## 1. INTRODUCTION

Drifting buoys operated by European countries, the United States, Canada and E.G.O.S. (European Group on Ocean Stations) provide valuable meteorological data in the North Atlantic Ocean. This report is a summary of the performance of these buoys giving information on the number of buoys operating, the accuracy of reported locations and data quality, timeliness and availability. It is compiled by looking at observations received in the Met. Office Meteorological Data Base (Met.D.B.) and by comparisons of observations with background fields from the Met. Office forecast model. Additional information on buoy operations and data quality is extracted from E.G.O.S. Technical Secretariat reports.

## 2. GENERAL PERFORMANCE

The following few sub-sections describe the general performance of the drifting buoys throughout the quarter.

### (a) Location Accuracy

76 out of 78 of the buoys reporting, gave a ' % of observations with acceptable positions' greater than 95% (75 out of 78 last quarter).

### (b) Data timeliness

(see note 9 of section 6 for definition of terms.)

Timeliness	Last quarter.	This quarter
Very Good	37	30
Good	33	36
Satisfactory	3	9
Poor	0	0
Very poor	5	3
<b>Total no. of buoys</b>	<b>78</b>	

**(c) Data availability**

(see note 9 of section 6 for definition of terms.)

Availability	South of 50 deg N		North of 50 deg N	
	Previous Quarter	Present Quarter	Previous Quarter	Present Quarter
Very Good	9	11	16	12
Good	3	7	4	2
Satisfactory	20	17	11	9
Poor	14	19	0	1
Very Poor	0	0	1	0

The total number of buoy days in the quarter was 5667 [obtained by summing the number of reporting days for each buoy] (last quarter the total was 5746) and the number of 'buoy hours' with at least one observation was 104434 (compared with 101682 last quarter). Thus, the mean number of hours per day, for days with at least one observation (averaged over all buoys operating in the area) was 18.43 (last quarter the figure was 17.70).

### 3. SUMMARY OF PRESSURE PERFORMANCE

#### (a) Buoy deployments, etc.

##### North of 50deg N

There were 24 buoys reporting pressure at the beginning of the period. 20 buoys were operating at the end of the period. 4 buoys were deployed during the period (44546, 63662, 65662 and 65663). 4 buoys ceased reporting pressure (44730, 44767, 64521 and 65599).

##### South of 50deg N

There were 39 buoys reporting pressure at the beginning of the period. 32 buoys were reporting at the end of the period.

15 buoys were deployed during the period (44548, 47744, 44775, 44776, 44778, 62751, 62752, 62753, 62756, 62757, 62759, 62841, 62842, 62754 and 62758).

22 buoys ceased reporting pressure (41571, 44617, 44726, 44513, 44626, 44764, 56542, 61523, 62512, 62516, 62520, 62751, 62752, 62753, 62754, 62756, 62757, 62758, 62759, 62841, 62852 and 64546).

#### (b) Data Quality - Pressure

##### Revised RMS Differences

The technique used to assess the quality of pressure data in this report is based on the Revised RMS differences between the observations and the background field from the Global Forecast Model (see note 8 in Explanatory Notes). For buoys south of 50°N the Revised RMS differences should be less than (or equal to) 2.0 hPa and for buoys north of 50°N they should be below (or equal to) 3.0 hPa. The buoys whose revised RMS differences were found to lie outside these limits have had their performances described as 'suspect' and are included in the section below. Examination of the time-series plots (see Annex B) indicates the performances of these buoys:-

- 44513 - Data from this buoy showed a bias of 1.3 hPa during the period it was reporting pressure (from 20/10/00 to 25/11/00).
- 44548 - Data from this buoy was occasional erratic during the period it was reporting, from 06/12/00 to the end of the period.
- 44764 - Data from this buoy showed a larger than normal scatter for the two days it was reporting, at the beginning of the quarter.

- 56542 - Data from this buoy showed a negative bias of – 4.7 hPa during the few days it was reporting, from the beginning of the quarter until 03/10/00.
- 62513 - Data from this buoy was occasionally erratic during the quarter.
- 64546 - Data from this buoy showed a larger than normal scatter during the few days it was reporting pressure from the beginning of the quarter until 13/10/00 and from 05/12/00, until it ceased reporting altogether on 11/12/00.
- 64699 - Data from this buoy became erratic towards the end of the quarter.

### Biases

23 buoys (excluding those mentioned in the previous section) showed pressure biases greater than 0.5 hPa (pressure biases are determined using the mean value for unflagged data from Annex A). Those buoys whose pressure data showed a bias of greater than 0.5 hPa have had their performance described as 'suspect'.

### *Summary*

All Buoys with the exception of 62508 showed a significant **wind speed** bias throughout their reporting lives. Buoy 41505 (9.14) also showed a significant standard deviation for **wind speed**.

## 6. EXPLANATORY NOTES:

1. Buoy owners are as follows,

CA	- Canada	P	- Portugal
F	- France	UK	- United Kingdom
D	- Germany	US	- United States
N	- Norway	IC	- Iceland
NL	- Netherlands	EG	- EGOS
IR	- Ireland		

2. Number of observations received is the number received at Bracknell in the Meteorological Data Base (Met.DB). If identical reports are received which have originated at different Collecting Centres, the earliest one received at Bracknell is stored in the Met.DB.
3. An observation with valid Time and Date is one that contains no coding errors in the Date/Time group.
4. An acceptable position for an observation is within a distance  $d$  of the last acceptable position where  $d=vt$  and,  
 $v = \text{maximum drift speed} = 1/4 \text{ knot}$   
 $t = \text{time between observations.}$
5. The percentage of elements present is calculated from the total number of observations received.
6. The delay is (Time of Receipt at Bracknell) - (Time of Observation).
7. The mean number of observations per day is calculated from the total number of observations received divided by the number of days in the period. It therefore includes 'quasi-identical' observations, i.e. those made within a few minutes of one another. For this reason the mean number of hours per day with at least one observation and the % of hour periods without an observation has been included, where an 'hour period' is defined as the period from HH-30 to HH+29 minutes.

8. Mean (OB-BG) is the mean value of (Observation-Background) Pressure, where the Background is the 6-hour forecast from the Global Forecast Model. RMS (OB-BG) is the Root Mean Square value of (Observation- Background) Pressure differences.

Unflagged data are those data used in model analyses.

Flagged data (i.e. unused observations) are those observations of suspect quality and all observations reported by a buoy at a frequency greater than 5 times every 6 hours, with accepted observations being at least one hour apart. Thus, those buoys which report most frequently have a higher percentage of flagged data.

The Mean calculated over Unflagged Data gives an indication of the instrument bias, since any gross errors have been excluded from the calculation.

The Revised RMS is based on all data except for the few that contain gross errors (as indicated on the time-series graphs - see Annex B).

9. The performance categories are defined in the table below.

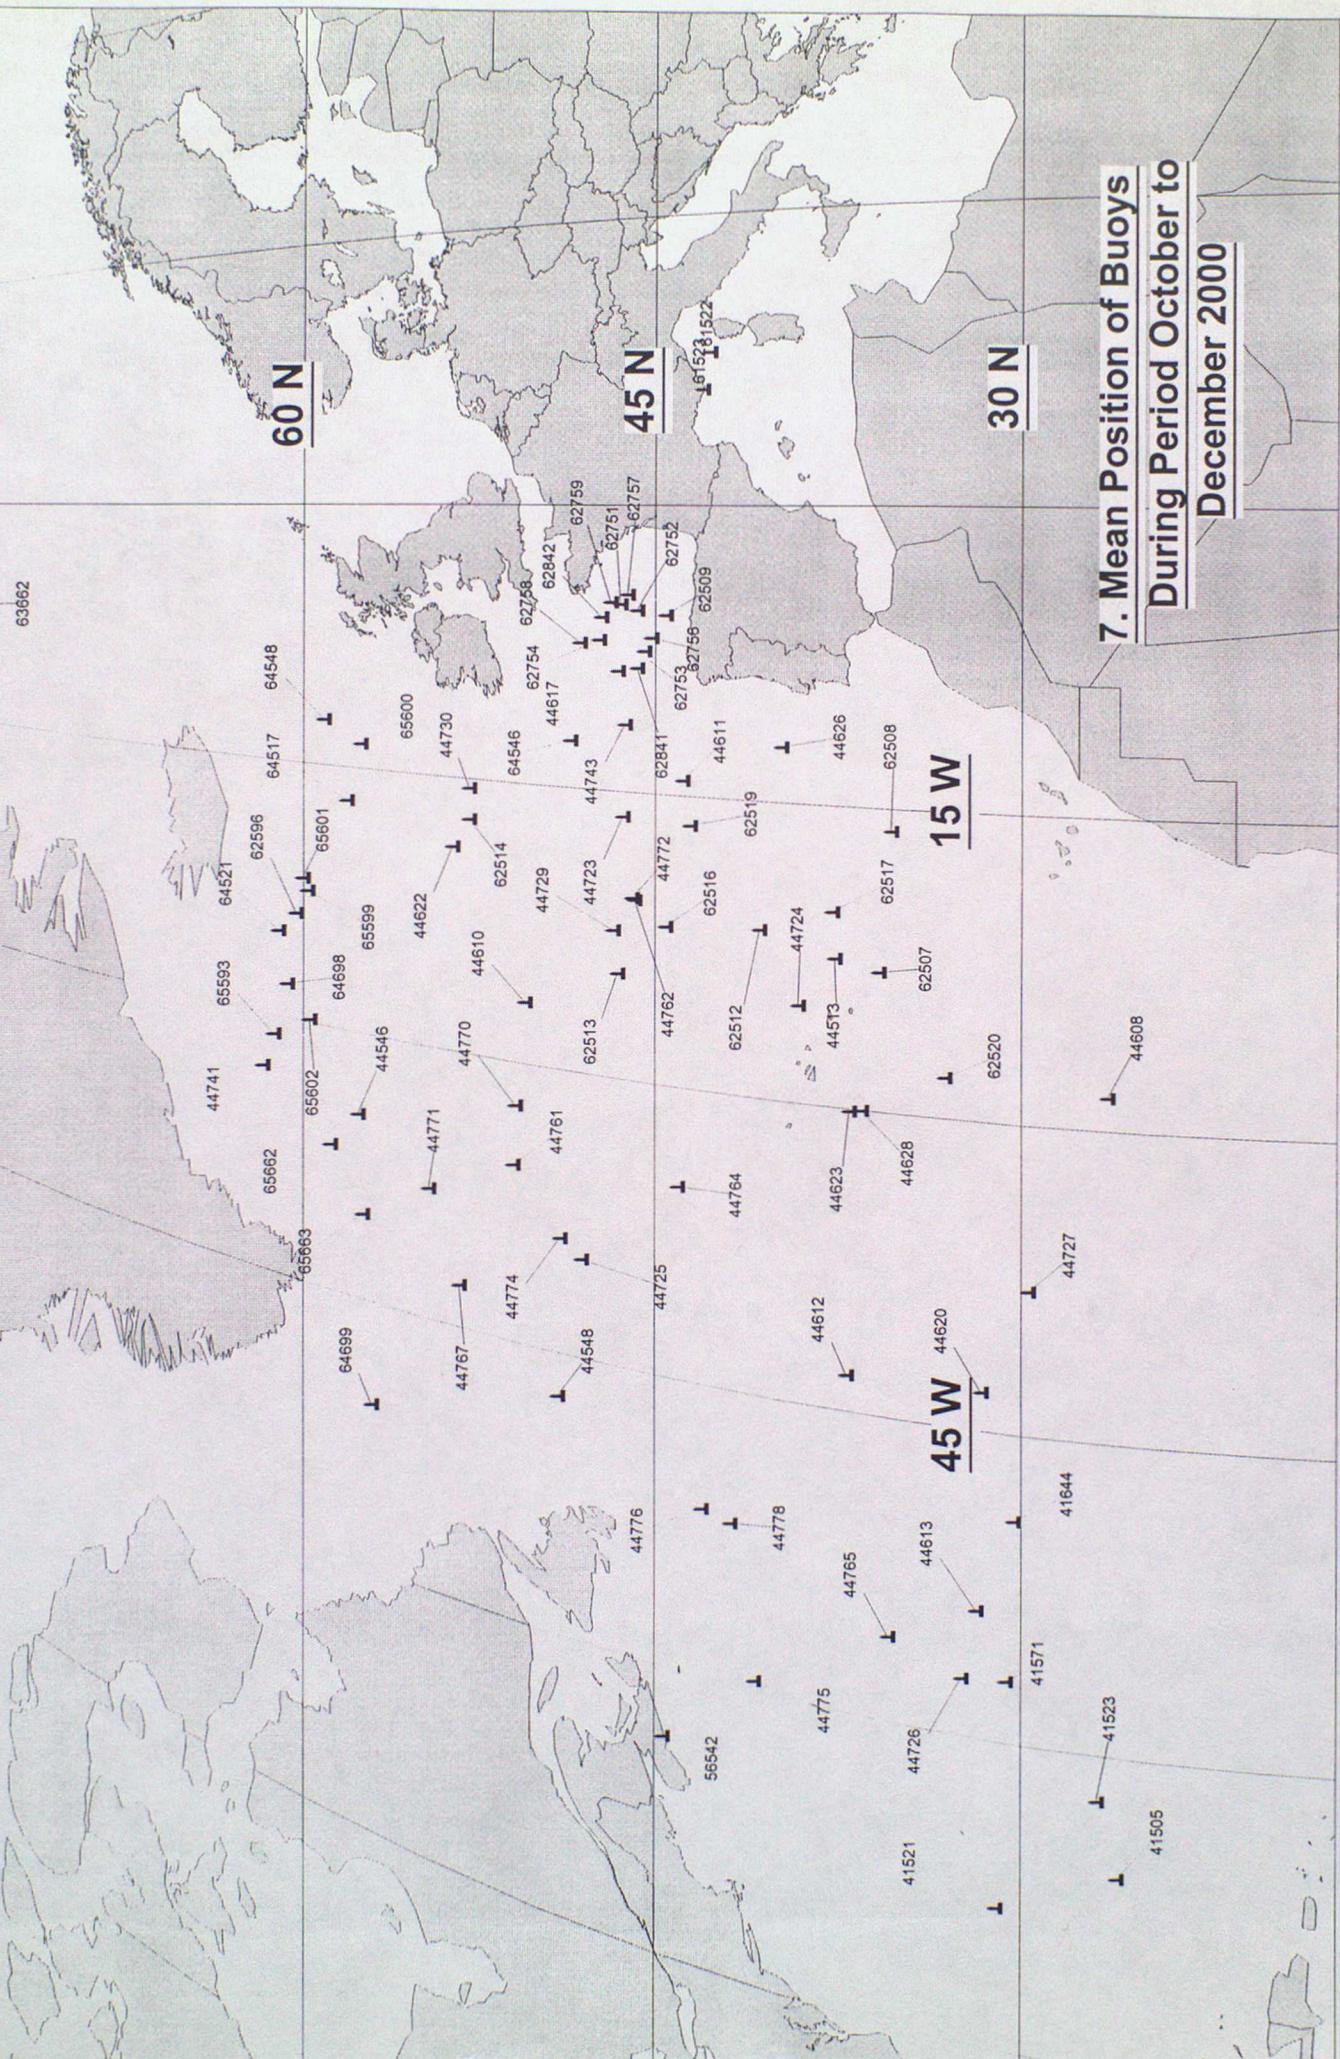

Performance	Availability (mean no. of obs/day)	Timeliness (median delay in mins)
Very Good	> 35	< 60
Good	25 - 35	60 - 119
Satisfactory	15 - 24	120 - 179
Poor	5 - 14	180 - 239
Very Poor	< 5	> 240

(N.B. WMO requirements state the need for only 4 observations per day from marine stations.)

The pressure quality is assessed from the Revised RMS and the Mean for unflagged data).

Performance	Pressure Quality (in hPa)			
	North of 50 degN		South of 50 degN

Acceptable	<= 3.0	<= 0.5	<= 2.0	<= 0.5
