

THE DAILY WEATHER REPORT

(INTRODUCTION)

73

1st October to 31st December, 1975

Stations published in the Daily Weather Report

METEOROLOGICAL OFFICE
Bracknell, Berkshire

1. HISTORY

A brief history of changes in contents and format between 1st April, 1919, and December, 1949, will be found in the introduction to the British Section for 1st October to 31st December, 1949. On 1st January, 1950, the British and International Sections of the former Report, which had been issued in three sections since 1919, were combined in a single publication, the present Daily Weather Report. At the same time, the third section was published separately with the title of Daily Aerological Record. A number of changes in meteorological codes and specifications were introduced on 1st January, 1955, and incorporated in the Report. Changes in format introduced on 1st July, 1955, provided for the elements of station and ships' observations to be given in the order of the appropriate meteorological code and for some modification of the scales and projections of charts. On 1st January, 1961, the Celsius scale was adopted for reporting surface temperatures. On 1st January, 1967, the metric system was adopted for all references to heights and distances. Certain changes relating to position and wave groups in the Ship-Code (FM 21E) were introduced on 1st January, 1968.

2. FORM OF PRESENTATION

(i) **Observations.**—Pages 1 and 4 of the Daily Weather Report contain reports for the four main hours of observation from a representative number of stations in Great Britain and Ireland which provide full reports together with a selection of reports from ocean weather stations for the same hours. In addition, Beaufort letters (Table 20), mainly describing precipitation, are given for each of the four six-hourly periods, together with reports of maximum and minimum temperature, sunshine, rainfall and state of ground (Table 13), in respect of the land stations listed. Explanations of the codes and specifications used are given below.

(ii) **Charts.**—Page 2 contains a chart of the weather in a large part of the northern hemisphere for mid-day of the previous day. Incorporated in this chart is a line joining the approximate locations of civil twilight (i.e., Sun 6° below horizon) at 1200 h for the mid point of the month indicated. Page 3 contains charts of slightly larger scale, for the British Isles and Western Europe, for 1800 h. of the previous day and for 0000 h and 0600 h on the day of issue.

4. EXPLANATION OF CODES AND SPECIFICATIONS

CODE FM 11 E—Land Stations	VV ww W	PPP TT	Nh CL h CM CH	Td Td a pp	8Ns C hshs	RRTxTx E RRTnTn E	sss TgTg
N = Total amount of cloud in eighths (Table 1). dd = Wind direction on scale 01-36 (see also Table 2). ff = Wind speed in knots.	VV = Visibility (Table 3). ww = Present weather (Table 5). W = Past weather (Table 4).	PPP = Last three figures of pressure (reduced to M.S.L.) in millibars and tenths. TT = Temperature in whole degrees Celsius. Note.—In reports from ocean weather stations (FM 21D) only the tens and units figure of air temperature are reported. The tens figure is reported by t_T .	Nh = Fraction of celestial dome covered by CL (or CM if no CL). CL = Form of low cloud (Table 6). h = Height above ground of base of lowest cloud (Table 9). CM = Form of Medium Cloud (Table 7). CH = Form of high cloud (Table 8).	Td = Dew point temperature in whole degrees Celsius. a = Characteristic of barometric tendency (Table 10). pp = Barometric tendency (change of pressure in last three hours in tenths of millibars).	8 = Indicator figure. Ns = Amount in eighths of individual cloud layer or mass (Table 1). C = Type of cloud (Table 11). hshs = Height of base of cloud (Table 12).	RR = Rainfall (Table 19) (Code 3577) (09h-21h) (21h-09h). TxTx = Maximum temperature in whole degrees Celsius (09h-21h). TnTn = Minimum temperature in whole degrees Celsius (21h-09h).	TgTg = Minimum temperature on grass in whole degrees Celsius (21h-09h). sss = Duration of sunshine (in hours and tenths). E = State of ground (Table 13) (Code 0900) (at 21h and 09h).

CODE FM 21 E—Ships	Q_LoL_oL_oL_oL_o	YYGGi_w	D _s v _s a pp	O T _s T _s T _d T _d	IT _w T _w T _w T _w	3P _w P _w H _w H _w	d _w d _w P _w H _w H _w
99=Indicator group. L _a L _a L _a =Latitude in tenths of a degree.	Q _c =Quadrant of the globe (Table 17). L _o L _o L _o L _o =Longitude in tenths of a degree.	YY=Day of the month. GG=Actual time to the nearest whole hour G.M.T. i _w =Wind indicator (Table 18).	D _s =Direction of movement of ship (Table 14). v _s =Speed of ship in knots (Table 15). a=Characteristic of barometric tendency (Table 10). pp=Barometric tendency (change of pressure in last three hours in tenths of millibars).	O = Indicator figure. T _s T _s = Difference between air temperature and sea temperature in $\frac{1}{2}$ degree Celsius. (If the air temperature is less than the sea temperature, 50 is added to the difference.) T _d T _d = Dew point temperature in whole degrees Celsius.	I=Indicator figure. T _w T _w T _w = Sea surface temperature in tenths of a degree Celsius. For negative temperatures 500 is added. tr=The tenths figure of the air temperature.	3=Indicator figure. P _w P _w =Period of waves in seconds. H _w H _w =Height of the waves in units of 0.5 metre. This group refers to wind waves. If there is a swell with no wind waves this group is reported as 3/00.	d _w d _w =Direction (in tens of degrees) from which waves come. P _w =Period of waves (Table 16). H _w H _w =Height of the waves in units of 0.5 metre. This group is used to report swell when it is possible to make a clear distinction between swell and wind waves.

Table 1.—Code for Cloud Amount (N, Nh, Ns)

- 0 = None.
- 1 = 1 eighth of sky covered or less, but not zero.
- 2 = 2 eighths of sky covered.
- 3 = 3 eighths of sky covered.
- 4 = 4 eighths of sky covered.
- 5 = 5 eighths of sky covered.
- 6 = 6 eighths of sky covered.
- 7 = 7 eighths of sky covered or more, but not 8 eighths.
- 8 = 8 eighths (sky completely covered).
- 9 = Sky obscured or cloud amount cannot be estimated.

Note.—"Trace" would be included under Figure 1, which should be used for amounts up to 1/8th (i.e., not up to 3/16ths). "Overcast but with openings" would be included under Figure 7, which should be used for amounts down to 7/8ths (i.e., not down to 13/16ths).

Variable, or all directions, or unknown, or waves confused, direction indeterminate 99

Note.—The direction to be observed is "true" not "magnetic"

2. FORM OF PRESENTATION (continued)

(iii) **General Synoptic Development.**—Below the weather charts on page 3 will be found a statement which describes the main features in the evolution of the synoptic situation over the United Kingdom during the preceding 24 hours together with an indication of the manner in which it is expected to develop.

3. NOTES

(i) **Standard of Time.**—Greenwich Mean Time is exclusively used throughout the Report.

(ii) **Temperature.**—On pages 1 and 4 temperature is specified in whole degrees Celsius, negative temperatures being coded by removing the minus sign and adding 50. Equivalent values in degrees Fahrenheit can be obtained by reference to the table printed between these pages. See also note under PPP TT in para. 4 below.

(iii) **Adjusted Readings.**—Where an instrumental reading is found to be in error and some adjustment is necessary, the adjusted reading is published in brackets thus (59).

(iv) **Rainfall Readings in Eire.**—The rainfall totals for stations in Eire are for the periods 18h-06h, reported at 0900h.
06h-18h, reported at 2100h.

(v) Readers of the Report who are unacquainted with the method of construction and the use of weather charts are recommended to read "The Practice of Weather Forecasting" which may be purchased from H.M. Stationery Office, 49 High Holborn. (Price £1.05 net).

(vi) Correction sheets will be issued weekly. These will contain corrected observations, where appropriate, for all stations with the exception of the following:—stations in Eire, Cape Wrath, Sule Skerry, Mull of Galloway, Kilnsea, Guernsey, Scilly, Hartland Point.

Table 3.—Code for Visibility—(VV) (Code 4377)

Table 4.—Code for Past Weather (W) (Code 4500)

0 = Cloud covering $\frac{1}{2}$ or less of the sky throughout the appropriate period.	3 = Sandstorm, duststorm or blowing snow.
1 = Cloud covering more than $\frac{1}{2}$ of the sky during part of the appropriate period and covering half or less during part of the period.	4 = Fog, ice fog or thick haze (visibility less than 1000 m.).
2 = Cloud covering more than $\frac{1}{2}$ of the sky throughout the appropriate period.	5 = Drizzle.
3 = Cloud covering more than $\frac{1}{2}$ of the sky throughout the appropriate period.	6 = Rain.
4 = Cloud covering more than $\frac{1}{2}$ of the sky throughout the appropriate period.	7 = Snow, or rain and snow mixed.
5 = Cloud covering more than $\frac{1}{2}$ of the sky throughout the appropriate period.	8 = Shower(s).
6 = Cloud covering more than $\frac{1}{2}$ of the sky throughout the appropriate period.	9 = Thunderstorm(s) with or without precipitation.

The code for W covers the weather occurring during the last six hours.

In the range 01-50 the figures give actual visibility in tenths of kilometres. This table gives the meanings of higher code figures.

†Values not given may be obtained by interpolation.

* Code figures not used.

‡ Decade 90-99 is used when visibility cannot be determined with sufficient accuracy to justify lower code figures.

Table 5.—Code for Present Weather (ww) (Code 4677)

Table 6.—Code for form of Low Cloud (CL)
(Code 0513)

- 0 = No stratocumulus, stratus, cumulus or cumulonimbus.
- 1 = Ragged cumulus other than of bad weather, or cumulus with little vertical extent and seemingly flattened, or both.
- 2 = Cumulus of moderate or strong vertical extent, generally with protuberances in the form of domes or towers, either accompanied or not by other cumulus or by stratocumulus : all having their bases at the same level.
- 3 = Cumulonimbus, the summits of which, at least partially, lack sharp outlines, but are neither clearly fibrous (cirriform) nor in the form of an anvil : cumulus, stratocumulus or stratus may also be present.
- 4 = Stratocumulus formed by the spreading out of cumulus : cumulus may also be present.
- 5 = Stratocumulus not resulting from the spreading out of cumulus.
- 6 = Stratus in a more or less continuous sheet or layer, or in ragged shreds, or both, but no stratus fractus of bad weather.
- 7 = Stratus fractus of bad weather or cumulus fractus of bad weather (pannus), or both ; usually below altostratus or nimbostratus. By "bad weather" is meant the conditions which generally exist before, during or after precipitation.
- 8 = Cumulus and stratocumulus, other than those formed from the spreading out of cumulus : the base of cumulus is at a different level from that of stratocumulus.
- 9 = Cumulonimbus, the upper part of which is clearly fibrous (cirriform), often in the form of an anvil ; either accompanied or not by cumulus, stratocumulus, stratus or pannus.
- / = Stratocumulus, stratus, cumulus and cumulonimbus are invisible owing to darkness, fog, blowing dust or sand, or other similar phenomena.

Table 7.—Code for form of Medium Cloud (CM)

- 0 = No altocumulus, altostratus or nimbostratus.
- 1 = Altostratus, the greater part of which is semi-transparent : through this part the sun or moon may be weakly visible as through ground glass.
- 2 = Altostratus, the greater part of which is sufficiently dense to hide the sun (or moon), or nimbostratus.
- 3 = Altocumulus, the greater part of which is semi-transparent, and no part of which is crenelated or in cumuliform tufts : the various elements of the cloud change only slowly and are all at a single level.
- 4 = Patches (often in the form of almonds or fishes) of altocumulus, the greater part of which is semi-transparent ; the clouds are at one or more levels and the elements are continually changing in appearance.
- 5 = Semi-transparent altocumulus in bands or altocumulus in one more or less continuous layer progressively invading the sky : these altocumulus clouds generally are growing denser as a whole. The layer may be opaque or may consist of two or more sheets.
- 6 = Altocumulus resulting from the spreading out of cumulus.
- 7 = Any one of the following cases :—
 - (a) Altocumulus in two or more layers, usually opaque in places and not progressively invading the sky.
 - (b) Opaque layer of altocumulus not progressively invading the sky.
 - (c) Altocumulus together with altostratus or nimbostratus or both.
- 8 = Altocumulus with sprouts in the form of small towers or battlements, or altocumulus having the appearance of cumuliform tufts.
- 9 = Altocumulus, generally at several levels, in a chaotic sky : dense cirrus is usually also present.
- / = Altocumulus, altostratus and nimbostratus are invisible owing to darkness, fog, blowing dust or sand, or other similar phenomena, or more often because of the presence of a continuous layer of lower clouds.

Code 8.—Code for form of High Cloud (CH)

(Code 330)

- 0 = No cirrus, cirrocumulus or cirrostratus.
- 1 = Cirrus in the form of filaments, strands or hooks, not progressively invading the sky (often called "mares' tails").
- 2 = Dense cirrus, in patches or entangled sheaves, which usually do not increase and sometimes seem to be the remains of the upper part of a cumulonimbus : or cirrus with sproutings in the form of towers or battlements, or having the appearance of cumuliform tufts.
- 3 = Dense cirrus, often in the form of an anvil ; either the remains of the upper parts of a cumulonimbus or parts of distant cumulonimbus, the cumuliform portions of which cannot be seen.
- 4 = Cirrus in the form of hooks or of filaments, or both, progressively invading the sky : they generally become denser as a whole.
- 5 = Cirrus, often in bands converging towards one point or two points of the horizon, and cirrostratus, or cirrostratus alone : in either case, they are progressively invading the sky, and generally growing denser as a whole, but the continuous veil does not reach 45 degrees above the horizon.
- 6 = Cirrus, often in bands converging towards one point or two points of the horizon, and cirrostratus, or cirrostratus alone : in either case, they are progressively invading the sky, and generally growing denser as a whole ; the continuous veil extends more than 45 degrees above the horizon, without the sky being totally covered.
- 7 = Veil of cirrostratus completely covering the celestial dome.
- 8 = Cirrostratus not progressively invading the sky and not completely covering the celestial dome.
- 9 = Cirrocumulus alone or cirrocumulus accompanied by cirrus or cirrostratus, or both, but cirrocumulus is the predominant cirriform cloud.
- / = Cirrus, cirrocumulus and cirrostratus are invisible owing to darkness, fog, blowing dust or sand, or other similar phenomena, or more often because of the presence of a continuous layer of lower clouds.

The expression "at the station" refers to a land station or a ship at the point from which observations are normally taken.

Tornado cloud or water spout.
Hail, ice pellets type (b), snow pellets. ICE PELLETS are defined as transparent or translucent pellets of ice, which are spherical or irregular, rarely conical, and which have a diameter of 5 mm. or less. They may be subdivided into two main types.

(a) Frozen raindrops or largely melted and refrozen snowflakes.
 (b) Pellets of snow encased in a thin layer of ice. HAIL is defined as small balls or pieces of ice (hailstones) with a diameter ranging from 5 mm. to 50 mm. or sometimes more, falling

Table 9.—Code for Cloud Height (h)
(Code 1600)

(Code 1600)		Height of base of cloud
Code figure		metres

01-55 Amount to the nearest whole millimetre.		d = drizzle.		00 No change						
56-60 Add 10 mm for each unit above 56 e.g., 73 = 230 mm		f = fog, visibility 200 metres, or more but less than 1 kilometre.		50 Pressure has risen or fallen more than 4·9 mb.						
57-90		F = thick fog, visibility less than 200 metres.		01 Pressure has risen 0·1 mb.						
91 0·1		h = hail, ice prisms or ice pellets types (a) and (b).		02 Pressure has risen 0·2 mb. etc. etc.						
92 0·2		ks = storm of drifting snow.		51 Pressure has fallen 0·1 mb.						
93 0·3		Intensity is shown by capital letters ("heavy" or "thick") or suffix "o" ("slight"). Continuous precipitation is shown by repeating the letter and intermittent precipitation by the prefix "i". The prefix "j" indicates weather near but not at the station.		52 Pressure has fallen 0·2 mb. etc. etc.						
94 0·4				48 Pressure has risen 4·8 mb.						
95 0·5				49 Pressure has risen 4·9 mb.						
96 0·6				58 Pressure has fallen 4·8 mb.						
97 Trace (There has been precipitation but amount less than 0·05 mm).				59 Pressure has fallen 4·9 mb.						
98 >400 Measurement impossible or inaccurate.										
5. EXPLANATION OF CHARTS										
BAROMETER. Isobars are drawn for intervals of four millibars.										
WIND. Arrows fly with wind. A full length feather represents 10 Kt and a short feather 5 Kt. A solid pennant represents 50 Kt. Calm is indicated by circle outside weather symbol.										
TEMPERATURE is given in degrees C., and is shown on the charts by means of figures alongside the Station circle.										
CLOUD SYMBOLS										
○ Clear sky. (1) Sky 1/2 covered. (2) Sky 2/3 covered. (3) Sky 3/4 covered. (4) Sky 4/5 covered. (5) Sky 5/6 covered. (6) Sky obscured.										
⊗ Missing or doubtful data.

DAILY WEATHER REPORT OF THE BRITISH METEOROLOGICAL OFFICE

No. 239

MONTHLY SUMMARY

For NOVEMBER 1975

CHANGEABLE

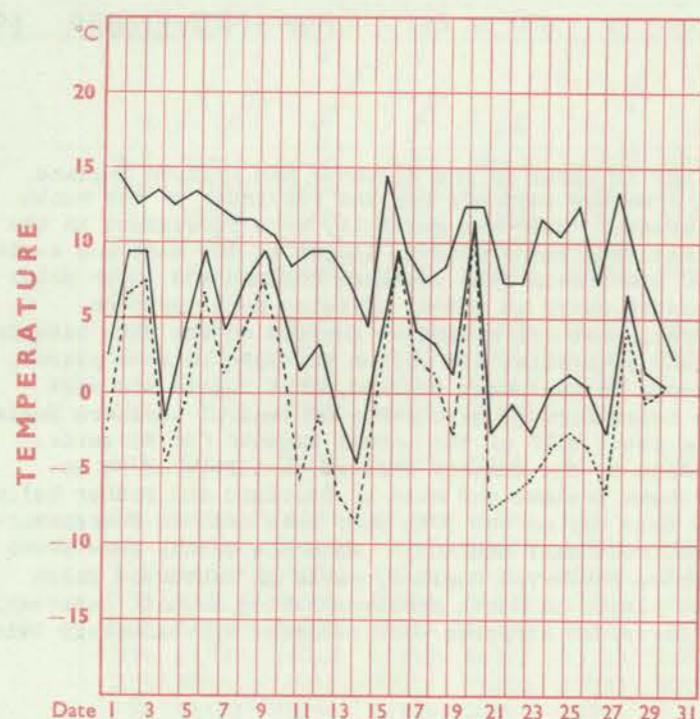

During the first few days of the month, low pressure near Iceland maintained a westerly airstream over the British Isles with frontal systems crossing the country. By the 6th the Azores anticyclone had begun to move northeast and crossed the country on the 7th, reaching southern Scandinavia by the 8th. By the 9th winds had become easterly over most of the United Kingdom, veering southeast on the 10th and persisted from this direction until the 14th. As the European anticyclone moved southeastwards, southwesterly winds spread across the British Isles. A small depression crossed northern areas on the 15th, turned south across the North Sea on the 16th causing a northerly flow over the British Isles. Frontal systems crossed the country from the northwest on the 18th and 19th followed by relatively high pressure over the area until the 22nd. A cold front crossing the country on the 23rd brought the return of a westerly or northwesterly airstream which lasted for the remainder of the month. Southern areas were affected by a deepening wave on the cold front which ran along the Channel on the 28th.

All areas had rain at times at the beginning of the month with some clear or sunny periods. From the 7th to the 10th the weather was mostly dry but with a little drizzle in places. Between the 11th and 14th western and northern districts had rain at times but the south and east were mainly dry. Between the 8th and 14th fog affected many places, with dense freezing fog in some districts. During

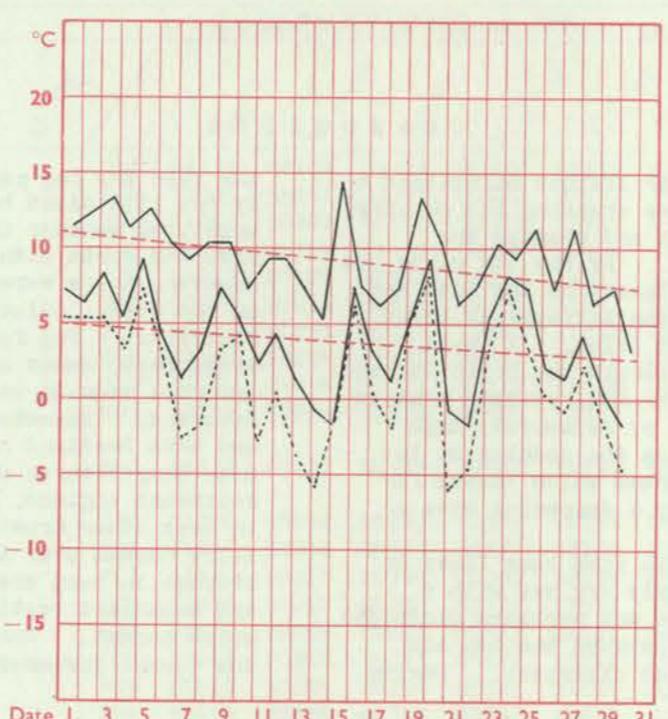

the 14th the fog persisted all day in parts of the Midlands and eastern England. By the 15th cloud had spread in from the west and for the remainder of the month unsettled weather affected all areas. Rain was generally more persistent in the west and north with gales at times, the sunny periods longer in the east and south. However, there were outbreaks of heavy rain over southern England and South Wales on the 28th. Sleet or snow showers, heavy at times, affected some northern districts. Fog formed in central, east and southeast England on the 29th becoming widespread, dense and freezing and persisting all day on the 30th in some places. Rainfall amounts were above average in southwest England, East Anglia and west Scotland. Elsewhere they were below normal, with parts of central northern England and east Scotland only recording about half of the normal amounts for November. Mean temperatures were fairly close to the monthly average, a little above in southwest England, parts of Northern Ireland and much of Scotland and rather below in most other areas. The very cold day on the 30th made mean maximum temperatures below normal over East Anglia and southeast England. Sunshine totals were about average in many areas, only extreme southwest England, parts of southwest Wales and southeast Scotland and a few places in north Scotland having amounts noticeably below normal. Manchester and Liverpool airports each recorded approximately twice the normal November sunshine.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

The complex depression to the west of Scotland transferred north then northwest and is now centred near Reykjavik. An associated cold front over western parts of Britain moved across the British Isles, clearing the southeast by evening and northeast Scotland by midnight, followed by an unstable southwesterly airstream in which a well marked trough had moved into central parts of Britain by this morning. During the next 24 hours, as the trough moves east across the country, all districts

will lie in an unstable west to northwest airstream. This will gradually back to Southwesterly with the approach of a frontal system associated with a deepening depression, now over the western Atlantic, which is moving rapidly eastwards towards the British Isles. The warm front is expected to reach western Ireland by this time tomorrow.

Issued at midday SATURDAY 1 NOVEMBER 1975

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

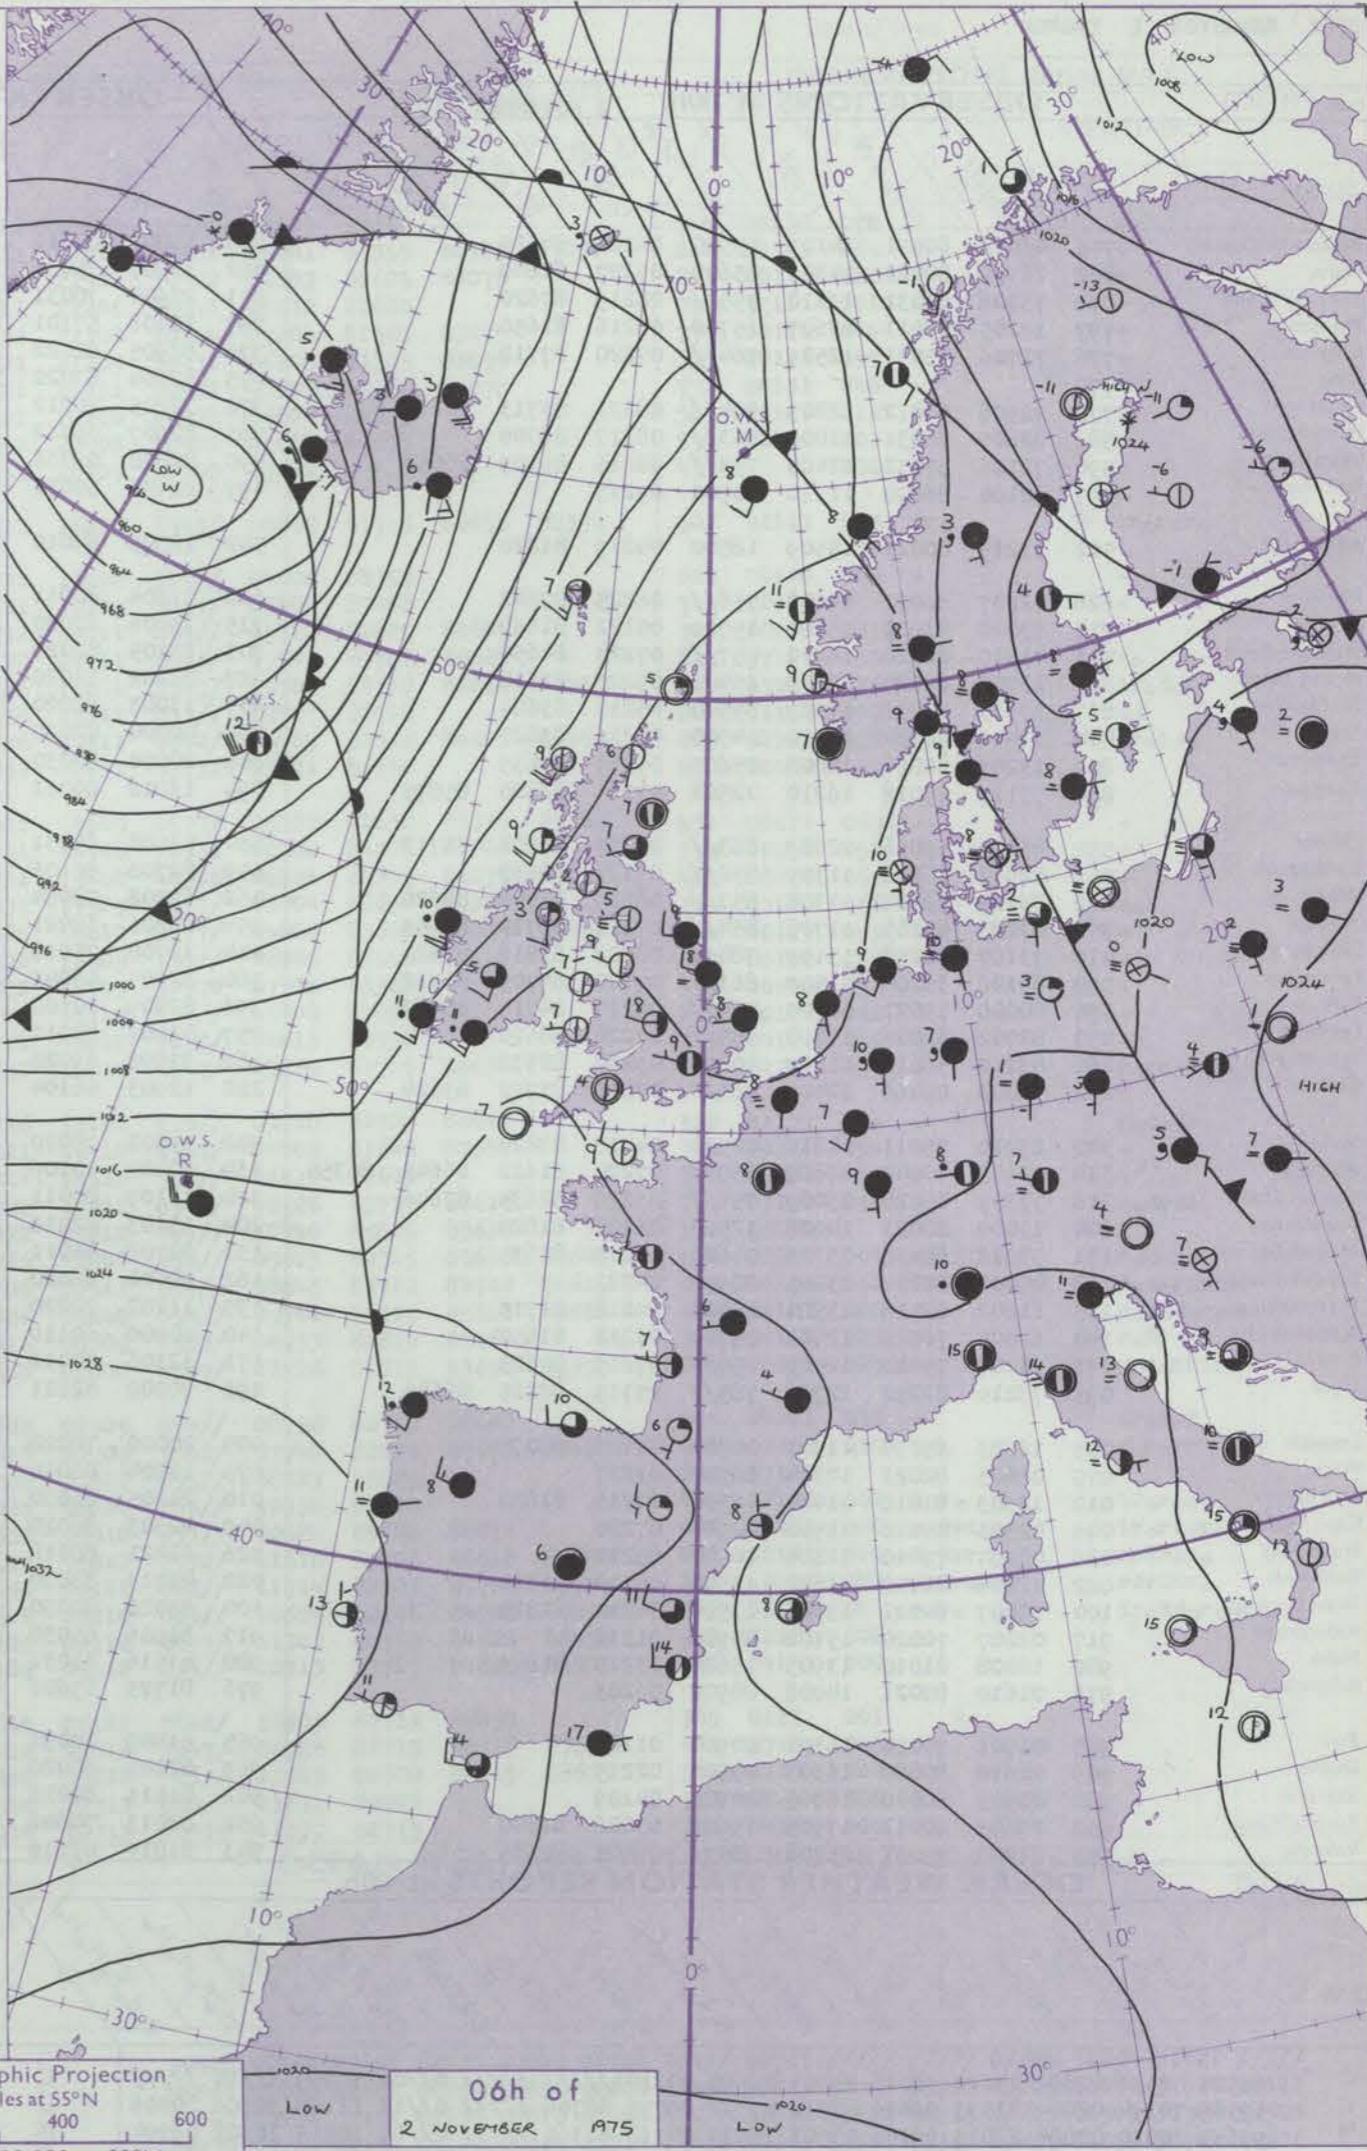

18h of
1 NOVEMBER 1975

00h of

2 NOVEMBER 1975

06h of

2 NOVEMBER 1975

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours the depression near southern Iceland moved towards southern Greenland, deepening, while another deep depression moved from Newfoundland towards southwest Iceland. An active trough of low pressure moved across the British Isles to the North Sea. Pressure remained high from the Azores to central Europe.

During the next 24 hours a deep depression is expected to persist near southwest Iceland, while its associated frontal troughs move eastwards across western parts of the British Isles. The Azores high will be displaced eastwards. Pressure is expected to fall in the western Mediterranean.

Issued at midday SUNDAY 2 NOVEMBER 1975

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

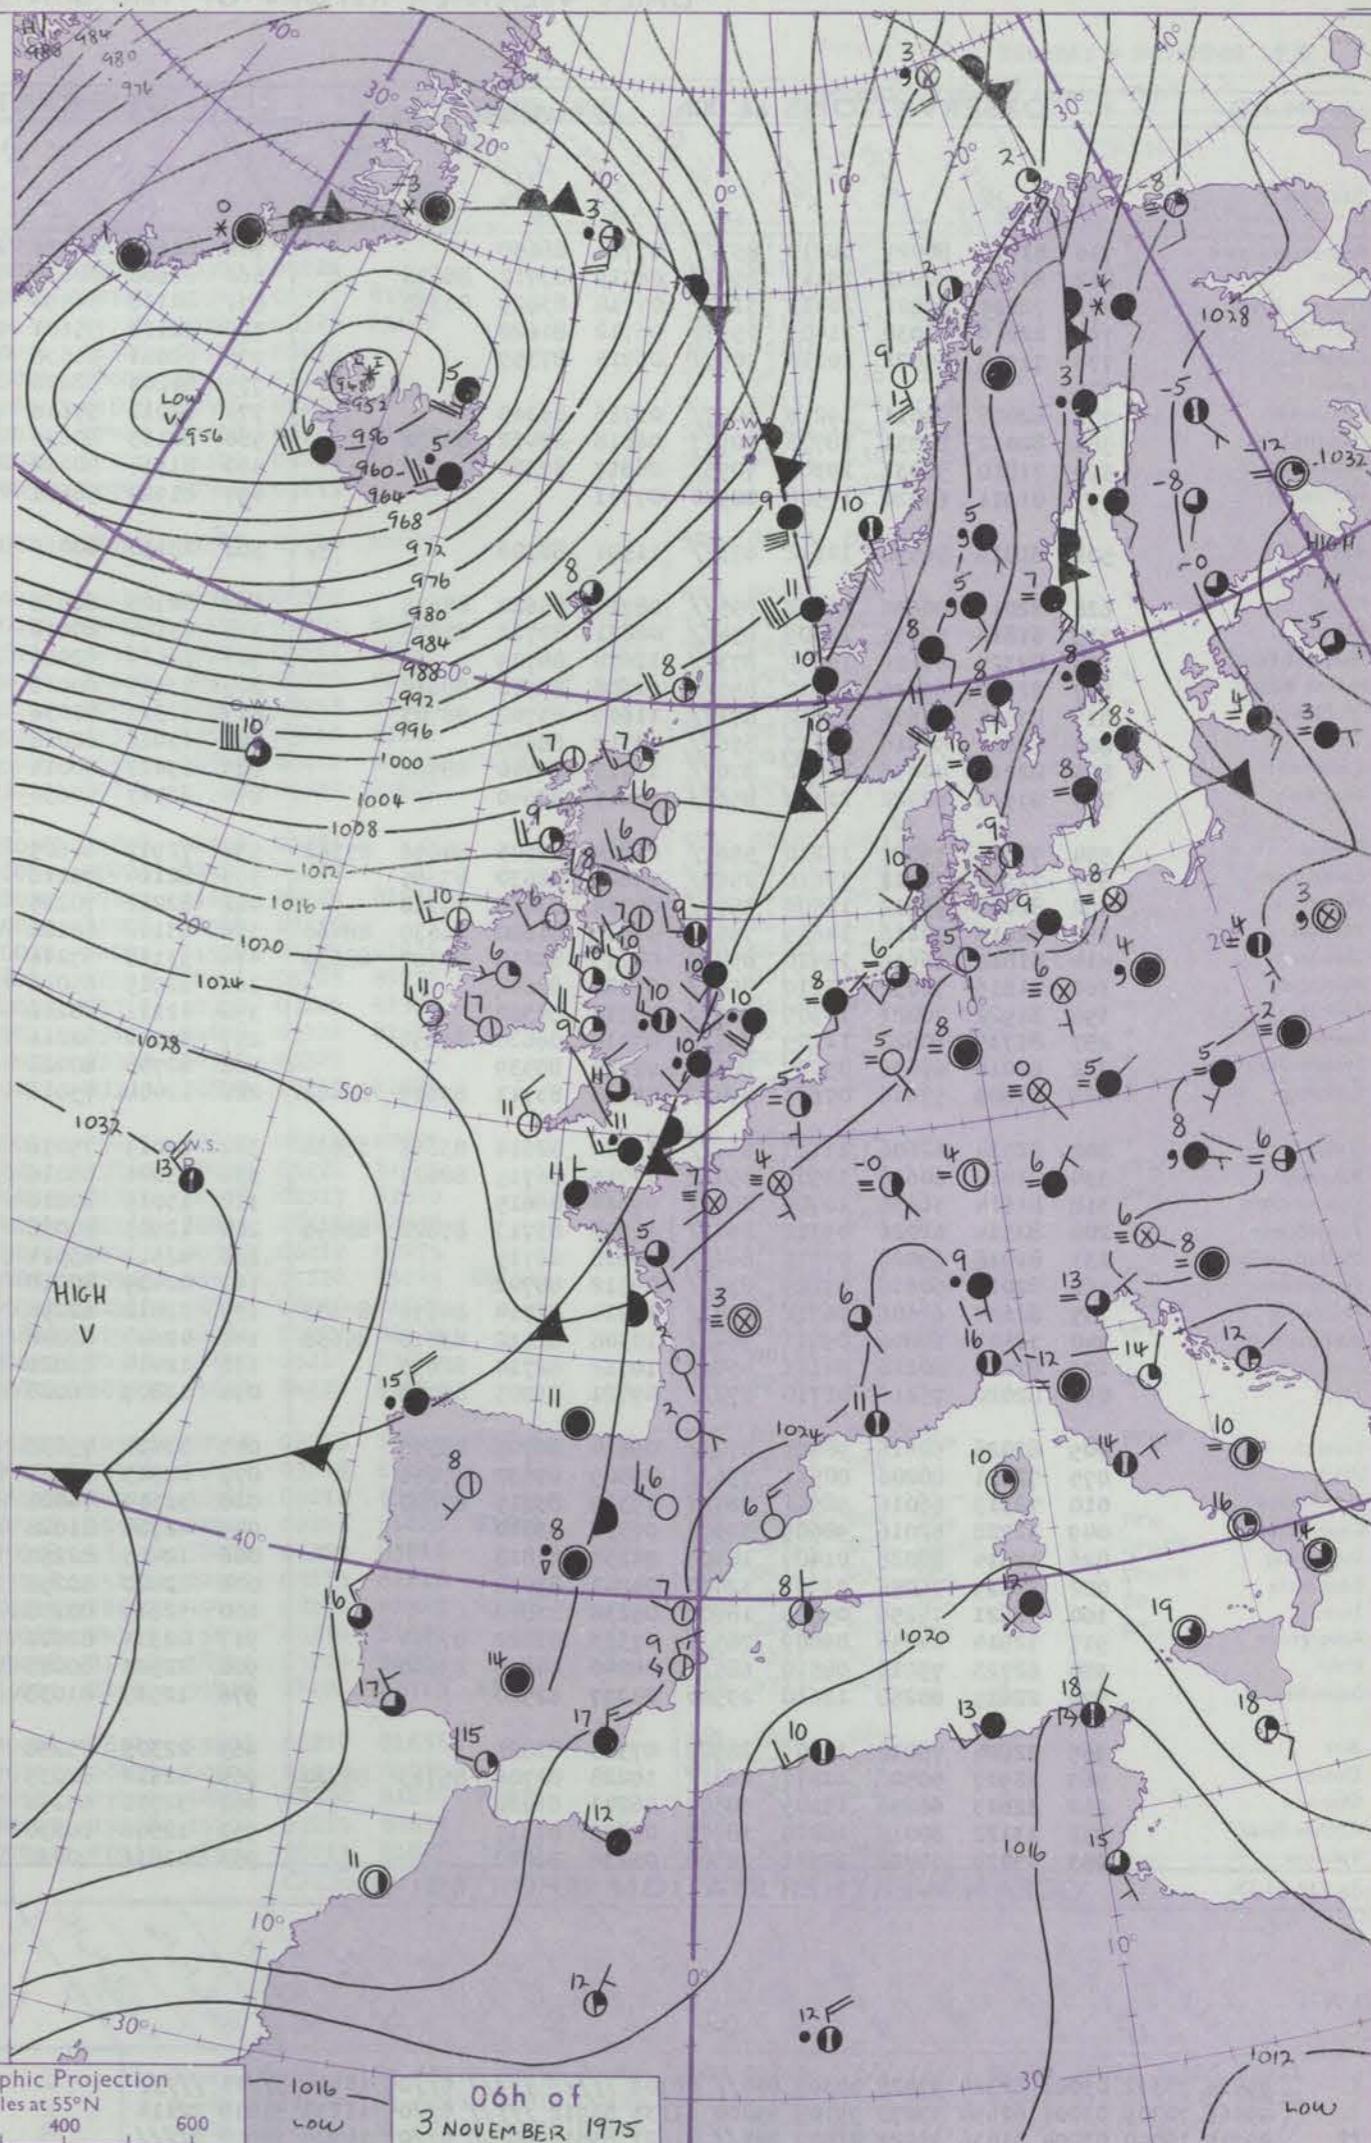

CHARTS OF WEATHER IN WESTERN EUROPE

18h of
2 NOVEMBER 1975

00h of
3 NOVEMBER 1975

06h of
3 NOVEMBER 1975

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

GENERAL SYNOPTIC DEVELOPMENT

The intense depression continued moving northeast across the Atlantic becoming almost stationary southwest of Iceland, with high pressure persisting near the Azores. Frontal troughs associated with Iceland depression have moved slowly

east across the British Isles. During the next 24 hours the frontal troughs will clear the country to allow westerly airstream over the country between the depression moving east from Iceland and the belt of high pressure from Azores to France.

Issued at midday Monday 3 NOVEMBER 1975

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours the trough of low pressure over eastern England moved away into the Continent. The depression near Iceland filled but an associated trough moved eastwards towards the British Isles. During the next 24 hours the

depression near Iceland will move away northwest and continue to fill and the Atlantic trough will move eastwards across Ireland, Wales, Scotland and into England.

Issued at midday TUESDAY 4 NOVEMBER 1975

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

GENERAL SYNOPTIC DEVELOPMENT

A belt of high pressure from the Azores to Biscay and central Europe remained almost stationary during Tuesday, the main cyclonic activity persisting in the Icelandic region. A trough approaching the British Isles moved slowly east, but became a weak feature over the North Sea and central England by this morning.

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

Issued at midday WEDNESDAY 5 NOVEMBER 1975

No major change is anticipated over the next 24 hours, a westerly flow continuing over the British Isles with a shallow ridge of high pressure developing to the west. The Iceland low pressure complex will transfer northeast to the north of Norway.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

A shallow depression over Iceland has filled as it moved east to the Norwegian Sea, with an associated trough crossing Scotland. An occluded trough across Norway to southern England has moved east in the north but more slowly in the south where it is slowly frontalysing. A trough moved east into Ireland yesterday afternoon and a small depression developed over Southern Ireland but this has since filled up.

The trough has now cleared all except the extreme east of England. An anticyclone west of Spain has moved north. During the next 24 hours the anticyclone is expected to transfer towards Biscay and an associated ridge of high pressure will move east to the British Isles in which a separate anticyclone is expected to form over Scotland by midnight tonight.

Issued at midday THURSDAY 6 NOVEMBER 1975

Polar Stereographic Projection
Statute miles at 55°N
200 400 600
Scale is 1:20,000,000 at 60°N.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a trough of low pressure over eastern England moved eastwards across the southern North Sea, while a ridge of high pressure extended northeastwards across the British Isles. A deep depression near southern Greenland moved northwards, and pressure remained low over the central Mediterranean.

During the next 24 hours the area of high pressure over the British Isles is expected to persist as the anticyclone centred off southwest Ireland moves northeastwards to the Irish Sea.

Polar Stereographic Projection
Statute miles at 55°N
200 400 600
Scale is 1:20,000,000 at 60°N.

06h of
7 NOVEMBER 1975

Issued at midday FRIDAY 7 NOVEMBER 1975

OCEAN WEATHER STATION REPORTS at 12h

OCEAN WEATHER STATION REPORTS at 18h.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours pressure has remained high over the British Isles as a high cell moved steadily northeast from the Southwest Approaches across the British Isles. During the next 24 hours the high cell will continue to move eastward and

a trough of low pressure 300 miles to the west of the British Isles will move slowly towards western districts.

Issued at midday SATURDAY 8 NOVEMBER 1975

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

GENERAL SYNOPTIC DEVELOPMENT

During Saturday the main synoptic feature was a well established anticyclone centred over southern Sweden, this remaining stationary. A ridge of high pressure extended southwest across northern England and Ireland and towards the Azores, this moving slowly north into Scotland. Pressure was relatively low over

Sardinia and Sicily, while the main cyclonic activity was confined to the Norwegian Sea and the Icelandic region. During today and tonight there will be only minor changes in the synoptic pattern, the high over Sweden remaining the dominant feature over most of Europe.

Issued at midday SUNDAY 9 NOVEMBER 1975

Polar Stereographic Projection
Statute miles at 55°N
200 400 600

Scale is 1:20,000,000 at 60°N.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

The circulation over the British Isles has been dominated by the anticyclone over the southern Baltic with an associated ridge to Scotland. During the past 24 hours the anticyclone has moved very slowly southeast and the ridge now extends north of Scotland to Faeroes, thus maintaining a cold shallow unstable airstream across the British Isles. A complex area of low pressure has persisted over

Iberia and the western Mediterranean, and associated minor troughs of low pressure have moved westwards across northwest Europe. Little change is expected in the general pattern over the next 24 hours. The easterly airstream is expected to continue over the British Isles but minor troughs moving westwards across France may affect southern England at times.

Issued at midday MONDAY 10 NOVEMBER 1975

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours the anticyclone over the Baltic moved northwestwards over Scandinavia, while the associated ridge of high pressure extending westwards maintained the unstable easterly airstream over the British Isles. Pressure remained low west of Iceland, near the Azores and in the western Mediterranean.

During the next 24 hours the depression near the Azores is expected to move northeastwards and an associated frontal trough will approach southwest England. There will be little change in the general pressure distribution.

Issued at midday TUESDAY 11 NOVEMBER 1975

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a trough of low pressure over northwestern districts moved away northwards and a ridge of high pressure slowly developed over most parts from the east. Troughs of low pressure to the southwest moved slowly northeast towards southwest England. During the next 24 hours the ridge of

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

06h of
12 NOVEMBER 1975

Issued at midday WEDNESDAY 12 NOVEMBER 1975

high pressure over the British Isles will move northwards and the trough of low pressure to the southwest will move a little further northwards into the English Channel area.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

18h of
12 NOVEMBER 1975

Polar Stereographic Projection
Statute miles at 55°N
200 400 600
Scale is 1:20,000,000 at 60°N.

06h of
13 NOVEMBER 1975

GENERAL SYNOPTIC DEVELOPMENT

An anticyclone over Russia, with a ridge westwards to Scandinavia, has continued to be the main synoptic feature over central Europe. A depression to the west of Biscay moved slowly north towards southwest Ireland, filling gradually over the 24 hour period, the troughs associated with this centre moving slowly east across France and into southwestern districts of the British Isles. A cold front over

Iceland is expected to move steadily east into the Faeroes by tomorrow morning, while the trough over southwestern districts of the British Isles is expected to be almost static. The low pressure centre near southwest Ireland will fill entirely. No other significant change is likely to occur before Friday morning.

Issued at midday THURSDAY 13 NOVEMBER 1975

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

06h of
14 NOVEMBER 1975

GENERAL SYNOPTIC DEVELOPMENT

The ridge of high pressure over Scandinavia and Scotland has receded eastwards. A slow moving depression west of the Isles of Scilly has filled while an associated trough has moved slowly into southwest England. A shallow low over northern Germany has moved northwards. A trough from the low over Iceland has moved

Issued at midday FRIDAY 14 NOVEMBER 1975

steadily east into northwest Scotland. During the next 24 hours troughs over southwest England will move little. The trough over Scotland will continue its eastward movement. There will be a continuing gradual decline of pressure over the British Isles during the weekend.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours the deepening depression east of Iceland moved northeastwards over the Norwegian Sea. Troughs of low pressure, associated with a complex low near the Azores, moved towards southwestern parts of the British Isles, while a new low developed west of Ireland. Pressure remained high over Spain and low over the central Mediterranean. During the next 24 hours the developing low west

of Ireland is expected to deepen and move across northern England to the North Sea, with its associated frontal troughs affecting most parts of England and Wales. Pressure will remain low over the Norwegian Sea, near the Azores, and in the central Mediterranean.

Issued at midday SATURDAY 15 NOVEMBER 1975

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours the depression to the west of the British Isles moved east across southern Scotland into the North Sea deepening considerably. Associated troughs moved across all areas. During the next 24 hours the deep depression in

the North Sea will move slowly southeast and a cold northerly air flow will become established over the British Isles.

Issued at midday SUNDAY 16 NOVEMBER 1975

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours the deep low to the east of Scotland moved slowly southeast with frontal troughs moving south across the British Isles. During the next

24 hours pressure will remain low to the east, and high to the west of Ireland keeping the British Isles in a strong, cold northerly airstream.

Issued at midday MONDAY 17 NOVEMBER 1975

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a complex low pressure area over Europe has maintained a strong northerly airstream over the British Isles. A new development near Iceland introduced troughs to the northwest later. The anticyclone in east central

Atlantic has moved slowly southwards. During the next 24 hours the troughs between Scotland and Iceland will penetrate northern districts of Britain and a somewhat milder westerly airstream will affect most of the British Isles.

Issued at midday TUESDAY 18 NOVEMBER 1975

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a complex low pressure area from Scandinavia to the western Mediterranean maintained the strong northerly airstream east of the British Isles, but troughs of low pressure associated with the Icelandic low moved southeastwards across northern districts. The anticyclone over the eastern Atlantic moved slowly southwards. During the next 24 hours the low

Issued at midday WEDNESDAY 19 NOVEMBER 1975

south of Iceland is expected to move eastwards; its associated frontal trough will then penetrate southwards over the British Isles followed by a return of the cold northerly airstream to northern districts. There will be little change in the general pressure distribution over Europe and the eastern Atlantic.

GENERAL SYNOPTIC DEVELOPMENT

An anticyclone to the southwest of the British Isles remained almost stationary, producing a moist westerly airstream over the British Isles. A shallow wave depression south of Iceland yesterday morning moved quickly eastward and is now centred over the Southern Baltic. Its associated cold front has moved south across Scotland and northern England bringing a cold unstable northerly airstream into

these districts. A small anticyclone has developed off eastern Iceland. During the next 24 hours the anticyclone to the southwest and that near Iceland will link to produce a belt of high pressure over the eastern Atlantic. The cold unstable northerly airstream on its eastern flank will extend southwards across remaining parts of the British Isles and much of northwest Europe.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

A complex low over Scandinavia moved away steadily east as an intensifying ridge of high pressure moved east over the British Isles from the northwestern sea areas. An anticyclone to the west of Cape Finisterre remained slow-moving. During the next 24 hours the high to the west of Iberia will persist and a trough of low

pressure will move slowly east from the Atlantic to lie from Cornwall to Hebrides by midnight. Pressure will remain low to the east keeping eastern England in a cold unstable northerly flow.

Issued at midday FRIDAY 21 NOVEMBER 1975

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

An anticyclone near Cape Finisterre maintained a ridge of high pressure over the British Isles. A weak frontal trough had reached western Ireland and moved slowly east. During the next 24 hours the anticyclone will move southwards over the

Polar Stereographic Projection
Statute miles at 55°N
200 400 600

Scale is 1:20,000,000 at 60°N.

Iberian Peninsula and troughs of low pressure over the eastern Atlantic will move eastwards across the British Isles, bringing an unsettled westerly situation to all districts.

Issued at midday SATURDAY 22 NOVEMBER 1975

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours the anticyclone near Biscay extended northeastwards towards Denmark, while the ridge of high pressure over the British Isles moved eastwards across the North Sea. Frontal troughs associated with a slow-moving depression near Iceland moved east across northern and western districts of the

Polar Stereographic Projection
Statute miles at 55°N
200 400 600
Scale is 1:20,000,000 at 60°N.

Issued at midday SUNDAY 23 NOVEMBER 1975

British Isles. Pressure remained low over the central Mediterranean. During the next 24 hours a frontal trough is expected to move east across the British Isles, followed by a trough of low pressure. The Continental high will continue to transfer northeastwards.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

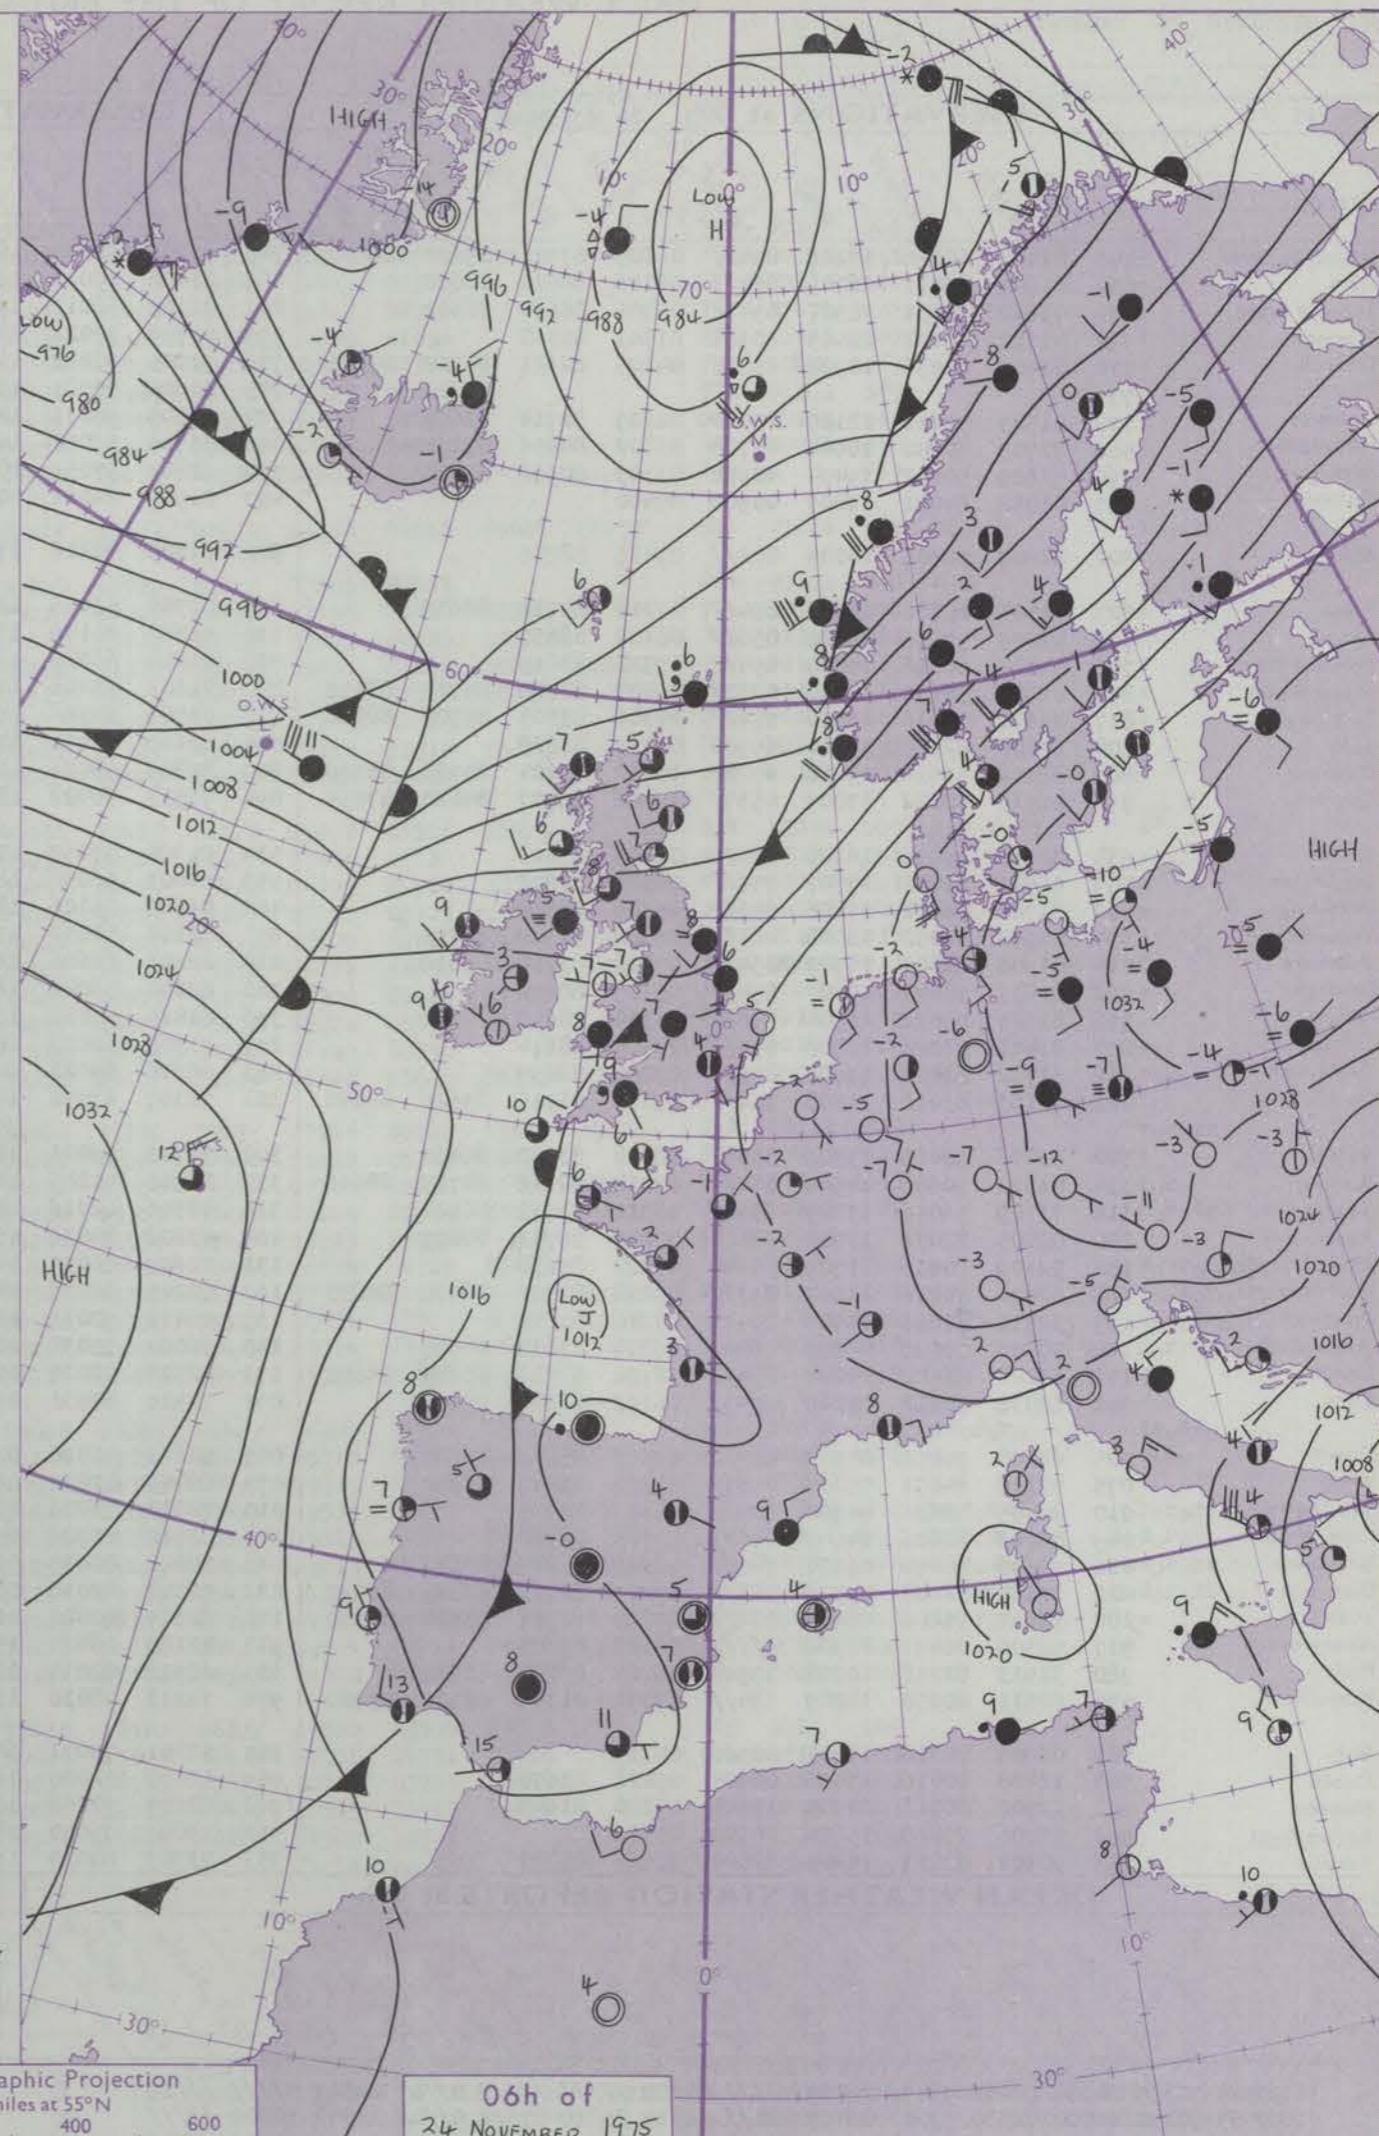

CHARTS OF WEATHER IN WESTERN EUROPE

18h of
23 NOVEMBER 1975

00h of
24 NOVEMBER 1975

06h of
24 NOVEMBER 1975

GENERAL SYNOPTIC DEVELOPMENT

A depression off northeast Iceland moved away steadily northeast and the anticyclone over Germany transferred slowly eastwards. In the south to southwest airstream between these two systems, a cold front extended south from the depression across western Scotland and Ireland to the Azores. It moved steadily east in the north, but became slow moving in the south as minor waves developed along it. A shallow depression west of Ireland moved southeast and had

amalgamated with one such wave over Biscay by this morning. Over the next 24 hours the low over Biscay is expected to transfer to the western Mediterranean. A depression off southeast Greenland will move rather quickly east to the Faeroes and its associated frontal system is expected to have cleared Scotland as an occluded feature, with the cold front becoming relatively slow moving across west England.

Issued at midday MONDAY 24 NOVEMBER 1975

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

DAILY WEATHER REPORT OF THE BRITISH METEOROLOGICAL OFFICE (contd.)

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours the depression near Greenland moved only slowly eastwards towards Iceland but pressure falls propagated further east. The associated frontal system moved bodily into the British Isles. During the next 24 hours the depression

just west of Iceland will continue to move slowly eastwards, with associated fronts moving southeast into the Dover Strait area, and cold air advection over northern districts of the British Isles.

Issued at midday TUESDAY 25 NOVEMBER 1975

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

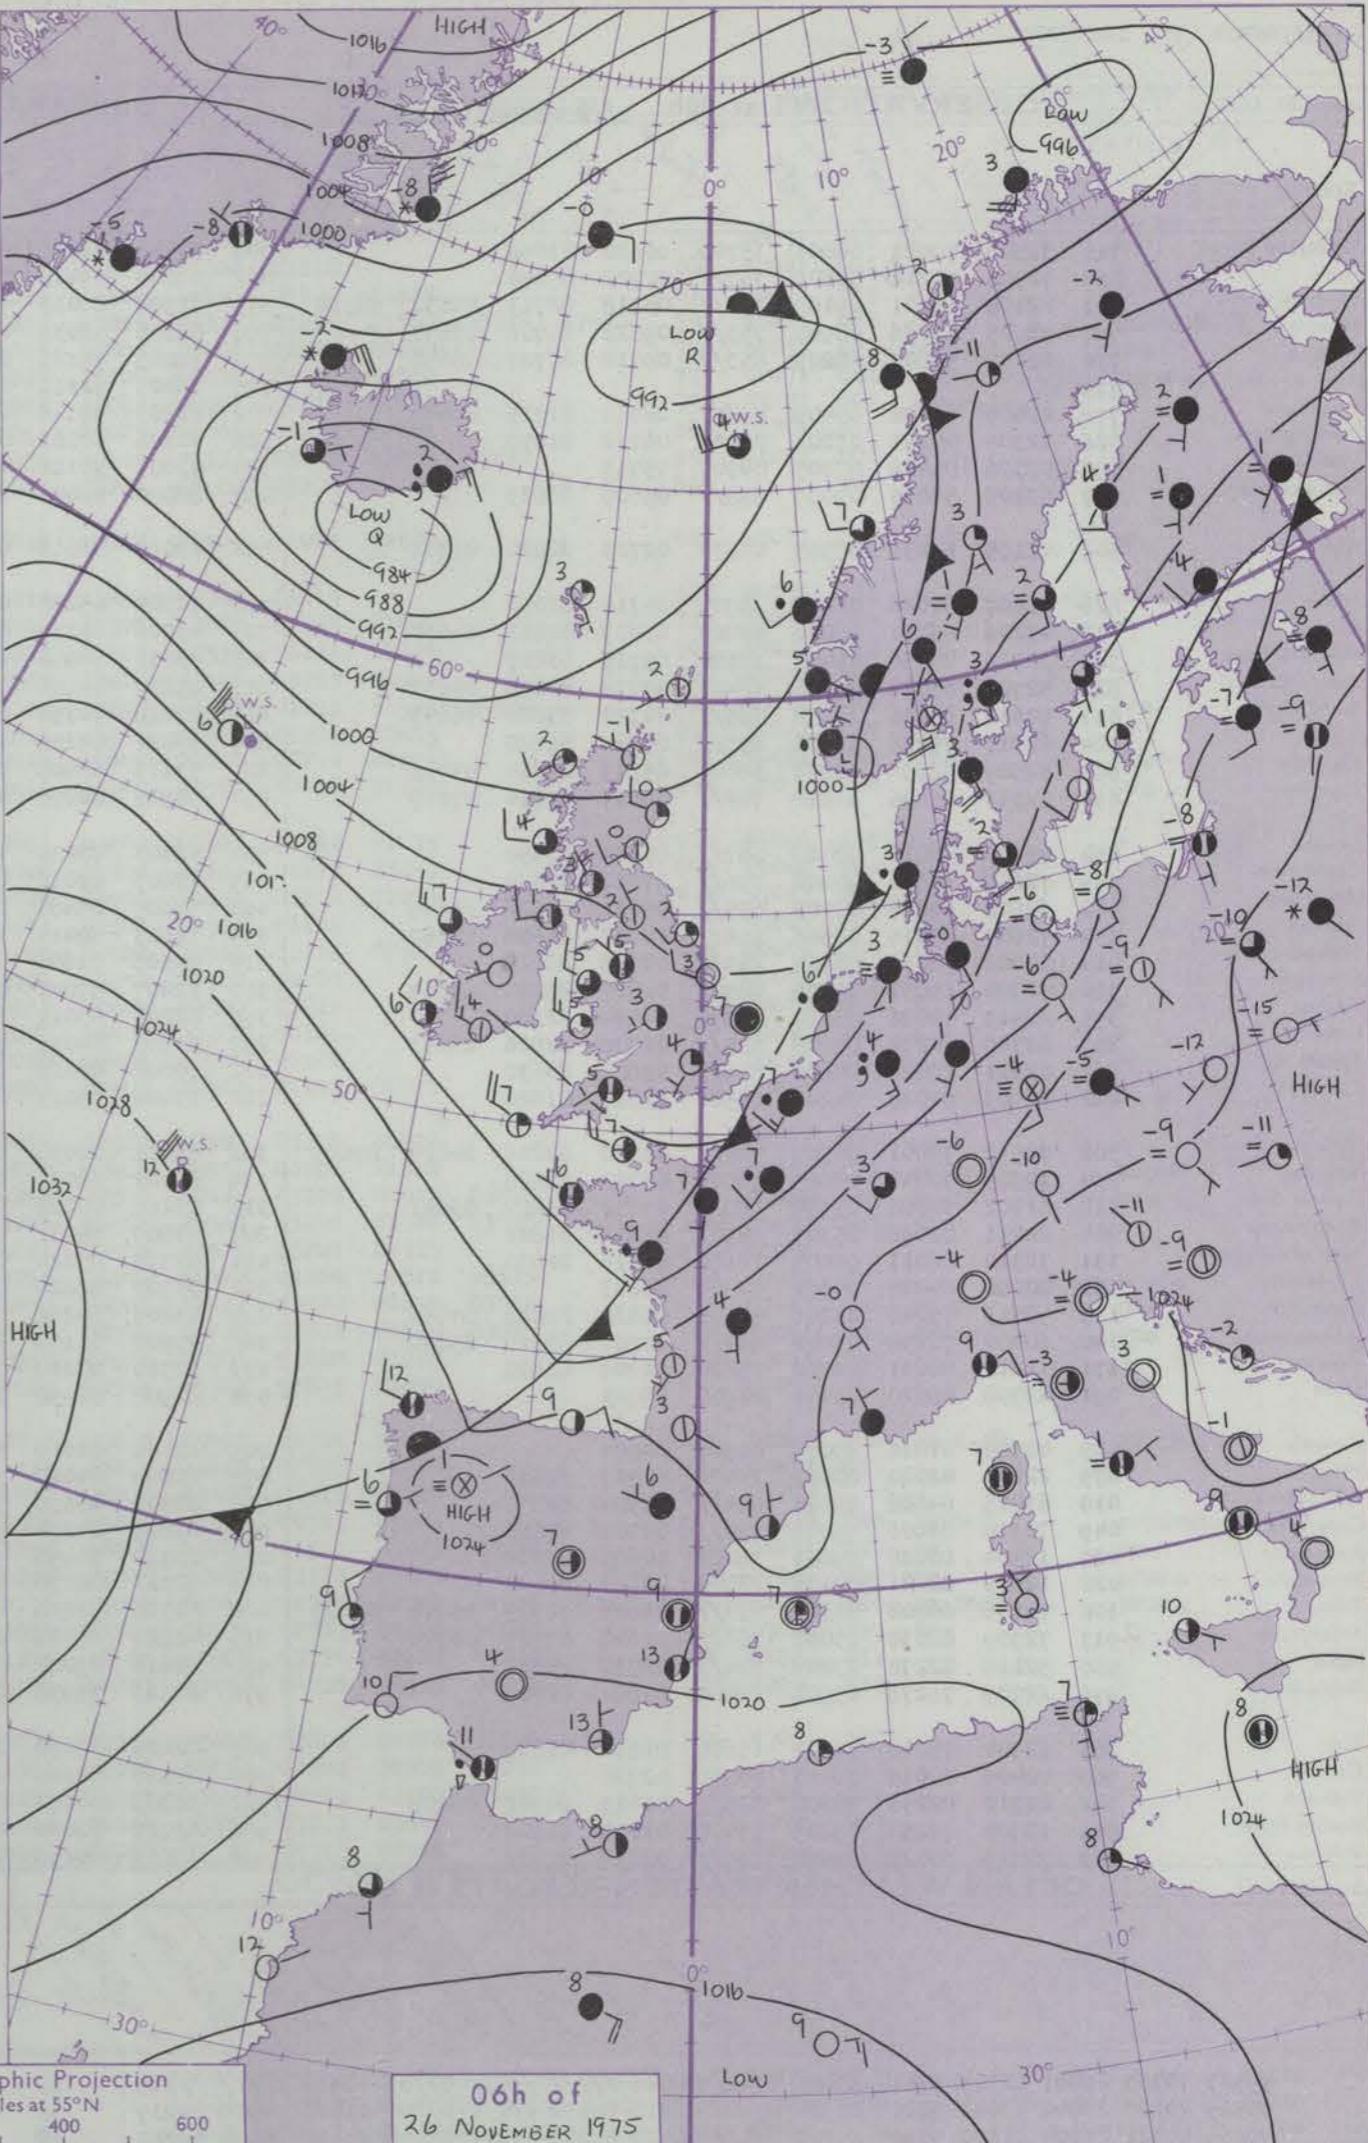

CHARTS OF WEATHER IN WESTERN EUROPE

18h of
25 NOVEMBER 1975

00h of
26 NOVEMBER 1975

06h of
26 NOVEMBER 1975

Polar Stereographic Projection
Statute miles at 55°N
200 400 600
Scale is 1:20,000,000 at 60°N.

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a deep depression near Iceland moved slowly eastwards, whilst pressure remained high near the Azores. A westerly airstream was maintained over the British Isles, and troughs of low pressure in this airstream

crossed most areas during the day. During the next 24 hours pressure is expected to remain low to the north of the British Isles and high to the southwest. A coldshowery northwesterly airstream will persist over most areas.

Issued at midday WEDNESDAY 24 NOVEMBER 1975

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

A rapidly developing depression in mid-Atlantic brought vigorous frontal troughs to western districts during the night. A depression near Iceland was slow-moving. The deep depression near the Hebrides will move into the North Sea

during the next 24 hours bringing a showery northwesterly airstream to all districts.

Issued at midday THURSDAY 27 NOVEMBER 1975

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

18h of
27 NOVEMBER 1975

06h of
28 NOVEMBER 1975

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

GENERAL SYNOPTIC DEVELOPMENT

A deep depression off Northern Ireland moved east into southern Scotland then turned north and is now centred just east of Shetland. Its associated occluding frontal system moved east across the British Isles and the North Sea and is now lying across Denmark. The cold front extends across northern France to a shallow wave about 250 miles west of the Brest Peninsula and is moving quickly east. An unstable westerly airstream following these frontal systems now covers all parts of

Issued at midday FRIDAY 28 NOVEMBER 1975

the British Isles. During the next 24 hours the depression near Shetland will move slowly north and the unstable westerly airstream will continue to affect most parts of the British Isles. The wave approaching Brest will move east along the English Channel and is expected to be positioned over the southern North Sea by tomorrow morning.

29 NOVEMBER 1975

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours the deep depression northeast of Scotland moved slowly northwest, while the shallow low in the Southwest Approaches moved rapidly eastwards, deepening, along the Channel to the southern North Sea. A cold, unstable westerly airstream over much of the British Isles returned to southern

30 NOVEMBER 1975

Polar Stereographic Projection
Statute miles at 55°N
200 400 600
Scale is 1:20,000,000 at 60°N.

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a depression north of the British Isles remained stationary but filled a little. An associated weak trough moved southeast into England. During the next 24 hours the depression north of the British Isles will continue

to fill and will move away northeast. A weak ridge of high pressure will develop temporarily from the west over southern districts ahead of a depression moving northeast in the Atlantic.

Issued at midday SUNDAY 30 NOVEMBER 1975
