## Daily Weather Summaries for February 2020

**If you have any questions or feedback about this product or wish to obtain further data please contact the Met Office.**

This document contains daily weather summaries for each day of February 2020. The Met Office National Meteorological Library and Archive holds a continuous record of daily weather summaries or daily weather reports from 1860, and these daily weather summaries form a continuation of that series.

The purpose of each summary is to provide an overview of the weather conditions across the UK on that day, with the historical emphasis mainly based on observations from surface network of weather stations, although the format has varied over the decades. While the emphasis remains on observations from the surface network, the current daily weather summaries supplement these by including satellite and rain-radar imagery to provide a more complete overview. The current format of the daily weather summaries is as follows:

1. Text summary of the main characteristics of the weather during the day, written by an operational meteorologist in the Met Office operations centre.
2. Table of daily extremes for the UK for key climate variables including temperature, rainfall, sunshine and gust speeds.
3. Overview of the synoptic situation at 00 and 12 UTC comprising: analysis charts showing the surface pressure pattern and associated weather fronts; North Atlantic and European infra-red satellite images showing cloud-cover; combined infra-red and rain-radar images of the UK; maps of wind speed and direction at 00 and 12 UTC; observations of pressure, wind speed and direction, cloud cover, air and dewpoint temperature at selected UK and European stations in data tables.
4. UK maps of key climate variables from observing stations including maximum, minimum and grass minimum temperature, rainfall, sunshine, gust speed and snow.
5. Further guidance notes

If you spot any data errors or omissions in this product please contact the Met Office.

## Daily Weather Summary for Saturday 01 February 2020

This day's summary created 08/02/2020 02:00

### Summary of the UK Weather for Saturday 01 February 2020

Overnight saw rain, often heavy, for many parts of Scotland with the driest of the weather in the far northeast. Northern Ireland and Northern England had patchy rain, heavy in places, with some drier and clear spells. Elsewhere was largely dry especially in the east with some outbreaks of light rain in the southwest and across Wales. Some good clear spells developed but it became cloudier towards dawn. Showery rain lingered in the northwest through the morning before turning heavier in the afternoon. The rain got lighter and eventually cleared as it moved south-eastwards. There were further showers across parts of Wales and in the midlands, however plenty of sunny spells occurred across the rest of the UK. Although it was a fine day for most, there was a strong south-westerly wind throughout.

### Summary of the UK Weather for Sunday 02 February 2020

Through the night, rain in the southwest progressed across much of the UK reaching Northern Ireland, Wales, northwest England and the Midlands by the early hours. It continued to push eastwards towards dawn, leaving many places in the west dry with a few showers. Scotland stayed dry for much of the night, though there were some showers in the far north. The southwest and Wales remained fairly dry during the morning however there may have been the odd localised shower. Scotland also remained dry during the early hours however around the rest of the UK there was extensive widespread rain. The rain turned to showers later in the morning however remained fairly widespread in western parts of Scotland. From midday, the rain reached eastern parts of Scotland then turned to widespread showers across the whole of Scotland. The remainder of the afternoon saw widespread showers, some may have been heavy. Sunny spells were seen further north but less so in the south. A continuous south-westerly wind was across the UK for most of the day with a noticeably stronger breeze.

### Summary of the UK Weather for Monday 03 February 2020

Overnight, it was showery in many places, especially over Scotland, northern England and parts of Wales. Some showers merged into longer spells of rain at times in Scotland through the early hours. Elsewhere, it stayed mostly dry with some clear spells developing. Towards dawn, the showers started to ease, becoming fewer and farther between. It was a windy day throughout the UK, with some heavy showers developing and making their way inland for many northern parts of the UK. During the afternoon, a band of rain pushed into the far south for a time, before clearing southwards in the evening. The showers in the north during the evening had become very heavy and squally, with some flashes of lightning observed in Northern Ireland and southeastern Scotland.

### Summary of the UK Weather for Tuesday 04 February 2020

Overnight, plenty of showers, with some heavy downpours moved southeastwards across the UK, although there were also many dry spells. Patchy cloud kept some areas milder than others. There was north-westerly or westerly breeze throughout. Most of the showers had dissipated by dawn, leaving behind a morning of patchy cloud and bright spells throughout the UK. It was a less windy day in the west, but during the afternoon, as winds backed to a more northerly direction, some very strong gusts were observed on North Sea coasts. The evening remained predominantly dry, with clear spells and lighter winds allowing a fairly moderate frost to begin forming north of the M4.

### Summary of the UK Weather for Wednesday 05 February 2020

Overnight patchy cloud kept some areas mild, before further cloud began to build towards dawn. It remained dry throughout except for some light showers early overnight, and towards dawn. Some patches of fog also formed in the early hours. It remained dry across the UK through the day, with patchy cloud and sunny spells. Some areas saw some hazy sunshine with the low cloud. Winds remained light, particularly across the south. Into the evening, skies began to clear which helped to lower temperatures, particularly across Wales and the midlands.

### Summary of the UK Weather for Friday 07 February 2020

It was another cold and settled night throughout the UK, with a widespread frost forming away from the far southwest of England, where it was cloudier and slightly breezier. Some extensive fog patches were affecting eastern parts of England in the early hours. It was a dry morning with some good spells of sunshine away from any fog patches. The fog was slow to clear and lingered until the late morning for many areas. A dry start to the afternoon but cloud built in from the southwest leaving more overcast conditions for much of the UK with sunny spells in parts of Northern England and Scotland. By late afternoon some western parts of the UK had showers with some heavier rain making its way into Northern Ireland. The cloud continued to build in parts of the south with northeastern areas holding onto some sunshine. A cloudy evening for much of the UK as a band of rain, heavy in places, arrived into western parts and moved across the country to central and some eastern areas. A rather windy day, especially across western parts.

### Summary of the UK Weather for Saturday 08 February 2020

Rain, sometimes heavy, spread eastwards across Scotland through the night. It only started to clear away towards dawn. Northern Ireland also saw some of this rain, but it cleared by the early hours. In the north and south of England, a lighter band of rain spread eastwards, clearing in all areas by dawn, except the southeast where it became heavier for a time. The rain cleared in the southeast through the morning but it remained rather cloudy. Elsewhere was largely dry with some good spells of sunshine but a few scattered showers were seen in Wales and the north. Through the early afternoon a band of heavy rain moved in from the west across Northern Ireland and the west of Scotland with cloud building for many elsewhere. The southeast saw the best of the sunshine. By late afternoon the rain had spread to many parts of Scotland and into the north of Wales. A cloudy evening away from the far southeast with rain continuing to move eastwards into central areas and the southwest by late evening. A very windy day for many with winds increasing through the day, especially in the west and north with gales here.

This day's summary created 17/02/2020 11:52

### Summary of the UK Weather for Sunday 09 February 2020

Rain covered much of the UK, at various times during the early hours. Northern England, southern Scotland and Northern Ireland saw the heaviest downpours. The winds began to strengthen across the UK throughout the night, bringing some strong gusts to some areas, particularly in the south. The southeast and East Anglia saw the best of the dry spells. Towards the early hours, a second band of heavy rain pushed in across Wales and northern England. Through the day, the rain sank further southwards, with most places seeing a wet and very windy afternoon. The highest gust was 97mph and was recorded on the Isle of Wight. Some downpours turned thundery with eastern parts seeing the worst of the thunder and lightning. Towards evening, much of the rain had pushed away leaving behind heavy, blustery showers with some dry spells in between.

## Daily Weather Summary for Monday 10 February 2020

This day's summary created 17/02/2020 02:00

### Summary of the UK Weather for Monday 10 February 2020

It was a largely cloudy night in the south with some clear spells at times. Elsewhere, it was wet with showers throughout the night, many turning heavy and often wintry. The north saw the most snow, mostly over higher ground but some to lower levels in Scotland. It was very windy with gales across the country. Most parts of the UK started the day dry with some sunny spells. Scotland, however, saw heavy, often wintry showers. Through the morning, further blustery showers pushed in from the west. Many of these showers were squally and fell as a mixture of rain, sleet and hail, with some snow over the hills. There was also the odd rumble of thunder. In between the showers most places saw bright and sunny spells. Most of the snow fell over Scotland, particularly on higher ground, though some parts of central England saw a dusting of snow as well. It was windy throughout the UK with gales in more exposed areas.

### Summary of the UK Weather for Tuesday 11 February 2020

It was a cloudy night in the north with showery rain and thunderstorms at times. The rain was often heavy or very heavy and also wintry with snow falling mainly to high ground but also to some lower levels. In the south, western areas saw showers which were wintry with snow on the higher ground with some areas having drier and clearer spells. Through the morning the heaviest showers were in the northwest and Scotland. However, there were showers across the UK with the southeast seeing the best of the dry weather and sunny spells. Snow showers were seen across areas of the north, with some hail showers seen in the south, amongst sunny spells. Another windy and chilly day throughout.

### Summary of the UK Weather for Wednesday 12 February 2020

Many places in the south saw a mostly dry night with clear spells, the best of these in the southeast. Western areas, especially the southwest, saw a constant stream of blustery showers, some of these turned heavy at times and fell as a mix of rain and hail. Further north, it remained very unsettled overnight. Showers merged into longer spells of rain which often turned wintry over the hills. Northern Ireland also saw plenty of showers with the odd rumble of thunder too. Through the afternoon there were showers across the UK, the heaviest of which were seen along the western coast of Scotland. There were plenty of sunny spells, predominantly across the south, midlands and Wales in the morning and early afternoon before showers crossed the region in the afternoon.

### Summary of the UK Weather for Thursday 13 February 2020

Most places started the evening dry but cloudy. Parts of south Wales, southwest England and northern Scotland saw frequent blustery showers, some of which turned heavy at times. Through the early hours, a band of heavy rain, accompanied by strong winds, pushed in from the west. The southwest saw some extremely heavy downpours as a result of a small area of line convection with the odd rumble of thunder. Towards dawn, the rain pushed further north reaching parts of western Scotland and northeast England. Some of the rain turned to snow, particularly over the northern hills and parts of Northern Ireland. As the rain cleared the south, it left behind heavy, blustery showers, though there were a few clear spells as well. The area of heavy downpours in the southwest moved their way east across the south coast during the morning, leading to some very intense bursts in the southeast, accompanied by some flashes of lightning. The rain and snow in the northeast was gradually losing intensity, leaving behind just a few patchy areas of precipitation over southern Scotland and northeast England. By the late afternoon and early evening, most of the UK had become predominantly dry, as a temporary weak ridge moved over the British Isles. This led to widespread clear skies and temperatures plummeting in the north, ahead of a weather front expected to roll in from the west on Friday morning.

This day's summary created 21/02/2020 02:00

### Summary of the UK Weather for Friday 14 February 2020

Winds were much calmer than of late overnight, although a breeze remained across much the UK. It remained largely dry and cloudy throughout, although there were some breaks towards dawn, notably around the midlands and the southwest. Any light showers were confined to coastal areas in western Scotland. During the morning, most of England, Wales, and the Scottish Borders remained dry and breezy, with a few sunny spells. A weather front was bringing some heavy, orographically enhanced rain to Northern Ireland and western Scotland. The afternoon saw the front slide southeastwards towards northern England and much of Wales, leaving behind blustery showers for the north of the UK. The front slowly decayed by rush hour, as it continued its journey southeastwards, eventually stalling over central and southwestern parts. Many southeastern parts of the UK remained mostly dry. It remained wet during the first part of the night for the southwestern and central parts of England, though predominantly dry elsewhere.

This day's summary created 22/02/2020 02:00

### Summary of the UK Weather for Saturday 15 February 2020

Overnight there were plenty of showers throughout the south of the UK. Wales, the northwest and western Scotland all saw showers through the early hours. It remained cloudy, and combined with the southerly breeze, it kept most areas relatively mild. In advance of rush hour, a cold occlusion (associated with Storm Dennis) moved in from the west across Ireland, bringing widespread rainfall and simultaneously, the warm front ahead travelled eastwards over Scotland. The rainfall from both fronts extended eastwards until covering the majority of the British Isles by noon. The heaviest rain was located in Northern Ireland, The Scottish highlands and Grampians and also Wales. The cold occlusion continued south eastwards this afternoon until this evening, then started to move north eastwards. Strong winds were observed in many parts of the UK throughout with the highest mean speed recorded in Wales. Lightning strikes have been observed in Northern Ireland later this afternoon and in North-eastern England this evening.

## Daily Weather Summary for Sunday 16 February 2020

This day's summary created 23/02/2020 02:00

### Summary of the UK Weather for Sunday 16 February 2020

Overnight remained very wet and windy, especially in the southern half of the UK. The prolonged rain over the last few days, coupled with some extremely heavy downpours overnight, led to some serious flooding problems in parts of south Wales. During the morning, two cold fronts progressed south eastwards over England and Wales, whilst a warm occlusion swept eastwards across Ireland and into western Scotland. Therefore, most of the rain was confined to southern and eastern parts of England and parts of Wales whilst Scotland and Ireland (particularly western parts) observed lightening and thundery showers. Into the afternoon, the occlusion (and the associated thundery showers) travelled further eastwards, with stormy showers remaining across Ireland. By late afternoon the rain bands from the cold fronts had cleared to the South West, allowing for some bright spells across England. In the evening showers continued to extend eastwards across Scotland and central England. Very windy conditions remained throughout the day.

### Summary of the UK Weather for Monday 17 February 2020

The beginning of the new week remained windy throughout the UK, with some heavy showers affecting Scotland, some of these falling as snow down to modest levels. Further south, through western parts England and Wales, there was some banding of showers, but for large swathes of the east, it was a much drier night. It stayed windy with most of the UK seeing sunshine and showers throughout the day. The showers were heavy at times and produced widespread snow across northern Scotland especially over higher ground.

### Summary of the UK Weather for Tuesday 18 February 2020

It remained mostly dry across the UK overnight, barring some heavy showers, sometimes wintry, across Northern Ireland and parts of Scotland. There were also some lighter showers across the southwest, but these were light and short-lived. Towards morning, Wales and the northwest coast saw some more persistent showers which continued through the start of the day. The winds were strong at times, particularly across the west coast. After a dry and bright start to the day scattered showers arrived from the east through the afternoon. These were heavy at times especially across the northwest, parts of Wales and southwest.

## Daily Weather Summary for Wednesday 19 February 2020

This day's summary created 26/02/2020 02:00

### Summary of the UK Weather for Wednesday 19 February 2020

It was a dry night across the south of the UK with winds remaining light. Throughout the night, Scotland saw scattered showers, sometimes heavy, which persisted until morning. Northern Ireland remained dry for much of the night, but towards the early hours saw the arrival of rain in the west. Most places saw a dry but rather cloudy start to Wednesday. Through the morning, a band of rain, accompanied by strengthening winds, pushed into parts of Wales and southwest England, before spreading across the rest of the UK throughout the day. The rain turned heavy at times, especially in west Wales and northwest England. By evening, much of the wet and windy weather had cleared southern areas, though some patchy rain and showers remained in places. Elsewhere remained unsettled with heavy downpours of rain at times. It was generally rather mild, but was chilly in the rain and wind.

### Summary of the UK Weather for Thursday 20 February 2020

Heavy rain moved westwards across Northern Ireland, Scotland and northern England overnight and turned wintry across higher ground. Elsewhere it was cloudy with patchy rain lingering across Wales and southwest and southern England. Heavier and more persistent rain arrived from the west across Wales towards dawn. During the morning, the band of rain continued to sink southwards across the rest of the UK. There were some particularly heavy downpours in parts of northwest England and west Wales, some of which turned thundery too. Through the afternoon, the rain cleared most parts leaving behind blustery, at times heavy showers. There were some bright and sunny spells, with the best of the dry weather in southwest England. Towards evening, most of the showers had died away leaving some clear spells. Further showers drifted into Scotland with some sharp bursts of rain in places.

This day's summary created 28/02/2020 02:00

### Summary of the UK Weather for Friday 21 February 2020

Scattered showers across Scotland and Northern Ireland eased through the first half of the night, before heavy rain moved in from the west during the early hours. The heavy rain also moved across northern England through the early hours. Elsewhere was mostly dry and cloudy with the occasional shower persisting across Wales and southwest England. Showery rain persisted through the northwest of England and Scotland, with heavy downpours in North Wales. Through the afternoon this began to ease and move southeastwards across the UK, but stalled and persisted over the same regions in the early evening. It was a breezy day throughout and remained dry and bright elsewhere in the UK.

This day's summary created 29/02/2020 02:00

### Summary of the UK Weather for Saturday 22 February 2020

It was largely unsettled throughout the night with many places seeing a mixture of heavy rain and showers. Through the first part of the night, a band of heavy rain continued to sink southwards across Wales and central England, becoming patchier and more showery in nature. The best of the dry weather was across southern England, though most areas were overcast overnight. Further north, Scotland and Northern Ireland saw a continuous stream of blustery showers, some of which turned heavy and thundery in places. Throughout the day there was a strong southwesterly wind. Showers were scattered across the UK, with the heaviest and more persistent seen across Scotland. There were sunny and bright spells, mostly in the south and east of England. This continued throughout before some more consistent showery rain reach the southwest in the early evening, before soon clearing again.

This day's summary created 01/03/2020 02:00

### Summary of the UK Weather for Sunday 23 February 2020

Most places saw a largely dry evening, aside from some blustery, at times heavy showers across Scotland, northern England and Northern Ireland. Thereafter, a band of rain, accompanied by strengthening winds, pushed in from the west, covering most of England, Wales and Northern Ireland by the early hours. The rain persisted in most parts until dawn, turning heavy at times, but started to move away from southwest England, becoming patchier and lighter in nature. Scotland continued to see blustery showers, some of which turned wintry over the hills with accumulations of snow in places. Through the morning, most of the rain over the UK cleared into the North Sea, leaving behind a few showers, heaviest over western Scotland and England. There were some very gusty winds for a time in southern England and Wales. Most showers dissipated in the afternoon, leaving the UK predominantly dry by the evening. There were some very mild temperatures observed for the time of year in the south. The first part of the night saw a band of rain moving in from the Atlantic across western parts of UK, turning to snow across high ground in Wales, and to modest elevations in northern England and Northern Ireland.

## Daily Weather Summary for Monday 24 February 2020

This day's summary created 02/03/2020 02:00

### Summary of the UK Weather for Monday 24 February 2020

Overnight, much of Northern Ireland, Scotland, Wales and north England saw a band of persistent snow, sleet and rain, moving in from the west. The wintry mix continued through the morning, allowing for snow to settle before sunrise. The rain became heavy at times over west Wales, but it was mostly dry and cloudy over the midlands and south England. The southwest of England saw the mildest temperatures, as much of the north of the UK was below zero. The mixture of wintry precipitation continued in the morning, but turned to rain for much of England, but remained as snow for many in Scotland. The southern half of UK saw some very strong gusts, but the winds were compensated by some very mild temperatures. The afternoon remained blustery for most, but most of the precipitation moved away, leaving just Scotland under a wintry mix of rain, sleet and snow. The first part of the night saw the wintry mix in Scotland slowly fading away, as showers began to blow in from the northwest into Northern Ireland, gradually becoming more wintry.

This day's summary created 03/03/2020 02:00

### Summary of the UK Weather for Tuesday 25 February 2020

Another chilly night over Northern Ireland, Scotland and north England, but remaining milder towards the south. Frequent showers of rain and snow, which were heavy at times, were mostly confined to the west. East Scotland and east England remained drier with clear spells, especially in the southeast. A few lightning strikes were observed along the southeast coast. Showers continued along the west coast of the UK and Northern Ireland through the morning. These were sometimes heavy, particularly in the southwest. Through the day, Scotland, Northern Ireland and northern England saw more rain and snow showers, while the southwest experienced a few hail showers and thunderstorms. The east of England remained mostly dry with sunny spells. Into the evening, the showers pushed eastwards, with the southeast seeing the worst of the showers, which sometimes fell as hail.

### Summary of the UK Weather for Wednesday 26 February 2020

Western parts of England, Wales and most of Northern Ireland experienced a cold and showery night, with frequent wintry showers, some banding together leading to some prolonged falls. However, marginal temperatures only allowed snow to settle on high ground, mostly above 200 m. The eastern half of the UK was much drier and with calm winds in the northeast, a widespread frost was able to form. These showers in the west continued through the morning, eventually easing and clearing eastwards through the morning. There were plenty of sunny spells across all areas of the UK through the day, especially in the east, where it remained dry. There were the occasional thunderstorms along the northwestern coasts bringing wintry showers at times. The evening remained largely dry and clear until a band of rain pushed up from the southwest across Northern Ireland, southwest England and Wales.

### Summary of the UK Weather for Thursday 27 February 2020

Overnight the northern half of the UK was experiencing some heavy snow showers while a weak low pressure system approached from the southwest. The system brought a spell of rain, sleet and snow for high ground for many central parts of the UK. It was a breezy day with showers continuing across northern Scotland, Northern Ireland and northern England throughout with snow at times over hills. Rain and sleet slowly cleared the southeast and East Anglia during the morning leaving most parts dry with sunny spells becoming widespread across the southwest.

### Summary of the UK Weather for Friday 28 February 2020

A dry night for the majority of the country, especially to start. A band of rain pushed up from the southwest during the early hours and spread across Northern Ireland, the southwest and Wales through the morning. There were heavy bursts at times. Scattered showers persisted across Scotland through the night. Winds were strong along coastlines, but were lighter inland. The rain continued to move slowly eastwards through the day and was heavy at times especially across Wales, western Scotland and northern England with some sleet over hills.

### Summary of the UK Weather for Saturday 29 February 2020

A band of squally rain spread eastwards across the UK throughout the night. The west saw rain and heavy showers at the start of the night, whilst eastern parts began to see rain closer to dawn. After the rain had cleared, the west of the UK started the day mostly dry but cloudy with occasional blustery showers. It remained windy throughout the night in many areas, particularly along coastlines. Through the morning, early rain cleared southeast England leaving a continuous stream of showers in its wake. Some of these showers turned heavy and thundery at times, particularly in southern areas. Through the afternoon, another band of rain pushed across Northern Ireland and then into parts of Scotland and northern England. It continued to sink southwards, covering much of Wales by evening, turning heavy over the hills. Further east, most places remained dry with patchy cloud, though there were a few showers at times.

## Daily Weather Summary for Saturday 29 February 2020

## Daily Weather Summary for Saturday 29 February 2020

## Guidance Notes

UTC = Universal Coordinated Time. For the UK UTC is the same as GMT (Greenwich Mean Time).

National boundaries shown on the European station map are for illustrative purposes only.

### Daily extremes

- Daily extremes have been manually confirmed by Met Office Observations Quality Management as valid observations from the live database at the time of checking. However, more extreme values may still be possible if they occur after the time of production.
- Mountain stations above 500 masl are excluded from lowest temperatures, highest gust speeds and greatest snow depths at 0900 UTC. This is because they are not considered representative of low level areas.
- Counties quoted against each station are based on historical county boundaries pre-1974 and may not reflect current administrative boundaries.

### Analysis charts and satellite imagery

- The satellite imagery is infra-red imagery from the geostationary MSG satellite.
- The rainfall image is derived from satellite data from MSG and rain-radar data. This represents a snapshot of instantaneous rain-rates at 0000 UTC and 1200 UTC and so does not necessarily reflect daily accumulations in the rainfall station map.
- Any analysis charts or satellite images which are unavailable will be displayed as white space.

### Station maps

- The UK maps show station data for the same set of stations presented UK data table. These stations are selected to provide good spatial coverage across the UK; they represent only a fraction of the overall UK observing network.
- Wind speed maps show wind speed in Kt and direction both averaged over the hour up to the time of observation. 1 Kt = 1.151 mph.

### Hourly station data

- The data tables provide spot hourly observations from synoptic messages at 0000 and 1200 UTC. Missing data are denoted by '-'.

- Pressures are mean sea level pressure in hPa.
- For UK stations, Gibraltar and Jersey, the wind speeds and directions are both averaged over the hour up to the time of observation. However, for European stations wind speeds and directions are both averaged over a 10-minute period up to the time of observation.
- Wind speeds are in Kt. Wind directions are stored in the database every 10 degrees and have been converted to the nearest point of the compass. These give the direction the wind is blowing from, not to.
- Cloud amounts are in Oktas from 0 (clear) to 8 (overcast). 9 indicates sky obscured (eg by fog).
- Air temperature and dew point temperature are in Celsius.

### **Temperature maps**

- Daily maximum, minimum and grass minimum temperatures are in Celsius.
- The period for the daily maximum temperature on day D is defined from 0900 UTC day D to 0900 UTC day D+1.
- The period for the daily minimum and grass minimum temperatures on day D is defined as 0900 UTC day D-1 to 0900 UTC day D.
- On any given day D the minimum will typically occur in the early hours of the morning and the maximum in early afternoon.

### **Rainfall, sunshine and max gust speed maps**

- Daily rainfall is in mm from 0900 UTC day D to 0900 UTC day D+1.
- Daily sunshine is in hours from Kipp and Zonen CSD1 automatic sunshine records. Bright sunshine is defined as exceeding 120 W/m<sup>2</sup>.
- Max gust speeds are the daily max gust in Kt from 0000-0000 UTC

### **Snow maps**

- The day of snow falling map displays data from present weather sensors, showing stations which have recorded sleet or snow falling at any point in the day (0000-0000 UTC).
- The snow lying map shows level snow depth as recorded by the automatic snow depth sensors at 0900 UTC. These snow depth sensors do not record snow depth if this is less than 1cm.
- Snow depth sensors are normally operational from October to April, in the event of snow falling outside this period data availability may be limited.
- Snow maps will only be displayed if one or more of the selected stations on that date have recorded either snow falling or non-zero snow depths. If snow maps are not

displayed it is still possible that other stations in the network have recorded a day of sleet or snow falling or non-zero snow depth.
