SIGNIFICANT WEATHER

0600 GMT 01 SEPTEMBER 2000	SIG WEATHER	1200 GMT 01 SEPTEMBER 2000	SIG WEATHER	<p><b>Summary of UK Weather for Friday 01 September 2000.</b></p> <p>At midnight there were outbreaks of rain across many eastern parts of the UK, Northern Ireland, and southwest Scotland. The rain was moderate or heavy in places, but by dawn the east had become mostly dry, apart from northeast Scotland, and the rain elsewhere had largely petered out. Showers developed fairly widely during the morning in western parts of the UK, and the rain in northeast Scotland persisted, some of it extending into western Scotland for a time. Much of eastern England stayed dry until midday when showers broke out in a number of counties, and during the afternoon and evening thunderstorms were reported there, as well as in northern England and southern Scotland. Showers also continued in western parts of the UK, but during the evening most of those petered out. Some heavy rain moved east across southernmost counties of England after dusk. Fresh locally strong southwesterly winds affected southern England.</p> <p>Temperatures were mostly near or a little below average, but it was warm in parts of Northern Ireland and western Scotland.</p>

0600 GMT 02 SEPTEMBER 2000	SIG WEATHER	1200 GMT 02 SEPTEMBER 2000	SIG WEATHER	<p><b>Summary of UK Weather for Saturday 02 September 2000.</b></p> <p>Northern Ireland had variable cloud overnight and a little patchy rain towards morning. Scotland had some rain chiefly in the east with clear periods in the west. There were some showers over England and Wales, especially in the east and across the Midlands, where thunder was reported. The morning was mostly cloudy in Northern Ireland with scattered showers, followed by a sunny afternoon. Showers continued over the east and north of Scotland in the morning but by late afternoon most places were dry, although it remained generally cloudy.</p> <p>Cloud was variable over most of England and Wales although the southwest of England, much of the English Channel coast and west and north Wales had a largely sunny day. There were further showers in the north and east of England, where there was also a fresh wind. Wales had a few showers in the morning. Most places were dry by late evening except for a few showers in the south.</p> <p>Temperatures were mostly close to average. Southwest Scotland and Northern Ireland were warm and parts of eastern England were cool.</p>

0600 GMT 04 SEPTEMBER 2000	SIG WEATHER	1200 GMT 04 SEPTEMBER 2000	SIG WEATHER	<p><b>Summary of UK Weather for Monday 04 September 2000.</b></p> <p>The early hours of Monday had clear skies almost everywhere with patches of mist and fog developing in sheltered spots. In the far north of Scotland there was an air frost but many sheltered places through inland parts of the country had a ground frost by daybreak.</p> <p>During the morning increasing amounts of high cloud invaded from the west but it was a fine dry morning across England, Wales and central and eastern Scotland with hazy sunshine. Northern Ireland and extreme western islands of Scotland saw some light rain by early afternoon, and this subsequently spread to the west of mainland Scotland by mid- afternoon.</p> <p>By early evening the thicker cloud and associated rain has spread to Anglesey, the Isle of Man and to central parts of Scotland but further east it was still dry. After dusk the rain started to clear away from the far west whilst it continued to extend east across northern parts of the British isles.</p> <p>Temperatures having been cold to start with rose to values similar to average, and even to slightly above average in some sheltered spots.</p>

0600 GMT 06 SEPTEMBER 2000 SIG WEATHER	1200 GMT 06 SEPTEMBER 2000 SIG WEATHER	<p><b>Summary of UK Weather for Wednesday 06 September 2000.</b></p> <p>Rain affected much of southeast England and East Anglia at first last night, but it soon died out although further outbreaks of rain were reported over southern England before dawn. Meanwhile, rain, heavy at times, spread across Northern Ireland and Scotland, and rain was reported in west Wales and northwest England by daybreak.</p> <p>The rain, always heaviest in the north, extended east across much of the UK, and by mid-morning Northern Ireland, western Scotland, northwest England and much of Wales had become drier and brighter, apart from scattered showers chiefly near coasts. By midday it was mainly dry, apart from the far southeast of England, northeast England and northeast Scotland, and it was fairly sunny at times in the north and west. The afternoon saw the rain in the east die out, along with most of the showers in the west, but some lingered in western Scotland and Northern Ireland. It was a breezy day generally, especially across Northern England.</p> <p>Temperatures were mostly near average, but they were slightly above in parts of the east.</p>

0600 GMT 07 SEPTEMBER 2000	SIG WEATHER	1200 GMT 07 SEPTEMBER 2000	SIG WEATHER	<p><b>Summary of UK Weather for Thursday 07 September 2000.</b></p> <p>After a dry start rain spread quickly across Northern Ireland. This rain spread east to bring heavy outbreaks of rain accompanied by strong to gale force southerly winds to Scotland. The rain reached the east of Scotland around dawn. England and Wales were dry with clear spells and variable amounts of cloud.</p> <p>During the morning the rain spread southeast into northern England. By mid morning winds were veering westerly across Northern Ireland as a change to brighter showery weather arrived. At the same time patchy rain and drizzle was spreading onto western coasts and hills. The clearance was across all of mainland Scotland by about midday. In southern England, after a bright start in eastern areas, thickening cloud brought patchy light rain and drizzle though many places, especially in the southeast, remained dry. During the evening patchy rain lingered across central areas of the UK with drizzle around some southwestern coasts and showers in northern areas. Highest gust was Aonach Mor at 81kt</p> <p>It was a warm day generally, especially in areas sheltered from the strong southwesterly winds.</p>

0600 GMT 08 SEPTEMBER 2000	SIG WEATHER	1200 GMT 08 SEPTEMBER 2000	SIG WEATHER	<b>Summary of UK Weather for Friday 08 September 2000.</b> Most of Scotland and Northern Ireland had a dry night although there were some showers around, mainly in the Northern and Western Isles. It was also largely dry over Northern England and north Wales but from the Midlands southwards there were outbreaks of rain and drizzle. During the day most of England and Wales was cloudy. There was some rain and drizzle, especially in southern areas where the drizzle was quite persistent at times. The far north of England was brighter. There were brighter skies with some sunny intervals in Scotland and Northern Ireland but there were also showers and some were heavy. They were even thundery in the Western Isles. It was another windy day in northern areas. Sella Ness recorded a gust of 53 knots at 1600 UTC. By evening, there was still some drizzle in southern counties and it was misty in places. The rest of England and Wales was largely dry and the showers over Scotland and Northern Ireland became more confined to western areas. Temperatures were mostly around normal for the time of year.

## SURFACE REPORTS

SIGNIFICANT WEATHER

**Summary of UK Weather for Saturday 16 September 2000.**

Northern Ireland and western Scotland had a rather cloudy night with outbreaks of light rain. Clearer skies over eastern and central Scotland allowed fog patches to form. Rain or heavy showers continued to affect East Anglia and southeast England with thunder reported from Manston at 0100. Elsewhere much of England and Wales had a dry night, although scattered showers affected western coastal areas. Outbreaks of rain continued to affect the western side of Scotland during the day but eastern areas, together with Northern Ireland, stayed mainly dry with a little sunshine. For much of England and Wales it was also a dry day with some sunshine, but outbreaks of rain and a brisk northwesterly wind continued to linger across eastern parts of East Anglia and southeast England until late afternoon or early evening. Most of England and Wales had a dry evening with some clear spells through central areas, but outbreaks of rain affected Northern Ireland and western and central Scotland. Temperatures were around normal for much of the UK, but parts of eastern Scotland were rather warm, whilst parts of East Anglia and southeast England were rather cold.

SURFACE REPORTS

SIGNIFICANT WEATHER

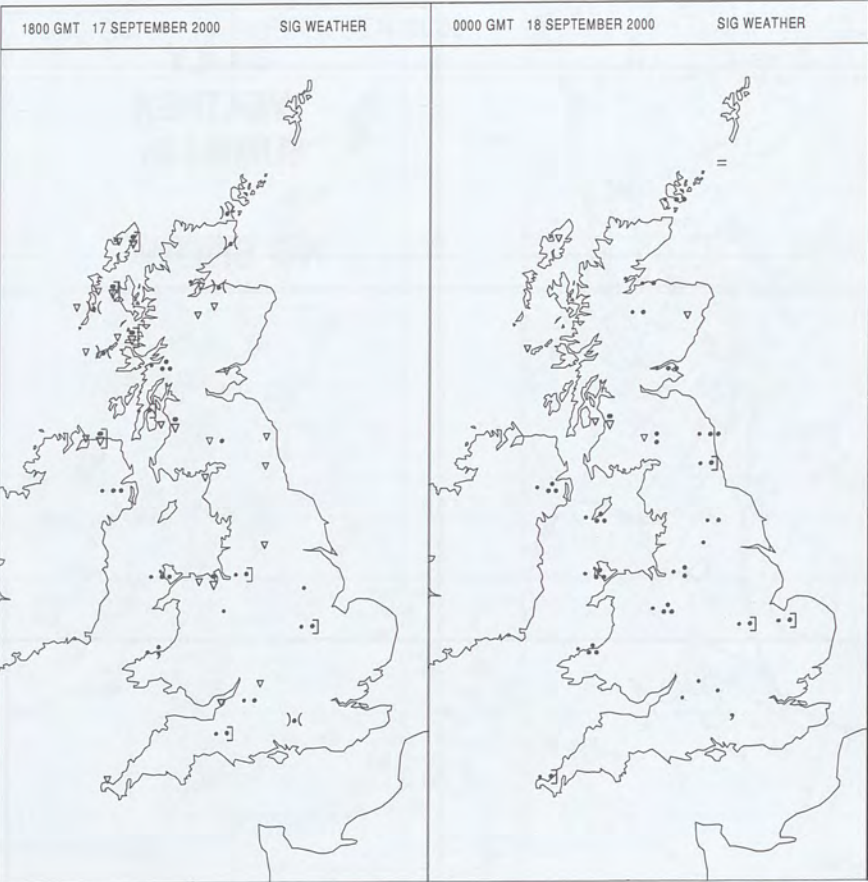

**Summary of UK Weather for Sunday 17 September 2000.**

Overnight, showery rain affected Northern Ireland, north Wales and northernmost parts of England. Remaining areas had a largely dry night.

During the day, there were further outbreaks of rain for northernmost parts of England, north Wales, Northern Ireland, and also western Scotland. The rain became heavier and more persistent across western Scotland and Northern Ireland during the afternoon. The rain then pushed across eastern Scotland, the rest of Wales, and much of northern England in the evening.

Elsewhere it was a largely dry and bright day but with a good deal of cloud. The best of the sunshine was along the south coast. During the evening there was some patchy light rain across southwestern and central parts of England.

The temperatures were generally close to normal.

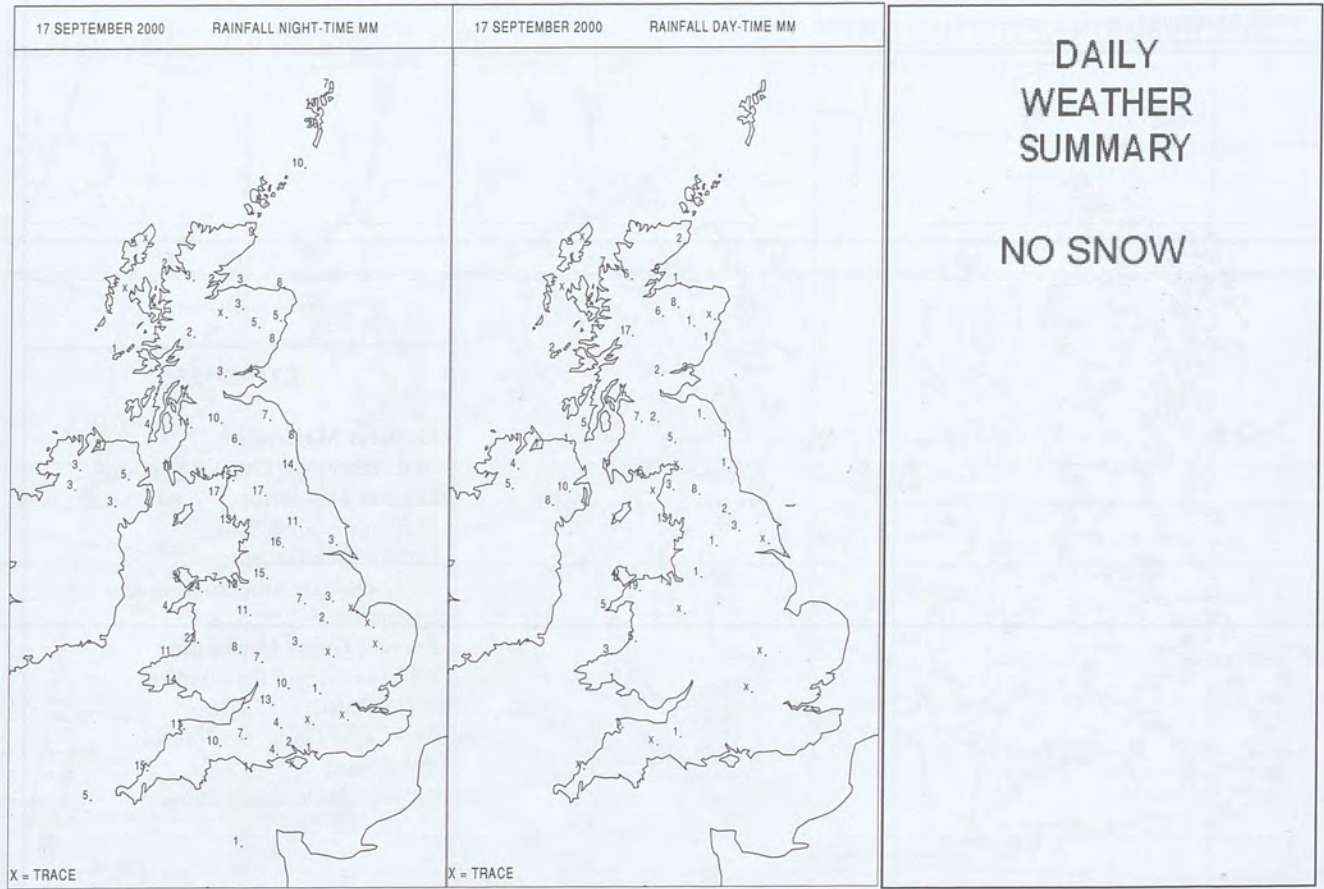

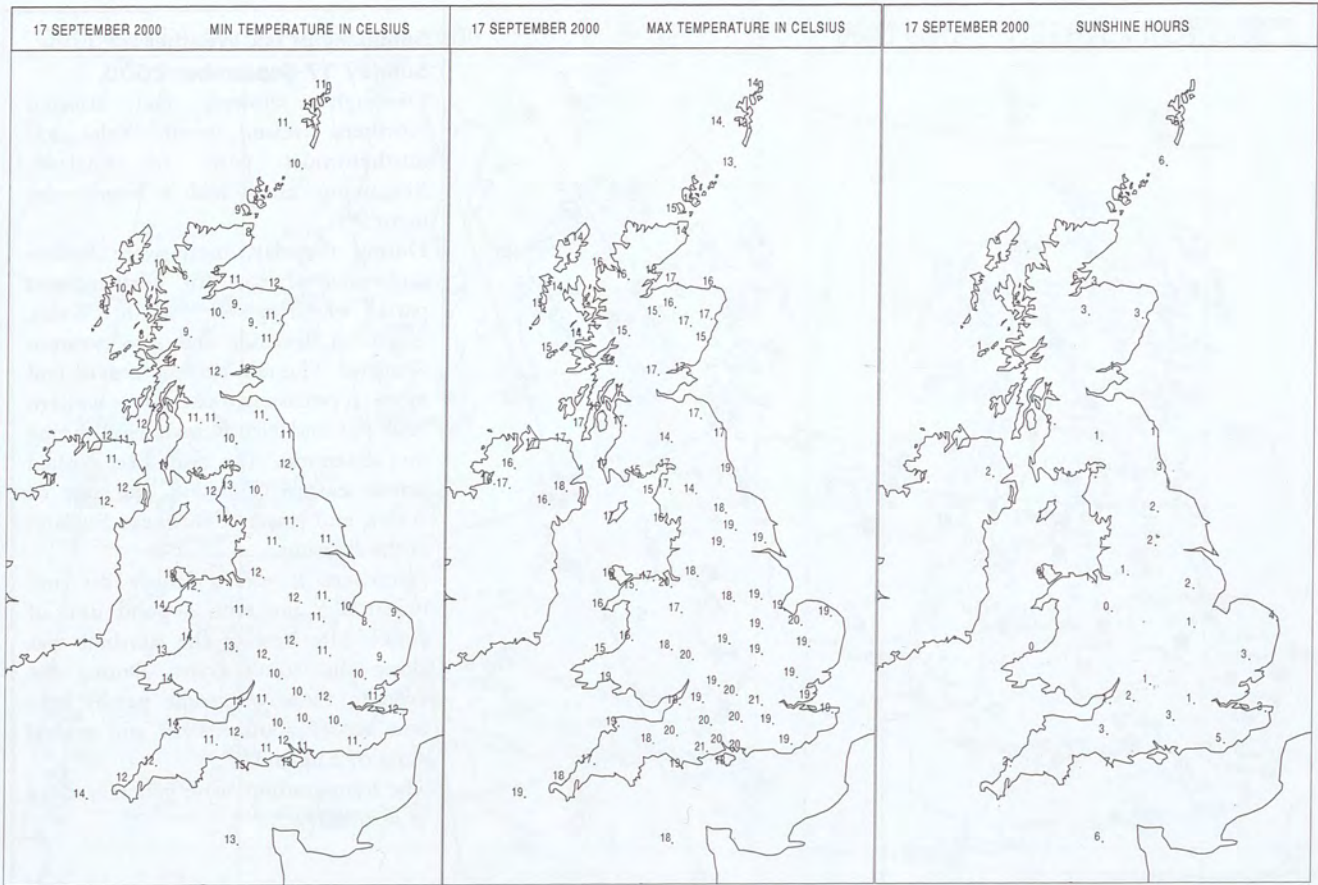

EXTREMES

- Highest Maximum:**  
20.6 Heathrow, Greater London
- Lowest Maximum:**  
13.3 Fair Isle, Shetland
- Lowest Minimum:**

**SURFACE REPORTS**

SIGNIFICANT WEATHER

**Summary of UK Weather for Tuesday 19 September 2000.**

Most places were dry overnight, but rain affected East Anglia, southeast and central southern England, and there were isolated showers in northwest Scotland. By dawn the rain had pushed north into Yorkshire. Mist and fog patches formed in central and western parts of England.

The fog was slow to clear in places, lingering almost to midday in parts of Shropshire. During the morning the rain became light and patchy for a time in the south, but it pepped up across Lincolnshire and later across counties to the south of London. Elsewhere it was mainly dry with some sunshine. The afternoon saw the rain edging north into Northumberland, as well as west across the Pennines, the Midlands and towards southwest England. The rain was often moderate and sometimes heavy. Meanwhile, showers affected Cornwall and there was some rain in Shetland. During the evening the rain moved north across much of southern and eastern Scotland and north and east Wales, but Northern Ireland was mainly dry. Tornadoes were observed in the Channel Islands. Temperatures generally were not too far from the average.

EXTREMES

SURFACE REPORTS

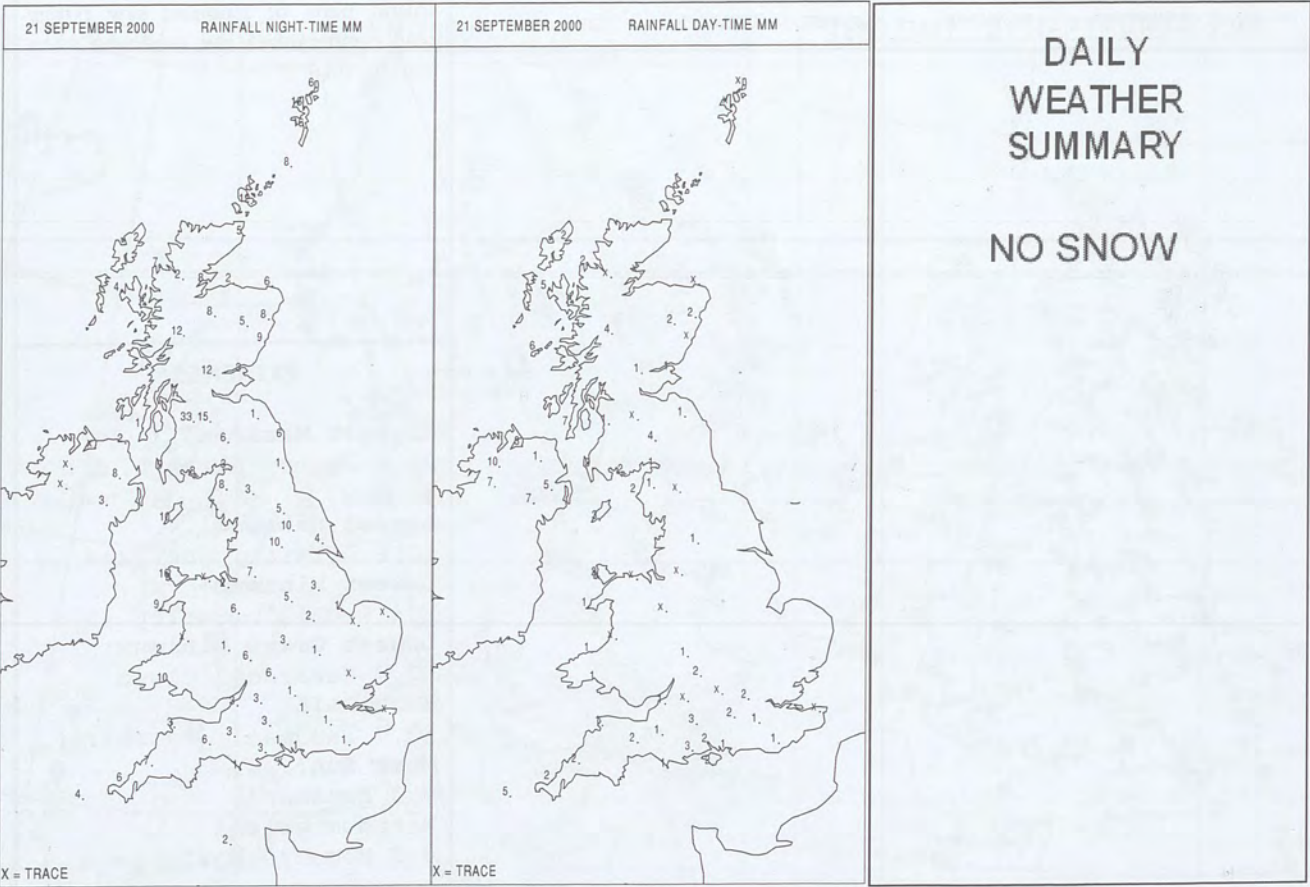

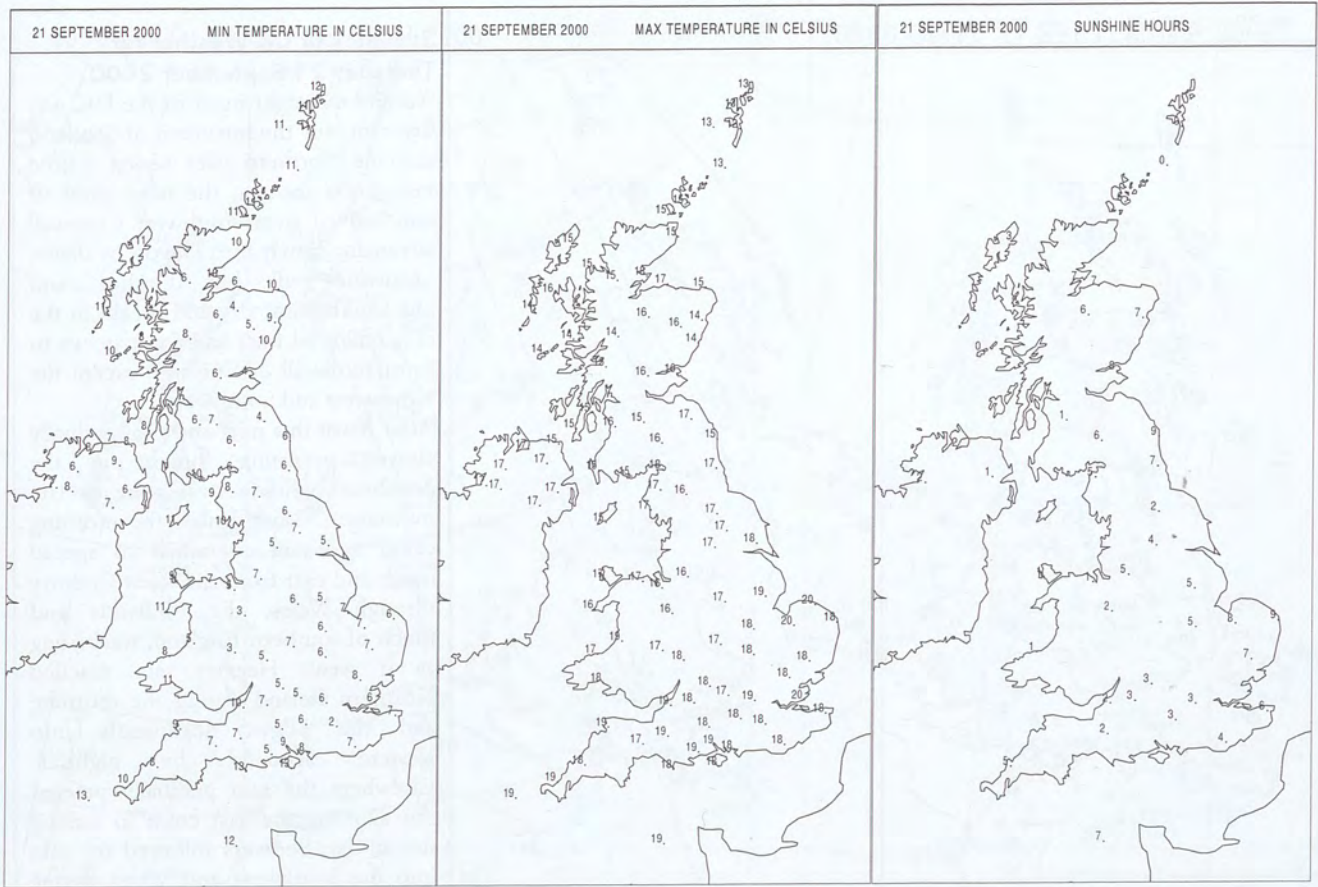

SIGNIFICANT WEATHER

**Summary of UK Weather for Saturday 23 September 2000.**

The night saw patchy rain extending northeast from Southwest England towards Yorkshire. Much of this was light, just a few heavier bursts over coasts and hills in the west.. By the end of the night this was affecting Southern Scotland and Northern Ireland whilst England and Wales dried up with a few fog patches forming. The southeast remained dry throughout.

Saturday saw dry and mostly sunny weather across all of England and Wales as the rain continued to push north into Northern Scotland. Scattered showers ran into Northern Ireland and Western Scotland, some of them thundery.

Winds were southeasterly, rather strong and gusty along western coasts and hills and for a time along the south coast.

It was warm away from north and northeast Scotland, and locally very warm in the south. Eastern coastal districts were near normal.

## Summary of UK Weather for Sunday 24 September 2000.

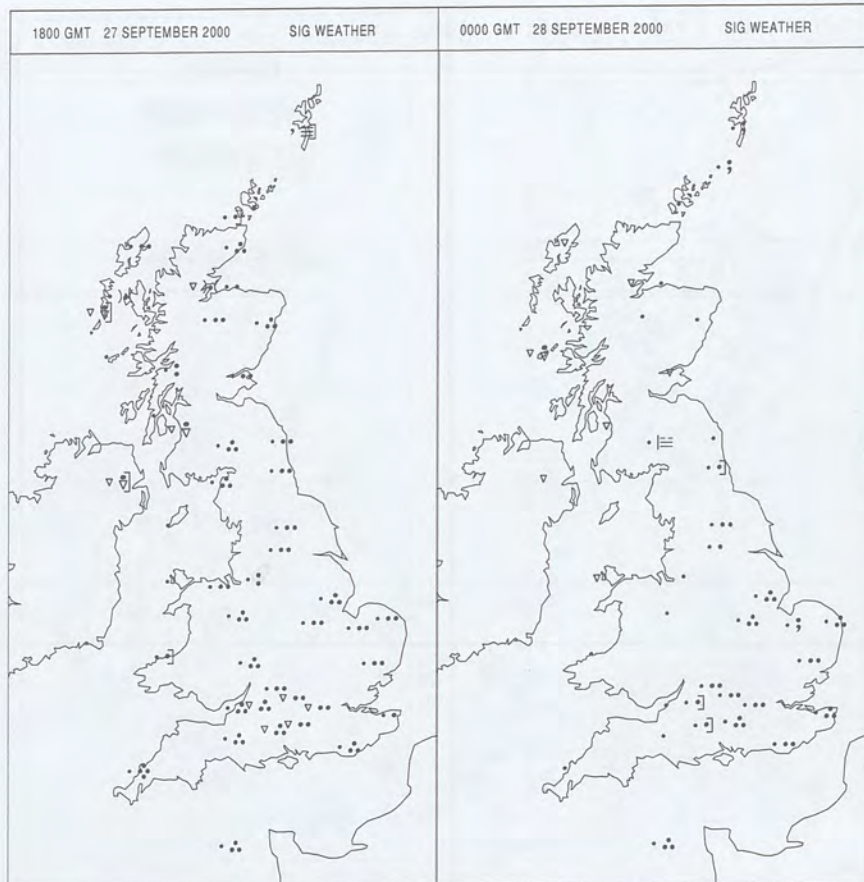

The night saw a band of rain move slowly north and east across Northern Ireland, Wales and Southwest England, heavy and thundery in places especially across Northern Ireland. Elsewhere it was mainly dry, and apart from low cloud affecting Northeast England and Eastern Scotland, clearer skies allowed patchy mist to develop.

During the day the rain continued to move slowly across the UK, heavy and thundery in places, lying from Western Scotland to Norfolk by evening. On the clearance of the rain Northern Ireland became drier and brighter, but across Wales and western parts of England especially, thundery showers followed. Ahead of the rain it remained mostly cloudy across Eastern Scotland and Northeast England, with the best of any sunshine across East Anglia.

In the evening rain continued to affect Western and Southern Scotland, and the far North of England, with showers across Northern Ireland, Wales and parts of England. Some of the showers were still thundery.

Winds were south or southeasterly, especially strong and gusty in the north.

Temperatures were near normal in the rain, otherwise above, and locally warm across east Anglia.

## Summary of UK Weather for Saturday 30 September 2000.

The night started with some light rain and drizzle near the coasts of East Anglia and the Southeast. Elsewhere there was a lot of dry weather with broken cloud but some heavy showers persisted across Southwest England, parts of Wales and Northern Ireland. Extensive mist and low cloud, with some fog and drizzle, affected the coasts of Northeast England and Eastern Scotland and elsewhere mist and fog patches formed in the light winds.

By morning rain was pushing into Northeast England and showers were running onto the south and southwest coasts. A waterspout was reported from near Brighton. The rain continued north to affect Eastern Scotland before midday, whilst scattered showers were developing elsewhere and becoming locally heavy, with thunderstorms reported. Some of the heaviest showers were in the London area around midday, moving north into the Midlands in the afternoon and evening. A tornado was reported in Lincolnshire. Mist and fog patches reformed in many areas during the evening.

Temperatures reached rather warm in many parts of England, Wales and Northern Ireland, near normal in Scotland.
