SATURDAY
1 FEBRUARY 1986

SUMMARY
OF
BRITISH WEATHER

The far west of Scotland had a clear night with a touch of frost in places. Elsewhere over Britain skies were cloudy with rain and drizzle, turning to sleet or snow over hills.

During the day the far west of Scotland, the Isle of Man and much of Northern Ireland had dry weather with a few bright spells. For the rest of Britain it was cloudy with widespread rain and drizzle, sometimes turning to sleet or snow, especially over high ground.

It was a rather cold day generally, but in the far north and northwest of Scotland temperatures were near average.

PLOTTED SURFACE OBSERVATIONS

SUNDAY
2 FEBRUARY 1986

SUMMARY OF BRITISH WEATHER

Most of England and Wales had rain and drizzle overnight with some sleet and wet snow over the Midlands, Greater Manchester and parts of northeast England and also over areas of high ground. Eastern and southern Scotland had a little rain turning to snow over high ground but for the rest of Scotland and Northern Ireland it was a dry night.

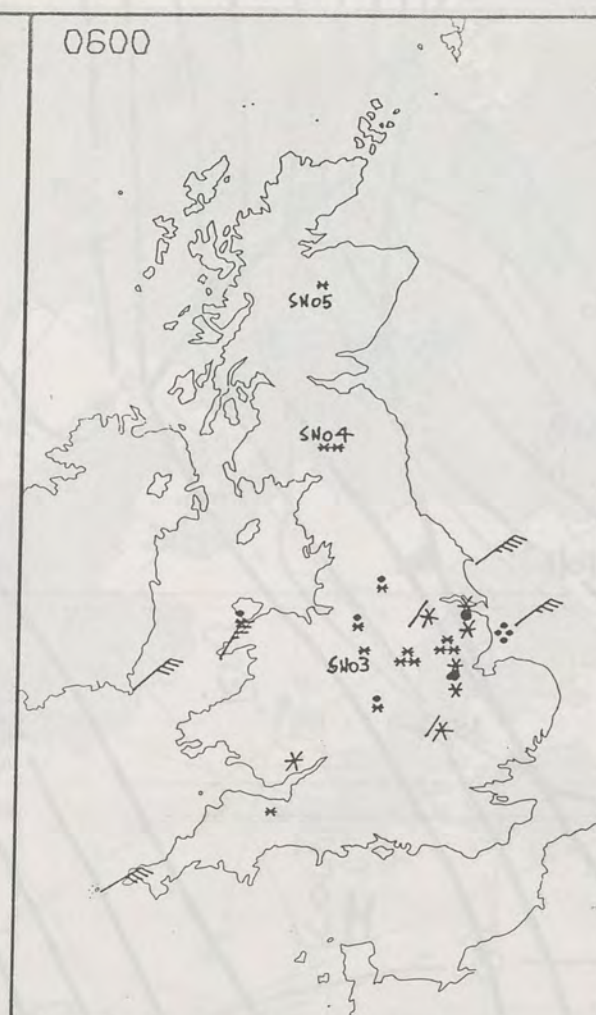

During the day much of England and Wales stayed cloudy, though there were one or two bright spells in West Wales and the Channel Islands. There was more rain and drizzle in most places, with wet snow over the Midlands, the Peak District and southern Pennines. By mid-afternoon rain began to turn to sleet and wet snow in central southern and southeast England, East Anglia and Lincolnshire.

Much of Scotland and Northern Ireland had a cloudy day with rain or sleet at times, most of it light. West Scotland stayed generally dry.

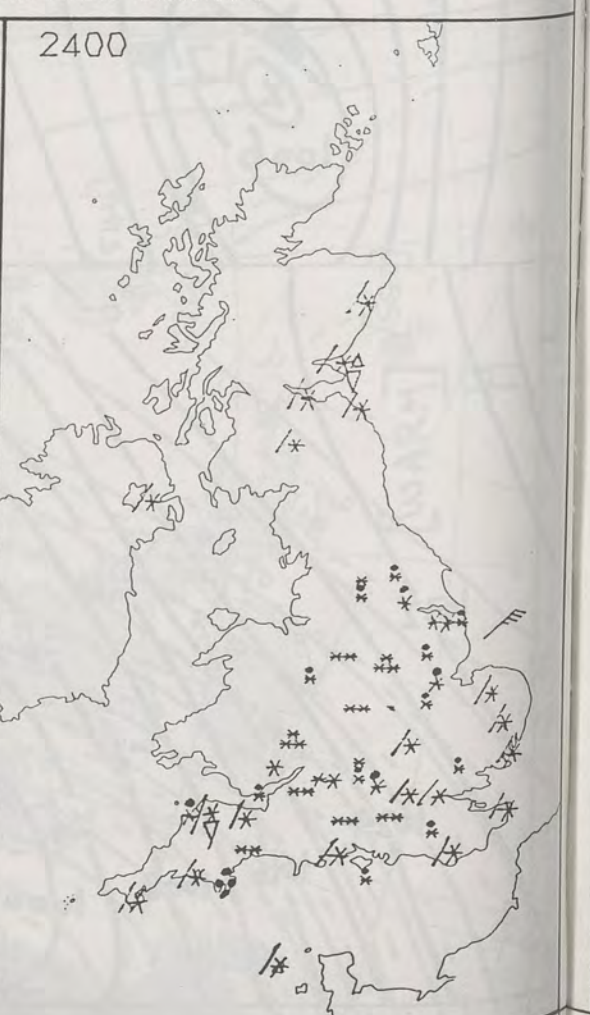

In north and northwest Scotland temperatures were near average. Elsewhere over Britain it was generally rather cold or cold.

SUMMARY
OF
BRITISH WEATHER

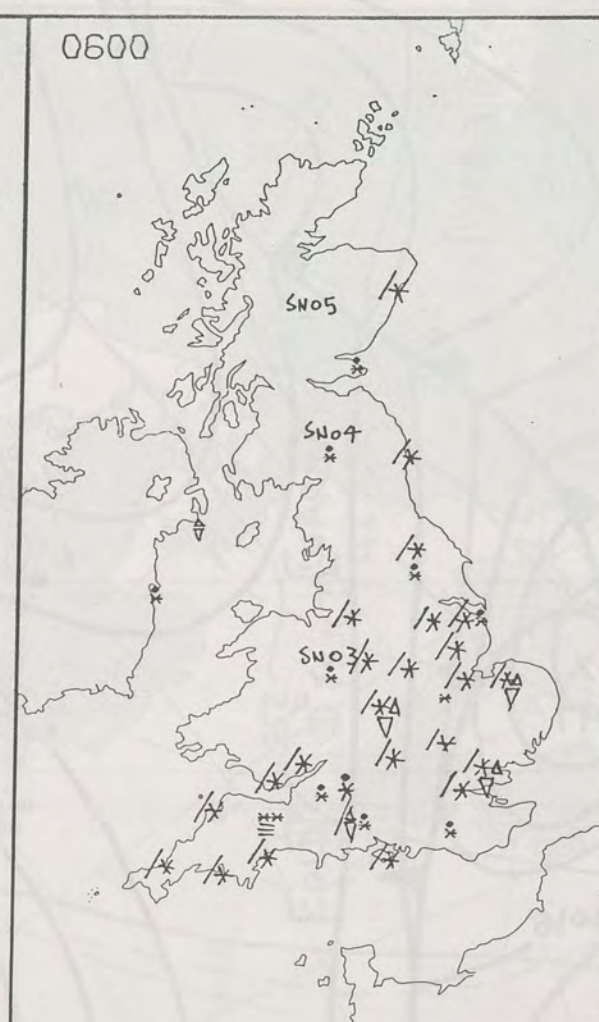

It remained dull and misty in most regions with light rain, drizzle or sleet at times and during the evening there was freezing drizzle in parts of East Anglia and the East Midlands. In Shetland it was mainly dry with sunny intervals.

Temperatures remained just above freezing in most places overnight but it was a cold day in most places, only in northwest Scotland and Shetland did the temperature approach the early February average.

TUESDAY
4 FEBRUARY 1986SUMMARY
OF
BRITISH WEATHER

In most regions cloudy weather persisted and there were patches of drizzle or sleet, the drizzle freezing in places at first, especially over high ground in central parts of England.

During the day the patches of drizzle and sleet became isolated and by evening they were mostly confined to Northern Ireland. In parts of eastern England there were breaks in the cloud during the afternoon and evening. In northern Scotland it was a mainly dry day with sunny spells and only isolated showers, Shetland had a sunny day.

There was slight frost in places overnight, and by day most places were rather cold or cold, however, in northern Scotland and the Channel Islands temperatures were not far from normal.

WEDNESDAY
5 FEBRUARY 1986

SUMMARY OF BRITISH WEATHER

Much of the country had a dry, clear and frosty night, though cloud did persist in the south-west of Britain.

During the morning, cloud increased in the east of Scotland and **NORTHEAST** England, and there were showers of rain along the coast, but sleet and snow inland. Most remaining areas of Britain had good sunny periods. By midday, snow showers had become fairly widespread in northern Britain, with some lengthy snow-fall in parts of eastern England.

Towards evening, this more prolonged snowfall moved south, and heavy showers of snow continued in some northern areas, but many southwestern parts remained dry. During the evening, the snow moved slowly westwards to affect central southern England, and the West Midlands, and a widespread frost was reported again, except in the far northwest and southwest.

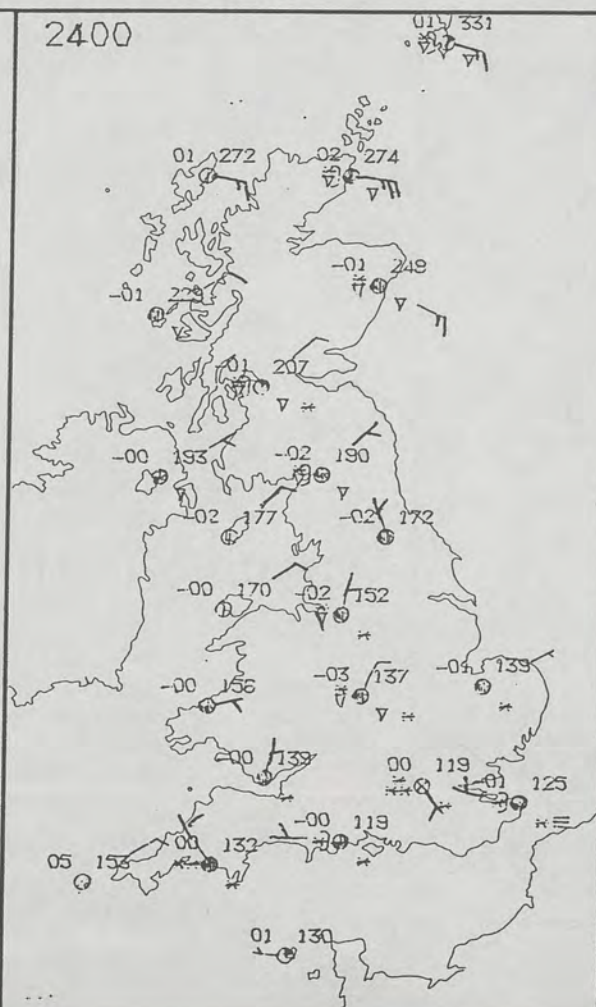

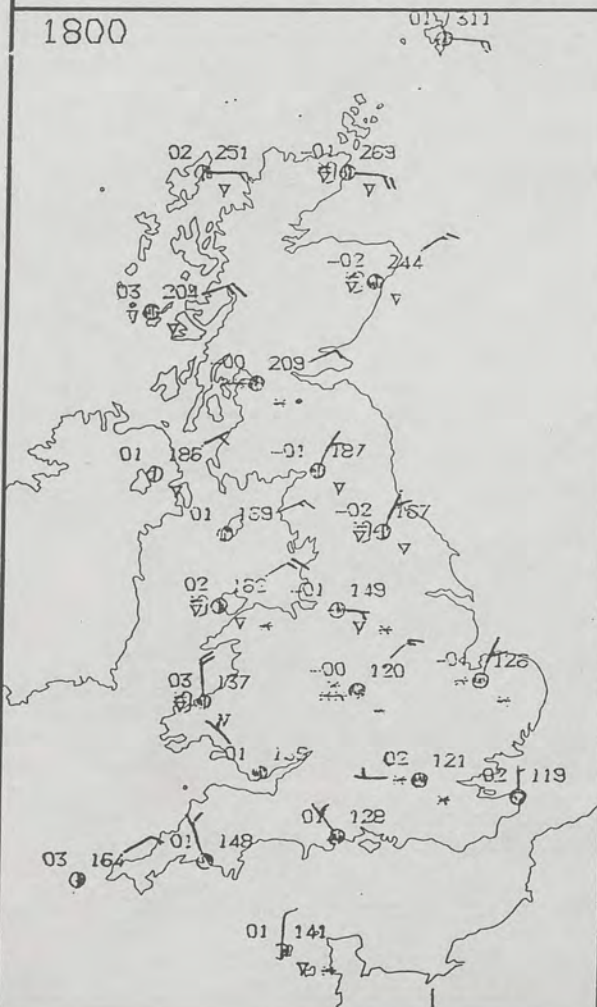

Temperatures were below normal nearly everywhere, mostly in the rather cold or cold category, and very cold in parts of eastern England. Northern and western Scotland had temperatures near normal.

THURSDAY
6 FEBRUARY 1986SUMMARY
OF
BRITISH WEATHER

Many parts of eastern, southeast and central southern England had snowfall overnight, enough to give several inches of cover in many places, though the extreme east of East Anglia and Kent escaped with a dusting.

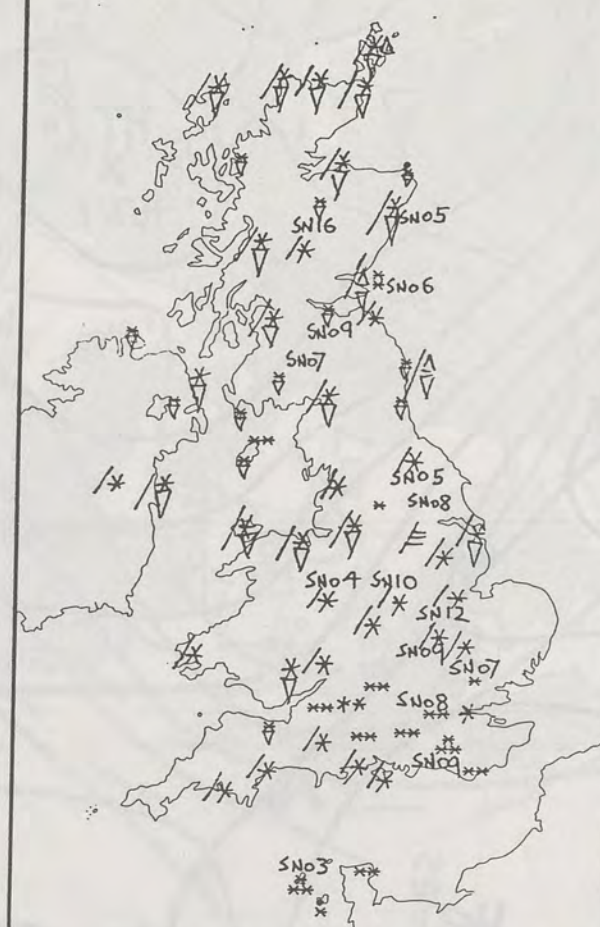

During the day, this area of snow moved to some other southwestern parts, and although these outbreaks of snow tended to die down in intensity some south coastal areas saw some heavy snowfall. The far West Country though, escaped with little more than an odd snow shower. The remainder of the country experienced snow showers, heavy and prolonged at times in many areas exposed to the easterly winds off the North Sea, rather more scattered to the west of the main high ground. During the evening, further prolonged snow affected the Home Counties of London.

The day was mostly very cold, with maximum temperatures well below the long term normal, and large areas of eastern and central England experiencing persistent frost.

PLOTTED SURFACE OBSERVATIONS

**FRIDAY
7 FEBRUARY 1986**

**SUMMARY
OF
BRITISH WEATHER**

England and most of Wales had a generally cloudy night with snow at times. Most of it was light but the Isle of Wight had as much as 15 cm. Scotland, Northern Ireland, western parts of England, and Wales were clearer with just an odd snow shower. There was widespread frost.

It continued fairly cloudy in England and Wales during the day with just a glimpse or two of the sun as well as further snow in places, chiefly in the east and south. Most of the snow was light but again some places along the south coast had heavier falls, this time with thunder in the Isle of Wight and Channel Islands. It was brighter in Scotland and Northern Ireland with more in the way of sunshine but still with a few snow showers.

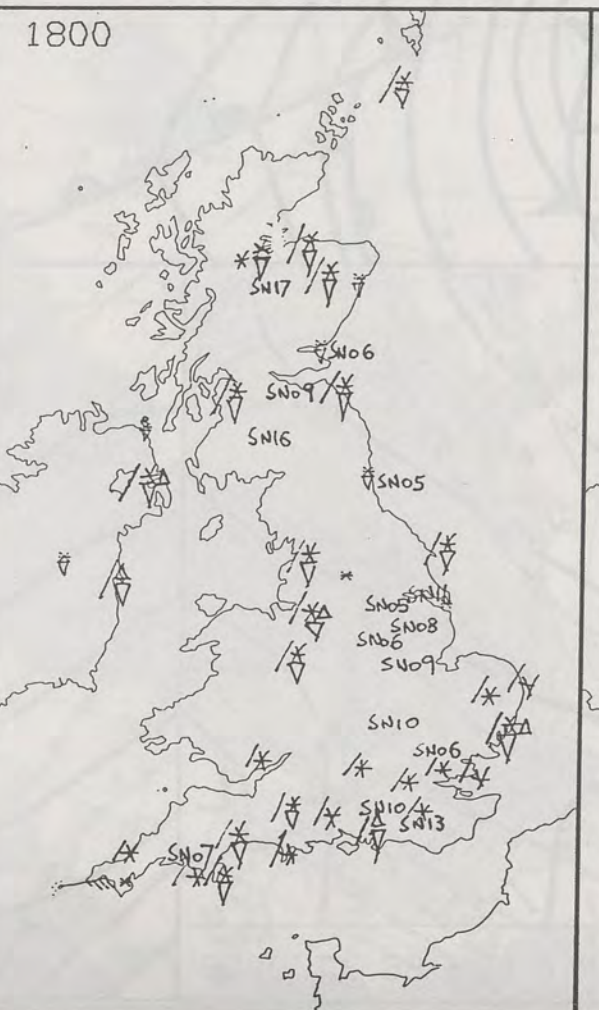

It was very cold over much of England and Wales and inland in Scotland, while remaining areas were mostly rather cold. Temperatures stayed below freezing over much of England and Wales.

SATURDAY
8 FEBRUARY 1986

SUMMARY
OF
BRITISH WEATHER

Eastern parts of England and the southeast of Scotland had a fairly cloudy night with out-breaks of snow. Much of it was light but there was an odd heavier burst, chiefly in East Anglia. Elsewhere the cloud was more broken with only a few light snow flurries. Frost was wide-spread and in places severe.

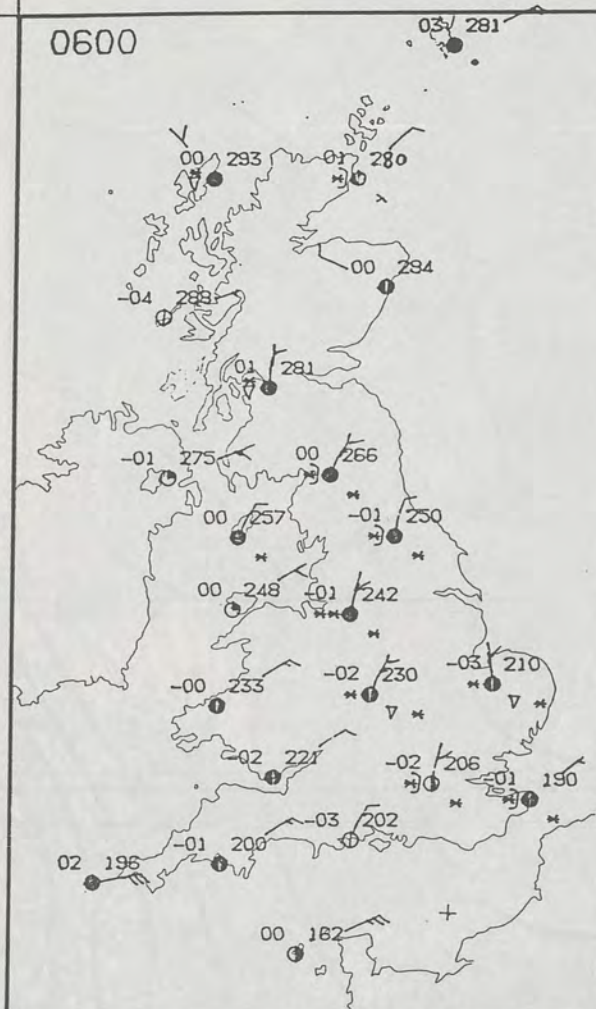

Eastern parts did, however, have a somewhat brighter day with sunny intervals, although with further snow showers. In Essex and Kent these showers gave several inches of snow. Wales and western parts of England had more in the way of sunshine with only isolated light snow showers. Scotland and Northern Ireland had a cloudy day with some light snow showers.

It was very cold again almost everywhere with temperatures remaining below freezing in eastern England and central parts of Scotland.

SUNDAY
9 FEBRUARY 1986

SUMMARY
OF
BRITISH WEATHER

Southeast England, East Anglia, the Midlands, northern England and Northern Ireland had some snow overnight, most of it light, but near the coasts of East Anglia and Kent there were some heavier bursts. Elsewhere it stayed dry. Frost was widespread and became severe in parts of Wales and central England.

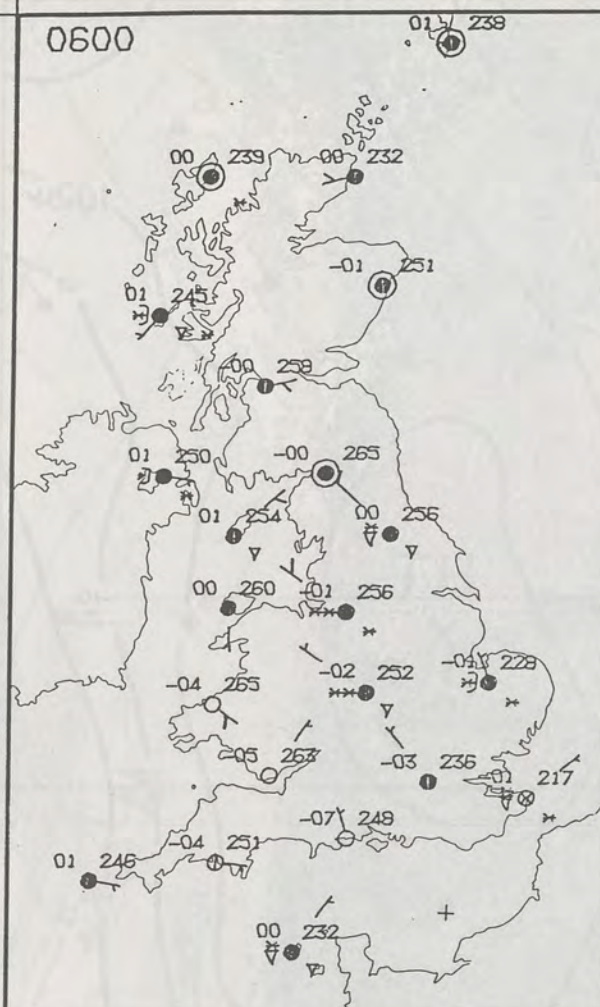

During the morning snow was widespread over central, southern and eastern England - mostly light and dying out later, with some bright spells here and there by afternoon. Northern England had a few light snow showers, whilst on the other hand Wales and southwest England stayed dry with some sunshine. Over Scotland and Northern Ireland skies stayed mostly cloudy, and in western and northern Scotland there were one or two snow showers.

It was a cold or very cold day generally over the UK, with frost persisting over much of southeast England and East Anglia. Northern Ireland and parts of western Scotland were only rather cold.

SUMMARY
OF
BRITISH WEATHER

Scotland and Northern Ireland had a cloudy night. Most places stayed dry, but in Scotland there was a little snow here and there. Most places in England and Wales were dry and clear with widespread severe frost but a few places had a little snow and in central and northern England freezing fog.

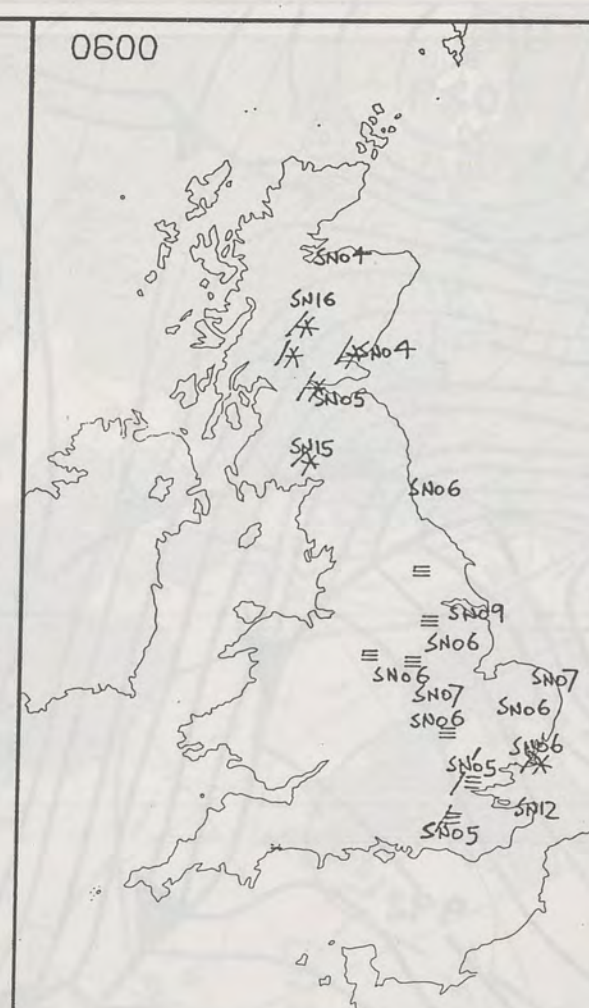

Much of England and Wales had a dry, sunny day, but temperatures in most places stayed below freezing and parts of northern England were foggy and very cold all day. Some places in East Anglia and Kent were more cloudy with a little snow.

Northern Ireland had a cloudy day with a little rain and snow in the afternoon, and temperatures a few degrees below normal. Over Scotland there was more cloud, but most places had some sunshine and it was dry nearly everywhere, just a little rain in parts of the west and a few hail and snow showers on Shetland. It was generally rather cold, even cold in a few places in the east and inland.

TUESDAY
11 FEBRUARY 1986

SUMMARY
OF
BRITISH WEATHER

Overnight there was a little snow in the mountains of Scotland but everywhere else was dry with widespread severe frost. Northern Ireland had a cloudy night and in East Anglia, the Midlands, southern England and South Wales the weather turned cloudy overnight, while in north-east England there was some freezing fog again.

During the day southern England, East Anglia, the Midlands and South Wales were cloudy and most places were very cold. There was a lot of dry weather, no more than a little snow here and there.

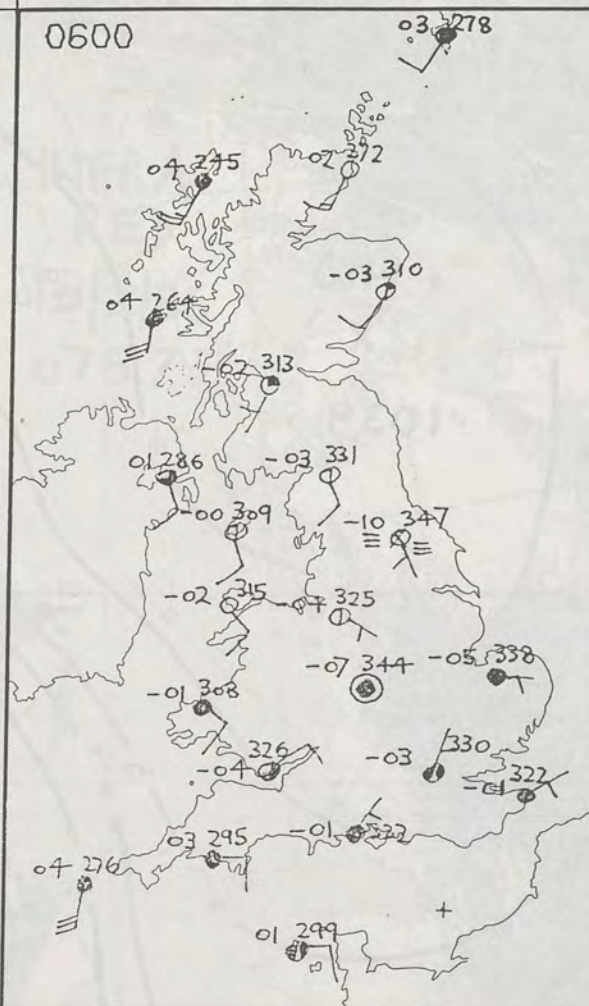

North Wales, northern England, central and eastern Scotland had a fairly sunny day, the freezing fog in northeast England cleared readily in the morning. It was cold, with many places staying below freezing all day.

Northern Ireland and western Scotland were cloudy but mostly dry and temperatures were a little below normal.

WEDNESDAY
12 FEBRUARY 1986

SUMMARY
OF
BRITISH WEATHER

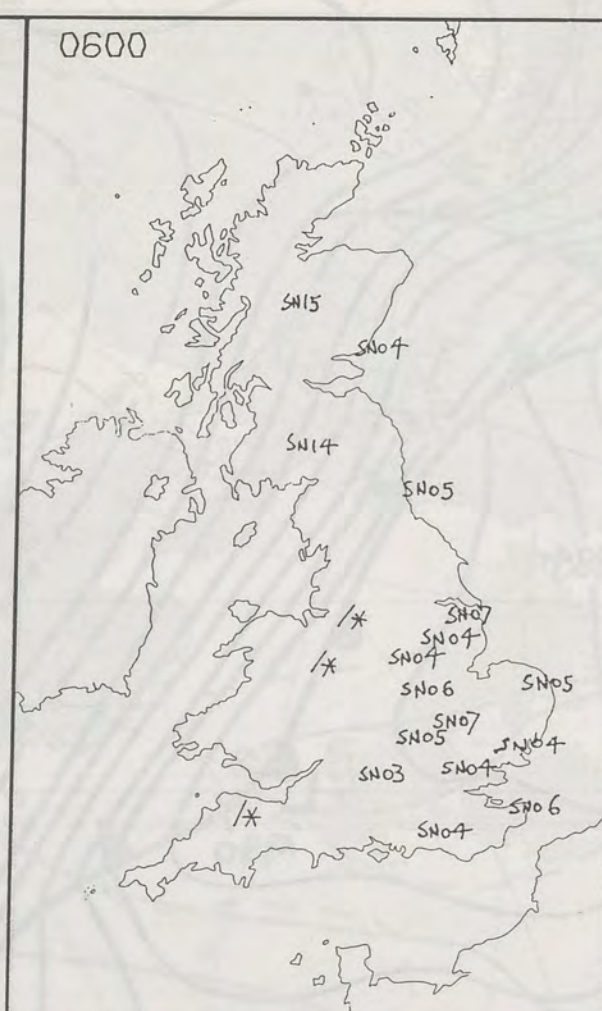

Central Scotland and far western parts of England and Wales had clear skies overnight, allowing a severe frost to develop over Scotland. In other parts of the country, cloud persisted, giving flurries of light snow in parts of England.

During the day, cloud cover was very variable, though in broad terms tended to disperse, especially in southern and eastern England. Northern Ireland and Scotland had mostly clear skies. During the evening, a frost set in again over most of the country.

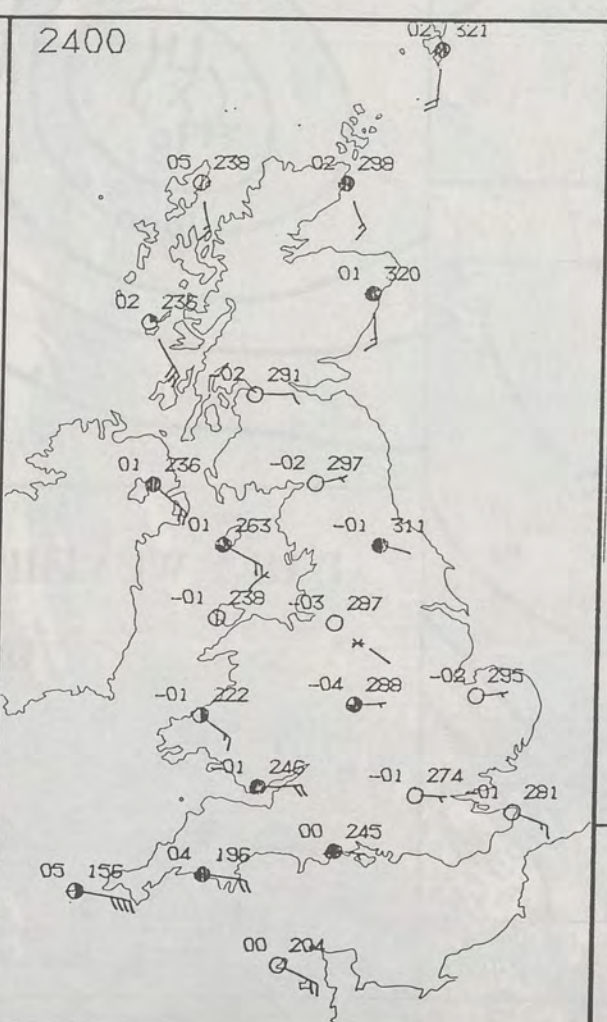

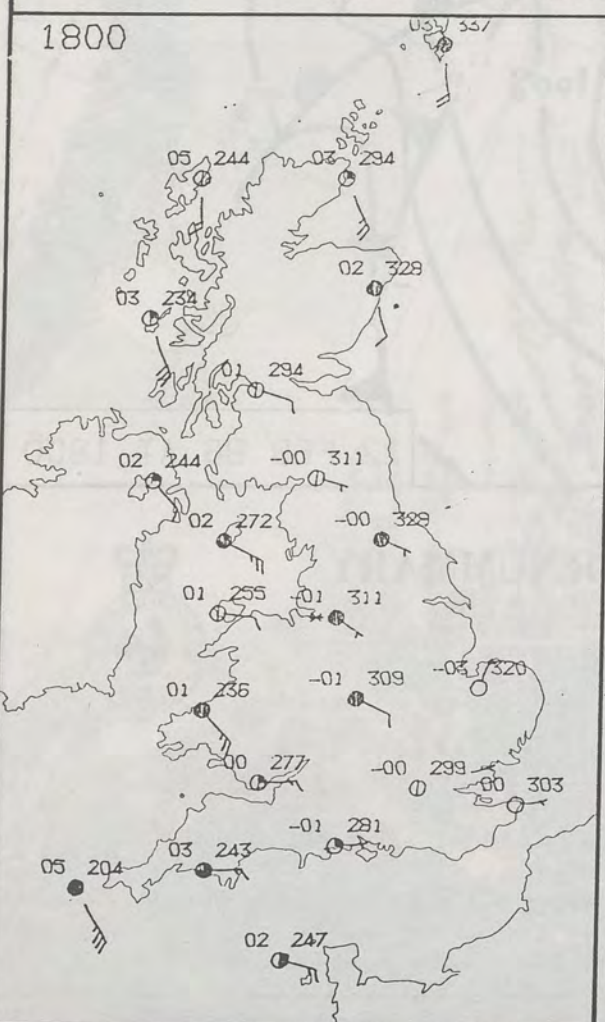

Temperatures were once again well below normal, and areas in eastern England persisted with sub-zero values. Only in the far southwest and far northwest did temperatures approach the long-term normal. There were gales around southwestern and western coasts.

A map of the British Isles (Great Britain and Ireland) with 25 numbered locations marked. Each location is associated with a number and a symbol. The locations are distributed across the islands, with a concentration in the south and east of England. The symbols include circles, squares, and dots, some with internal markings. The numbers range from 01 to 05, with some locations having multiple numbers. The map is oriented with North at the top.

SUMMARY OF TISH WEATHER

The day was dry and mostly sunny, though some patchy cloud did run onto some northeast coasts of England and eastern coastal areas of Scotland, and there was cloud in the far southwest of England too. Later in the afternoon, a little rain or sleet turned up in the far west of Cornwall and the coastal cloud in eastern Scotland proved thick enough for a little light snowfall. During the evening, frost returned in many central and eastern areas.

FRIDAY
14 FEBRUARY 1986

SUMMARY
OF
BRITISH WEATHER

Most regions had a dry night with frost but in eastern Scotland and northeast England there were light snow showers and in Cornwall there were patches of sleet.

During the day northwest Wales and western Scotland remained dry with a good deal of sunshine. Elsewhere it was a mainly cloudy day with light snow at times.

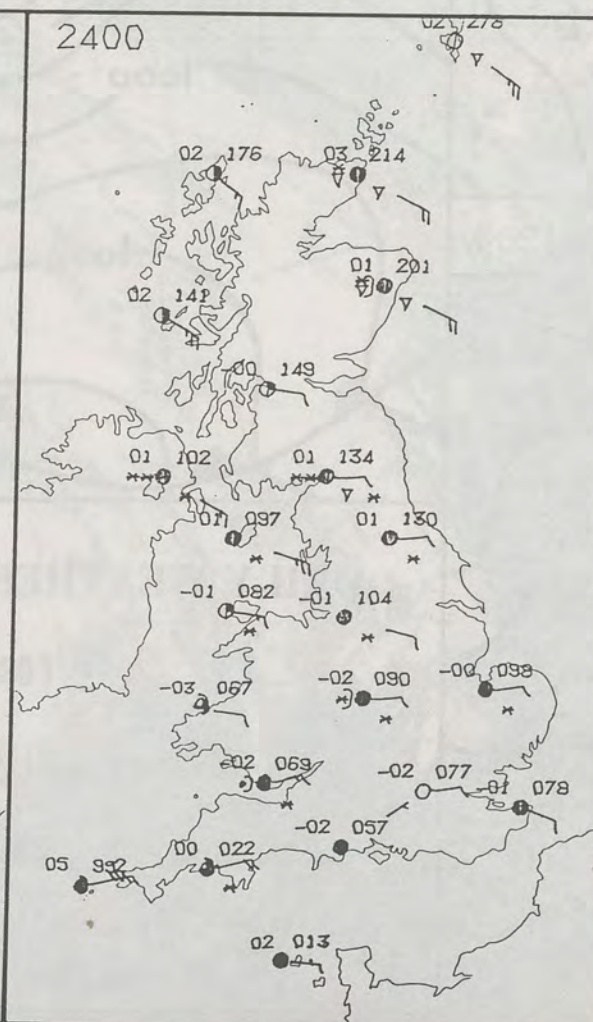

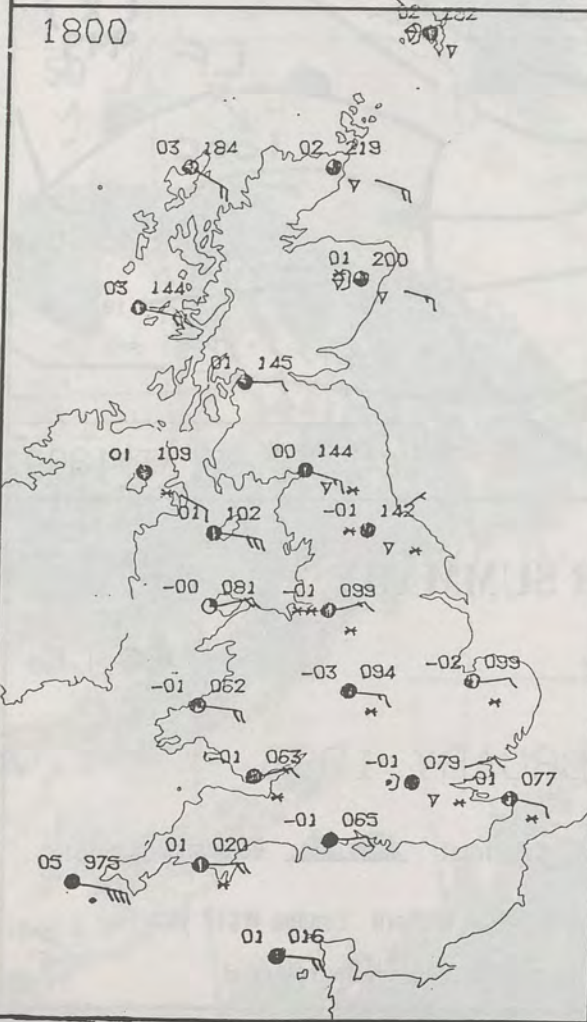

In northwest Scotland and the Northern Isles temperatures were near normal. Elsewhere it was cold and over much of England and Wales very cold with frost persisting through the day in most central and eastern regions.

SATURDAY
15 FEBRUARY 1986

SUMMARY
OF
BRITISH WEATHER

In northern England, Northern Ireland and Scotland there were scattered light snow showers, and brief sunny intervals were mostly confined to the Northern and Western Isles.

Over the rest of England and Wales it was mostly dry, the only exceptions being in the Channel Islands and West Cornwall, where there was some light rain in the early hours. In southern England, South and West Wales there were sunny periods but in central and eastern counties cloud persisted.

There was frost overnight in most places. It was a cold day in many places, and very cold in central England and East Anglia, where the temperature remained near or just below freezing all day. In the far southwest of England temperatures were near normal, while in western and northern Scotland it was only rather cold.

SUNDAY
16 FEBRUARY 1986

SUMMARY
OF
BRITISH WEATHER

During the night much of the United Kingdom was dry and cloudy, but in northern and eastern Scotland there was a little rain, sleet and snow. Temperatures were below freezing nearly everywhere.

There was some sunshine on the coast of southeast England, in West Wales and in the Western and Northern Isles of Scotland, but most places had a cloudy day. There was a lot of dry weather, but in England and Wales there was a little snow here and there. In the east and north of Scotland there was some light rain, sleet and snow.

It was another cold or very cold day in most places and over England, Wales, the Isle of Man and the Channel Islands, the east to northeast winds were quite strong, up to gale force on coasts.

Northern and western Scotland were only rather cold.

SUMMARY
OF
BRITISH WEATHER

Much of Britain had a dry night, but in England and Scotland there was a little light rain, sleet and snow here and there. It was very cold, with temperatures in most places below freezing and it was fairly windy.

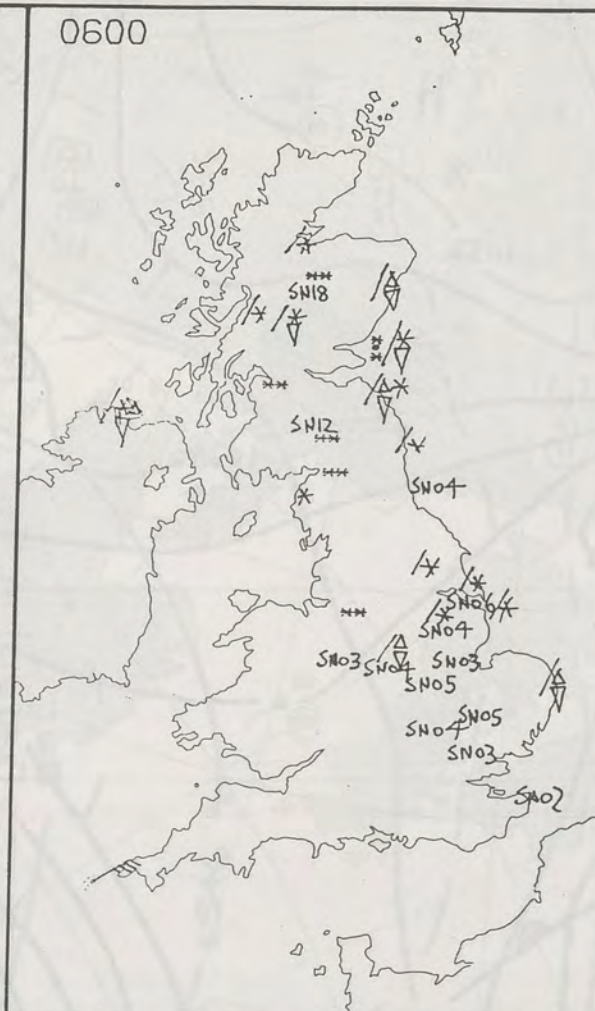

During the day most places in England and Wales were very cold again; coldest areas were central, eastern and southern parts of England and Wales, where in a few places temperatures stayed below freezing all day. The strong east or northeast wind reached gale force on coasts and hills. Scotland and Northern Ireland were mostly only rather cold.

Many places had a dry day, but there was a little rain, sleet and snow about. In Scotland there was some sunshine in most places and during the afternoon the weather over Northern Ireland, England and west Wales brightened up a little.

TUESDAY
18 FEBRUARY 1986

SUMMARY
OF
BRITISH WEATHER

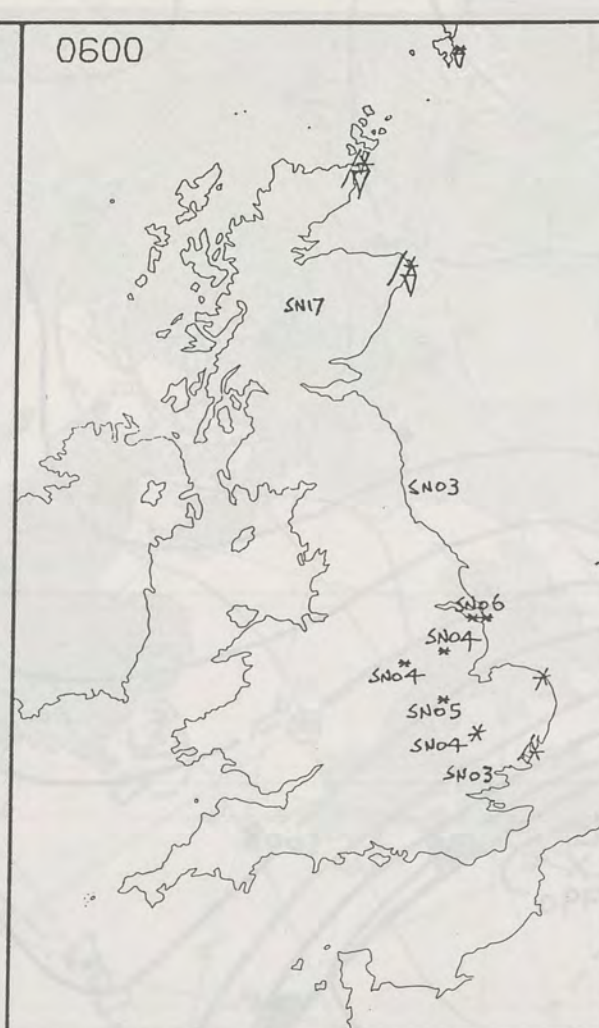

The weather stayed mostly cloudy and mostly dry over the greater part of the country. The north-easterly wind was generally not quite as strong as on recent days - except in the extreme south, especially the Channel Islands. There were snow showers in various districts, but more especially in the east. Most were very light, but there were one or two heavier ones towards northeastern coasts. Conversely, there were also some good breaks in the cloud sheet in some areas - more especially in the west, while parts of the far southwest of England and northwest Scotland had quite a sunny day.

Although northern areas had the lowest overnight temperatures, it was once again southern Britain that had a very cold day, whilst temperatures in parts of Scotland and Northern Ireland were only a couple of degrees or so below normal.

SUMMARY
OF
BRITISH WEATHER

There was generally a lot of cloud with areas of mostly light snow. Some places towards the east and northeast coast of Britain had heavier snow from time to time, with the Aberdeen area particularly badly affected. Many districts also had some brighter spells, though it was generally dull in southwest England and eastern and southern Scotland.

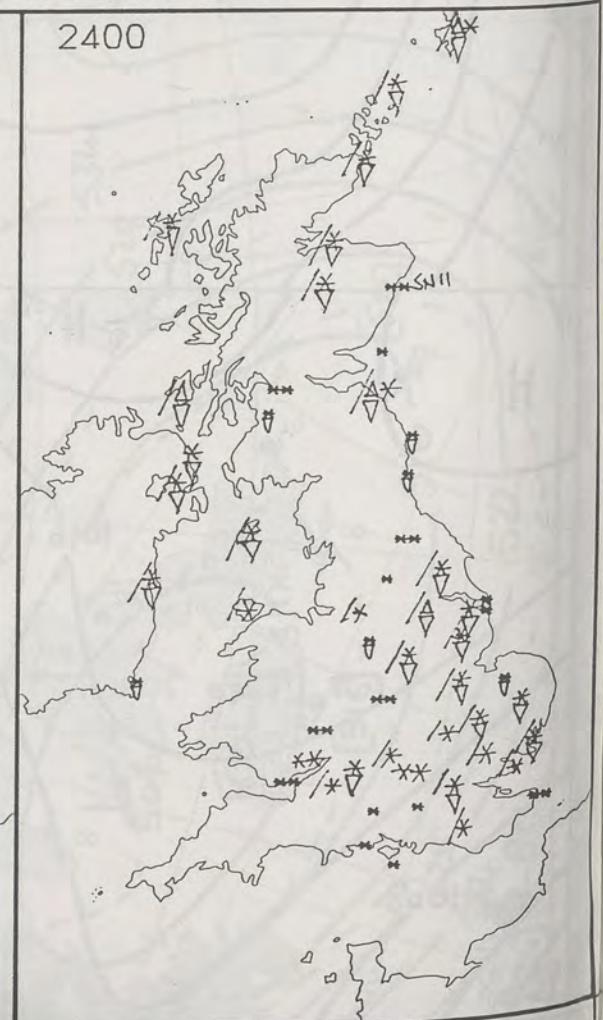

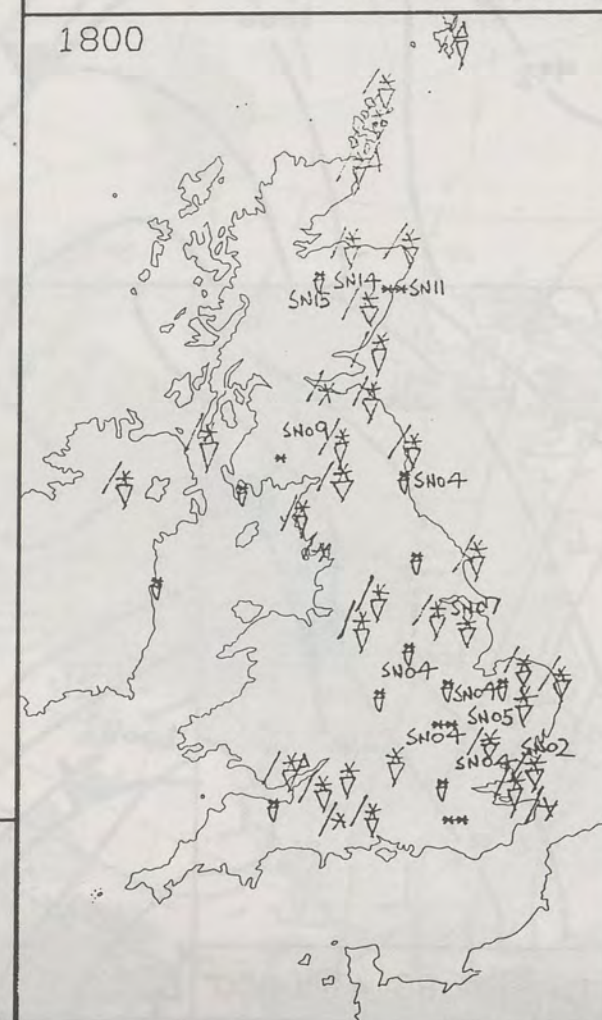

It was again cold, and very cold in some eastern and southern districts of Britain, though winds were mostly quite light. Temperatures approached normal in parts of northwest Scotland and Northern Ireland.

PLOTTED SURFACE OBSERVATIONS

THURSDAY
20 FEBRUARY 1986

SUMMARY
OF
BRITISH WEATHER

Amounts of cloud were very variable, in most places there were clear or sunny intervals and some northwestern parts of England and Wales had a dry day with a good deal of sunshine.

There were scattered snow showers, many of these were light but in eastern counties of England and Scotland there were some heavier, slow-moving showers, which gave a covering of snow in places. There were also some accumulations of snow in parts of southwest England and South Wales, especially on high ground.

Freezing fog developed in the early hours of Thursday in parts of Lincolnshire, the East Midlands and East Anglia. Some fog patches were very slow to clear and soon reformed during Thursday evening.

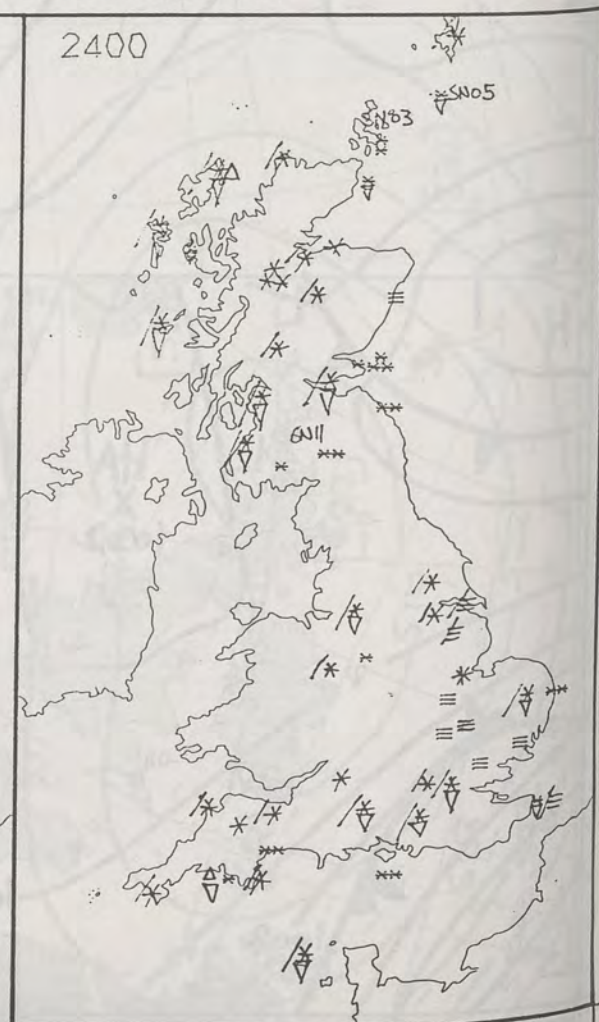

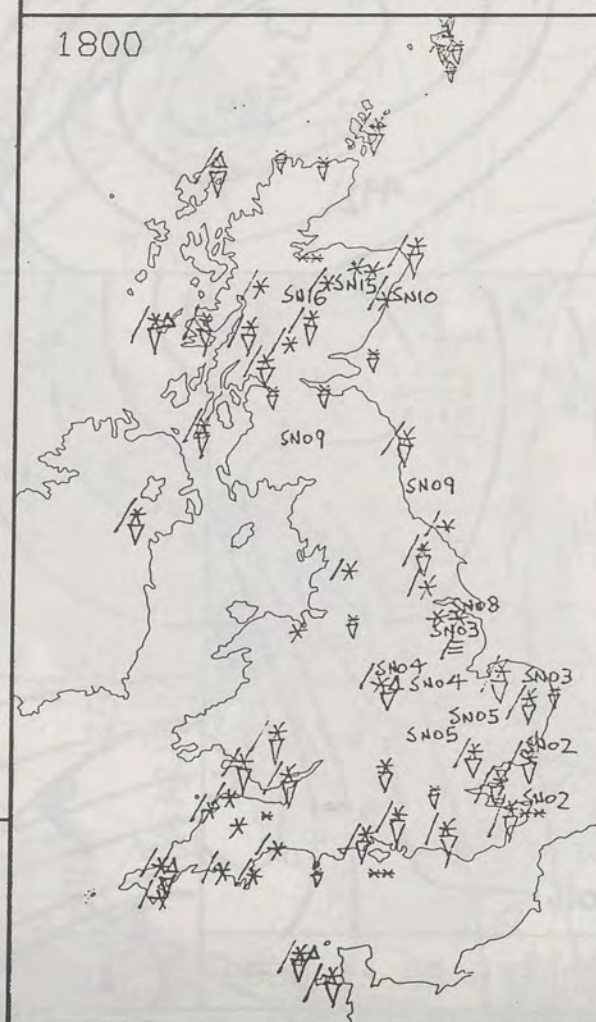

Frost was widespread overnight and severe in many places, especially in central and eastern England where frost persisted through the day in many places. Elsewhere it was another very cold day generally, though in Northern Ireland and northwestern Scotland temperatures were only two or three degrees below normal.

PLOTTED SURFACE OBSERVATIONS

FRIDAY 21 FEBRUARY 1986

SUMMARY OF BRITISH WEATHER

In northern Scotland there were sunny or clear periods and scattered snow showers. In southern Scotland it was mainly cloudy with periods of snow, occasionally heavy. During the evening snow became confined to the Southern Uplands.

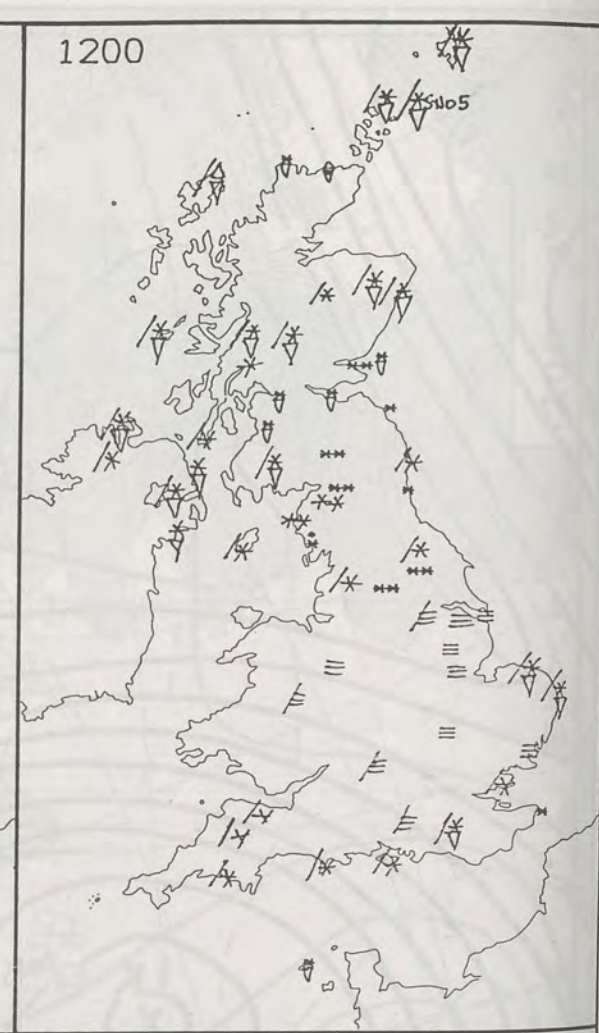

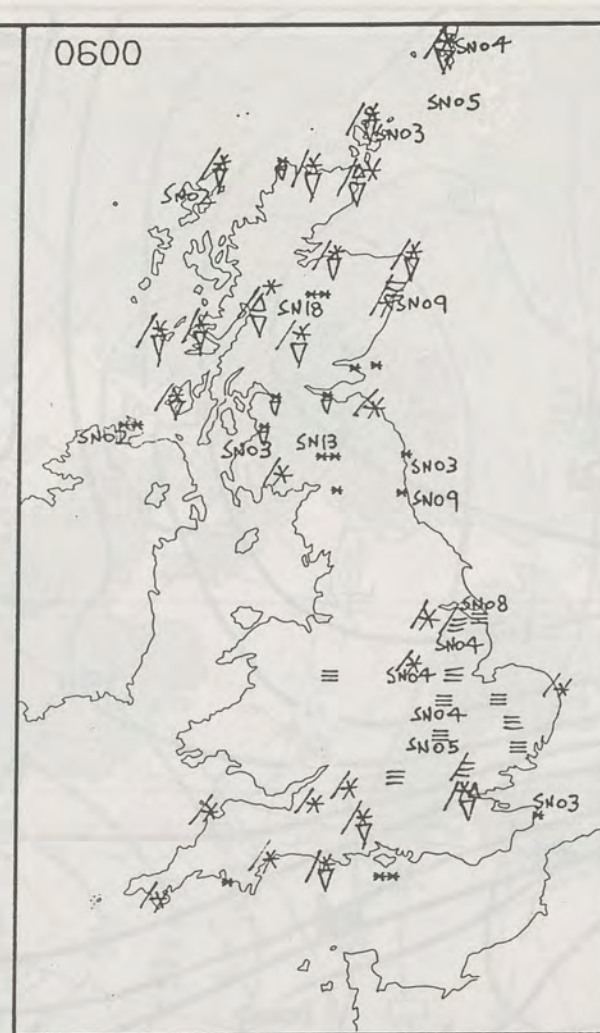

In Northern Ireland and northern England it was mainly cloudy with light snow at times but in Northern Ireland sunny intervals developed and most of the day was dry.

In Wales, central and southern England there were isolated light snow showers but most places remained dry. Patches of freezing fog formed in central and eastern England but it cleared during the morning. In parts of East Anglia and south-east England it was dull most of the day, elsewhere cloud became well broken and there was a good deal of sunshine.

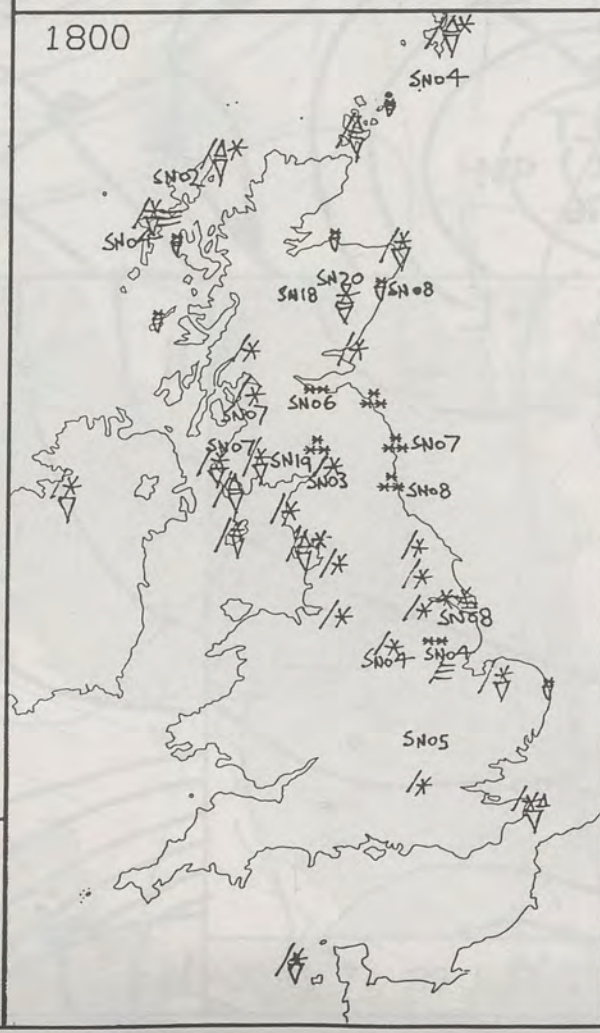

Only the Isles of Scilly and parts of South Cornwall escaped frost and in most central and eastern parts of Britain the frost was severe and persisted all day. It was a very cold day in most parts, but in Northern Ireland and western parts of Britain temperatures rose two or three degrees above freezing. Frost returned almost everywhere during the evening.

MONDAY
24 FEBRUARY 1986

SUMMARY
OF
BRITISH WEATHER

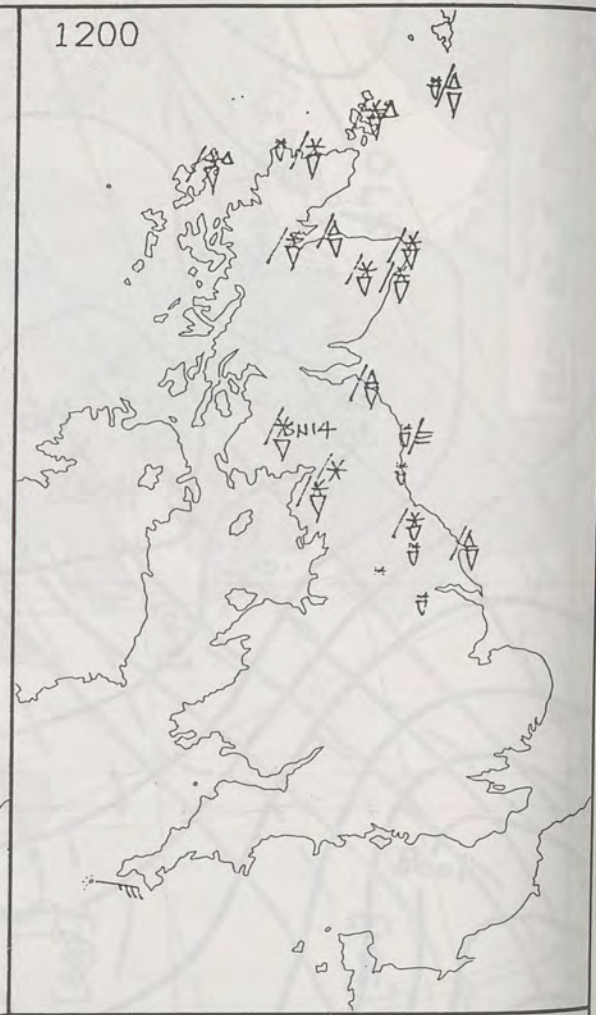

This was a rather better day for most places, with temperatures rising above freezing everywhere and quite a lot of sunshine across the country. Overnight, though, there was once again a general severe frost. Showers, mostly of snow, affected some eastern and northern coastal regions.

Cloud amounts were variable during the day, and there were a few areas of mostly light snow in the east and north. Some heavier bursts of snow affected coastal regions in the far northeast of England and north of Scotland. Generally, though, dry, sunny weather predominated over the British Isles. Winds, too, were mostly quite light.

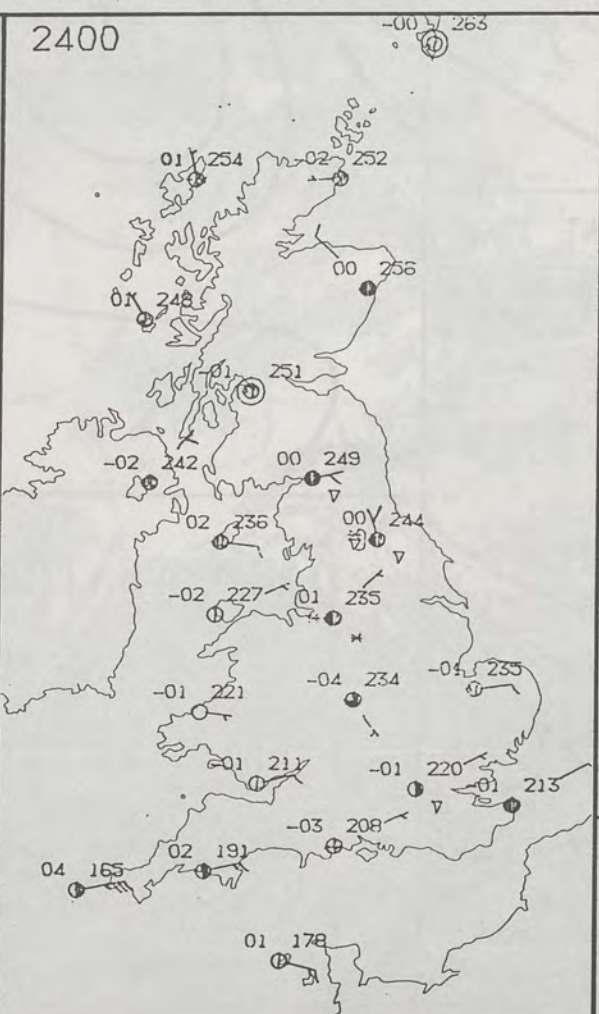

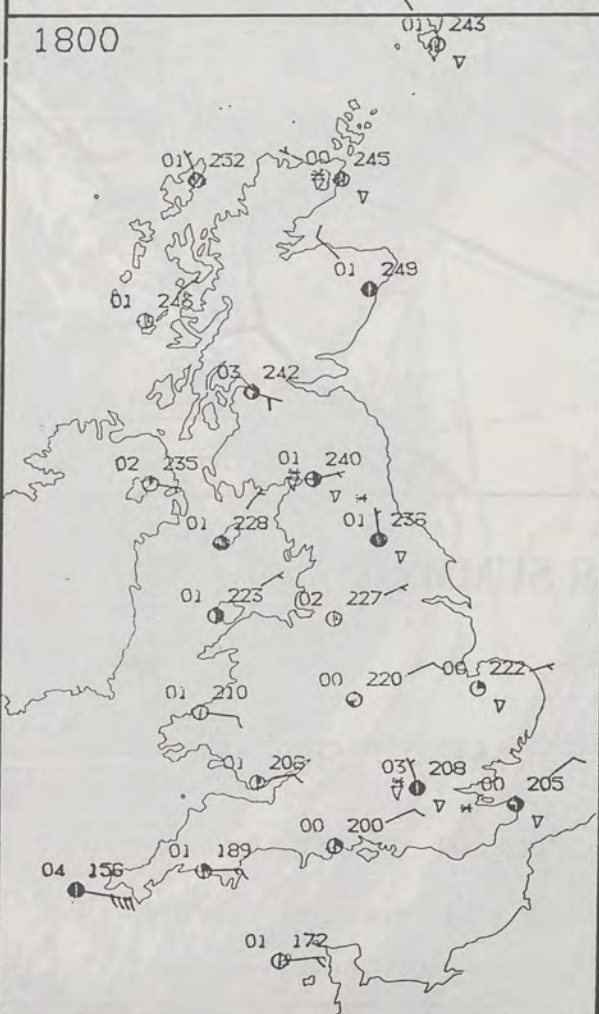

In quite a few districts, especially in England and Wales, it was not as cold as recent days with temperatures rising two or three degrees above freezing point, but still in the rather cold or cold category.

**TUESDAY
25 FEBRUARY 1986**

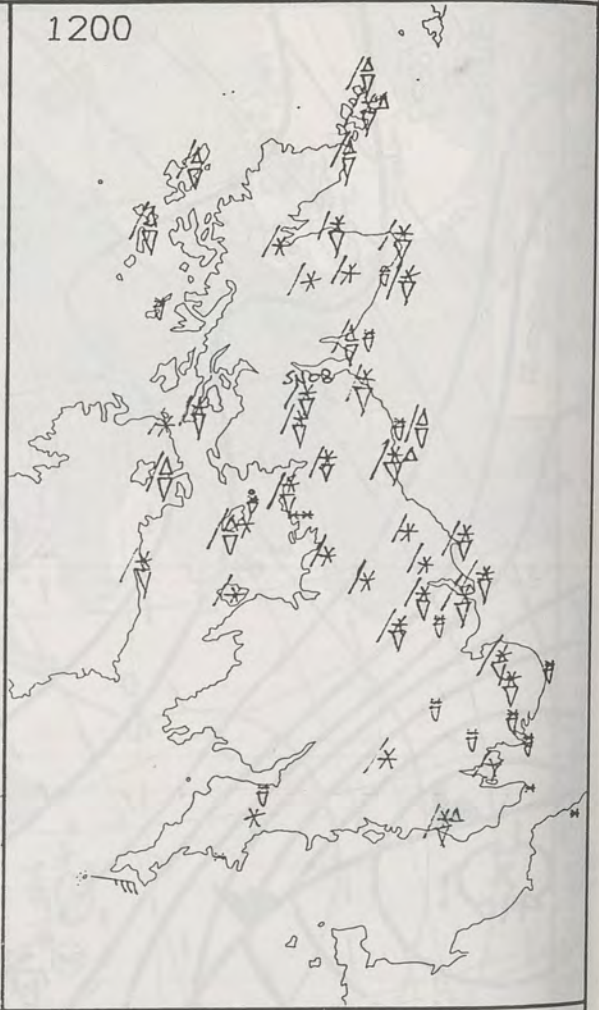

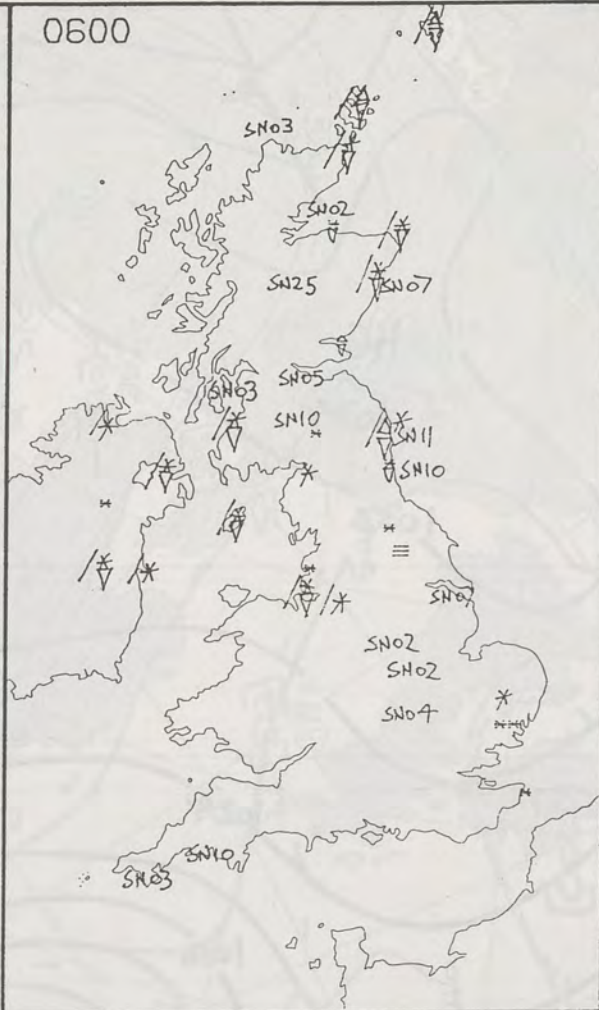

**SUMMARY
OF
BRITISH WEATHER**

Markedly colder air moved west over southern Britain overnight and with a lot of cloud and a fresh wind, it was a bitterly cold day over southern and southeast England and East Anglia with a persistent frost. There was also some light snow, though this tended to die out.

Further north it was not quite so cold, especially over western and northern Scotland and Northern Ireland where it was only rather cold and many places were bright and dry. However, there were snow and hail showers too, especially towards eastern and northeastern coasts where some were quite heavy.

SUMMARY
OF
BRITISH WEATHER

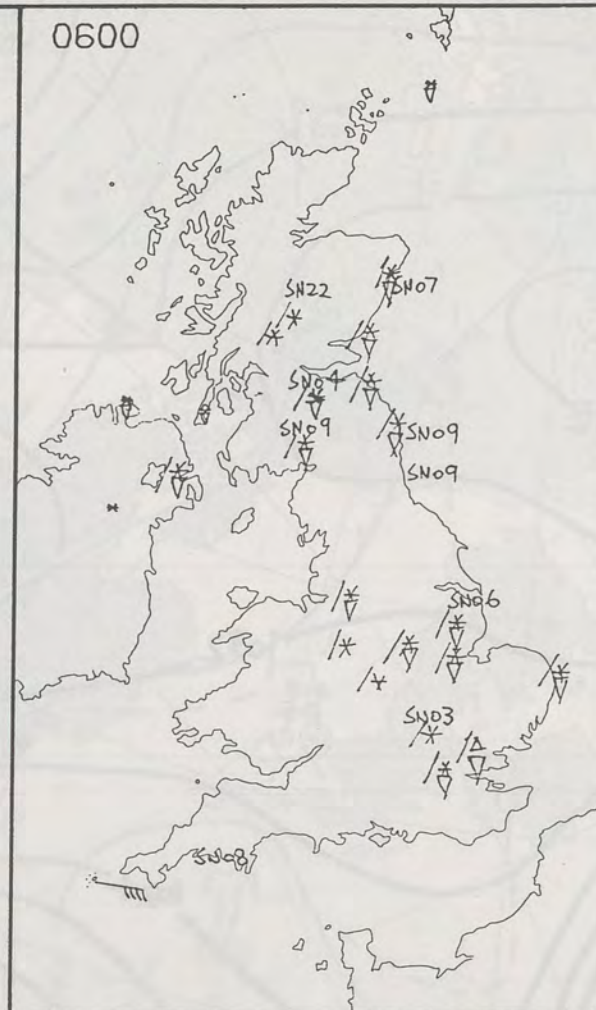

Frost was widespread and severe in most places overnight and apart from a few light snow showers in the Midlands, east Scotland and Northern Ireland most places stayed dry and clear.

During daytime there were long sunny periods almost everywhere. Patchy cloud in northeast England gave a few rain and snow showers, and one or two light snow showers were to be found in southeast Scotland too.

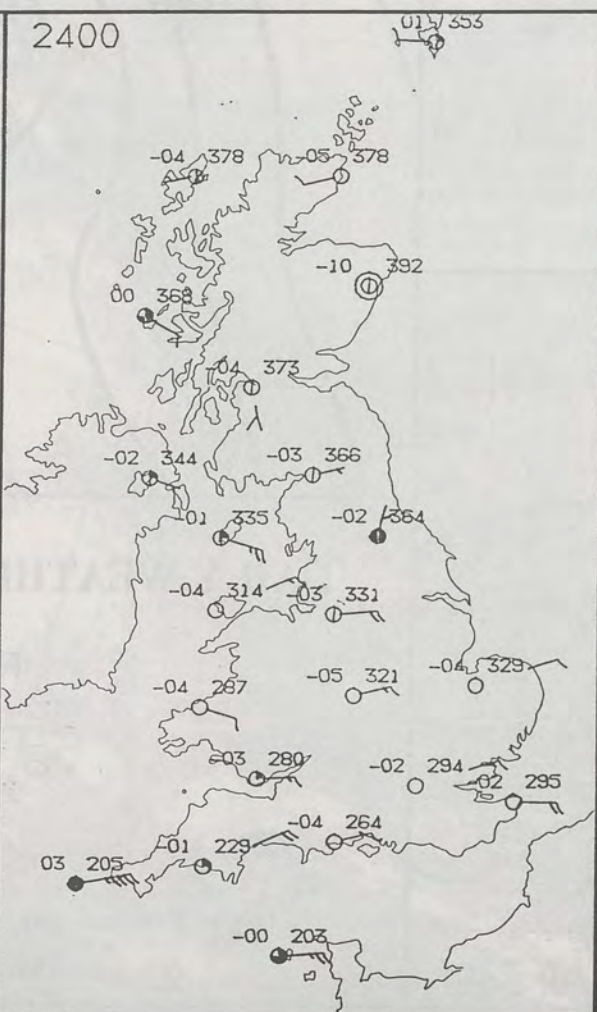

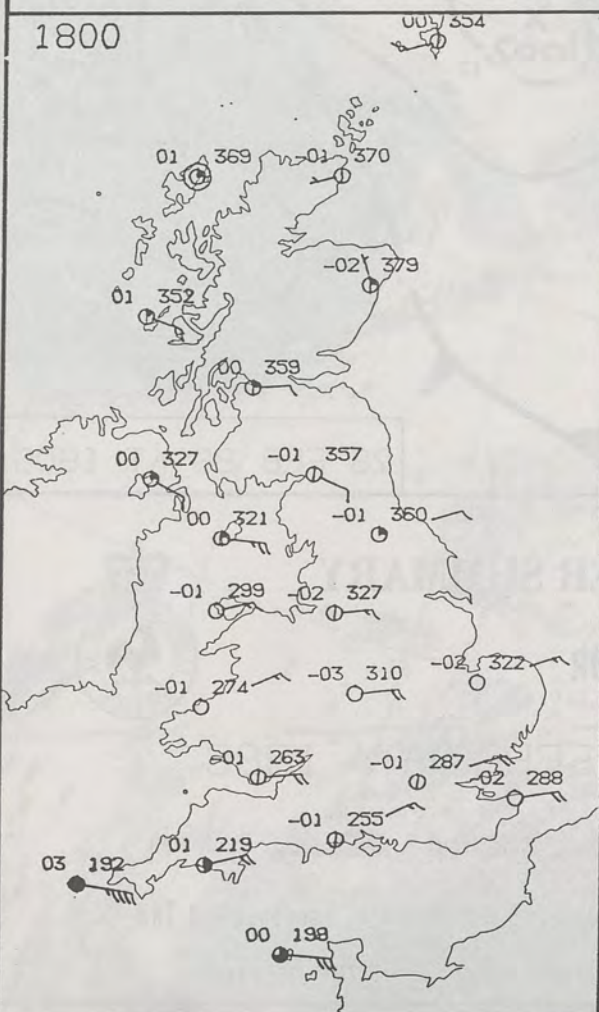

It was a cold or very cold day everywhere, with frost persisting all day over much of southeast England, the Midlands, East Anglia, Lincolnshire and northern England. A gust of 64 knots was reported from Brixham in Devon during the mid-afternoon.

SUMMARY
OF
BRITISH WEATHER

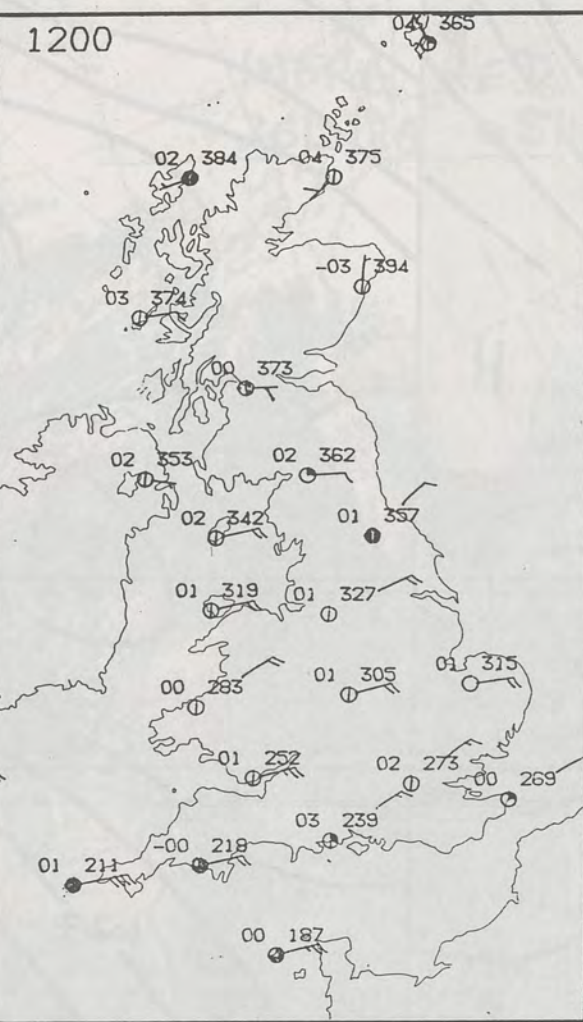

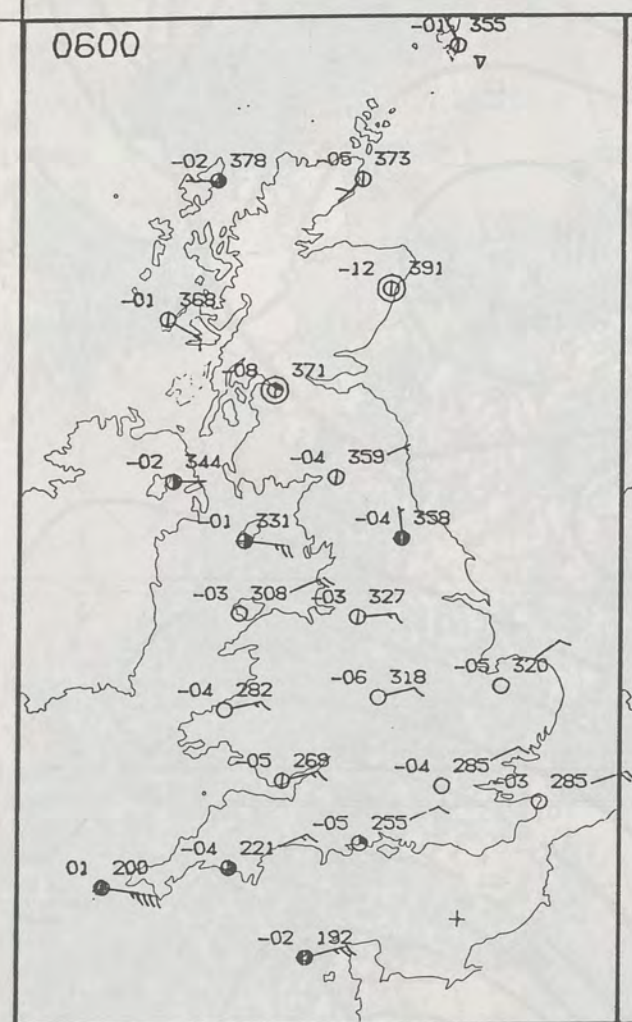

One or two snow showers were to be found in northeast England, parts of southeast Scotland and the Northern Isles; but for the rest of Britain it was a dry night. Frost was widespread and severe in many places.

During the day northeast England and southeast Scotland had some more sleet and snow showers and there were a few in the Northern Isles too. Elsewhere over Britain dry weather predominated, with most places having a sunny day. Later thickening high cloud made the sunshine rather hazy for the Channel Islands and much of southwest England.

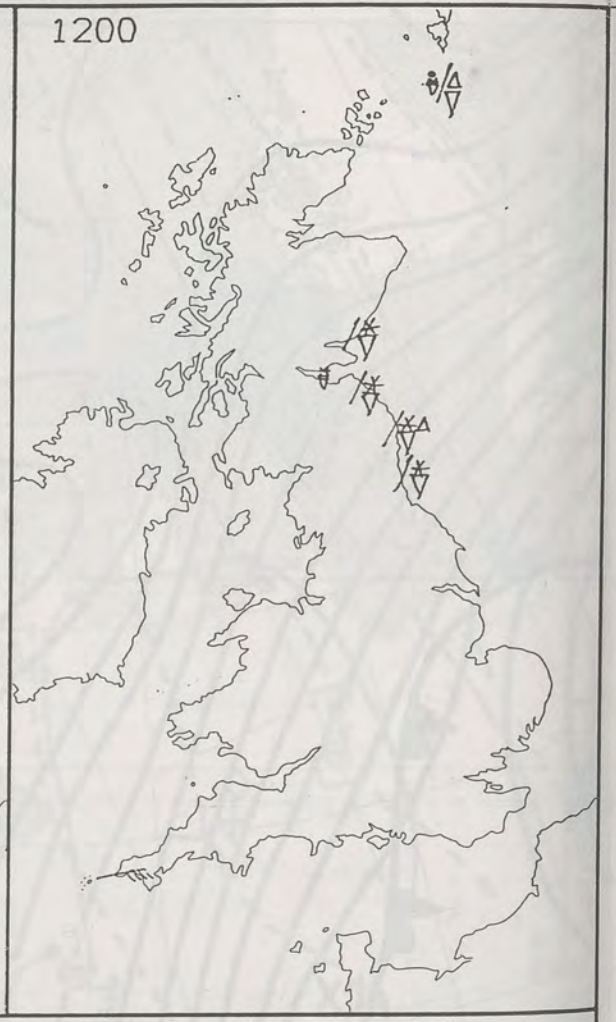

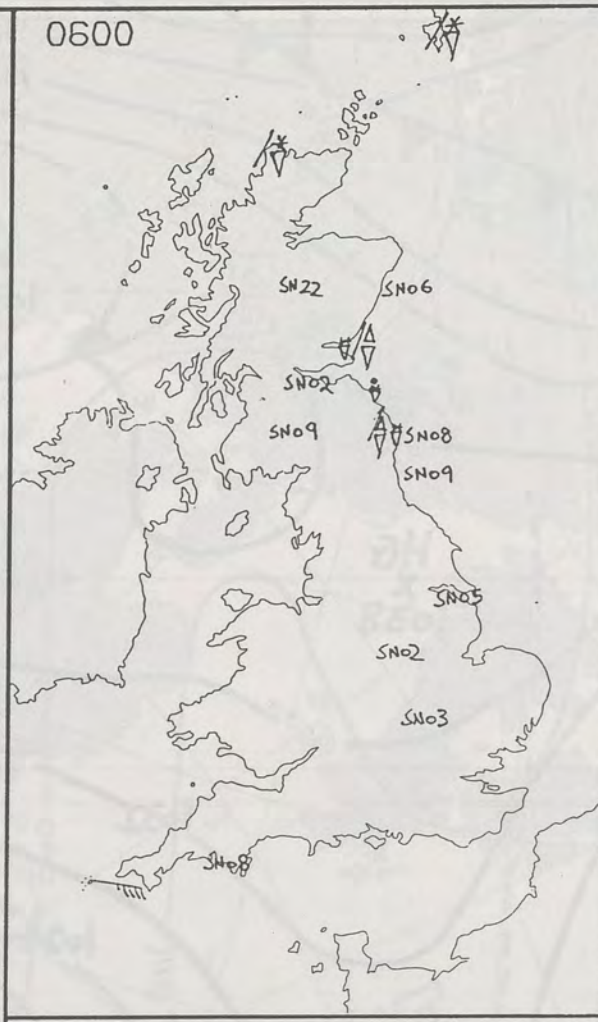

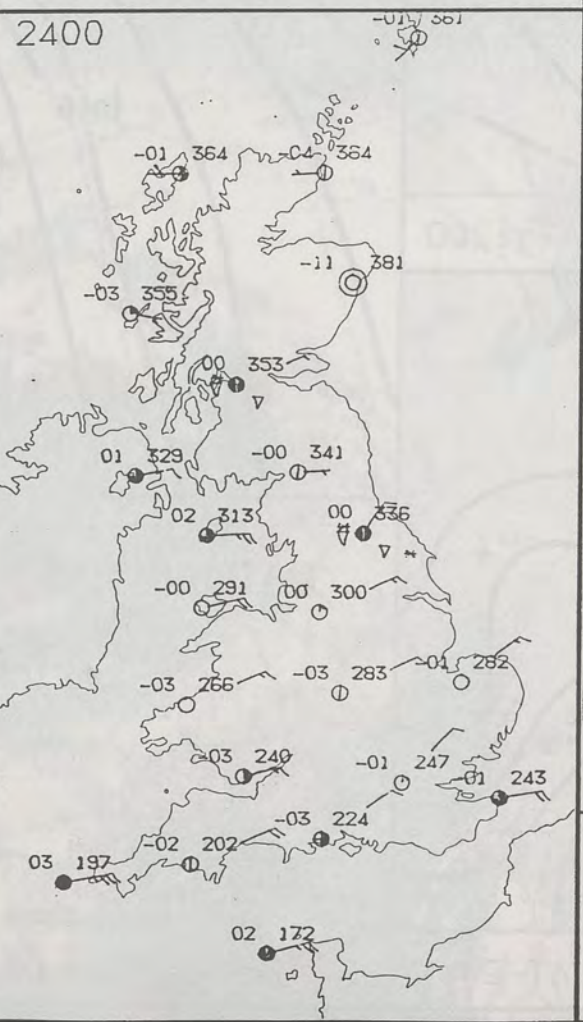

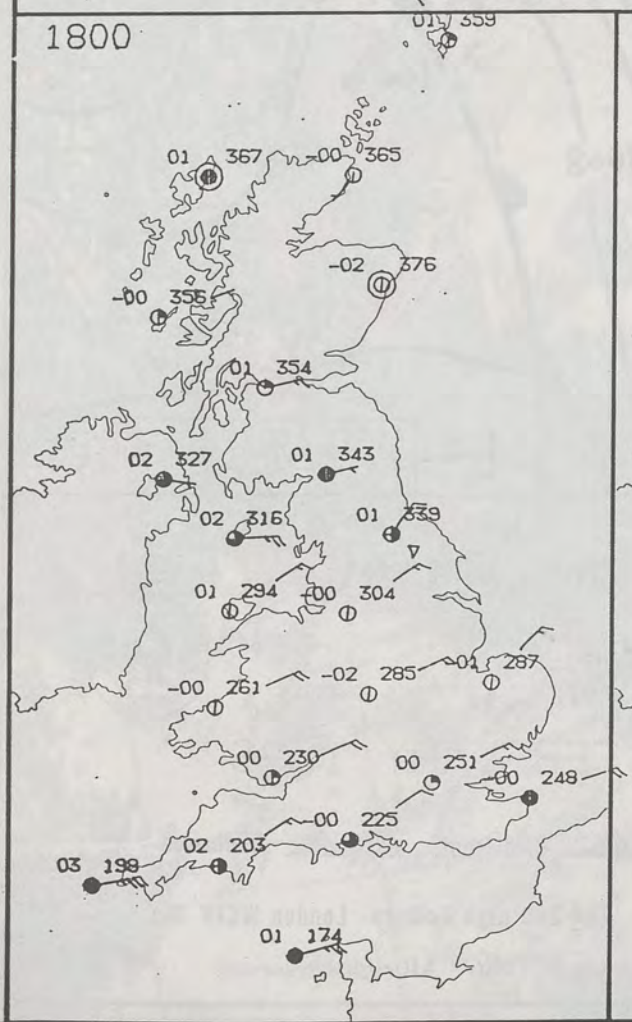

Temperatures were near normal in the far north of Scotland, Orkney and Shetland, but elsewhere it was a cold or very cold day with a biting easterly wind.

SUMMARY OF BRITISH WEATHER

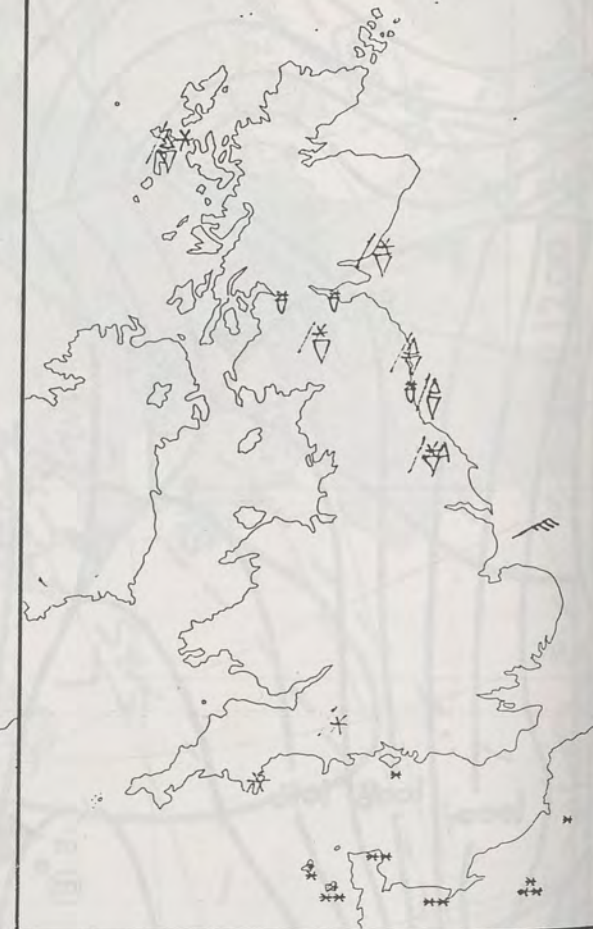

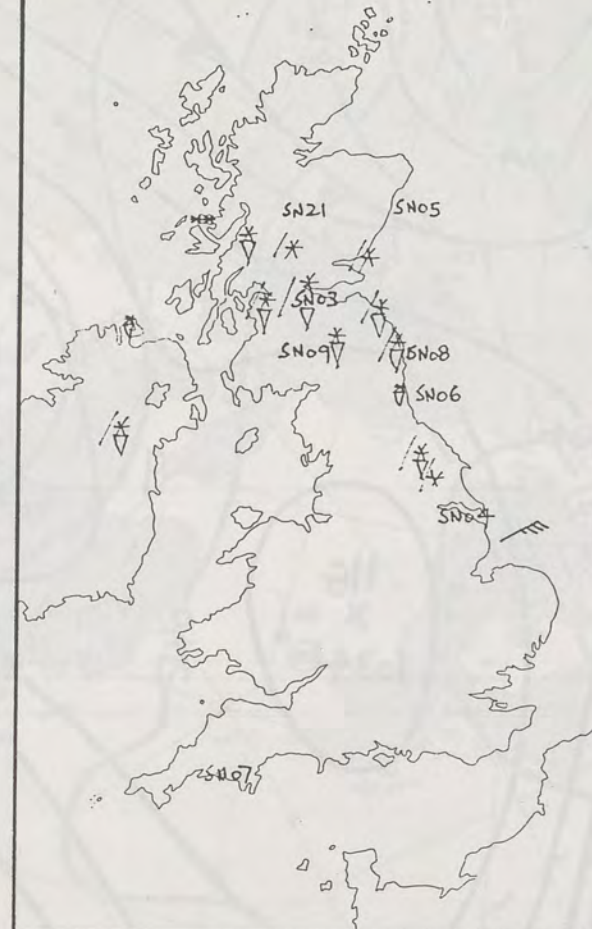

Over most of central and northern Britain it remained dry with small amounts of cloud. In parts of northeast England and southeast Scotland it was rather cloudy at times with one or two snow showers.

In southern parts of England and Wales the sky was mainly clear overnight but cloud gradually spread northward during the day. Outbreaks of light snow reached southern coastal regions during the afternoon and the snow edged slowly inland during the late afternoon and evening. The snow was mostly light and patchy and still confined to the southern half of counties bordering the Channel by late evening but there was a strong to gale force easterly wind drifting the snow. In the Channel Islands snow began in the morning and persisted through the day with some moderate outbreaks.

There was a widespread frost overnight, severe in many places and in the south of England it was a very cold day. Elsewhere it was rather cold or cold.
