With present weather is combined, whenever possible, the general character of the weather.

A "solidus" divides actual existing weather from preceding conditions, thus: -bc/r = fair weather after rain; i = intermittent; - = "decreasing"; + = "increasing"; h(r) = "hail" or "rain and hail";

Capital letters indicate intensity, suffix o indicates slight; and repetition of letters continuity, thus: -

R = heavy rain.  
rr = continuous moderate rain.  
rro = continuous light rain.

The Meteorological Office issues warnings to ports and fishing stations of gales on or near the coasts of the British Isles. When one of these notices has been received at a station a black canvas cone is hoisted.

The *South Cone* (point downwards) is hoisted for gales from S.E., veering to S.W., W. or N.W.

„ S.W., veering to W. or N.W.

„ W., veering to N.W.

„ E., veering to S. or S.W.

The *North Cone* (point upwards) is hoisted for gales from S.E., E. or N.E., backing to N.

„ N.W., veering to N., N.E. or E.

„ N., veering to N.E. or E.

„ N.E., veering to E.

The Signals remain hoisted after the receipt of a warning telegram until danger of a gale is passed.

The Districts to which warnings are sent are shown in the British Section of the Daily Weather Report by the following symbols:—

-  South Cone hoisted.

#### NOTES ON THE INFORMATION CONTAINED IN THE BRITISH AND INTERNATIONAL SECTIONS OF THE DAILY WEATHER REPORT.

**Heights of Stations.**—The heights of British Stations above M.S.L. published in the British Section of the Daily Weather Report refer to the plot of ground on which the rain gauge is situated.

**Pressure.**—The distribution of barometric pressure at Mean Sea Level is shown by means of isobars which are drawn for intervals of 2 millibars on the British Section of the Report and for intervals of 4 millibars on the International Section.

The wind at a height of 1,500-2,000 feet above ground usually blows along the isobars and, for the same temperature, pressure and latitude, the speed of the wind is inversely proportional to the distance between the isobars, e.g., for isobars 1 inch apart in the Daily Weather Report the speed of the upper wind is about 12 m.p.h. in latitude 55°, with a temperature of 50° F. and a pressure of 1,015 mb; if, however, the isobars are  $\frac{1}{2}$  inch apart the corresponding speed is 24 m.p.h.

The scale below can be used with both the International and the British Sections. If the distance between consecutive isobars is measured along the rule from the left-hand extremity the geostrophic wind is shown by the scale in miles per hour.

#### GEOSTROPHIC WIND SCALE FOR

4 mb isobars on 1 : 2 × 10<sup>7</sup> Charts.  
or 2 mb " " 1 : 10<sup>7</sup> "  
or 1 mb " " 1 : 5 × 10<sup>6</sup> "

Miles per hour.

This scale applies under the following conditions:—

Pressure, 1,015 mb. Temperature, 50° F. Latitude, 55°.

Corrections.—For an increase of 10 mb pressure, subtract 1% from velocity; for an increase of 10° F. add 2%. From Latitude 55° to Latitude 65° subtract 1% for each degree above 55°. From Latitude 55° to Latitude 45° add  $\frac{1}{2}$ % for each degree below 55°.

**Temperature.**—Temperature is specified in degrees Fahrenheit, and is shown on the charts by means of figures written alongside the circles which indicate the positions of the stations.

**Relative Humidity.**—From January 1st 1926, relative humidity at British stations has been calculated from the following hygrometric formulae:

$$x = f - .444(t - t') \text{ for wet bulb readings above } 32^\circ \text{ F.}$$

$$x = f - .400(t - t') \text{ for wet bulb readings below } 32^\circ \text{ F.}$$

where  $x$  is the vapour pressure in mb.;

$f$  the saturation vapour pressure at the temperature of the wet bulb;

$t$  the dry bulb temperature; and

$t'$  " wet " "

The use of Glaisher's tables has been discontinued.

The tables used for calculating humidities from the readings of the dry and wet bulb thermometers on aeroplanes, are based on a formula similar to the above, but allowance for the variations of barometric pressure with height and for the increased ventilation of the thermometers.

**Upper Air Temperature.**—The British observations are made normally, one at 1,000 feet above the level of the aerodrome, and the remainder at pressures of 950, 900, 850, 800, etc., millibars. Heights are then computed and, apart from instrumental error, are correct heights: they do not require modification for differences of temperature from normal as these are allowed for in the computation. The values are shown graphically and in tabular form in the Upper Air Supplement. On the diagram, temperatures are given in degrees Fahrenheit and Absolute. The oblique line marked "Dry Adiabatic" shows the lapse rate of temperature for dry air ascending or descending under adiabatic conditions, i.e., without communication of heat from external sources. The lapse rate under these circumstances is very approximately 5.5° F. per 1,000 feet, or 10°a per kilometre. A lapse rate greater than this value indicates instability in a dry atmosphere.

The broken lines marked Saturated Adiabatic show lapse rates for saturated air. These are for air masses which contain just sufficient moisture at 1,015 mb. pressure to become saturated after rising 1 km. in an environment having the dry adiabatic lapse rate. The condensed moisture is assumed to be retained thereafter in the air as it rises.

**Times of Sunrise, Noon and Sunset.**—From January 1st, 1926, the times of Sunrise, Noon and Sunset published in the British Section of the Report for certain stations have been recalculated from (1) the figures for the duration of sunshine contained in the International Meteorological Tables and (2) the value of the sun's declination and the equation of time published in the Nautical Almanac. The change of declination of the sun on the same day from year to year over a cycle of four years is now taken into account. This change has formerly been neglected, as stated in former issues of Form 2373.

**Wind.**—All wind directions specified in the reports are "true," as distinguished from "magnetic." The arrows indicating wind direction are drawn to fly with the wind. Wind velocities are shown on the charts of the British Section and Upper Air Supplement in m.p.h. by the numbers placed within the small circles. In the International Section velocities are not shown. In both Sections the number of feathers on the arrows denotes wind force by Beaufort number.

**Upper Winds.**—The direction and velocity of the wind are given in the charts of the Upper Air Supplement for heights of 2,000 feet and 6,000 feet. The data are also given in tabular form for various heights. The reports are usually based on Pilot Balloon ascents.

Wind reports deduced from British Pilot Balloon Ascents refer to the 1,000 feet layers centering at the heights given in the table up to 16,000 feet. When winds are reported at greater heights, they refer to the 5,000 feet layers centering at 20,000 feet, 25,000 feet, 30,000 feet and 35,000 feet.

In the tabular statement direction is specified in degrees from true north measured through East 90°, South 180°, West 270° to North 360°. (See diagram below.)

**Sea Disturbance.**—The code for sea disturbance used at coastal stations is given on p. 1 of the British Section of the Report. Ships at sea use the following code:—

- |  |         |                               |  |         |                           |
|--|---------|-------------------------------|--|---------|---------------------------|
| 0. No or slight swell<br>1. Moderate swell<br>2. Heavy "<br>3. Long low "<br>4. Confused " | } and { | Sea smooth<br>to<br>moderate. | 5. No or slight swell<br>6. Moderate swell<br>7. Heavy "<br>8. Long low "<br>9. Confused " | } and { | Sea rough<br>or<br>above. |
|--|---------|-------------------------------|--|---------|---------------------------|

**Adjusted Readings.**—Where an instrumental reading is found to be in error and some adjustment is necessary, such adjusted reading is published in brackets thus (59).

**SUPPLEMENT TO THE DAILY WEATHER REPORT OF THE METEOROLOGICAL OFFICE, LONDON.**  
**SUMMARY OF METEOROLOGICAL OBSERVATIONS AT SELECTED STATIONS ISSUED ON THE 1st DAY OF EACH MONTH.**

Notes on the Weather of JULY, 1926.

After a few days of fair, warm weather low pressure systems began to spread over Southern England and Ireland about the 4th. causing unsettled, mainly cooler weather with much rain at times and local thunderstorms. On the 5th, rainfall measurements exceeded 30 mm. in several places while on the 9th. thunderstorms occurred in many parts accompanied by very heavy rain in some instances: Tynemouth reported 64 mm.

About the 11th, an anticyclone passed across France towards Denmark and was associated with a short spell of hot weather in our islands. At Kew Observatory, for instance, temperature rose to 79°F. on the 11th, to 83°F. on the 12th. and 13th. and to 86°F. on the 14th., each of these figures being higher than any previously recorded there this summer. On the last of these four days 89°F. was registered at Camden Square and Calshot. Meanwhile pressure was rising on the Atlantic, south of Iceland bringing a supply of air from a more northerly source to Great Britain. This caused cloudier skies and a marked drop in temperature on the 15th, the maximum readings in some cases being about 20° lower than on the 14th.

Temperature rose again, however, during the next few days as the anticyclone moved southeast to the Continent and readings well above 80° were taken in many southern districts on the 18th. At the same time a depression was spreading up from the Bay of Biscay and caused high winds and gales locally as well as numerous thunderstorms. Torrential rain and hail fell in many western districts, especially in Wales: at Rhayader 103 mm. fell in the 24 hour period ending on the morning of the 19th. A report from Ross-on-Wye stated that the river rose with exceptional rapidity on that date to a point over 11 feet above its normal level. The maximum rate of rise was  $4\frac{1}{2}$  feet in half an hour.

Somewhat unsettled, rather cool weather then prevailed until about the end of the month when an anticyclone passed northeastwards to Scotland.

In districts visited by heavy thunderstorms the total rainfall was much above the average but in some others the month was comparatively dry. Considerably more than the normal sunshine was enjoyed in parts of Scotland, Stornoway and Aberdeen both having an excess of over 50 hours.

## NOTES ON CHART OF ISOPLETHS (p. 4).

The diagram is obtained by drawing a line from Akureyri in Iceland to the South of France, near Marseilles. The points at which the isobars drawn for 4 mb pressure intervals intersect this line at 1h, 7h, 13h, and 19h, are plotted consecutively and joined to show the variation of pressure from day to day at any point in the line. The line terminates at Lat. 66° N., Long. 18° W. in the north, at Lat. 44° N., Long. 4° E. in the south.

\* Based in part on reports made by telegraph in which the day & night measurements are rounded off to the nearest whole millimetre. Small discrepancies may arise between these totals and those given in the Monthly Weather Report which are based on readings taken to 0.1 mm.

G. C. SIMPSON, F.R.S., Director.

PRESSURE: ICELAND TO GULF OF LIONS JULY, 1926.

## GENERAL INFERENCE.

Anticyclones centred over Scandinavia and to the west of Ireland form part of a high pressure belt stretching from Northern Scandinavia across the British Isles to north of the Azores. Weather will be warm and mainly fair to fine apart from a risk of local thunderstorms chiefly in the northern half of the Kingdom and Ireland.

Districts.	Forecasts for the 24 hours commencing 15h. G.M.T. Thursday, 1st July, 1926.	Further Outlook.
1. S.E. England	Wind variable, light; mainly fair to fine; morning mist locally; very warm.	No material change other than increasing tendency of thundery conditions in all districts.
2. E. England		
3. E. Midlands		
4. W. Midlands	Wind variable or easterly, light; mainly fine to fair but slight risk of local thunderstorms; visibility good but local mist or fog during night and early morning; warm.	
5. S.W. England		
6. South Wales		
7. North Wales		
8. N.W. England		
9. N. Midlands		
10. N.E. England		
11. E. Scotland	Wind variable or westerly, light; mainly fair apart from risk of local thunderstorms; morning mist locally; warm.	No material change other than increasing tendency of thundery conditions in all districts.
12. S.W. Scotland		
13. Isle of Man	As 2 - 10.

## GENERAL INFERENCE.

A broad and extensive belt of high pressure extends from Northern Scandinavia across the British Isles to northwest of Azores. Quiet, warm and mainly fair to fine weather, apart from a general risk of local thunderstorms, will continue. There is however, a chance that a rain area over Northern France and Belgium may extend to Southern England late today.

BEAUFORT NOTATION OF WEATHER.

The BEAUFORT SCALE of WIND is used only for surface observations. In the accompanying table the speed of the wind corresponding with the different numbers, is the speed at about 30 feet above the ground.

SEA DISTURBANCE.

0=no swell } Calm or slight sea. 1=mod. swell } 2=heavy swell } 3=no swell } 4=mod. swell } 5=heavy swell } 6=rather rough sea. 7=rough sea. 8=very rough sea. 9=mountainous sea.

SYMBOLS.

0 = (less than (for cloud height), before (for precipitation).

⊙ = solar halo. ☾ = lunar halo.

With present weather is combined, whenever possible, the general character of the weather.

A "sechus" divides actual existing weather from preceding conditions; thus: -bc/r = fair weather after rain; - = has decreased; + = has increased.

Beaufort No.

Statute miles per hour.

TELEGRAPHIC CODE FOR SURFACE VISIBILITY.

0. Dense fog. 1. Thick fog. 2. Fog. 3. Moderate fog. 4. Mist or haze. 5. Poor visibility. 6. Moderate. 7. Good. 8. Very good. 9. Excellent visibility, beyond 31 m.

† Trace = rain has fallen, but amount less than 0.1 mm.

5<sup>th</sup> July

[illegible]

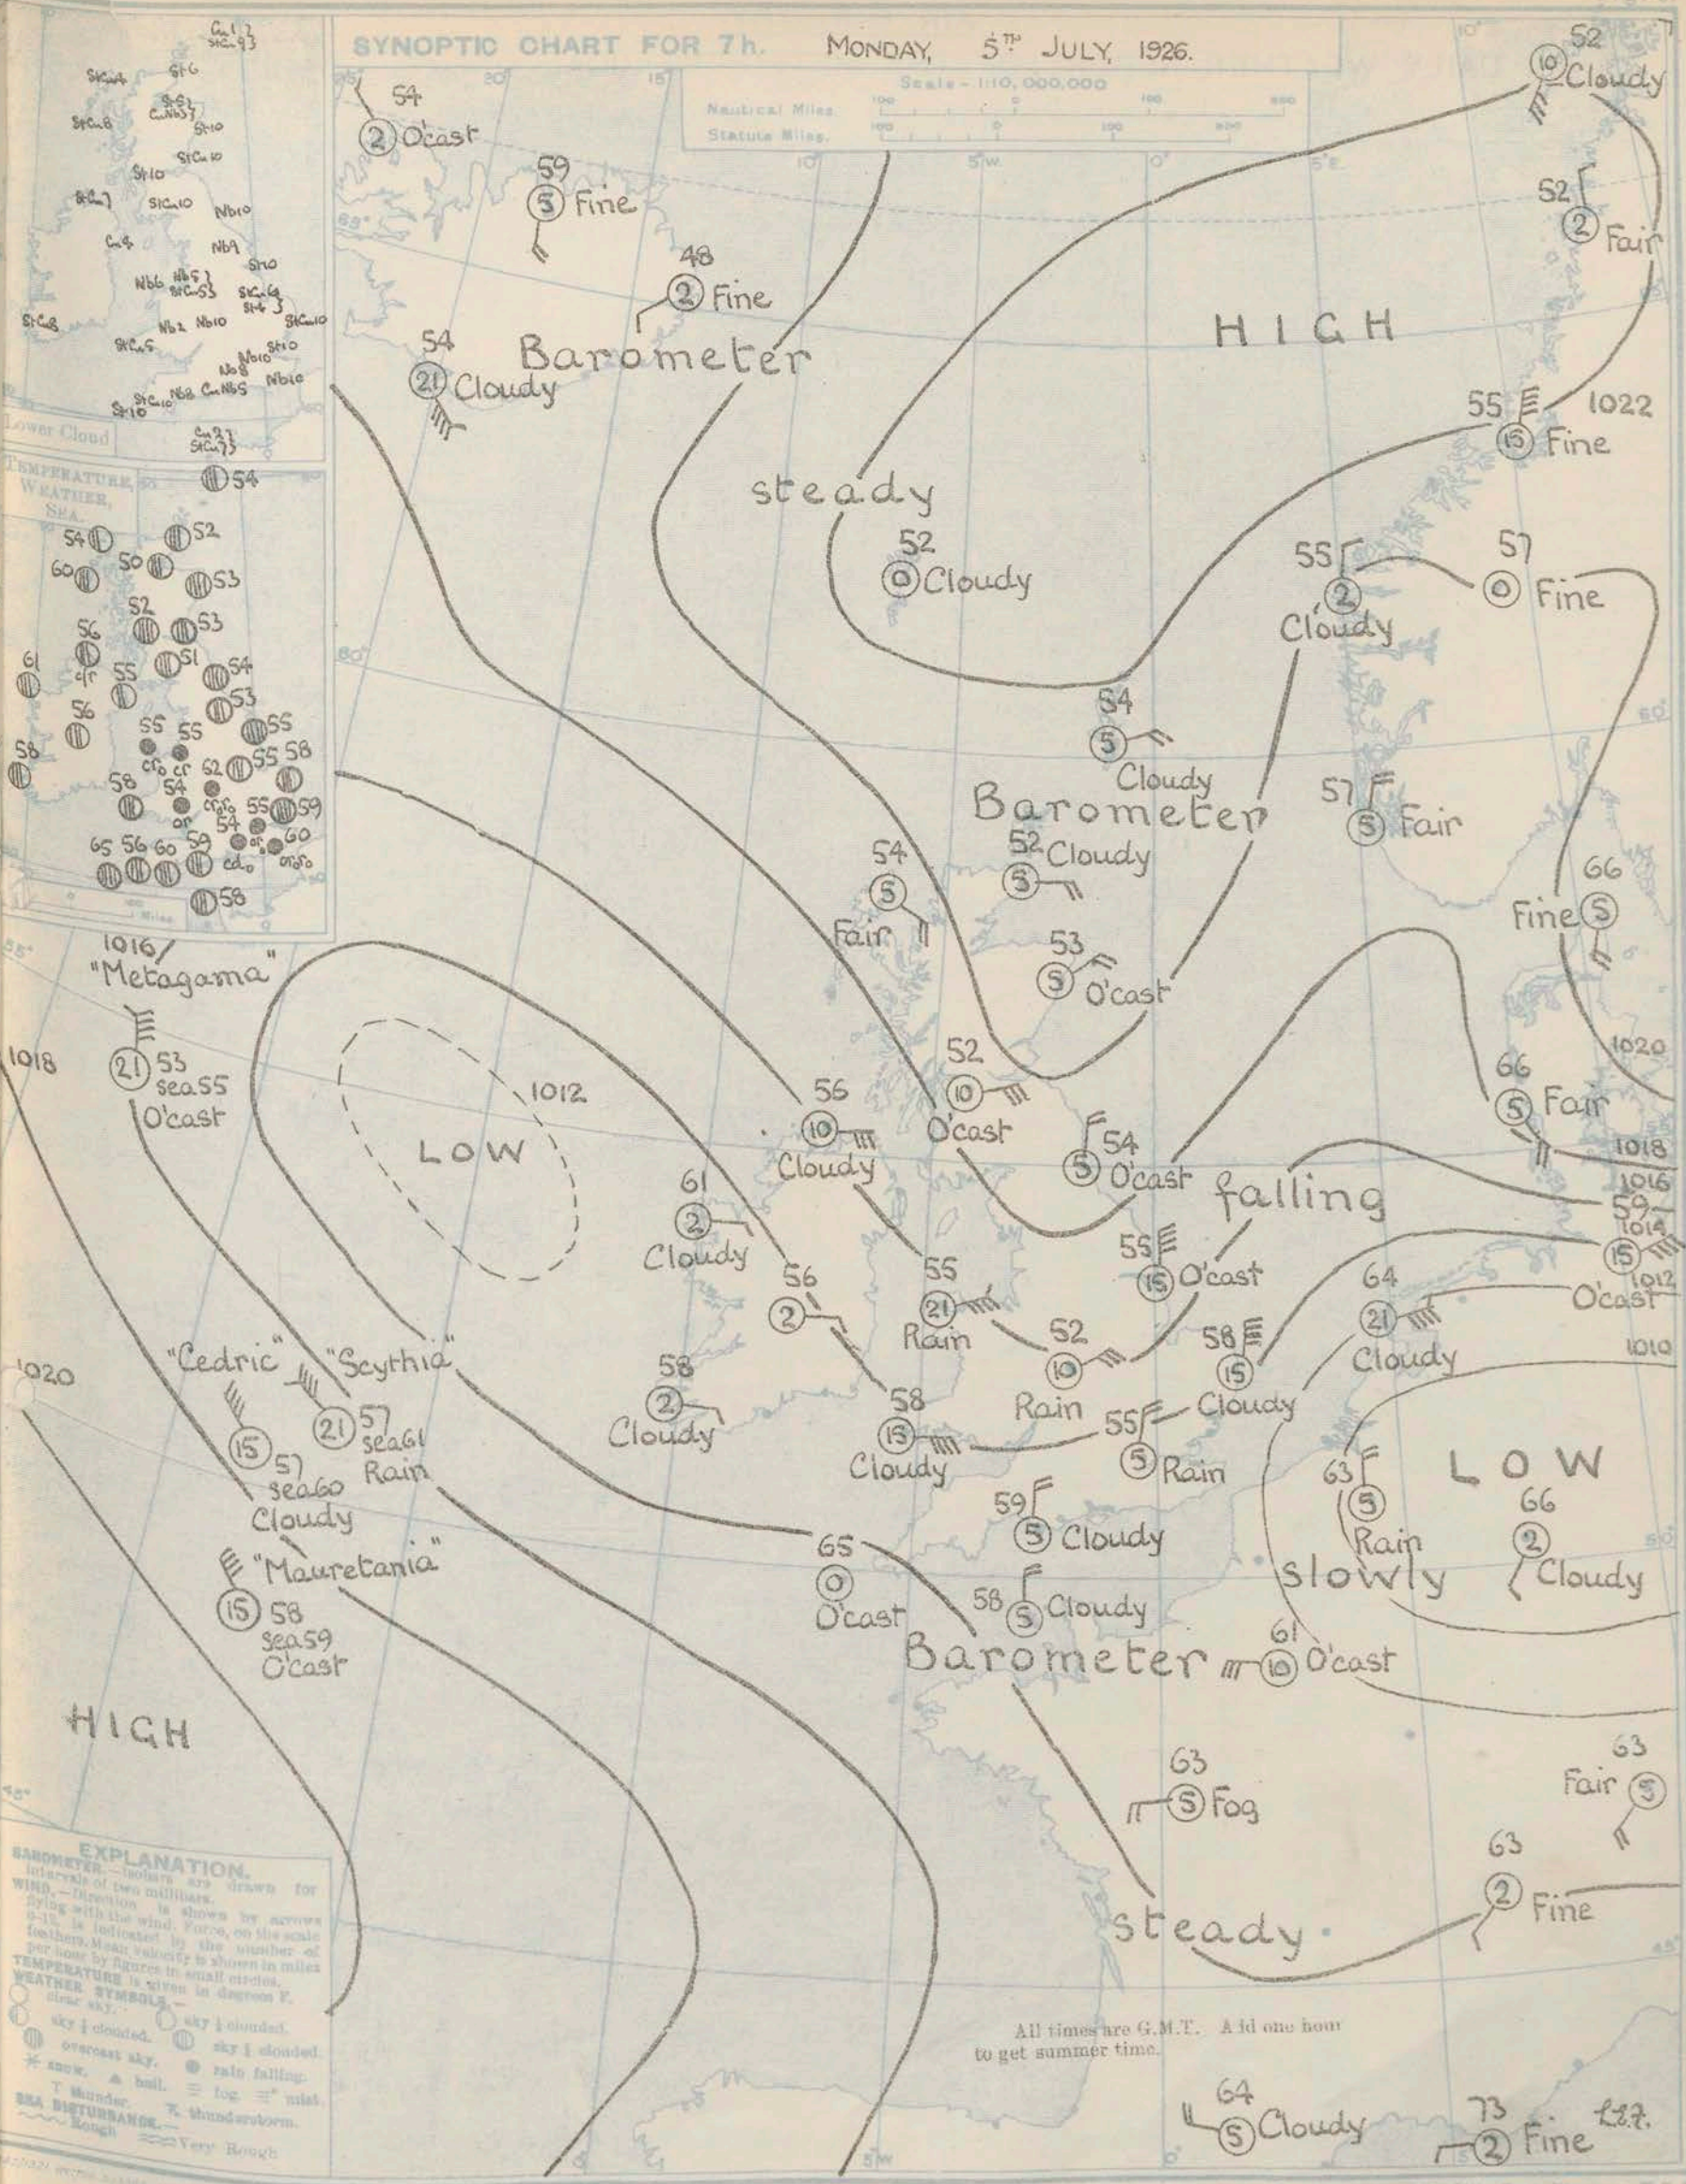

The anticyclone north of the Shetlands is decreasing slowly in intensity. A depression west of Ireland is filling up, and a depression over the Rhine valley is moving northwest. Unsettled weather with local rain and thunder will continue in Southern districts and in Ireland, and will spread slowly northwards.

2. E. England	
3. E. Midlands	
4. W. Midlands	
5. S.W. England	Wind N.W., backing W or S.W., light or moderate, cloudy, occasional rain or showers; improving with brighter intervals; visibility moderate to good; temperature moderate.
6. South Wales	
7. North Wales	
8. N.W. England	Wind variable, probably becoming S to SW, light or moderate; rainy at first, improving later, with fair intervals, but thundery showers; visibility poor at times; cool then somewhat warmer.
9. N. Midlands	
10. N.E. England	
11. E. Scotland	Wind northerly to easterly or variable, moderate to light; much rain; some improvement tomorrow; some mist; cool.
12. S.W. Scotland	
13. Isle of Man	As 8 - 10.
14. N. & N.W. Scotland	Wind between E and N.E., light or moderate; fair to cloudy occasional rain, mist locally; moderate temperature.
15. Hebrides	
16. Orkneys and Shetlands	
17. N.W. Ireland	Wind variable to westerly, light or moderate, cloudy, some rain; mist locally, moderate temperature.

## GENERAL INFERENCE.

The shallow depression over England is filling up. A 1st and deep depression remains centred far out on the Atlantic and a secondary developing in front of it will extend over our southern districts, or possibly move up the Channel. Further will occur in the South after a very brief improvement, but weather may remain fair for a time in the North.

Districts.	Forecasts for the 24 hours commencing 15h. G.M.T.	Wednesday, 7th July, 1926.	Further Outlook.
1. S.E. England	Wind variable, finally between S and E., light or moderate; cloudy, local thundery showers; fair or fine tonight but rain tomorrow; mist locally; temperature moderate to rather low.		
2. E. England			
3. E. Midlands			
4. W. Midlands			
5. S.W. England	Wind backing S., becoming variable, mainly light or moderate; fair at first, becoming cloudy, with rain at times; mist locally; temperature moderate to rather low.		
6. South Wales			
7. North Wales	Wind mainly easterly, light or moderate; fair at first, perhaps some rain tomorrow; local morning mist; moderate temperature.		
8. N.W. England			
9. N. Midlands	Wind between N. and N.E., light; fair to cloudy, local drizzle and coastal fog; temperature moderate to rather low.		
10. N.E. England			
11. E. Scotland	Wind between N.E. and E., light; fair or fine; local coastal fog; temperature moderate; rather warm locally.		
12. S.W. Scotland			
13. Isle of Man	As 7 - 9.		
14. N. & N.W. Scotland			
15. Hebrides	Wind SE. to E., or variable, mainly light or moderate; cloudy, some rain and mist, moderate temperature.		
16. Orkneys and Shetlands			
17. N.W. Ireland	As 7 - 9.		
18. N.E. Ireland			
19. S.E. Ireland	Wind SE. to E., or variable, mainly light or moderate; cloudy, some rain and mist, moderate temperature.		
20. S.W. Ireland

Capital letters indicate intense; suffix o indicates slight; repetition of letters indicates continuity. R = heavy rain. r = slight rain. rr = continuous rain. SYMBOLS. < = (less than (for cloud height), > = (more than (for precipitation), ☉ = solar halo. ☽ = lunar halo. With present weather is combined, whenever possible, the general character of the weather. A "solidus" divides actual existing weather from preceding conditions, thus: -bc/r = fair weather after rain; - = has decreased; + = has increased.																											
THE BEAUFORT SCALE OF WIND is used only for surface observations. In the accompanying table the speed of the wind corresponding with the different numbers, is the speed at about 30 feet above the ground.

## GENERAL INFERENCE.

The depression south of Iceland is stationary and is filling up, but small secondaries are still likely to form on its southern side and move towards the British Isles where winds will be mainly between south and west. The weather will be generally unsettled in these Islands, but fair periods are likely especially in south-eastern and eastern districts.

## Districts.

Forecasts for the 24 hours commencing 15h G.M.T. Sunday, 11th July, 1926.

## Further Outlook.

1. S.E. England	Wind west or southwest, light or moderate; weather mainly fair, but risk of rain or showers later; visibility moderate, mist locally at night; rather warm.	
2. E. England		
3. E. Midlands		
4. W. Midlands		
5. S.W. England	Wind west or southwest, light or moderate, perhaps freshening later: weather mainly fair or cloudy with occasional rain or showers later; visibility moderate apart from coastal fog, probably improving; rather warm.	
6. South Wales		
7. North Wales		
8. N.W. England		
9. N. Midlands	as 5 - 9.	
10. N.E. England		
11. E. Scotland	Wind west or southwest, light; weather mainly fair, risk of rain or showers later, visibility moderate or good apart from coastal mist: rather warm.	
12. S.W. Scotland		
13. Isle of Man	Wind south or southwest moderate: weather cloudy, some rain or showers: visibility mainly good: temperature moderate or rather warm.	
14. N.E. Scotland		
15. Hebrides	Wind southwesterly, light or moderate; cloudy, occasional rain or drizzle: visibility moderate, poor at times: rather warm.	
16. Orkneys and Shetlands		
17. N.W. Ireland	Wind southwest or west, moderate; weather cloudy, some rain or showers, probably improving later: visibility moderate or good: rather warm.	
18. N.E. Ireland		
19. S.E. Ireland		
20. S.W. Ireland		

Unsettled generally but fair periods are likely especially in the southeast and east.

# SYNOPTIC CHART FOR 7h. MONDAY, 12th JULY, 1926.

Nautical Miles  
Statute Miles

Scale - 1:110,000,000

**EXPLANATION.**  
ISOBARS.—Isobars are drawn for intervals of two millibars.  
WIND.—Direction is shown by arrow pointing with the wind. Force, on the arrow, is indicated by the number of feathers. Mean velocity is shown in miles per hour by figures in small circles.  
TEMPERATURE.—Is given in degrees F.  
WEATHER SYMBOLS.—  
☉ sky clear.  
☁ sky cloudy.  
☁☁ sky overcast.  
☁☁☁ overcast sky.

## GENERAL INFERENCE.

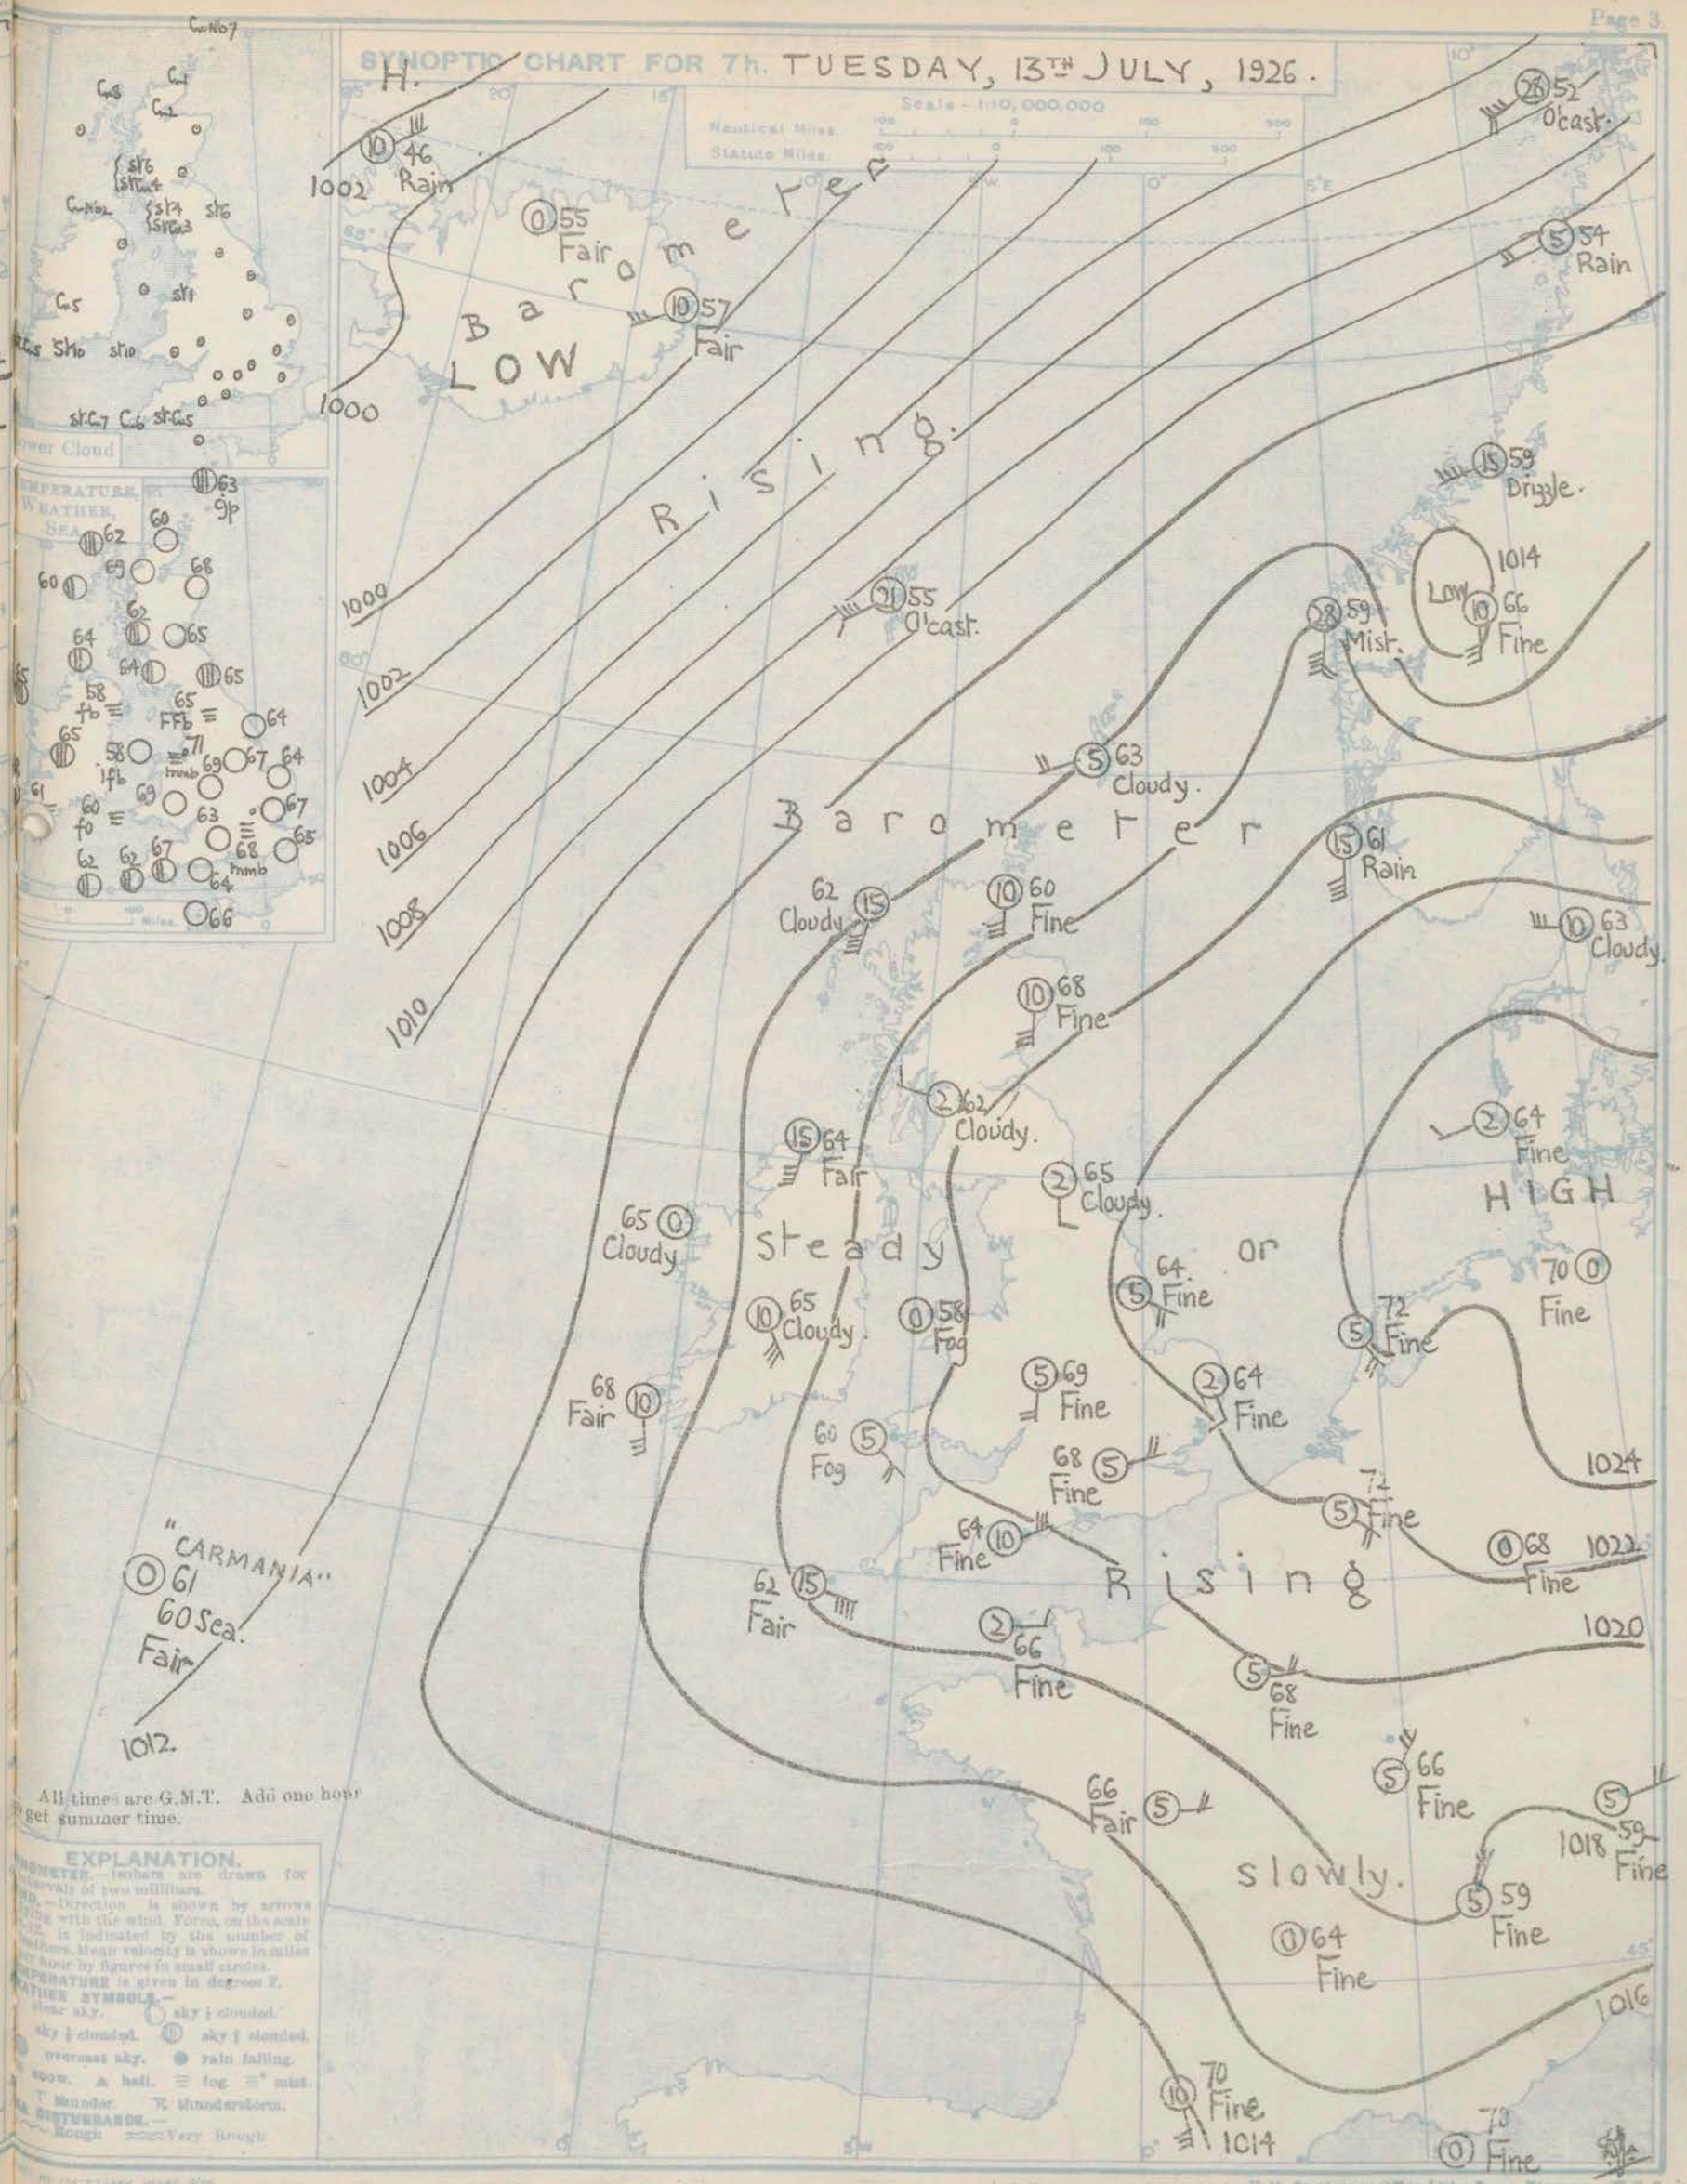

The British Isles continue under the influence of an anticyclone which is now centred over the Netherlands. Weather will remain mainly fine to fair and warm. In extreme western districts small secondaries moving northwards may give rise to occasional local showers.

Districts.	Forecast for the 24 hours commencing 15h G.M.T. Tuesday, 13th July, 1926.	Further Outlook.
1. S.E. England	Easterly winds, light to moderate; mainly fine to fair; local morning mist or fog, particularly near coasts; warm.	Similar, but with a tendency for the development of local thunderstorms.
2. E. England		
3. E. Midlands		
4. W. Midlands		
5. S.W. England		
6. South Wales		
7. North Wales		
8. N.W. England	Light variable or southerly winds; mainly fine to fair; local coastal fog and morning mist; warm.	
9. N. Midlands		
10. N.E. England		
11. E. Scotland		
12. S.W. Scotland	Wind southerly or variable, light to moderate; mainly fine to fair but risk of occasional local showers; visibility good but local coastal mist or fog; warm.	
13. Isle of Man		
14. N. & N.W. Scotland		
15. Hebrides		
16. Orkneys and Shetlands	As 8 - 13.	
17. N.W. Ireland		
18. N.E. Ireland		
19. S.E. Ireland	As 14 - 17.	
20. S.W. Ireland

## GENERAL INFERENCE.

Pressure is very uniform over the British Isles, being high to the East and West and low to the North and South. Weather will continue mainly fine to fair and warm except in Scotland where there is a risk of rain spreading slowly south-eastwards. Thunderstorms will occur locally in Scotland and perhaps Northern Ireland today and in southern districts to-morrow.

Districts.	Forecasts for the 24 hours commencing 15h. G.M.T. Wednesday, 14th July, 1926.	Further Outlook.
1. S.E. England	Wind variable, mainly easterly, light to moderate; fine to fair; visibility moderate to good but local morning mist and coastal fog; very warm.	Similar but with increasing tendency for the formation of local thunder storms.
2. E. England		
3. E. Midlands		
4. W. Midlands		
5. S.W. England		
6. South Wales	Wind variable, light or moderate; fine to fair; local morning mist; warm.	
7. North Wales		
8. N.W. England		
9. N. Midlands	Wind variable or northerly, light or moderate; fine to fair or cloudy, risk of occasional rain and local thunderstorms; local coastal mist or fog; warm, becoming cooler.	
10. N.E. England		
11. E. Scotland		
12. S.W. Scotland	As 8 - 10.	
13. Isle of Man		
14. N. & N.W. Scotland	Wind variable or northerly, fresh at times locally; cloudy to fair, occasional rain, perhaps thunder; some mist locally; cooler.	
15. Hebrides		
16. Orkneys and Shetlands	Wind variable or northeasterly, light to moderate; fine to cloudy, risk of thunder; local coastal fog; cooler.	
17. N.W. Ireland		
18. N.E. Ireland		
19. S.E. Ireland	As 8 - 10.

## EXPLANATION.

BAROMETER. - Isobars are drawn for intervals of two millibars.  
WIND. - Direction is shown by arrows lying with the wind. Force, on the scale 0-12, is indicated by the number of feathers. Mean velocity is shown in miles per hour by figures in small circles.  
TEMPERATURE. - is given in degrees F.  
WEATHER SYMBOLS. -

## GENERAL INFERENCE.

An anticyclone covering the British Isles is moving southeasterwards and decreasing in intensity. Mainly fair weather will continue for at least another twenty four hours except perhaps in Northern Scotland where there is a chance of occasional rain during this period. A few scattered local thunderstorms are not improbable.

## Districts.

Forecasts for the 24 hours commencing 15h. G.M.T. Friday, 16th July, 1926.

18. N.E. Ireland
19. S.E. Ireland
20. S.W. Ireland

Wind easterly to southeasterly or variable, fresh at times, moderating; mainly fair; a very slight risk of local thunder; visibility mainly good but morning mist or fog locally; moderate temperature on coasts, rather warm inland.

Variable winds, mainly light or moderate; fine to fair; a slight risk of local thunder; morning mist or fog in places; temperature moderate on coasts, rather warm during day inland.

Variable to westerly winds, light, freshening; fair to cloudy, occasional rain later, perhaps local thunder; visibility mainly moderate to good; temperature moderate.

As 7 - 13.

As 1 - 6.

Probably mainly fair in southern districts but tendency to become rather less settled generally

## GENERAL INFERENCE.

The anticyclone centred over the Southern North Sea and covering the British Isles is moving slowly eastwards. Another anticyclone is indicated on the Atlantic westwards of Ireland. Quiet, mainly fair and rather warm weather will continue generally except perhaps in extreme northern districts where secondaries to a deep depression centred to the north of Iceland may give rise to occasional rain. There is also a slight risk of a few scattered thunderstorms.

## Districts.

Forecasts for the 24 hours commencing 15h. GMT. Saturday, 17th July, 1926.

## Further Outlook.

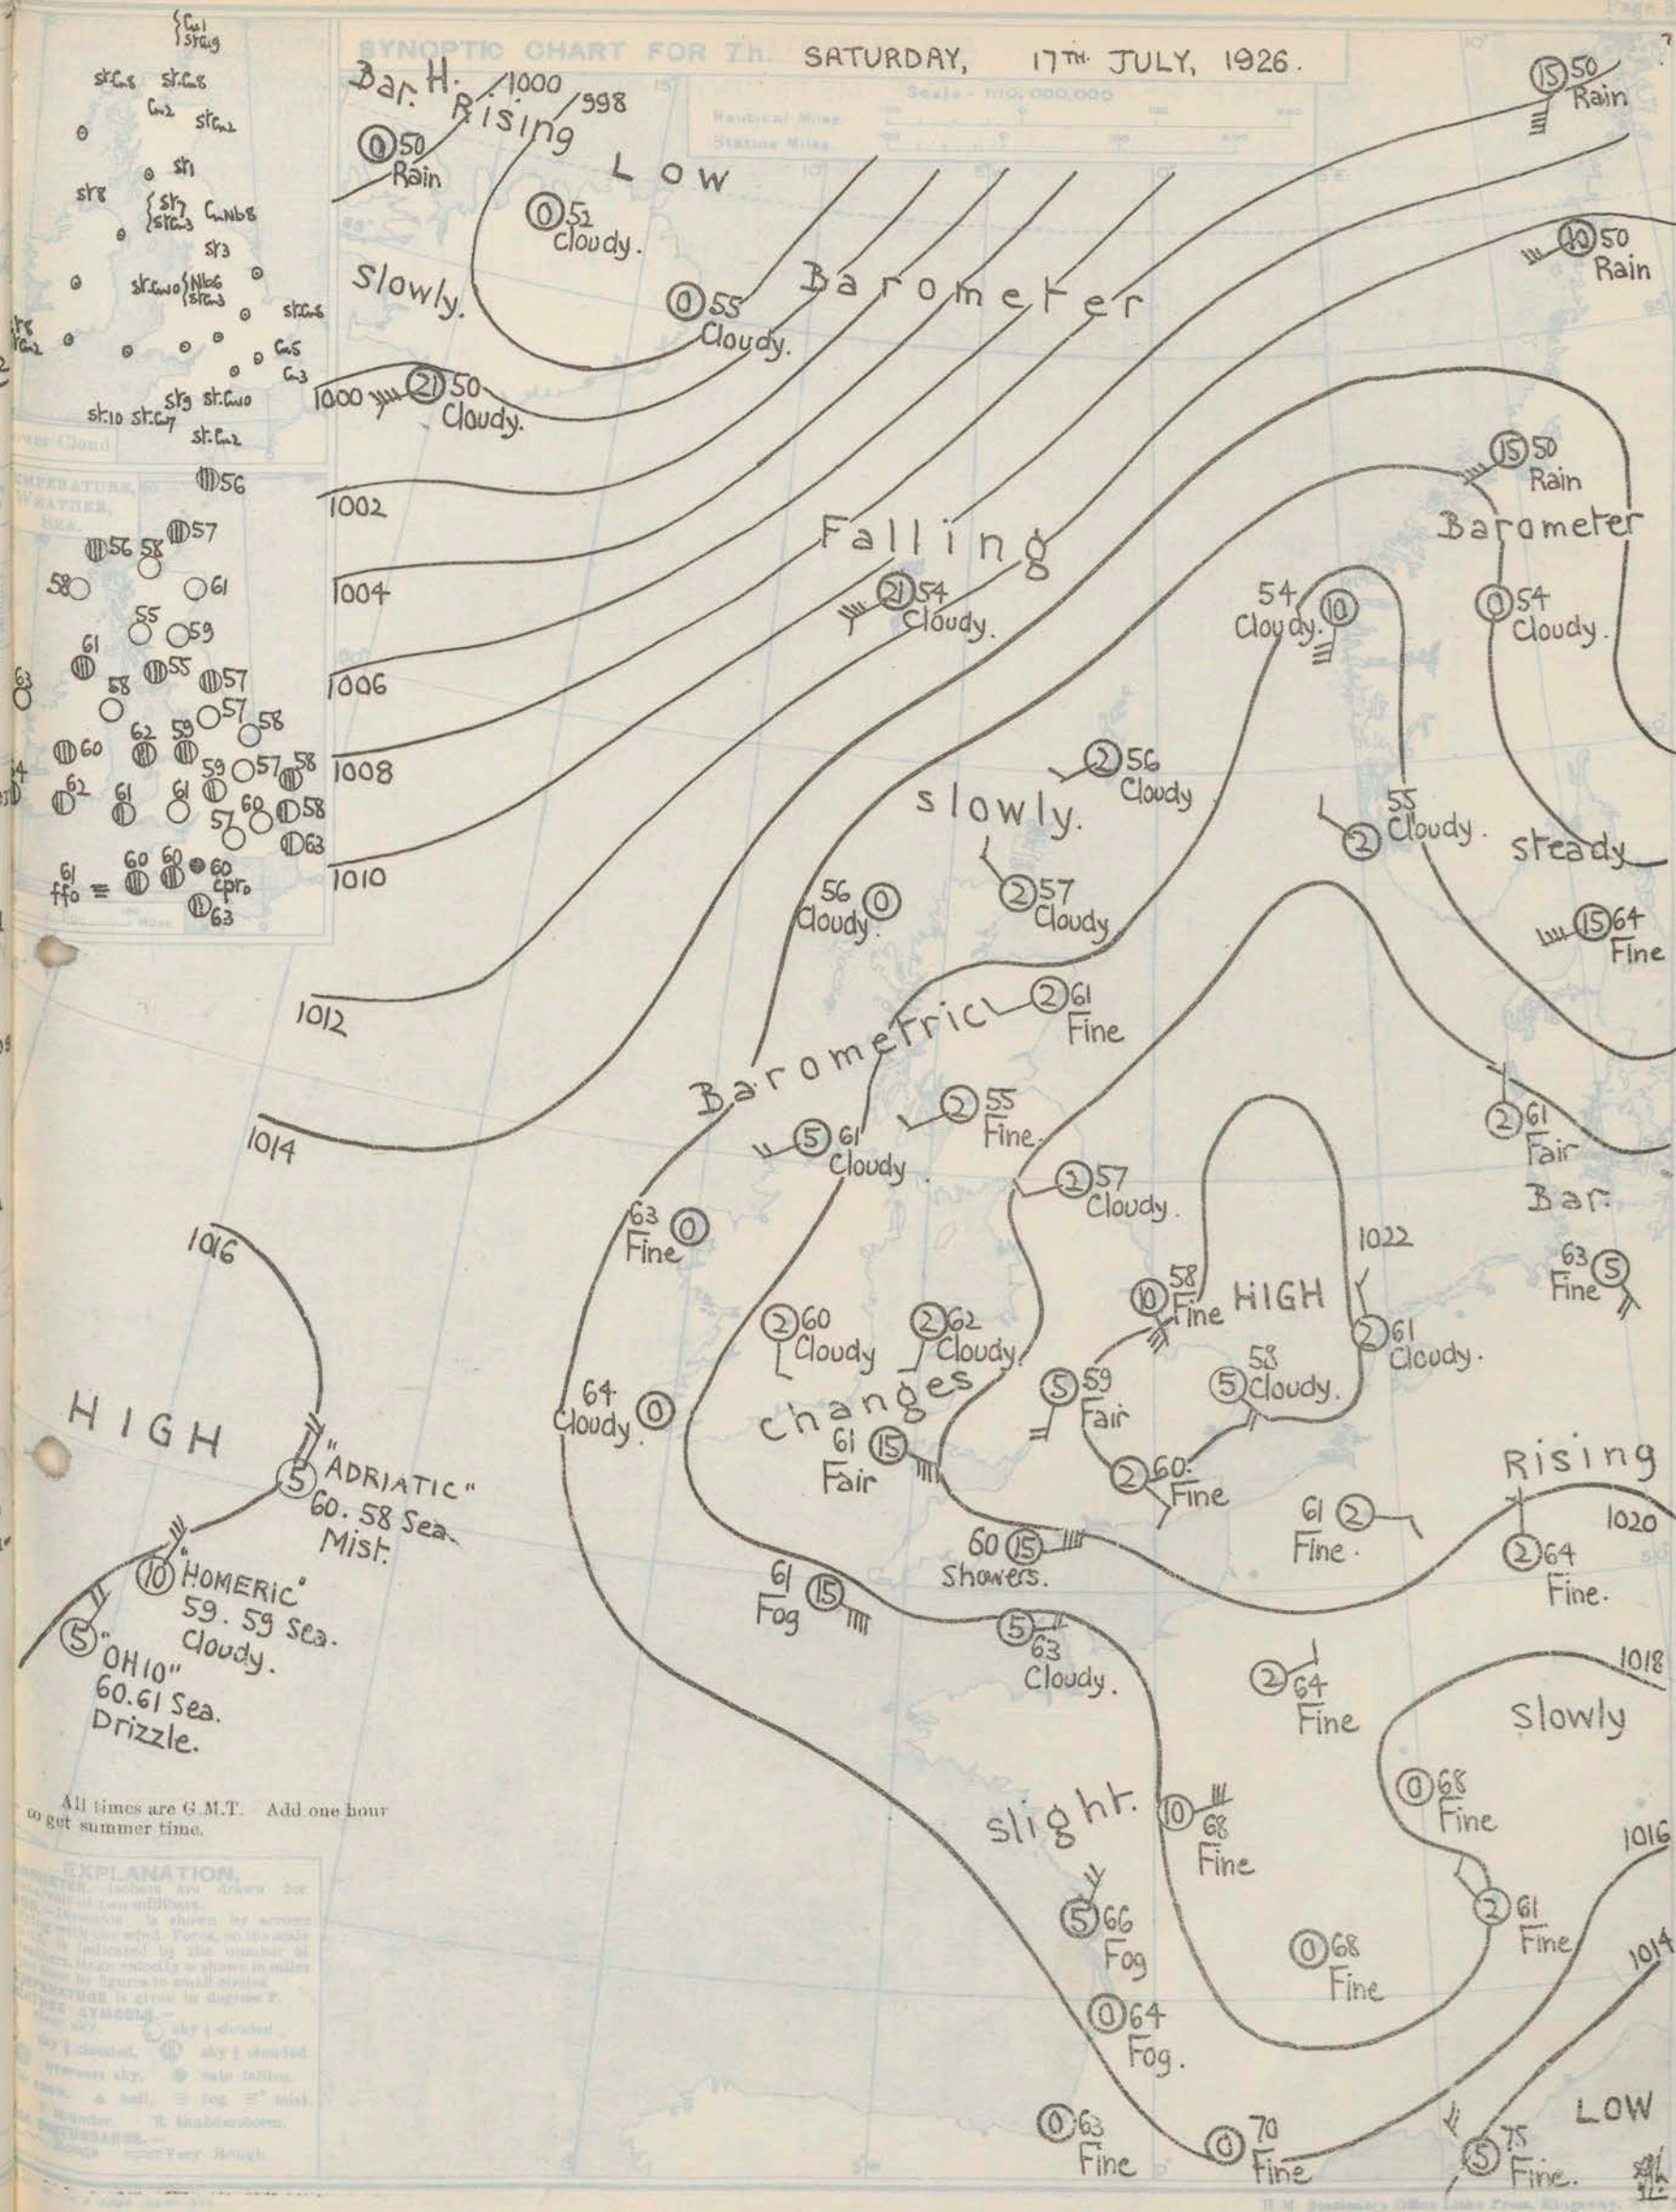

1. E.E. England	Wind southeasterly or variable, mainly light or moderate; fine to fair; a very slight risk of local thunder; visibility good apart from local mist or fog in early morning; rather warm.
2. E. England

**BEAUFORT NOTATION OF WEATHER.**

b	blue sky (not more than a quarter covered with cloud).	x	hoar frost, y dry air.
bc	sky partly cloudy (one half covered).	z	dust haze; the turbid atmosphere of dry weather.
c	generally cloudy	h(r) =	"hail" or "rain and hail."
d	drizzle, e	Capital letters	indicate intense; suffix o indicates slight; repetition of letters indicates continuity.
f	fog, visibility 200-1000 m.	R	= heavy rain. r <sub>o</sub> = slight rain.
F	thick fog, " less than 200 m.	rr	= continuous rain.
m	mist, " 1000-12000 m.	<b>SYMBOLS.</b>	
b	hail, i	< = (less than (for cloud height),	
jp	precipitation within sight of station.	⊕ = before (for precipitation).	
KQ	line squall, i	⊙ = solar halo. ⊕ = lunar halo.	
o	overcast sky, p	With preceding weather is combined, whenever possible, the general character of the weather.	
rs	sleet, t	A "solidus" divides actual existing weather from preceding conditions, thus: -hcl = fair weather after rain; -hcl = has decreased; + = has increased.	
u	ugly, threatening sky.		
v	unusual visibility, w		
	dew.		

**THE BEAUFORT SCALE** of WIND is used only for surface observations. In the accompanying table the speed of the wind corresponding with the different numbers, is the speed at about 30 feet above the ground.

## GENERAL INFERENCE.

A deep depression over Iceland is almost stationary, and together with attendant secondaries will maintain unsettled weather in northern districts and in Ireland. An eastward extension of the Azores anticyclone will give considerable fair periods in the South.

Districts.	Forecast for the 24 hours commencing 15h. G.M.T. Tuesday, 20th July, 1926.	Further Outlook.
1. S.E. England	Wind N.W., backing W., moderate; fair; visibility good; moderate temperature.	Rather unsettled, but considerable fair periods over Southern England.
2. E. England		
3. E. Midlands		
4. W. Midlands		
5. S.W. England	Wind N.W., backing W., moderate or fresh; fair to cloudy, perhaps local drizzle later; visibility mainly good; moderate temperature.	
6. South Wales		
7. North Wales	Wind N.W., backing W. to S.W., moderate or fresh; fair at first, becoming cloudy later with occasional rain or drizzle; visibility mainly good; moderate temperature.	
8. N.W. England		
9. N. Midlands		
10. N.E. England		
11. E. Scotland	Wind between W. and S.W., moderate or fresh, strong at times locally; mainly cloudy, occasional rain; visibility moderate to good; temperature moderate.	
12. S.W. Scotland		
13. Isle of Man		
14. N. & N.W. Scotland		
15. Hebrides		
16. Orkneys and Shetlands

**EXPLANATION.**  
 BAROMETER.—Columns are drawn for  
 pressure of two millibars.  
 WIND.—Direction is shown by arrow  
 pointing with the wind. Force, in the scale  
 of 1, is indicated by the number of  
 millibars. Mean velocity is shown in miles  
 per hour by figures in small circles.  
 TEMPERATURE is given in degrees F.

## GENERAL INFERENCE.

A depression is centred to the north of the Shetlands and is moving away eastwards. Apart from local showers and a narrow belt of rain which will travel eastwards across Ireland and the southern half of the Kingdom, weather will be mainly fair, some sunny periods being experienced in most districts. Further secondaries, however, are likely to form off the West of Ireland and cause an early renewal of unsettled conditions.

Districts.	Forecast for the 24 hours commencing 15 h. G.M.T. Friday, 23rd July, 1926.	Further Outlook.
1. S.E. England	Wind westerly, mainly moderate; variable sky, occasional showers; visibility moderate to good; temperature moderate.	Unsettled generally; probably considerable fair periods in southeastern districts.
2. E. England		
3. E. Midlands		
4. W. Midlands		
5. S.W. England	Wind westerly to southwesterly, strong at times locally at first, moderating then freshening later; variable sky, occasional showers or local rain; visibility moderate to good; temperature moderate.	
6. South Wales		
7. North Wales		
8. N.W. England		
9. N. Midlands	Wind northwesterly to westerly, mainly moderate; variable sky, occasional local showers; visibility good; moderate temperature.	
10. N.E. England		
11. E. Scotland		
12. S.W. Scotland		
13. Isle of Man	Wind westerly to southwesterly, moderate, stronger at times; occasional showers but some fair periods, rainy later; visibility moderate to good; moderate temperature.

**EXPLANATION.**  
BAROMETER.—Isobars are drawn for intervals of two millibars.  
WIND.—Direction is shown by arrows lying with the wind. Force, on the scale 0-12, is indicated by the number of feathers. Mean velocity is shown in miles per hour by figures in small circles.  
TEMPERATURE.—Is given in degrees F.  
WEATHER SYMBOLS.—  
☉ sky; clouded.  
☁ sky; cloudy.  
☂ sky; clouded.

## GENERAL INFERENCE.

A belt of high pressure is developing from off our southwest coasts to Northern Norway, and the highest pressure will probably be over or just north of Scotland. In Northern and Western districts weather will be fair for two or three days, but over Southeast England there will be occasional local rain or drizzle, at least for a time.

Districts.	Forecasts for the 24 hours commencing 15h G.M.T. Friday, 30th July, 1926.	Further Outlook.
1. S.E. England	Wind N. to N.E., light or moderate; mainly cloudy, local rain or drizzle; fairer intervals; visibility variable; rather cool.	Fair for two or three days in the West and North.
2. E. England		
3. E. Midlands		
4. W. Midlands	Light winds, mainly between N. and N.E.; fair or fine; visibility mainly good; rather warm.	
5. S.W. England		
6. South Wales		
7. North Wales		
8. N.W. England		
9. N. Midlands		
10. N.E. England	Light variable breeze; fair or fine; local morning mist; rather warm.	
11. E. Scotland		
12. S.W. Scotland		
13. Isle of Man		
14. N. & N.W. Scotland		
15. Hebrides		
16. Orkneys and Shetlands		
17. N.W. Ireland		
18. N.E. Ireland		
19. S.E. Ireland
