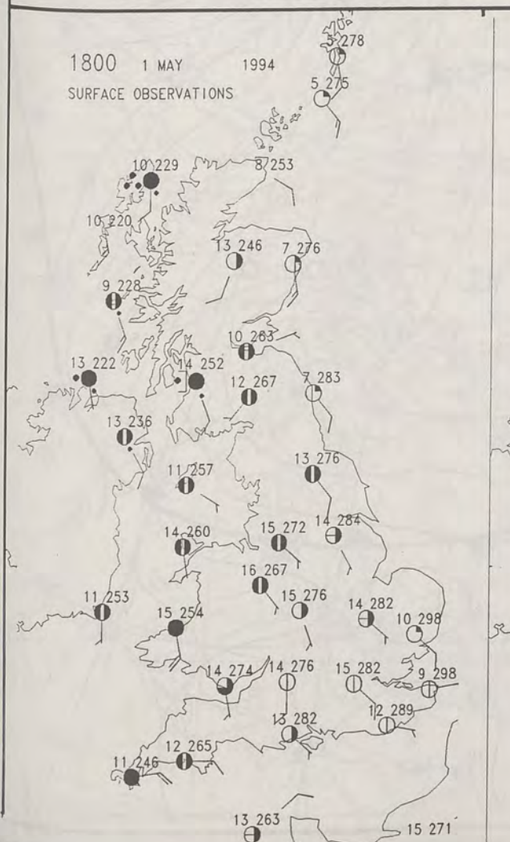
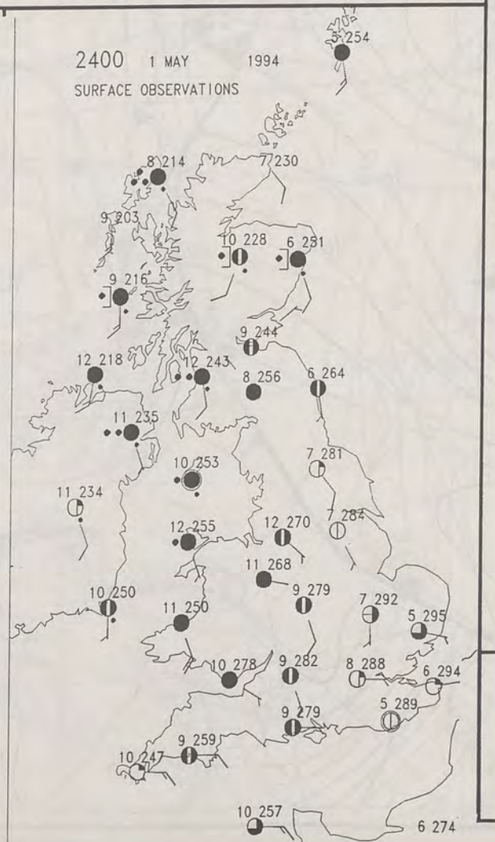
PLOTTED SURFACE OBSERVATIONS





SUMMARY OF UK WEATHER SUNDAY 1st May 1994

After a cool night in many inland areas of England and Scotland, it was a bright start to the day, and dry everywhere. By mid-morning, cloud was thickening over Northern Ireland ahead of an area of light rain which reached the province by noon.

Elsewhere, it was turning out to be another warm day away from the east coast where onshore winds prevailed. By mid afternoon it was still a bright or sunny day over the bulk of the country but the rain over Northern Ireland had spread to the Western Isles. This rain, occasionally quite heavy, persisted into the evening, by which time further bursts had reached Northern Ireland.

During the evening too, cloud, albeit mostly high and thin, was working its way across much of the mainland. Temperatures generally were a degree or two above average but cooler nearer the east coast. There was groundfrost in places early and late.

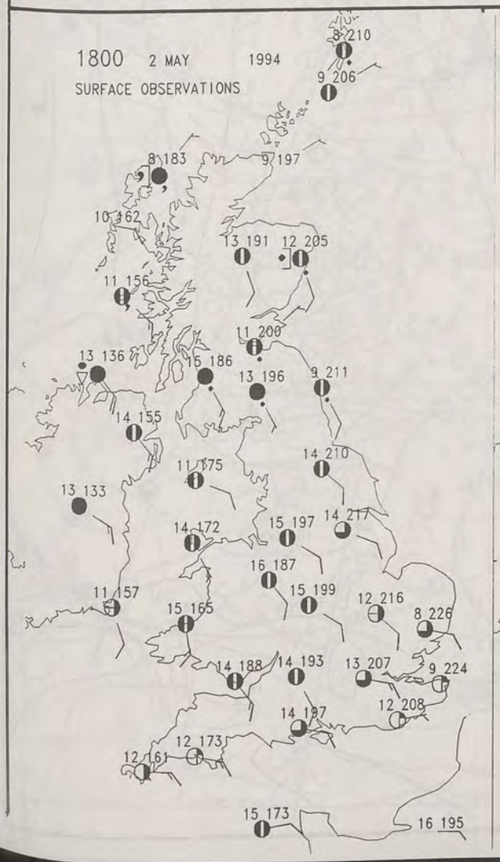
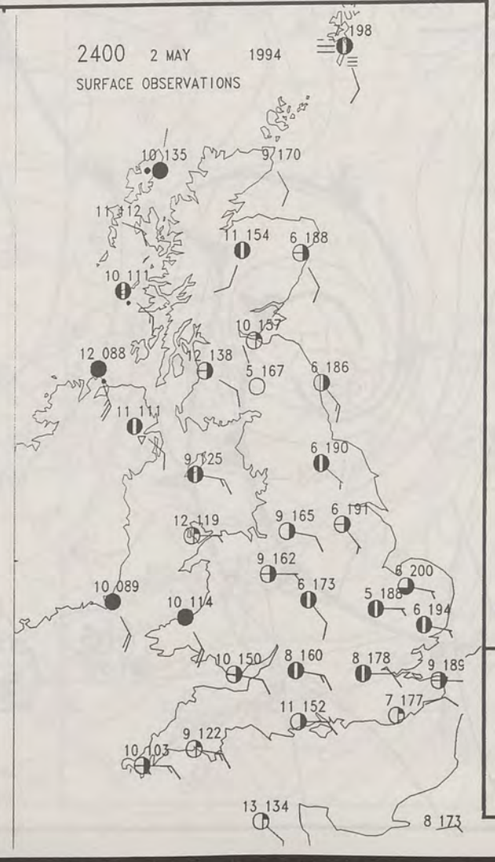
PLOTTED SURFACE OBSERVATIONS





SUMMARY OF UK WEATHER
MONDAY 2nd May 1994

Northern Ireland and much of Scotland started the day rather cloudy and there were outbreaks of rain from time to time but these tended to die out by mid-morning. Elsewhere there was rather a lot of thin high cloud making the early morning sunshine rather hazy at times.

By noon, any remaining drizzly rain was confined to the Western and Northern Isles and a few places over or near to the Scottish Borders.

Some eastern coastal counties were rather cloudy at times as cloud was driven onshore from the still cool North Sea.

By early evening there were a few showers too, principally in Northern Ireland where cloud was thickening ahead of the next weather system.

It was a generally warm day away from cool windward facing coasts in the east. Especially favoured were areas in the lee of hills in the west such as the North Wales coast.

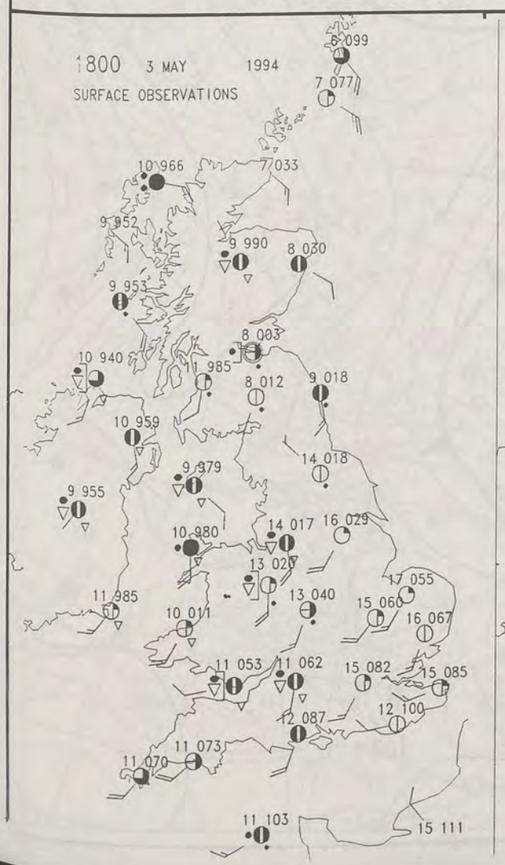
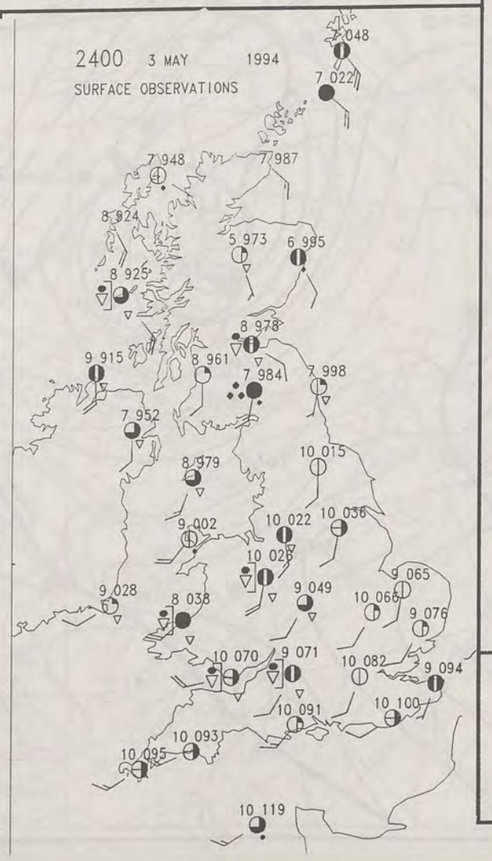
PLOTTED SURFACE OBSERVATIONS





SUMMARY OF UK WEATHER
Tuesday 3rd May 1994

It was generally a fine night across the United Kingdom with clear periods and small amounts of cloud. Western districts were more cloudy.

The cloud thickened over southwest England, west Wales and Northern Ireland in the morning with outbreaks of rain. The rest of the country stayed dry with sunny spells; the best of the sunshine was in eastern and southeast England. During the afternoon, rain pushed into other parts of Wales, northern England, the Midlands, southern and western Scotland. There were some heavy bursts of rain in Scotland, but further south it was mainly light and patchy. Brighter showery weather followed to Northern Ireland and the southwest; and most of central southern England, southeast England and East Anglia stayed dry although became rather cloudy for a while.

By evening, the rain was confined to southern Scotland, heavy at times with isolated thunder. Northern Ireland and western areas of England and Wales had showers, but elsewhere it was dry.

Temperatures were close to the average in most of Scotland and Northern Ireland; whereas many parts of England and Wales were warm if not very warm.

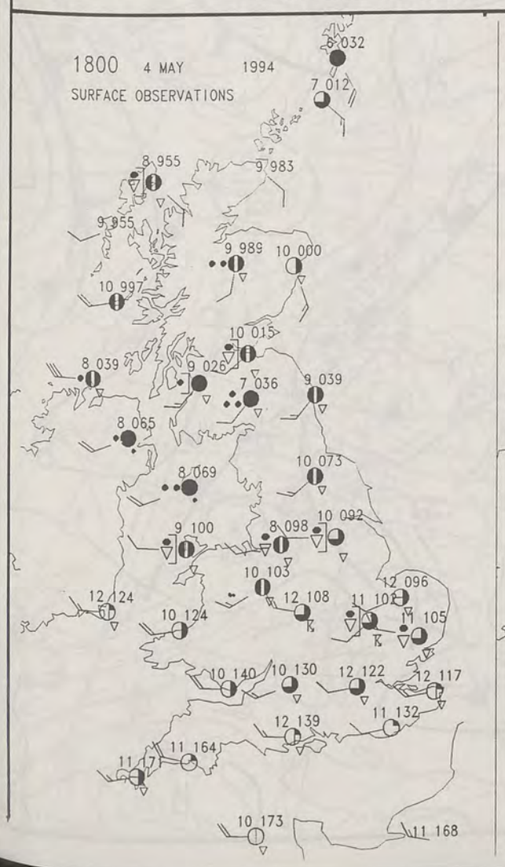
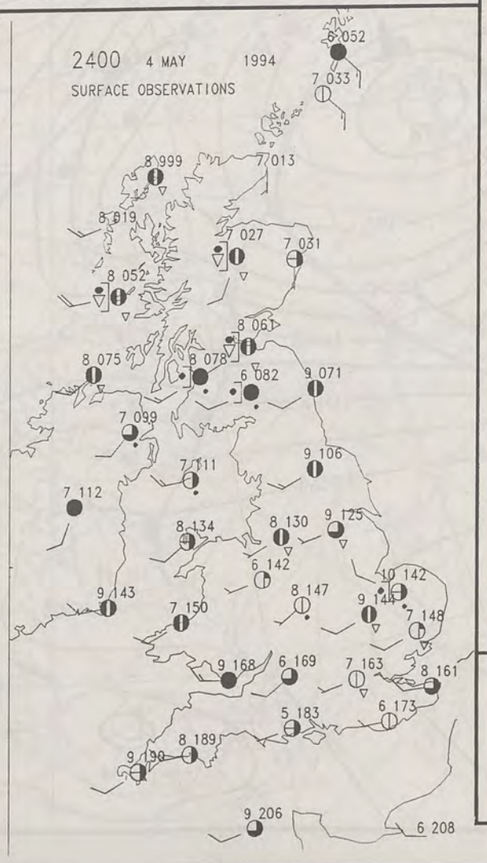
PLOTTED SURFACE OBSERVATIONS





SUMMARY OF UK WEATHER
WEDNESDAY 4th May 1994

Northern Scotland stayed dry overnight with clear spells, but rain spread to the South.

Northern Ireland had a cloudy, showery night.

Over England and Wales there were clear spells, but there were showers as well, especially in Wales and the West of England.

During the day there was some sunshine nearly everywhere in Scotland, but showers in most places with some longer spells of rain.

Northern Ireland had a cloudy day with rain at times, some of it heavy.

There was sunshine at times in Wales too, indeed some places in the South had a sunny day, but there were showers, most of them in the North.

England too was sunny at times, but most places had showers. Some of them were heavy and there were several thunderstorms.

Temperatures were close to average.

SUMMARY OF UK WEATHER THURSDAY 5th May 1994

Much of the country had a dry night with variable cloud. It was cold in places with a ground frost in sheltered parts of southern and central England. Increasing cloud in the west brought outbreaks of rain to western Scotland, Northern Ireland, west Wales and southwest England.

Eastern Scotland and England had a dry, bright start with sunny periods. However, outbreaks of rain or drizzle spread east to cover most parts by early afternoon. The rain was heaviest in the west. It turned misty in places with patchy fog along some western and southern coasts.

During the afternoon brighter weather with showers edged from the northwest across western Scotland and Northern Ireland. These clearer conditions spread across the rest of Scotland in the evening- and then to much of northern England and Wales by midnight. Meanwhile, the remainder of England and Wales stayed misty with rain or drizzle.

Temperatures were around normal during the day after a cold night in parts of the south.

PLOTTED SURFACE OBSERVATIONS

SUMMARY OF UK WEATHER
FRIDAY 6th May 1994

Rain or drizzle covered south Wales and much of England during the night- as far north as about north Yorkshire. The Northern Isles had a short period of rain too. For the rest of the Wales, northern England, Scotland and Northern Ireland it was a generally dry, clear night with showers only affecting western Scotland. These clearer conditions spread to Wales and central England by the end of the night.

In the morning, many places had some sunshine in particular northeast Scotland and northeast England . However, southern and southeast England, and East Anglia stayed generally cloudy. Showers continued in western Scotland but they became less frequent during the day, and there were only a few across mainland Scotland, Northern Ireland and northern England. Even so, the odd heavy shower persisted into the night and a thunderstorm was reported on Islay.

During the afternoon rain returned to southwest England, and continued north and eastwards across Wales and central and western parts of England through the evening.

Temperatures were around normal.

SUMMARY OF UK WEATHER SATURDAY 7th May 1994

Overnight much of England and Wales had outbreaks of rain and drizzle. There were a few showers over western Scotland but most of Scotland and Northern Ireland had a dry night.

Much of England and Wales had a cloudy day. There was rain especially in the north and east. During the day western parts became brighter with some showers. Some western areas such as the Isle of Man and Isles of Scilly had a sunny day and the rain only reached northeast Kent in the evening. The rain lasted through the evening in more southeastern parts and East Anglia. There was some heavy rain with thunder reported in Kent.

There were a few showers over western Scotland in the morning. Showers became more widespread over Scotland and Northern Ireland in the afternoon. Hail was reported in places with thunder in Northern Ireland and around the Moray Firth.

Temperatures were close to or a little normal over most of the country.

PLOTTED SURFACE OBSERVATIONS

SUMMARY OF UK WEATHER
SUNDAY 8th May 1994

It was a fairly cloudy night across the country with just a few spots of rain in the Scottish borders but clearer over parts of Scotland with a touch of groundfrost and a few mist patches.

By dawn it was dry everywhere with a good deal of sunshine but with some persistent cloud affecting southeastern and eastern counties through much of the morning.

By mid morning there were a few showers in the southwest but they were mainly light. A few spots of rain fell on the Kent coast before noon.

The afternoon saw an increase of shower activity in many areas but principally along coasts. Some of the showers were quite heavy, especially so in the southeast and over East Anglia where there was thunder too.

By mid evening the showers were beginning to die down and the thunderstorms had moved away to Humberside and north Yorkshire, but not before parts of East Anglia had seen substantial rainfall.

By this time too, cloud was thickening in the southwest with outbreaks of mainly light rain.

It was a generally warm day away from the heavier showers.

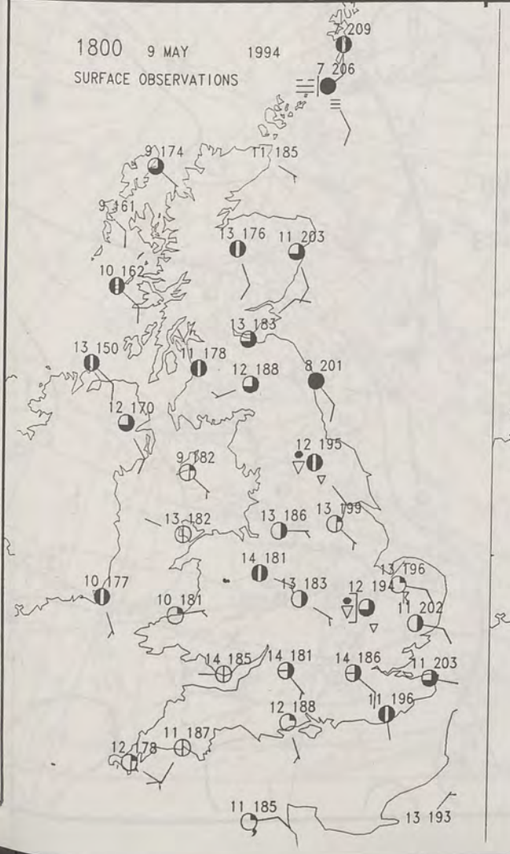
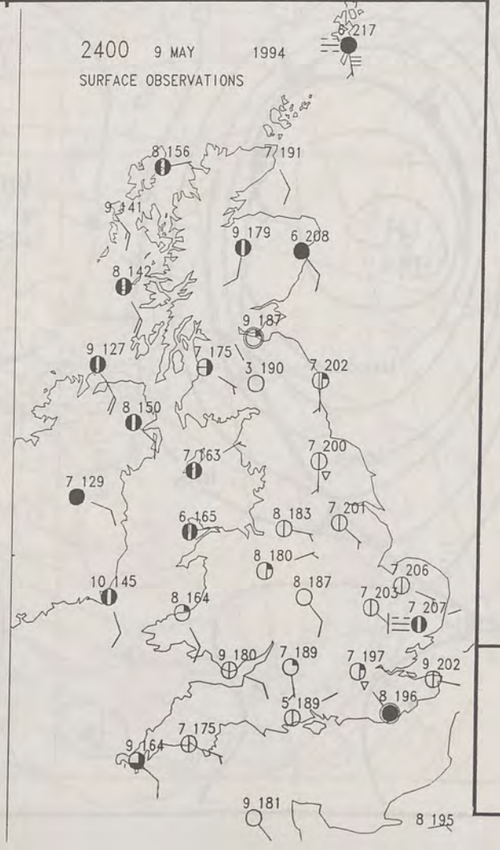
PLOTTED SURFACE OBSERVATIONS





SUMMARY OF UK WEATHER
MONDAY 9th May 1994

Scotland and Northern Ireland were dry overnight with clear skies and patchy fog here and there. It was a cold night and in Scotland there was a touch of frost.

Wales was dry too. Many places were cloudy early on, but the skies cleared before morning.

Most places in England were dry as well, although in the southwest there was some rain and drizzle while northern England had a few showers. Many places turned misty and there was patchy fog.

Wales and much of Scotland had a sunny day, although in Scotland there were one or two showers.

Northern Ireland had a dry, bright day, with plenty of sunshine, although most places clouded over during the evening.

Most places in England were dry with a lot of sunshine. However central and eastern areas turned more cloudy. There were a few showers, especially in northeast England and East Anglia and one or two thunderstorms in East Anglia and Lincolnshire.

Temperatures were close to or a little above normal.

PLOTTED SURFACE OBSERVATIONS

SUMMARY OF UK WEATHER WEDNESDAY 11th May 1994

The bulk of the country was dry with clear spells, however misty low cloud spread to East Anglia and parts of eastern Scotland during the night. There was also some patchy rain in western parts of Cornwall Pembrokeshire,Northern Ireland and SW Argyll.

Most parts of the British Isles were dry with sunny periods and generally warm. The exceptions to this were the western extremities of Wales, Cornwall, southwest Argyll and Northern Ireland where it was more cloudy with patchy rain. The misty low cloud was rather persistent across East Anglia and other areas close to the North Sea with some patchy drizzle in places. During the evening outbreaks of showery rain started to extend northeast to other parts of the west country and south Wales.

Temperatures were warm in parts of central southern England but rather cool near the east coast.

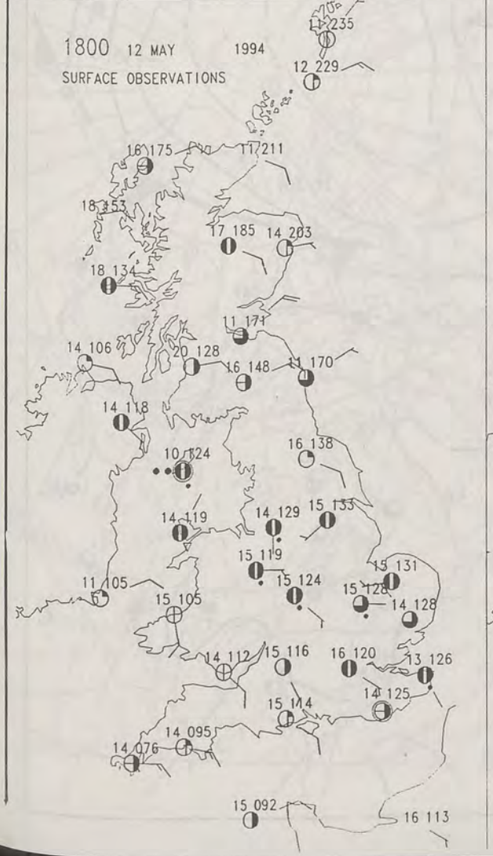
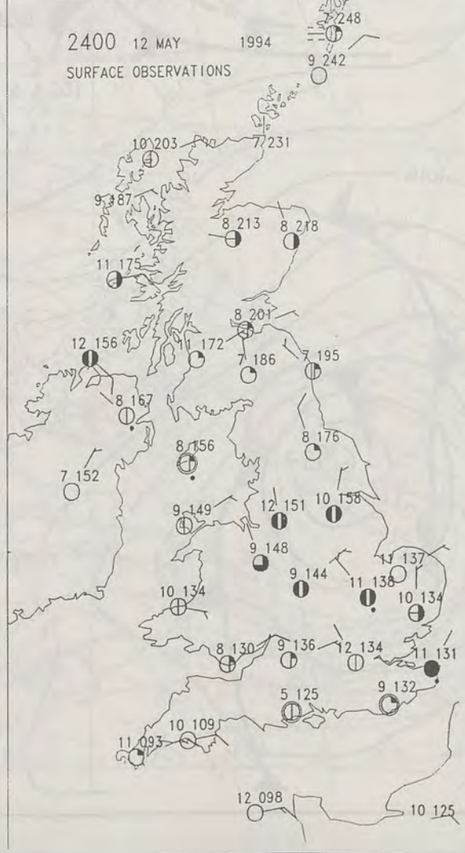
PLOTTED SURFACE OBSERVATIONS





SUMMARY OF UK WEATHER THURSDAY 12th May 1994

Much of Britain was dry and fairly clear overnight, it did however become quite misty along the northeast coast and later in the central lowlands and northeastern Scotland.

The main exception however, was the outbreaks of rain across the West Country and just fringing southern Pembrokeshire. Gradually as the night wore on the rain extended eastwards along southern coastal counties so that by dawn it was raining on the Isle of Wight and Hampshire.

The morning was quite wet in counties from west Wales across central southern England to Sussex, but as the rain area moved north over the next few hours it gradually lost intensity. Behind the rain band brighter and drier weather followed and had reached most of southern England and South Wales by about midday. By evening the remnants of the rain band had fragmented to lie near Liverpool Bay and also around the southern North Sea.

Most other parts were dry and fairly sunny.

Temperatures ranged from average in brighter southern areas and close to the east coasts to very warm in the Northwest.

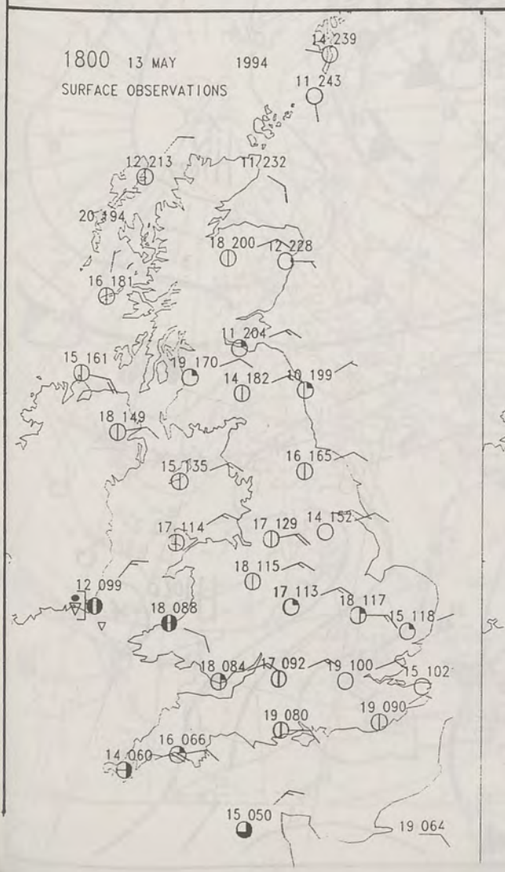
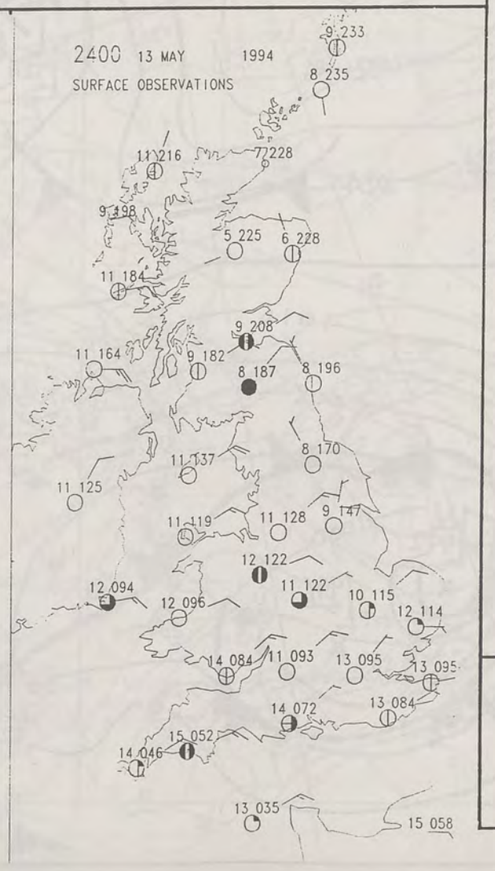
PLOTTED SURFACE OBSERVATIONS





SUMMARY OF UK WEATHER FRIDAY 13th May 1994

The bulk of the British Isles was dry and clear overnight, although parts of the North Wales, the Midlands and Essex were cloudier with some patchy light rain. The rain had largely died out by morning. It became misty in places later in the night.

During the day, much of the country stayed dry with a good deal of sunshine. The band of cloud over central parts gave a little light rain in places at first before becoming more broken as well. It was a breezy day generally.

It was generally a warm day. There were some exceptions though, near the east coast the temperatures were close to normal, and in some sheltered western parts it was very warm (23 deg C at Aultbea, Northwest Highland).

SUMMARY OF UK WEATHER SATURDAY 14th May 1994

Most of the country had a fine night. There was some fog in eastern Scotland. Over southern England patchy cloud gave a few showers and thunder was reported in the Channel Islands.

During the morning there was further patchy rain over southernmost counties of England and heavier rain reached the Channel Islands. The rest of England and Wales had plenty of sunshine.

In the afternoon the rain became heavier and more persistent over southern England, spreading into the Midlands and East Anglia. The Channel Islands became mainly dry. Drier weather spread across many southern parts of England in the evening. The Midlands, East Anglia, most of Wales and parts of Northern England had a wet evening. Thunder was reported in south Wales.

Most of Scotland and Northern Ireland had a dry, sunny day. The Northern Isles were more cloudy with a few light showers.

It was warm or rather warm over most of the country. Parts of the east coast were rather cold.

PLOTTED SURFACE OBSERVATIONS

SUMMARY OF UK WEATHER
SUNDAY 15th May 1994

Most northern parts had a dry night. A band of rain moved north across northern England, Wales, the Midlands and East Anglia. Southern parts of England were largely dry.

Southern England and south Wales had a bright morning with some sunshine. There was some rain over southwest England in the afternoon and evening, and in the evening some showers over south Wales and southwest England, as well as southeast England, where there was also thunder.

The north Midlands, northern England, north Wales and the far south of Scotland had a cloudy, wet day with some heavy rain, although the Midlands turned drier later. Northern Ireland also turned wet. Most of Scotland had a dry day apart from that rain in the south and a few showers around the Moray Firth and in the Northern Isles.

It was warm over southeastern parts of England. Over northern England, Northern Ireland, and southern Scotland it was very cold. Elsewhere temperatures were close to normal.

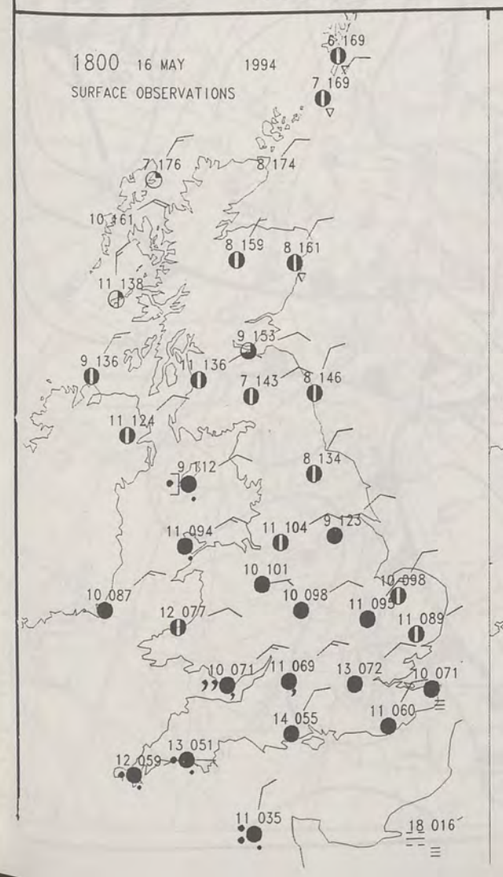
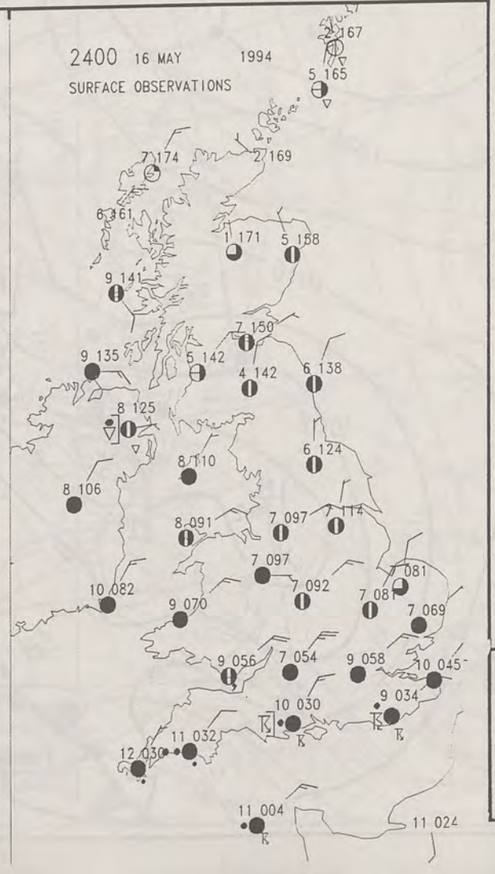
PLOTTED SURFACE OBSERVATIONS





SUMMARY OF UK WEATHER MONDAY 16th May 1994

Most of Northern England and Scotland had a dry night, but there was the odd spot of rain in Northern Ireland and Northern Scotland. There were outbreaks of rain in Southern England and Wales, with thundery showers for a time in the southwest.

During the morning there were outbreaks of rain in the Midlands and North Wales, and there were isolated thunderstorms too. The thunder died out around mid-day then most of England and Wales were dry though quite cloudy. However, rain returned to the southwest in the evening, with thunder spreading across the Channel later.

Most of Scotland had a dry day with some sunshine, but there was the odd shower in Northern Scotland and the Western Isles. Northern Ireland was similar with a mostly dry and bright day.

It was warm in Southern England where it brightened up, but for the rest temperatures were about 3 degrees below average.

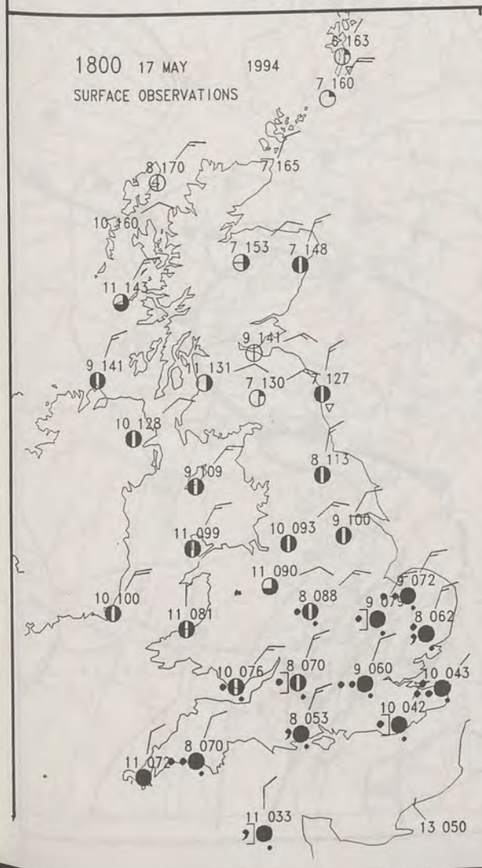
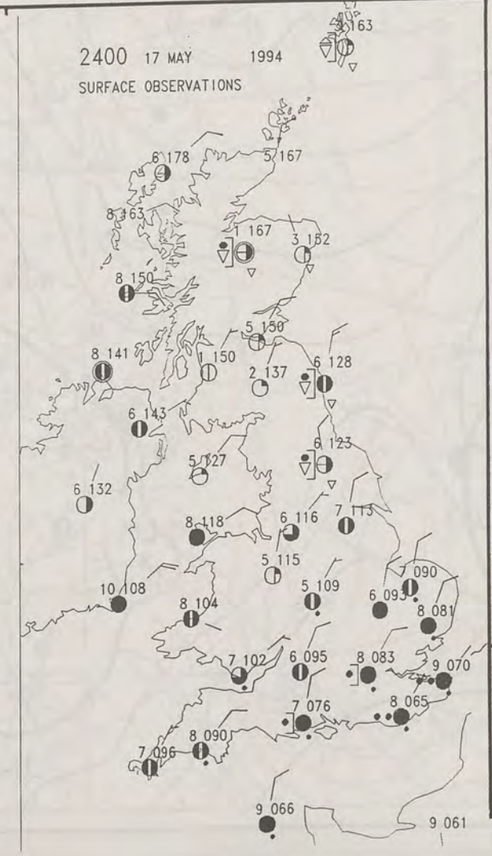
PLOTTED SURFACE OBSERVATIONS





SUMMARY OF UK WEATHER TUESDAY 17th May 1994

In northern districts it was a dry night with slight air frosts in the Glens of Scotland and a widespread ground frost. By midnight rain, heavy and thundery at times was already occurring on the south coast of Britain and this spread slowly during to reach by dawn, south of a line Suffolk to the Bristol Channel.

During the morning the rain continued slowly and erratically northwards, although by this time it was light and had lost the thundery element. At times some drier interludes occurred close to the Channel coast, but were brief and it stayed grey and overcast with widespread hill fog.
Mid afternoon saw the rain at its furthest northward extent with outbreaks in southern Lincolnshire, parts of the Midlands and southern Wales. But as the evening wore on gradually it became drier in all but the southeast and central southern England.

All other areas were mainly dry apart from parts of Scotland and Northumbria, with an isolated hail shower on Uist.
Scotland had a mainly sunny day.

Temperatures were mostly around average in northern areas but very cold in parts of the Midlands and much of the south.

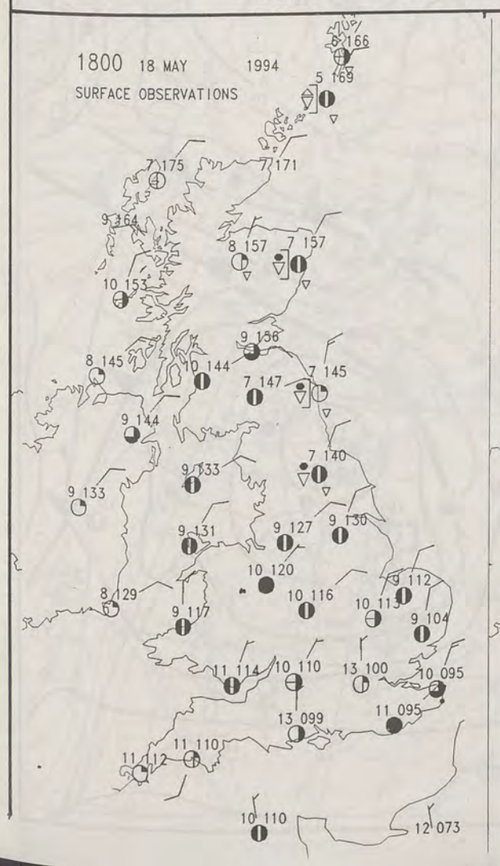
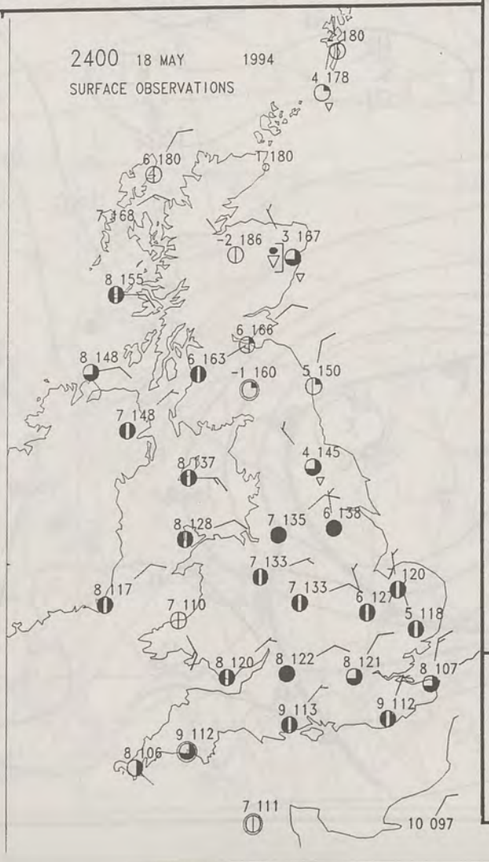
PLOTTED SURFACE OBSERVATIONS





SUMMARY OF UK WEATHER WEDNESDAY 18th May 1994

It was rather cloudy at times but mostly dry across the British Isles during the night. An exception to this was the area to the south of a line bounded Bournemouth to Harwich. Here cloud was thick with outbreaks of rain which became locally moderate at times but by dawn this had mostly turned quite drizzly and was drying up slowly from the west. Also the North Sea coast of northern England and Scotland had some light showers. There was quite a widespread ground frost in northern areas with local air frost in parts of Scotland.

Wednesday morning dawned with the rain across southeastern parts and this took all of the morning before it finally dried up in the extreme east of Kent. Most remaining parts of the United Kingdom were dry and bright with sunshine at times, especially around coasts, but showers were still pecking away in more northern districts. Indeed, in the Orkneys and Shetland some of the showers were wintry with sleet or soft hail. There were long sunny periods in these parts of Scotland also.

Temperatures were mostly rather cool but were cold in places near the North Sea.

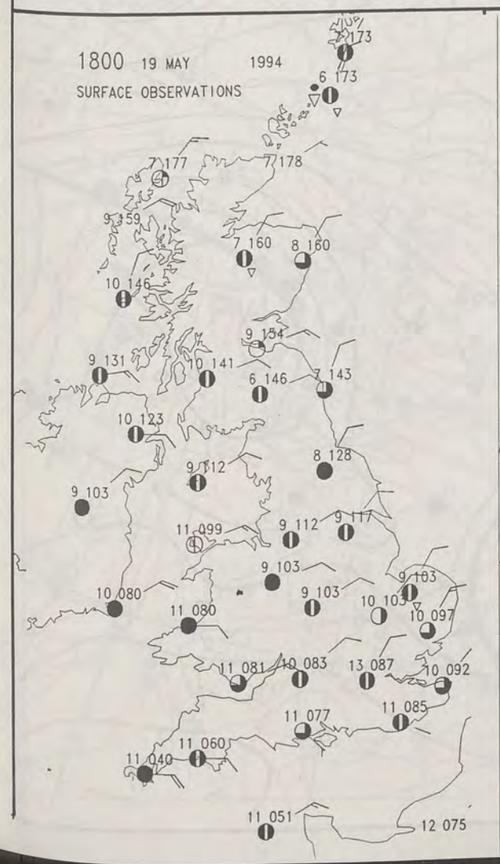
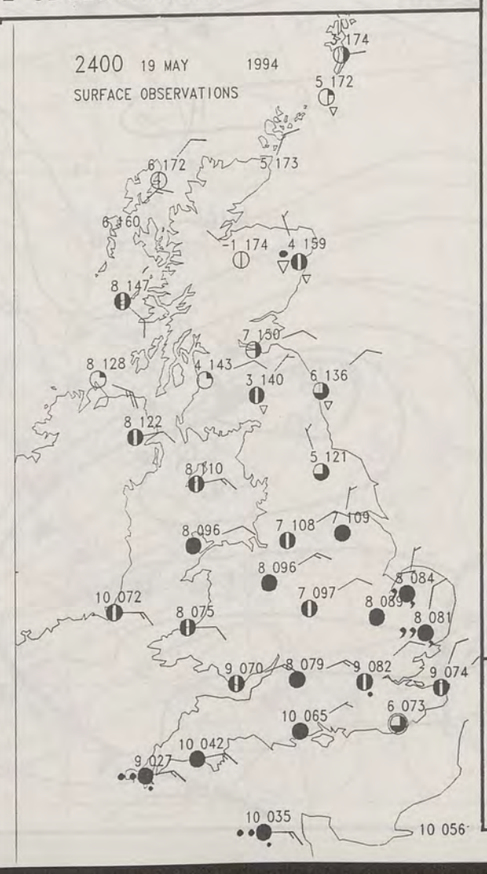
PLOTTED SURFACE OBSERVATIONS





SUMMARY OF UK WEATHER
THURSDAY 19th May 1994

The night was generally dry apart from scattered showers over Scotland and along eastern counties of England. There were long clear periods over much of Scotland and northern England leading to a sharp frost in the Scottish Glens and the Cumbrian valleys. Elsewhere skies were rather more cloudy, nevertheless, clear spells allowed a ground frost to form in a few spots, even in the south.

On Thursday, a few showers continued to affect eastern England, along with eastern and northern Scotland, and light showers affected the London area during the evening. Otherwise it was a dry, though rather cloudy day. The best of the sunshine occurred before mid morning inland, but for much of the day around many of the coasts. East Anglian coasts, however, stayed mostly cloudy. Thicker cloud affected the extreme southwest of England with the odd spot of rain never too far away. Northern Ireland , west and north Scotland had long sunny periods.

It was a cool day over most of the country and very cool over much of the English Midlands.

PLOTTED SURFACE OBSERVATIONS

SUMMARY OF UK WEATHER SATURDAY 21st May 1994

Much of Scotland had a fine, clear night, but in the south there was a little rain.

The rest of the United Kingdom had a cloudy night. Northern Ireland stayed dry, but much of England and Wales had rain or drizzle, with heavy rain here and there.

During the day the southeast of Scotland had a little rain early on, but much of Scotland was dry and bright with some sunshine. Indeed the northwest had a sunny day.

Northern Ireland was cloudy with a lot of dry weather and just a little rain.

Cumbria had some afternoon sunshine and the border counties of northern England were mostly dry and bright, but much of England, along with Wales, had a cloudy day. There were spells of rain nearly everywhere. The rain was often heavy and there were one or two thunderstorms.

Temperatures were below average in most places.

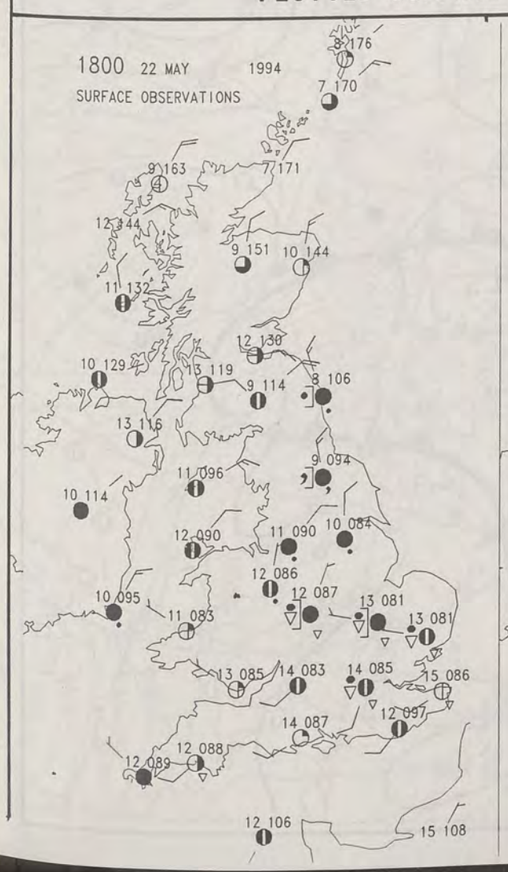
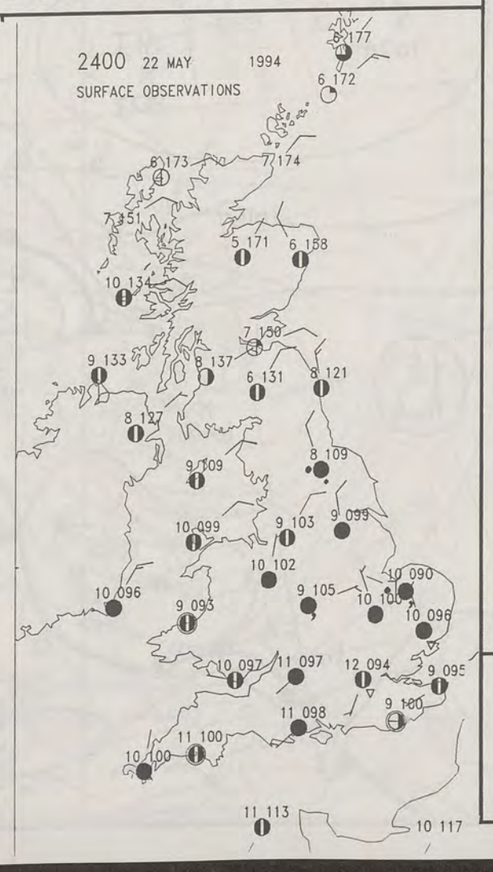
PLOTTED SURFACE OBSERVATIONS





SUMMARY OF UK WEATHER SUNDAY 22nd May 1994

The bulk of England and Wales had a cloudy night with outbreaks of rain or drizzle. Scotland and Northern Ireland were dry with clear spells, although there was a little rain over the more southernmost parts towards dawn. There was touch of frost in some northern glens.

England and Wales had a cloudy and damp start to the day with further outbreaks of rain. During the morning, the rain petered out across all but some central and northern parts. Southern England and south Wales had a brighter afternoon, but some showers developed as a result. Thunder was reported at Yeovil in Somerset, where 8mm of rain fell in 12 minutes.

Scotland and Northern Ireland were largely dry with some sunshine at times. The best of the sunshine was in the northwest.

During the evening, the showers in the south died away.

It was a cool day across southern Scotland, northern England and parts of the north Midlands. Elsewhere the temperatures were close to normal.

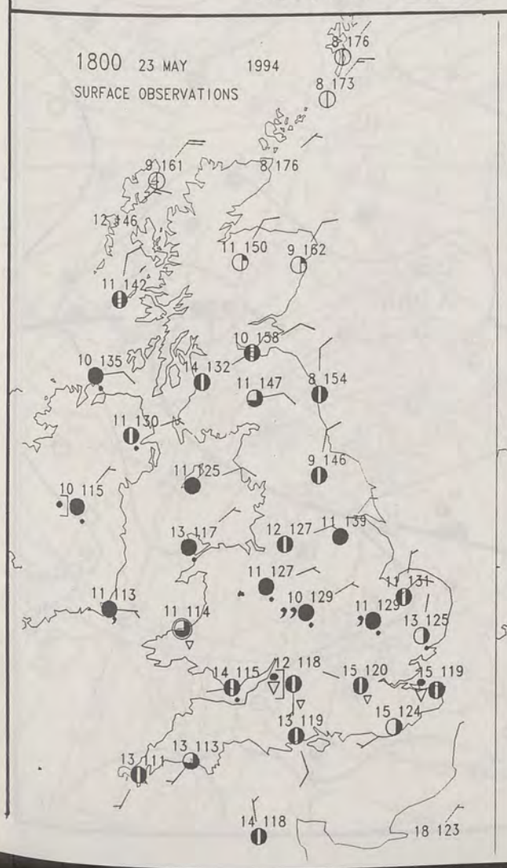
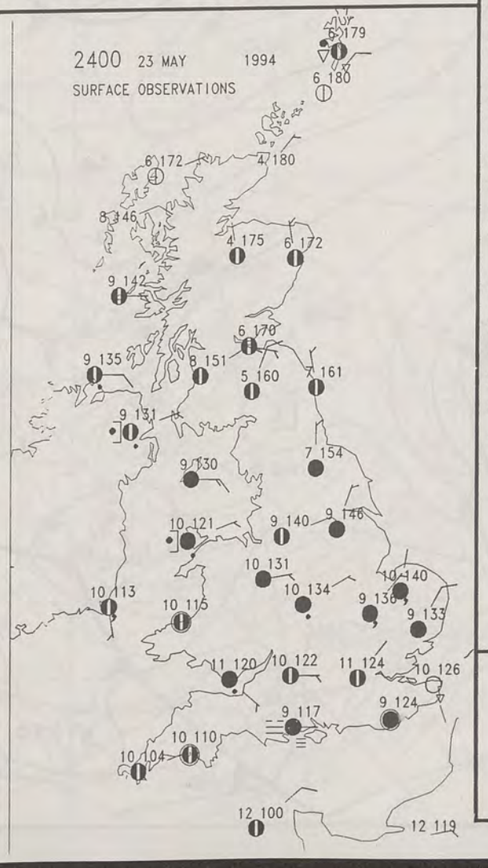
PLOTTED SURFACE OBSERVATIONS





SUMMARY OF UK WEATHER MONDAY 23rd May 1994

Much of England and Wales had a cloudy and misty night with some hill fog. There were some outbreaks of rain over central parts of Wales and the west Midlands initially, and elsewhere later in the night there was some patchy drizzle. Parts of Northern Ireland also had a little rain towards dawn. Scotland was largely dry with patchy cloud. There was touch of frost in the more sheltered glens.

During the day, it remained rather cloudy across much of England, Wales and Northern Ireland with some patchy drizzle in places. The drizzle slowly petered out, but showers developed over southern England in the afternoon, and at the same time the cloud became much more broken across southernmost counties of England. Most of the showers died away during the evening. Scotland remained dry with some sunny spells. The best of the sunshine was in the north.

The temperatures were generally close to normal, although for Northern Ireland, northeastern and central parts of England it was a very cool day.

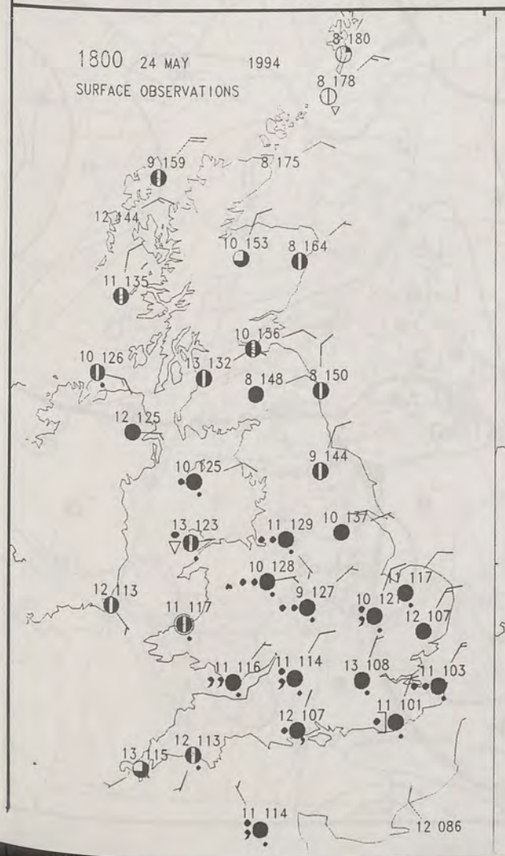
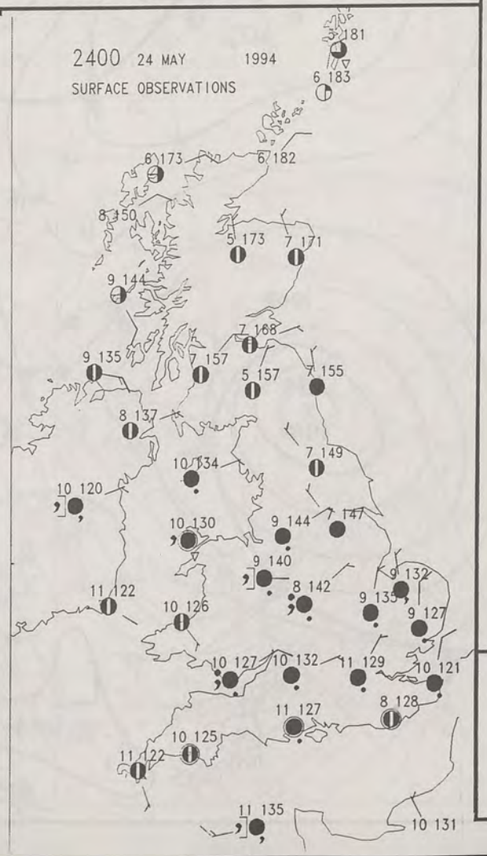
PLOTTED SURFACE OBSERVATIONS





SUMMARY OF UK WEATHER TUESDAY 24th May 1994

It was a cloudy night across the British Isles but at least it had turned mainly dry. Fog patches affected some southern and southwestern counties and there was a touch of frost in the sheltered glens of Scotland.

Some patchy drizzle was affecting central and southern England around dawn and more persistent rain was in the southwest approaches. This rain, fairly heavy a times had spread to all southwestern counties as far east as Dorset by mid-morning and to Hampshire and Wiltshire by noon.It had also moved north up the Irish Sea as far as Northern Ireland by the same time.

By mid afternoon, all areas to the southeast of a line from the Mersey to the Wash were damp with the brightest weather still in the far north. Little changed during the remaining daylight hours and parts of south Devon got a real soaking. By mid evening though, Cornwall was dry again and the rain elsewhere was becoming a lot more intermittent.

Generally speaking it was a cool day especially in wetter areas and in the north.

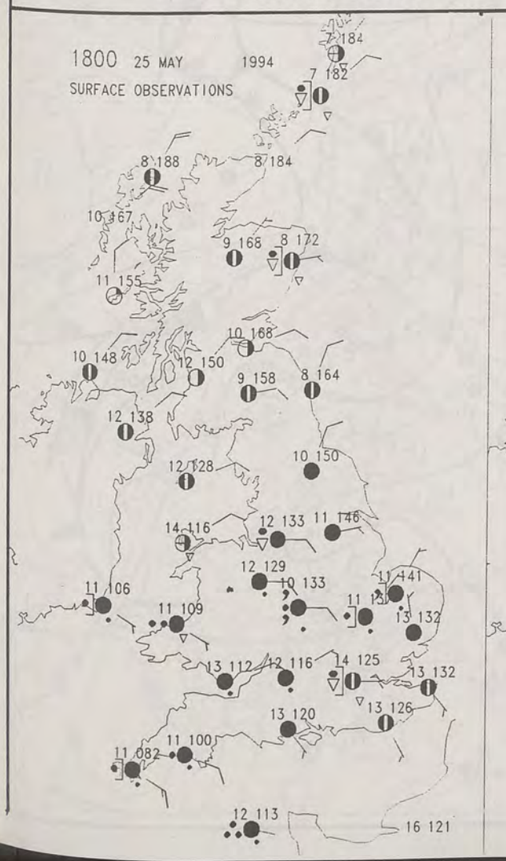
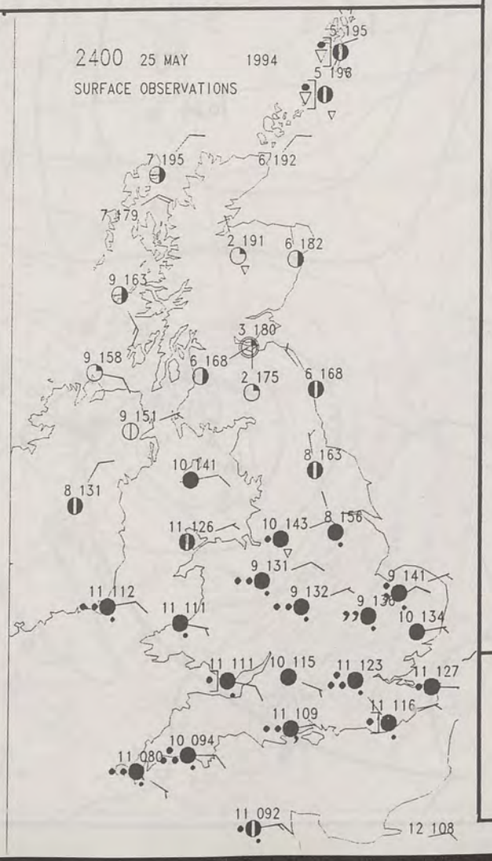
PLOTTED SURFACE OBSERVATIONS





SUMMARY OF UK WEATHER
WEDNESDAY 25th May 1994

With the exception of Western Scotland, most of the country was under a blanket of fairly thick cloud overnight. consequently it was a mild night but a misty one with a few fog patches in the south and a few spots of rain.

Outbreaks of rain and drizzle became quite widespread over southern and central counties of England during the morning and there were a few showers over the Northern Isles. Western Scotland again had long sunny periods.

The cloud and rain in the south continued through the afternoon and in the southwest there were some fairly heavy outbreaks which lasted right through the evening. During the evening other southern coastal areas as far east as Hampshire had quite heavy rain too. As the cloud lowered at dusk over southern and central areas the drizzly rain became more widespread and it became quite misty in places.

Clear spells over Scotland and Northern Ireland lasted into the evening and temperatures here were falling off quite quickly, with the prospect of a touch of frost again.

Generally speaking it was a cool day especially along the east coast with onshore breezes.

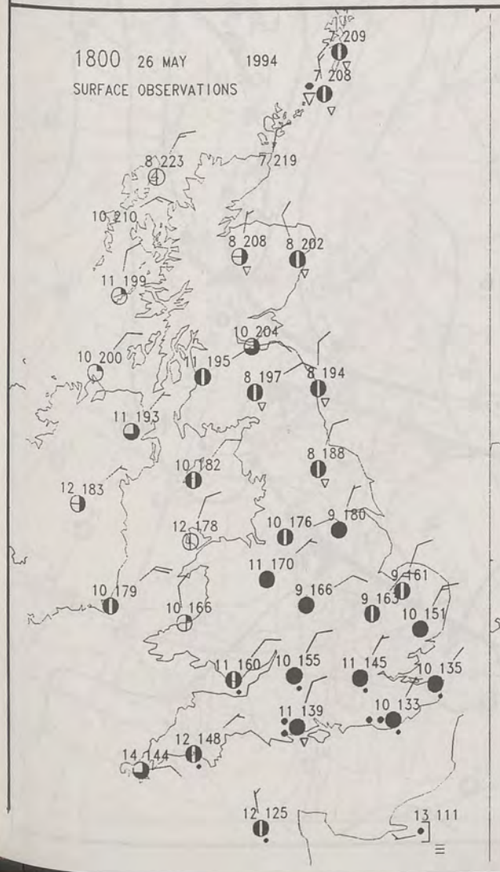
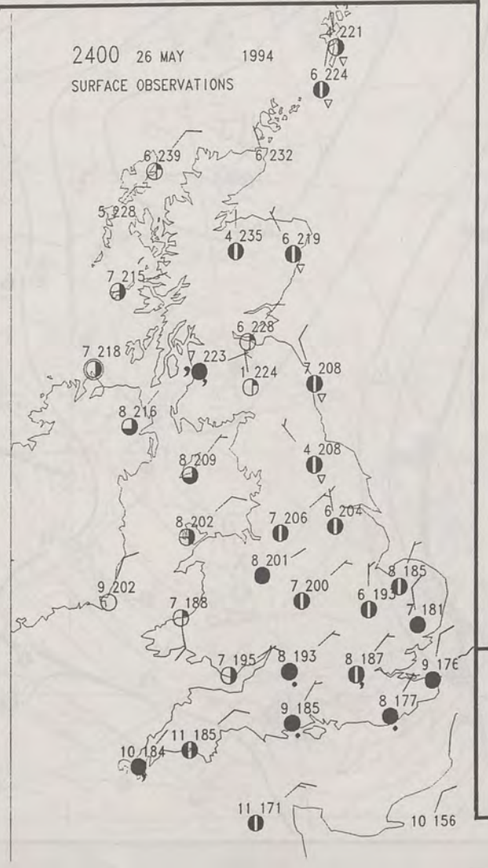
PLOTTED SURFACE OBSERVATIONS





SUMMARY OF UK WEATHER THURSDAY 26th May 1994

Overnight, Northern Ireland and northern and eastern Scotland had variable amounts of cloud and some showers. The rest of Scotland and northern England were largely dry with clear spells. Wales and the rest of England were cloudy with outbreaks of rain.

The rain over England and Wales egded southwards during the day, clearing much of Wales, the Midlands and East Anglia by midday, and the southern coastal counties during the early evening.
Some of the rain was heavy at first. Drier and brighter weather across Northern Ireland and northern England followed on behind. There were still a few showers over northern and eastern Scotland, but for the rest of Scotland it was a dry day with some sunshine.

After a touch of frost over parts of Scotland (Glasgow minus 1C), most parts had a cool day.

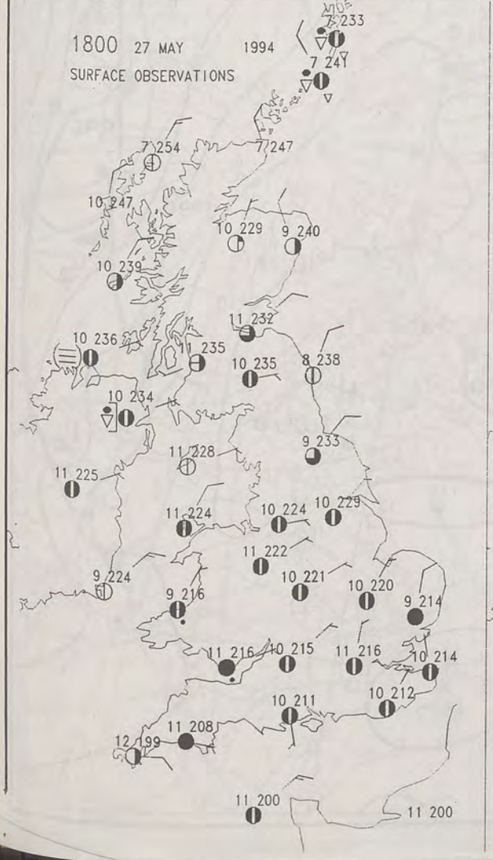
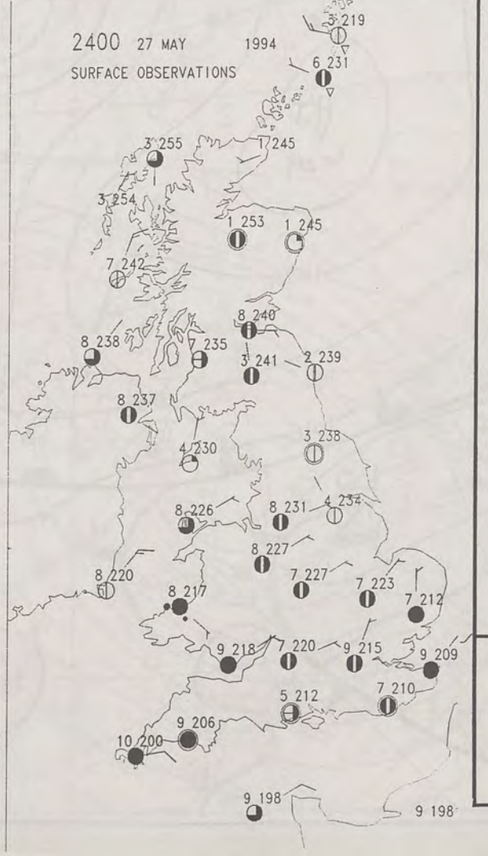
PLOTTED SURFACE OBSERVATIONS





SUMMARY OF UK WEATHER FRIDAY 27th May 1994

It was a generally dry night with clear spells. However, there was a good deal of cloud over south England and Wales at first- with a few spots of rain. It turned cold with a fairly widespread ground frost, away from East Anglia and southern England and Wales. There was an air frost in places too, through Cumbria, the Borders, and up into Highland.

Looking at the United Kingdom as a whole, it was generally dry and bright with sunny intervals- but turned more cloudy through the afternoon. In the morning there were some good spells of sunshine around, especially along the south coast. There were isolated light showers- in northern and western Scotland, parts of northern England, and later in southwest England and south Wales. Scotland was again the most sunny place.

After a cold start, temperatures were cool or very cool.

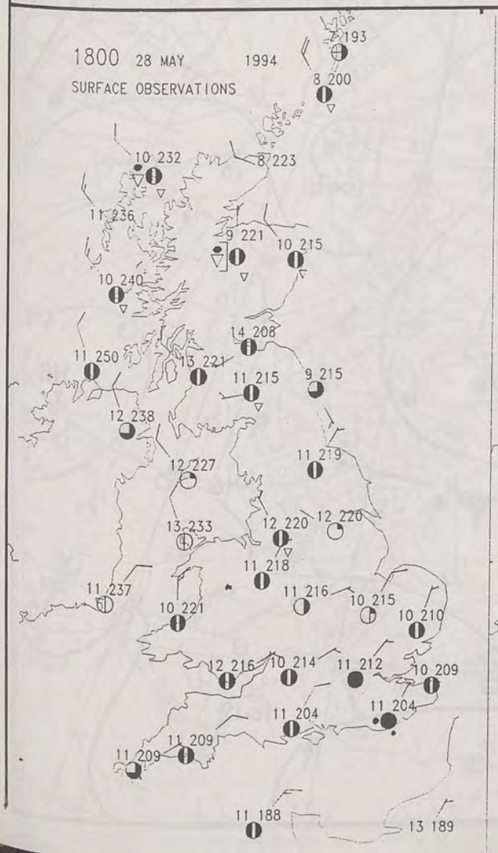
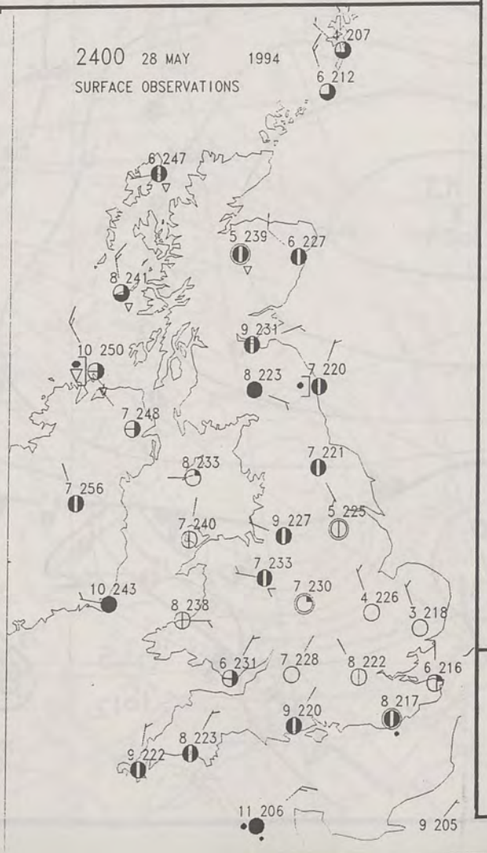
PLOTTED SURFACE OBSERVATIONS





SUMMARY OF UK WEATHER SATURDAY 28th May 1994

Much of the United Kingdom had a dry night, although it wasn't dry everywhere. in Scotland and eastern England there were a few showers, while southwest Wales had a little rain.

In Scotland there was some sunshine, indeed parts of the west had a sunny day, but the north had a few showers.

Northern Ireland and Wales were dry and bright with some sunshine and some places in Wales were sunny for much of the day.

Most places in England had some sunshine, but there was a lot of cloud and there were some showers, particularly in East Anglia.

Temperatures were below average nearly everywhere and many places had quite a cold day.

PLOTTED SURFACE OBSERVATIONS

SUMMARY OF UK WEATHER MONDAY 30th May 1994

Much of the British Isles had a dry and mostly clear night, although increasing cloud over western Scotland brought a little rain over the Outer Hebrides around dawn.

During the day, England, Wales, Northern Ireland and southern Scotland were dry and sunny. There was some brightness over the rest of Scotland at first, but on the whole it was a cloudy day with outbreaks of rain.

After a chilly night with a widespread ground frost, the temperatures were generally near normal, locally warm.

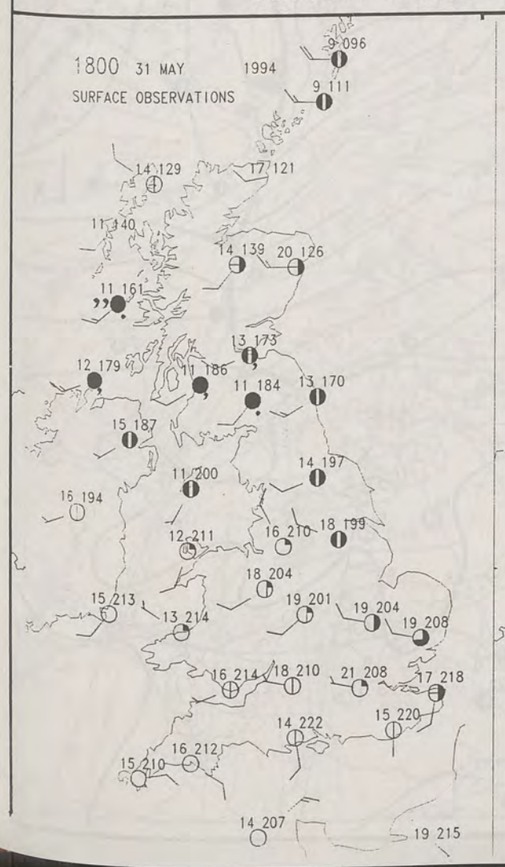
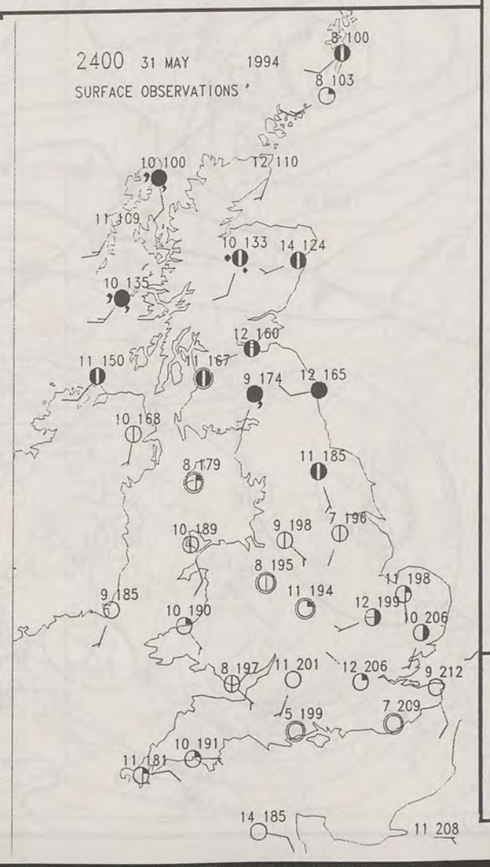
PLOTTED SURFACE OBSERVATIONS





SUMMARY OF UK WEATHER TUESDAY 31st May 1994

Scotland and Northern Ireland had a fairly cloudy night with outbreaks of rain and drizzle in northern and western regions. Most of England and Wales was dry with clear spells.

A dry day followed across most of the United Kingdom and warm in places too. Northern and western areas of both Scotland and Northern Ireland and parts of northern England were rather cloudy with patchy light rain and drizzle in places. Eastern Scotland, Wales, central and southern parts of England were mainly sunny.

Northern Scotland became much drier and brighter during the afternoon with sunny spells, although cloud returned in the evening.

Temperatures were close to normal in western areas of Scotland and much of Northern Ireland, but many other parts of the country had a warm day, in fact very warm in parts of southeast England and eastern Scotland.
