SUMMARY OF UK WEATHER THURSDAY 1st December 1994

Most places had a dry, cloudy and misty night with some fog patches forming in central and eastern parts.

It was a generally dry day across the bulk of the country. The early mist and fog lifted in most places during the morning but some parts of northeast England stayed misty all day.

A murky evening followed with some fog patches in central and eastern England. Most places were dry but a little light rain affected the far west and there were some drizzle patches elsewhere.

It was a mild day in the west and also in some of the brighter parts of the south. Temperatures were close to normal in most other areas.

SUMMARY OF UK WEATHER FRIDAY 2nd December 1994

It was a murky night with some drizzle, and more persistent rain at times in the Western Isles of Scotland. Central and eastern parts had some fog patches as well.

Much of the country had a cloudy and dry day but there was some patchy rain at times in the west. Some places did brighten up with good spells of sunshine for example, East Anglia, parts of the southeast and some places in Wales and northern Scotland sheltered from the southeast wind.

It was a murky evening with some fog patches in central and southern England. Western parts of Scotland and Northern Ireland had some rain.

It was very mild over much of Northern Ireland, west Wales and western and central Scotland. In fact some parts of the northwest Highland region were extremely mild. Temperatures in most other places were near to or a little above normal.

SUMMARY OF UK WEATHER SATURDAY 3rd December 1994

Rain accompanied by strong and blustery winds spread into Northern Ireland and other western parts overnight. The east was mainly dry with early mist and fog.

In the morning, the wet and windy weather swept quickly eastwards reaching everywhere by around noon. Some of the rain was heavy with a few reports of thunder. At the same time brighter showery weather followed into the west. The rain cleared from most parts in the afternoon leaving the bulk of the country with sunshine and showers, some heavy.

Some showers continued in the evening and rain reached the far southwest but most places were dry.

It was a mild day across the country and some parts of the south were very mild.

SUMMARY OF UK WEATHER SUNDAY 4th December 1994

Overnight, most parts started dry and clear, however, cloud and rain quickly pushed across southwest England after midnight, and then across the rest of southern England, Wales, the Midlands, East Anglia and parts of northern England by daybreak. Some of the rain was heavy in places and accompanied by strong winds. Clearer showery weather followed on behind into the southwest.

During the morning, the brighter showery weather in the southwest, extended across much of southern Britain. The showers were heavier and more frequent in the west. The rain over northern England slowly petered out during the afternoon and evening, but not before nudging across the southern half of Scotland and Northern Ireland as well. Apart from occasional showers near northern and western coasts, the rest of Scotland was dry but rather cloudy. The strong winds over southern Britain slowly eased during the day.

The temperatures were generally close to, or a little below normal over Scotland, Northern Ireland and northern England, but mild or very mild elsewhere.

SUMMARY OF UK WEATHER MONDAY 5th December 1994

There were some showers around during the first part of the night, but these died away to leave much of the country dry and clear with a frost over parts of Scotland. Towards dawn, cloud began to edge across Northern Ireland.

England, Wales and Scotland started the day dry and sunny. The cloud continued to thicken across Northern Ireland, bringing rain to the province during the morning. It also became increasingly windy. By midday the wet and very windy weather had spilled into other western parts.

Through the afternoon, the rain continued to push eastwards across the rest of the country with squally blustery showers following on behind. The rain eventually cleared the east coast during the evening. Some of the showers in the west were of hail.

It was a very windy day generally with gales or severe gales in the north and west. Gusts in excess of 80 mph were reported on the Isle of Man and some western parts of Scotland.

The temperatures were on the mild side in the south and west, but close to normal elsewhere.

SUMMARY OF UK WEATHER TUESDAY 6th December 1994

Many eastern counties of England and Scotland had a dry night with clear skies. Further west, there were some showers. The showers were heavy in places. Thunder was reported over Bristol. It was windy in the north with gales over northern Scotland.

Apart from a few showers over the far southeast, eastern parts of England and Scotland remained dry throughout the day with plenty of sunshine. Wales, and western areas of England and Scotland had a mixture of sunshine and showers in the morning. The showers died away in the afternoon as cloud increased from the west. Northern Ireland had a bright morning, but it also became cloudy here in the afternoon. During the evening wet and windy weather pushed across Northern Ireland, Wales, and western parts of England and Scotland. The rain was heavy in places and accompanied by gales.

The temperatures were generally close to, or a little above normal.

SUMMARY OF UK WEATHER WEDNESDAY 7th December 1994

The night began very windy with gales on exposed headlands and with rain in western parts of the mainland. Over the next two hours the wet and windy weather moved east to all but East Anglia and the southeast. In the wake of the clearance of the rain came blustery showers, which in places were heavy and with hail and thunder.

The day dawned with rain affecting east Yorkshire, Lincolnshire, East Anglia and the southeast and still with some very strong winds with gusts to gale force along headlands. Elsewhere it was showery and these showers continued throughout the day some heavy with hail and thunder and turning wintry in the north and over the high ground from north Wales northwards. By midday the rain cleared from the extreme east and then the whole country had showery weather conditions for the rest of the day.

Temperatures were generally rather mild in the east but in other parts they were mostly around normal.

SUMMARY OF UK WEATHER THURSDAY 8th December 1994

There were showers over much of the country at first, with some clearer spells to the east. However, cloud, rain and strong winds, just reaching the southwest at midnight, spread across most parts during the night, reaching all but the far north of Scotland by morning. The winds were strongest in the southwest, gusting upto 80 miles per hour.

The cloud and rain, heavy at times, pushed across the country during the morning. Clearer, showery weather soon followed in the west, with the rain becoming confined to the south and southeast, where it remained very windy.

Much of the country had a bright afternoon with some sunshine but also showers, although these largely died out towards evening. The south, though, remained cloudy, wet and windy.

During the evening the cloud and rain cleared from the south and southeast, leaving the bulk of the country with a fine, dry night. However, there were a few showers around mainly in the northwest of Scotland.

Temperatures were mostly near normal over Scotland but elsewhere they were mild or very mild.

SUMMARY OF UK WEATHER FRIDAY 9th December 1994

It was a dry night for much of the country with virtually clear skies over many central and eastern counties. The northwest, though, was more cloudy with a few showers through the night and gusty winds.

Most of England and Wales had a dry, bright day with some sunny spells. Southern counties, though, were rather more cloudy but still with a few bright or sunny spells. Northern Ireland and Scotland had sunshine at times but also showers, these mainly in the west.

During the evening central and eastern areas were dry with clear periods. Western areas became increasingly cloudy and windy.

Temperatures were generally near or a little above normal.

SUMMARY OF UK WEATHER
SATURDAY 10th December 1994

The early hours of the morning saw cloud and rain spreading in from the west, reaching Northern Ireland and western coasts of England and Scotland by dawn. The rain became very heavy in Strathclyde and adjacent areas and was accompanied by strong winds. Further south and east the early hours had been chilly with a touch of groundfrost but by dawn even here the cloud and breeze was raising the temperature.

The bulk of England and Wales then had an exceptionally mild day with some places getting very close to their December high. It was cloudy and breezy too with spots of rain at times. Western coasts and hills had more in the way of drizzly rain.

Further north, over the west of Scotland, the rain was quite heavy at times and in Glasgow one and a half inches of rain fell during the day. To the east of high ground in the north, it was a mainly dry day and quite a mild one but the extreme north was near normal for temperatures.

Generally over England and Wales it was exceptionally mild. Winds in the northwest reached galeforce at times.

SUMMARY OF UK WEATHER
SUNDAY 11th December 1994

The appallingly wet weather over Strathclyde and other western areas of Scotland continued throughout the day. Over the twentyfour hour period to 1800 records were broken with in excess of 4 inches of rain in many places. Rain too affected Northern Ireland on and off for much of the day.

Many places had their mildest night on record.

Further south, over England and Wales, it was a cloudy but mainly dry picture. There was coastal drizzle and mist patches in the west but even here dry weather predominated. Some sunny periods came along during the day, especially in southeastern and eastern counties of England. The fresh to strong southwesterly winds were yet again a feature of the weather as was the exceptional mildness, many places having temperatures rise to near record December daytime maximum.

Even in the cloudier and wetter areas of the north it was mild and very mild elsewhere, winds were generally strong and up to gale force at times around western coasts.

SUMMARY OF UK WEATHER MONDAY 12th December 1994

Northern Ireland and southern Scotland had a wet start to the night with some outbreaks of heavy rain in southwest Scotland. The rain became lighter and more sporadic towards dawn with cloud breaks developing. Northern Scotland had clear spells, but with showery rain in the far north and the Northern Isles. Most of England and Wales was dry and windy with variable amounts of cloud. There was drizzle in Pennine areas with an odd spot elsewhere.

During the day Scotland and Northern Ireland were fairly bright with sunny intervals. There were showers too, some heavy, and quite frequent in western Scotland. Northern England and much of Wales had a mostly cloudy morning with outbreaks of rain and drizzle. Central and southern counties of England were mainly dry with sunshine at times. During the afternoon the rain and drizzle began to die out as it edged south into the Midlands and East Anglia.

By evening, most of the UK was dry with broken cloud. Wales, the Midlands and East Anglia were cloudy with patchy drizzle. Occasional showers continued in Northern Ireland, western and northern Scotland.

Winds were blustery in many areas. Scotland and Northern Ireland were mild while England and Wales were Exceptionally mild.

SUMMARY OF UK WEATHER
TUESDAY 13th December 1994

Much of the country had a rather cloudy night with rain or drizzle at times. The rain was chiefly over Northern Ireland and northern parts of England and Wales. The far north of Scotland, though, was clearer with a few showers.

Scotland had a bright morning with a fair amount of sunshine but also a few showers. England, Wales and Northern Ireland had a cloudy morning with outbreaks of rain, heavy at times, over northern parts.

During the afternoon the rain edged southwards and the clearer weather over Scotland pushed down into Northern Ireland and parts of northern England.

The rain cleared away southwards from all but the southernmost counties during the evening. Elsewhere was mainly clear and cold.

Temperatures ranged from near normal in the north to very mild in the south.

SUMMARY OF UK WEATHER WEDNESDAY 14th December 1994

It was a clear, cold night over the bulk of the country with frost and a few freezing fog patches. The southernmost counties of England were more cloudy at first, but this soon cleared southwards, becoming largely confined to Cornwall by morning. The northeast of Scotland also had a little more cloud and a few showers.

The morning was dry and bright for most of the country with the overnight fog lifting and a fair amount of sunshine at times. There were, however, a few isolated showers along the more exposed parts of the east coast. The afternoon continued in much the same vein with further sunshine at times, but also a few showers along the east coast and into parts of northwest Scotland towards evening.

Eastern and central districts had a largely clear evening with temperatures falling below zero in many parts. Western areas were milder and more cloudy with rain or drizzle, particularly in northwest Scotland.

Temperatures were mostly rather cold or a little below normal.

SUMMARY OF UK WEATHER THURSDAY 15th December 1994

It was a frosty night in central and eastern areas with patchy freezing fog. However, increasing cloud and a freshening wind kept much of Northern Ireland, western Scotland and western coasts of England and Wales frost-free with a few spots of rain and drizzle. There was a little snow too over the Southern Uplands and the Pennines.

Freezing fog was rather slow to clear from parts of East Anglia and Lincolnshire. For much of central and eastern England it was a dry and sunny day. It was cloudier elsewhere, with some brighter intervals. The cloud was thickest in the west and gave some patchy rain and drizzle, and even a few more flakes of snow to the Southern Uplands during the morning. By midday though, rather more persistent outbreaks of rain reached northwest Scotland and this continued southeastwards across most of the UK through the afternoon.

Southeastern and eastern England stayed dry until well into the evening and by then any rain was mostly light and patchy. Clearer, showery weather followed the rain into Scotland and Northern Ireland late in the day the showers heaviest in northwest Scotland.

Temperatures were around normal during the day, after a very cold start in most places.

SUMMARY OF UK WEATHER FRIDAY 16th December 1994

Much of England and Wales had a cloudy end to the night with outbreaks of mainly light showery rain. Further north, over Scotland and Northern Ireland there were a lot of clearing skies but still with showers in the west.

By mid-morning the rain had died out in most places south of the Scottish borders, where showers persisted. It was a dry afternoon across England and Wales too, but with rather a lot of thin high cloud and this thickened from the west during the evening.

By mid evening, cloud had thickened sufficiently in many western areas of both England and Wales together with Northern Ireland for outbreaks of rain to be reported. This edged its way east slowly making real progress only in the north.

Temperatures were generally near to normal and it was breezy in the north west.

SUMMARY OF UK WEATHER SATURDAY 17th December 1994

After an early night frost in many eastern and central parts of England, cloud spread in from the west. By the early hours of the morning cloud had thickened enough in the west to produce some rain from north Wales to the Western Isles. In these areas it had become very mild.

Soon after dawn, the eastern progress of the rain, albeit mostly light, had reached the Welsh Marches and the east of Scotland. All of the country was turning mild but quite breezy by this time.

By lunchtime, clearer weather but still with showers was reaching Northern Ireland and western Scotland, the rain belt was narrowing as it moved east.

The majority of England had a dry but cloudy afternoon and a mild one but as the cloud thickened towards evening, outbreaks of rain occurred in many places.

Showers continued through the evening in the north and west of Britain some of them were wintry. northern England had more in the way of persistent rain, while some heavy rain over northwest Wales moved into the rest of Wales, southwest England and the north Midlands during the evening.

It was generally speaking a very mild day across the whole country. Winds, fresh everywhere, reached gale or severe gale force in the northwest.

SUMMARY OF UK WEATHER SUNDAY 18th December 1994

Southern parts of the country had some rain overnight. The north had blustery showers. The heaviest and most frequent were in the northwest where they were wintry with the winds gusting to gale force in many places.

Rain cleared from most southern parts by the afternoon to give showers there. A good many central parts were dry and largely sunny. Blustery showers affected the north, wintry with hail and thunder at times in the northwest with gale-force gusts.

It was a showery evening with snow showers in the north, though many eastern parts stayed dry.

Southern parts were mild but temperatures were near to or a bit below normal in the north.

SUMMARY OF UK WEATHER MONDAY 19th December 1994

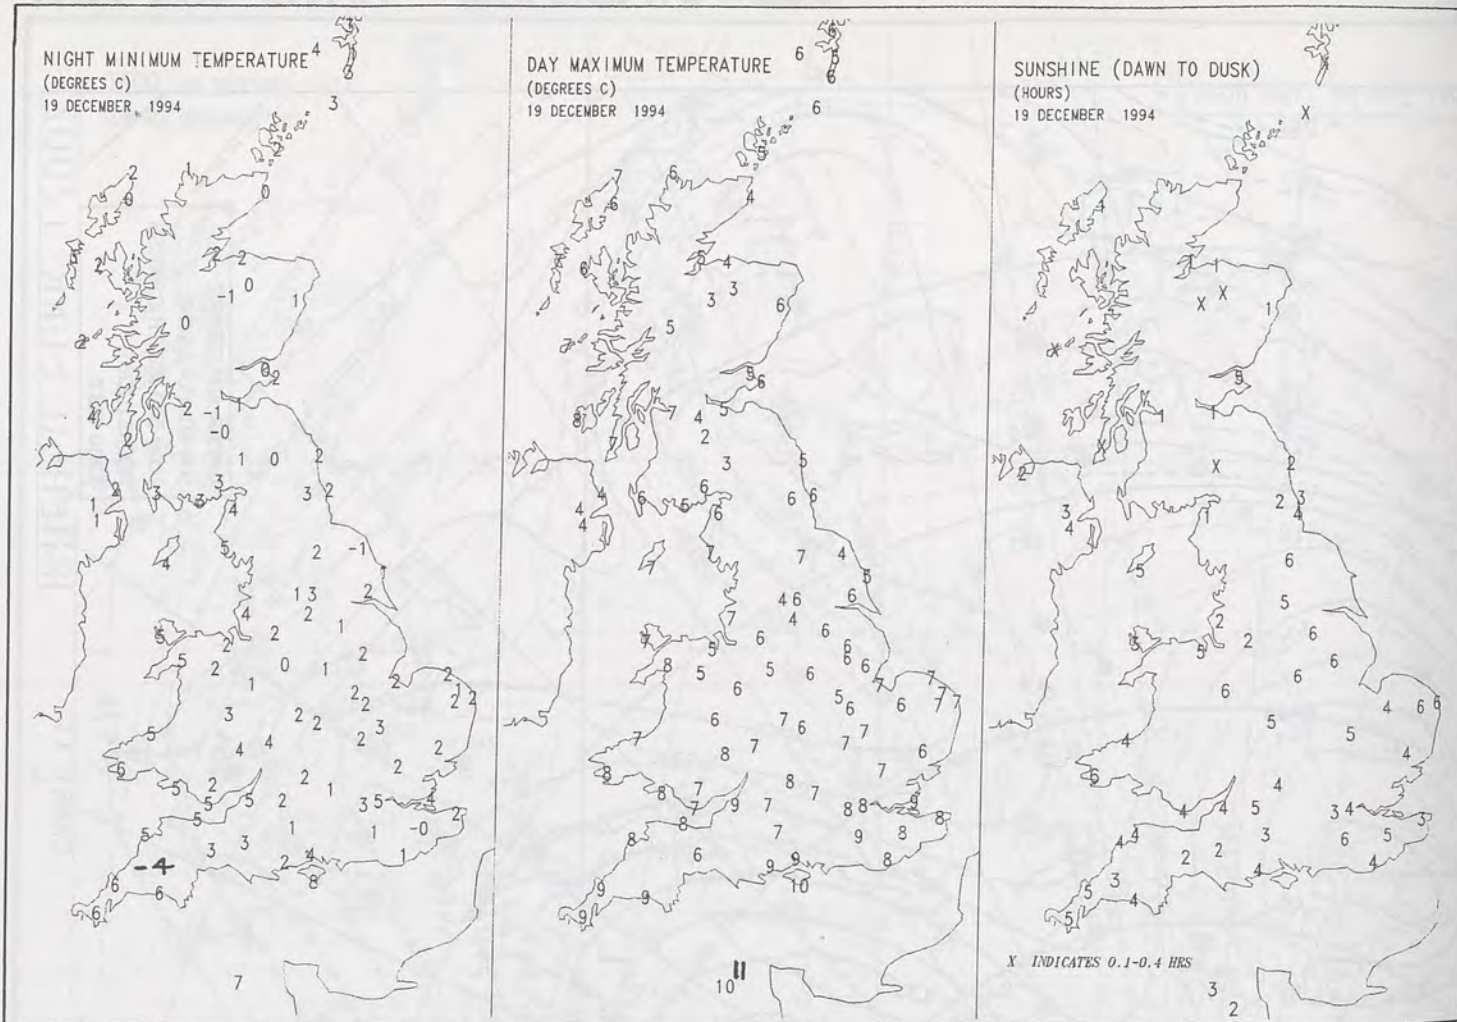

Overnight, showers continued to affect Scotland, Northern Ireland, Wales and the northern and western parts of England. The showers were wintry in the north, and even further south there was some hail. Thunder was a reported over Merseyside. Elsewhere, it remained dry and clear.

During the day, the eastern half of England stayed largely dry with a good deal of sunshine. For the rest of the country, there was a mixture of sunshine and showers. The showers were heavy and wintry in places, especially in the north with reports of hail and snow. Further showers continued to affect the west during the evening.

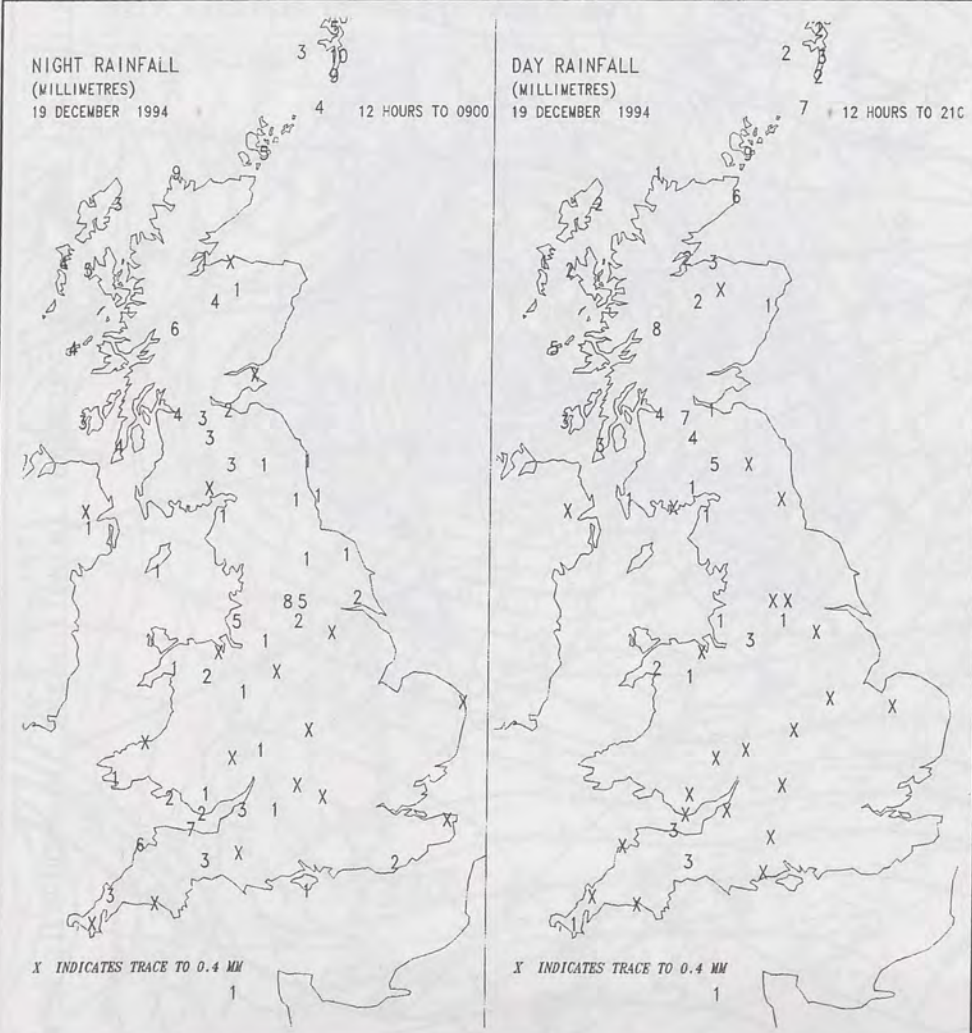

It was a windy day in the north. The temperatures were mostly near normal, although it was rather cold over Northern Ireland.

SUMMARY OF UK WEATHER TUESDAY 20th December 1994

There were a number of showers over Scotland and near the west coasts of England and Wales, but for most other parts of the country it was a dry night with clear periods and a widespread frost.

Scotland and Northern Ireland had scattered showers in western areas, with hail in places, and some snow over the mountains, with 7cms reported from Aviemore [Highland] at 0900 gmt. Thunder was reported over the Hebrides. Eastern areas were mainly dry with sunny spells.

There were a few showers near the west coast of England and Wales, with a few over the Pennines falling as sleet and snow. Eastern areas were generally dry and sunny, then in the evening southwest England became cloudy with outbreaks of rain.

After a cold, frosty night in many central and eastern areas, daytime temperatures were mostly near average.

SUMMARY OF UK WEATHER WEDNESDAY 21st December 1994

It was a cold night in most parts of the country with widespread frost, and fog in northwest England and southern Scotland, and freezing fog in East Anglia. There were some sleet and snow showers near the east coast of Scotland, with 7cms being reported from Aviemore [highland]. Southwest England was cloudier and milder with a little rain.

The fog lingered for most of the day in some places, particularly around Manchester and Glasgow and in fact temperatures at Glasgow Airport only reached minus 2 Celsius.

The rest of the country had a mainly dry and bright day with some sunshine in most parts, though there were a few showers along North Sea coastal regions.

After a widespread frost daytime temperatures were mostly in the rather cold category.

SUMMARY OF UK WEATHER THURSDAY 22nd December 1994

A widespread frost covered the bulk of the UK overnight with patches of dense freezing fog as well. However, East Kent stayed a few degrees above freezing with sharp showers near the coast, and the odd shower cropped up on the Norfolk coast too. Western Scotland had considerably milder temperatures with cloud and winds increasing.

It was a generally dry and sunny day across much of England and Wales, although there were a few showers along the coasts of Kent and East Anglia. The freezing fog lasted all day long in a few places, and became more widespread again during the evening. After a bright start, most of Scotland and Northern Ireland turned cloudy. Outbreaks of rain and drizzle reached the Western Isles soon after midday and spread to western Scotland through the afternoon. It was rather windy here with gusts in the order of 40 miles per hour.

Temperatures were rather cold generally, but very cold where fog lingered.

SUMMARY OF UK WEATHER FRIDAY 23rd December 1994

Scotland and Northern Ireland had outbreaks of light rain and drizzle overnight. Further south were mostly clear skies. However, there was a good deal of mist and freezing fog, especially in central and southern England.

During the morning the cloud over Scotland and Northern Ireland edged slowly into parts of northern England with further rain. The rest of England and Wales had a frosty start with freezing fog in parts. Although it did brighten up with some sunshine in places, the fog proved very reluctant to clear in many central and southern districts.

The fog remained in many parts of England and Wales through the afternoon, returning to other areas towards evening. Otherwise, away from the fog, it was dry, bright and rather sunny. Northern parts remained cloudy with further rain and drizzle.

Much of England and Wales had a foggy evening with some patches of dense, freezing fog in parts of the south. The north was more cloudy with outbreaks of rain or drizzle.

Temperatures ranged from being mild in parts of Scotland to very cold in some areas of England and Wales.

SUMMARY OF UK WEATHER
SATURDAY 24th December 1994

Much of England and eastern parts of Wales had clear skies overnight with a widespread frost. It was rather foggy in central and southern areas with patches of dense, freezing fog in some southern counties. Further north it was more cloudy with outbreaks of rain and drizzle, although towards the end of the night clearer weather edged into northern Scotland.

During the day the cloud and rain in the north pushed into northern England and much of Wales. The brighter weather over northern Scotland extended into southern parts and also Northern Ireland. The fog in central and southern areas of England slowly cleared through the morning becoming bright with some sunshine, although it did linger in one or two places into the afternoon. Towards evening, though, the cloud thickened up over Scotland and Northern Ireland.

Much of the country was cloudy through the evening with rain or drizzle over Wales and central parts of England. The southeast remained frosty and foggy.

Temperatures ranged from mild in the north to very cold in parts of the south.

SUMMARY OF UK WEATHER SUNDAY 25th December 1994

It was very cold at first in the extreme southeast with some freezing fog patches. A band of cloud and patchy rain was moving slowly southeast introducing milder weather. It took the whole night for this milder air to reach the extreme southeast however. It was mostly cloudy to the north of this with some patchy rain in places. Scotland began mostly dry but rain which arrived in the Outer Hebrides during the early hours then spent the entire day working south.

The band of rain produced some heavy pulses even in the evening while it was crossing the southeast of England. In the wake of the rain band showers started to invade northwestern parts with some turning wintry in the Hebrides by dusk. Other northern and western areas later received showers with some snow reported in mainland Scotland by the end of the evening.

Temperatures were in the main around average in the east, whilst mild elsewhere, eventually even the southeast.

SUMMARY OF UK WEATHER
MONDAY 26th December 1994

England and Wales had clear intervals overnight, especially in central and eastern parts. Showers occurred, mainly near western coasts, but southeastern counties of England had a longer spell of rain early in the night. Ground frost was fairly widespread by morning. Scotland and Northern Ireland had clear intervals and showers. The showers were most frequent in the north and west, and over northern Scotland some were heavy, wintry and accompanied by thunder.

During the day England and Wales started mostly dry and bright, apart from a few showers in the south and west. Cloud increased and thickened from the west during the day with outbreaks of rain reaching Wales and southwest England by early afternoon. The rain [heavy in Wales and parts of northern England] moved steadily east, reaching most places by mid evening. It became windy with southwesterly gales on exposed coasts. Scotland and Northern Ireland had sunshine and showers, the showers wintry in the north. An area of rain spread into Northern Ireland and southern and central Scotland during the afternoon, turning to snow for a while over hills, before moving away during the evening.

It was mild or very mild over Wales and most of England, near normal over Northern Ireland, but rather cold over much of Scotland.

SUMMARY OF UK WEATHER TUESDAY 27th December 1994

Most of Scotland had a cold, clear night with a fairly widespread frost. A few sleet and hail showers brushed the north and west coasts as well as the northern and western Isles. Northern Ireland and northern England had a cloudy start to the night with outbreaks of rain and drizzle, mainly light. Some areas, particularly in Northern Ireland, became dry late in the night. Wales and the rest of England were mild, wet and windy with periods of rain, some heavy.

During the day Wales, central and southern areas of England were cloudy with further periods of rain, some heavy. The rain became more drizzly in the afternoon in many places. Northern Ireland had a dry morning with bright or sunny intervals, but clouded over in the afternoon with outbreaks of rain and drizzle. The rain became heavier and more persistent towards evening. Northern England had a fairly cloudy day with rain and drizzle for much of the time. Scotland had a cold, frosty morning with fog patches in southern counties. There was some sunshine for a while, but clouds slowly increased in the afternoon and the fog gradually lifted. Most places had a dry day, although the far southwest had some rain in the evening.

Wales and the southern half of England were exceptionally mild. Northern Ireland and northern England were near or a little below the seasonal average, and Scotland was generally rather cold or cold.

SUMMARY OF UK WEATHER WEDNESDAY 28th December 1994

It was a wet night across the country. Sleet fell over parts of Scotland with some snow on the Scottish mountains.

It stayed dull with further rain or drizzle through the day, heavy at times especially over Wales and the southwest.

In the evening, the rain gradually eased off in Northern Ireland, much of Scotland along with the more western parts of both Wales and England. Elsewhere there were outbreaks of rain.

It was an exceptionally mild day across most of the country.

The winds today were blustery generally, gusting to 60 or 70 miles per hour at times near the south coast.

SUMMARY OF UK WEATHER
THURSDAY 29th December 1994

Southern England and East Anglia had a wet, cloudy start to the night with strong winds. The cloud and rain gradually cleared away southeastwards during the night. Along the south coast the wind gusted up over 50 mph at times. Elsewhere there were showers, some heavy with thunder and lightning.

The wet and windy weather continued through the day with further blustery showers. Some of these were on the heavy side with thunder and hail mixed in. In between the showers there was also some sunshine, although southern counties of England remained rather cloudy through the day.

During the evening more thundery showers spread across the country from the west. It stayed quite windy as well, particularly in the west and along the south coast.

Temperatures ranged from near normal in Scotland and Northern Ireland to very mild in parts of England and Wales.

SUMMARY OF UK WEATHER Friday 30th December 1994

Overnight Scotland and Northern Ireland had showers. There were some showers around the western and southern coasts of England and Wales, especially towards morning, with hail reported in places. There was thunder in the Channel Islands. There were gales over southwestern parts of the country. A gust of 64 knots was recorded at Milford Haven.

England and Wales had showers during the day. The showers were most frequent in the west and generally scattered in the east. Hail was reported in places with thunder in south Wales and along parts of the south coast, where it was windy with gales. Scotland and Northern Ireland had a showery and mainly cloudy day. The showers became more widespread and heavier during the day with hail in places. As the low pressure centre moved away east it became windy with gales in the north.

In the evening the showers became more prolonged over northern Scotland with sleet in places. Temperatures were generally close to normal.

SUMMARY OF UK WEATHER Saturday 31st December 1994

During the night a band of rain and sleet moved south across central and southern Scotland and Northern Ireland. By morning it was across northern England. Clearer weather with sleet, snow and hail showers followed across Scotland, where it was windy. There were a few showers over Wales and the west country but most southern areas had a dry night.

Northern England and Wales had rain and sleet in the morning with snow in places. The rain and sleet lingered across northeast England but eventually moved southeast to be followed by a few showers. Southeastern parts had a mainly sunny morning and then cloud and rain with some sleet in the afternoon. There were a few sleet and snow showers across England and Wales into the evening.

Scotland and Northern Ireland had sleet, snow and hail showers during the day. The showers were generally well scattered across Northern Ireland and southern Scotland.

Temperatures were close to normal over south Wales and southern England but it was generally rather cold.
