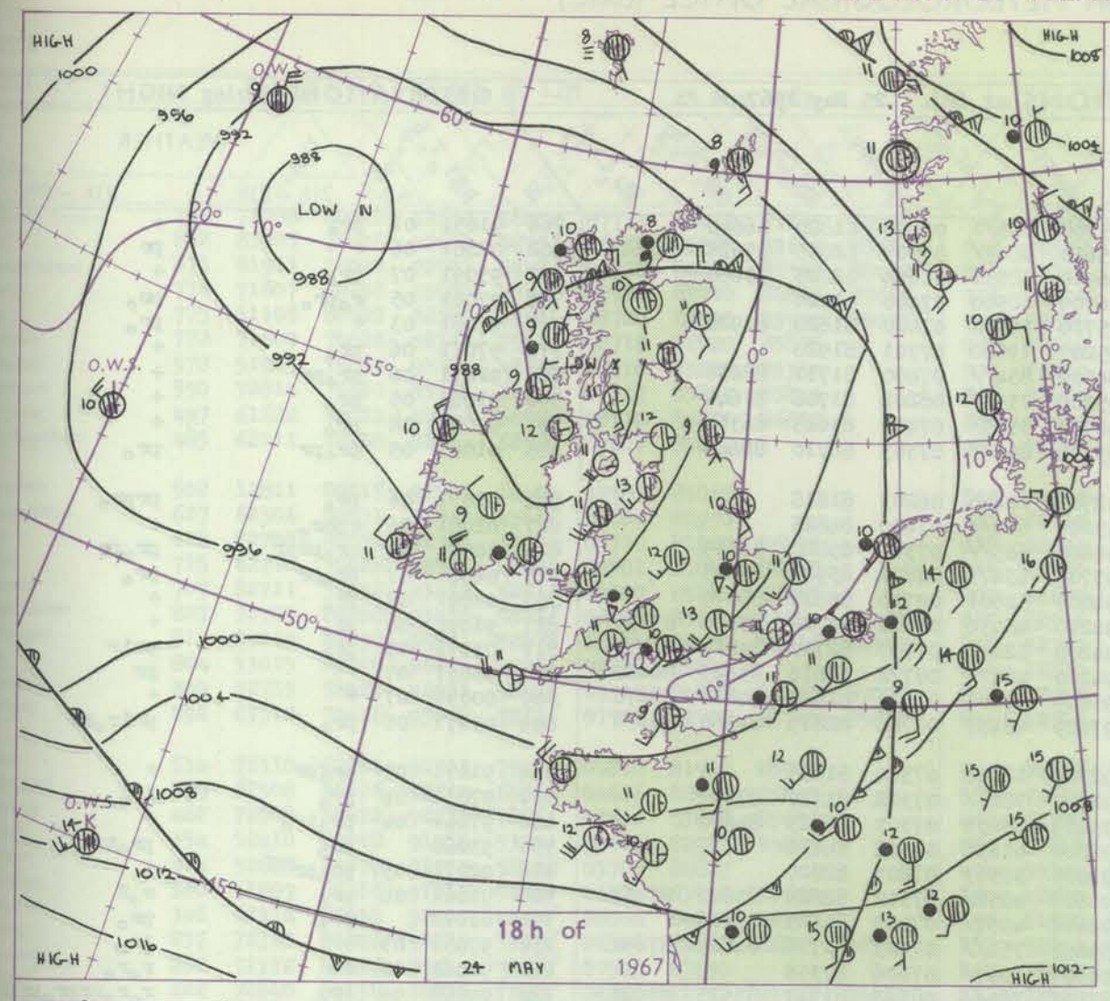
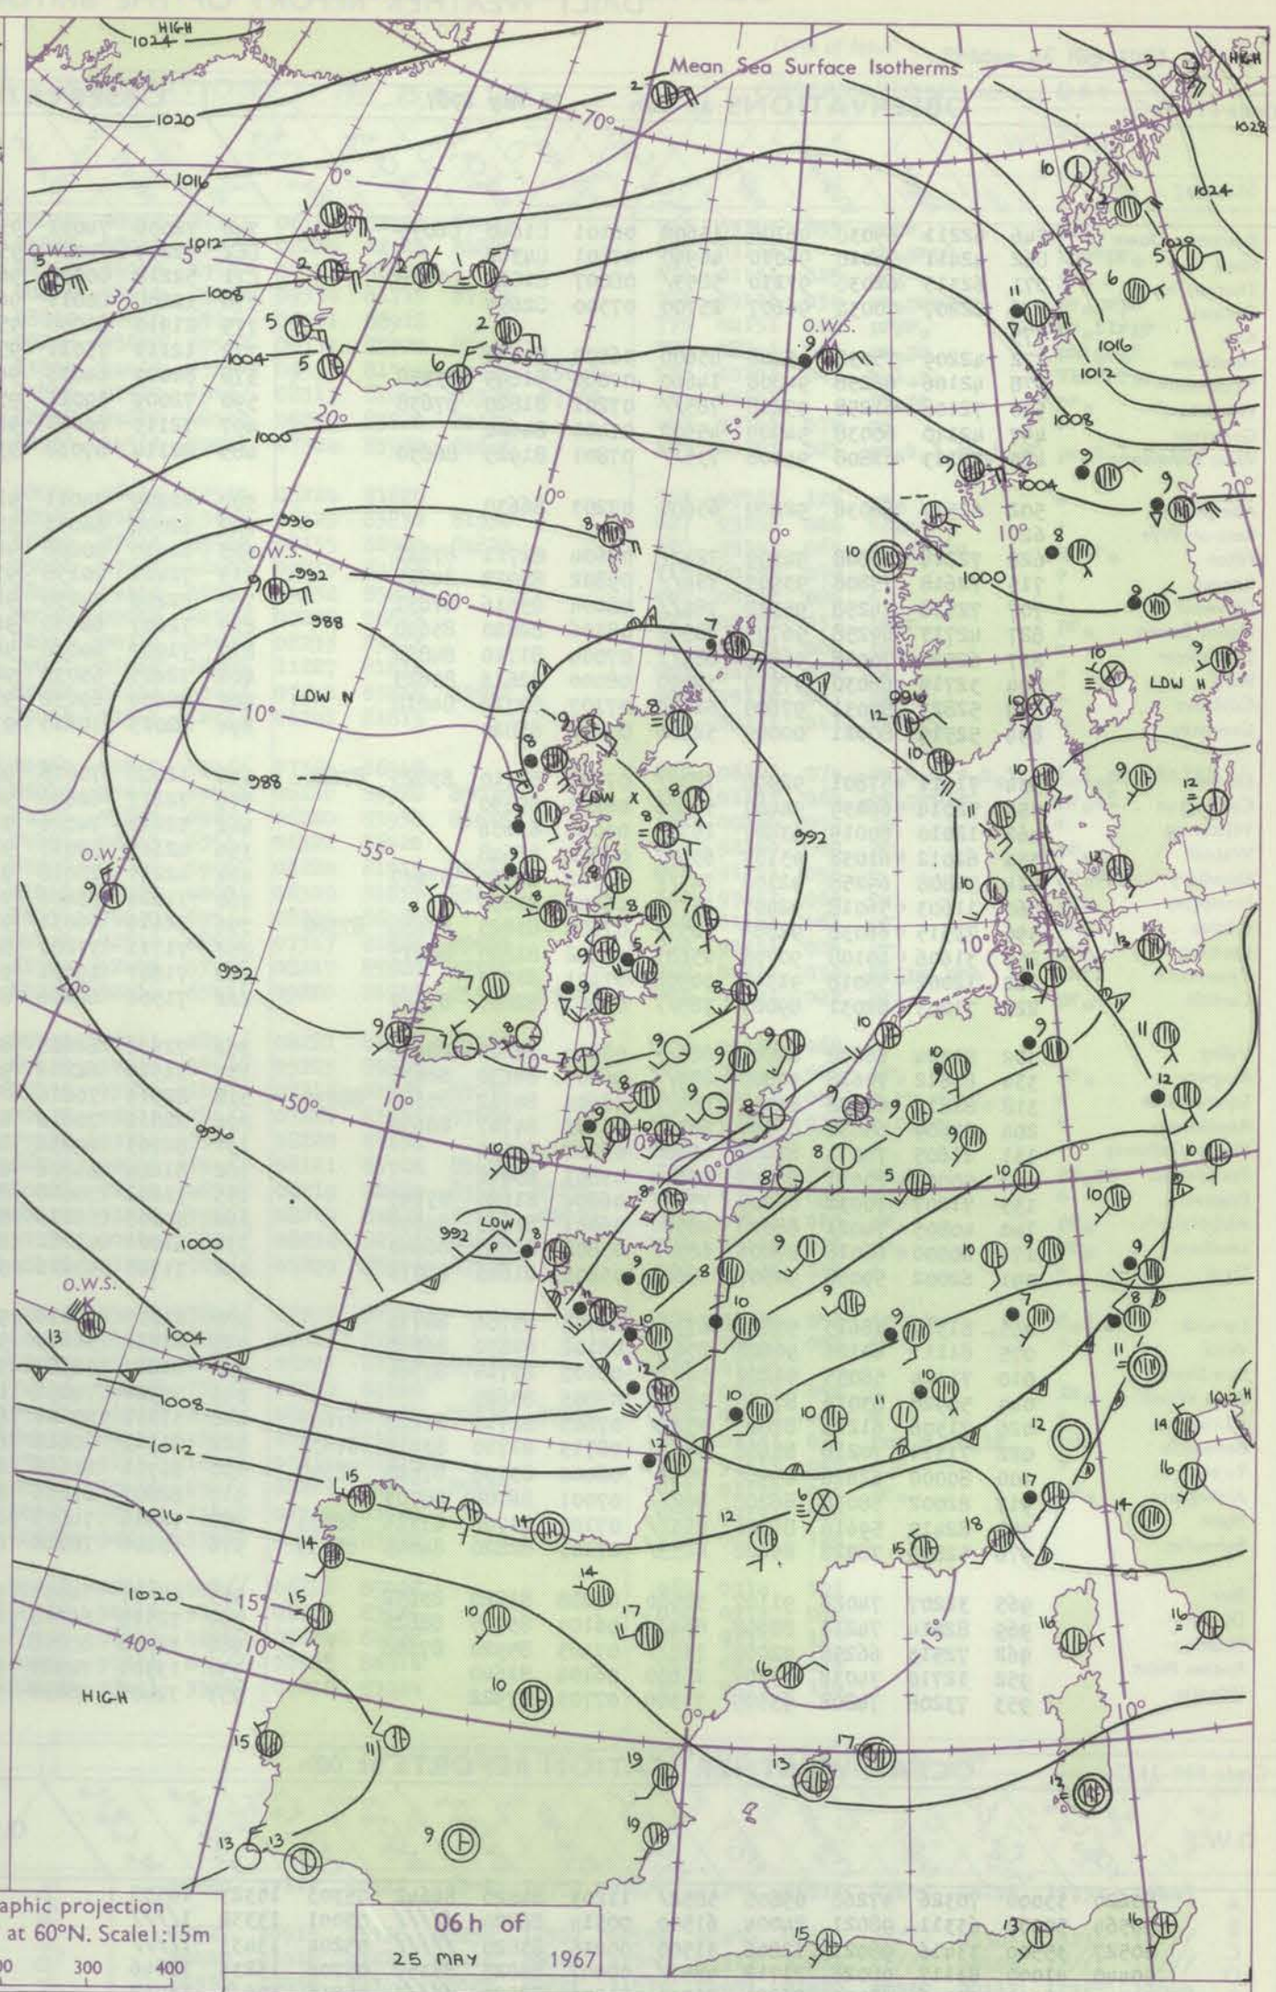
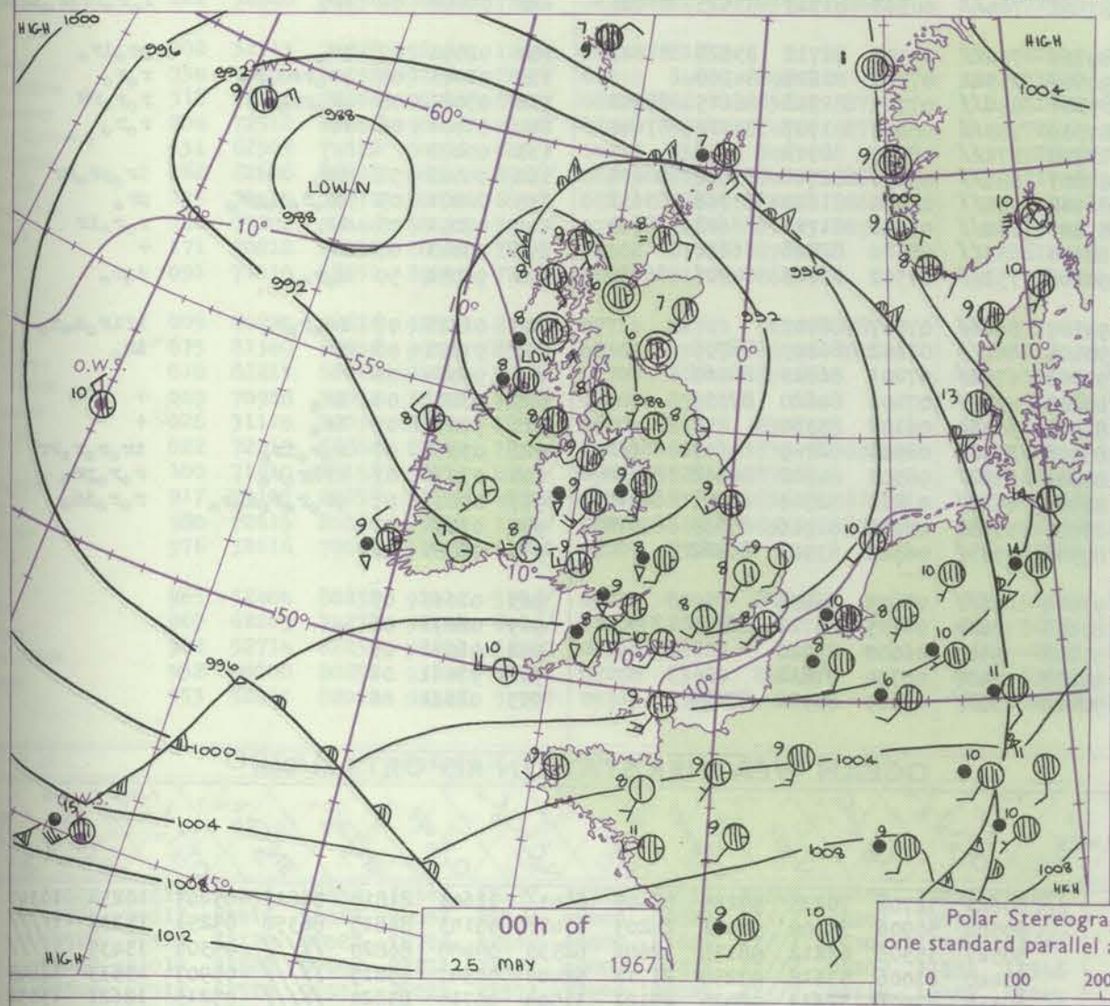
CHARTS OF WEATHER IN WESTERN EUROPE







Polar Stereographic projection
one standard parallel at 60°N. Scale 1:15m
0 100 200 300 400

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday **Thursday 25** May 1967

The complex depression to the northwest of the British Isles has remained slow moving and will show little change in the next 24 hours. The occluding frontal system associated with this low moved north across Scotland during yesterday to leave the whole of the country in an unstable airstream. The small wave on the polar front in mid-Atlantic yesterday morning has deepened and moved rapidly eastwards to reach the Southwest Approaches by this morning. It is expected to move away quickly into the Continent without penetrating over the south of England. The unstable airstream is expected to persist over the whole country for the next 24 hours.

DAILY WEATHER REPORT OF THE BRITISH METEOROLOGICAL OFFICE (contd.)

Code FM 11.C

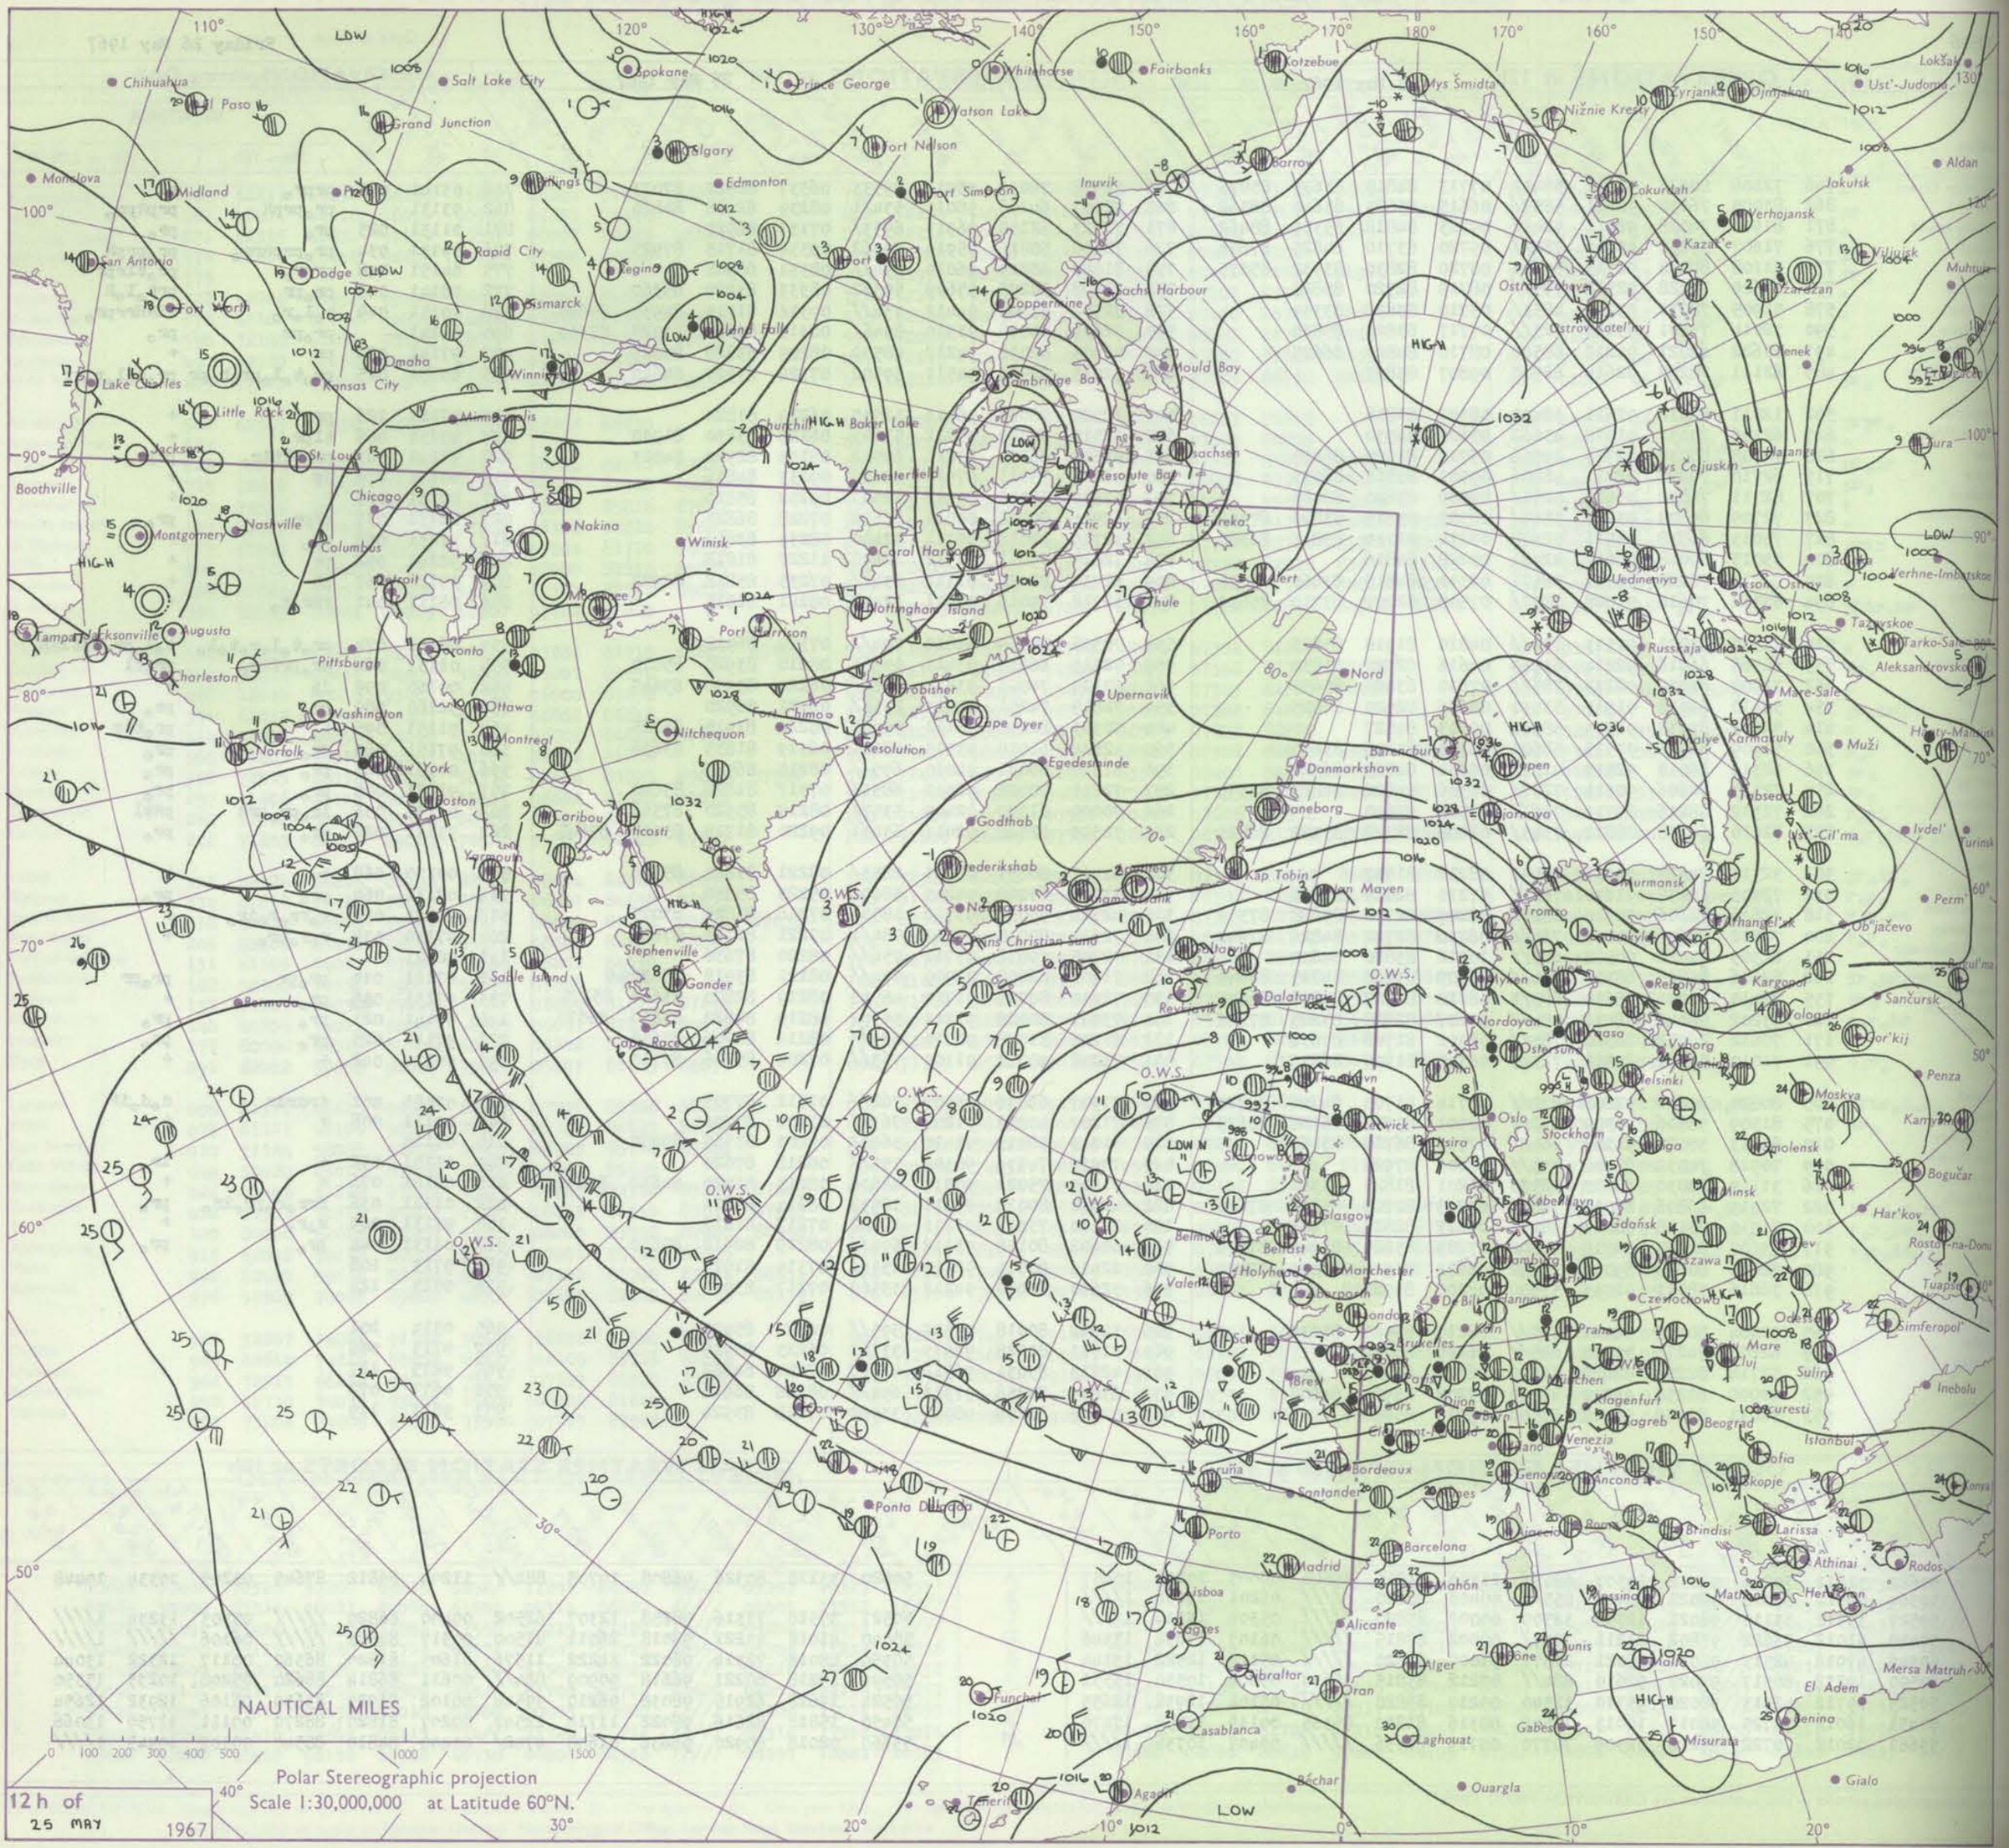
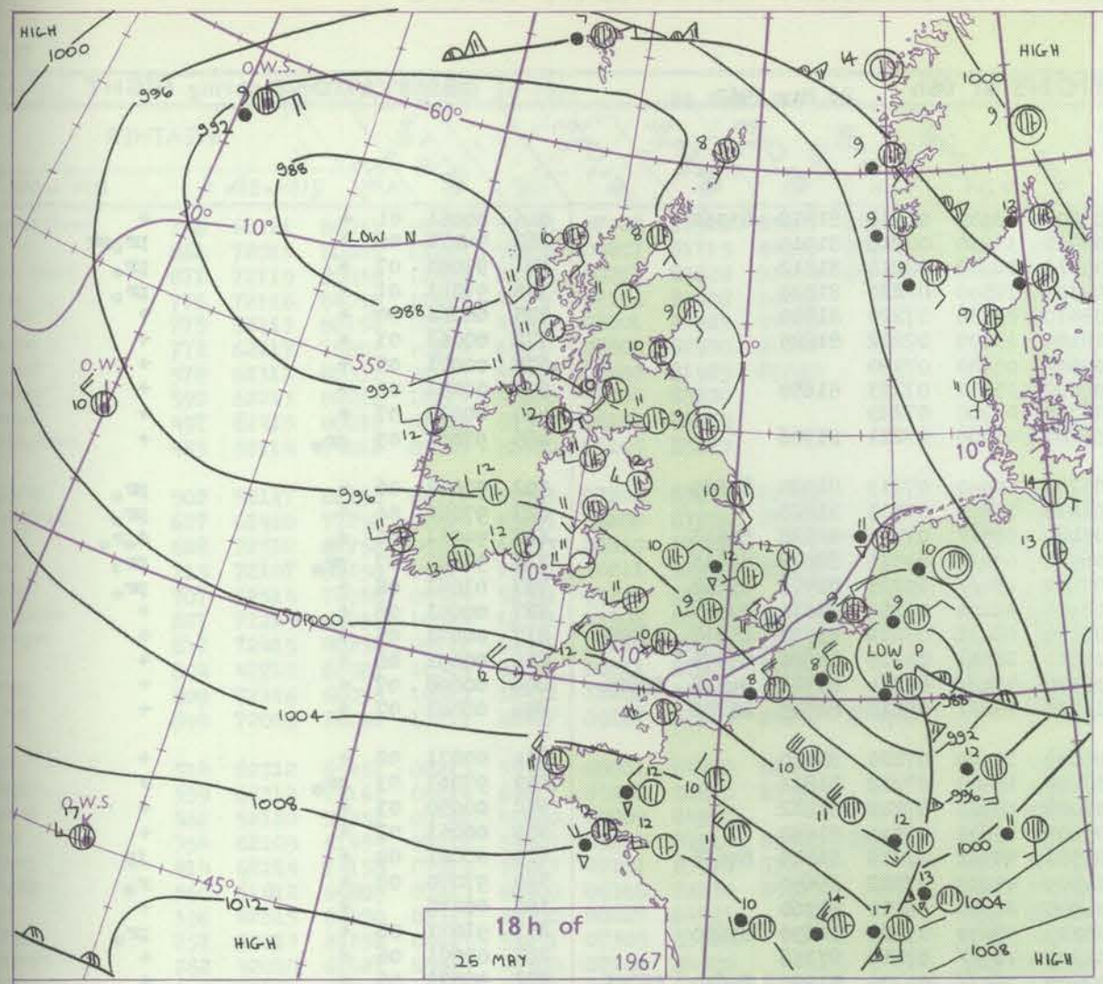
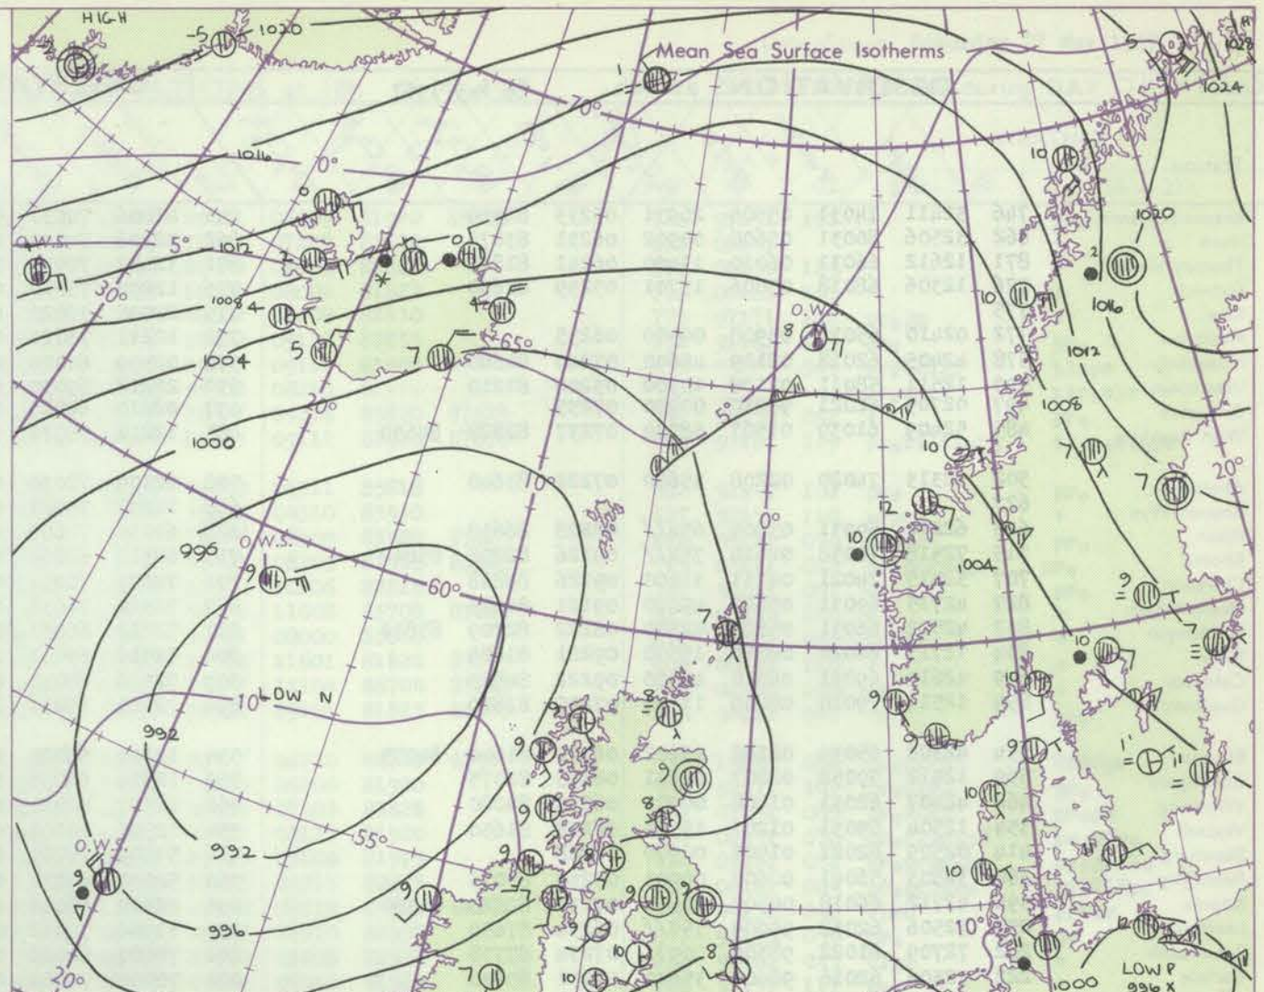
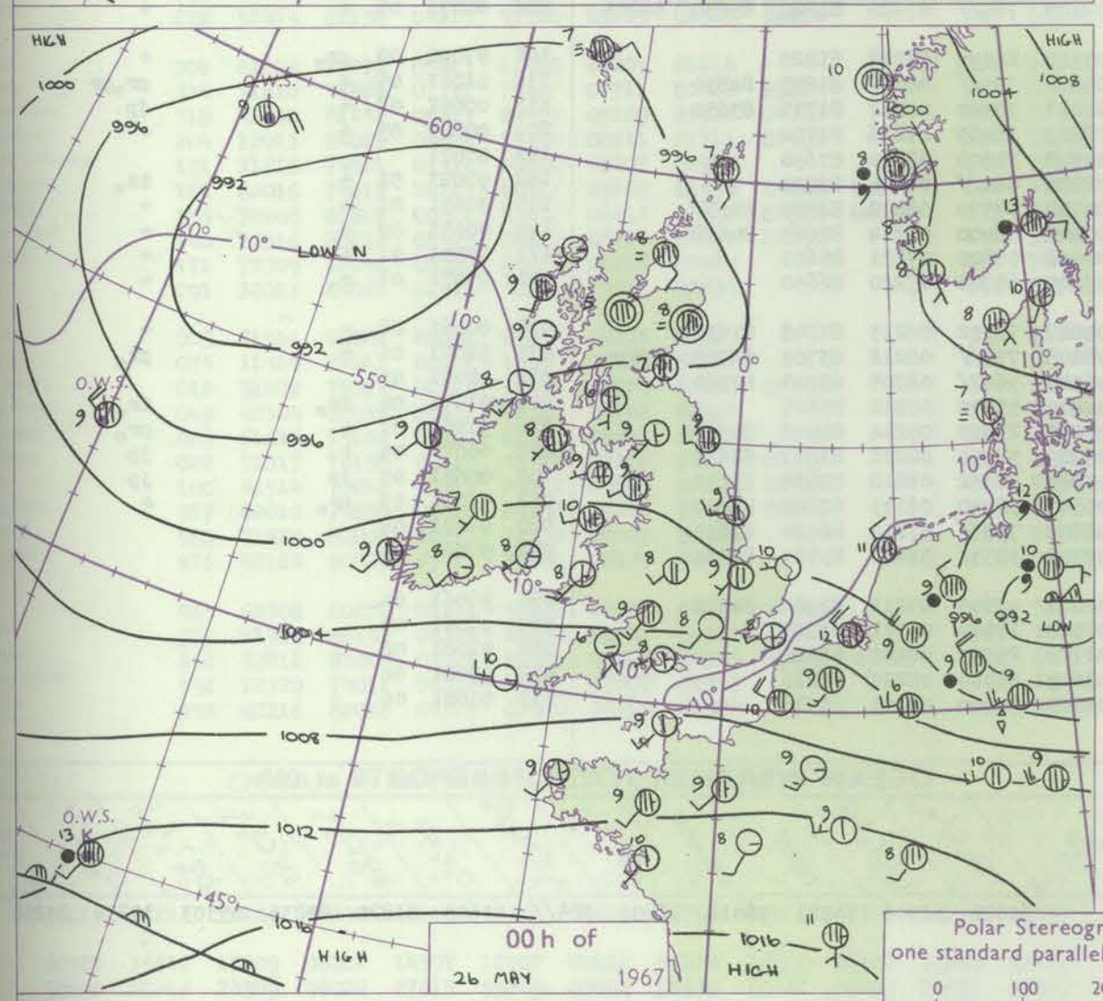
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE









Polar Stereographic projection
one standard parallel at 60°N. Scale 1:15m
0 100 200 300 400

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday **Friday 26** May 1967

The complex depression to the west of Scotland has simplified and filled a little and the single low will drift slowly westwards with little change of pressure. The wave depressions near Brest deepened and moved rapidly east across northern France into Germany without affecting the British Isles, but a trough in the unstable westerlies moving eastwards in association with the depression produced widespread thunderstorms over central and eastern England. Northern districts of the British Isles are likely to remain in the unstable southwesterly airstream but further small wave depressions near O.W.S.'K' will move rather quickly northeast and may affect southern districts of England.

Code FM 11.C **OBSERVATIONS at 00h** 26 May 1967

one standard parallel at 60°N. Scale 1:15m
0 100 200 300 400

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday **Saturday 27** May 1967

The British Isles remains under the influence of the cyclonic circulation associated with the depression centred near O.W.S. 'I'. The trough extending southsoutheastward from the centre to the Biscay area is moving northeast over southern districts of England and Wales bringing further outbreaks of rain. During the next 24 hours this trough is expected to continue moving northeast to north over all districts of Britain but further thundery troughs over Biscay and France are expected to maintain the generally unsettled weather over much of the country.

Code FM 11.C

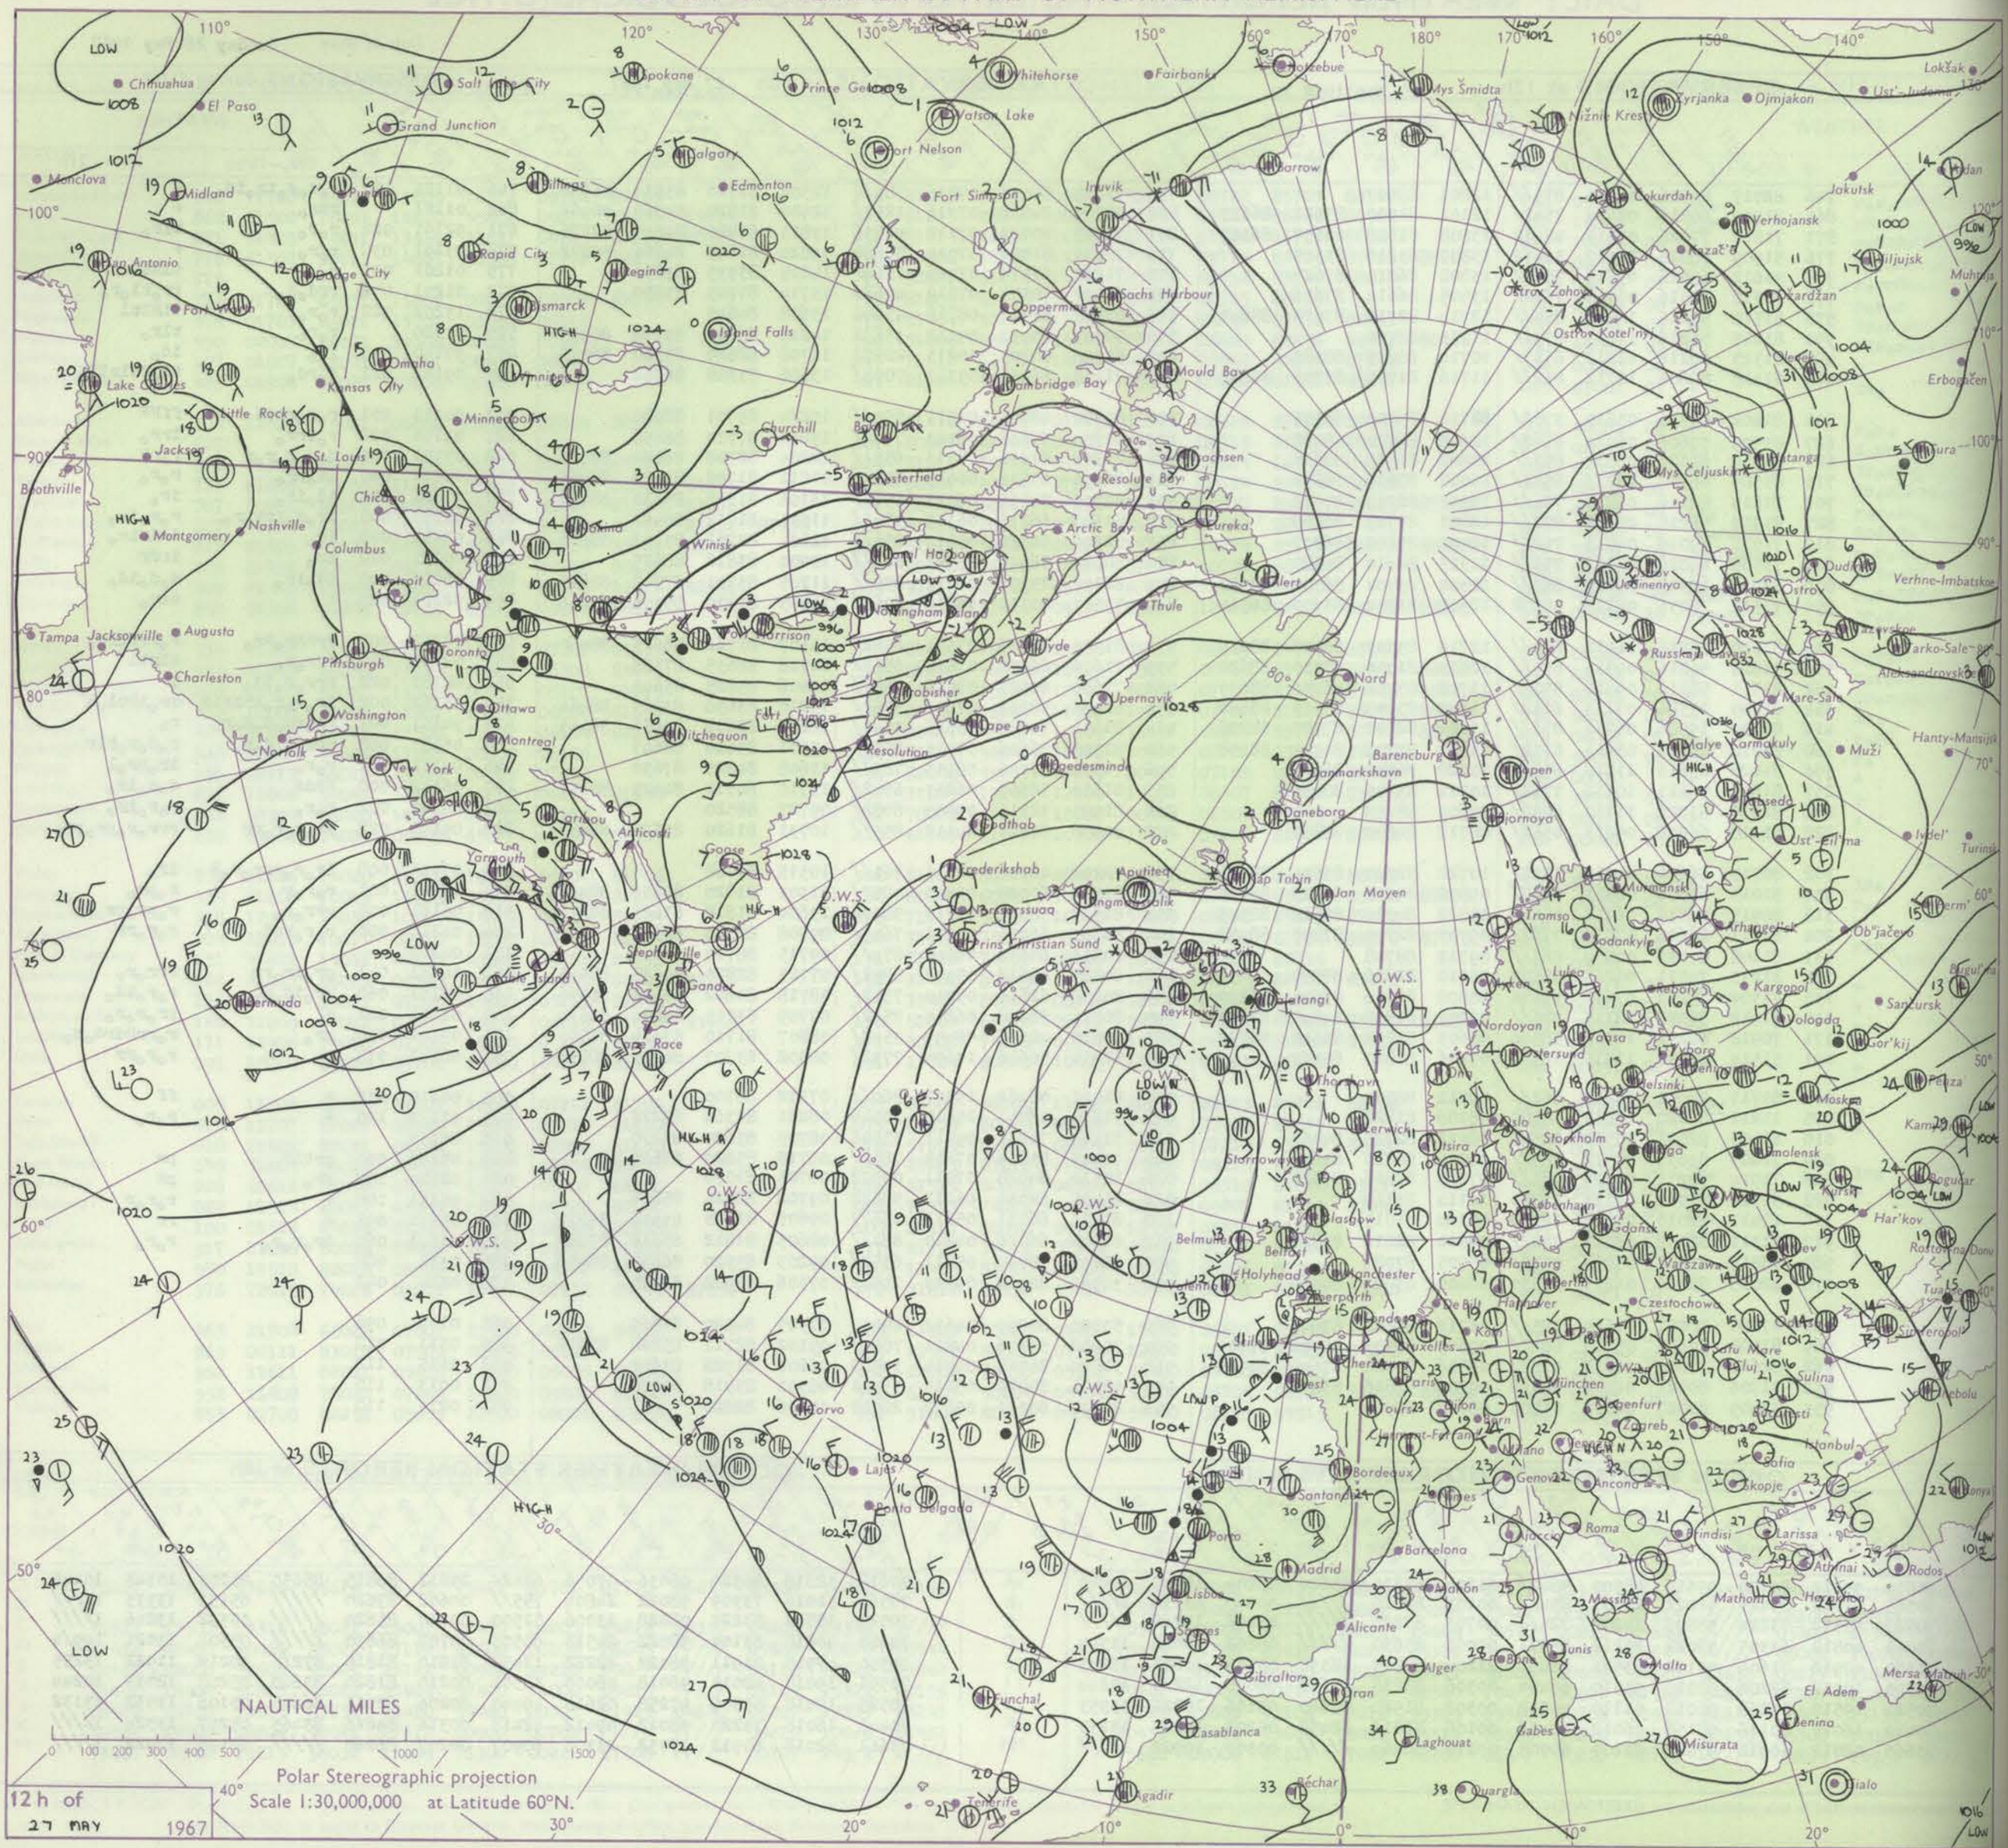
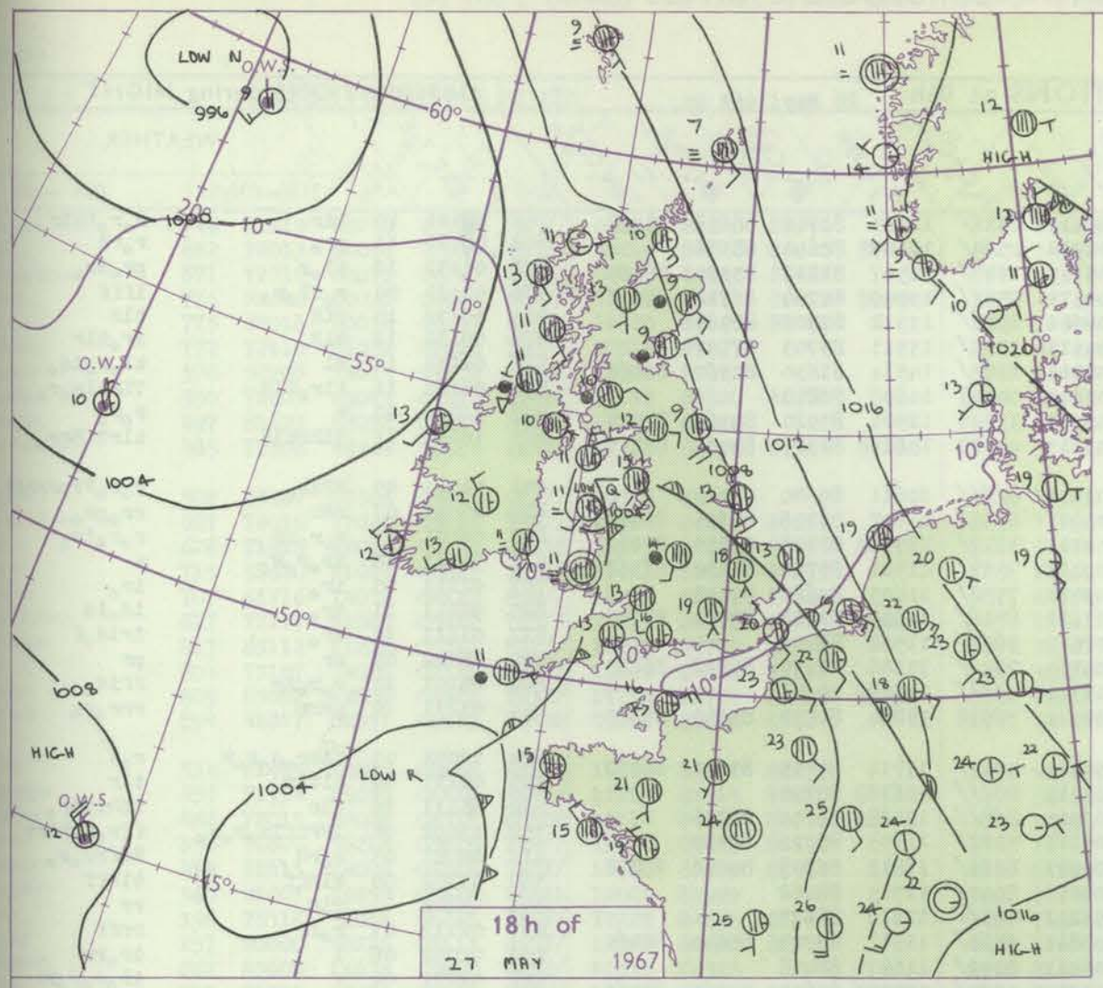
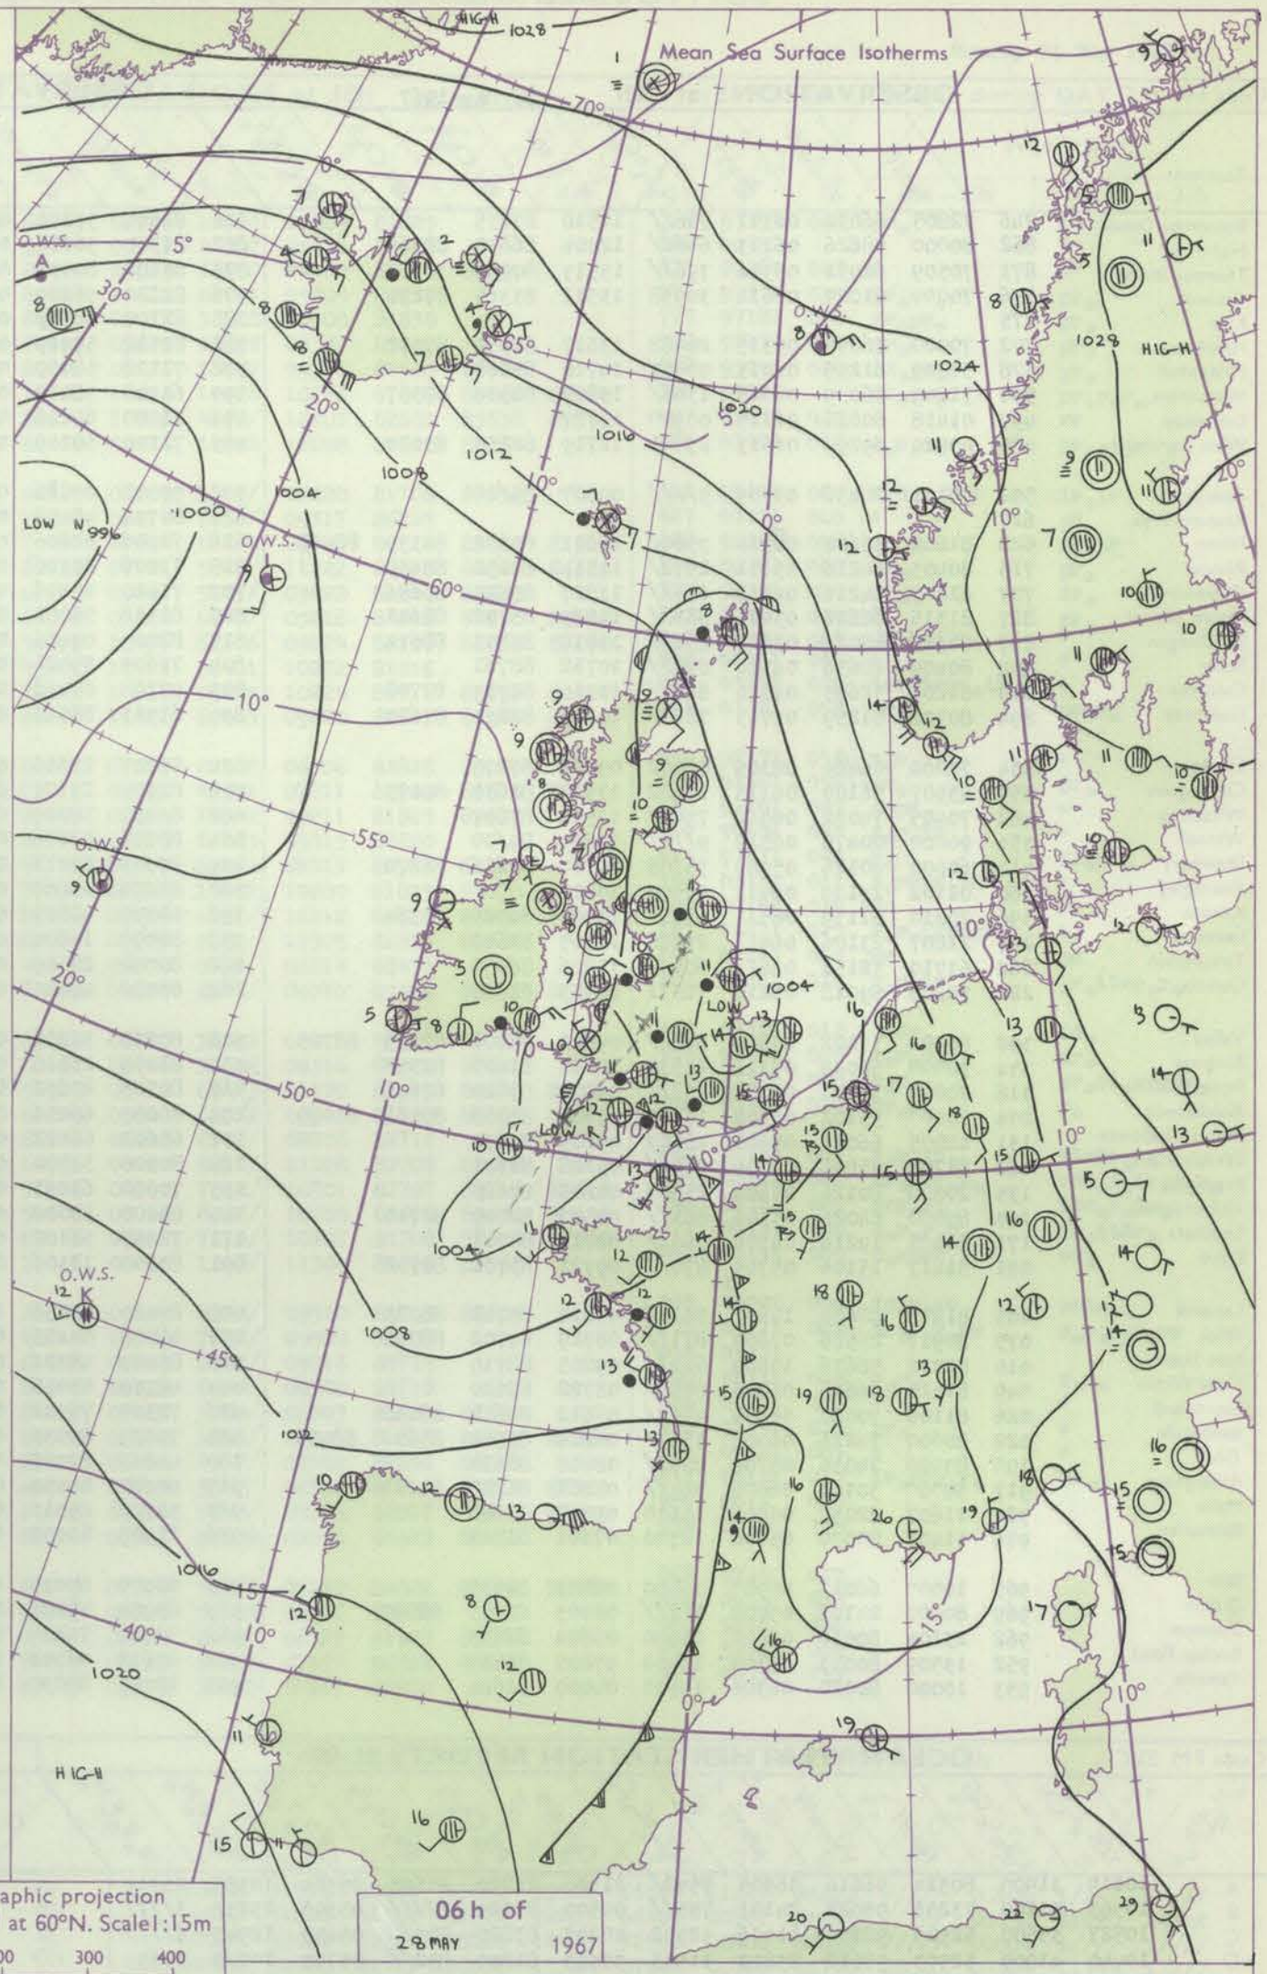
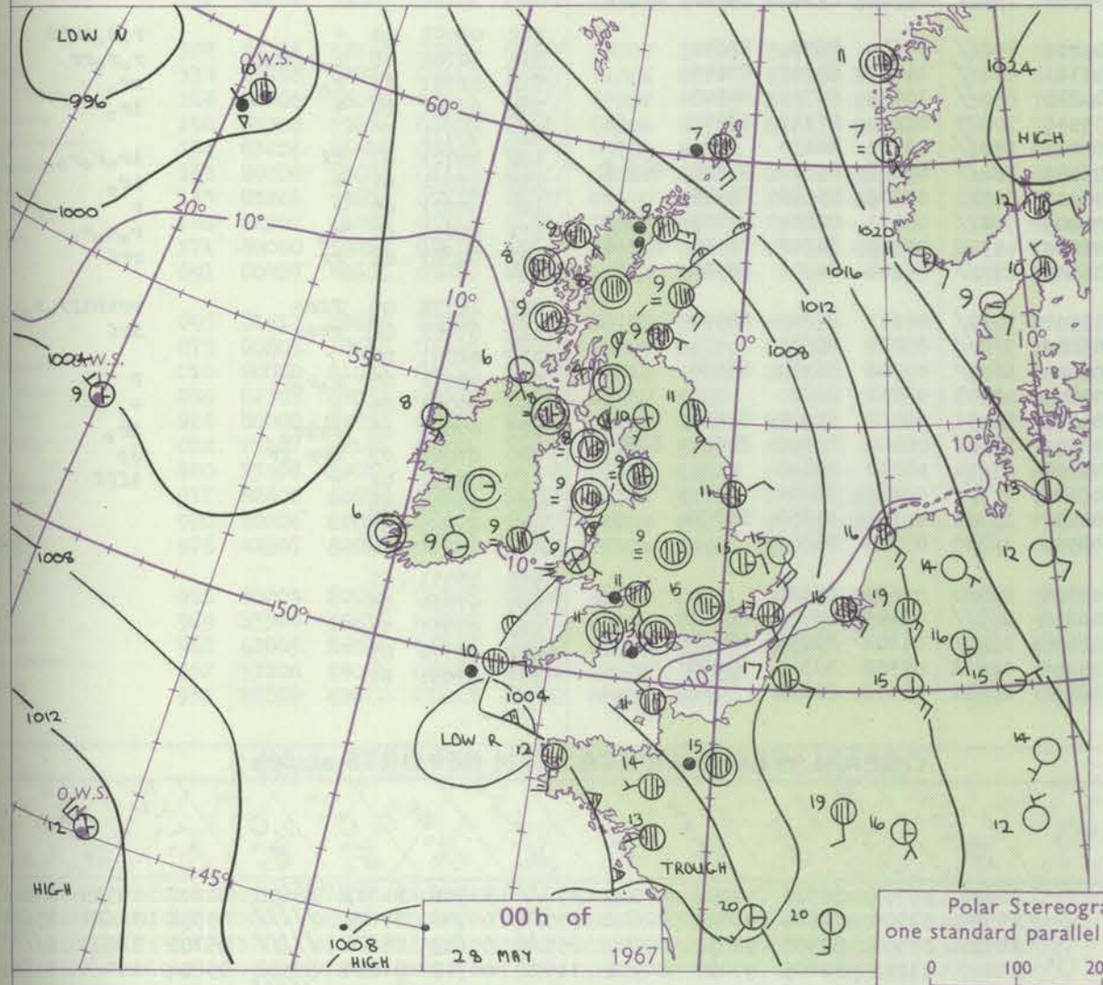
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE









Polar Stereographic projection
one standard parallel at 60°N. Scale 1:15m
0 100 200 300 400

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday **Sunday 28** May 1967

The main depression centred to the southwest of O.W.S.'I' persists but is filling slightly. The British Isles remains in the circulation of this depression with small secondary depressions moving northwards from the Continent across the countrygiving outbreaks of rain and thunderstorms. During the next 24 hours a weak ridge is expected to develop over the British Isles with the airstream becoming more stable and a decrease in the shower activity.

Code FM 11.C **OBSERVATIONS at 00h** 28 May 1967

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday Monday 29 May 1967

The old primary depression in mid-Atlantic having moved southwest and then southeast and filled substantially is now almost stationary. A complex secondary low which moved northwards over the British Isles during the past 24 hours now lies between north Scotland and Iceland and is expected to move slowly northwest. The associated cold front is moving away northeastwards over the North Sea followed by a weak ridge of high pressure which extends northwards from an anticyclone which has formed over southern France. This anticyclone is expected to move northeast towards north Germany maintaining the ridge over the north of the British Isles while a trough in unstable air remains near southwestern districts.

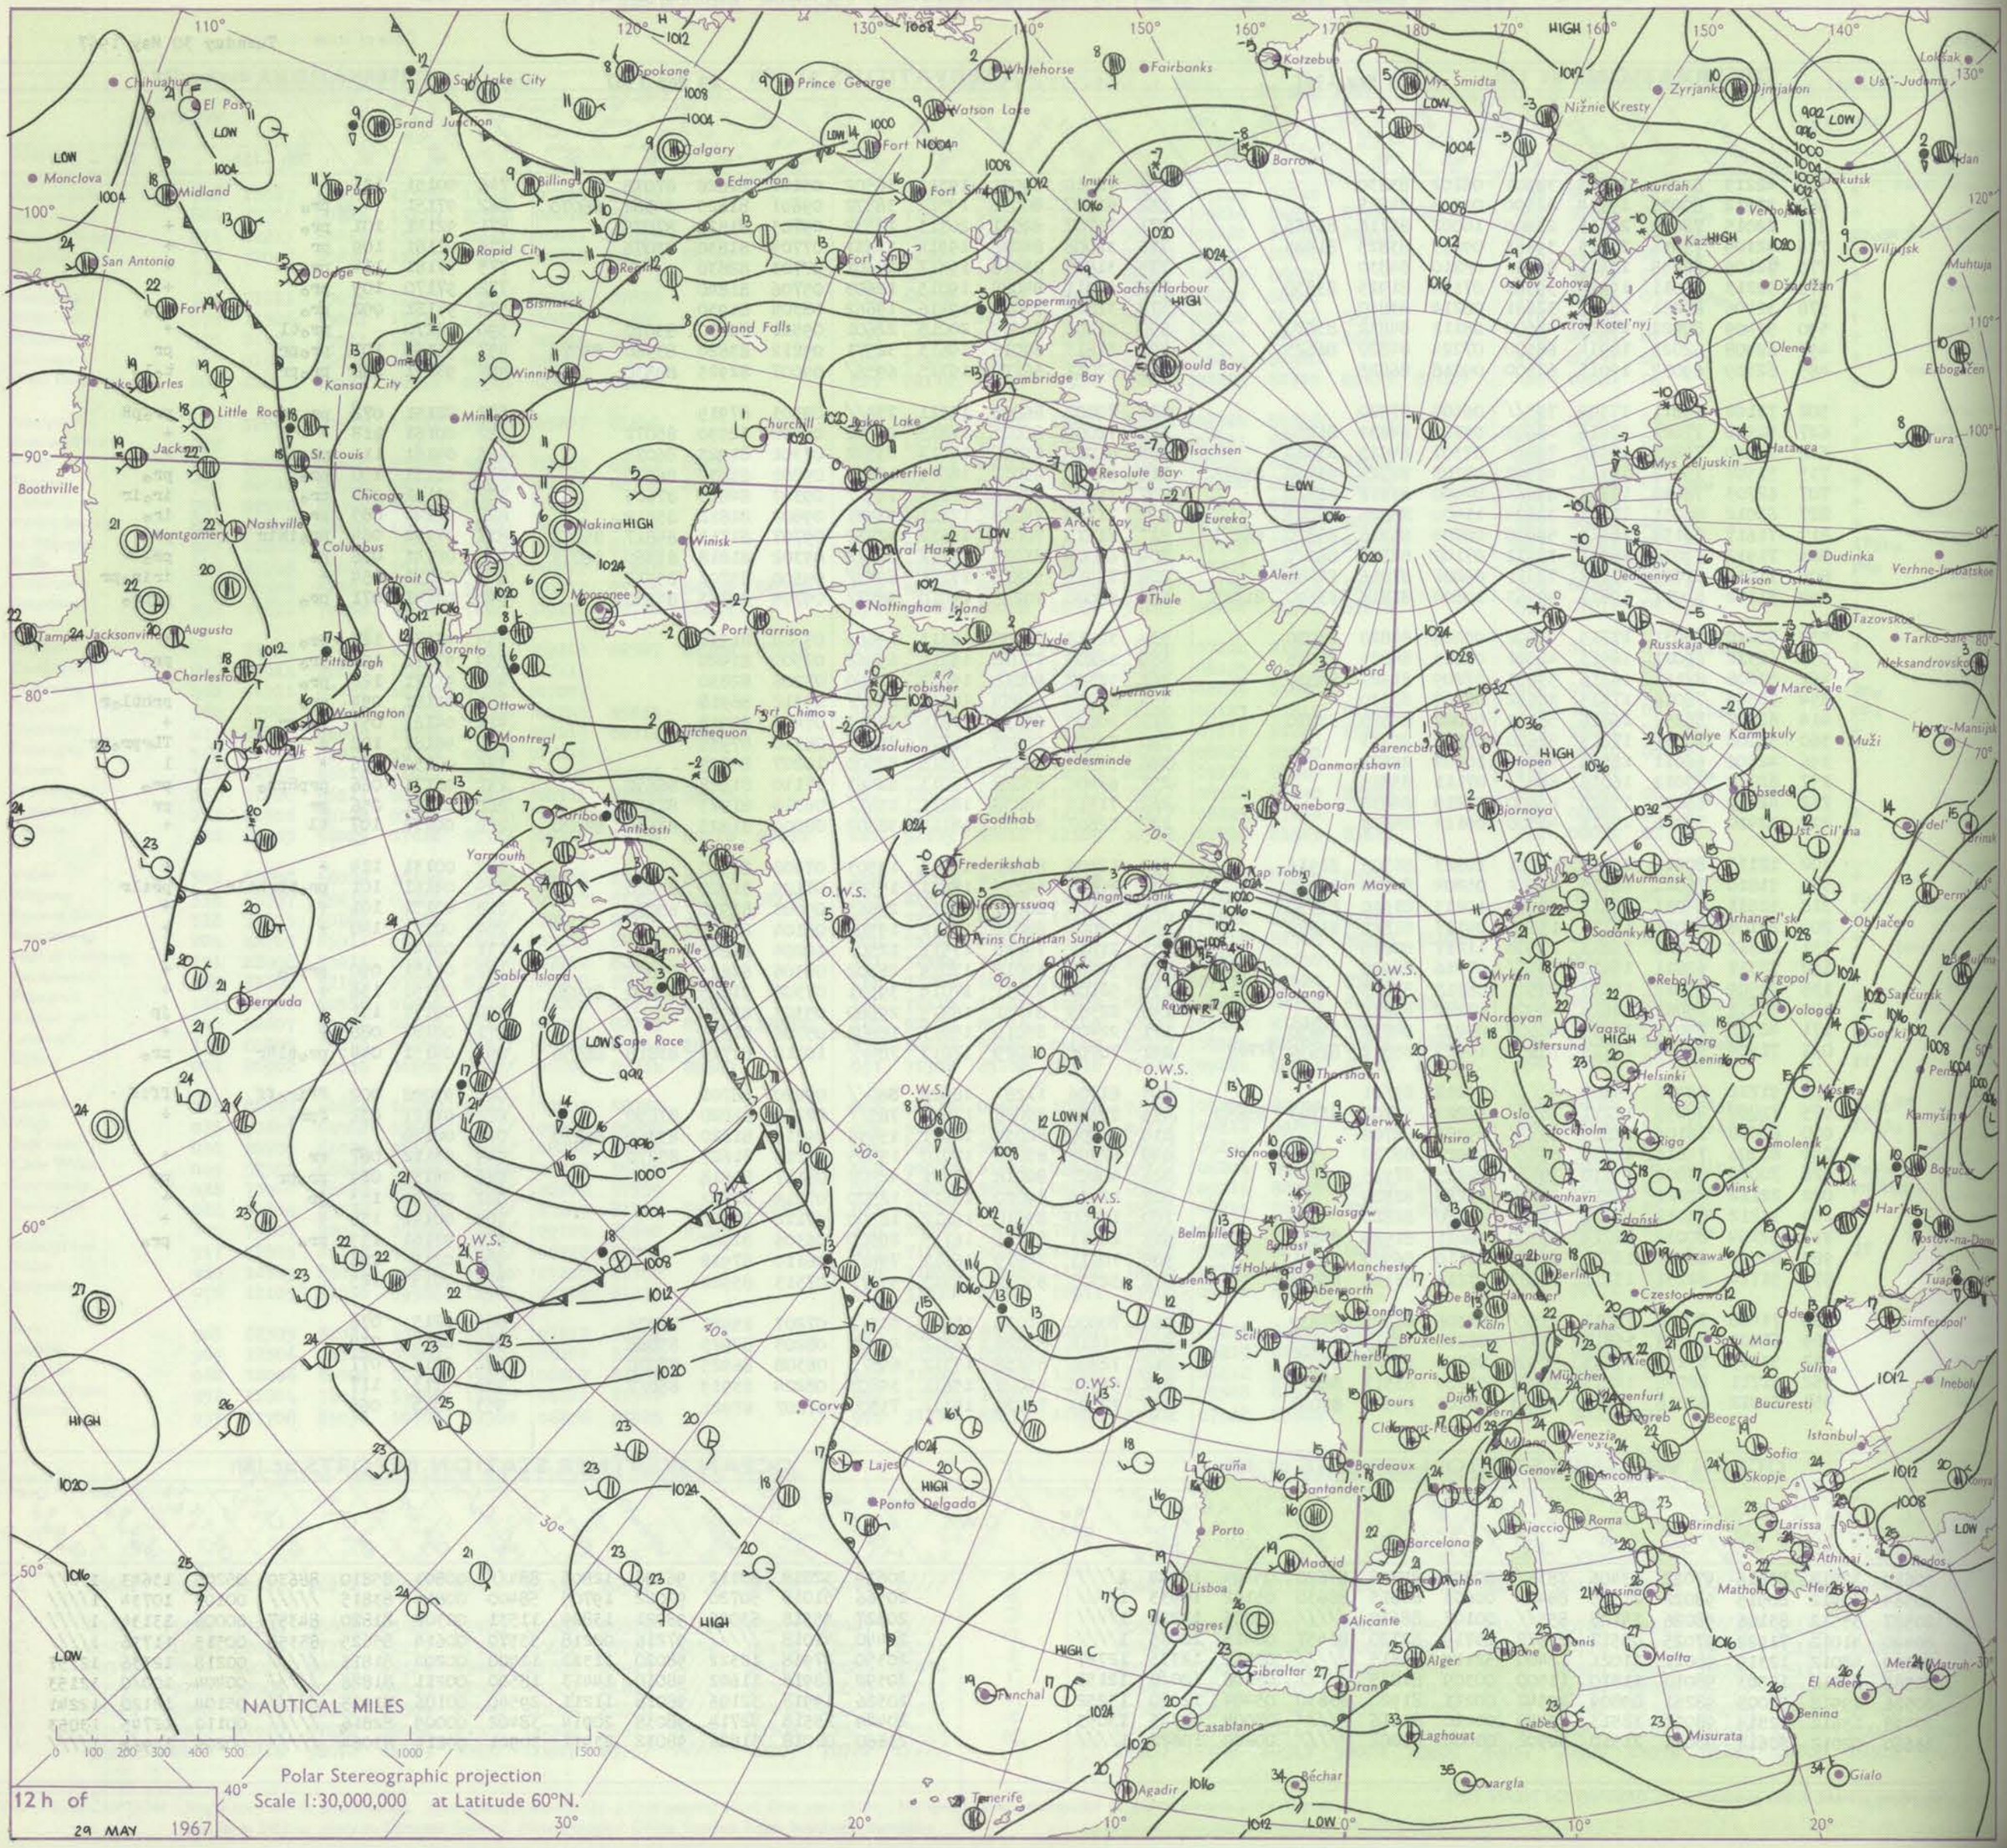
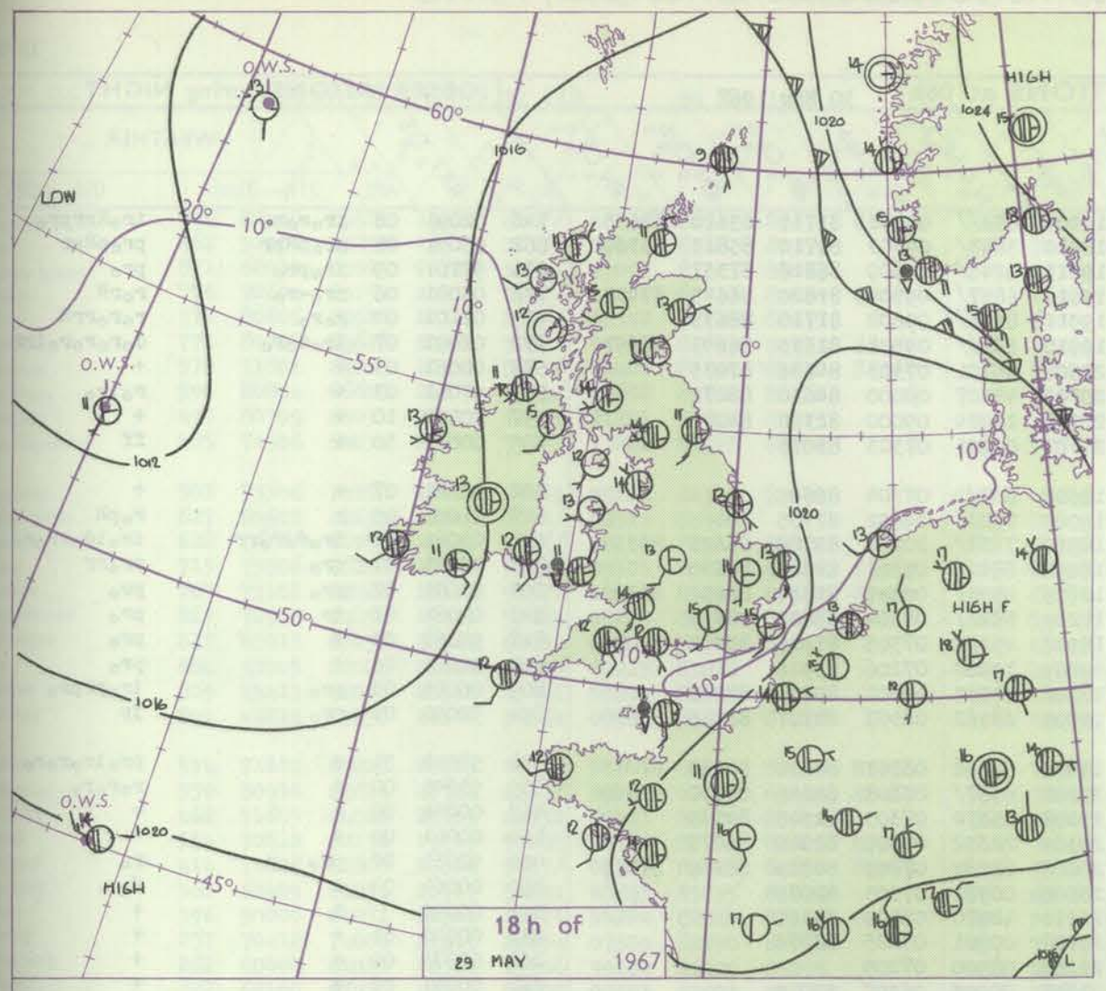
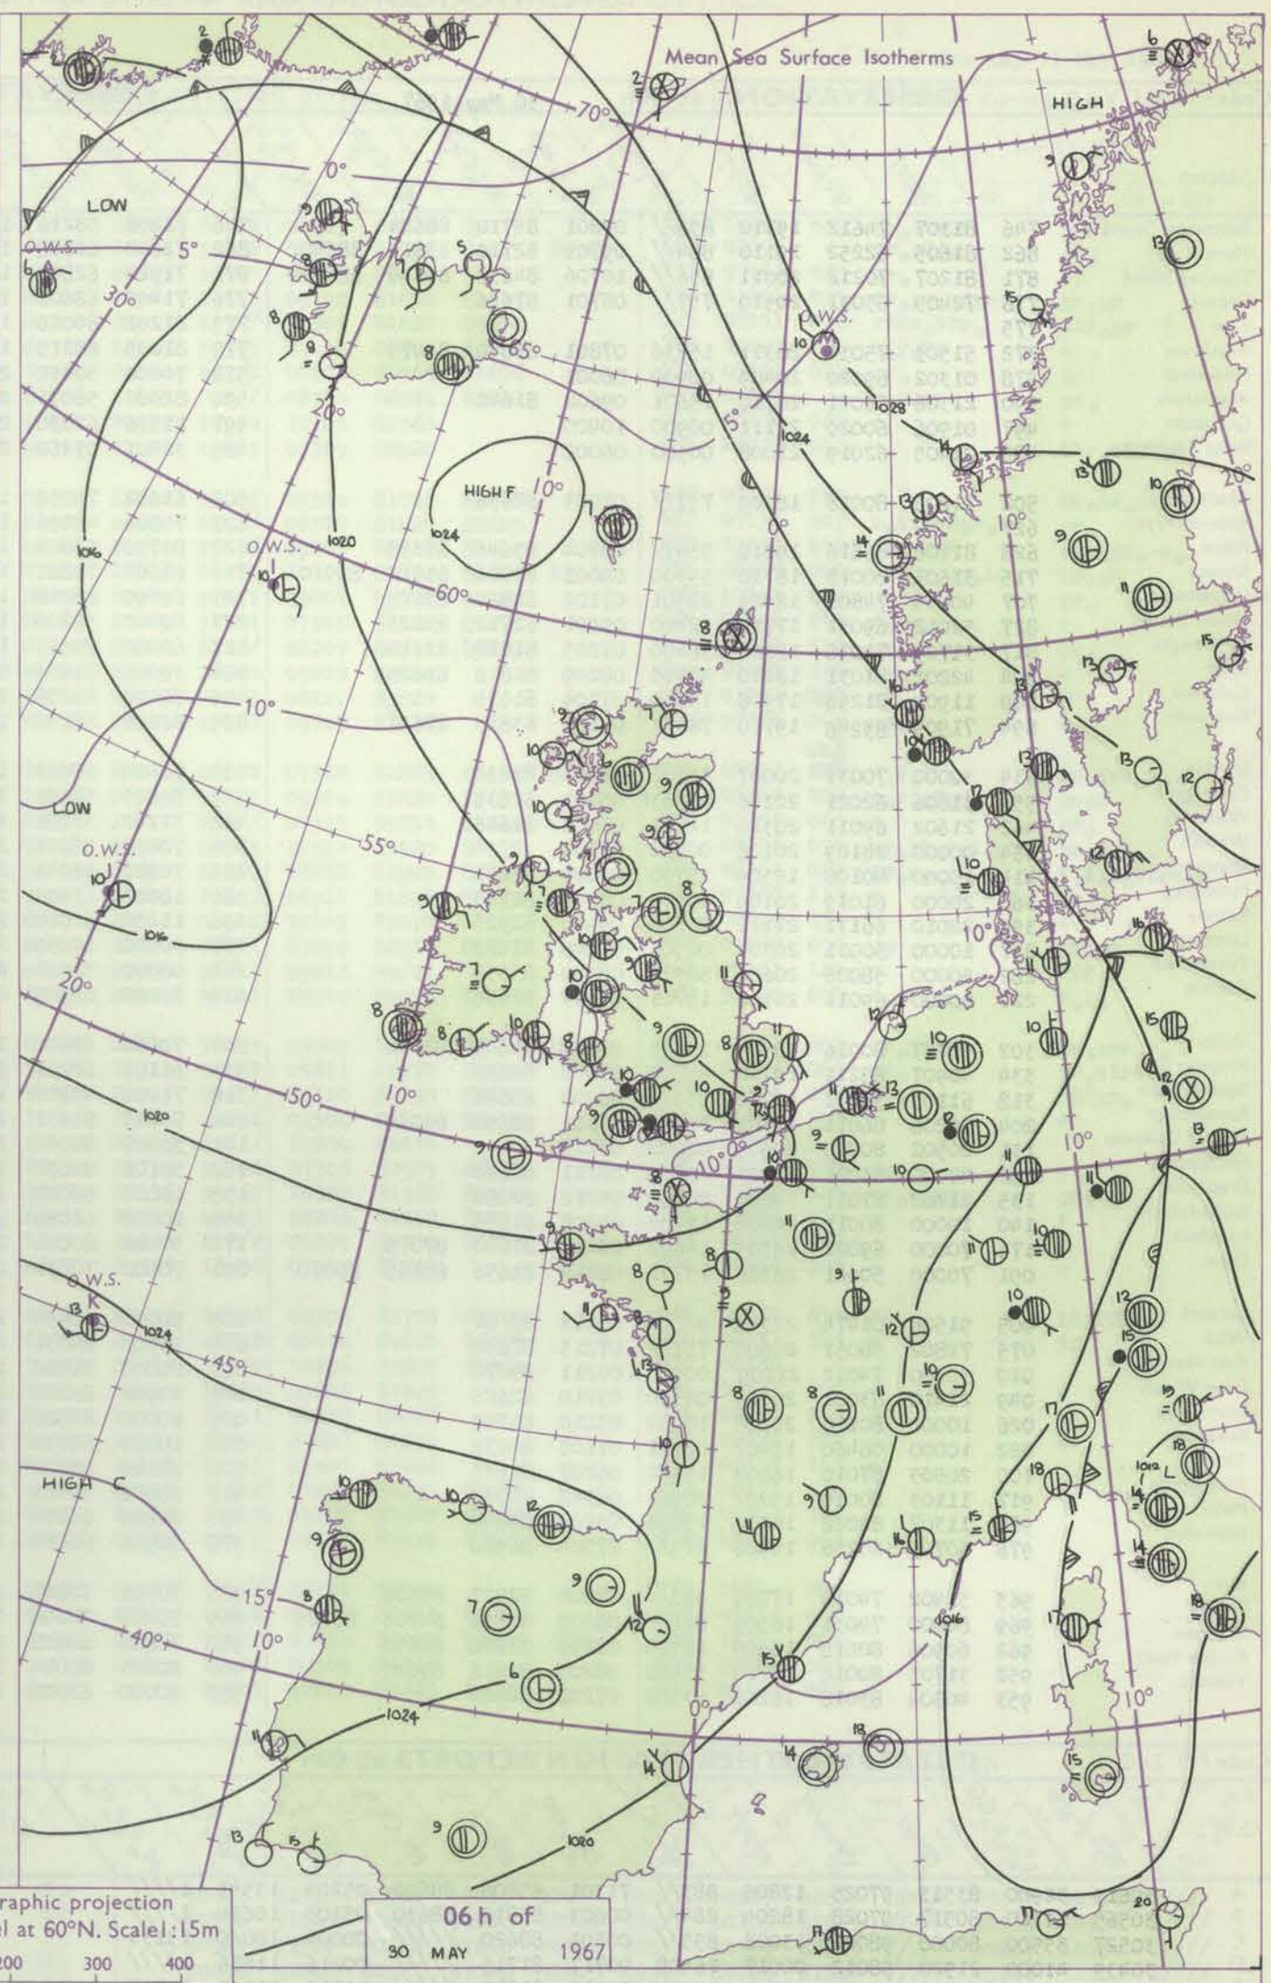
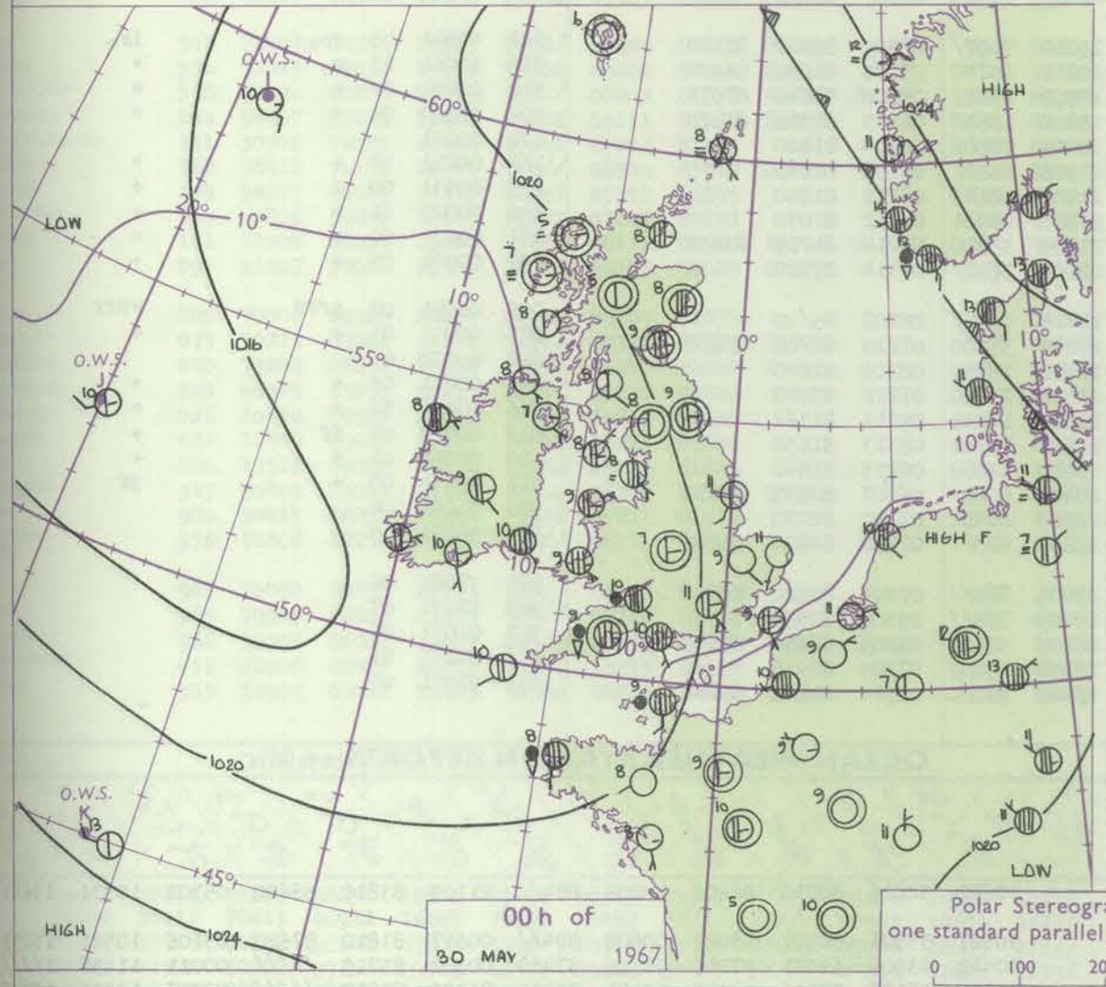
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE









Polar Stereographic projection
one standard parallel at 60°N. Scale 1:15m
0 100 200 300 400

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday Tuesday 30 May 1967

The complex low pressure area to the northwest and west of the British Isles has persisted, but has filled slowly. The anticyclone which developed over France and west Germany has moved north and northwest and is now a weak feature near the Faeroes. A trough of low pressure southwest of the British Isles and over Biscay has moved slowly north to southern England. During the next 24 hours the trough will continue to advance slowly northwards over the British Isles, followed by weak ridging on its southern flank. Falls of pressure now occurring over Germany are expected to extend northwestwards producing a trough over the North Sea.

Code FM 11.C

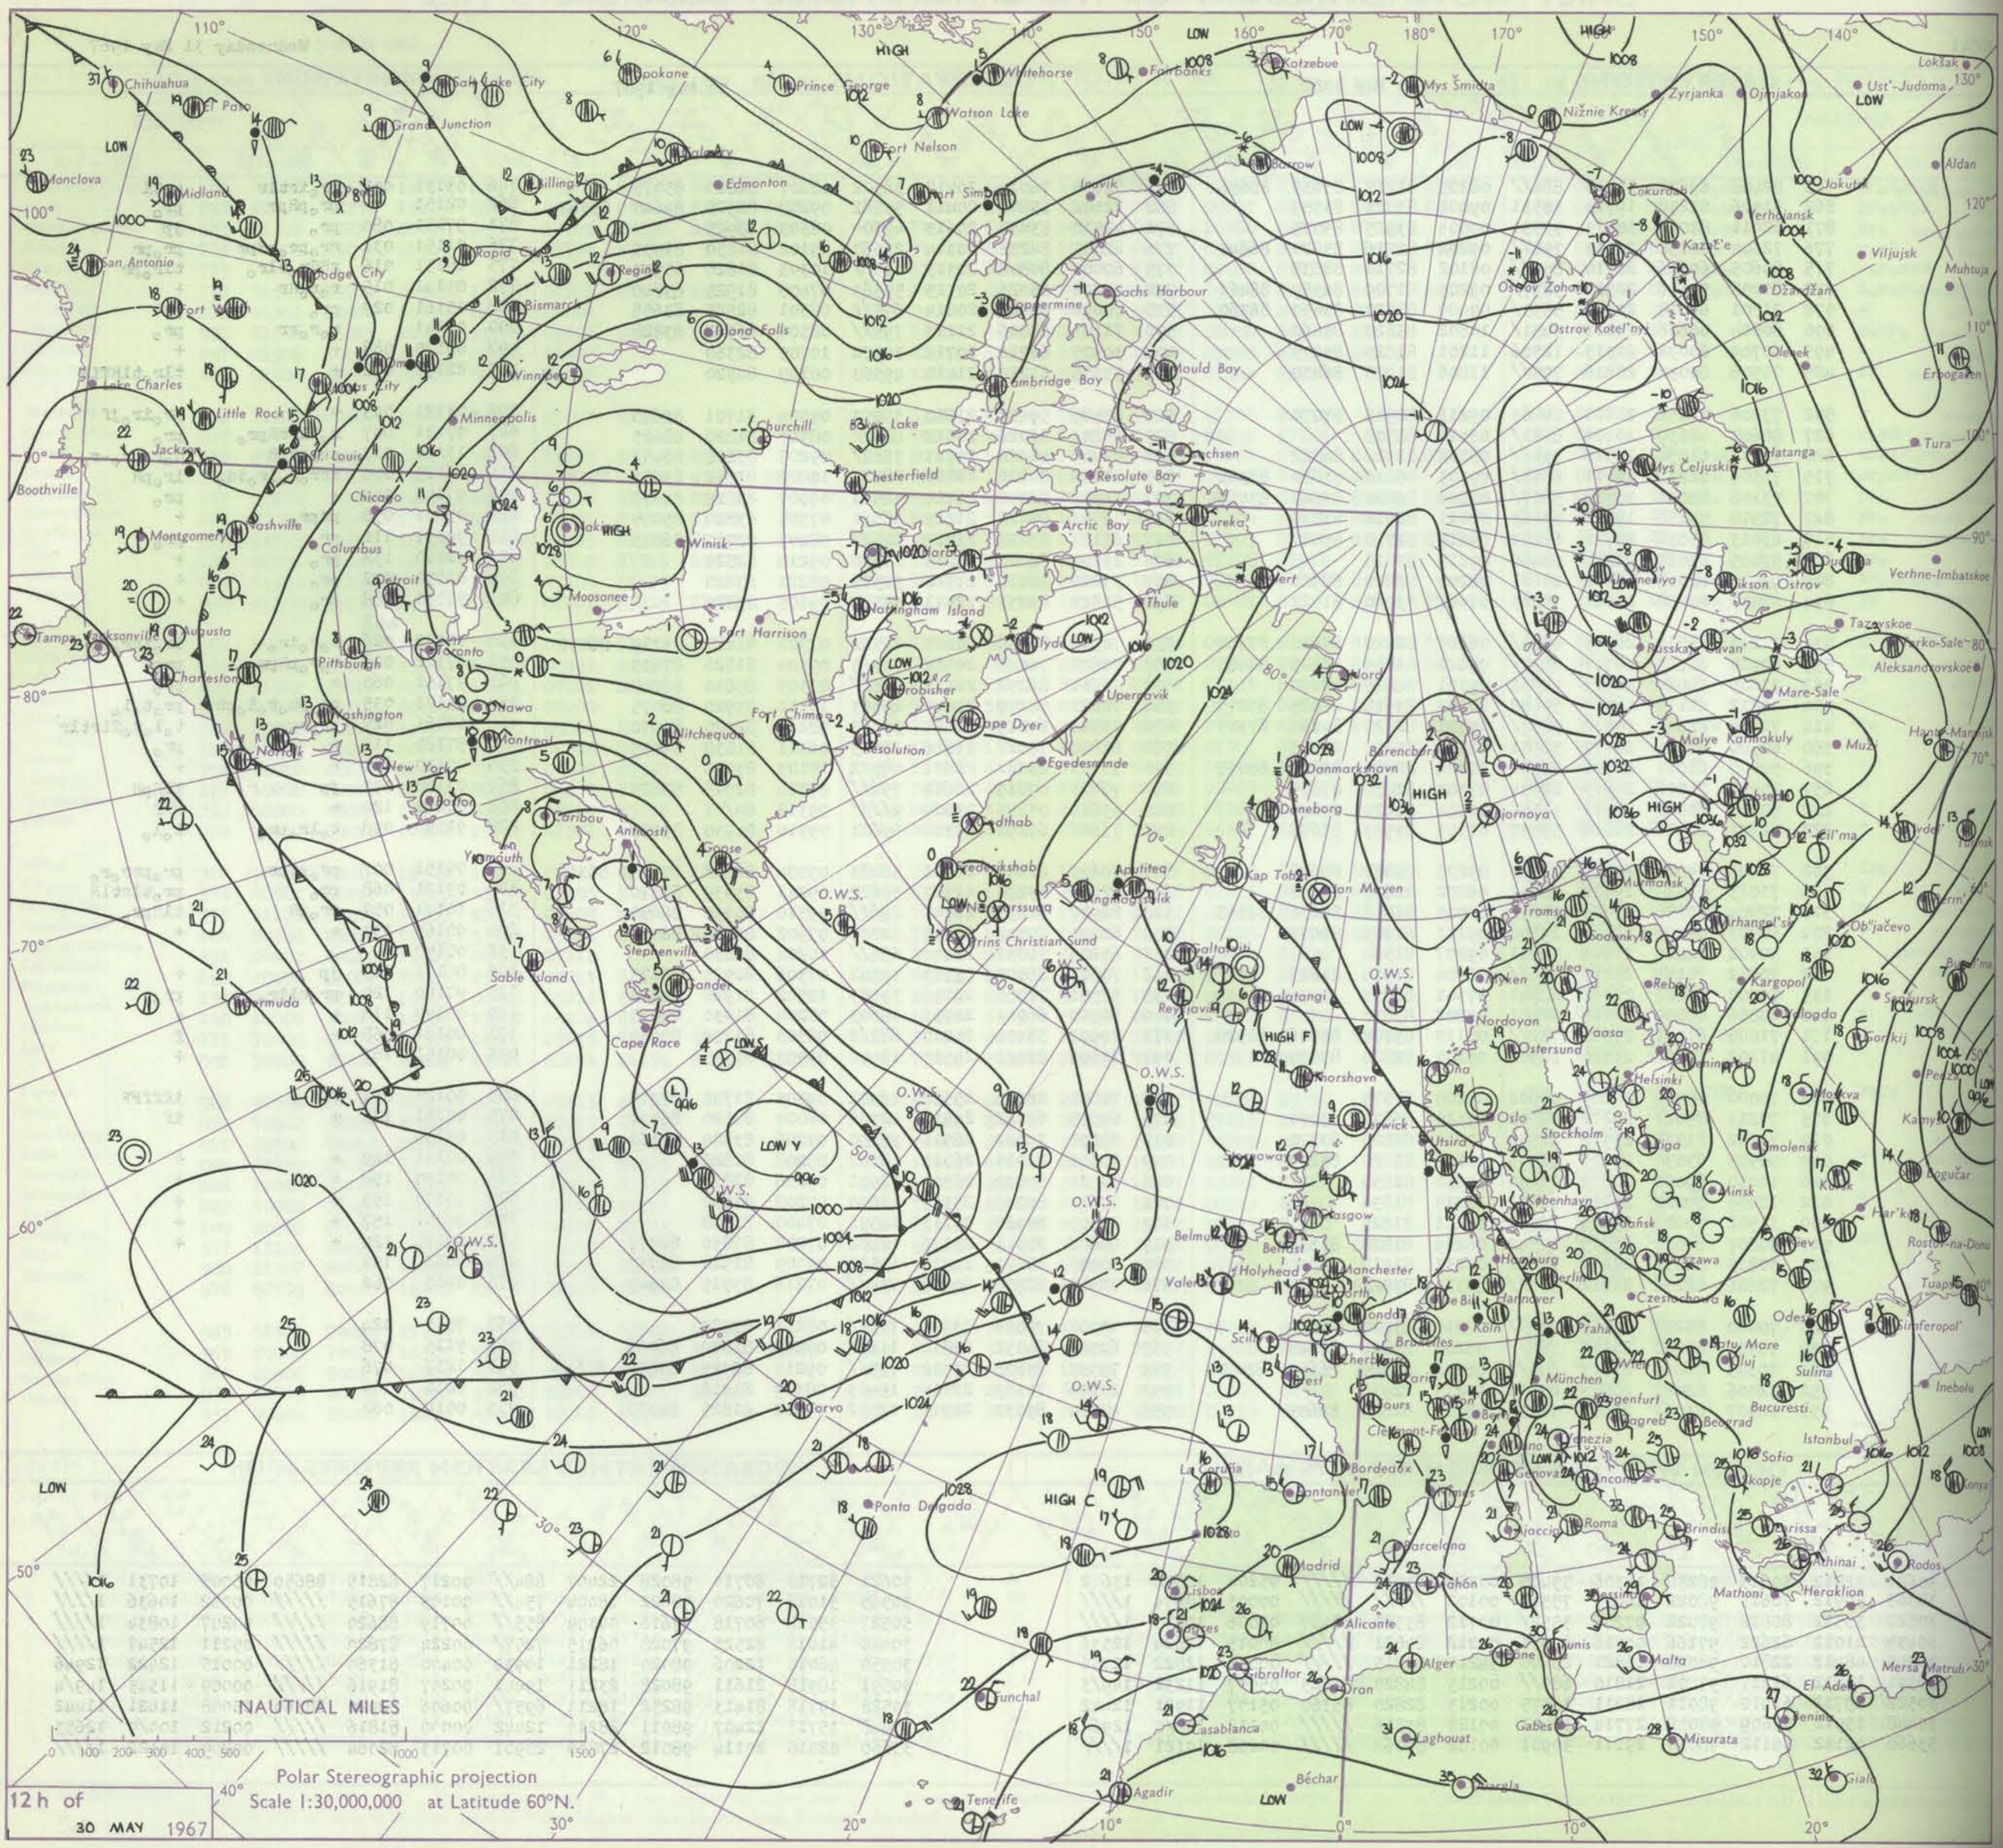
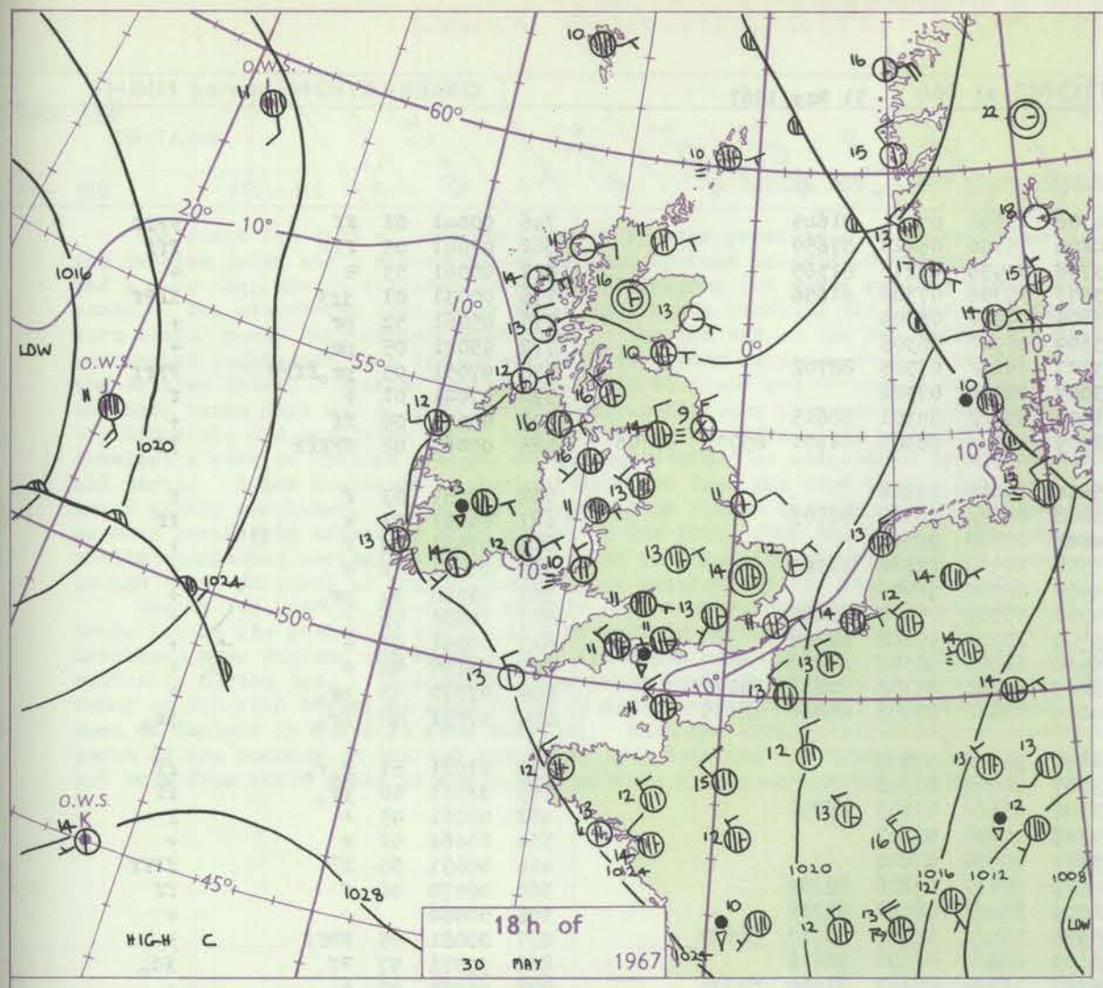
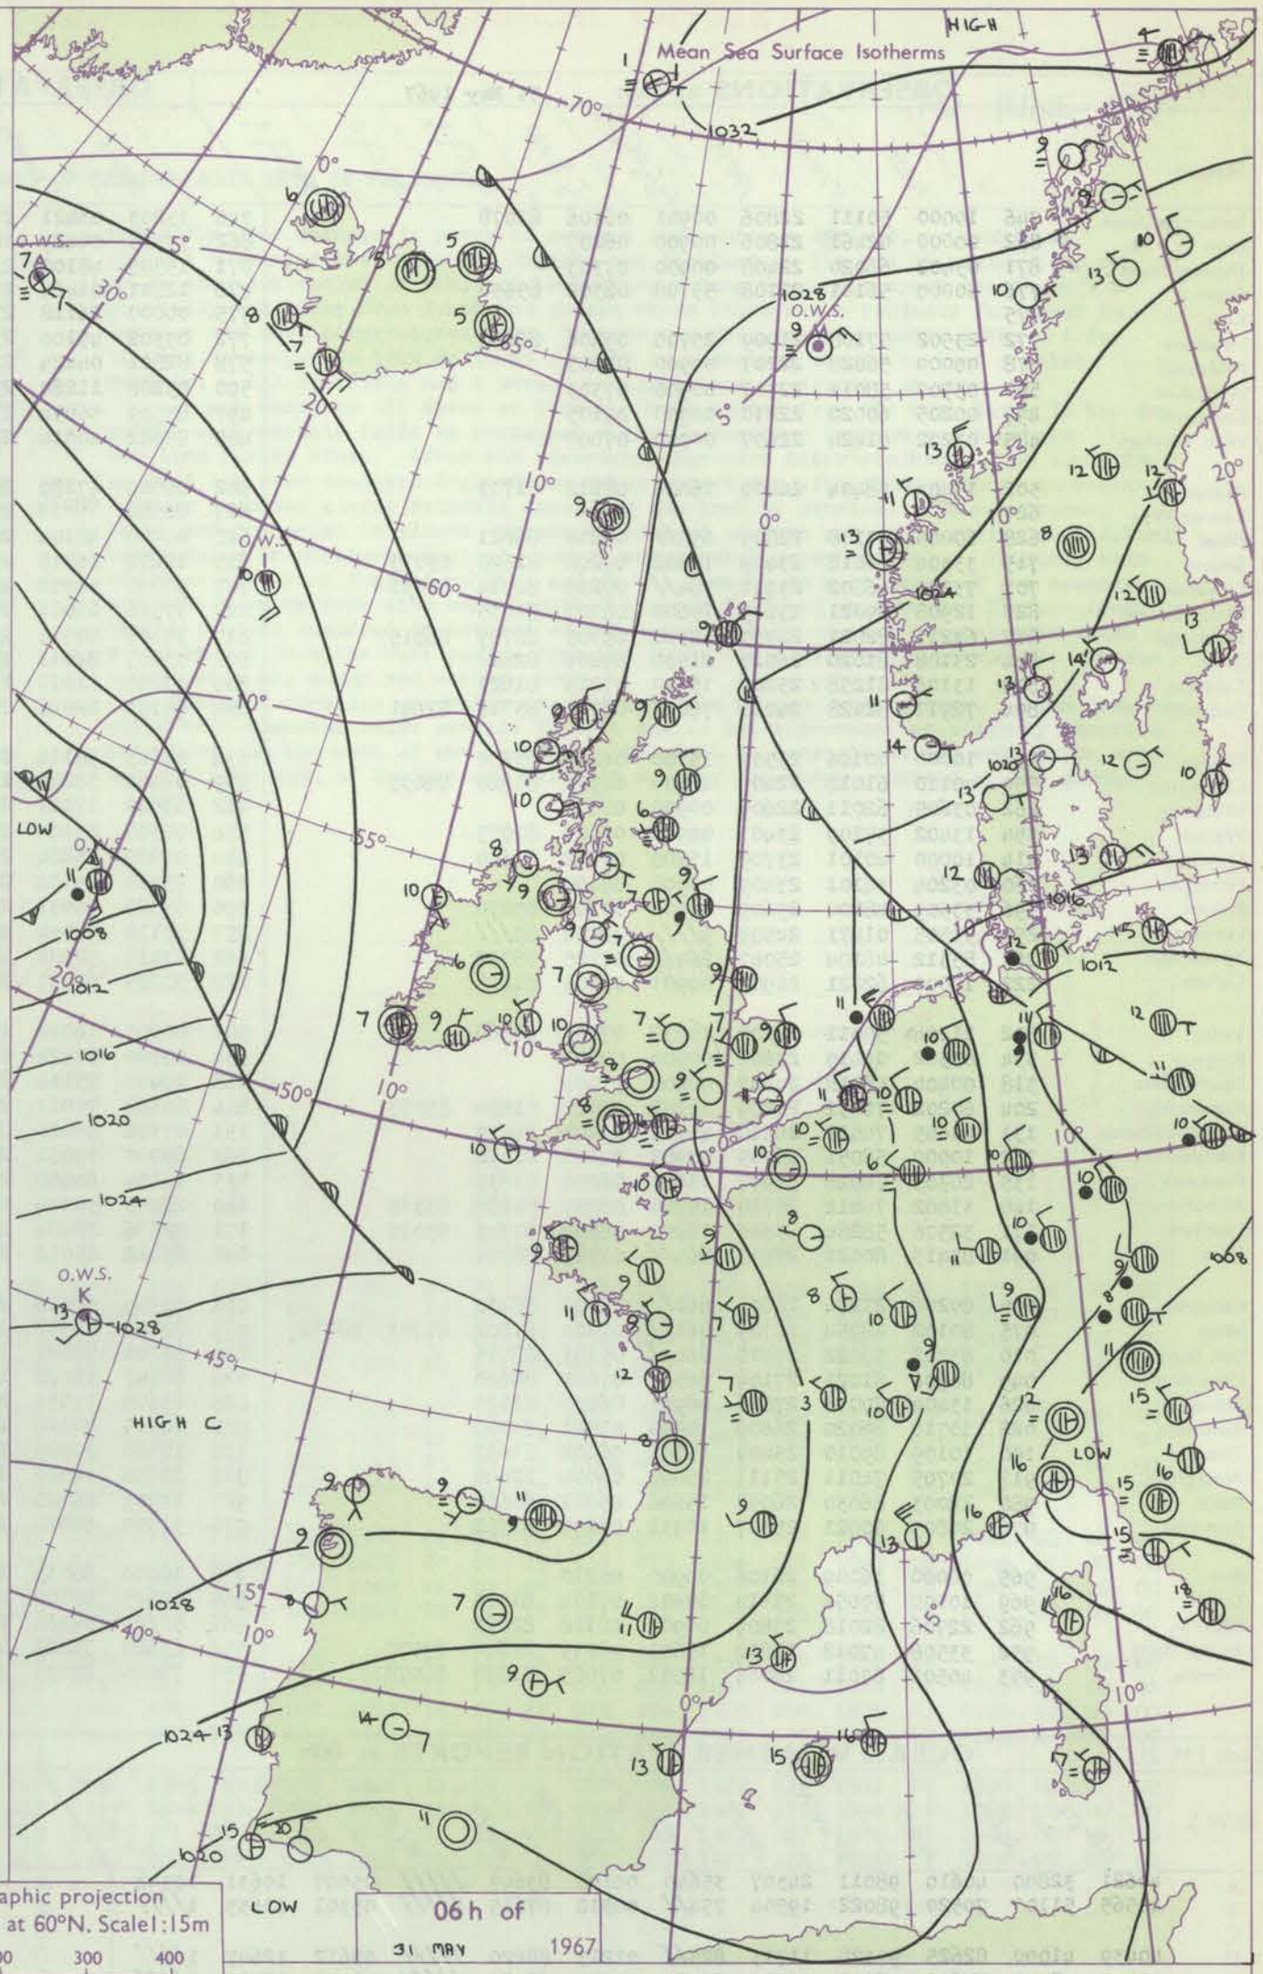
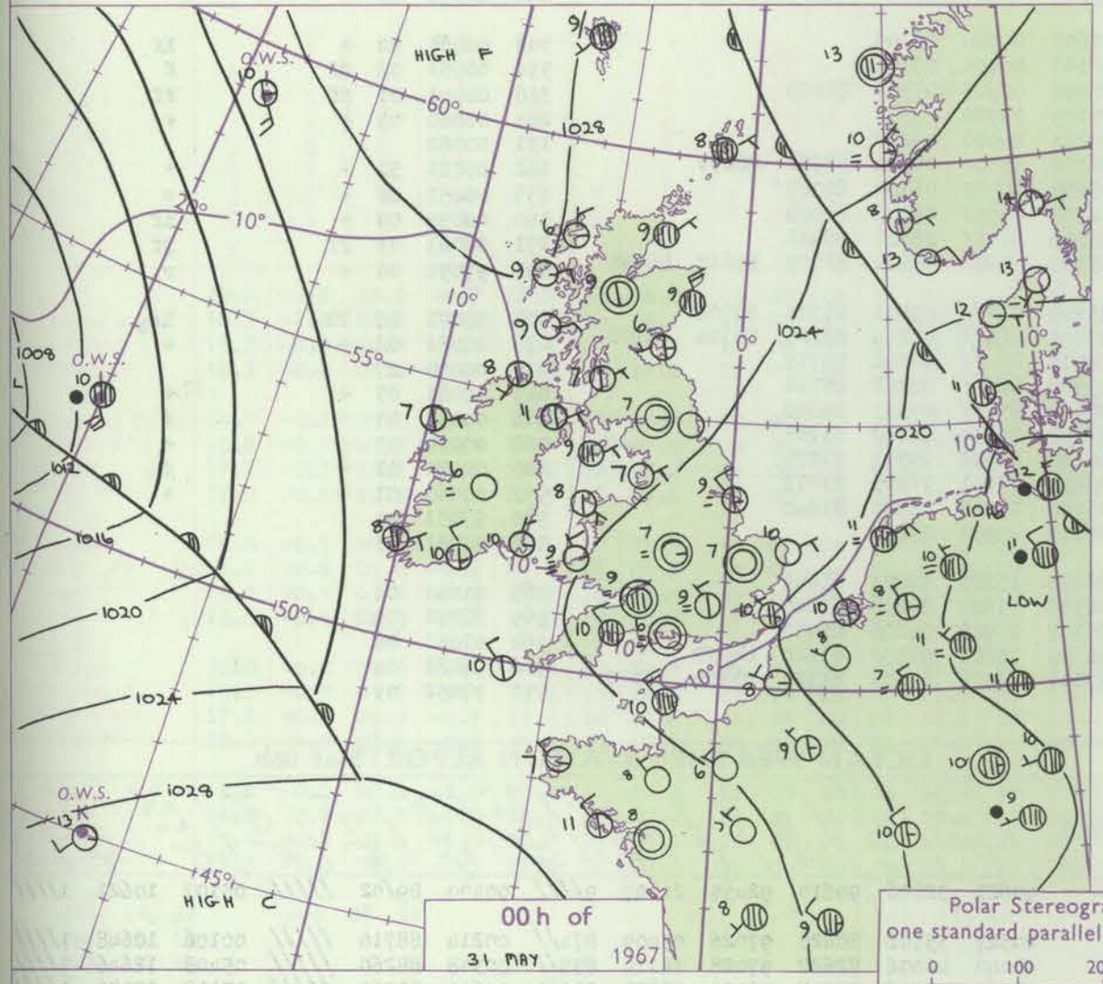
All times of observation printed in this publication are GREENWICH MEAN TIME.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE









GENERAL SYNOPTIC DEVELOPMENT

Issued at midday Wednesday 30 May 1967

A ridge developed southward from the high over the Norwegian Sea absorbing the small high near the Faeroes, and the general rise of pressure continued over the British Isles especially in western districts. A shallow low formed over the English Channel and moved into the Midlands before filling overnight, but in spite of rising pressure the air mass has continued to be unstable. With pressure falling over the Baltic and central Europe the cold front over the eastern North Sea became retrograde and is now returning slowly towards Scotland and eastern England as a warm front, and will get close to east coast districts in the next 24 hours, whilst the frontal system approaching from the southwest will make slow progress into southwestern areas.

Code FM 11.C
