1902 Redruth Church 730 yards SW

1903 "of the amount registered by the monthly gauge is nearly 6% too low the difference being most pronounced when the prevailing winds are W or N. the direction of the chief obstructions"

1883 to 1900 M<sup>r</sup>. Jenkin in a letter dated Jan 12<sup>th</sup> 1904 says that this gauge became sheltered about 1883 & from that year to 1900 a cumulative correction of +0.3 per cent. <sup>for each year</sup> should be applied. This would amount to about 5½ per cent. in 1900 (New gauge erected 1901 - see following sheet) statement preserved with back years  
 This is not fully borne out by comparison with other records  
 C. H. W.

## Note by Observer

"Until the early part of 1905 the gauge was on the ground but being inconvenient to reach in slippery weather and also too crowded in by rose trees etc it was moved to present position.

Measurements taken, as a rule, between 9 and 10 a.m.

In the years 1895 to 1898 the amount was entered in error under date when observation was made instead of to previous day."

1905 Gauge moved about 12 ft N E early in year
