Introduction

This publication

1. The present publication is the 13th in the new paper-back series which provides the information on rainfall over the United Kingdom that was formerly given in Part I of *British Rainfall*. It gives monthly and annual totals of rainfall and, where available, the rainfall on the wettest day of the year by amount and date(s).

Station details

2. The publication includes for each station its 'Rainfall Station Number' (previously known as its 'Hydrometric Station Number'): this is the reference number used by the Meteorological Office to identify the station's rainfall data.

3. The county in which the rain-gauge is located is given by the 'County Number'. The counties in this volume are those which came into existence after the 1974 reorganization of Local Government in England and Wales, and after the 1975 reorganization in Scotland. The new county number, Ccc, comprises C the country and cc the county within the country. In Wales the county of Powys has been divided into two parts, north and south, each given a separate county number: this is to maintain a link with the 'districts' adopted by the Meteorological Office in its *Monthly Weather Report*. In the London area, all stations within administrative authorities bearing the name 'London Borough of ...' are shown within the county of Greater London. In Scotland the reorganization introduced Regional Council areas but, as the former county names are still largely used, the county numbering system adopted by the Meteorological Office serves the dual purpose of identifying both Regional Council and old county areas, and the three-figure county number may be regarded as being CRc, where C is the country number, R is the Regional Council number and c is the county number within the Region. (Where c is 6 or greater, the old county has been divided between two Regional Councils and the two parts are separately identified.) A complete decode of the system is given on pages x–xi.

4. The location of the rain-gauge sites is given by National Grid Reference to the nearest 100 metres, and the altitude of the rain-gauge site above mean sea level is given to the nearest metre.

5. The name of the rainfall station is that used by the Meteorological Office under rules which require that the primary name should normally appear on the 1-inch Ordnance Survey map and/or its 1:50 000 metric successor. Where stations exist on islands, the island name is given in capital letters as the first part of the name. Where it is desirable to identify the location beyond the name of the town, village, etc., a supplementary part of the name appears after a comma. In a decreasing number of cases it is desirable to retain the name under which data were published in *British Rainfall* (prior to 1969): thus there will remain some instances where longer-term station names do not adhere to these rules and the names may not in fact appear on current Ordnance Survey maps. Abbreviations or initials are used only in forms that are readily identifiable, although there are rules applicable to certain standard abbreviations, such as S. Wks = Sewage Works (or Sewage Treatment Works), P. Sta. = Pumping Station, Res. = Reservoir, Met. Office = Meteorological Office (where the term applies only to sites manned by personnel of the Meteorological Office or at Royal Naval Air Stations by personnel of the Directorate of Naval Oceanography and Meteorology).

*Where a station name is prefixed by an asterisk, the rain-gauge is set with its rim at ground level, surrounded by a pattern of antisplash grid which is acceptable to the Meteorological Office.

Where a station name is prefixed by a hatch symbol, the station is located in England although it is shown within the Hydrometric Areas associated with Scottish River Purification Boards; such stations fall within the data areas of the Northumbrian River Authority if in the north-east and of the North West Water Authority if in the north-west.

> Where a station name is prefixed by a 'greater than' sign, the data originated from a rain-gauge of a tipping-bucket type which provides data acceptable to Meteorological Office standards for data archiving purposes.

6. The average annual rainfall at stations for the latest reference period, 1941–70, is given in as many cases as possible. Estimated averages are not included. Representative figures (Table B) for the monthly and annual rainfall of 1981 in England, Wales, Scotland, Northern Ireland and the Isle of Man are given as percentages of the longer-period averages (1941–70) in Tables C and D.

Rivers and streams

7. The publication follows earlier practice in that it endeavours to associate rain-gauges with particular catchments and accordingly names the associated rivers and streams.

8. It is not practicable to identify every stream in the country and some minor features have necessarily been ignored. However, in general, a stream is separately identified if it is more than four miles long and has, or has had, a number of rainfall stations within its catchment.

9. As with station names, a number of subjective decisions have had to be taken. The name of the river or stream not uncommonly changes throughout its course: a stream which enters and leaves a lake may thereby acquire a new name. In general, such rivers are identified by the name in use at the lowest reaches, that at the mouth or that at the confluence with a larger river to which it is a tributary.

Water authorities and hydrometric areas

10. The water industry was also reorganized in England and Wales in April 1974 when the many 'River Authorities' were replaced by ten larger regional 'Water Authorities'; similarly, in 1975 there were changes in Scotland resulting in fewer 'River Purification Boards' each covering larger geographical areas.

11. As the administrative structure within Water Authorities does not necessarily follow hydrological boundaries, and is in any case subject to revision from time to time, it is not practicable to publish the rainfall data under sub-headings related to (say) Water Authority Divisions. Accordingly, the data are now published within 'Hydrometric Area' groupings and maps showing the relationship between these Hydrometric Areas and the various water authorities across the United Kingdom are included in pages viii and ix. The Hydrometric Area numbers used in this volume are those in use at the date of printing, and are not necessarily those in use in 1981.

Data

12. Rainfall data are still published in strict numerical order of Rainfall Station Number. The 1974/75 reorganization of the water authorities cut across the hydrologically determined station numbering system adopted by the Meteorological Office in 1961 and to maintain the publication of data in numerical order it has been necessary in some instances to subdivide water authority headings into Part 1, Part 2, and so on.

13. The unit of rainfall amount that is used is the millimetre (mm). Monthly and annual totals are the summation of daily and monthly totals in that unit. If for any station or any period the unit of measurement was the inch, the daily data have been converted to millimetres prior to totalling.

14. The data from each station have been subjected to the routine quality-control procedure in operation by the Meteorological Office at the time of data receipt. Any corrections or adjustments have been incorporated in the figures now presented.

15. Certain practices operating during the period of publication of *British Rainfall* have been kept, namely the retention in archives of all data as originally submitted, and the omission from the published information of data from stations which appear too unrepresentative of the rainfall regime indicated by the bulk of rainfall stations in the area.

16. The present publication continues the practice commenced with the first new paper-back edition, that for 1969, in that reports from stations from which data for the year are incomplete are included. Some stations opened or closed during the year and for others a local shift of site occurred which is thought to have been sufficient to raise doubts about the homogeneity of the old and new observations. New rainfall station numbers have been allocated in the latter instance.

17. When data are missing in a random manner from the Meteorological Office data set for 1981, then the station in question will not, in general, be included in the lists of published data. In a certain limited number of cases, missing monthly totals are estimated and such estimated values are shown in the table by brackets around the totals. Where totals have been subject to substantial amendment during the quality-control process, this too is indicated by the presence of brackets around the rainfall totals. Such amendments, in addition to the treatment accorded to suspect daily values, could arise for example from the reapportionment of rainfall reported when the observation on the first day of the month has been missed, or because of adjustments arising from snowfall.

18. The maximum amount of rainfall in a rainfall-day is given in the last column together with the date of its occurrence. Should the amount be equalled on other dates within the year, those other dates are included, subject to a maximum of three date entries, shown in date order. For stations which commenced or terminated within the year (i.e. with some months' entries shown as dashes) the maximum daily amount is shown related to the period of available data. The maximum daily fall is not shown for stations whose data were received only as monthly totals or for which, for one reason or another, daily data are incomplete for the relevant period of record within the year.

Availability

19. This series of booklets has been introduced to meet the needs within the Meteorological Office. Further, it provides the opportunity to acknowledge the contribution of many enthusiastic, private rainfall observers and co-operating rainfall station authorities who may receive a free copy for the period during which the data from their station(s) are published.

20. Whilst the booklets are not primarily produced for sale, some copies are available, on repayment, for libraries, universities and other educational establishments, and indeed to individuals, particularly if they wish to maintain a series of publications of rainfall data as a continuation of the former *British Rainfall* series.

21. The publications are available only from the Meteorological Office: they are *not* available through Her Majesty's Stationery Office. Applications for copies should be made to one of the addresses given below:

The Director-General
Meteorological Office (Met O 8)
London Road
BRACKNELL
Berkshire RG12 2SZ

The Superintendent
Meteorological Office
231 Corstorphine Road
EDINBURGH EH12 7BB

The Senior Meteorological Officer
Progressive House
1 College Square East
BELFAST
Northern Ireland BT1 6BQ

but any Standing Orders for issues as they are published should be placed only with the BRACKNELL address.

WATER AUTHORITY BOUNDARIES and Hydrometric Area Numbers (Northern British Isles)

The WATER AUTHORITY BOUNDARIES are those related to river divisions, which are somewhat different from water supply, etc., boundaries, and which are related to the re-organization of 1974 in England and Wales, and of 1975 in Scotland. Parts of Wales were revised in April 1979.

The HYDROMETRIC AREA NUMBERS are now in the HHHh format, where HHH is the original number allocated in the 1930s and h is a subdivision resulting from water authority re-organizations. Thus, when h = 0 the boundary remains that originally defined in the 1930s.

Over IRELAND agreement has been reached with relevant authorities in the North and South for the adoption of a single system: the format adopted by the Meteorological Office to integrate this system with the HHHh system in use for the U.K. is 2HH0, where HH is the Irish Hydro-metric Number, to which 200 is added, and the h component is always 0. Hydrometric Station Numbers are allocated only for those catchments or parts of catchments within Northern Ireland.

For the CHANNEL ISLANDS the Hydrometric Area numbers previously allocated by the Meteorological Office only, are maintained but converted to the HHHh format.
