NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR TUESDAY, 1st MAY, 1906.

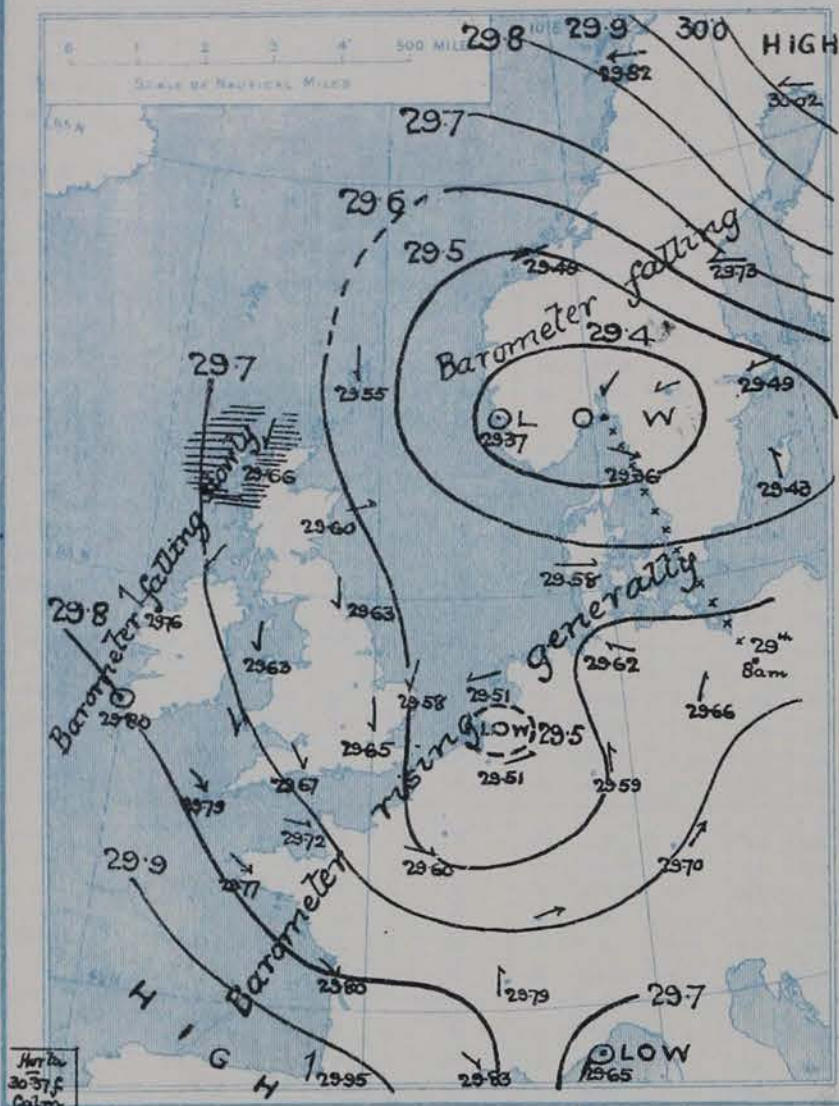

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → : Force 5 to 7 → : } Calm ⊙
Force 8 to 10 → : Force 1 to 4 → :

SEA—Rough High

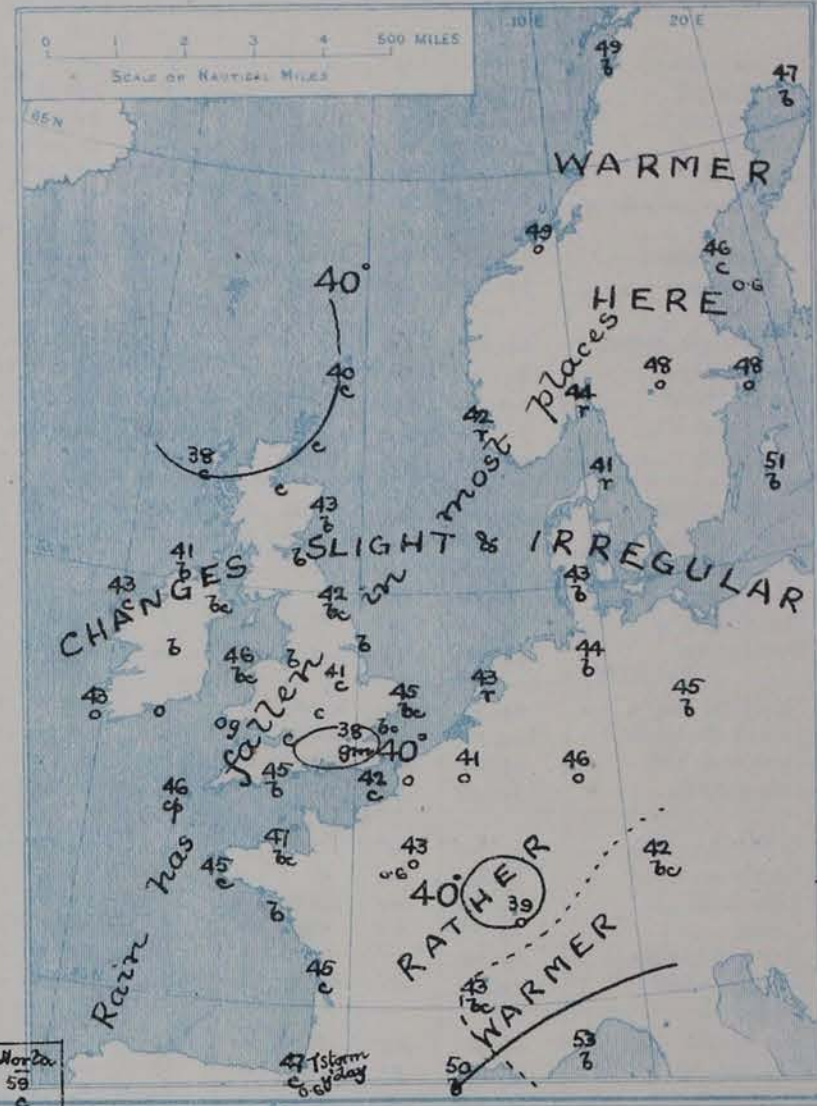

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°.

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.8

III. BAROMETER AND WIND

Yesterday morning.

IV. EXTREMES OF TEMPERATURE

recorded

in various districts of the United Kingdom during the week ended Saturday, 28th April.

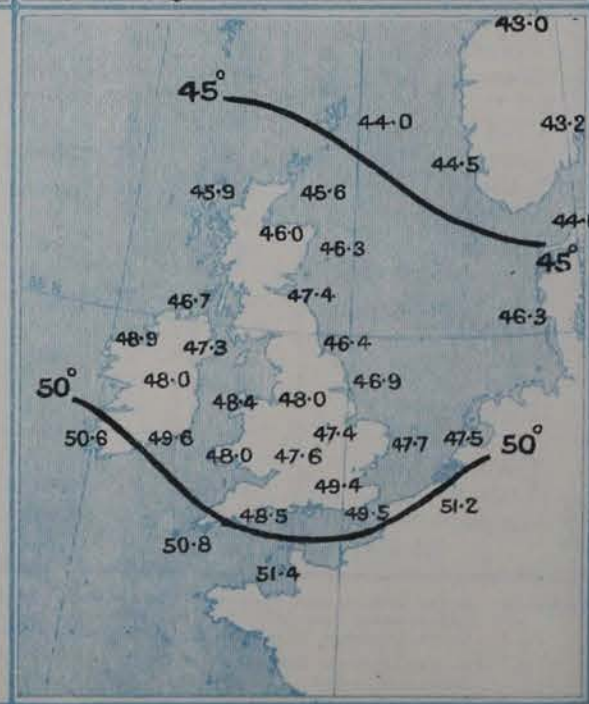

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period

APRIL - MAY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

Pressure is now lowest in a depression that has travelled north-north-westward from Germany to the Skagerrack, and highest in the extreme south-west and north-east of our area. The readings of the barometer range from about 30.0 ins. both over the Spanish Peninsula and the far north of Sweden to 29.3 ins. some distance north of Skagen. The mercury is also relatively low in a small disturbance over Belgium. The depression to the eastward of the North Sea is causing a slight fall of the barometer in Scotland, and a similar movement has commenced in Ireland during the night.

WIND

The wind shows a complete cyclonic circulation around the northern baric minimum and also around the small depression over Belgium. The northerly current prevailing over our Islands has fallen light, and the only strong breeze reported in any part of our area is at Skagen. At Blackrock Point a light air from S.E. has sprung up. Temperature has risen rather decidedly in the north of Scandinavia, changed little and irregularly elsewhere. Over these Islands the readings range from 46° at Sillly and Holyhead to 38° at Stromway and in London; and on the Continent from about 50° in the extreme south of France and only slightly lower in Sweden to 41° at Brussels and 39° at Belfort.

TEMPERATURE

WEATHER

AND

SEA

The sky is clear in a few places locally both in the United Kingdom and on the Continent, but regarded as a whole the weather is very cloudy or dull; rain is falling in the neighbourhood of the low pressure systems and passing showers in the Scilly Isles. The sea is rather rough in the Minch, moderate or slight on our coasts generally.

The maximum temperatures recorded over this country yesterday were about 50°, and the minima of the night very low for the time of year. Frost was again experienced at most inland stations over England and Ireland and also in the north and east of Scotland. Showers or steady rain have fallen over most parts of our area, the largest measurements being 0.6 in. at Hernisand, Paris and Biarritz; at the latter station a thunderstorm accompanied by hail occurred. Much bright sunshine was recorded except in London and at a few other stations; at Aberdeen there were 12.7 hours, and at Lowestoft 13.1 hours.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The slight decrease of pressure which is reported from Scotland and the west of Ireland will probably give rise to further showers in various parts of the Kingdom during the ensuing twenty-four hours. The general direction of the wind is likely to continue between North and North-West, and the temperature low for the time of year.

FORECASTS*

For the 24 hours ending at NOON on 2nd. May, 1906.

DISTRICTS.

FORECASTS.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	} Light or moderate winds between N. and W.; cold, changeable, some showers, frost probable inland at night
1	SCOTLAND EAST	
2	ENGLAND N.E.	} N ^W or N.W ^{ly} winds of little strength; cold, some showers
3	ENGLAND EAST	
4	MIDLAND COUNTIES	} Light winds between N. and N.W.; mostly fair, but some showers still probable; cold.
5	ENGLAND SOUTH	

6	SCOTLAND WEST	} Same as Nos. 0 and 1.
7	ENGLAND N.W.	
8	ENGLAND S.W.	} Moderate N ^W or N.W ^{ly} winds; weather changeable, fair at times, showers occasionally; cold.
9	IRELAND NORTH	
10	IRELAND SOUTH	} Rather variable, but mainly N.W ^{ly} winds; unsettled, some showers; cold.

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (⌋), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌋), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields +0.03 in., but for Sumburgh Head +0.04 in.; for stations South of Malin Head and North Shields +0.02 in., but for Scilly and Jersey +0.01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Wednesday, 2ND MAY, 1906.

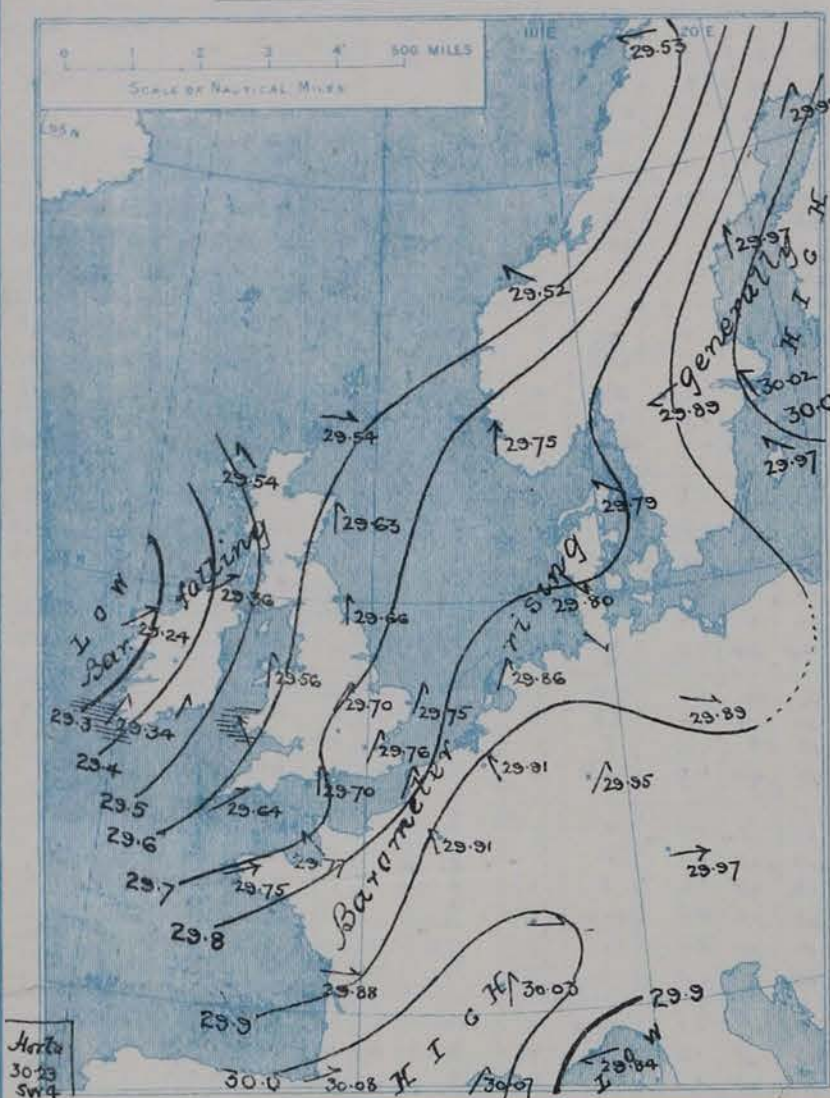

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ☉
Force 8 to 10 → Force 1 to 4 → }

SEA.—Rough High

GENERAL SITUATION AT 8 A.M.

PRESSURE

Since yesterday the centre of a rather large cyclonic disturbance has appeared off the west of Ireland, while the depression that then lay over the Skagerrack has travelled northwards to Denmark, and the south of Scandinavia. The readings now range from above 30.0 in. over the Spanish Peninsula and the southwest and south of France and also in the neighbourhood of Stockholm to 29.52 in. at Christiansund and to 29.24 in. at Blacksod Point. A small secondary disturbance is shown over the western part of the English Channel.

WIND

On the approach of the depression from the Atlantic the wind backed all over the countries of northwestern Europe, and is now Southerly over our Islands, Westerly in the west of France and over the Bay of Biscay, and Southwesterly over the Netherlands and the west of Norway. It blows freshly or strongly on the west coast of France and at several of our own southwestern stations, but as a whole it has little force.

TEMPERATURE

Temperature has risen in nearly all parts of the United Kingdom and over the adjacent Continental countries, fallen over the greater portion of Scandinavia. The readings are still low for the time of year; over these Islands they vary from about 50° in the south of Ireland and at Lillly to 41° at Liverpool and to 38° at Stromway and Malin Head. Readings of 50° or slightly higher are reported from the west coast of France and Nice, and the thermometer is no lower than 48° at Christiansund and Bodø.

WEATHER

The weather is at present fair or fine over our area as a whole, but the sky has become overcast along the west coast of France, and in the west and southwest of the United Kingdom, with rain at many Irish and Welsh stations, as well as in the southwest of England and at Oxford.

AND

SEA

The sea is rough off the southwest of Ireland, moderate to smooth elsewhere. Nearly half an inch of rain has fallen in the west of Ireland and smaller amounts in many other parts of our Islands. Frost was again experienced in various British localities; at Wick the thermometer fell to 28° and at Nottingham to 29°. Bright sunshine was fairly abundant except over Ireland and in some parts of England. A thunderstorm was experienced at Loughaven, and thunder heard at Spurn Head.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The depression off the west of Ireland is likely to move northwards or northeastwards and to cause an increase in the force of the Southerly and Southwesterly winds over the country generally and rain in most districts. The weather in the south and southeast will be affected by the small secondary disturbance, and some rain is probable during today.

FORECASTS*

For the 24 hours ending at NOON on 3RD MAY, 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	S ^W to S ^W winds, increasing in force; milder, unsettled, rain at times.
1	SCOTLAND EAST	
2	ENGLAND N.E.	Light to moderate or fresh S ^W to S ^W winds; weather becoming milder, with some showers; temperature rising.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as Nos. 0 and 1.
7	ENGLAND N.W.	
8	ENGLAND SW	Increasing S ^W and S ^W winds; squally, unsettled, occasional rain.
9	IRELAND NORTH	
10	IRELAND SOUTH	Fresh or strong winds between S. and W. or N.W.; mild unsettled, rainy.

WARNINGS

At 7.10 pm. yesterday to District 8 and part of 5, and at 9.30 am. to-day to part of District 9, "HOIST SOUTH CONE."

Note.—The South Cone, point downwards (⌵), means that gales or strong winds are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.

The North Cone, point upwards (⌴), means that gales or strong winds are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields +.03 in.; but for Sumburgh Head +.04 in.; for stations South of Malin Head and North Shields +.02 in.; but for Scilly and Jersey +.01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Thursday, 3RD MAY, 1906.

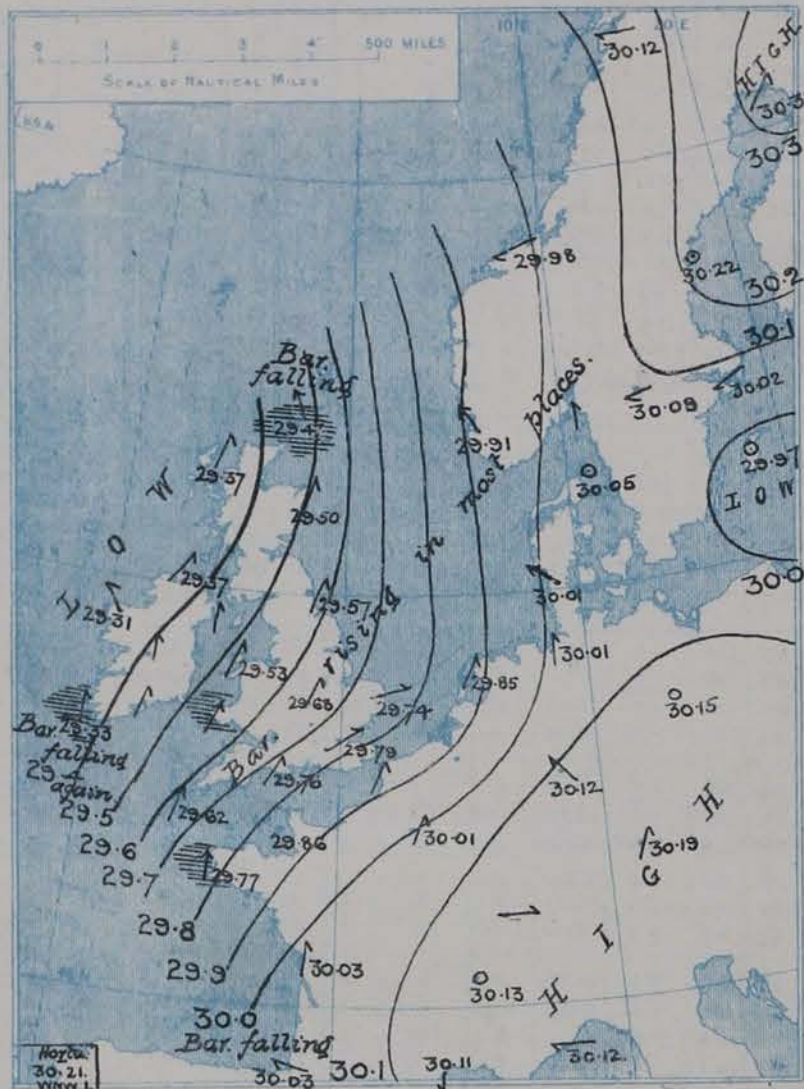

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ☉
Force 8 to 10 → Force 1 to 4 → }

SEA—Rough High

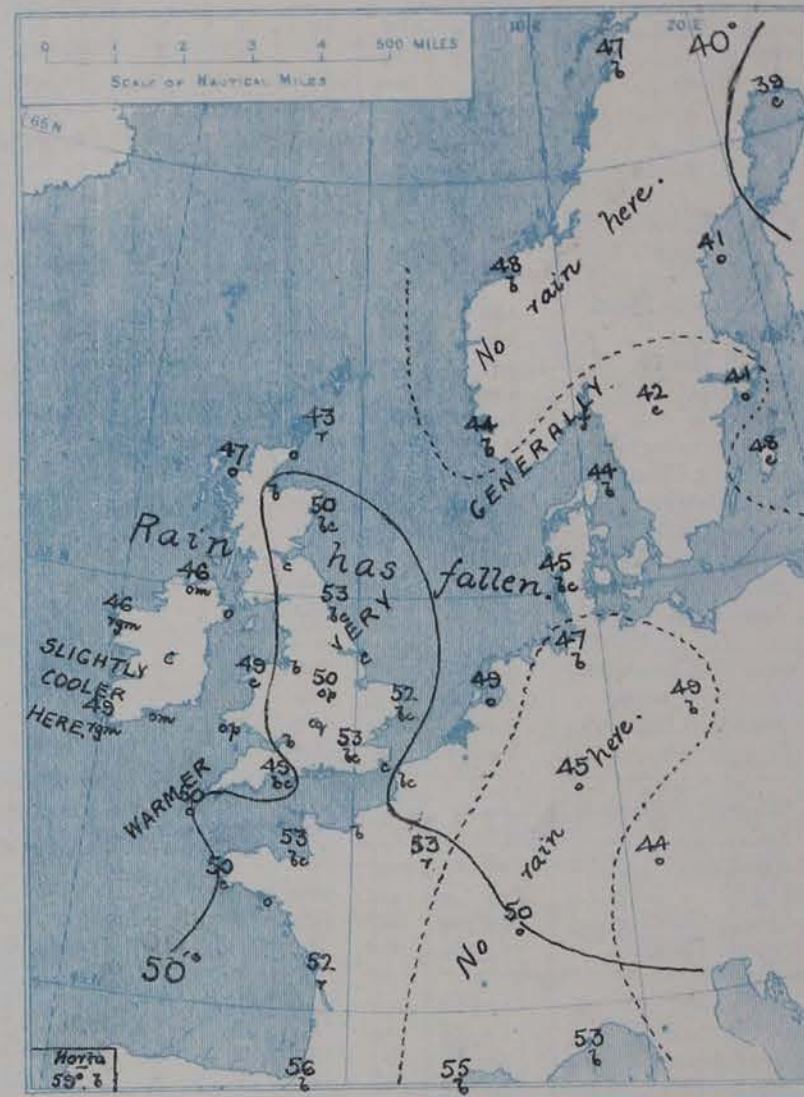

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°.

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. LAST WEEK'S SUNSHINE.

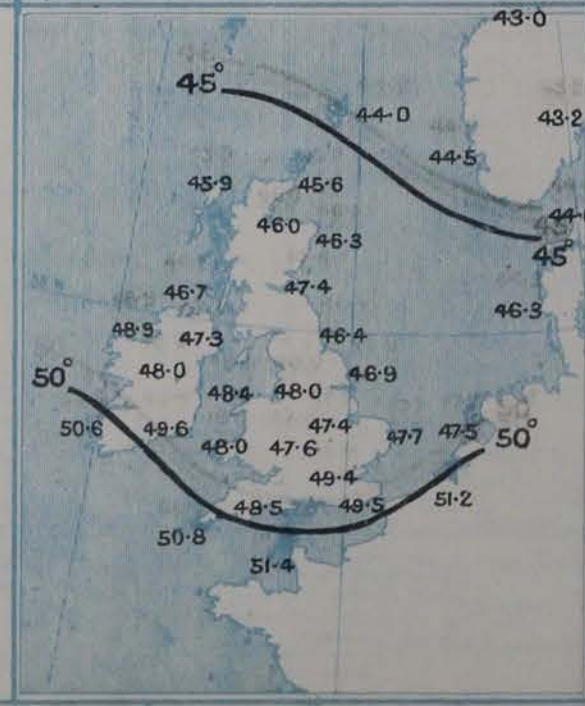

Amount recorded in various districts of the United Kingdom during the week ended Saturday, 28th April, with the percentage of the average duration for the corresponding week.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period

APRIL - MAY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

Since yesterday morning the barometer has risen and become highest over the northern regions of Scandinavia, the reading at Haparanda being rather above 30.3 ins. Another area with relatively high readings, 30.1 ins. and upwards, is shown over Central Europe and the south-east of France. The lowest pressure, 29.4 ins. and less is still found off our own western and north-western coasts. The mercury is falling again in the south-west of Ireland and a fall has also commenced at Biarritz, but over our area as a whole it is at present rising.

WIND

TEMPERATURE

WEATHER

AND

SEA

Southerly or South-Westerly winds are general over the United Kingdom and the nearest portions of the Continent; they have little strength as a whole, but blow a fresh or strong breeze on several parts of our west and south-west coasts. Over Scandinavia the air is drawn from the Eastward, and a light Easterly air has also set in in the south-west of France. Temperature has risen very generally, the change amounting to many degrees in England and the north of France. It now ranges from 50° or a little above in most parts of Great Britain to 46° in the north of Ireland, and to 43° in the Shetlands. On the Continent it increases from 39° in the north of Sweden to 53° at Paris and Nice, and to 56° at Biarritz. The sky is clear at a few of our own stations and also in various Continental regions, but regarded as a whole it is very cloudy or entirely overcast. Rain is falling in the Shetlands and the west of Ireland and at Rochefort and Paris, and passing showers at Pembroke and Nottingham. The sea is rough off the Shetlands, rather rough at some of the south-western stations, moderate to smooth elsewhere.

Rain was experienced either yesterday or during the night throughout the whole of the United Kingdom; the measurements are less than 0.15 in. at most stations, but nearly twice as much in South Wales, and about 0.4 in. in various parts of Ireland. In many parts of Great Britain the maximum temperatures for the past 24 hours are at 8 a.m. to-day. The bright sunshine recorded yesterday was much less than of late over the country generally; at some stations in the south-west there was none.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

There are no indications of any change in the general distribution of pressure. Mild Southerly and South-Westerly winds are consequently likely to continue, with mostly fair weather in the east and south-east, and frequent showers or periods of steady rain in the western and north-western districts.

7	ENGLAND N.W.	Moderate to fresh or strong S ^{ly} and S.W ^{ly} winds; mild, showery, fair intervals.
8	ENGLAND S.W.	
9	IRELAND NORTH	S.W ^{ly} and S ^{ly} winds, varying in strength; fair at times, but frequent showers; mild.
10	IRELAND SOUTH	
	WARNINGS	The SOUTH CONE is still flying in part of district 9.

Note.—The South Cone, point downwards (⌋), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌋), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

FOR FRIDAY, 4TH MAY, 1906.

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus—0.6

Map of the North Atlantic showing isotherms for 45° and 50° isotherms. The 45° isotherm is a solid line starting at 45.0 in the north and ending at 44.0 in the south. The 50° isotherm is a solid line starting at 50.6 in the west and ending at 51.2 in the east. Numerous numerical values are plotted along these lines and in the surrounding water.

45° isotherm values: 45.0, 44.0, 44.5, 44.4, 44.3, 44.2, 44.1, 44.0, 43.9, 43.8, 43.7, 43.6, 43.5, 43.4, 43.3, 43.2, 43.1, 43.0, 42.9, 42.8, 42.7, 42.6, 42.5, 42.4, 42.3, 42.2, 42.1, 42.0, 41.9, 41.8, 41.7, 41.6, 41.5, 41.4, 41.3, 41.2, 41.1, 41.0, 40.9, 40.8, 40.7, 40.6, 40.5, 40.4, 40.3, 40.2, 40.1, 40.0, 39.9, 39.8, 39.7, 39.6, 39.5, 39.4, 39.3, 39.2, 39.1, 39.0, 38.9, 38.8, 38.7, 38.6, 38.5, 38.4, 38.3, 38.2, 38.1, 38.0, 37.9, 37.8, 37.7, 37.6, 37.5, 37.4, 37.3, 37.2, 37.1, 37.0, 36.9, 36.8, 36.7, 36.6, 36.5, 36.4, 36.3, 36.2, 36.1, 36.0, 35.9, 35.8, 35.7, 35.6, 35.5, 35.4, 35.3, 35.2, 35.1, 35.0, 34.9, 34.8, 34.7, 34.6, 34.5, 34.4, 34.3, 34.2, 34.1, 34.0, 33.9, 33.8, 33.7, 33.6, 33.5, 33.4, 33.3, 33.2, 33.1, 33.0, 32.9, 32.8, 32.7, 32.6, 32.5, 32.4, 32.3, 32.2, 32.1, 32.0, 31.9, 31.8, 31.7, 31.6, 31.5, 31.4, 31.3, 31.2, 31.1, 31.0, 30.9, 30.8, 30.7, 30.6, 30.5, 30.4, 30.3, 30.2, 30.1, 30.0, 29.9, 29.8, 29.7, 29.6, 29.5, 29.4, 29.3, 29.2, 29.1, 29.0, 28.9, 28.8, 28.7, 28.6, 28.5, 28.4, 28.3, 28.2, 28.1, 28.0, 27.9, 27.8, 27.7, 27.6, 27.5, 27.4, 27.3, 27.2, 27.1, 27.0, 26.9, 26.8, 26.7, 26.6, 26.5, 26.4, 26.3, 26.2, 26.1, 26.0, 25.9, 25.8, 25.7, 25.6, 25.5, 25.4, 25.3, 25.2, 25.1, 25.0, 24.9, 24.8, 24.7, 24.6, 24.5, 24.4, 24.3, 24.2, 24.1, 24.0, 23.9, 23.8, 23.7, 23.6, 23.5, 23.4, 23.3, 23.2, 23.1, 23.0, 22.9, 22.8, 22.7, 22.6, 22.5, 22.4, 22.3, 22.2, 22.1, 22.0, 21.9, 21.8, 21.7, 21.6, 21.5, 21.4, 21.3, 21.2, 21.1, 21.0, 20.9, 20.8, 20.7, 20.6, 20.5, 20.4, 20.3, 20.2, 20.1, 20.0, 19.9, 19.8, 19.7, 19.6, 19.5, 19.4, 19.3, 19.2, 19.1, 19.0, 18.9, 18.8, 18.7, 18.6, 18.5, 18.4, 18.3, 18.2, 18.1, 18.0, 17.9, 17.8, 17.7, 17.6, 17.5, 17.4, 17.3, 17.2, 17.1, 17.0, 16.9, 16.8, 16.7, 16.6, 16.5, 16.4, 16.3, 16.2, 16.1, 16.0, 15.9, 15.8, 15.7, 15.6, 15.5, 15.4, 15.3, 15.2, 15.1, 15.0, 14.9, 14.8, 14.7, 14.6, 14.5, 14.4, 14.3, 14.2, 14.1, 14.0, 13.9, 13.8, 13.7, 13.6, 13.5, 13.4, 13.3, 13.2, 13.1, 13.0, 12.9, 12.8, 12.7, 12.6, 12.5, 12.4, 12.3, 12.2, 12.1, 12.0, 11.9, 11.8, 11.7, 11.6, 11.5, 11.4, 11.3, 11.2, 11.1, 11.0, 10.9, 10.8, 10.7, 10.6, 10.5, 10.4, 10.3, 10.2, 10.1, 10.0, 9.9, 9.8, 9.7, 9.6, 9.5, 9.4, 9.3, 9.2, 9.1, 9.0, 8.9, 8.8, 8.7, 8.6, 8.5, 8.4, 8.3, 8.2, 8.1, 8.0, 7.9, 7.8, 7.7, 7.6, 7.5, 7.4, 7.3, 7.2, 7.1, 7.0, 6.9, 6.8, 6.7, 6.6, 6.5, 6.4, 6.3, 6.2, 6.1, 6.0, 5.9, 5.8, 5.7, 5.6, 5.5, 5.4, 5.3, 5.2, 5.1, 5.0, 4.9, 4.8, 4.7, 4.6, 4.5, 4.4, 4.3, 4.2, 4.1, 4.0, 3.9, 3.8, 3.7, 3.6, 3.5, 3.4, 3.3, 3.2, 3.1, 3.0, 2.9, 2.8, 2.7, 2.6, 2.5, 2.4, 2.3, 2.2, 2.1, 2.0, 1.9, 1.8, 1.7, 1.6, 1.5, 1.4, 1.3, 1.2, 1.1, 1.0, 0.9, 0.8, 0.7, 0.6, 0.5, 0.4, 0.3, 0.2, 0.1, 0.0, -0.1, -0.2, -0.3, -0.4, -0.5, -0.6, -0.7, -0.8, -0.9, -1.0, -1.1, -1.2, -1.3, -1.4, -1.5, -1.6, -1.7, -1.8, -1.9, -2.0, -2.1, -2.2, -2.3, -2.4, -2.5, -2.6, -2.7, -2.8, -2.9, -3.0, -3.1, -3.2, -3.3, -3.4, -3.5, -3.6, -3.7, -3.8, -3.9, -4.0, -4.1, -4.2, -4.3, -4.4, -4.5, -4.6, -4.7, -4.8, -4.9, -5.0, -5.1, -5.2, -5.3, -5.4, -5.5, -5.6, -5.7, -5.8, -5.9, -6.0, -6.1, -6.2, -6.3, -6.4, -6.5, -6.6, -6.7, -6.8, -6.9, -7.0, -7.1, -7.2, -7.3, -7.4, -7.5, -7.6, -7.7, -7.8, -7.9, -8.0, -8.1, -8.2, -8.3, -8.4, -8.5, -8.6, -8.7, -8.8, -8.9, -9.0, -9.1, -9.2, -9.3, -9.4, -9.5, -9.6, -9.7, -9.8, -9.9, -10.0, -10.1, -10.2, -10.3, -10.4, -10.5, -10.6, -10.7, -10.8, -10.9, -11.0, -11.1, -11.2, -11.3, -11.4, -11.5, -11.6, -11.7, -11.8, -11.9, -12.0, -12.1, -12.2, -12.3, -12.4, -12.5, -12.6, -12.7, -12.8, -12.9, -13.0, -13.1, -13.2, -13.3, -13.4, -13.5, -13.6, -13.7, -13.8, -13.9, -14.0, -14.1, -14.2, -14.3, -14.4, -14.5, -14.6, -14.7, -14.8, -14.9, -15.0, -15.1, -15.2, -15.3, -15.4, -15.5, -15.6, -15.7, -15.8, -15.9, -16.0, -16.1, -16.2, -16.3, -16.4, -16.5, -16.6, -16.7, -16.8, -16.9, -17.0, -17.1, -17.2, -17.3, -17.4, -17.5, -17.6, -17.7, -17.8, -17.9, -18.0, -18.1, -18.2, -18.3, -18.4, -18.5, -18.6, -18.7, -18.8, -18.9, -19.0, -19.1, -19.2, -19.3, -19.4, -19.5, -19.6, -19.7, -19.8, -19.9, -20.0, -20.1, -20.2, -20.3, -20.4, -20.5, -20.6, -20.7, -20.8, -20.9, -21.0, -21.1, -21.2, -21.3, -21.4, -21.5, -21.6, -21.7, -21.8, -21.9, -22.0, -22.1, -22.2, -22.3, -22.4, -22.5, -22.6, -22.7, -22.8, -22.9, -23

GENERAL SITUATION AT 8 A.M.

PRESSURE

The barometer is at present rising throughout the whole of our area, and the readings range from 30.3 ins. and upwards over the northern portion of the Baltic and its neighbourhood to below 29.6 ins. in a depression of a V-shaped character having its minimum over the north of Scotland.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind has veered to the North-Westward in Ireland and along the west coast of Great Britain, but continues South-Easterly or Southerly over the eastern half of the latter region and the adjacent countries of the continent. It blows freshly on some parts of our western and south-western coasts and also at some stations on the shores of the North Sea; as a whole, however, it is moderate or light in force. At Valencia the wind was North at 7 a.m. Temperature has risen over Germany, Denmark, the Netherlands, and over the greater part of Scandinavia, changed little over France and Great Britain, and fallen slightly at several Irish stations. The readings now range from 57° at Nice and 55° at Berlin and Great Yarmouth to 46° or 47° over the major portion of Ireland, and to 36° in the extreme north of Sweden. The weather is fine and bright over Germany and at most of the Swedish stations; in most other regions the sky is cloudy or overcast, with passing showers in the north-west of Ireland and over South Wales, and steady rain in the Hebrides. The sea is rather rough off the coast of Brittany, moderate to smooth elsewhere.

The highest temperature recorded over our Islands yesterday was 60° at Margate, but in many places the maximum was only slightly lower. Heavy rain has fallen at some Irish stations, as much as 0.5 in. at Blacksod Point and 0.8 in. at Birr Castle, and slight showers over these Islands generally. The duration of bright sunshine varied considerably, the highest record being 12 hours at Aberdeen and the lowest 1.8 hour at Birmingham.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The depression which is now passing over our Islands is steadily dispersing, but the backing of the wind in Ireland appears to indicate that another disturbance is approaching that country from the Atlantic. Moderate or fresh winds between South and West, with unsettled weather, are likely to prevail generally during the ensuing 24 hours.

FORECASTS*

For the 24 hours ending at NOON on 5th. May, 1906.

DISTRICTS.	FORECASTS.	DISTRICTS.	FORECASTS.
0 { SCOTLAND NORTH	N.W. ^{ly} and W. ^{ly} to S. ^{ly} winds, moderate or fresh; changeable, some showers, rather mild.	6 { SCOTLAND WEST	Same as Nos. 0 and 1.
1 { SCOTLAND EAST		7 { ENGLAND N.W.	N.W. ^{ly} to S.W. ^{ly} or S. ^{ly} winds, moderate or fresh; some showers, fair intervals;
2 { ENGLAND N.E.	S.W. ^{ly} and W. ^{ly} winds, moderate or fresh, backing again later; mostly fair, but showers still probable; temperature changing little.	8 { ENGLAND S.W.	temporarily cooler.
3 { ENGLAND EAST		9 { IRELAND NORTH	Wind backing to S.W. or S.; changeable, occasional showers; becoming milder.
4 { MIDLAND COUNTIES		10 { IRELAND SOUTH	
5 { ENGLAND SOUTH			
		WARNINGS	NONE ISSUED.

Note.—The South Cone, point downwards (⌞), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌞), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields +0.3 in., but for Sumburgh Head +0.4 in., for stations South of Malin Head and North Shields +0.2 in., but for Scilly and Jersey +0.1 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR SATURDAY, 5TH MAY, 1906.

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Direction and Force, flying with the wind.

Force above 10 ———→

Force 5 to 7 ———→

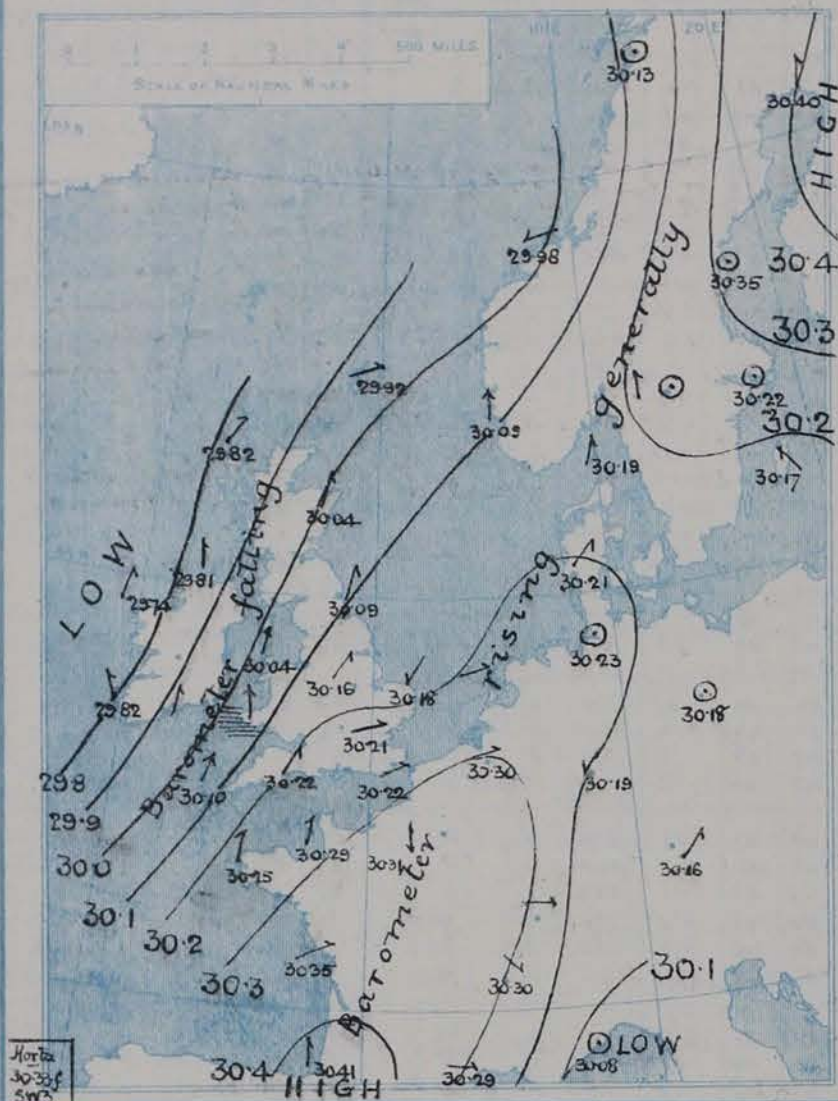

Calm ☉

Force 8 to 10 ———→

Force 1 to 4 ———→

SEA.—Rough ———→

High ———→

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°

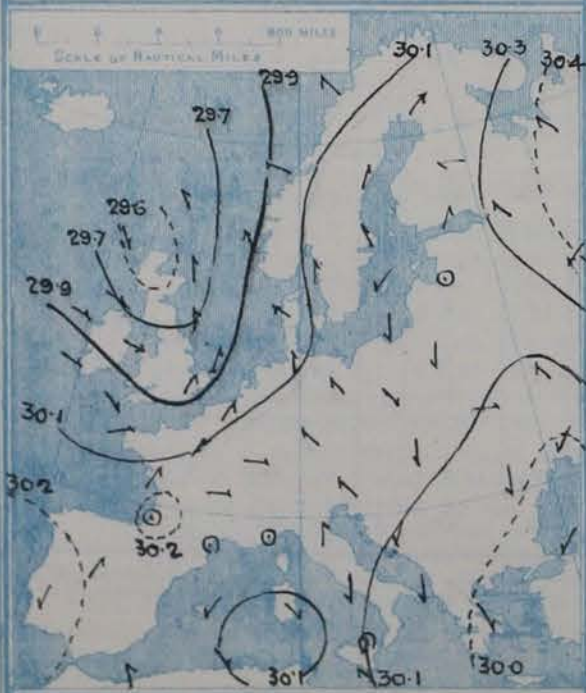

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus—0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. BRIGHT SUNSHINE IN 1906.

Total Duration recorded in various districts of the United Kingdom in the 12 weeks ended Saturday, 28th April, with the percentage of the average duration for the corresponding period.

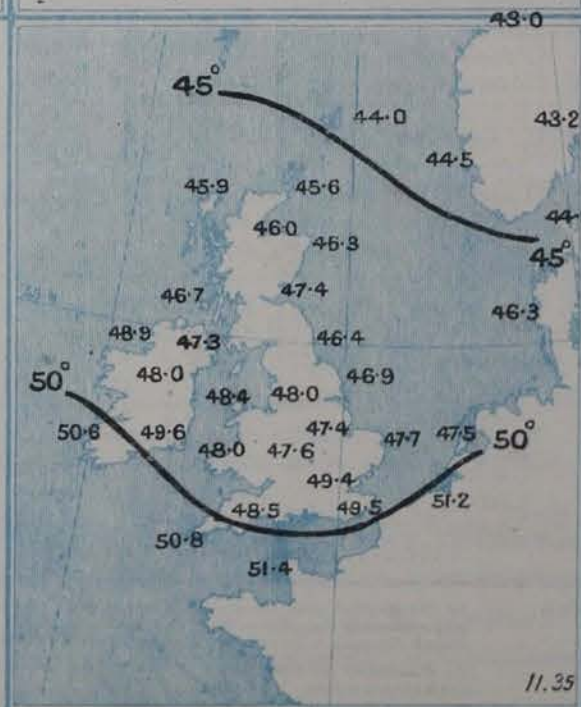

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period

APRIL - MAY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The depression which lay over Scotland yesterday has disappeared and the barometer has risen between three and four tenths of an inch in almost all parts of Great Britain. During the night, however, Ireland and our western districts generally have come under the influence of another disturbance over the Atlantic and the mercury in those regions is still falling rather decidedly. The readings at present range from above 30.3 ins. over the greater part of France and the Spanish Peninsula and also over the northern half of Sweden and its neighbourhood to less than 29.5 ins. off the west coasts of Ireland and Scotland.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind, after being westerly over the United Kingdom during yesterday, has backed to the southward in nearly all districts and increased to a strong breeze on the coast of Wales and to a fresh breeze at Scilly. A strong southerly breeze also prevails on the south-west coast of Norway, but on the Continent as a whole light variable breezes are reported. Temperature has fallen somewhat in Scotland, risen quickly in the extreme north of Norway, and changed irregularly in most other localities. At the majority of our own stations it is about 50°, but as low as 44° at Stornoway, and 42° at Malin Head and Sumburgh Head. The Continental readings range from 58° at Nice, 57° at Frankfurt and 56° at Christiansund to 38° at St. Petersburg. The weather is fair or fine and bright in nearly all parts of England, Scotland and the western regions of the Continent; rain is, however, falling at Faerder and Belfort and the sky has become overcast on our south-west coast. Rain has set in during the night throughout Ireland and has already extended to Holyhead and Stornoway. The sea is rather rough at Pembroke, moderate to smooth elsewhere.

The maximum temperatures recorded over our Islands yesterday were 60° or slightly lower at several stations in the east and south. Heavy rain was measured in the south-west of Ireland and also at Belfort, and smaller amounts in many other places. Bright sunshine was fairly abundant over the Kingdom generally, but Rhyl recorded no more than 2 hours and Stornoway 1.8 hours; at Pembroke there were 9.6 hours. A thunderstorm occurred at Lyons last evening.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The depression in the west will probably travel in a northerly direction and at the same time extend more over the United Kingdom, with considerable falls of rain in the west and north-west. The south and east will be less affected, and the greater part of to-day will be fair.

FORECASTS*

For the 24 hours ending at NOON on

6th. May. 1906.

DISTRICTS.

FORECASTS.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	} S ^W and S.W ^W winds, freshening; becoming unsettled with rain, most in the west; mild.
1	SCOTLAND EAST	
2	ENGLAND N.E.	} S ^W and S.W ^W winds, increasing somewhat in force; fair during to-day, some
3	ENGLAND EAST	
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	} rain at night or to-morrow; mild.

6	SCOTLAND WEST	} Same as Nos. 0 and 1.
7	ENGLAND N.W.	
8	ENGLAND S.W.	} S ^W and S.W ^W winds, fresh or strong; mild; unsettled, occasional rain.
9	IRELAND NORTH	
10	IRELAND SOUTH	} Fresh to moderate S ^W and S.W ^W winds; changeable, some rain; mild.

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (∇), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (∇), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR SUNDAY, 6TH MAY, 1906.

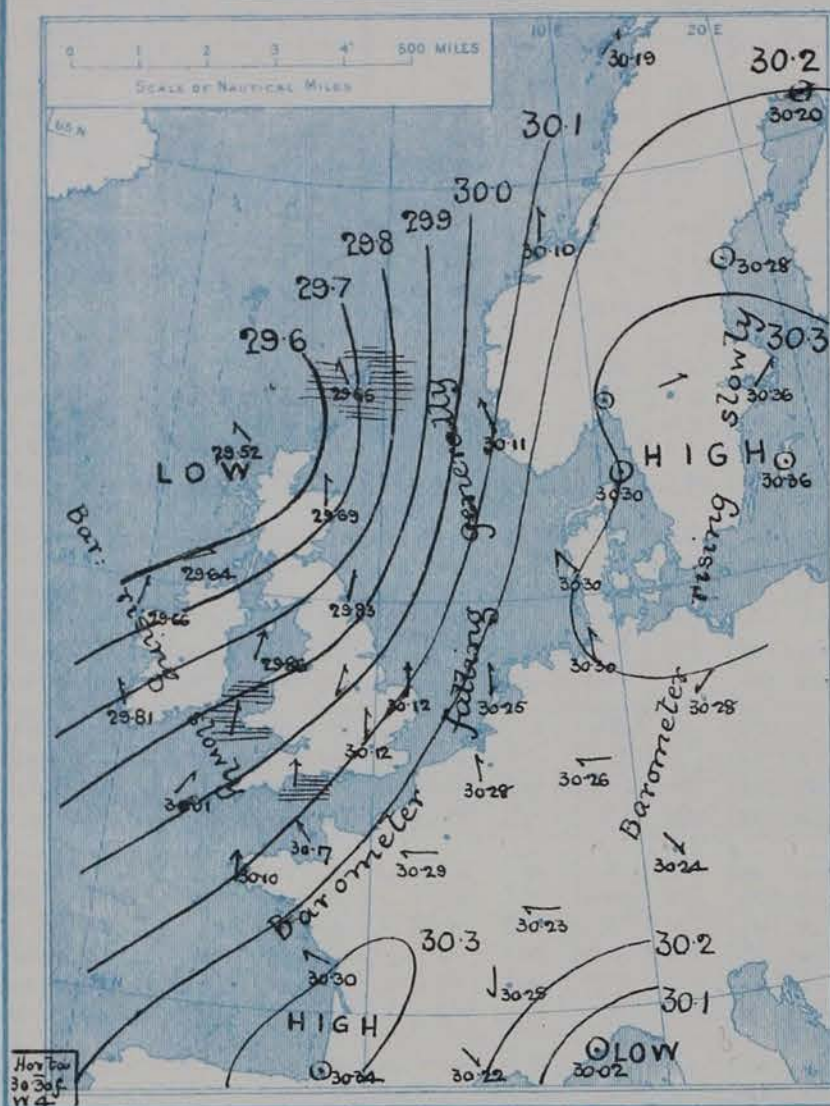

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → : Force 5 to 7 → : } Calm ☉
Force 8 to 10 → : Force 1 to 4 → :

SEA—Rough  High 

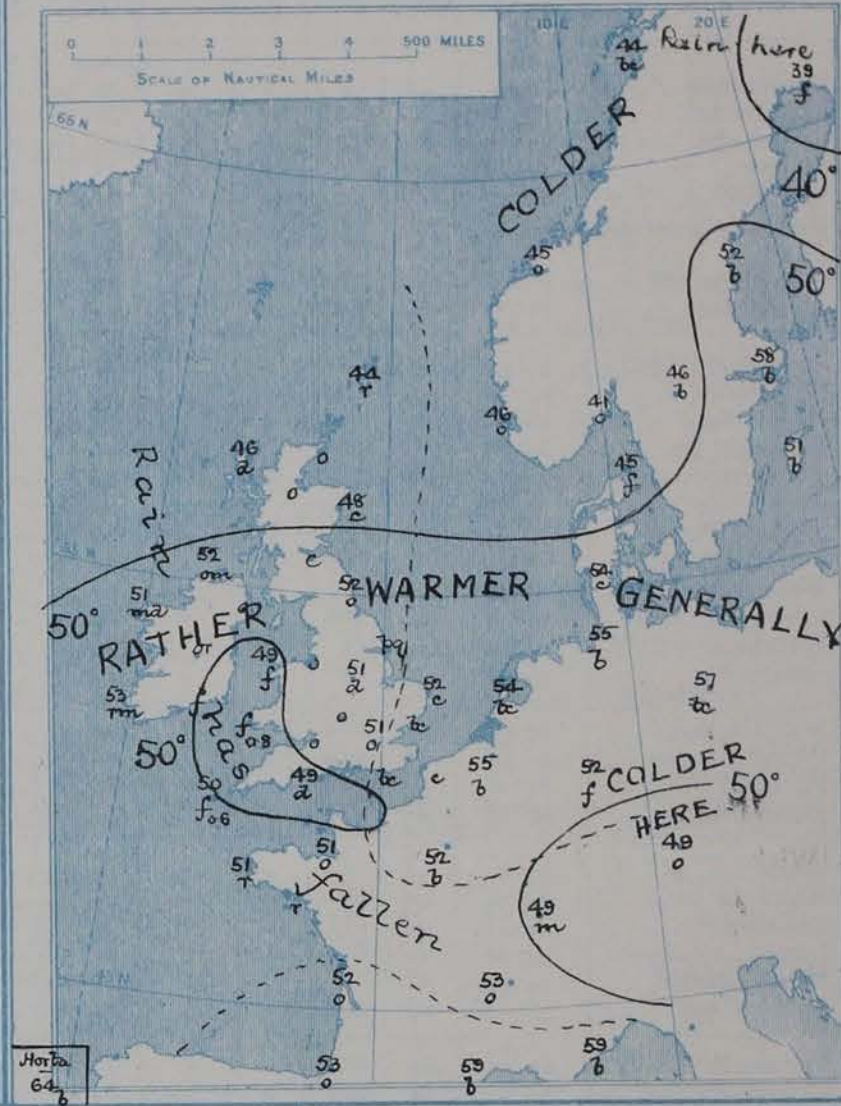

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°.

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

Amount recorded in various districts of the United Kingdom during the 17 weeks ended April 28, with the percentage of the average for the corresponding period.

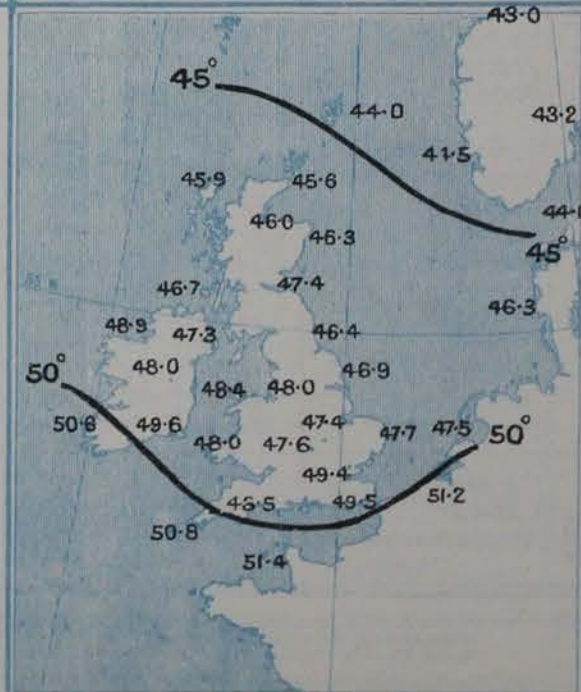

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period

APRIL - MAY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The centre of a well marked depression, with readings below 29.5 ins., is now lying to the west of the Hebrides, the borders of the system extending over nearly the whole of these Islands and the North Sea. On our western coasts the barometer is inclined to rise again but in all other parts of the United Kingdom a gradual fall is in progress. The highest pressures, 30.3 ins. and upwards, are found in two areas, - one lying over the southwest of France and the other over Denmark, the Baltic and the southern parts of Sweden.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind is moderate to fresh from the S.^{W.} or S.W.^{W.} over the greater part of the United Kingdom, the North Sea and the neighbouring parts of the Continent, but draws into S.E. in the extreme north of Scotland. In France, Germany and Sweden calms or light variable airs are reported. Temperature has risen in most places. Over the United Kingdom the readings are above the average, the highest reported being 59° at Leith, 56° at Birn Castle and 55° at Liverpool, and the lowest 44° at Sumburgh Head and 46° at Stromoway. At the Continental stations the thermometer ranges from 62° at Lisbon, 59° at Nice and Perpignan and 58° at Stockholm, to 44° at Bodø and 39° at Haparanda. The weather is cloudy or dull over these Islands and their neighbourhood, with fog and rain on many parts of our western and southwestern coasts. Rain is falling also in the northwest of France, but in the western parts of the Continent generally the weather is fair. The sea is moderate or slight generally, but rather rough at Sumburgh Head, Pembroke and Portland Bill.

In the course of the past 24 hours the thermometer has risen to 55° and upwards in many parts of the United Kingdom, to 60° at Leith and Margate and to 62° in London. Little or no bright sunshine was recorded in Ireland or Wales, but on our east and southeast coasts the amount was considerable, the longest duration reported being 12.8 hrs. at Folkestone. Rain has fallen generally, - heavily on some parts of our southwest coasts.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (⌋), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌋), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR MONDAY, 7TH MAY, 1906.

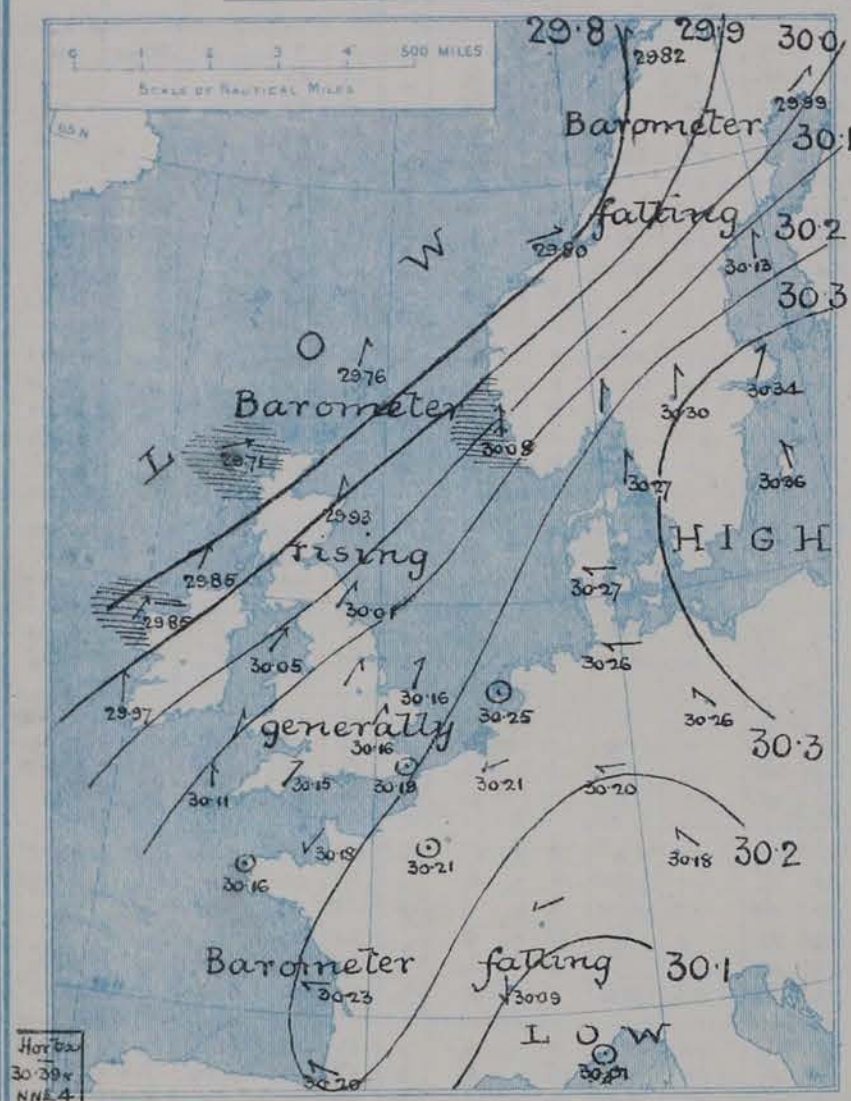

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → : Force 5 to 7 → : } Calm ⊙
Force 8 to 10 → : Force 1 to 4 → :

SEA.—Rough High

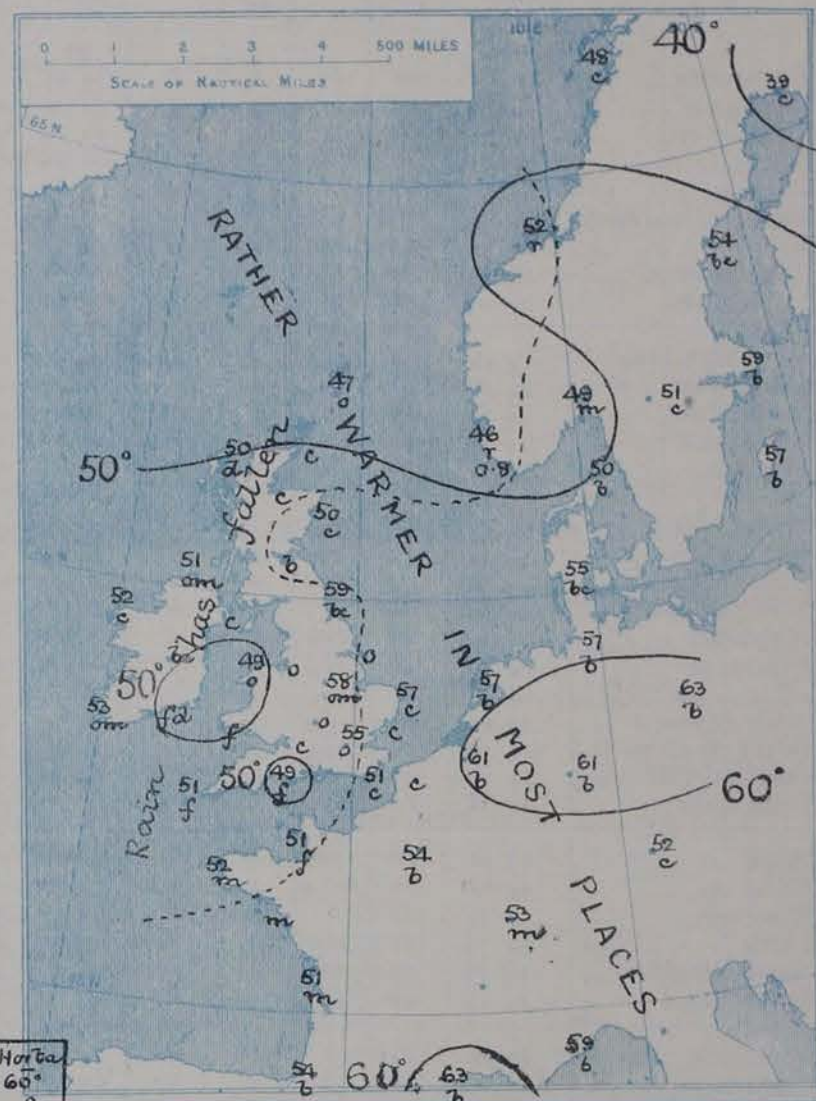

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus—0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

Amount recorded in various districts of the United Kingdom during the week ended Saturday, 28th April, with the percentage of the average for the corresponding week.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period

APRIL - MAY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

Barometric pressure is now highest, 30.3 ins. and upwards, over the region of the Baltic, and relatively high, 30.2 ins. and above, in an arm extending thence to the south-west of France. The lowest readings, below 29.8 ins., are found off our north-western and northern coasts and on the north-west coast of Norway. The mercury is falling in the north of Scandinavia and also in most parts of France; over these Islands it is rising.

WIND

The general current of air over the United Kingdom and the north-western countries of the Continent is from the South-Westward; it has little force as a whole but blows freshly or strongly on some exposed parts of our western and north-western coasts, and a fresh gale at Skudesnaes. Over Germany and the south-west of France a light Easterly wind is reported. Temperature has risen in most places but changed very little at our western stations and on the west coast of France. Over these Islands it ranges from 59° at Leth and Shields to 48° at Pembroke and to 47° in the Shetlands; and on the Continent from 63° at Perpignan and Berlin to 46° at Skudesnaes and to 39° at Staparanda.

TEMPERATURE

WEATHER

AND

SEA

The sky is clear in many parts of Sweden, Denmark, the Low Countries, Germany and France; elsewhere, however, there is much cloud and a considerable amount of mist, while rain is falling on the west coast of Norway and in the Hebrides. Over the western half of the English Channel and the shores of the St. Georges Channel thick fog prevails. The sea is rough at Stormoway, rather rough at Blackhead Point and on the south-west coast of Norway, moderate to smooth elsewhere.

During yesterday the thermometer rose to about 60° at several stations in the north and north-east of our Islands and to 68° at Hain. The night was very mild, many of the minimum temperatures being above 50°. Slight rain has fallen in most parts of the Kingdom but scarcely any in the east of Scotland and the south and south-east of England. The duration of bright sunshine was very slight as a whole but many hours were recorded on the coasts of Kent and Essex.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

Although the barometer is at present rising over the United Kingdom and its neighbourhood there are no indications of any material modification in the general distribution of pressure over Western Europe. It is probable that before the ensuing 24 hours have elapsed our western districts will come under the influence of another low pressure system approaching from the Atlantic.

FORECASTS*

For the 24 hours ending at NOON on 8th. May. 1906.

DISTRICTS.

FORECASTS.

DISTRICTS.

FORECASTS.

- 0 { SCOTLAND NORTH
- 1 { SCOTLAND EAST
- 2 { ENGLAND N.E.
- 3 { ENGLAND EAST
- 4 { MIDLAND COUNTIES
- 5 { ENGLAND SOUTH

S.W.⁴ and S.⁴ breezes; mild, cloudy,
occasional rain in west, fairer in east.
S.⁴ and S.W.⁴ winds, light; some
slight rain locally but mostly fair;
mild

- 6 { SCOTLAND WEST
- 7 { ENGLAND N.W.
- 8 { ENGLAND SW
- 9 { IRELAND NORTH
- 10 { IRELAND SOUTH

Same as Nos. 0 and 1.
S.⁴ and S.W.⁴ winds, light or moderate;
fair as a whole but not settled; local
fogs on coast; mild.
Moderate or fresh S.⁴ and S.W.⁴
winds; fair to showery, some fog on
south coast; mild.

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (⌋), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌋), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields +0.3 in., but for Sumburgh Head +0.4 in.; for stations South of Malin Head and North Shields +0.2 in., but for Scilly and Jersey +0.1 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR TUESDAY, 8TH MAY, 1906.

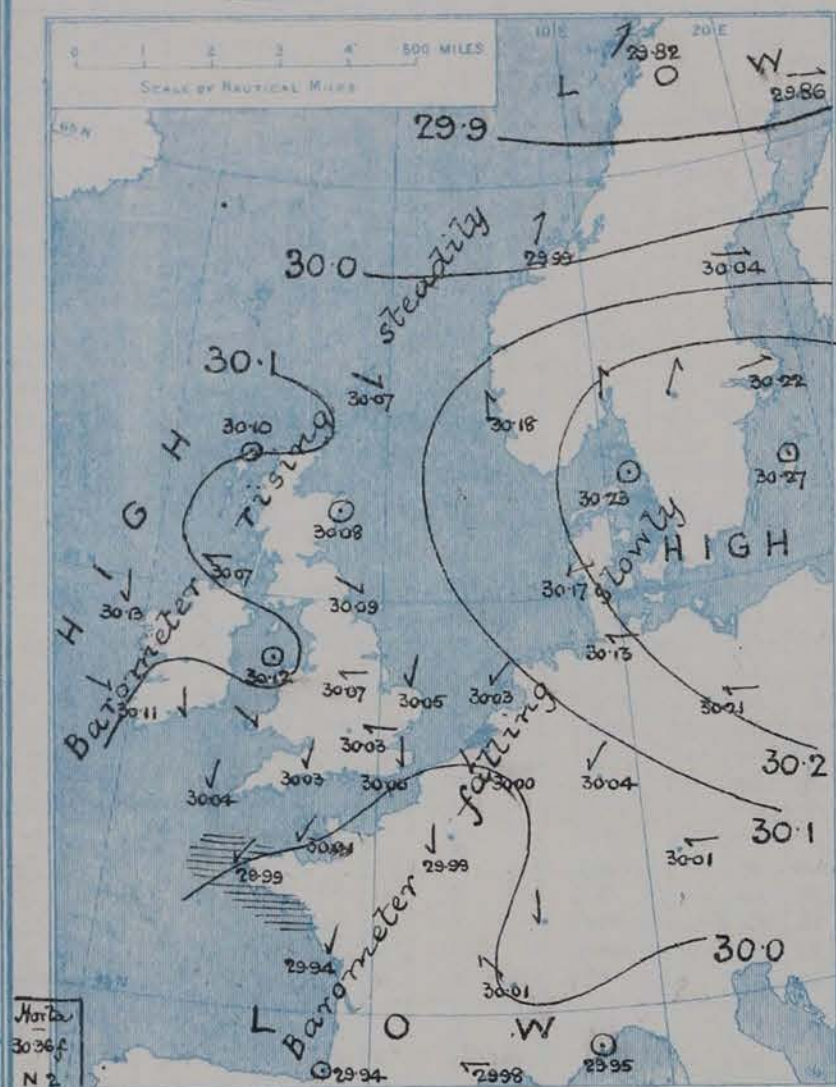

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → : Force 5 to 7 → : } Calm ⊙
Force 8 to 10 → : Force 1 to 4 → :

SEA—Rough  High 

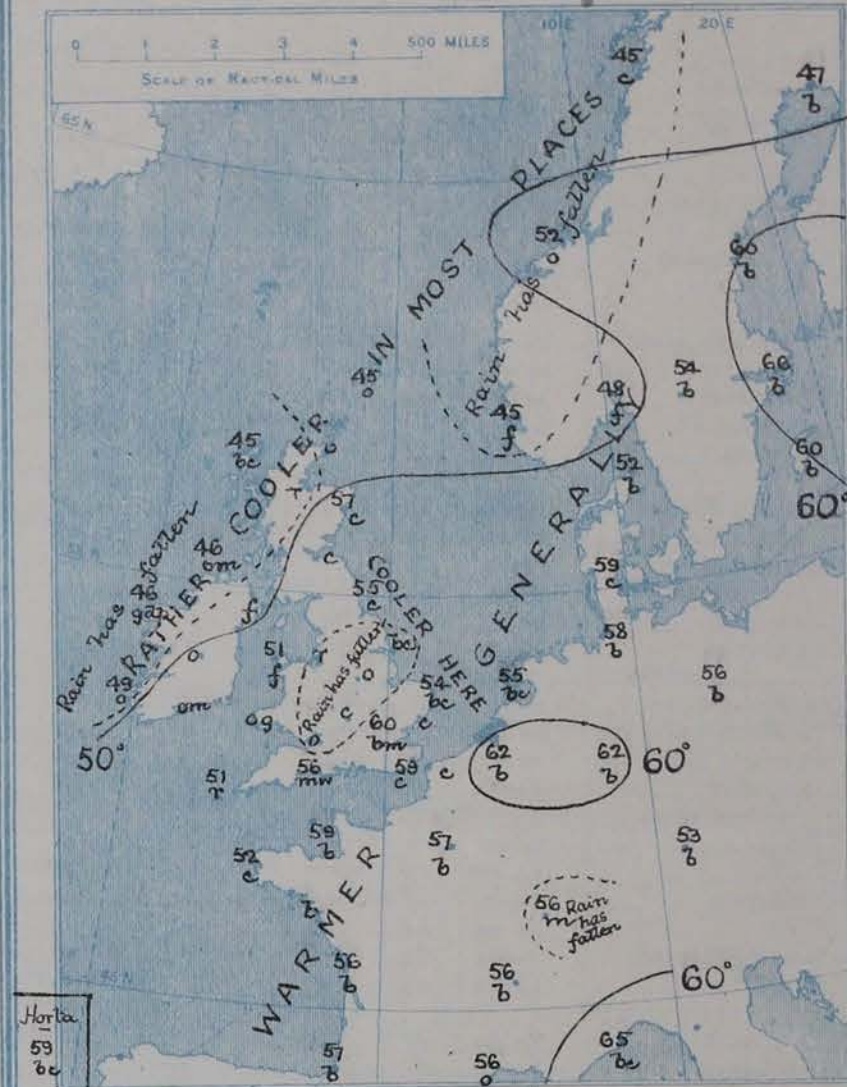

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE—Isotherms are drawn for each 10°.

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus -0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. EXTREMES OF TEMPERATURE

recorded

in various districts of the United Kingdom

during the week ended Saturday, 5th May.

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period

MAY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The rise of the barometer which was in progress yesterday morning over our western and northern districts has continued, while a fall which had commenced in the south-west of Europe has extended to France and the greater part of England, and also to Germany, the Netherlands and Denmark. The barometer is still highest, 30.2 ins. and upwards, in the region of the Baltic, but it is relatively high, 30.1 ins. and above, over the major portion of Ireland and the adjacent part of the Atlantic. The lowest reading, 29.82 ins., is reported from Bodö, but the mercury has fallen to below 30.0 ins. over almost the whole of France.

WIND

TEMPERATURE

WEATHER

AND

SEA

The South-Westerly and South-easterly winds have consequently entirely disappeared from the United Kingdom and have been replaced by light airs, chiefly from between North and East. At most Continental stations the wind is Easterly or North-Easterly and of little force; along the west coast of Norway, however, the Southerly and South-Westerly winds still prevail. Temperature has risen in most regions but fallen at most stations along the east coast of Great Britain, in the north of Scotland, and over Ireland. It is now as high as 60° in London and at Oxford and 57° at Aberdeen but decreases to 46° or 45° on our extreme north-western and northern coasts. The Continental readings range from 66° at Stockholm and 65° at Nice, to 45° at Skudeanaes and Bodö. The sky is clear in Sweden, Germany, the Netherlands, and at most French and Danish stations; over these islands and Norway, however, the weather is generally cloudy or overcast, with rain at Liverpool, Warrington and Lillie and passing showers at Blackhead Point. Thick fog prevails on the shores of the Irish Sea and also on the south coast of Norway. The sea is rather rough at Brest and Lorient, moderate to smooth elsewhere.

During yesterday the thermometer rose to above 60° over our islands generally, and to 68° at Margate; at many French and German stations and also at Stockholm the temperature exceeded 70°. Rain has fallen in various parts of the United Kingdom, as much as 0.4 in. being reported from Stornoway and Nottingham. Bright sunshine was little prevalent except at some stations in the extreme south-east of England, over Ireland, and at Aberdeen.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

Although barometric pressure has become very uniform over the United Kingdom, and the general character of the weather is likely to be fair or fine, some local irregularities, accompanied by a thundery condition of the atmosphere, will probably appear before the ensuing 24 hours have elapsed.

FORECASTS*

For the 24 hours ending at NOON on 9th. May, 1906.

DISTRICTS.

FORECASTS.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Light variable airs, mainly between N. and E.; fair as a whole, some showers locally; mild.
1	SCOTLAND EAST	
2	ENGLAND N.E.	Light variable airs, mainly between N. and E.; fair or fine generally, then less settled, with rain and thunder locally; very warm to-day, cooler to-morrow.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

6	SCOTLAND WEST	Same as Nos. 0 and 1.
7	ENGLAND N.W.	
8	ENGLAND S.W.	Light variable airs; changeable; very warm inland to-day, cool and foggy on coast. N ^w and N.E ^w winds, light or moderate; cloudy, mist locally, some showers; mild.
9	IRELAND NORTH	
10	IRELAND SOUTH	N ^w winds, light or moderate; changeable, some showers.

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (⌋), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌋), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + 0.3 in., but for Sumburgh Head + 0.4 in.; for stations South of Malin Head and North Shields + 0.2 in., but for Scilly and Jersey + 0.1 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR WEDNESDAY, 9TH MAY, 1906.

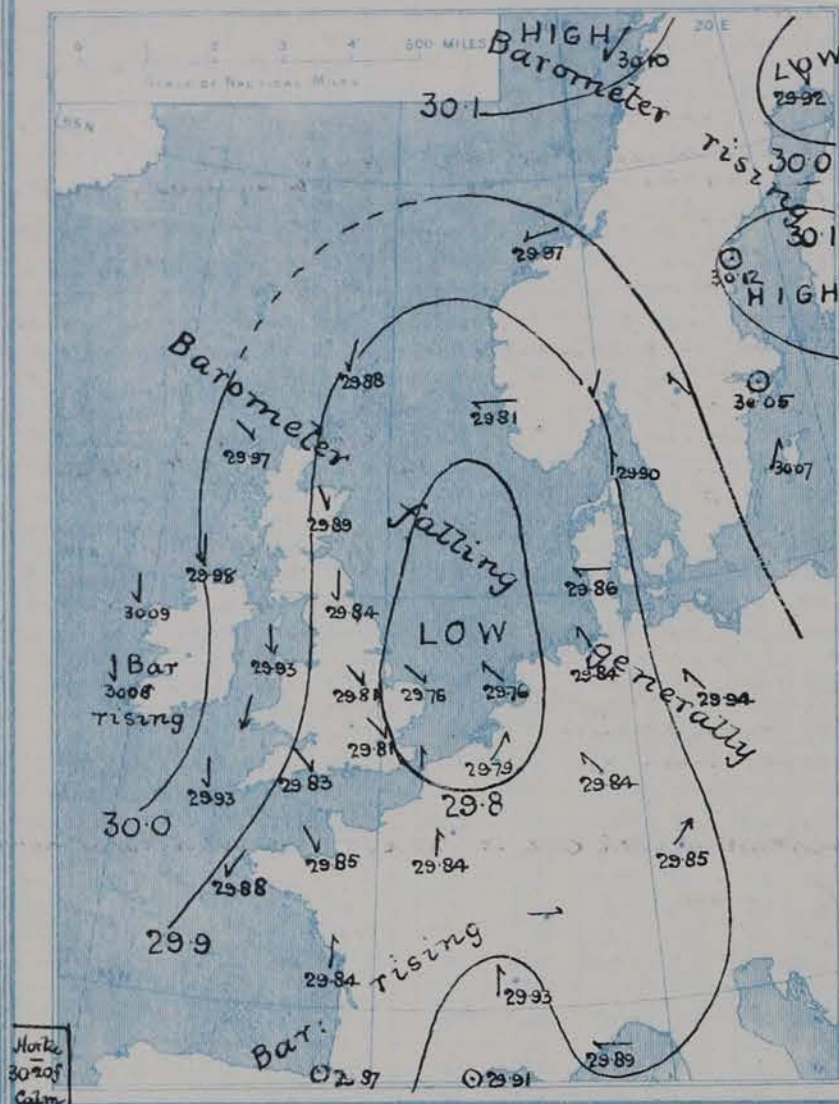

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → : Force 5 to 7 → : Force 1 to 4 → : Calm ☉

SEA—Rough High

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

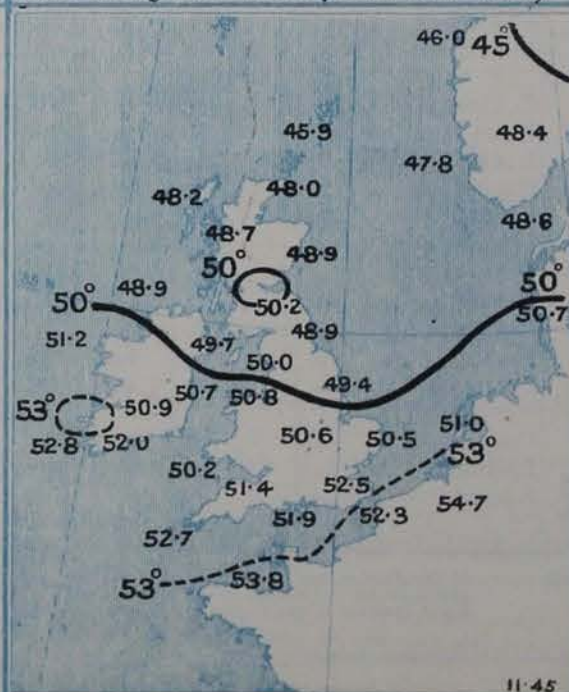

IV. LAST WEEK'S RAINFALL.

Amount recorded in various districts of the United Kingdom during the week ended Saturday, 5th May, with the percentage of the average amount for the corresponding week.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period MAY

(Derived chiefly from Observations extending over the 35 years 1871-1905)

GENERAL SITUATION AT 8 A.M.

PRESSURE

WIND

TEMPERATURE

WEATHER

AND

SEA

Since yesterday morning the barometer has fallen over the whole of our area except the north of Scandinavia. It is still falling slowly generally but has commenced to rise again in Ireland and the southern half of France. The readings now range from 30.12 ins. at Skerries and only slightly lower at Bodö and over the western half of Ireland to below 29.8 ins. in a shallow depression covering the east and south-east of England, Belgium and Holland and extending northwards to the south-west coast of Norway. The cyclonic circulation of the wind around the baric minimum, although light in force, is very well marked over our Islands and the nearer parts of the Continent. Over the west of France and the southern parts of Germany the direction of the winds appears to be influenced by the presence of some very small irregularities in barometric pressure. Temperature has fallen very generally - quickly in the north-east and west of Great Britain. In the south-west of France, over Denmark, the north of Scandinavia, and at some German stations the thermometer has risen. Over these Islands it is low for the time of year except over the southern and south-eastern counties of England, the readings ranging from 59° at Jersey to below 45° in Scotland and the north of Ireland, and to 41° in the Shetlands. The highest reading on the Continent is 67°, recorded both at Stockholm and Wisby, and the lowest 37° at Bodö. The weather is fine and bright along the west and south coasts of France, over Germany, the Low Countries, Denmark and Sweden, and fair at many of our own western stations. Elsewhere the sky is very cloudy or quite overcast, with fog at Spurn Head and rain at Shields and Leith. The sea is moderate to smooth.

The highest temperatures recorded in our Islands yesterday were 75° at Oxford and in London; in the north and north-west the maxima were low. A thunderstorm, with very little rain, passed over London during the evening and thunder or lightning occurred at several of our other stations. About 0.5 in. of rain has fallen in the east of Scotland and 0.68 in. at Holyhead, while at Upton, Slough, as much as 1.96 in. was measured this morning. Many of the northern and north-western stations had no sunshine, but in the south and south-east the day was very bright; several places recording more than 12 hours. The newspapers report violent thunderstorms and extremely heavy rains in several parts of England, especially at Buxton and at Hyde (Cheshire).

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The depression over the North Sea is likely to move slowly towards the Continent, while the rise of the barometer which has set in over Ireland and the south of France will gradually extend to Great Britain. Cloudy or dull weather, with rain locally, and a rather low temperature is to be expected during to-day, followed by some improvement to-morrow.

FORECASTS*

For the 24 hours ending at NOON on 10th May, 1906.

DISTRICTS.

FORECASTS.

DISTRICTS.

FORECASTS.

- 0 SCOTLAND NORTH
- 1 SCOTLAND EAST
- 2 ENGLAND N.E.
- 3 ENGLAND EAST
- 4 MIDLAND COUNTIES
- 5 ENGLAND SOUTH

N^{ly} winds, light or moderate; cloudy or overcast; some rain; cold.

Light or moderate winds, chiefly N.W.^{ly}; cloudy or dull, slight rain not improbable locally, improving later; rather cool.

- 6 SCOTLAND WEST
- 7 ENGLAND N.W.
- 8 ENGLAND S.W.
- 9 IRELAND NORTH
- 10 IRELAND SOUTH

Same as Nos. 0 to 2.

Light or moderate winds, mainly N^{ly}; cloudy or dull, slight rain locally; very cool.

Light or moderate N^{ly} winds; fair as a whole; very cool

WARNINGS

NONE ISSUED.

Note—The South Cone, point downwards (⌒), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (⌒), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields +0.3 in., but for Sumburgh Head +0.4 in.; for stations South of Malin Head and North Shields +0.2 in., but for Scilly and Jersey +0.1 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR THURSDAY, 10TH MAY, 1906.

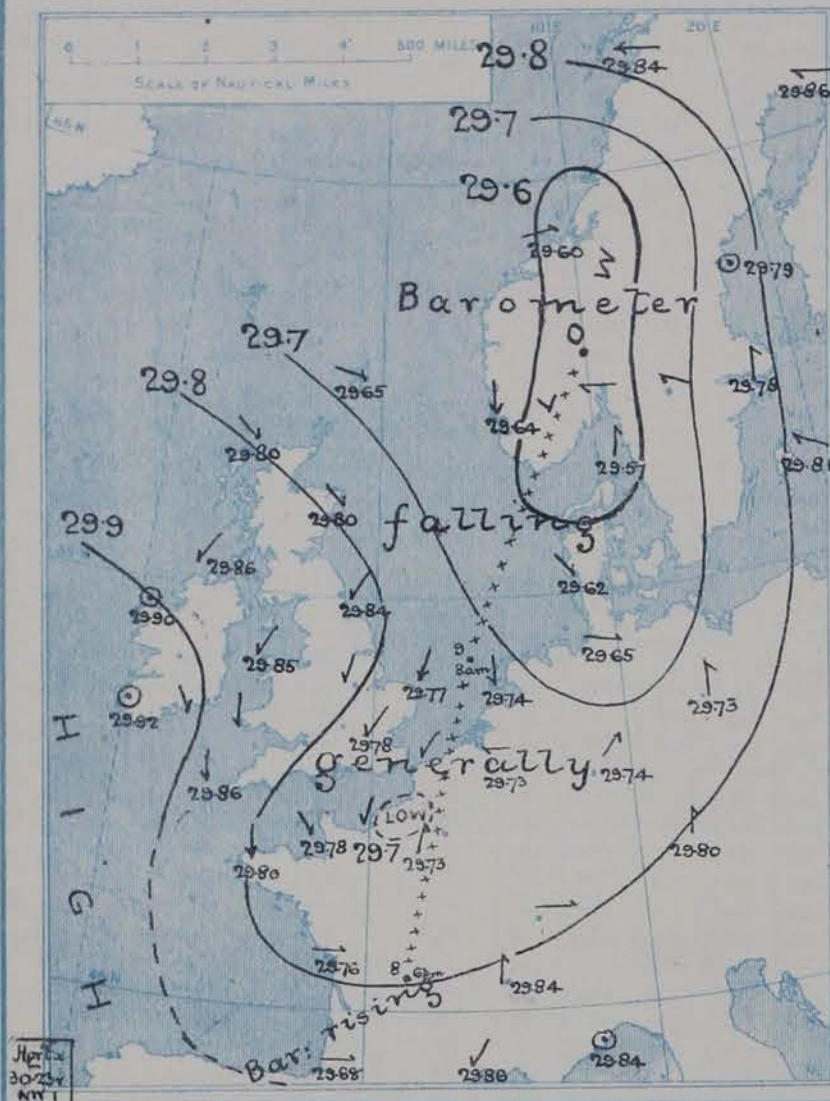

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ☉
Force 8 to 10 → Force 1 to 4 → }

SEA—Rough High

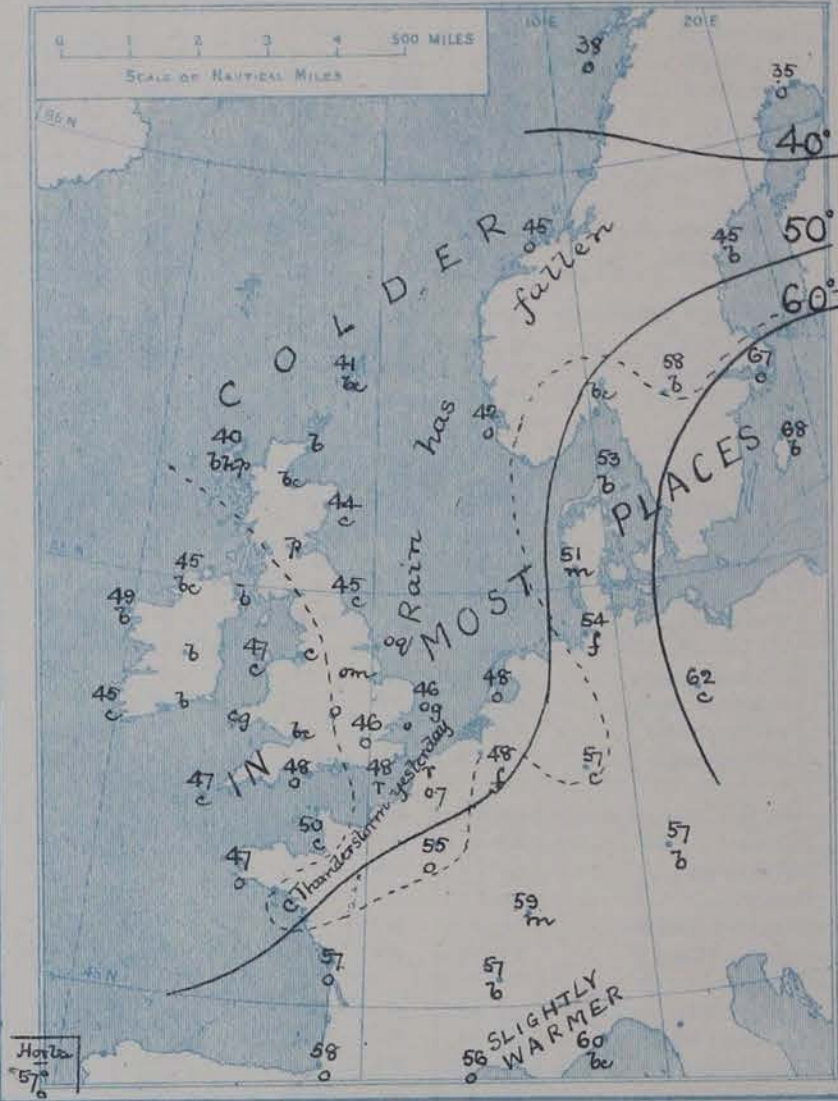

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°.

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND.

Yesterday morning.

IV. LAST WEEK'S SUNSHINE.

Amount recorded in various districts of the United Kingdom during the week ended Saturday, 5th May, with the percentage of the average duration for the corresponding week.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period MAY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The depression which lay over the North Sea at 8 a.m. yesterday has travelled north-north-eastward to Norway, where the barometer has fallen to below 29.6 ins. In the meantime other systems with relatively low readings have appeared over France, and pressure is still decreasing in nearly all parts of our area, the change being rather more decided on our own north-west coasts than elsewhere. In the extreme south-west and south of France a recovery of pressure has commenced.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind is moderate or light from between North-West and North-East over the United Kingdom and from the Westward in the south-west of France; over Germany and the Baltic region it draws into the Southward, and over the north of Scandinavia into East. A small but complete cyclonic circulation is shown around the north-east of France. Temperature has fallen except at some of our northern and north-western stations and in a few Continental localities. Over these Islands it is very low for the time of year; in most places the thermometer marks about 45° but the readings decrease to 40° at Stornoway and increase to 50° at Bath and Jersey. The Continental readings range from above 65° in the south-east of Sweden, 62° at Berlin and 60° at Nice to 35° at Haparanda. The weather is fine and bright in most parts of Sweden and also at Munich and in the south-east of France, while it is fair in Ireland and the north of Scotland; elsewhere the sky is generally overcast with fog at Brussels and the mouth of the Elbe, showers at Leith, and rain in the north-east of France and at Dungeness, as well as at Lisbon. The sea is moderate to smooth.

The maximum temperatures recorded yesterday were only about 50° on our western and northern coasts, but at some southern and south-eastern stations they were above 65°. Slight rain has fallen in several parts of Great Britain and at scattered places on the Continent, while thunderstorms have occurred at Orient and on the coast of Kent, thunder at Clacton-on-Sea, and both thunder and lightning at Jersey. Little or no bright sunshine was experienced over the midland counties and north of England, but Valencia recorded 9 hours, and some stations in the south-east more than 9 hours.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The low pressure to the southward and eastward of our Islands will probably move slowly in a northerly or north-easterly direction, and will be joined by a depression from the Atlantic which is at present causing backing winds and a rather pronounced fall of the barometer on our north and north-west coasts. The wind is therefore likely to become more North-Westerly over our Islands and the weather to remain cold and unsettled.

FORECASTS*

For the 24 hours ending at NOON on 11th May, 1906.

DISTRICTS.

FORECASTS.

DISTRICTS.

FORECASTS.

- 0 SCOTLAND NORTH
- 1 SCOTLAND EAST
- 2 ENGLAND N.E.
- 3 ENGLAND EAST
- 4 MIDLAND COUNTIES
- 5 ENGLAND SOUTH

N.W.^y to W.^y winds, light or moderate; changeable, some rain, most in west; cold.

N.^y and N.E.^y to N.W.^y winds, light or moderate; cloudy or overcast, occasional slight rain; cold.

- 6 SCOTLAND WEST
- 7 ENGLAND N.W.
- 8 ENGLAND S.W.
- 9 IRELAND NORTH
- 10 IRELAND SOUTH

Same as Nos. 0 and 1.

N.^y to N.W.^y winds, moderate or light; unsettled, mostly dull, some showers; very cool.

N.W.^y winds, moderate; fair at first, then unsettled with some rain; rather cold.

WARNINGS

NONE ISSUED.

Note—The South Cone, point downwards (⌋), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (⌋), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR FRIDAY, 11TH MAY, 1906.

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 →

Force 5 to 7 →

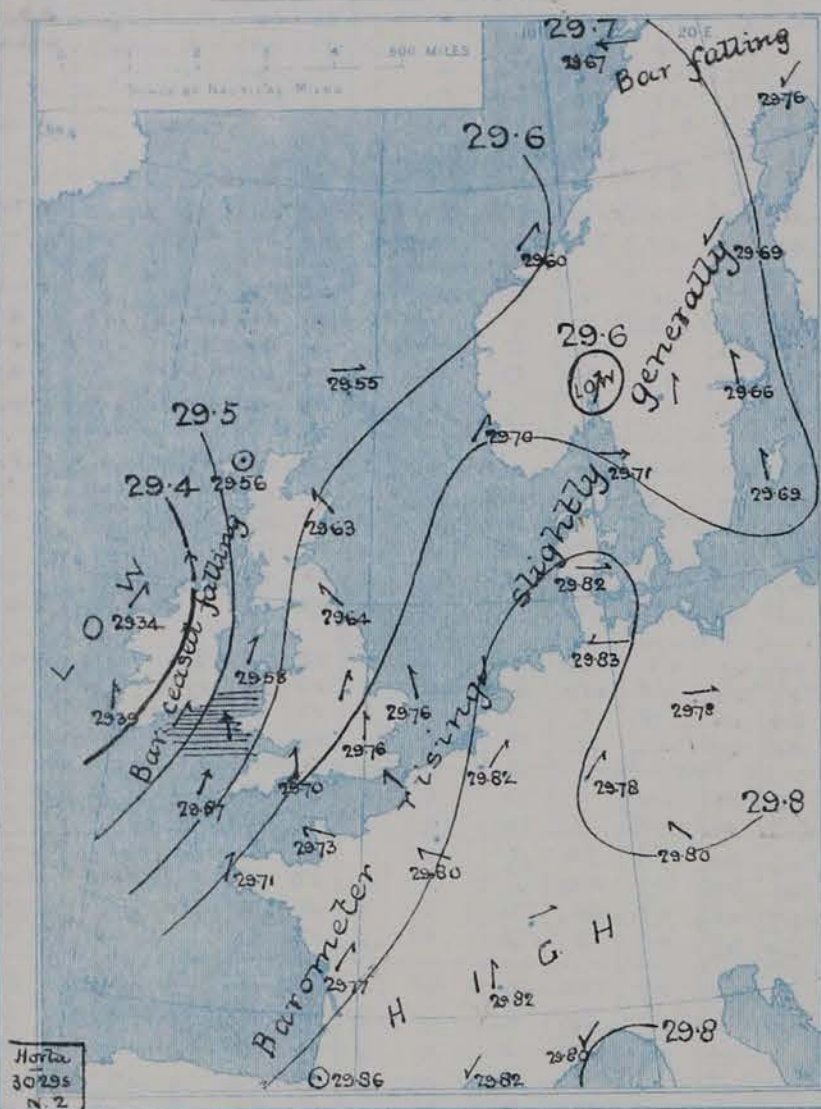

Calm ⊙

Force 8 to 10 →

Force 1 to 4 →

SEA—Rough

High

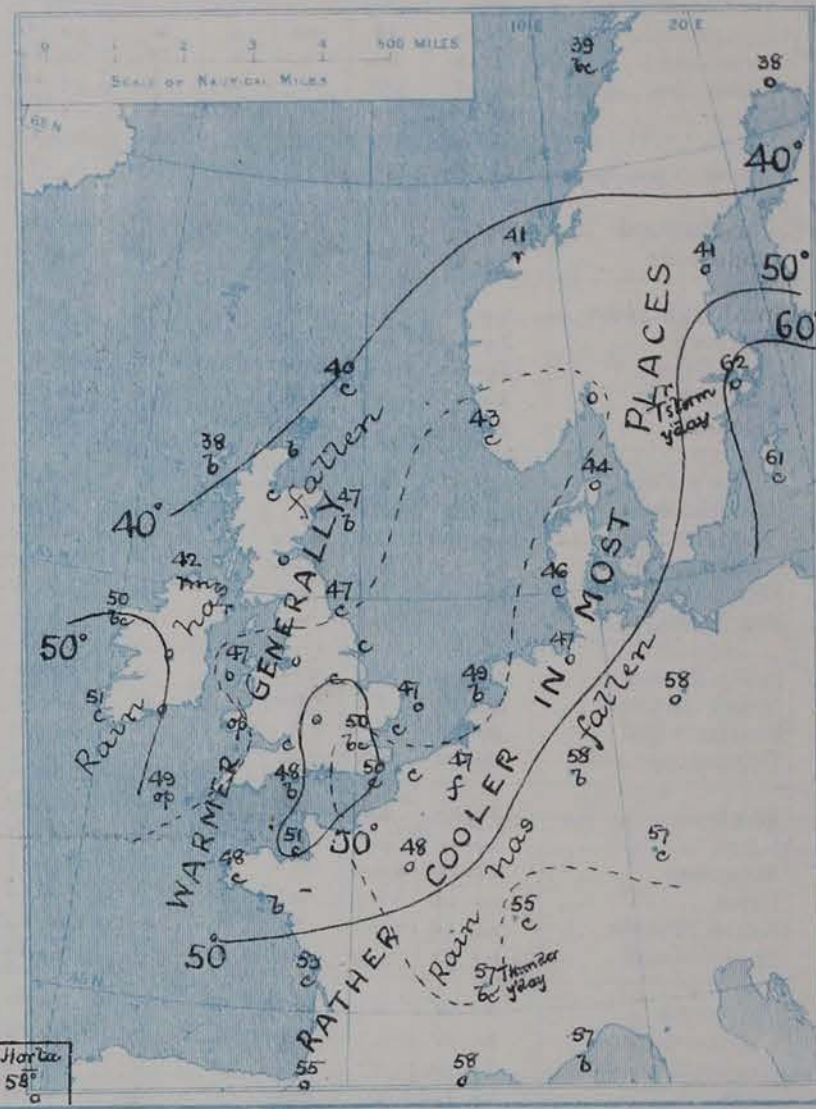

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°.

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. RAINFALL IN 1905.

Total Amount recorded in various districts of the United Kingdom in the 18 weeks ended Saturday, May 5th with the percentage of the average amount for the corresponding period.

GENERAL SITUATION AT 8 A.M.

PRESSURE

Since yesterday morning a rather large cyclonic disturbance has spread over the United Kingdom from the Atlantic, causing the barometer to fall about half an inch in Ireland and about three tenths of an inch along the west coast of Great Britain. Over Germany, Denmark, the Netherlands and the adjacent portion of France the mercury has risen. The highest readings, 29.8 ins. and upwards, are found in a rather narrow area extending from Spain to Denmark, and the lowest 29.4 ins. and less, over the western half of Ireland. Pressure is also relatively low in a small minimum near Christiania.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind has shifted to the Southward over the whole of the United Kingdom and its immediate neighbourhood; it blows a fresh or strong breeze at some exposed stations on our west coast, but is light or moderate generally. In the north of Scandinavia there is a moderate to fresh breeze from the North-Eastward, but on the Continent generally the wind varies much in direction and has little force. Temperature has risen over our Islands, fallen in most continental regions. It ranges from 51° or 50° at many of our western and southern stations to 42° at Wick and Malin Head and to 38° at Stormoy. The highest continental reading is 62° at Stockholm and the lowest 38° at Haparanda. The weather is fine and bright in a few places locally, but regarded as a whole the sky is overcast or very cloudy both over our Islands and the Continent. Steady rain is falling in the north-east of Ireland and at Christiansund and Harstad and showers on our south-west coast, while at Brussels fog is reported. The sea is rather rough at Pembroke and Roches Point, moderate to smooth elsewhere.

Many of the maximum temperatures recorded over these Islands yesterday were below 50°; and during the night the thermometer fell to below 32° in some parts of Scotland. In the southern part of Sweden and France the thermometer rose to 70° or above, and at Berlin to 79°. Slight rain has fallen in several parts of the United Kingdom, and as much as 0.44 in. at Valencia Island. Thunderstorms were experienced yesterday at Lyons and Harstad. The day was very dull in the south and south-east, very bright in the north of England, in Scotland and at Scilly.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The movement eastward of the depression off Ireland appears to have ceased. Showers will probably be experienced in most districts, but over the eastern parts of Great Britain the general character of the weather is likely to be fair. A further increase of temperature is to be expected in all districts.

FORECASTS*

For the 24 hours ending at NOON on 12th. May. 1906.

DISTRICTS.

FORECASTS.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	} Light or moderate winds, between S. and W; changeable, some showers, especially in west; milder.
1	SCOTLAND EAST	
2	ENGLAND N.E.	} S.W. winds, light or moderate; fair as a whole, some slight showers locally; temperature rising.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

6	SCOTLAND WEST	} Same as Nos. 0 and 1.
7	ENGLAND N.W.	
8	ENGLAND S.W.	} S.W. and S.W.W. winds, moderate; changeable, some showers; becoming milder.
9	IRELAND NORTH	
10	IRELAND SOUTH	} Light or moderate winds, between S. and W; changeable, showery; milder.

WARNINGS

NONE ISSUED.

Note. The South Cone, point downwards (⌞), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (⌞), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR SATURDAY, 12TH MAY, 1906.

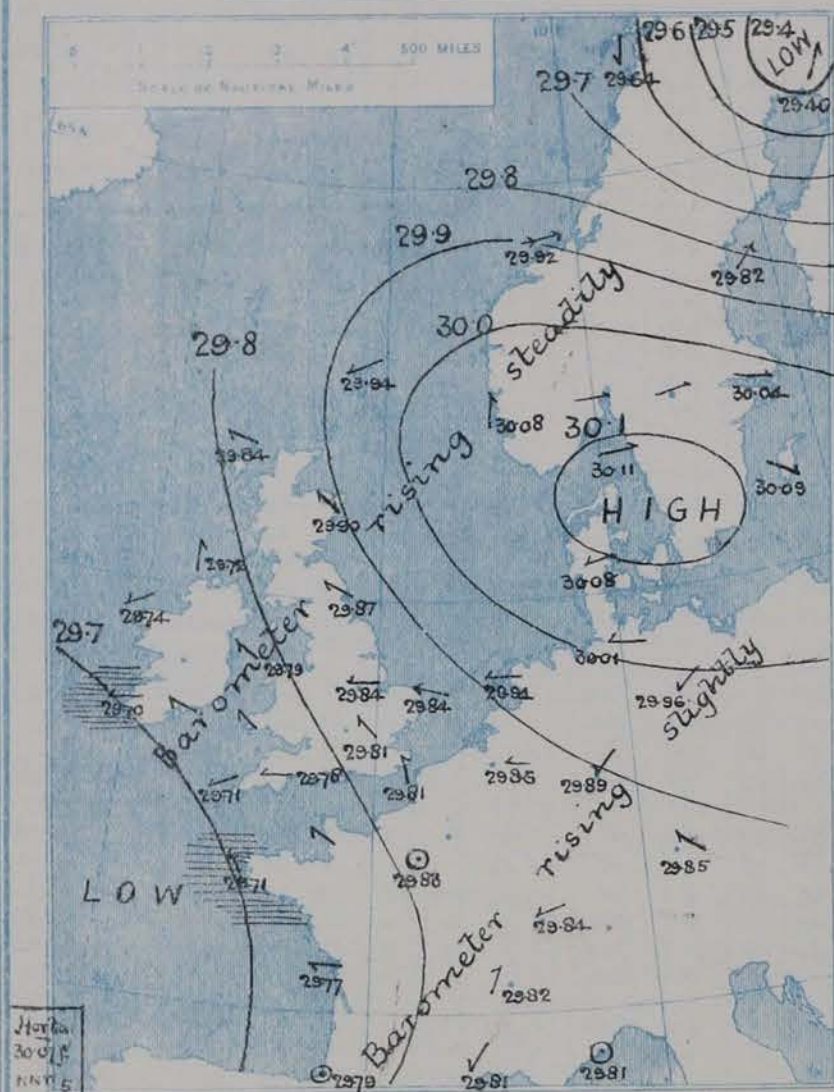

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Direction and Force, flying with the wind.

Force above 10 \rightarrow : Force 5 to 7 \rightarrow : Force 1 to 4 \rightarrow : } Calm \odot

SEA.—Rough --- High ---

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus—0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. BRIGHT SUNSHINE IN 1906.

Total Duration recorded in various districts of the United Kingdom in the 18th weeks ended Saturday, 5th May, with the percentage of the average duration for the corresponding period.

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period MAY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The barometer has now become highest, 30.1 ins. and upwards, in an anticyclone which has its central space over the Kattegat and its neighbourhood, and lowest, about 29.4 ins., in a depression centred over Lapland. The barometer is, however, relatively low over the Bay of Biscay and off our own south-west coast. The mercury is at present rising in all parts of our area except the north of Sweden.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind is light or moderate from the Eastward over Germany and the Netherlands, and from East or South-East over France and the United Kingdom; over Scandinavia it draws into West and blows a gale at Christiansund. Temperature has risen in nearly all parts of these Islands and the nearer countries of the Continent—quickly in Belgium and the north of Ireland—fallen several degrees in the region of the Baltic, and a few degrees in the north of Scandinavia. The readings range from 58° in London and 55° at Liverpool to 43° in the Shetlands; and from 62° at Brussels and 60° at Lyons to 35° at Bodö and Naparanda. The weather is cloudy or overcast in most parts of France, the United Kingdom and Norway, with mist or fog on our south-west coast and on the west coast of Brittany, and rain at Rochefort and Biarritz. Over Germany, the east and south-east of England, and at some Irish stations the sky is nearly cloudless. The sea is rather rough at Christiansund, off the south-west of Ireland and rough off the north-west of France; elsewhere it is moderate to smooth.

The highest temperature recorded over our Islands yesterday was 59° at Birr Castle and the highest at the Continental stations 77° at Lyons. Rain has fallen over our western and northern districts, the largest measurements being 0.35 in. at Donaghadee and 0.43 in. at Leith. Lightning was observed last night at Oxford. Bright sunshine was the most prevalent on the coast of Kent and in the south-west of Ireland; along the coast of Wales and the north-west of England the day was sunless.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The anticyclone to the eastward of the North Sea is likely to extend further eastward and to increase in intensity. Fair weather, with South-Easterly and Easterly winds, is anticipated over these Islands generally, but some local thunderstorms are not improbable over the more southern and south-eastern counties of England.

FORECASTS*

For the 24 hours ending at NOON on 13th May, 1906.

DISTRICTS.

FORECASTS.

- 0 { SCOTLAND NORTH
- 1 { SCOTLAND EAST
- 2 { ENGLAND N.E.
- 3 { ENGLAND EAST
- 4 { MIDLAND COUNTIES
- 5 { ENGLAND SOUTH

S.E.⁴ and E.⁴ winds, light or moderate; fair generally; cool on east coast, rather warm inland.

Light winds mainly E.⁴; fair as a whole, but thunderstorms not improbable locally; rather warm.

DISTRICTS.

FORECASTS.

- 6 { SCOTLAND WEST
- 7 { ENGLAND N.W.
- 8 { ENGLAND S.W.
- 9 { IRELAND NORTH
- 10 { IRELAND SOUTH

E.⁴ and S.E.⁴ winds, light or moderate; fair; warm.
S.E.⁴ winds, light or moderate; fair generally; rather warm.
S.E.⁴ or E.⁴ winds, light or moderate; fair generally but not settled, some fog or haze on coast.
Light or moderate winds, between S. and E; fair generally; temperature rising.

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (⌞), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌠), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR SUNDAY, 13th MAY, 1906.

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Direction and Force, flying with the wind.

Force above 10

Force 5 to 7

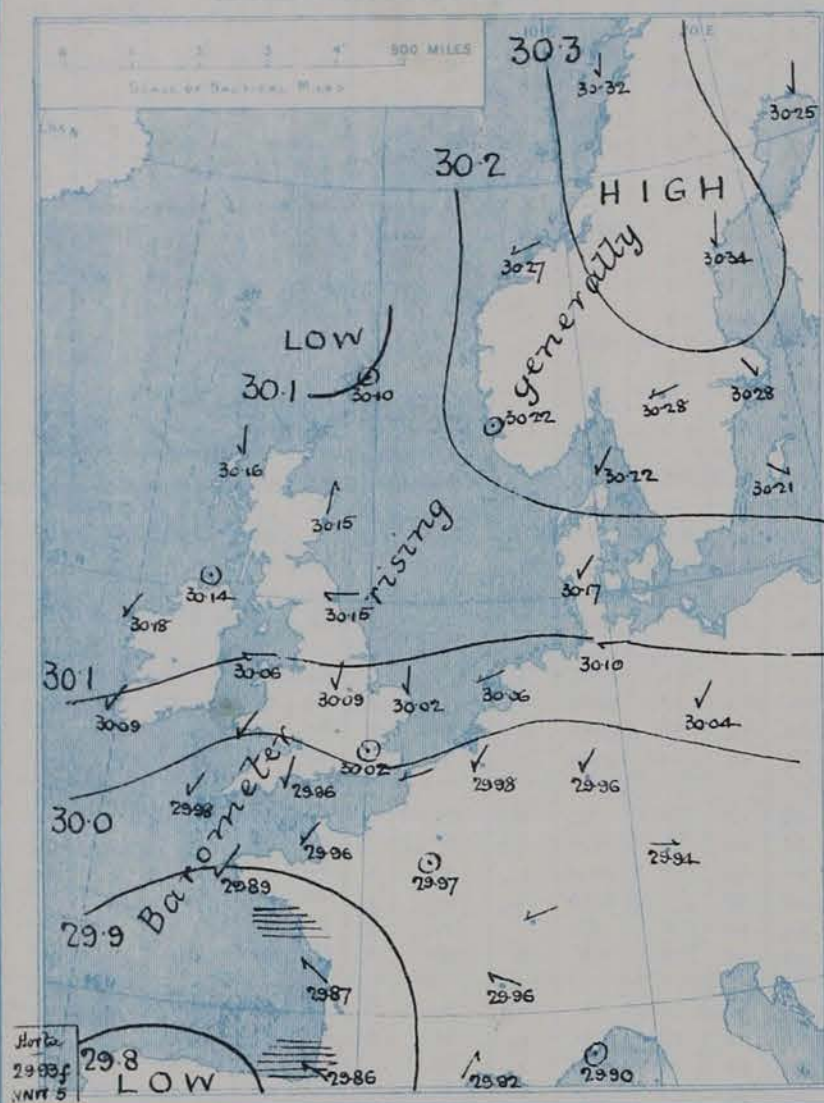

Calm

Force 8 to 10

Force 1 to 4

SEA.—Rough

High

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus: 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°

Amount recorded in various districts of the United Kingdom during the 18 weeks ended Saturday 5th May with the percentage of the average for the corresponding period.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period

MAY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The anticyclone noticed yesterday over Denmark and the south of Scandinavia has increased in intensity, and has extended over a considerable portion of North-Western Europe. A general rise of the barometer has therefore taken place, the highest readings, 30.3 ins. and upwards, being now found over the Northern parts of Scandinavia. The lowest pressures, 29.6 ins. and less, are reported in a shallow depression which has appeared off the south of Portugal.

WIND

The wind is light from the Eastward or North-Eastward over all the more central parts of our area, comprising Ireland, England, the Netherlands, Denmark and the northern parts of France and Germany; in the west of France it is South-Eastery. Calms or light variable airs are reported in Scotland, and light North-easterly breeze over the greater part of Scandinavia. Temperature has risen in most places, and is now above the average at all but our extreme northern and north-western stations.

TEMPERATURE

In London and at Bath the thermometer stands at 61°; a similar value being reported at Brussels, and slightly higher readings at some of the German stations. On our north-west, north and north-east coasts the readings are below 50°, while in the north of Scandinavia they are below 40°.

WEATHER

AND

SEA

The weather is fine over Western Europe as a whole, but is dull at several of our own northern stations, and foggy at Edinburgh Head and Malin Head. The sea is slight or smooth on the British and Irish coasts, but rather rough in the Bay of Biscay.

During yesterday the thermometer rose to 65° and upwards over the central and southern parts of England, the highest reading reported being 69° in London and at Oxford. At Brussels, Paris and Lyons the thermometer reached 75°, while at Berlin and Frankfurt it rose to 77°. The amount of bright sunshine was large on our south and east coasts, but much smaller in the western and northern parts of the Kingdom. Showers fell yesterday at many of the English stations; a thunderstorm occurred at Margate and thunder was heard at Clacton-on-Sea. A heavy thunderstorm was experienced at Yarmouth at 5 a.m. to-day.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (T), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.

The North Cone, point upwards (T), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + 0.3 in., but for Sumburgh Head + 0.4 in.; for stations South of Malin Head and North Shields + 0.2 in., but for Scilly and Jersey + 0.1 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR MONDAY, 14th MAY. 1906.

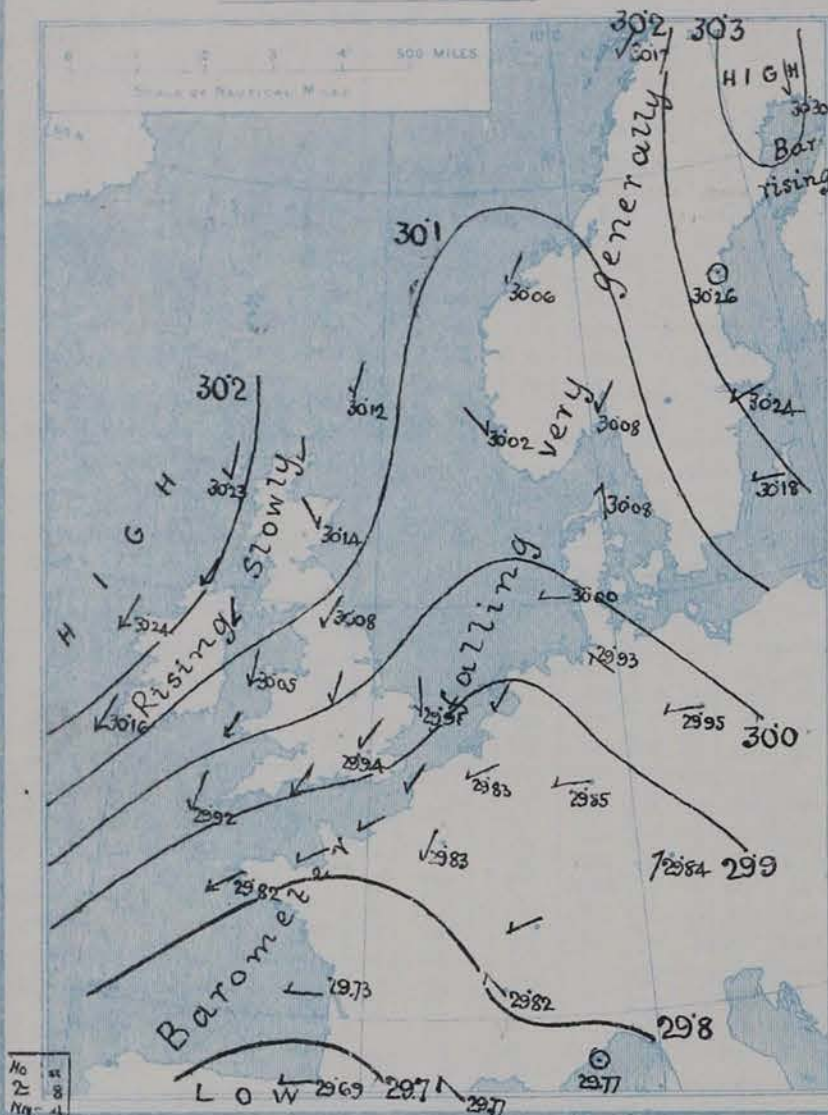

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 — Force 5 to 7 — } Calm ☉
Force 8 to 10 — Force 1 to 4 —

SEA—Rough High

GENERAL SITUATION AT 8 A.M.

PRESSURE

The high pressure system recently over Scandinavia is moving away to Northern Russia, the highest barometer reported being 30.30 in. at Haparanda. Another anticyclone lies out on the Atlantic, beyond our western and northwestern coasts, where the mercury stands above 30.2 in. An extensive depression over the Spanish Peninsula is occasioning a general fall of the barometer over nearly the whole of the region under observation, the lowest value being 29.66 in. at Lisbon. The gradients are moderate off our southwestern coasts, slight elsewhere.

WIND

Winds from between N. and E. prevail both at home and abroad, as a rule light or moderate in force, but at a few of our western and southwestern coast stations a fresh or strong breeze is reported. Temperature has decreased over the British Isles, changed somewhat irregularly at the foreign stations. The readings range from 43° or 44°

TEMPERATURE

over the north of Scotland to 58° at Jersey and 59° at Bath and Portland Bill; from 37° over Northern Scandinavia to 61° at Frankfurt and Biarritz and 65° at Nice. Fine, bright weather prevails over the greater part of our area, but slight rain is falling in the northeast of Scotland and at Cape Gris Nez and at Christiansund. The sea is moderate to smooth on all coasts.

WEATHER

AND

SEA

During yesterday temperature rose to 70° and upwards in various parts of England and Wales, to 74° at Bath and Brighton and 75° at Jersey, but in the extreme north and northwest the maxima were 50° and under. Thunderstorms occurred during yesterday forenoon in the eastern counties of England, thunder or lightning being subsequently reported from many parts of Southern England. The thunderstorm at Yarmouth was accompanied by $\frac{3}{4}$ in. of rain. The duration of bright sunshine was very large generally, from 10 to more than 13 hrs. in many places, but Skegness had only 0.2 hr. and Aberdeen none.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The depression over the Peninsula will probably continue to expand northeasward across France, but no great modification in the general distribution of pressure over these Islands is anticipated, so that the N.E.^s type of conditions is likely to hold through the coming 24 hours.

FORECASTS*

For the 24 hours ending at NOON on 15TH May, 1906.

DISTRICTS.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received. † Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Tuesday, 15th May, 1906.

I. BAROMETER, WIND AND SEA. This Morning.

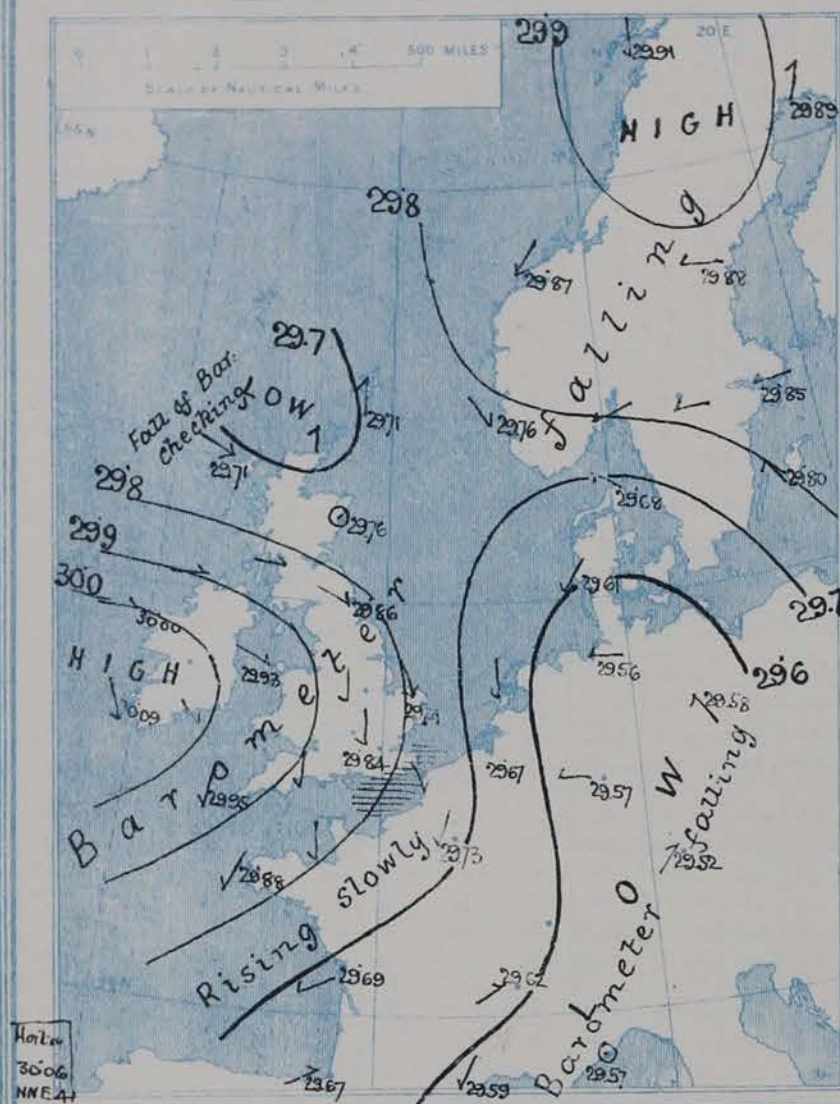

BAROMETER—Isobars are drawn for each tenth of an inch

WIND—Arrows show Directions and Force, flying with the wind

Force above 10 → Force 5 to 7 → } Calm ☉

Force 8 to 10 → Force 1 to 4 →

SEA—Rough High

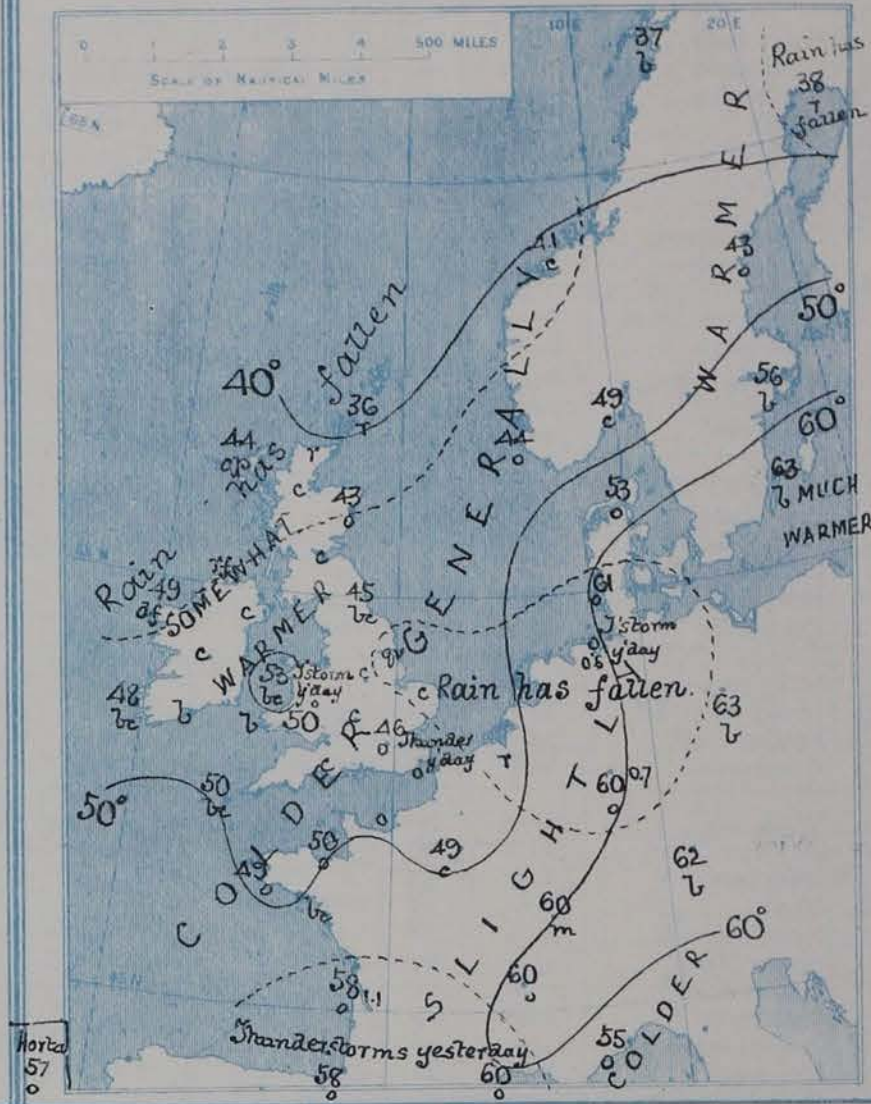

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAIN—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus -0.6

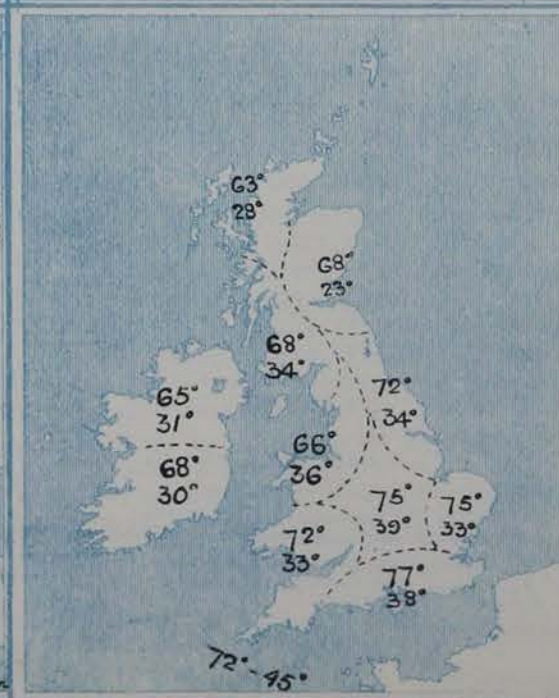

III. BAROMETER AND WIND

Yesterday morning.

IV. EXTREMES OF TEMPERATURE recorded

in various districts of the United Kingdom during the week ended Saturday, 12th MAY.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period MAY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The Atlantic anticyclone has moved southward and is now indicated at some distance out at sea beyond the southwest of Ireland, where the barometer is slightly above 30 ins. A large system of low pressure covers most of the Continental countries, the mercury being below 29.6 ins. over Germany and south and southeast of France. In the course of the past night a disturbance has advanced quickly to the north of Scotland, where the barometer has fallen below 29.7 ins. The gradients generally are slight to moderate.

WIND

TEMPERATURE

WEATHER

AND

SEA

W.^s and N.W.^s breezes prevail over our western and northern districts, elsewhere they are mainly from between N. and E. As a rule the force is light to moderate, but locally on our southeastern and the French coasts a fresh breeze is reported, and at Christiansund a strong breeze. Temperature has risen somewhat at several of our northwestern and northern stations, and at the outlying Continental stations between Lyons and Haparanda. The values range from 36° at Lumburgh Head and 42° at Wick to 50° at Scilly and Jersey and 53° at Holyhead; from 37° at Bodø and 38° at Haparanda to 62° at Munich and 63° at Berlin and Wisby. The weather is fair or fine over Western England, Southern Ireland, Eastern Germany and Southern Sweden; over the rest of our area it is mostly cloudy to overcast, with rain falling on our northwestern and northern coasts, over the Low Countries and at Haparanda. The sea is rather rough on the French side of the Straits of Dover, moderate to very smooth on all other coasts.

During yesterday temperature rose to 70° to 72° at some of the south coast stations, but some of the maxima in the northeast and northwest were 48° or 50°. In the night a slight frost occurred at Nain. A thunderstorm occurred at Llandudno, lightning at Town and Manchester and thunder at Margate. Thunderstorms accompanied by considerable falls of rain occurred in various parts of France and Germany. Over the northern half of England there was little or no bright sunshine, but in other districts the records were large, in most places ranging between 10 and 14 hours.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The new disturbance in the north will probably pass on to Norway, pressure remaining low on the Continent generally. Winds from between N. and W. are likely to prevail during the ensuing 24 hours, with changeable weather and temperature.

FORECASTS*

For the 24 hours ending at NOON on 16th May, 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	S. ^s to W. ^s and N.W. ^s breezes; unsettled, some rain; cold.
1	SCOTLAND EAST	Light or moderate W. ^s to N. ^s breezes; changeable, cloudy, some showers; cold.
2	ENGLAND N.E.	
3	ENGLAND EAST	N. ^s and N.W. ^s breezes, fresh on coast; cloudy, some cold showers; temperature rising.
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Light or moderate W. ^s and N.W. ^s breezes; changeable, some showers; cold.
7	ENGLAND N.W.	
8	ENGLAND S.W.	Light or moderate N. ^s and N.W. ^s breezes; generally fair or fine; some rise of temperature.
9	IRELAND NORTH	
10	IRELAND SOUTH	

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (⌞), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌞), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered in Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Wednesday, 16th May, 1906.

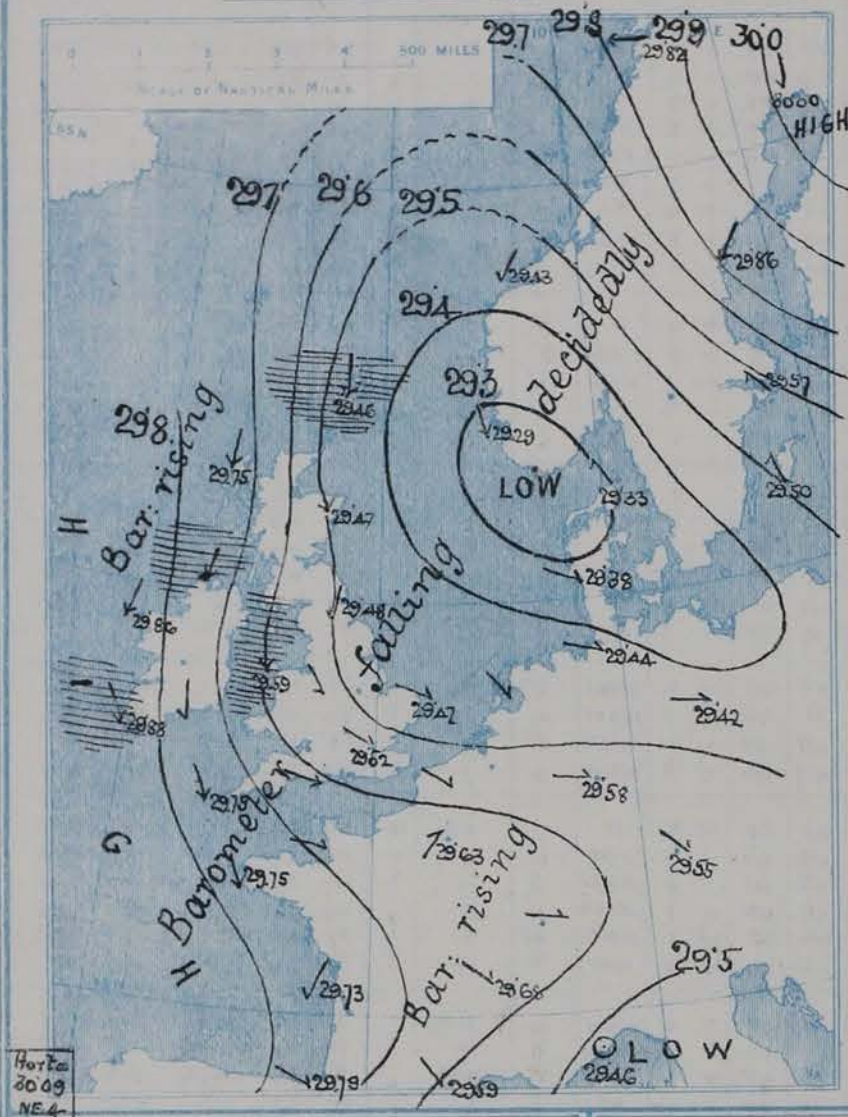

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ☉
Force 8 to 10 → Force 1 to 4 →

SEA—Rough High

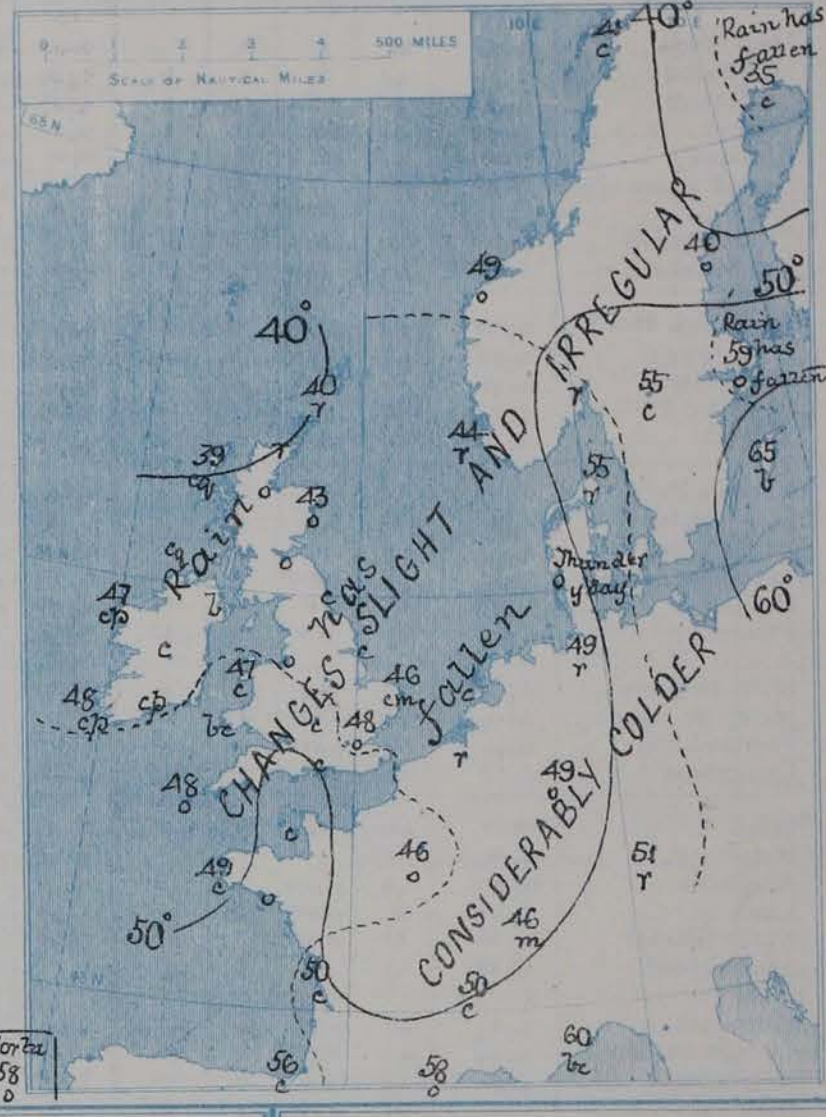

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°.

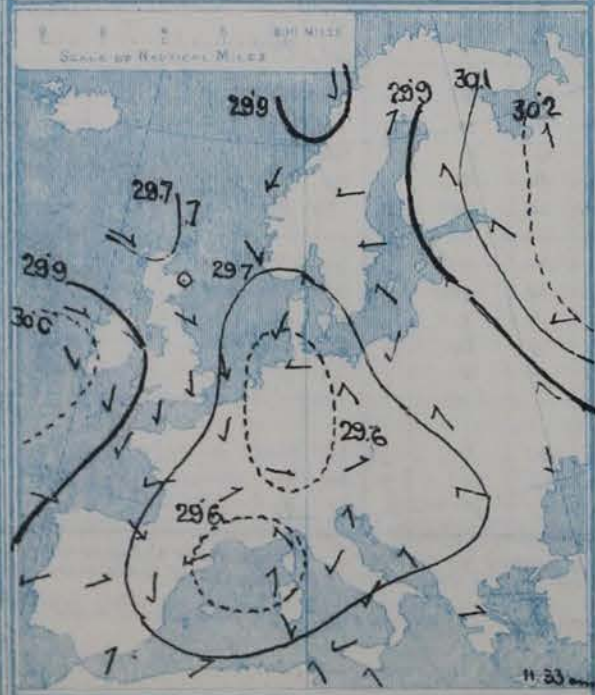

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. LAST WEEK'S RAINFALL.

Amount recorded in various districts of the United Kingdom during the week ended Saturday, 12th MAY, with the percentage of the average amount for the corresponding week.

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period MAY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The low pressure systems which were yesterday morning over Germany and to the northward of Scotland have since coalesced, and the minimum of pressure is now over the southern extremity of Norway, where the barometer is below 29.3 ins. Another depression is shown over the Western Mediterranean, with the barometer below 29.5 ins on the Riviera. The region of highest pressure is over the extreme north of Russia, the barometer reading at Haparanda being 30.00 ins. The highest readings on our western coasts are below 29.9 ins. The gradients are moderately steep over our western districts and Northern Scandinavia.

WIND

TEMPERATURE

WEATHER

AND

SEA

N.^s to N.W.^s winds prevail over the British Isles, N.W.^s to W.^s over the western half of the Continent, and SE.^s to NE.^s over the Scandinavia region. In many localities the force is fresh or strong, and at Holyhead and Wick a slight gale is reported. Temperature has changed irregularly, a considerable fall having taken place over the inland parts of the Continent. The present values range from 39° or 40° in the north of Scotland to 50° at Bath and 51° at Jersey; from 35° at Haparanda and 40° at Helsingfors to 57° at Berlin, 58° at Perpignan and 60° at Nice. Cloudy to overcast skies prevail over nearly the whole of our area, and rain is falling at many of the home and foreign stations. The sea is rather rough off the Shetlands and in a few situations on our western coasts, but generally it is moderate to very smooth.

During yesterday temperature rose to between 60° and 62° at several stations in the south of England, but in various parts of the Kingdom there were maxima of 50° and under. Sumburgh Head not rising above 40°. Showers fell in many localities, at Aberdeen the rainfall amounted to 0.4 inch. The duration of bright sunshine was very variable, ranging from 2.3 hours at Aberdeen and less than 3 hours at Margate and Broadstairs to 12.5 hours at Scilly and 12.8 hours at Plymouth and Torquay.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The North Sea disturbance is expected to move eastward to the Baltic region, and with a gradual increase of pressure in its rear a cool N.^s type of conditions will prevail over the British Isles during the ensuing 24 hours.

FORECASTS*

For the 24 hours ending at NOON on 17TH May, 1906.

DISTRICTS.

Same as nos. 0 to 2.

Strong or fresh N.W.^s and N.^s breezes; moderating later; changeable, squally, some showers; cool.

Strong to moderate N.^s (N.W.^s to NE.^s) breezes; changeable, squally, some showers; cool.

WARNINGS

NONE ISSUED.

Note—The South Cone, point downwards (⌵), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.

The North Cone, point upwards (⌴), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields +03 in.; but for Sumburgh Head +04 in.; for stations South of Malin Head and North Shields +02 in.; but for Scilly and Jersey +01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Larkstone-on-Sea.

Observations for this column not generally received.

Observations received too late for insertion in Chart on next page.

WEATHER CHARTS

FOR Thursday, 17th May, 1906.

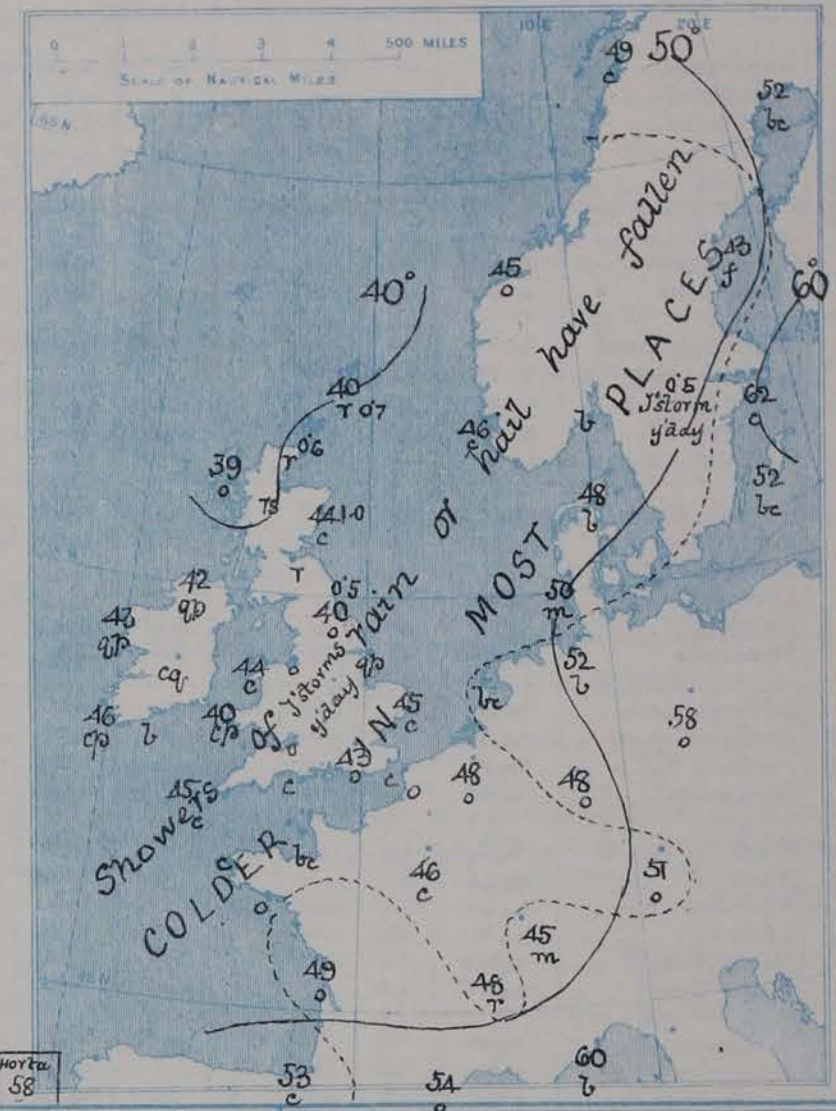

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.
WIND—Arrows show Directions and Force flying with the wind.
 Force above 10 — Force 5 to 7 — Calm ☉
 Force 8 to 10 — Force 1 to 4 —
SEA—Rough High

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°.
WEATHER—Shown by Letters of the Beaufort Scale (See P. 4.)
 A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. LAST WEEK'S SUNSHINE.

Amount recorded in various districts of the United Kingdom during the week ended Saturday, 12th MAY, with the percentage of the average duration for the corresponding week.

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period MAY

(Derived chiefly from Observations extending over the 35 years 1871-1905)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The central space of a moderately deep disturbance is this morning found on the North Sea off our northeastern coasts, the barometer having fallen to 29.39 ins at Aberdeen and Shields. Another, and equally deep, system occupies the Italian region, and shallow irregularities of pressure are situated over the northeast of France and on the Baltic. The highest barometer readings reported are 29.81 ins. at Haparanda and 29.91 ins at Blackud Point. The gradients are rather steep over our western and northern districts, slight elsewhere.

WIND

TEMPERATURE

WEATHER

AND

SEA

Winds from between N.W. and N.E. prevail over the British Isles and Western France, and from varied directions over the rest of the Continent. On our western and northeastern coasts and in Norway strong breezes to a slight gale prevail, elsewhere the force is light to moderate. Temperature has fallen at nearly all the home and foreign stations, and over these Islands and France the morning values are unusually low for the time of year.

The readings range from between 39° and 42° over a great part of this country, to 46° at Jersey and Berr Castle and 49° at Jersey; from 43° at Hemsö and 44° at Hapar and 45° at some other French stations to 60° at Nice and 62° at Stockholm. Cloudy to overcast skies prevail both at home and abroad, and rain, hail or sleet is falling at several of our western and northern stations and also at Lyons. A high sea is running on the Minch and it is rough or rather rough in several localities on our northwestern & northeastern coasts, moderate to smooth elsewhere.

During yesterday there were few places with maximum temperatures as high as 55°, in numerous instances the values were below 50°, as low as 42° in the Shetlands. The majority of the night minima have been as low as 35° to 40°. Thunderstorms occurred in many parts of England, and heavy rains over the northern districts, an inch at Aberdeen. The duration of bright sunshine was very variable, Aberdeen had none and Birmingham 1.2 hrs., against 10.3 hrs. at Valencia and Plymouth and 10.4 hrs. at Torquay.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The distribution of pressure is of an exceedingly unsettled type, and the North Sea disturbance is likely to occasion a continuation of strong polar winds, with gales on many coasts, and cold precipitation.

FORECASTS*

For the 24 hours ending at NOON on 18TH May, 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	{ N ^W and N.E. ^S winds, strong to a gale; unsettled, cold rain or sleet.
1	SCOTLAND EAST	
2	ENGLAND N.E.	{ Increasing N.W. ^S to N. ^S winds, a gale at times; unsettled, some cold rain or sleet.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	{ Freshening N.W. ^S winds; dull, unsettled, some cold showers.
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	{ Same as Nos. 0 & 1.
7	ENGLAND N.W.	
8	ENGLAND S.W.	{ Fresh or strong N. ^S winds; unsettled, some cold showers.
9	IRELAND NORTH	
10	IRELAND SOUTH	{ Same as No. 8.

WARNINGS

{ At 9.0 am. Today to Districts 0 to 2, 6, 7 and 9, "Hoist North Cone."

Note—The South Cone, point downwards (⌵), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.

The North Cone, point upwards (⌶), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + .03 in., but for Sumburgh Head + .04 in.; for stations South of Malin Head and North Shields + .02 in., but for Scilly and Jersey + .01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR FRIDAY, 18th MAY, 1906.

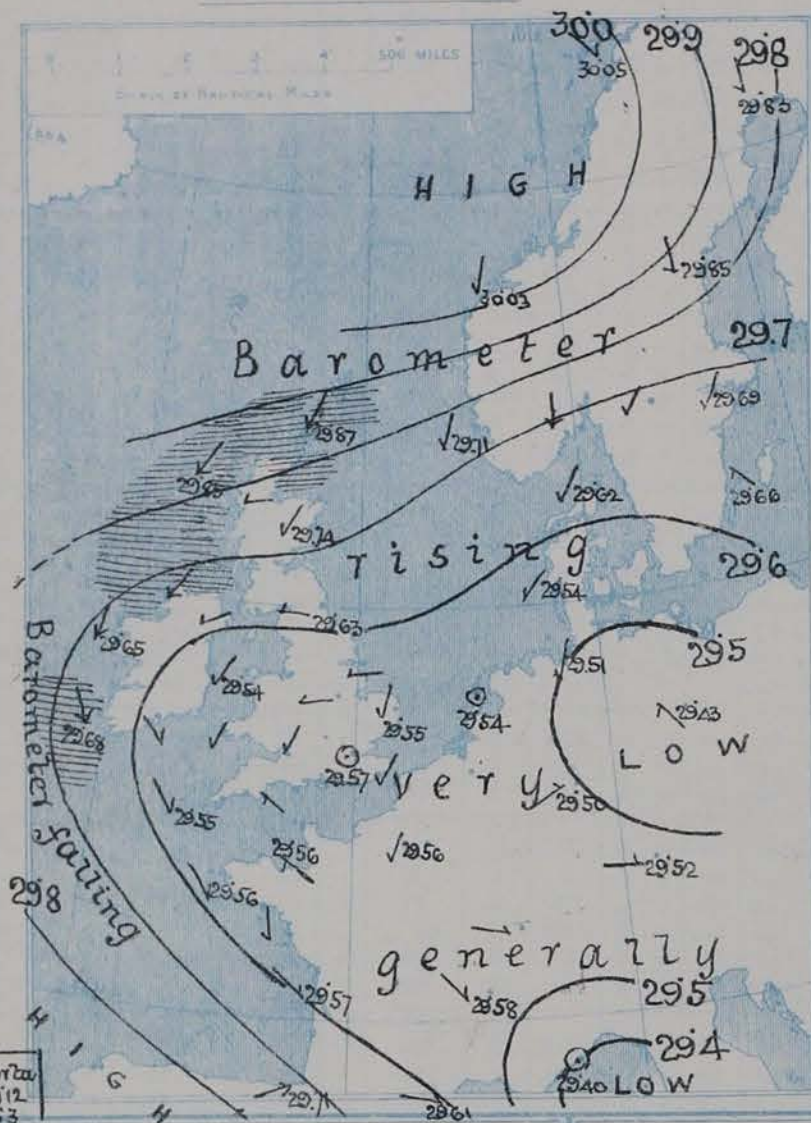

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Direction and Force, flying with the wind.

Force above 10 ——— Force 5 to 7 ——— } Calm ©
Force 8 to 10 ——— Force 1 to 4 ———

SEA—Rough High

GENERAL SITUATION AT 8 A.M.

PRESSURE

The disturbance which was yesterday off our northeastern coast has almost completely dispersed in the course of the night. The lowest pressures reported this morning are found over Germany and the Gulf of Genoa, where the barometer is at about 29.4 in. A large anticyclone is indicated to the northward, about the Arctic Circle, and pressure is increasing all over Scandinavia and the greater part of Western Europe, the mercury having passed above 30.0 in. on the Norwegian coast. The gradients are slight to moderate generally.

WIND

TEMPERATURE

WEATHER

AND

SEA

N.⁵ to E.⁵ breezes prevail over these Islands and Scandinavia, and N.W.⁵ to W.⁵ over the western part of the Continent. In most places the force is light, but a fresh or strong breeze is reported on our northern and western coasts and at Biarritz. Temperature has fallen over Southern Ireland and Western France, risen in nearly all other regions. The present values range from 43° at Wick and in several parts of Ireland to 50° at Spurn Head and Bruges and 53° at Jersey; from 40° at Bodø, 42° at Brest and 43° at Lorient and Christiansund, to 60° at Nice and 63° at Berlin and Wiesbaden. Fine weather prevails in nearly all parts of England and Northern France, elsewhere the sky is mostly very cloudy to overcast and rain is falling in many places. At Aberdeen and Belfort the atmosphere is foggy. The sea is rough or rather rough off the Irish and Scotch coasts, moderate to very smooth elsewhere.

During yesterday temperature reached 50° or slightly above at a number of southern stations, the day generally being very cold. At Malin Head, Bettisyard and Darwen the maximum was only 44°. A sharp frost occurred in the North Midlands in the night, the shade temperature at Nottingham sinking to 28°; Oxford reports a grass minimum of 24° and London 28°. Rain, hail or sleet showers fell in most places, and at Pembroke, Wick and Leith the rainfall measured 0.4 inch. Stornoway, Bettisyard and Darwen had no bright sunshine, the records elsewhere ranging upwards to 10.5 hours at Jersey and Valencia.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The northern anticyclone appears to be spreading southward, and during the ensuing 24 hours N.⁵ to E.⁵ breezes will probably prevail, with improving weather and an increase of temperature.

FORECASTS*

For the 24 hours ending at NOON on 19th May, 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Moderating N.E. ⁵ to E. ⁵ breezes; some rain at first, improving later; milder.
1	SCOTLAND EAST	
2	ENGLAND N.E.	Light E. ⁵ breezes; generally fair or fine; mild.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as No. 0.
7	ENGLAND N.W.	
8	ENGLAND S.W.	Moderate or light N.E. ⁵ to E. ⁵ breezes; some showers at first, improving later; some rise of temperature.
9	IRELAND NORTH	
10	IRELAND SOUTH	Moderating N. ⁵ to E. ⁵ breezes; changeable; some showers, improving later; some rise of temperature.
WARNINGS		At 0.10 pm yesterday to District 10 and part of 8, "Hoist North Cone." The signals are still up in Districts 0 to 2, 6, 7 and 9.

Note: The South Cone, point downwards (⌣), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (⌢), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + .03 in., but for Sumburgh Head + .04 in.; for stations South of Malin Head and North Shields + .02 in., but for Scilly and Jersey + .01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Lullinstree-on-Sea.

(c) Observations for this column not generally received.

(d) Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR

SATURDAY, 19th MAY,

1906.

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 →

Force 5 to 7 →

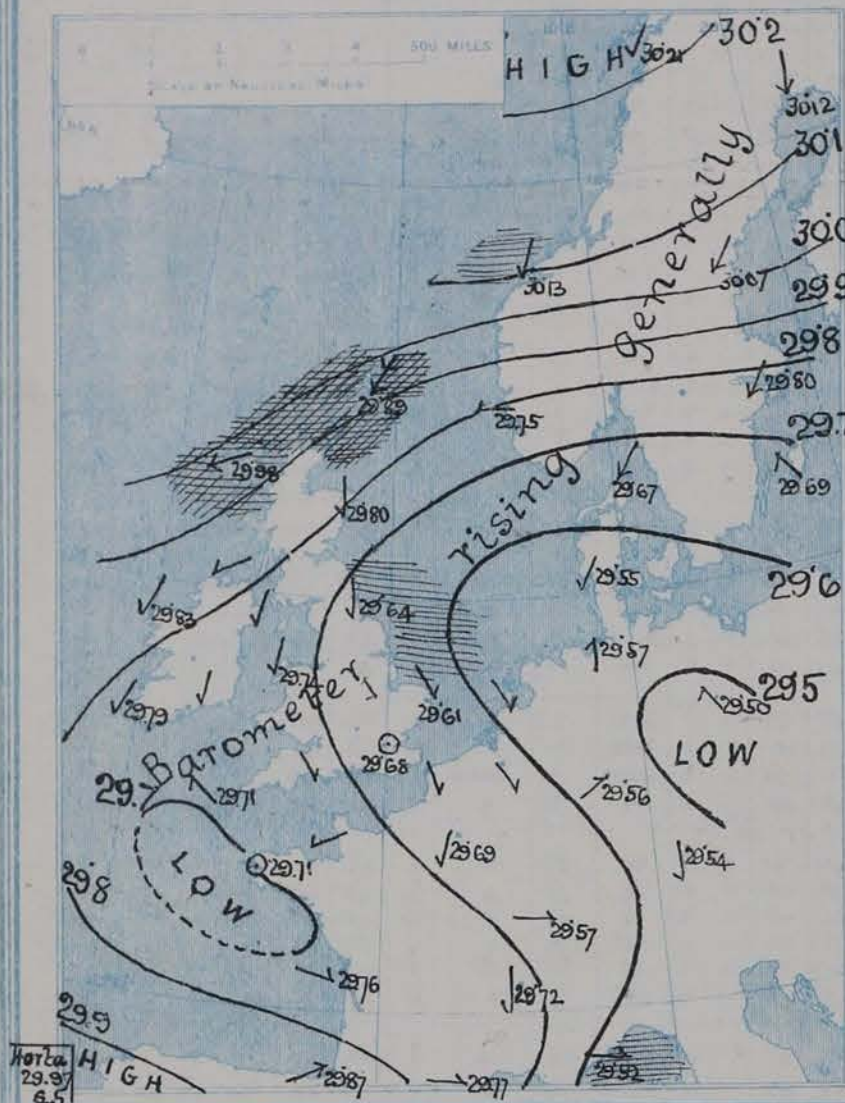

Calm ☉

Force 8 to 10 →

Force 1 to 4 →

SEA—Rough

High

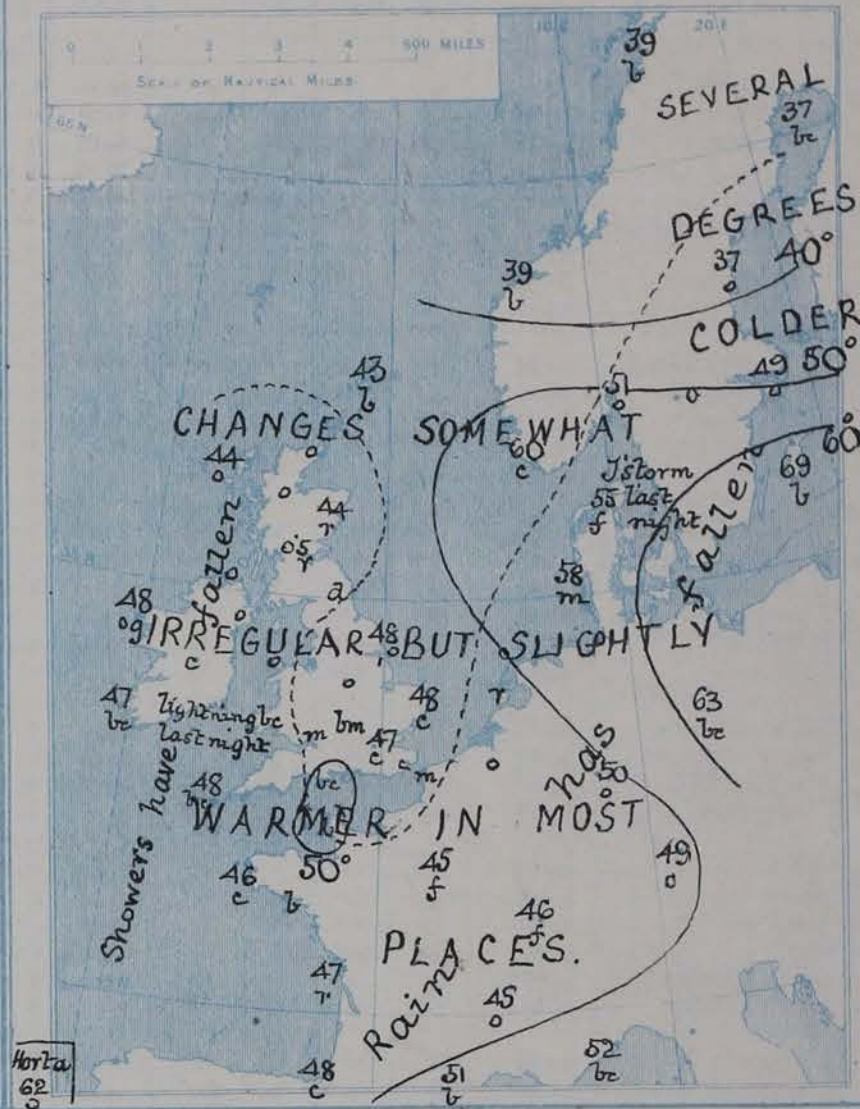

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus .06

III. BAROMETER AND WIND

Yesterday morning.

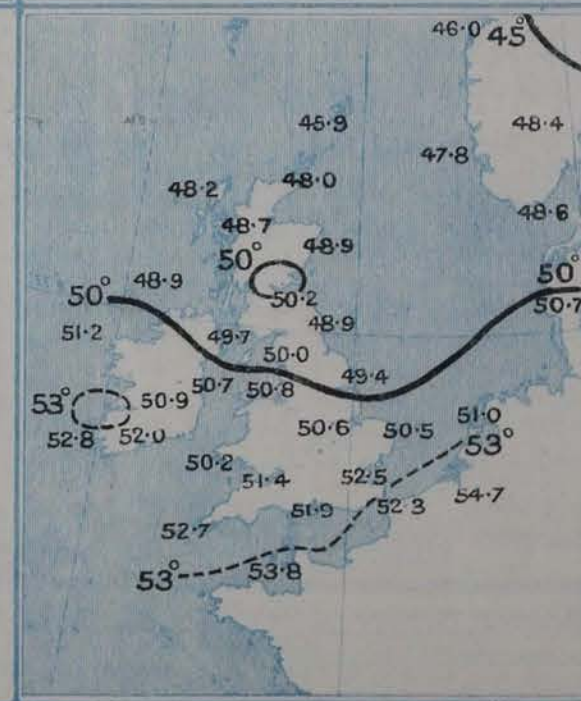

IV. BRIGHT SUNSHINE IN 1906.

Total Duration recorded in various districts of the United Kingdom in the 19 weeks ended Saturday, 12th MAY, with the percentage of the average duration for the corresponding period.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period MAY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

An increase of pressure has taken place over the whole of the region under observation, an extensive anticyclone being shown in the far north, the barometer at Bodø having risen to 30.21 ins. The lowest pressure is found over Northern Germany, the barometer at Berlin reading 29.50 ins. A small shallow irregularity is indicated on the upper part of the Bay of Biscay. A new anticyclone appears to be approaching the Peninsula, the barometer having risen to 30.06 ins. at Lisbon. Between the north of Scotland and Norway the gradient is moderately steep, elsewhere it is slight.

WIND

TEMPERATURE

WEATHER

AND

SEA

Northerly or North-Easterly winds prevail over the Scandinavian region, Scotland and Ireland; North-Westerly over England and the Low Countries; rather variable in other parts of the Continent. A strong gale is reported in the Shetlands, and strong or very strong winds in the Hebrides and some parts of Scandinavia, but generally the force is moderate to light. Temperature has changed somewhat irregularly, but has risen at most places both at home and abroad. The present values range from 41° at Bath and 43° or 44° at many of the northern and east coast stations to 51° at Portland Bill and 54° at Jersey; from 37° or 39° over Northern Scandinavia and 45° or 46° in several parts of France to 63° at Berlin and 69° at Wisby. Wisby is 21° warmer than Biarritz and 17° warmer than Nice. Over the greater part of our area the sky is very cloudy or overcast, rain is falling on our north-east coast, at the Skelder and Rockefort, and fog is reported at Skagen, Paris and Belfort, mist in many localities. A high sea is running round the north of Scotland, and it is rather rough on the north-east coast of England, off Christiansund and Nice, moderate to very smooth elsewhere. During yesterday temperature exceeded 50° at nearly all the home stations, reaching 57° at Southport and 58° at Nottingham; at Naim the maximum was 45°. Most of the night minima were above 40°, but at Bath the shaded thermometer fell to 32°; Oxford reports a grass minimum of 27°. Stormoway had no bright sunshine, and Aberdeen only a few minutes; over England and Ireland the duration ranged from 2 hours at Bettws-y-coed to 12.5 hours at Bournemouth and Jersey.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The shallow irregularities of pressure off the mouth of the Channel and on the North Sea will probably disperse, and the northern anticyclone gradually expand southward and become the dominant factor in the situation. Finer and milder conditions are expected to extend to all districts.

FORECASTS*

For the 24 hours ending at NOON on 20th. May, 1906

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Decreasing N.E. winds; fair generally, local showers; moderate temperature.
1	SCOTLAND EAST	Moderate to light N.W. or N.E. breezes; some rain at first, improving later; moderate temperature.
2	ENGLAND N.E.	
3	ENGLAND EAST	
4	MIDLAND COUNTIES	Light or moderate N.W. to N. and N.E. breezes; generally fair or fine, local showers; milder.
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Fresh to light N.E. breezes; fair generally, local showers; moderate temperature.
7	ENGLAND N.W.	
8	ENGLAND S.W.	Same as Nos. 3 to 5.
9	IRELAND NORTH	Light or moderate N.E. breezes; fair, cloudy, local showers; milder.
10	IRELAND SOUTH	

WARNINGS

NONE ISSUED.

Note. The South Cone, point downwards (∩), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (∪), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR SUNDAY, 20TH MAY, 1906.

I. BAROMETER, WIND AND SEA. This Morning.

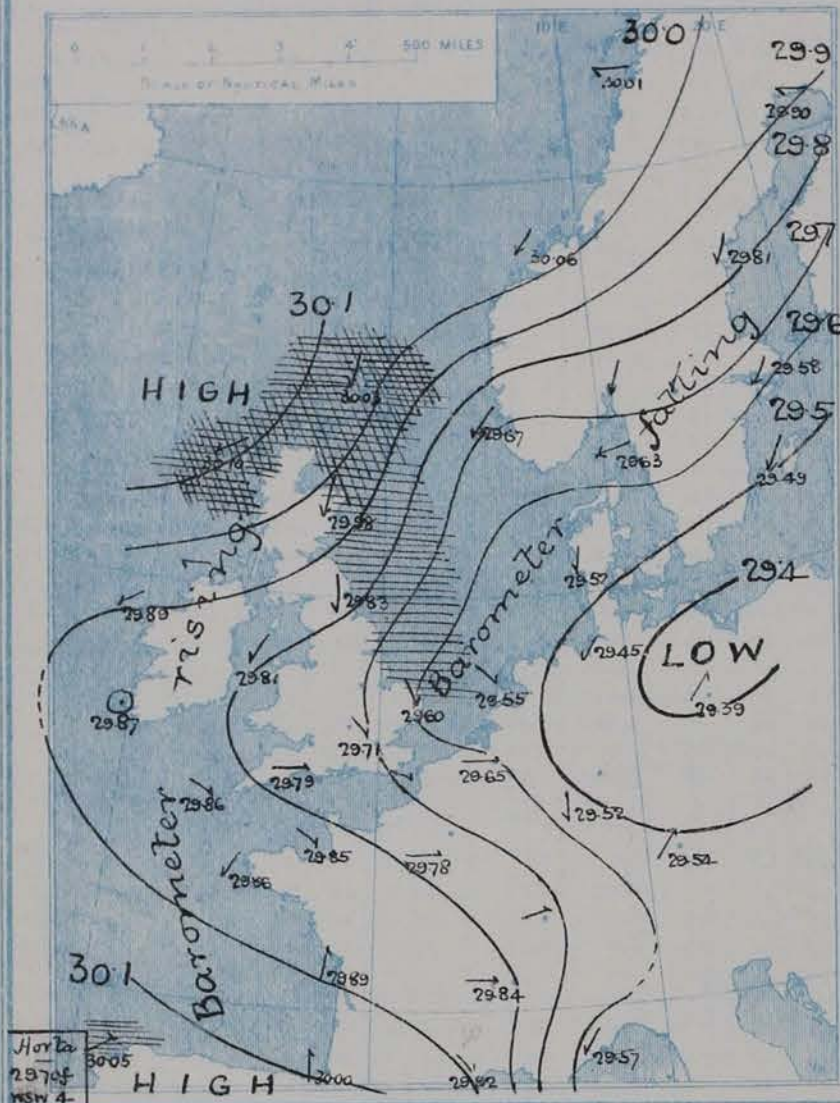

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ☉

Force 8 to 10 → Force 1 to 4 →

SEA—Rough High

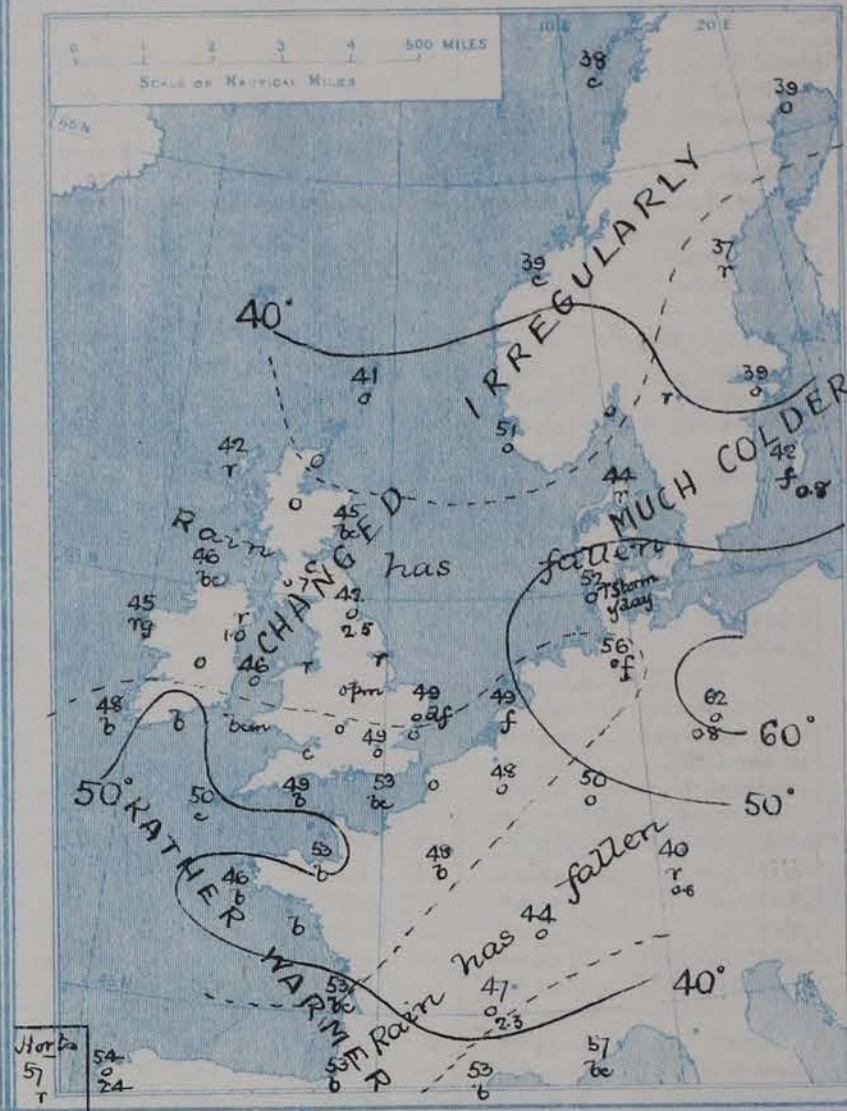

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°.

WEATHER—Shown by Letters of the Beaufort Scale (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

Amount recorded

in various districts of the United Kingdom during the 19 weeks ended Saturday 12TH MAY with the percentage of the average for the corresponding period.

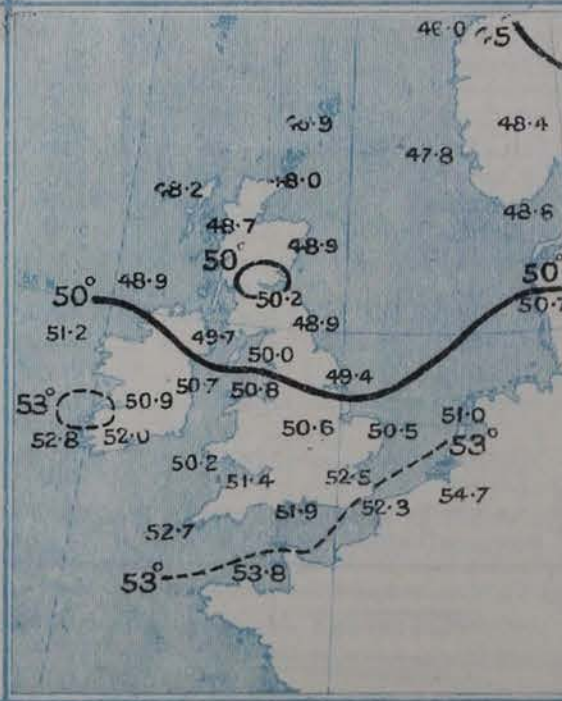

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period
MAY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The depression over Germany has increased in depth and at the same time extended northwards, while the barometer has become highest off our northwest coasts and Portugal. The readings range from 30.1 ins. both at Lissabon and Lisbon to 29.39 ins. at Berlin. Besides the disturbance centred over Germany there is another in the neighbourhood of the Gulf of Genoa, and an ill-defined secondary over our southwestern districts. The mercury is at present rising in most places and falling in Scandinavia and Denmark.

WIND

TEMPERATURE

WEATHER

AND

SEA

The general current of wind is northerly or northeasterly over all the northern parts of our area, but in the south of England and over the Netherlands it draws into north-west, and at Berlin and Munich into south-west. Fresh or strong breezes are blowing in various parts of Denmark, Scandinavia, and Scotland, but as a whole there is little force. Over the west of France the wind is light and variable. Temperature has fallen quickly over the south of Sweden and its vicinity, risen slightly over the southwest of our area, changed little and irregularly elsewhere. It now ranges from 62° at Berlin and 58° at Lisbon to below 50° in nearly all other regions, and to less than 40° over the greater part of Norway and Sweden. The general state of the sky is very cloudy or entirely overcast and rain is falling at several of our northwestern stations and at Lissabon and Lissabon Head, as well as at Belfort and Munich and at several stations in Northern Europe. In the extreme south and west of France the weather is fine and bright. The sea is high off the north and northeast coasts of Scotland, rough off the east of England and rather so at Lissabon, moderate to smooth elsewhere.

The maximum temperatures recorded over our Islands yesterday were a little above 60° in the south, but below 50° at many northern and northwestern stations. Heavy and continuous rain has fallen in the northeast of England and its neighbourhood and also in the northeast of Ireland. At North Shields the amount measured is 2.53 ins. Large quantities are also reported from various parts of the Continent, - 2.40 ins. at Lissabon, 2.25 ins. at Lyons, and 1.18 in. at Fano. At the last named station a thunder-storm has been experienced.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

WARNINGS

NONE ISSUED.

Note: The South Cone, point downwards (∇), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (∇), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields +.03 in., but for Sumburgh Head +.04 in.; for stations South of Malin Head and North Shields +.02 in., but for Scilly and Jersey +.01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

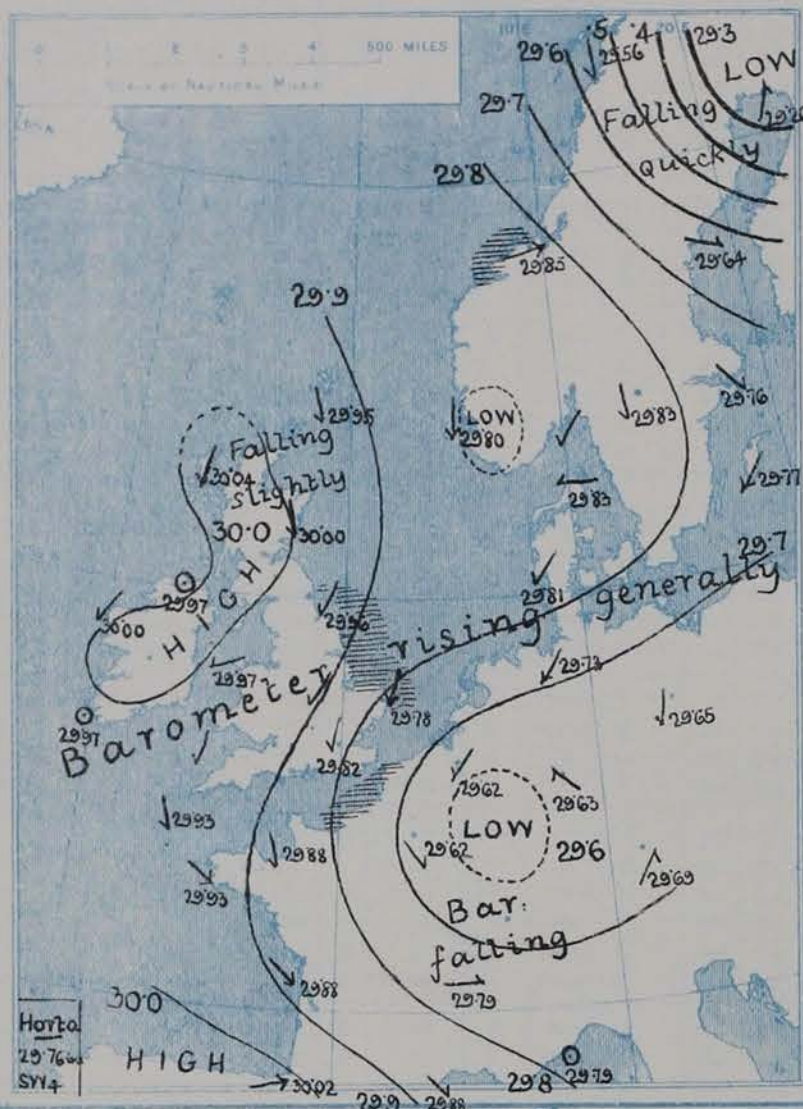

FOR MONDAY, 21ST MAY, 1906.

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → Force 8 to 10 → Force 1 to 4 → Calm ☉
SEA.—Rough High

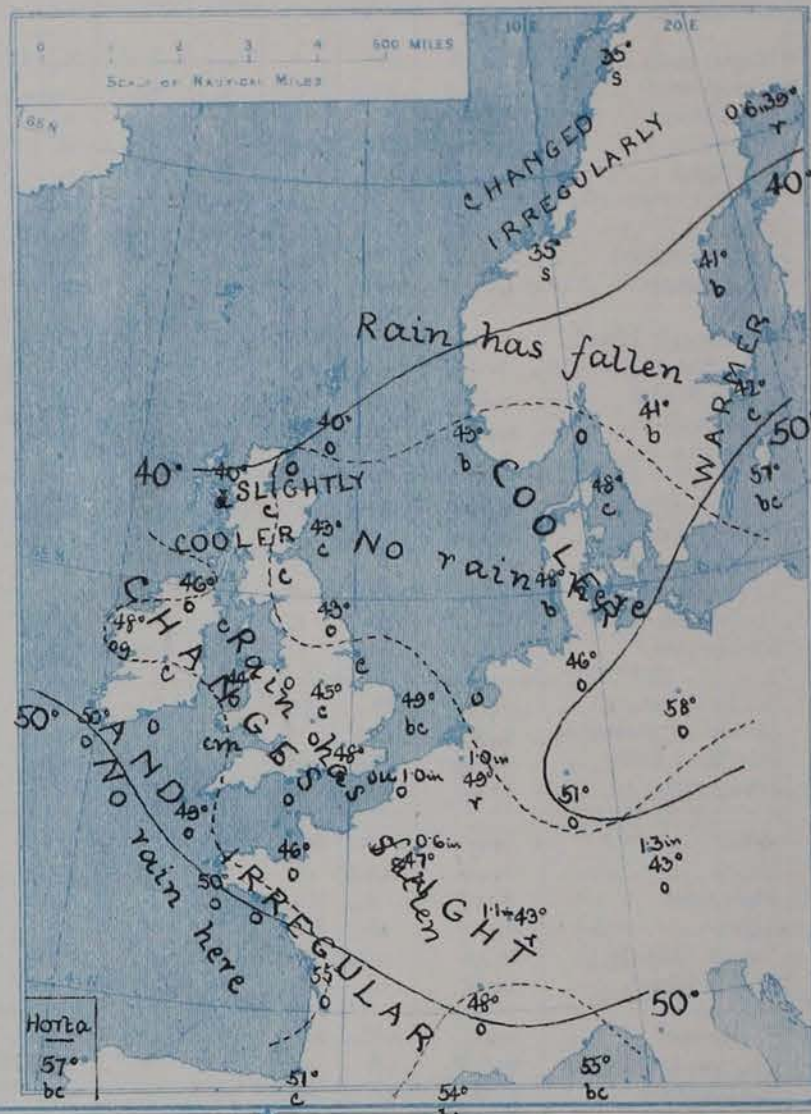

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus: 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

Amount recorded in various districts of the United Kingdom during the week ended Saturday, 12TH MAY, with the percentage of the average for the corresponding week.

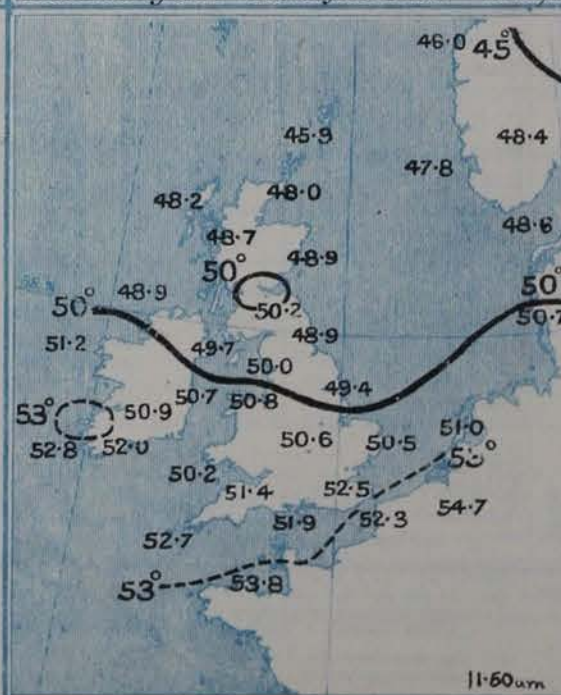

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period MAY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The central space of a low pressure system is this morning shown over Luxemburg, with the barometer at about 29.6 ins. A new disturbance has advanced quickly to Northern Scandinavia, the barometer having fallen to 29.6 ins at Haparanda. The highest pressure is over Portugal, 30.12 ins. at Lisbon, while an anticyclone of less intensity is shown over Ireland and Scotland, with readings slightly above 30 ins. The gradient is moderately steep over Northern Sweden and between the lower part of the North Sea and the northeast of France, slight elsewhere.

WIND

TEMPERATURE

WEATHER

AND

SEA

N.^{ly} to NE.^{ly} breezes prevail over the British Isles, Norway and the Low Countries, N.W.^{ly} to W.^{ly} in most parts of France and Sweden, and S.W.^{ly} to SE.^{ly} over Western Germany. In most places the force is light or moderate, but fresh or strong breezes are reported on the southern shores of the North Sea, and on the English Channel and the Bay of Biscay. Temperature is still very low generally. The present values range from 40° to 43° over the northern parts of Britain to 49° at Sully and Yarmouth and 50° at Valencia; from 35° at Bodo and Christiansund and 39° at Haparanda, and below 50° at the majority of the Continental stations, to 57° at Wisby and 58° at Berlin. Very cloudy or overcast skies are reported over nearly the whole of the area under observation, with rain over Belgium and Northwestern France and at Haparanda, drizzling rain at Stornoway, and snow on the Norwegian coast. The sea is rough on the French side of the Channel, and rather rough on the east coast of England, slight to very smooth in other localities.

During yesterday temperature rose to 62° at Torquay and to between 55° and 59° at some other southwestern stations, but in numerous instances the maxima were below 50°. Rain fell in many places, the amounts generally being small, but in London and at Yarmouth nearly half an inch was measured. Much larger amounts are reported from the Continent, an inch at Brussels and Cape Gris Nez, 1.1 inch at Belfort and 1.3 inch at Munich. At many of our home stations no bright sunshine was registered, and the duration in most other places was small, but Torquay had 10.3 hours and Sully 12.3 hours.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The general distribution of pressure remains of an unsettled and unseasonable type. N.^{ly} and NE.^{ly} breezes are likely to continue, with low temperatures and changeable, showery weather.

FORECASTS*

For the 24 hours ending at NOON on 22nd. May, 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Light or moderate N. ^{ly} and NE. ^{ly} breezes; dull, some rain or sleet; cold.
1	SCOTLAND EAST	
2	ENGLAND N.E.	
3	ENGLAND EAST	N. ^{ly} and NE. ^{ly} winds, strong or fresh on coast, more moderate inland; cloudy, changeable, some showers; cold.
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	showers; cold.

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as Nos. 0 to 2.
7	ENGLAND N.W.	
8	ENGLAND S.W.	Light or moderate N. ^{ly} or NE. ^{ly} winds; cloudy, changeable, some showers; cold.
9	IRELAND NORTH	
10	IRELAND SOUTH	Light variable breezes, mainly NE. ^{ly} ; cloudy, changeable, some showers; cold.

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (⌋), means that gales, or strong winds, are probable, at first from the Southward (from S.F. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E. the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌋), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

† The corresponding values in yesterday's report should be 39° and 29.59 ins respectively.

WEATHER CHARTS

FOR TUESDAY, 22ND MAY, 1906.

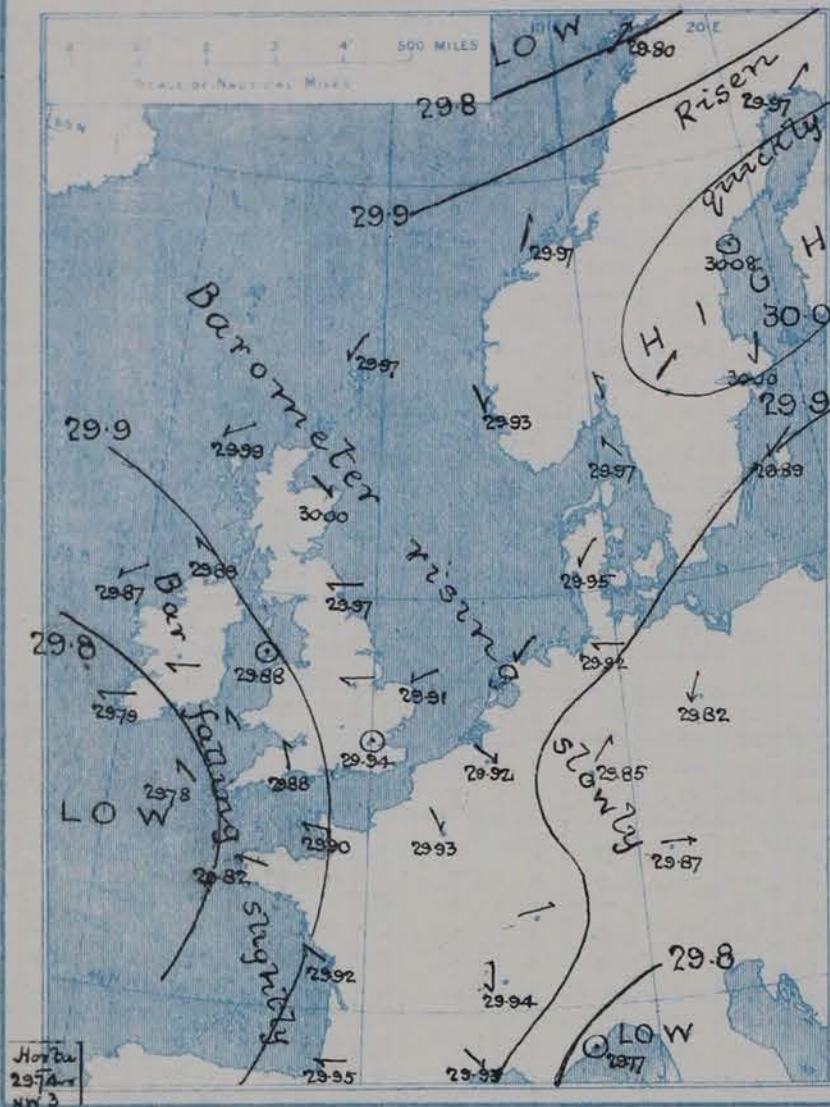

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ☉
Force 8 to 10 → Force 1 to 4 →

SEA—Rough High

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°.

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus .06

III. BAROMETER AND WIND

Yesterday morning.

IV. EXTREMES OF TEMPERATURE

recorded

in various districts of the United Kingdom
during the week ended 19TH May

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period

MAY—JUNE

(Derived chiefly from Ob. vations
extending over the 35 years 18. -1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

Since yesterday morning the barometer has risen very quickly in the north of and steadily over the Continental portion of our area generally; over England the upward movement has been slight, while over all our most western districts and in Brittany the mercury has fallen slowly. The highest readings, 30.0 ins. and above, are found over the of Bothnia and Central Sweden, and the lowest, 29.8 ins. and less, in a depression off the west of England, and also in another system over the Gulf of Genoa.

WIND

The wind has decreased in strength very generally, and is now very light over our area. It is rather variable in direction over our Islands, but mainly from some point between N. and E: on some parts of our southwest coasts, however, it is S.E.^s. In the extreme north of Scandinavia there is a S.W.^s breeze, but over the Continent as a whole there is no general current of wind. The sky is very cloudy or overcast except in the extreme south-west and south of France and over Scandinavia and at a few stations locally in the United Kingdom.

TEMPERATURE

Temperature has risen in Denmark and Norway, changed little and rather irregularly elsewhere. Over these Islands it ranges from 53° at Jersey to below 50° generally, and to 41° at Nain. The Continental readings vary from 39° or 40° in the far north to about 50° in most other regions, and to 57° at Perpignan. The sea is moderate to smooth.

WEATHER

AND

SEA

The highest temperatures reported over the United Kingdom yesterday were 57° or 58° at some of the south coast stations, and at Bath; in many northern and north-western localities the thermometer remained below 50°. Slight rain was experienced in a few English districts, and more decided falls in Scotland and the southeast of France. The day was dull or very cloudy as a whole, but at Birr Castle and Lowestoft there were about nine and a half hours of bright sunshine.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The depression off our southwest coasts appears to have little depth, but it is likely to cause some rain in its immediate neighbourhood. Over the Kingdom generally the wind will be E.^s and light in force, and the weather dry. Much cloud is probable in most districts and temperature will undergo little change.

FORECASTS*

For the 24 hours ending at NOON on 23rd May, 1906.

DISTRICTS.

FORECASTS.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Wind light and mainly E. ^s ; fair as a whole; very cool.
1	SCOTLAND EAST	
2	ENGLAND N.E.	Light E. ^s or NE. ^s winds; fair generally, but very cloudy in most places; temperature showing little change.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

6	SCOTLAND WEST	Same as Nos 0 & 1.
7	ENGLAND N.W.	
8	ENGLAND S.W.	Wind light and chiefly E. ^s ; cloudy or overcast in most places; very cool. Moderate or light SE. ^s or E. ^s winds; cloudy or dull, some rain locally.
9	IRELAND NORTH	
10	IRELAND SOUTH	Moderate or light winds, mainly E. ^s ; very cool, some rain in south, fairer in north and northeast.

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (⏚), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W and N.W. is likely to veer towards N or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (⏚), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E and S.E. is likely to veer towards S or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '24 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR WEDNESDAY, 23RD MAY, 1906.

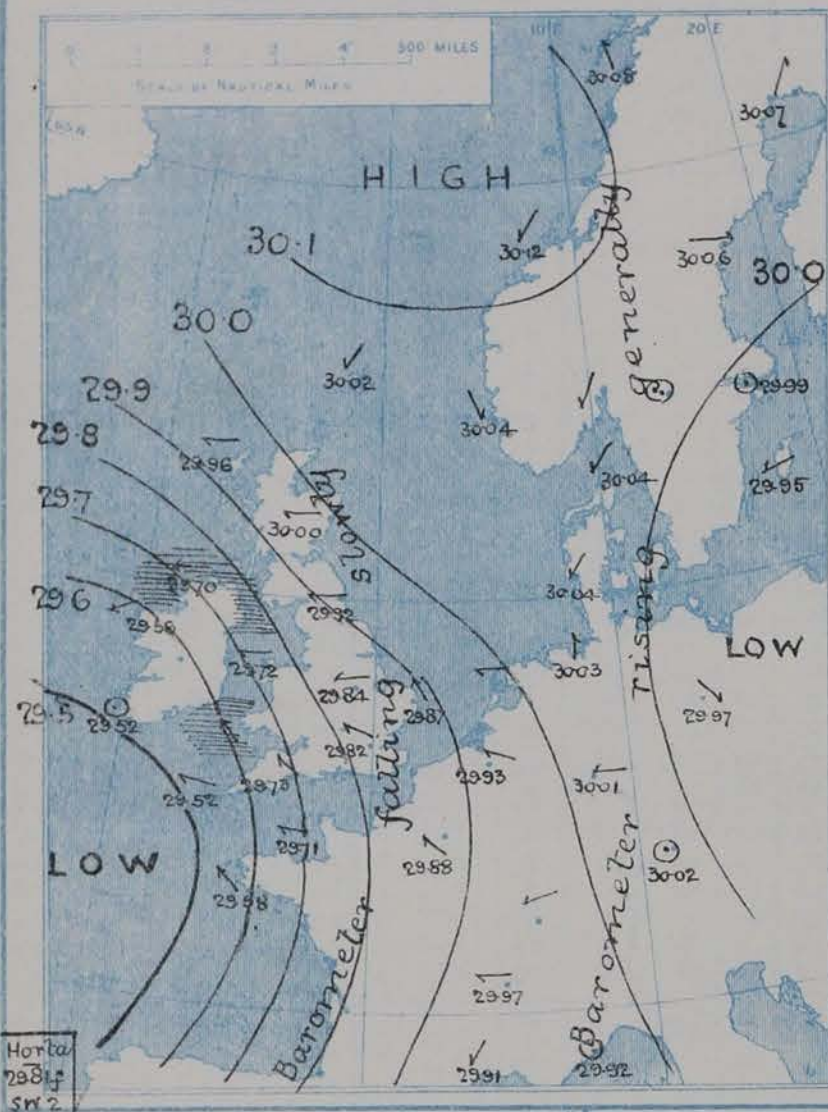

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ☉
Force 8 to 10 → Force 1 to 4 →

SEA.—Rough High

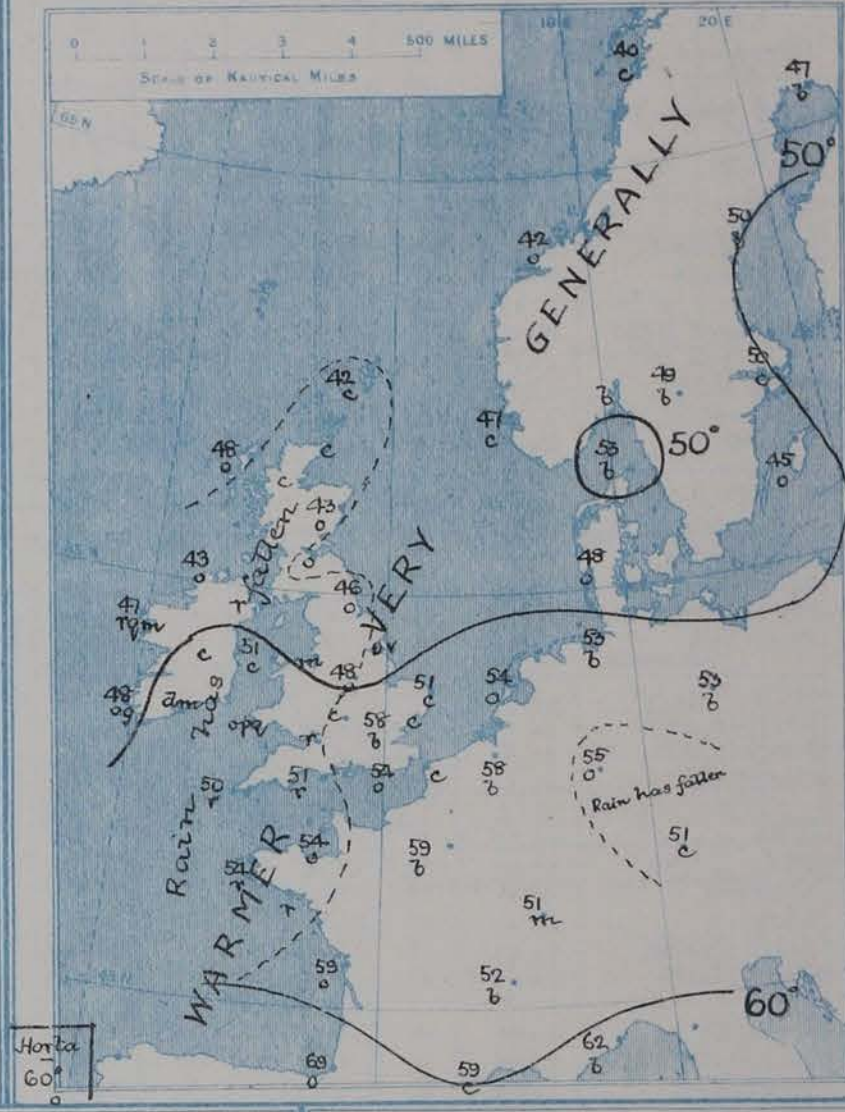

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus—0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. LAST WEEK'S RAINFALL.

Amount recorded in various districts of the United Kingdom during the week ended **Saturday, 19TH MAY**, with the percentage of the average amount for the corresponding week.

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period

MAY—JUNE.

(Derived chiefly from Observations extending over the 35 years 1871–1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

A large cyclonic system has approached our southwestern coasts and the Bay of Biscay, and has occasioned a decrease of pressure over the whole of our Islands and the greater part of France, the lowest barometer reading reported being 29.52 mm at Sully and Valencia. At all the foreign stations eastward of the meridian of Paris an increase of pressure is in progress, the central space of an anticyclone being indicated between Iceland and Norway, the highest barometer being 30.12 mm at Christiansund. A moderate gradient is shown over our western districts, slight elsewhere.

WIND

SE³ to E³ winds prevail over the British Isles and the western portion of the continent, the direction over Scandinavia and Germany being variable. In nearly all places the force is light or moderate, but it is fresh at some of our western and southern stations, strong at Donaghadee and Pembroke. Temperature has risen at most of the home and the foreign stations, rather decidedly in places. The values range from 42° or 43° at some northern stations to 57° at Oxford and 58° in London; from 40° at Bodø and 43° at Christiansund to 62° at Nice and 69° at Biarritz.

TEMPERATURE

The weather is fine in London and at Blackon-on-sea, but over the rest of the country it is very cloudy or overcast, with rain in most parts of Ireland and the southwest quarter of England. Rain is also falling over Brittany, and the weather is dull generally over western France, but in nearly all other foreign districts it is fine. A rough sea is running outside Belfast Lough, and it is rather rough on the coasts of Donegal and Pembroke, moderate to very smooth elsewhere.

WEATHER

AND

SEA

During yesterday temperature rose to 50° and upwards in nearly all parts of the country, but did not exceed 45° at Sunning Head. In London the 8 am reading today is 3° above yesterday's maximum. Rain has fallen at nearly all the home stations, the amounts generally being small, but at Roche's Point 0.5 in was recorded. The day generally was very dull, so that most stations returned either no bright sunshine or very little, but Scotland had large amounts, Aberdeen 10.4 hours and Stornoway 12.2 hours.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The progress of the southwestern disturbance has been arrested by the increase of pressure to the northward of these Islands and over Central Europe, but the system is growing deeper slowly, and the S.E.³ type is likely to prevail, with unsettled weather.

FORECASTS*

For the 24 hours ending at NOON on 24th May, 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Light or moderate SE ³ to E ³ breezes; fair, cloudy weather, local showers; cool.
1	SCOTLAND EAST	
2	ENGLAND N.E.	Light or moderate SE ³ to E ³ breezes, fresh locally on coast; changeable, some rain; close, temperature rising.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as Nos. 0 & 1.
7	ENGLAND N.W.	
8	ENGLAND S.W.	SE ³ to E ³ breezes, fresh or strong locally; cloudy, dull, some rain; cool.
9	IRELAND NORTH	
10	IRELAND SOUTH	

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (⌣), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌢), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields +.03 in., but for Sumburgh Head +.04 in.; for stations South of Malin Head and North Shields +.02 in., but for Scilly and Jersey +.01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR THURSDAY, 24TH MAY, 1906.

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 —→

Force 5 to 7 —→

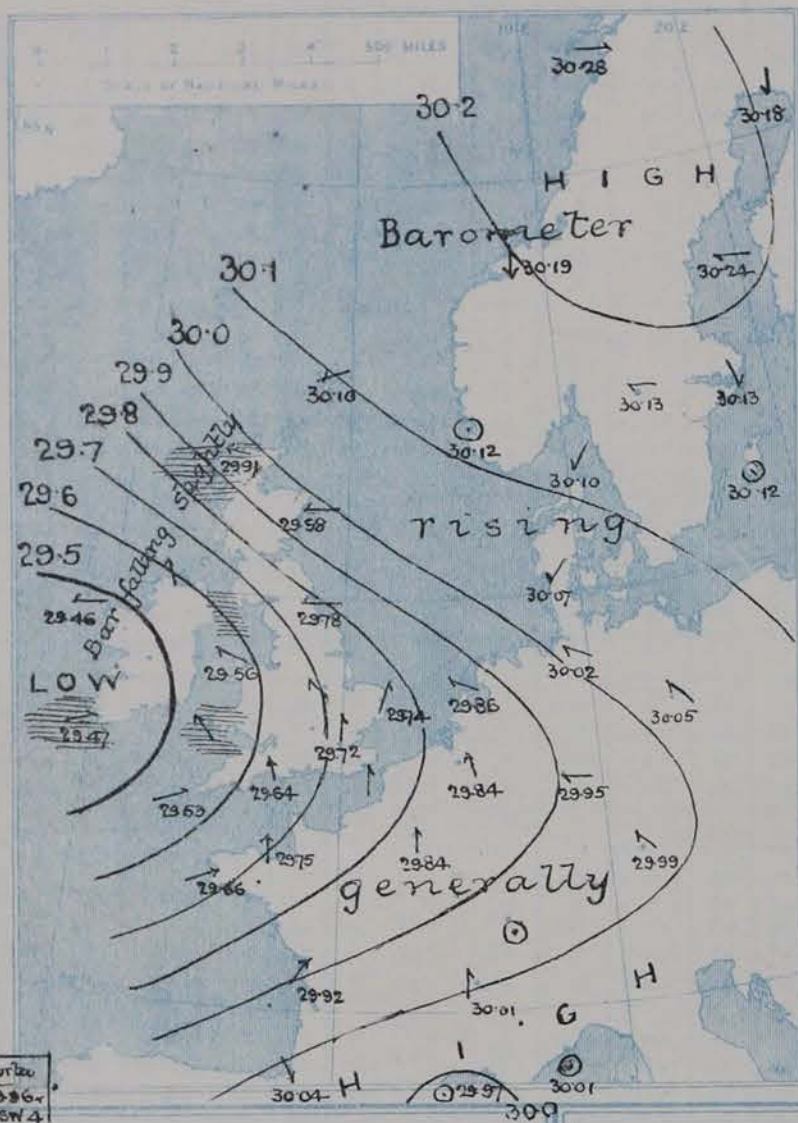

Calm ☉

Force 8 to 10 —→

Force 1 to 4 —→

SEA—Rough

High

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus: 0.6.

III. BAROMETER AND WIND

Yesterday morning.

IV. LAST WEEK'S SUNSHINE.

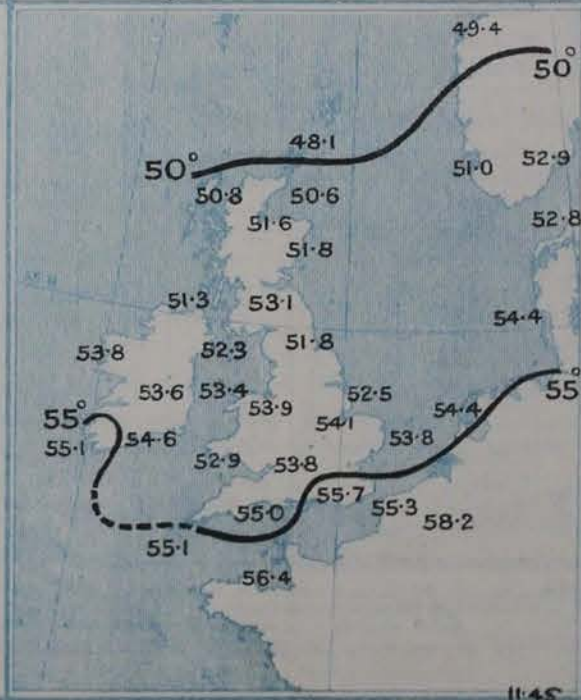

Amount recorded in various districts of the United Kingdom during the week ended Saturday, 19TH MAY, with the percentage of the average duration for the corresponding week.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period

MAY—JUNE.

(Derived chiefly from Observations extending over the 35 years 1871–1905).

GENERAL SITUATION AT 8 A.M.

TEMPERATURE, WEATHER, SUNSHINE, AND RAINFALL FOR YESTERDAY

PRESSURE

An extensive anticyclone now covers northern Europe, the barometer having risen to 30.28 ins. at Bodø. A belt of relatively high pressure, with readings slightly above 30 ins., extends from Spain across the south of France to North Italy. The central space of a low pressure area lies to the westward of Ireland, where the readings are below 29.5 ins. A moderately steep gradient is shown over our northern districts and on the Bay of Biscay, slight elsewhere.

WIND

The winds show a cyclonic circulation round the western disturbance, S.W. to S. over our southern districts and France, S.E. to E. over our northern districts, the Low Countries and Germany, variable over Scandinavia. As a rule the force is light or moderate, but fresh or strong winds are reported on the Bay of Biscay and at some of our southern and western stations.

TEMPERATURE

Temperature has risen nearly everywhere, and the values range from 43° or 44° over the north of Scotland to 60° over the inland counties of England; from 40° at Bodø and 44° at Christiansund to 60° at Frankfurt and Perpignan and Brussels.

WEATHER

Fair or fine weather is reported in various parts of England, in Scandinavia, Denmark and Germany, and locally in the north of France. Elsewhere it is very unsettled, rain is falling in many places, and off our southwestern coasts the atmosphere is gloomy, misty or foggy. A high sea is running off Brest, and it is rather rough in various situations on our western coasts, moderate to smooth in other regions.

AND

SEA

During yesterday temperature rose to between 60° and 67° in the extreme southeast of England, all other districts being much cooler, many maxima being below 50°. Thunderstorms occurred at some of the Channel stations, and rain fell everywhere, considerable amounts being measured at a number of stations, 0.7 in. at Portland Bill and Valencia, while at Cape Gris Nez 1.7 in. fell. Many stations had no bright sunshine, but Stormoway registered 9.9 hours.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

Pressure is increasing over the Continental regions, and the western depression is therefore likely to remain out at sea, moving slowly N.W. The S. and S.W. breezes in the south will probably spread to all districts, accompanied by a general increase of temperature, and some improvement in the weather.

FORECASTS*

For the 24 hours ending at NOON on 25th May, 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Fresh to light E. and S.E. breezes, veering S. later; unsettled, with some rain at first, improving later; milder.
1	SCOTLAND EAST	
2	ENGLAND N.E.	
3	ENGLAND EAST	Moderate or light S. and S.W. breezes; generally fair or fine, showers locally; warmer.
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Fresh to light S.E. and S. breezes; changeable, some showers; milder.
7	ENGLAND N.W.	
8	ENGLAND S.W.	Light to fresh S.W. breezes; changeable, local showers; some fog on coast; milder.
9	IRELAND NORTH	Same as nos. 6 & 7.
10	IRELAND SOUTH	Same as No. 8.

WARNINGS

NONE ISSUED

Note - The South Cone, point downwards (⌋), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (⌋), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields +.03 in., but for Sumburgh Head +.04 in.; for stations South of Malin Head and North Shields +.02 in., but for Scilly and Jersey +.01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

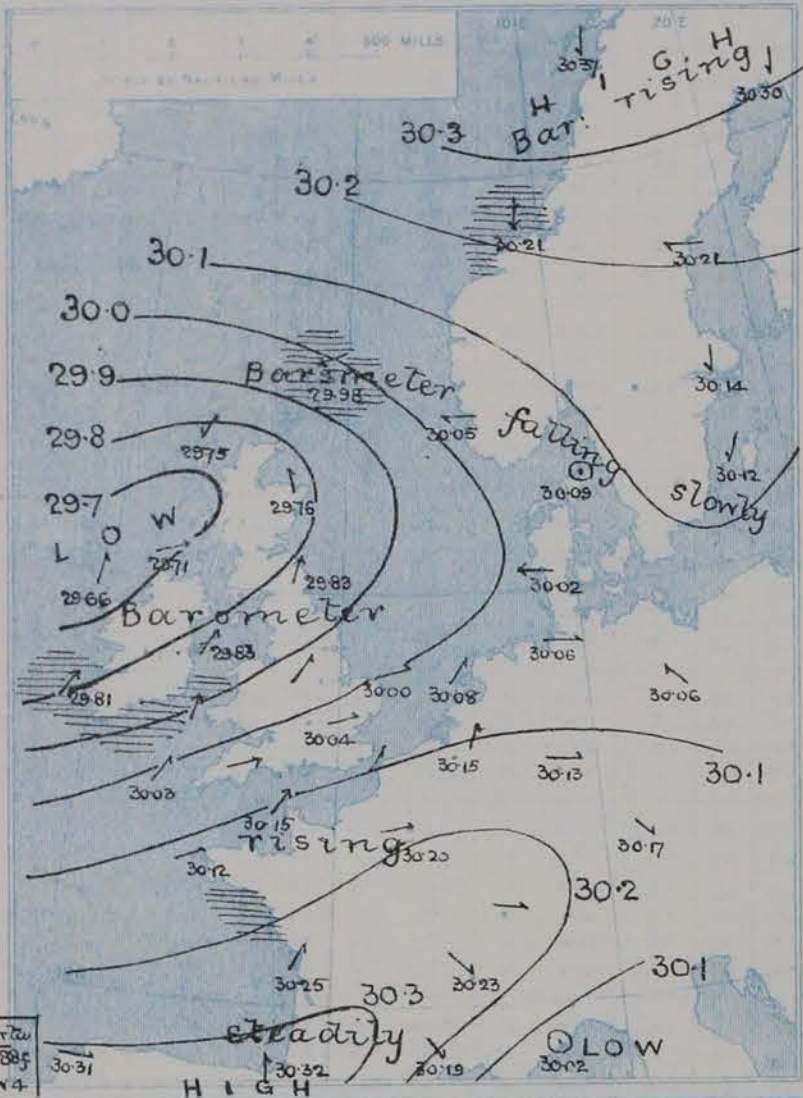

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR FRIDAY, 25TH MAY, 1906.

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER — Isobars are drawn for each tenth of an inch.
WIND — Arrows show Direction and Force, flying with the wind.
 Force above 10 ——— Force 5 to 7 ——— } Calm ☉
 Force 8 to 10 ——— Force 1 to 4 ——— }
SEA — Rough ——— High ———

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE — Isotherms are drawn for each 10°.
WEATHER — Shown by Letters of the Beaufort Scale. (See P. 4.)
RAINFALL — A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus: 0.6

III. BAROMETER AND WIND

Yesterday morning.

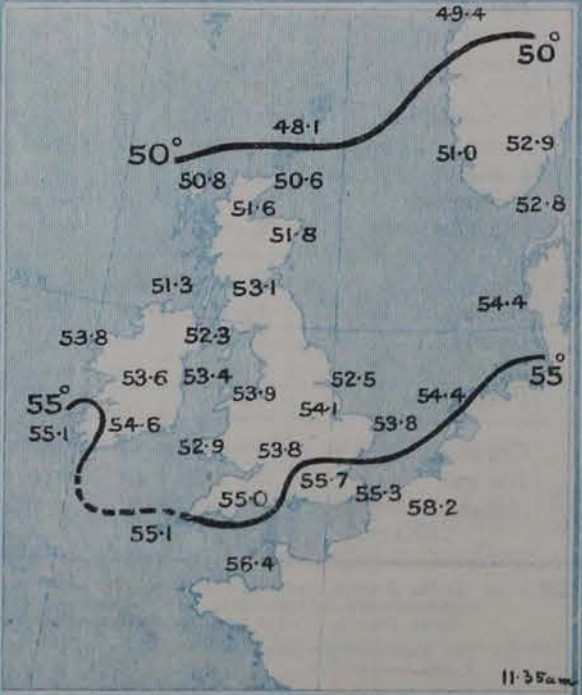

IV. RAINFALL IN 1906.

Total Amount recorded in various districts of the United Kingdom in the 20 weeks ended Saturday, 19TH MAY, with the percentage of the average amount for the corresponding period.

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period
MAY - JUNE.
 (Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

Pressure is now highest, above 30.3 ins., in two anticyclones situated respectively over the extreme southwest and the north of Europe. The central space of a cyclonic system is situated outside our northwestern coasts, where the mercury is below 29.7 ins. The gradient is moderate over our southern districts and off the north of Scotland, slight elsewhere.

WIND

TEMPERATURE

WEATHER

AND

SEA

Winds from between N. and E. prevail beyond the North Sea and in the extreme north of Scotland, and from between S. and W. over the rest of the area under observation. As a rule the force is light to moderate, but at some of the home and foreign coast stations, a fresh or strong breeze is blowing, and at Christiansund a fresh gale. Temperature has fallen over our southern districts, northern France, and the Low Countries, risen nearly everywhere else. At the home stations the readings range from 46° at Sumburgh Head to 54° at Blackton-on-Sea and Leith; on the Continent from 40° at Bodo and 44° at Christiansund, to 60° at Berlin and Frankfurt, 61° at Perpignan and 62° at Nice. Fine weather prevails extensively, but it is dull at several of our western and northern stations, with rain in places, and fog at Aberdeen. A rough sea is running off the Shetlands and Pembroke, and it is rather rough along the south of Ireland, off Christiansund, and locally on the Bay of Biscay, moderate to very smooth elsewhere.

Temperature rose yesterday above 60° in nearly all parts of England to 67° at Margate, Liverpool and Southport, and 69° at Manchester and Nottingham. Over northern Scotland the maxima were from 45° to 49°. Rain fell at nearly every station, the amounts ranging upwards to 0.6 in. at Stornoway and 0.7 in. at Aberdeen, while in Brittany Lorient received 1.2 in. Thunderstorms occurred in the afternoon at Harrogate and Spurn Head, and early this morning at Aberdeen. Stornoway, Aberdeen and Scarborough had no bright sunshine, Folkestone 8.5 hrs. and Jersey and Nottingham 8.8 hours.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The depression in the northwest is making very little progress. It will probably move further N^W across Scotland, so that the S.W.^s type is expected to become general in the course of the ensuing 24 hours.

FORECASTS*

For the 24 hours ending at NOON on 26TH May, 1906.

DISTRICTS.

FORECASTS.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Fresh to light N.E. ^s to variable breezes; finally S.W. ^s ; changeable, some rain; mild.
1	SCOTLAND EAST	Light variable to S.W. ^s breezes; changeable, some showers; mild.
2	ENGLAND N.E.	Light or moderate S.W. ^s breezes; generally fair or fine; some showers locally; moderate temperature.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

6	SCOTLAND WEST	Fresh to light S.W. ^s winds; changeable, rain at times; moderate temperature.
7	ENGLAND N.W.	
8	ENGLAND S.W.	
9	IRELAND NORTH	
10	IRELAND SOUTH	

WARNINGS

NONE ISSUED.

Note: The South Cone, point downwards (T), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (T), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + 0.3 in., but for Sumburgh Head + 0.4 in.; for stations South of Malin Head and North Shields + 0.2 in., but for Scilly and Jersey + 0.1 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR SATURDAY, 26TH MAY, 1906.

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 —

Force 5 to 7 —

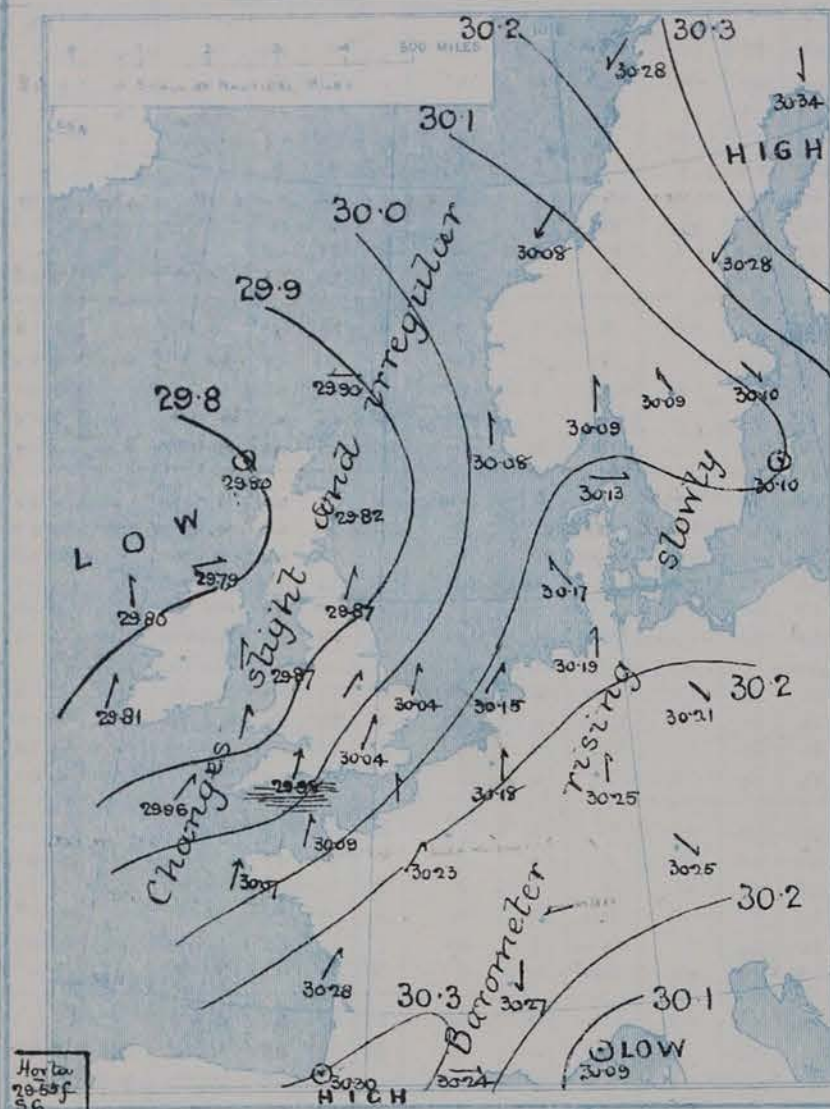

Force 8 to 10 —

Force 1 to 4 —

Calm ☉

SEA Rough

High

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°.

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. BRIGHT SUNSHINE IN 1905.

Total Duration recorded in various districts of the United Kingdom in the 20 weeks ended Saturday, 19TH MAY, with the percentage of the average duration for the corresponding period.

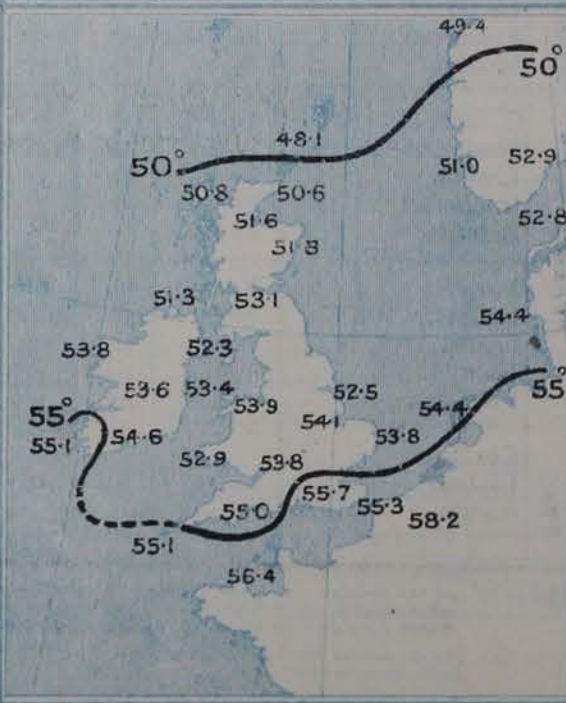

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period

MAY--JUNE.

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The distribution of pressure has undergone very little modification. The barometer is still highest, 30.3 ins. and upwards, over the Spanish Peninsula and Lapland. A low pressure system is situated beyond our northwestern coasts, where the barometer is 29.8 ins. Over England the readings are a little irregular. A depression is approaching the Azores from the westward, the barometer giving way quickly. The gradients are moderate to slight.

WIND

TEMPERATURE

WEATHER

AND

SEA

S⁵ to S.W.⁵ breezes prevail over Ireland, England and the western portion of the Continent, calms and E.⁵ breezes in Scotland, and from various directions in Scandinavia. The force is mostly light or moderate, but at Portland Bill and Christiansund a strong breeze is reported. Temperature has changed slightly and irregularly. At the home stations the readings range from between 45° and 47° in the north of Scotland to 54° at Leith and Valencia and 56° at Yarmouth; on the Continent from 41° at Bodø and 42° at Haparanda, 50° at Havre and 51° at Cape Gris Nez to 62° at Perpignan and 70° at Nice. Very cloudy or overcast skies prevail over the British Isles and the northern part of France, elsewhere the weather is mostly fine and clear. Rain is falling in the south and east of England, at Malin Head, in Brittany and at Faerder. Round Ireland the atmosphere is misty, between Holyhead and Llandudno and on the coast of Caithness very foggy. The sea is rather rough off Portland Bill, moderate to very smooth in all other localities.

Temperature rose yesterday to 64° at Leith and to 60° or 61° at most stations in the east of England, but did not exceed 48° at Wick. Rain fell generally, the largest amount being 0.4 in. at Holyhead and Sully. At some of the western and northern stations there was no bright sunshine, but along the south and east coasts of England the duration amounted to between 11 and 14 hours.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The small irregularities of pressure over England will pass eastward in the course of the day, and in their rear a general improvement in the weather is probable, but the S.W.⁵ current is likely to be attended by occasional showers in most localities.

FORECASTS*

For the 24 hours ending at NOON on 27th May, 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Calms and light variable breezes; changeable, cloudy, some showers, mist or fog locally on coast; moderate [temperature.]
1	SCOTLAND EAST	
2	ENGLAND N.E.	Light to moderate S. ⁵ to S.W. ⁵ breezes; dull, with some rain at first, fairer but some showers later; cool.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as Nos. 0 & 1.
7	ENGLAND N.W.	
8	ENGLAND S.W.	Light or moderate S.W. ⁵ breezes; changeable, some showers, mist or fog on coast; cool.
9	IRELAND NORTH	
10	IRELAND SOUTH	

WARNINGS

NONE ISSUED.

Note: The South Cone, point downwards (⌣), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W and N.W. is likely to veer towards N or N.E. the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌢), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + 0.3 in., but for Sumburgh Head + 0.4 in.; for stations South of Malin Head and North Shields + 0.2 in., but for Scilly and Jersey + 0.1 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR SUNDAY, 27th MAY, 1906

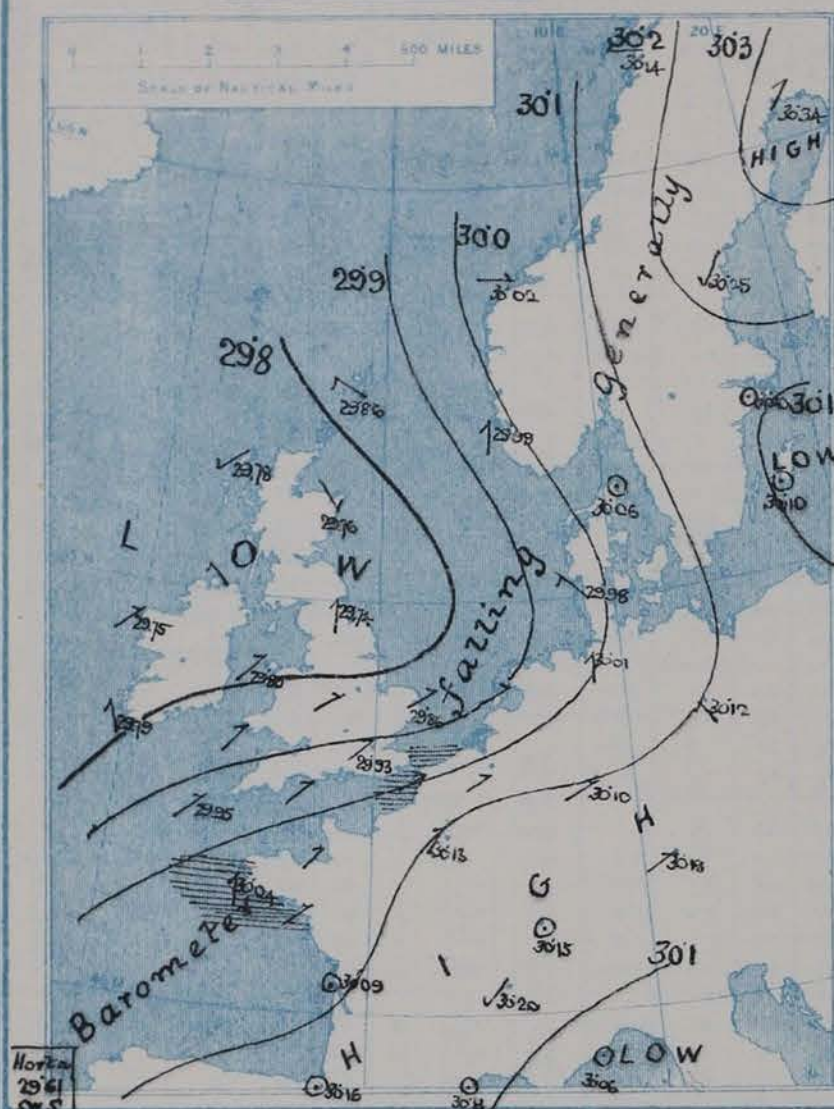

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Direction and Force, flying with the wind.

Force above 10 ——— Force 5 to 7 ——— } Calm ☉
Force 8 to 10 ——— Force 1 to 4 ———

SEA—Rough ——— High ———

II. TEMPERATURE AND WEATHER. This Morning

TEMPERATURE—Isotherms are drawn for each 10°

WEATHER—Shown by Letters of the Beaufort Scale (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus -0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°

Amount recorded in various districts of the United Kingdom during the 20 weeks ended Saturday, 19th May with the percentage of the average for the corresponding period.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

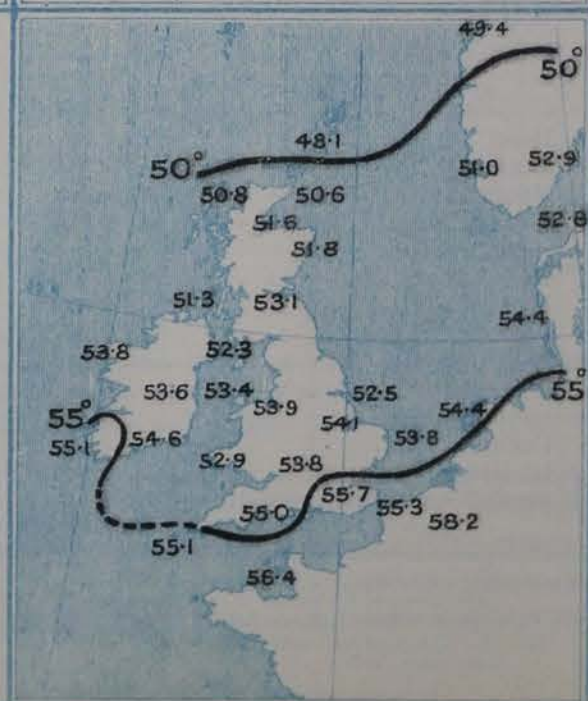

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period

MAY - JUNE.

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The depression noticed yesterday off our extreme northwestern coasts has spread eastward over all the more northern parts of the United Kingdom, and the barometer is at present falling over Northwestern Europe generally. The highest pressures, 30.3 ins. and upwards, are reported over Lapland, but the barometer is also high, 30.2 ins. and upwards, over the southern parts of the Spanish Peninsula. The lowest readings, about 29.7 ins., are found in a small area lying off the northwest of Ireland.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind is light to moderate from the Southward or Southwardward over Ireland, England, and the neighbouring parts of the Continent, but draws into South and Southeast on the eastern shores of the North Sea, and into East in the Shetlands and Hebrides. Over the Baltic and the southern parts of France calms or light variable airs are reported. Temperature has risen excepting in the north and is now above 55° over Central Ireland and the greater part of England, the highest reading reported being 59° at Shields. Around the western and southern coasts of Great Britain, where much fog prevails, the thermometer is much lower, most of the readings being as low as 50° or a trifle above it. The lowest reading in these Islands is 45° at Dumburgh Head, Stromoway and Wick. At the Continental stations the thermometer ranges from 72° at Lisbon, 70° at Oporto and 68° at Perpignan to 47° at Christiansund and 43° at Hernösand. The weather is cloudy or dull generally, with rain in several parts of the United Kingdom and also in Denmark and the Netherlands. The sea is moderate or slight generally, but rather rough in the Straits of Dover and along the northern and northwestern coasts of France.

During yesterday the thermometer rose to 60° and upwards in most parts of these Islands, and to 63° at Oxford and Birt Castle. At many places round our western and southern coasts the presence of fog kept the thermometer below 55°. Little or no bright sunshine was recorded over England and Ireland, but at Aberdeen 5.2 hours were registered, and at Stromoway 7.6 hours. Rain has again fallen over Northwestern Europe generally, the largest amount reported being 0.6 in. at Cape Gris Nez.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (⌵), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (⌴), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR

Monday, 28th May,

1906.

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch

WIND—Arrows show Direction and Force, flying with the wind

Force above 10

Force 5 to 7

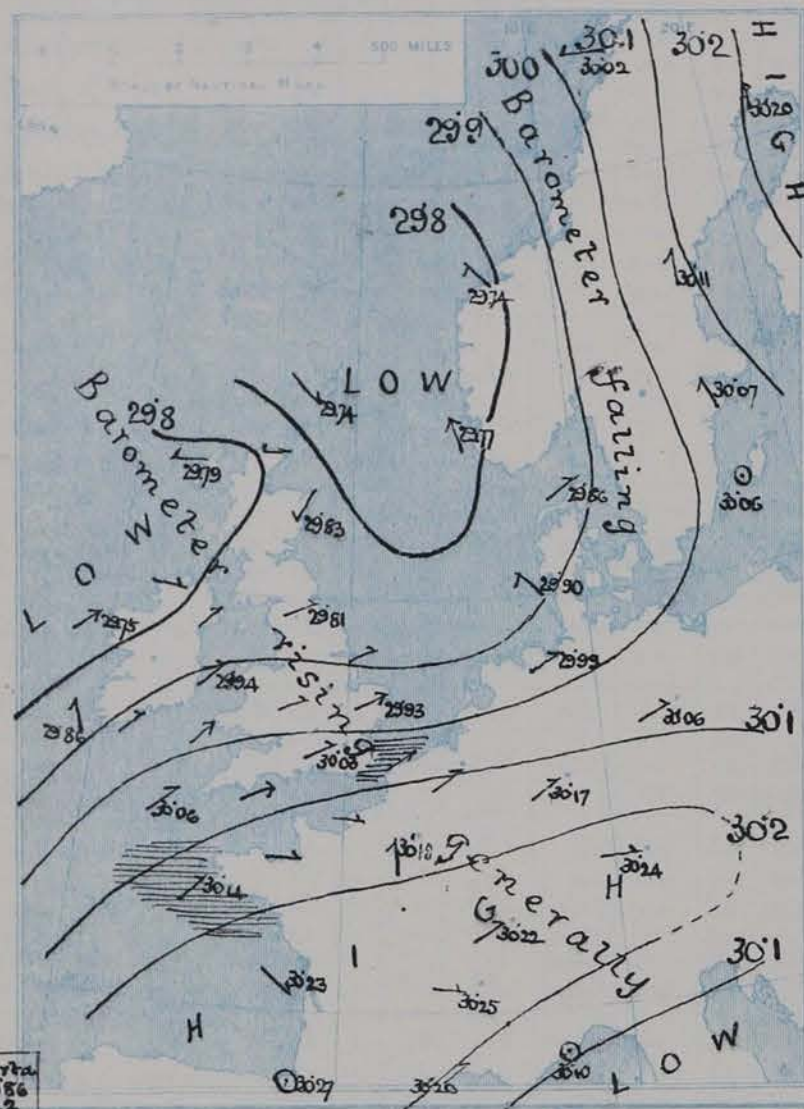

Calm

Force 8 to 10

Force 1 to 4

SEA—Rough

High

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

Amount recorded in various districts of the United Kingdom during the week ended Sat. 19th MAY with the percentage of the average for the corresponding week.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period

MAY—JUNE.

(Derived chiefly from Observations extending over the 35 years 1871—1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The barometer is now highest, 30.2 in. and upwards, in two areas, - one lying over France and South Germany, and the other over Lapland. The former system is apparently spreading northward, and the mercury is rising slowly in all parts of these Islands and France; the northern high pressure area is passing away to the eastward, and the barometer is falling in Scandinavia and Denmark. The lowest pressures, 29.8 in. and less, are reported over our own extreme north-west coasts, and in another area over the west of Norway and the northern parts of the North Sea.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind is South-Westerly over Ireland, England and the neighbouring parts of the Continent, and blows fresh on our east and south-east coasts. In Scandinavia and Denmark it is Southerly or South-Easterly, while in Scotland it is light from the Eastward. Temperature has risen in most places. Over the eastern and central parts of England and Ireland the readings are above the average, the highest values reported being 65° at Yarmouth, 62° at Clacton-on-Sea, and 60° in London and at Parsonstown. In Scotland the readings are mostly below 50°. At the Continental stations the thermometer ranges from 72° at Perpignan, and 65° and upwards over Central and Southern France generally, to 48° at St. Rudecnaes and 45° at Hernösand. The weather is cloudy over North-eastern Europe as a whole, with fog or mist on our own western and southern coasts, and slight rain at Bath and Oxford; rain is also falling in some parts of Denmark and the south of Scandinavia. On the east coast of England and at many of the French stations the weather is fine. The sea is moderate or slight generally, but rather rough in the Straits of Dover and also on the coasts of Brittany. During yesterday the thermometer rose to 65° and upwards at many of our eastern and central stations, and to 68° at Skegness and Scarborough. Along the Channel coast, where fog prevailed, the readings were much lower the maximum at Portland Bill being only 53°. The amount of bright sunshine was generally very small; at most places in the west and south there was none. Rain fell in all but the extreme northern parts of the Kingdom, as well as in the northern and central parts of the Continent.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The anticyclone in the south is likely to extend northwards, and a general improvement in the weather is probable over the southern half of the Kingdom. In the north the conditions will be affected for a time by the low pressure systems lying off our north-west coasts and over the northern parts of the North Sea.

FORECASTS*

For the 24 hours ending at NOON on 29th May, 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Light variable breezes; dull, cool, slight rain in places.
1	SCOTLAND EAST	
2	ENGLAND N.E.	S.W. ⁴ and W. ⁴ winds, moderate; fair, warm.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	S.W. ⁴ and W. ⁴ winds, moderate; some showers at first, then fair. Becoming warmer.
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as Nos. 0 and 1.
7	ENGLAND N.W.	
8	ENGLAND S.W.	S.W. ⁴ winds, light or moderate; dull and damp at first, with fog on coasts, improving later.
9	IRELAND NORTH	
10	IRELAND SOUTH	S. ⁴ and S.W. ⁴ winds, moderate; cloudy and showery at first, improving later.

WARNINGS

NONE ISSUED.

* The South Cone, point downwards (∇), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (∇), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields +.03 in., but for Sumburgh Head +.04 in.; for stations South of Malin Head and North Shields +.02 in., but for Scilly and Jersey +.01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR

Tuesday, 29th May

1906.

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Direction and Force, flying with the wind.

Force above 10

Force 5 to 7

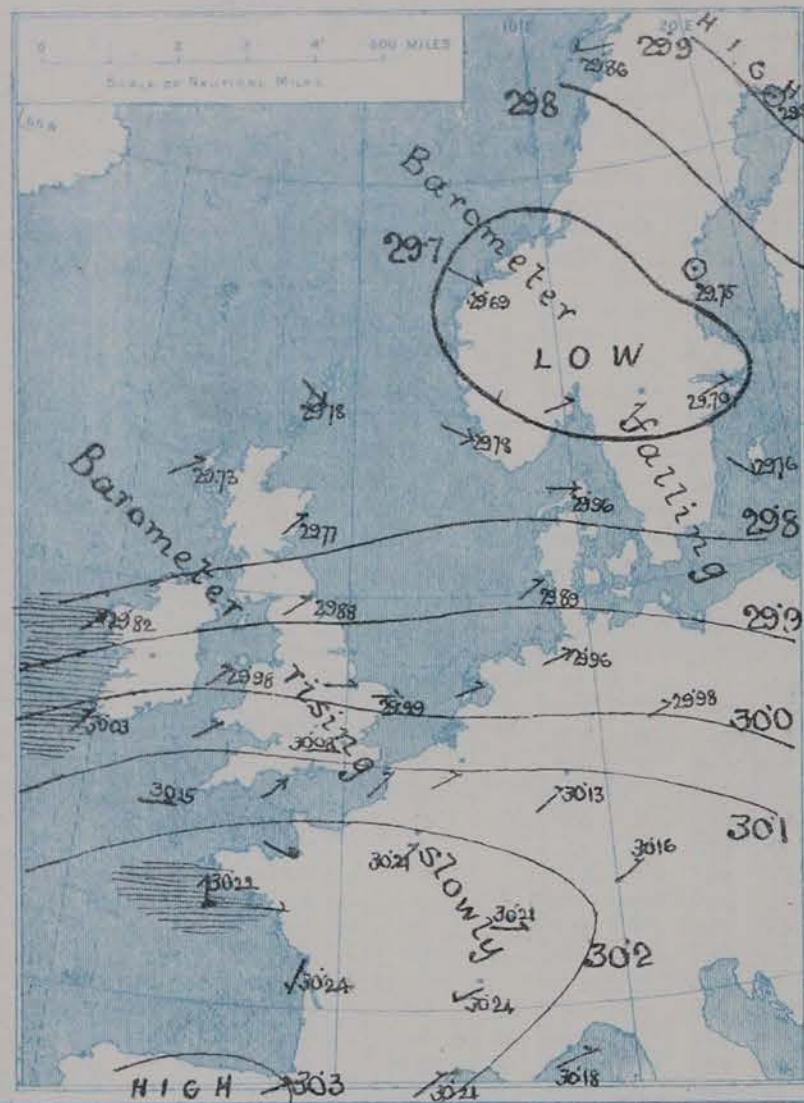

Calm

Force 8 to 10

Force 1 to 4

SEA—Rough

High

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°.

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus: 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. EXTREMES OF TEMPERATURE

recorded

in various districts of the United Kingdom

during the week ended Sat. 26th MAY.

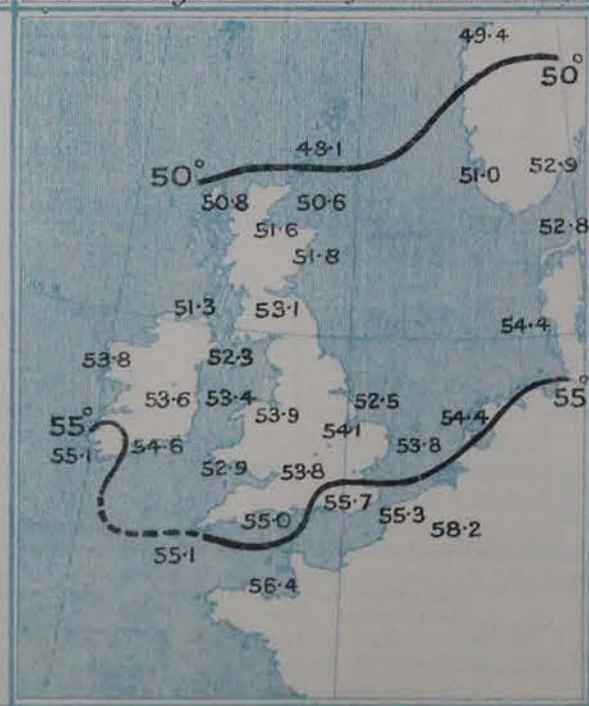

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period

MAY—JUNE.

(Derived chiefly from Observations extending over the 35 years 1871—1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

A large anticyclone still lies over the southern parts of our area, the highest pressures, 30.2 ins. to 30.3 ins., being reported over France and Switzerland. The lowest readings, 29.7 ins. and less, are found in a large shallow depression over Scandinavia. The barometer is rising slowly in these Islands and France, but is falling over all the more northern parts of the Continent.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind is chiefly Westerly or South-Westerly, - light or moderate in force generally, but strong at Blacksod Point and Northland Hill. Calms prevail in the Gulf of Bothnia, and a light Easterly breeze in the north of Norway. Temperature has risen in most parts of Great Britain and France, but has fallen elsewhere. Over the eastern parts of England the morning readings range between 60° and 65°; but on all our western and southern coasts the thermometer is below 55° and at Kilmorke it is as low as 49°. At the Continental stations the thermometer ranges from between 70° and 75° in the south of France to 50° and less over the greater part of Scandinavia, and to 44° at Ikernösand. The weather is fine in France and the east and southeast of England, but is cloudy or dull in all other parts of our area. Fog or mist still prevails round our western and southern coasts, and rain is falling at several of the Scandinavian stations, as well as at Frankfurt. The sea is moderate or slight generally, but rather rough off the west of Ireland and on the coast of Brittany.

Over Eastern and Central England, where a large amount of bright sunshine was experienced, the thermometer rose yesterday to between 70° and 73°; but at many of our south coast stations, where mist or fog prevailed, it did not reach 60°. In the north of Scotland the maximum readings were below 55°. Rain has fallen in the west and north of these Islands generally and small quantities at some of our southern stations.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The anticyclone in the south will probably continue to increase in intensity and to spread slowly northwards. Fair weather is therefore likely to prevail over the greater part of England and Ireland, but with mist or fog on our western and southern coasts. In the extreme north the conditions will be affected by the low pressure system over Scandinavia and by other depressions moving over the northern parts of the Atlantic.

FORECASTS*

For the 24 hours ending at NOON on 30th. May, 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Light variable airs; dull, some rain, mist or fog locally.
1	SCOTLAND EAST	
2	ENGLAND N.E.	S.W. th winds, light; fair generally; warmer.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	W th and S.W. th winds, light or moderate; fair, warm.
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	S.W. th winds, moderate; dull, misty, slight rain locally.
7	ENGLAND N.W.	
8	ENGLAND S.W.	S.W. th winds, moderate; fair generally, but misty or foggy on coast.
9	IRELAND NORTH	
10	IRELAND SOUTH	Same as No. 6.

WARNINGS

NONE ISSUED.

Note - The South Cone, point downwards (⌋), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W and N.W. is likely to veer towards N or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌋), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E and S.E. is likely to veer towards S or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + 0.3 in., but for Sumburgh Head + 0.4 in.; for stations South of Malin Head and North Shields + 0.2 in., but for Scilly and Jersey + 0.1 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

FOR Wednesday, 30TH MAY, 1906.

SEA: Rough High 

GENERAL SITUATION AT 8 A.M.

PRESSURE

A large anticyclonic still lies over the southern parts of our area, the highest pressures, 30.1 ins. and upwards, being found over France, the Channel and the Bay of Biscay. The lowest readings, 29.6 ins. and less, are reported in a shallow depression over the south of Scandinavia. The barometer is at present falling a little over Western Europe generally, but is rising over the northern parts of Scandinavia.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind is moderate from the South-Westward on our western coasts, but draws into West over England and the Netherlands, and into North-West in Germany. In the Bay of Biscay the wind has shifted to the North-Eastward, while over the northern parts of the Continent a cyclonic circulation is shown round the Scandinavian depression. Temperature has fallen in most places. Over these Islands the readings now differ but little from the average, the highest values, 55° to 58°, being reported in the south and east of England, and the lowest, 45° to 49°, on the north-east coasts of Scotland. In the south of France the weather remains very warm, the morning temperature being as high as 78° at Perpignan and 70° at Lyons. The weather is fine in the south of England and also in the south of France, but is cloudy or dull in all other parts of our area. Fog still prevails on some parts of our south coasts, and also on the north-east coasts of Scotland, and rain is falling at Harstad and Tanö. The sea is moderate or slight generally, but rather rough on the north coasts of France.

In the course of yesterday the thermometer rose to between 65° and 70° over Eastern and Central England and to 71° in London; at many of our south coast stations it failed to reach 60°. In the east and south-east of England the amount of bright sunshine was very large (more than 13 hours in London and at Margate and Clacton-on-Sea), but in the western and northern parts of the Kingdom the duration was much smaller. Rain has fallen in Scotland and the north of Ireland, and also in Scandinavia, the amount at Helsingfors being 1.1 in.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The anticyclone in the south appears likely to disperse gradually. No material change in the weather is anticipated during the ensuing 24 hours, but a low pressure system which is spreading northwards from Spain will probably occasion a shift of wind to the Eastward along our southern coasts.

FORECASTS*

For the 24 hours ending at NOON on 3rd May, 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Variable breezes, finally N.W. ^{ly} ; cloudy, some mist or fog, slight rain in places
1	SCOTLAND EAST	
2	ENGLAND N.E.	W ^{ly} winds, light or moderate; fair, cool.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	W ^{ly} to variable or light E. ^{ly} airs; fair generally, but some mist or fog on coast.
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	W ^{ly} and S.W. ^{ly} winds, light; cool, cloudy, local showers
7	ENGLAND N.W.	
8	ENGLAND S.W.	S ^{ly} to S.E. ^{ly} winds, light; fair generally, but some mist or fog on coast.
9	IRELAND NORTH	
10	IRELAND SOUTH	S ^{ly} and S.W. ^{ly} winds, moderate; cool, cloudy, local showers.

WARNINGS

NONE ISSUED.

Note. — The South Cone, point downwards (⌣), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (⌢), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

FOR Thursday, 31ST MAY, 1906.

BAROMETER—Isobars are drawn for each tenth of an inch.
WIND—Arrows show Directions and Force, flying with the wind.

Force above 10		Force 5 to 7		} Calm ☉
Force 8 to 10		Force 1 to 4		
SEA—Rough		High		

TEMPERATURE.—Isotherms are drawn for each 10°
WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)
RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0·6

Yesterday morning.

Amount recorded
in various districts of the United Kingdom
during the week ended SAT. 26th MAY
with the percentage of the average duration
for the corresponding week.

at 8 A.M. for the monthly period

MAY - JUNE.

(Derived chiefly from Observations
extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The anticyclone recently noticed over the southern parts of our area continues to disperse, and in the course of the night a shallow depression, in which readings are below 29.5 ins., has appeared over the north of Scotland. The disturbance noticed yesterday over Scandinavia is travelling eastwards across the Gulf of Finland, in which neighbourhood the barometer is below 29.6 ins. The highest pressures, 29.9 ins. and upwards, are now found over the south of France, but the mercury is nearly as high over the northern part of Scandinavia.

WIND

The wind is light to moderate from the Westward over the greater part of these Islands, but draws into South-West on our east coasts and over the North Sea. In the neighbouring parts of the Continent the wind is very variable, but in Scandinavia it is Easterly or North Easterly, and in Denmark and Germany it is chiefly Westerly. Temperature has risen in the eastern parts of Great Britain, but fallen slightly in all our western districts. The readings in our Islands now range from 59° at Yarmouth and Clacton-on-Sea to 50° or slightly below it at several of our western and extreme northern stations and to 45° at Lumburgh Head.

TEMPERATURE

Over the southern parts of France the thermometer remains high; at Biarritz it stands at 73°, and at Perpignan at 75°. The weather is fine in Scotland and also in France, but is cloudy or dull in nearly all other parts of Western Europe. Rain is falling at Stockholm, and passing showers at Stornoway. The sea is slight or smooth generally, but rather rough off the north and west of Ireland.

WEATHER

AND

SEA

During yesterday the thermometer rose to 65° or slightly above it at several of our own eastern and southern stations; on some parts of our south-west coasts, where fog prevailed, the maximum readings were below 55°. At the southern French stations the thermometer rose to between 88° and 93°. The amount of bright sunshine was large in the south-east of England, but much smaller in our western and northern districts. Slight rain has fallen in many parts of the United Kingdom, and lightning was seen at Roche's Point at night.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The depression in the north is likely to remain stationary or to travel very slowly eastwards. No very decided change in the weather is anticipated, but with the continued dispersal of the southern anticyclone the conditions over Western Europe generally are likely to become gradually less settled.

FORECASTS*

For the 24 hours ending at NOON on 1st. June, 1906.

DISTRICTS.

FORECASTS.

- 0 { SCOTLAND NORTH
- 1 { SCOTLAND EAST
- 2 { ENGLAND N.E.
- 3 { ENGLAND EAST
- 4 { MIDLAND COUNTIES
- 5 { ENGLAND SOUTH

S.W.^{ly} to W.^{ly} winds, light; fair at first, some showers later.

S.W.^{ly} to W.^{ly} winds, light; cloudy, with thunder showers in places. Cooler.

DISTRICTS.

FORECASTS.

- 6 { SCOTLAND WEST
- 7 { ENGLAND N.W.
- 8 { ENGLAND S.W.
- 9 { IRELAND NORTH
- 10 { IRELAND SOUTH

W.^{ly} to N.W.^{ly} winds, moderate or fresh; cool and rather changeable, with slight rain in places.

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (⌋), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌋), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.
