Head of Observations, Plans and Requirements Branch.

## 1. INTRODUCTION

Drifting buoys operated by European countries, the United States, Canada and E.G.O.S. (European Group on Ocean Stations) provide valuable meteorological data in the North Atlantic Ocean. This report is a summary of the performance of these buoys giving information on the number of buoys operating, the accuracy of reported locations and data quality, timeliness and availability. It is compiled by looking at observations received in the Met. Office Meteorological Data Base (Met.D.B.) and by comparisons of observations with background fields from the Met. Office forecast model. Additional information on buoy operations and data quality is extracted from E.G.O.S. Technical Secretariat reports.

## 2. GENERAL PERFORMANCE

The following few sub-sections describe the general performance of the drifting buoys throughout the quarter.

### (a) Location Accuracy

69 out of 73 of the buoys reporting, gave a '% of observations with acceptable positions' greater than 95% (69 out of 71 last quarter).

### (b) Data timeliness

(see note 9 of section 6 for definition of terms.)

Timeliness	Last quarter.	This quarter
Very Good	38	45
Good	17	15
Satisfactory	9	8
Poor	3	0
Very poor	4	5
<b>Total no. of buoys</b>	<b>71</b>	<b>73</b>

(c) Data availability

(see note 9 of section 6 for definition of terms.)

Availability	South of 50 deg N		North of 50 deg N	
	Previous Quarter	Present Quarter	Previous Quarter	Present Quarter
Very Good	9	13	20	22
Good	12	7	9	5
Satisfactory	4	9	2	5
Poor	14	10	0	2
Very Poor	1	0	0	0

The total number of buoy days in the quarter was 5159 [obtained by summing the number of reporting days for each buoy] (last quarter the total was 5110) and the number of 'buoy hours' with at least one observation was 88284 (compared with 88625 last quarter). Thus, the mean number of hours per day, for days with at least one observation (averaged over all buoys operating in the area) was 17.11 (last quarter the figure was 17.34).

### 3. SUMMARY OF PRESSURE PERFORMANCE

#### (a) Buoy deployments, etc.

##### North of 50deg N

There were 26 buoys reporting pressure at the beginning of the period. 26 buoys were operating at the end of the period. 8 buoys were deployed during the period (44514, 44721, 44722, 44553, 62596, 64547, 65598 and 65600). 9 buoys ceased reporting pressure (44514, 44616, 44624, 44728, 44780, 64693, 64694, 64700 and 65593).

##### South of 50deg N

There were 29 buoys reporting pressure at the beginning of the period. 28 buoys were reporting at the end of the period. 10 buoys were deployed during the period (44513, 44516, 44517, 44723, 61536, 61537, 62507, 62508, 62509 and 62510). 14 buoys ceased reporting pressure (13504, 41505, 41636, 41637, 41638, 41648, 41649, 41852, 44778, 61501, 61502, 61504, 62506 and 62554).

#### (e) Data Quality - Pressure

##### Revised RMS Differences

The technique used to assess the quality of pressure data in this report is based on the Revised RMS differences between the observations and the background field from the Global Forecast Model (see note 8 in Explanatory Notes). For buoys south of 50°N the Revised RMS differences should be less than (or equal to) 2.0 hPa and for buoys north of 50°N they should be below (or equal to) 3.0 hPa. The buoys whose revised RMS difference were found to lie outside these limits have had their performance described as 'suspect' and are included in the section below. Examination of the time-series plots (see Annex B) indicates the performance of these buoys:-

- 41599 - Data from this buoy was occasionally erroneous throughout the period.
- 41852 - Data from this boy was erroneous until it ceased reporting pressure on 09/11/99.
- 44513 - Data from this buoy became erratic towards the end of the period.
- 44514 - Data from this buoy showed a larger than normal scatter, until it ceased reporting pressure on 08/12/99.

- 44517 - Data from this buoy showed an increasing bias, becoming completely erroneous by the end of the period.
- 44723 - Data from this buoy showed a bias of +2.1hPa from when it started reporting (26/11/99) until the end of the period.
- 44778 - Data from this buoy showed bias of -10hPa during November, until it ceased reporting completely on 22/11/99.
- 61537 - Data from this buoy showed a larger than normal scatter throughout.
- 62506 - Data from this buoy became erratic from mid-October until it ceased reporting pressure on 08/12/99.
- 64700 - Data from this buoy was erratic from the beginning of the period until it ceased reporting on 26/10/99.
- 65593 - Data from this buoy developed a bias of around -7hPa during November, and ceased reporting altogether on 22/11/99.
- 65595 - Data from this buoy was occasionally erroneous throughout the period.
- 65598 - Data from this buoy showed an increasing (negative) bias from when it began reporting, on 09/12/99, until the end of the period.

### Biases

15 buoys (excluding those mentioned in the previous section) showed pressure biases greater than 0.5 hPa (pressure biases are determined using the mean value for unflagged data from Annex A). Those buoys whose pressure data showed a bias of greater than 0.5 hPa have also had their performance described as 'suspect'.

#### (4) Air Temperatures

The following table shows the mean and standard deviation of observation minus background differences for air temperatures.

(Note : The calculations below exclude the majority of gross errors. However, gross errors within +/-20 °C of the background value are included. Therefore, in some instances, the figures may be slightly misleading.)

#### *Summary*

Buoys 44517(12.07), 65593(2.02) and 65596(1.06) all showed significant air temperature bias.

## (5) Winds

The following table shows the mean and standard deviation of observation minus background differences for wind speed and direction.

65599	-1.35	5.69	2517	3.32	36.12	2131

### *Summary*

Although buoy 41648 showed a significant bias for wind speed throughout its reporting life, figures in the table (are misleading) as they were calculated using only the two reports where wind direction was available.

Buoys 44607(2.13) and 44721(-2.60) both showed a significant **wind speed** bias throughout their reporting lives.

## 6. EXPLANATORY NOTES:

1. Buoy owners are as follows,

CA	- Canada	P	- Portugal
F	- France	UK	- United Kingdom
D	- Germany	US	- United States
N	- Norway	IC	- Iceland
NL	- Netherlands	EG	- EGOS
IR	- Ireland		

2. Number of observations received is the number received at Bracknell in the Meteorological Data Base (Met.DB). If identical reports are received which have originated at different Collecting Centres, the earliest one received at Bracknell is stored in the Met.DB.
3. An observation with valid Time and Date is one that contains no coding errors in the Date/Time group.
4. An acceptable position for an observation is within a distance  $d$  of the last acceptable position where  $d = vt$  and,  
 $v$  = maximum drift speed = 1/4 knot  
 $t$  = time between observations.
5. The percentage of elements present is calculated from the total number of observations received.
6. The delay is (Time of Receipt at Bracknell) - (Time of Observation).
7. The mean number of observations per day is calculated from the total number of observations received divided by the number of days in the period. It therefore includes 'quasi-identical' observations, i.e. those made within a few minutes of one another. For this reason the mean number of hours per day with at least one observation and the % of hour periods without an observation has been included, where an 'hour period' is defined as the period from HH-30 to HH+29 minutes.

8. Mean (OB-BG) is the mean value of (Observation-Background) Pressure, where the Background is the 6-hour forecast from the Global Forecast Model. RMS (OB-BG) is the Root Mean Square value of (Observation-Background) Pressure differences.

Unflagged data are those data used in model analyses.

Flagged data (i.e. unused observations) are those observations of suspect quality and all observations reported by a buoy at a frequency greater than 5 times every 6 hours, with accepted observations being at least one hour apart. Thus, those buoys which report most frequently have a higher percentage of flagged data.

The Mean calculated over Unflagged Data gives an indication of the instrument bias, since any gross errors have been excluded from the calculation.

The Revised RMS is based on all data except for the few that contain gross errors (as indicated on the time-series graphs - see Annex B).

9. The performance categories are defined in the table below.

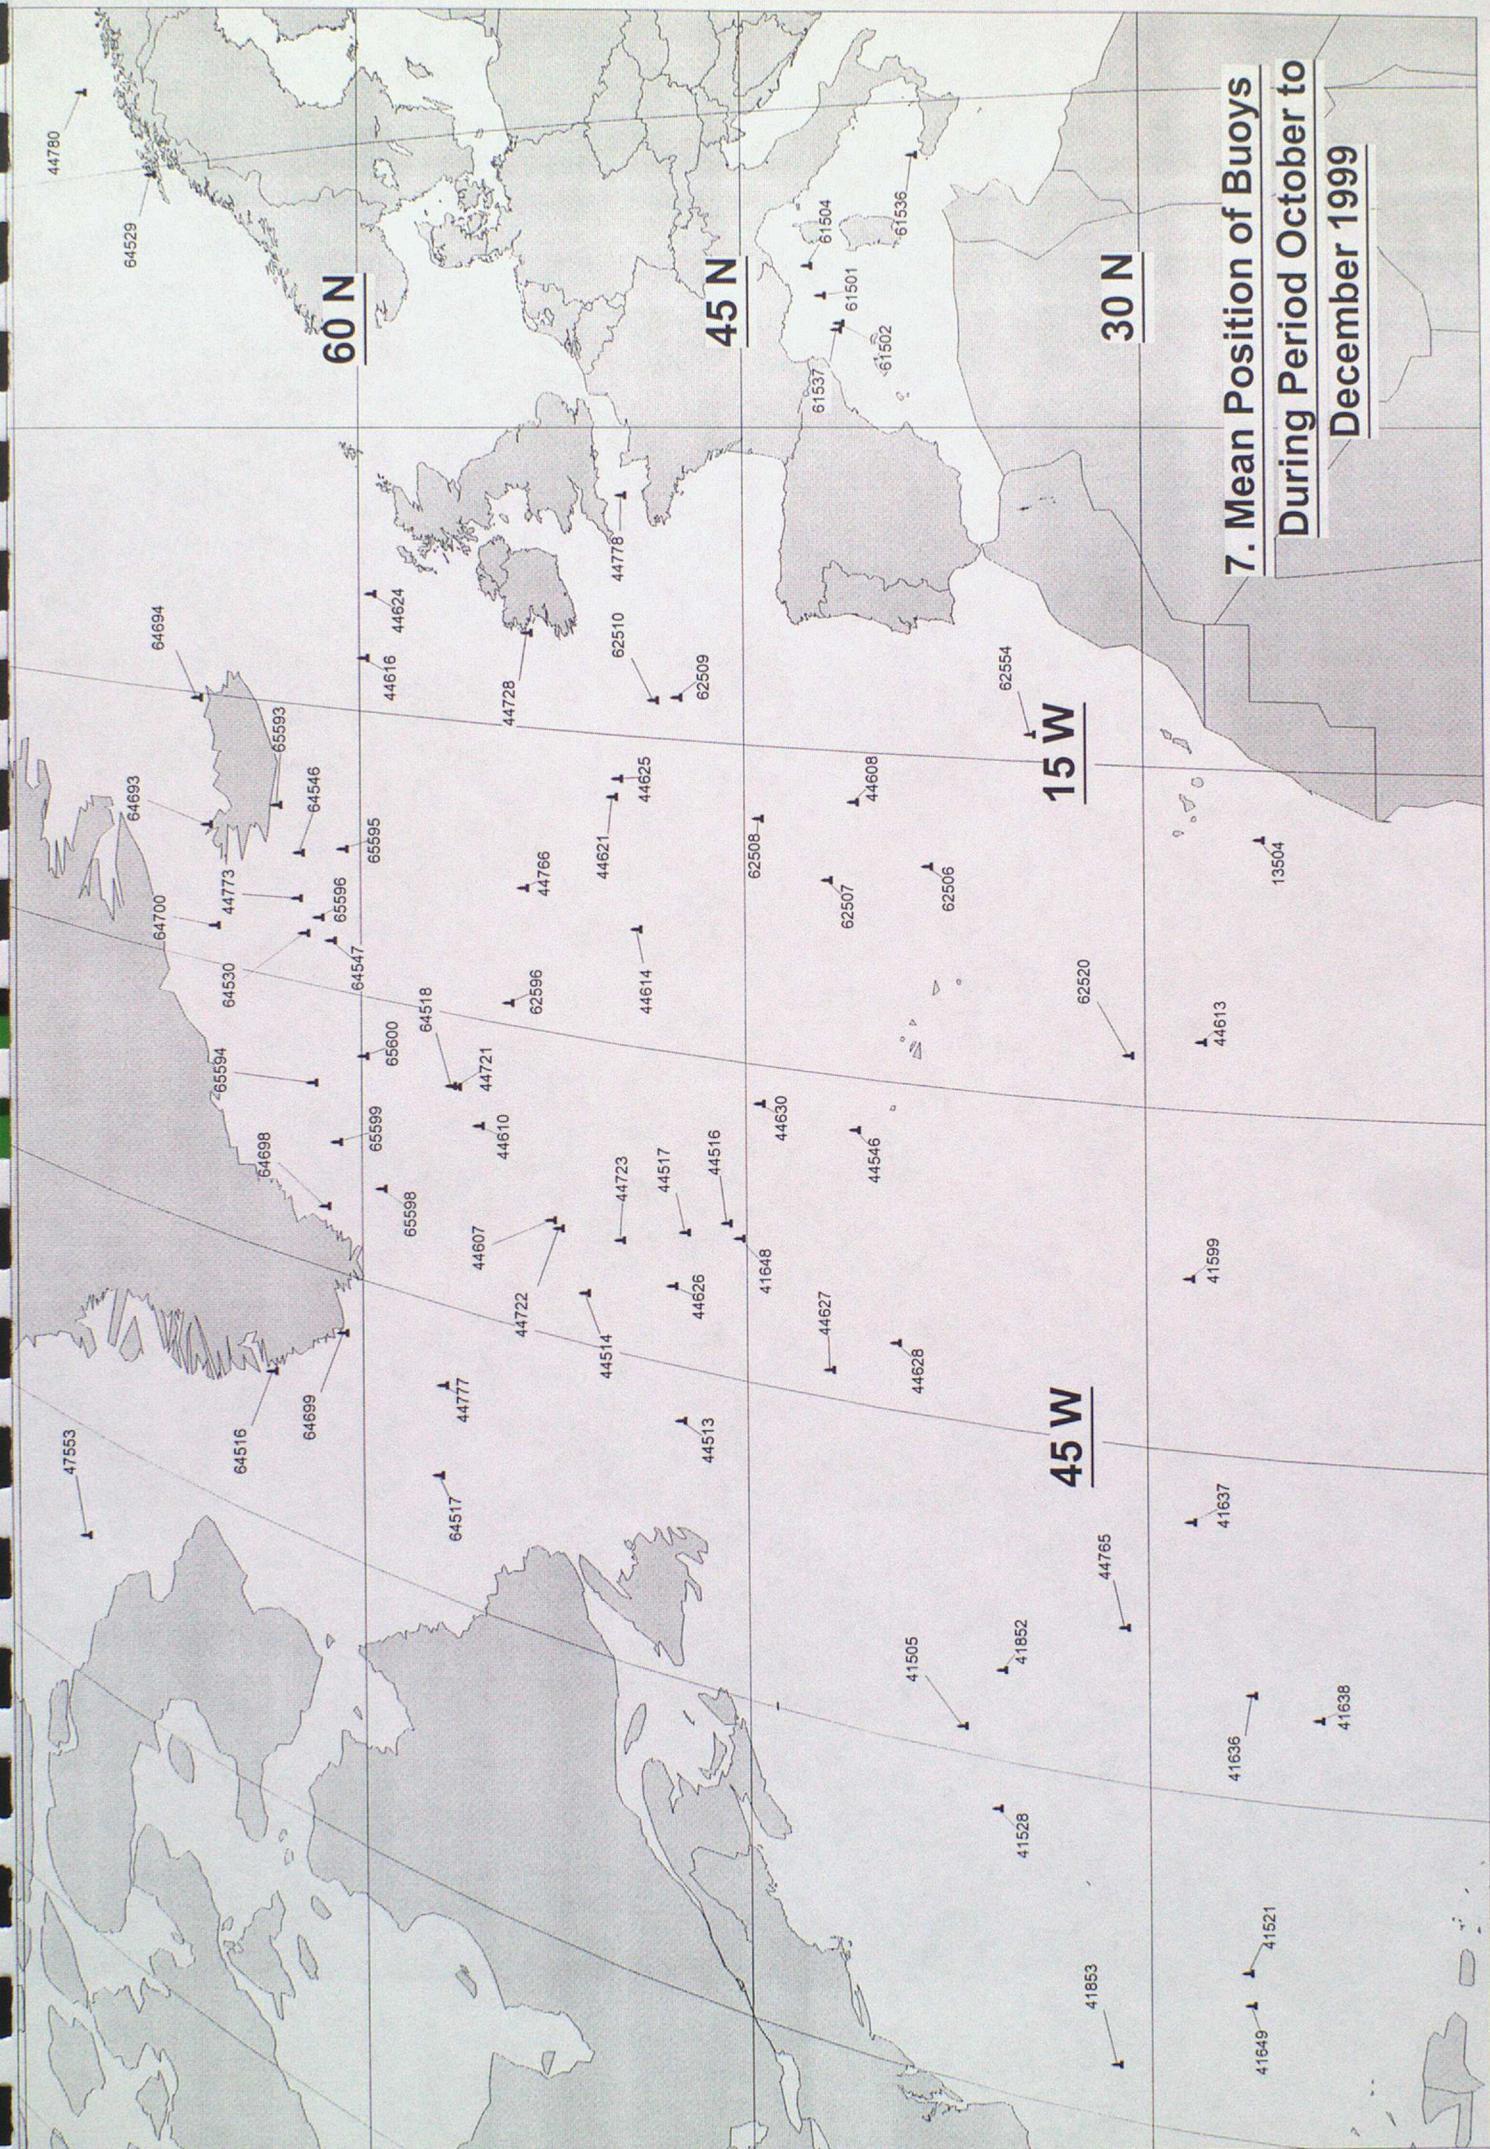

Performance	Availability (mean no. of obs/day)	Timeliness (median delay in mins)
Very Good	> 35	< 60
Good	25 - 35	60 - 119
Satisfactory	15 - 24	120 - 179
Poor	5 - 14	180 - 239
Very Poor	< 5	> 240

(N.B. WMO requirements state the need for only 4 observations per day from marine stations.)

The pressure quality is assessed from the Revised RMS and the Mean (for unflagged data).

Performance	Pressure Quality (in hPa)				
	North of 50 degN		South of 50 degN		
	RMS	MEAN	RMS	MEAN	
Acceptable	<= 3.0	<= 0.5	<= 2.0	<= 0.5
