SIGNIFICANT WEATHER

0600 GMT 01 SEPTEMBER 2001	SIG WEATHER	1200 GMT 01 SEPTEMBER 2001	SIG WEATHER	<p>Summary of UK Weather for Saturday 01 September 2001.</p> <p>Many places had a dry night. It was generally cloudy in the north and west, but southern and eastern areas had some clear spells. Later in the night, outbreaks of rain moved into Northern Ireland and western Scotland.</p> <p>Rain continued to affect Northern Ireland and western Scotland through the morning. During the afternoon, the rain largely petered out across Northern Ireland but persisted across western Scotland and also affected northeast Scotland. Southeast Scotland remained largely dry.</p> <p>Much of England and Wales had a dry day, although northwesternmost parts did see some light rain and drizzle during the afternoon. It was generally bright with a good deal of sunshine in the south and east.</p> <p>During the evening, there was further rain for western and northern Scotland, and also western parts of Northern Ireland towards midnight. Elsewhere, it remained largely dry but with increasing cloud amounts.</p> <p>It was a warm day for Northern Ireland. The temperatures were generally close to normal elsewhere.</p>
1800 GMT 01 SEPTEMBER 2001	SIG WEATHER	0000 GMT 02 SEPTEMBER 2001	SIG WEATHER	
				<p>EXTREMES</p> <p>Highest Maximum: 22.1 Knockarevan, Fermanagh</p> <p>Lowest Maximum: 12.3 Lerwick, Shetland</p> <p>Lowest Minimum: 4.7 Aboyne, Aberdeenshire</p> <p>Lowest Grass Minimum: 0.6 Aviemore, Inverness-Shire</p> <p>Most Rain: 17.0 Waterstein, Inverness-Shire</p> <p>Most Sun: 12.2 Jersey Airport, Jersey</p>

DAILY CLIMATE DATA

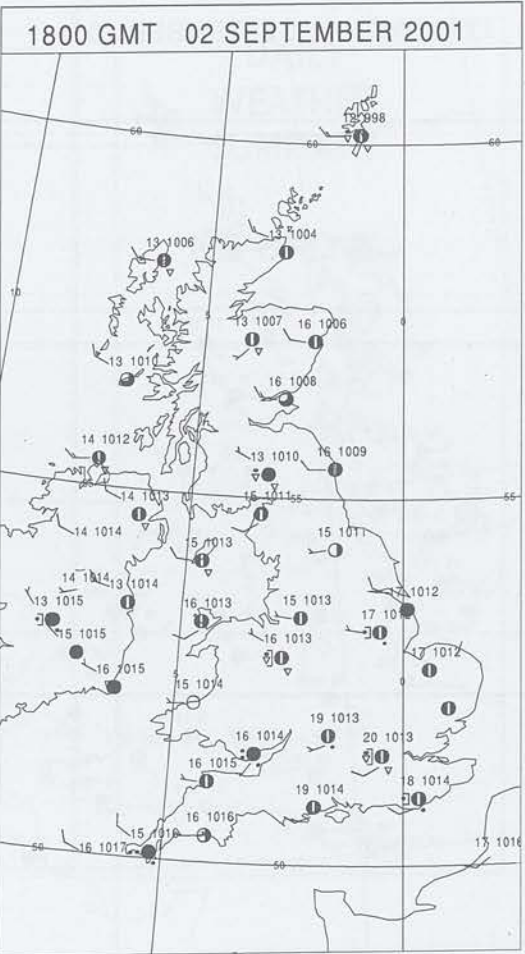

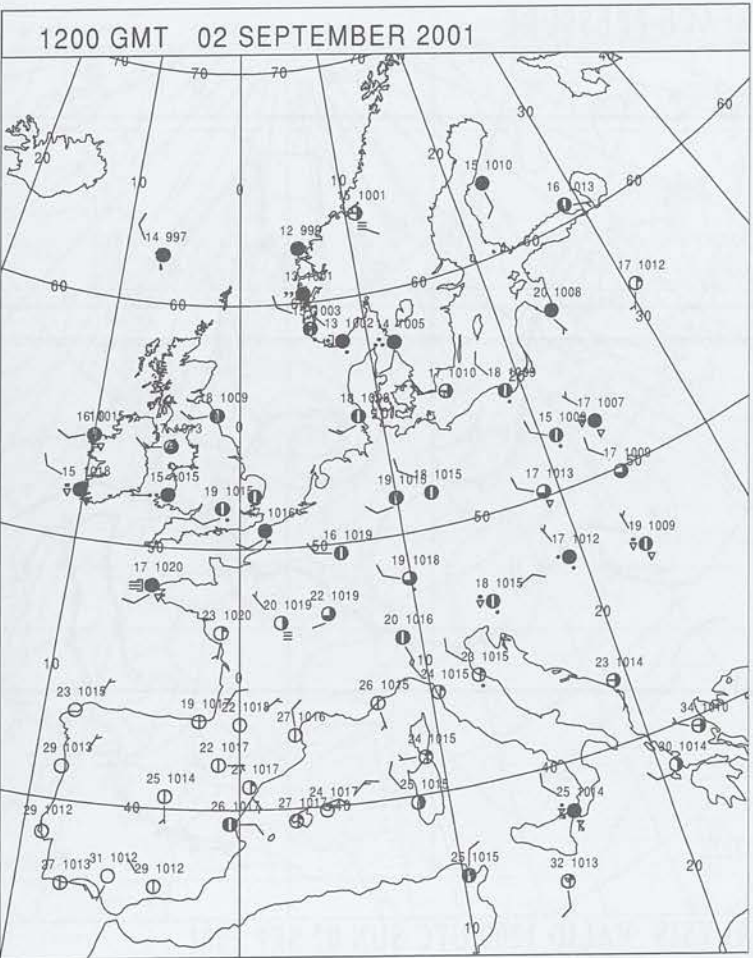

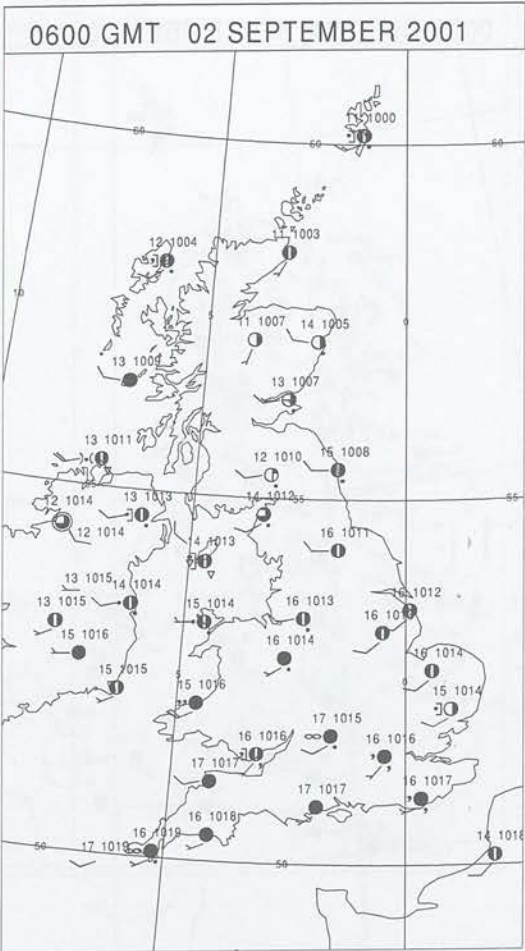

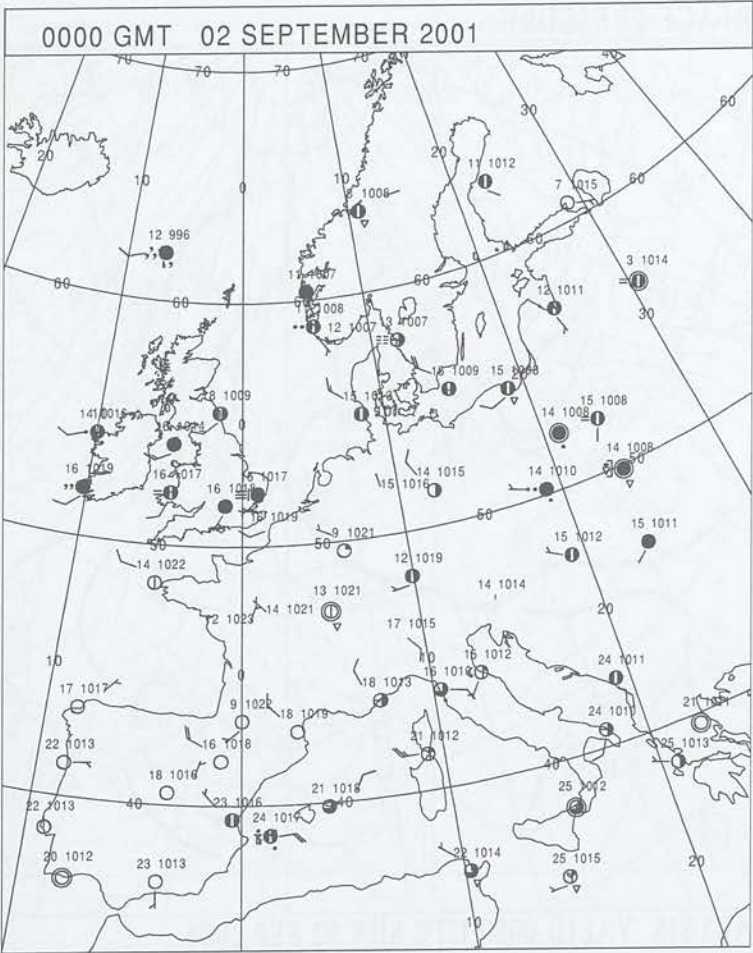

The map displays the British Isles with 35 meteorological stations marked by dots and labeled with a number and a four-digit code. The stations are distributed across the country, with a higher density in the south and east. The map includes latitude and longitude lines. A small inset map in the top right corner shows the location of the stations relative to the rest of Europe.

Station Number	Station Code

SIGNIFICANT WEATHER

0600 GMT 02 SEPTEMBER 2001	SIG WEATHER	1200 GMT 02 SEPTEMBER 2001	SIG WEATHER	<p>Summary of UK Weather for Sunday 02 September 2001.</p> <p>The night was cloudy over most of the country. It was generally dry, although there were some outbreaks of rain and drizzle, mainly in the west of England and Wales; and over western Scotland there were scattered showers. A few clear breaks occurred, more especially east of the Pennines and the Scottish mountains.</p> <p>During the day, Scotland had sunny intervals and showers with the best of the sunshine occurring over Fife. Northern Ireland and northern England had plenty of cloud and a few showers, although many places to the east of the Pennines remained dry. Over Wales, central and southern England the morning was mostly cloudy with occasional rain or drizzle. The afternoon was generally brighter, but showers developed, and over southern England and East Anglia there were some heavy showers, these merging during the evening into longer spells of rain.</p> <p>Temperatures were close to normal.</p>
1800 GMT 02 SEPTEMBER 2001	SIG WEATHER	0000 GMT 03 SEPTEMBER 2001	SIG WEATHER	<p>EXTREMES</p> <p>Highest Maximum: 22.7 Southampton, Hampshire</p> <p>Lowest Maximum: 13.6 Sella Ness, Shetland</p> <p>Lowest Minimum: 9.4 Lerwick, Shetland</p> <p>Lowest Grass Minimum: 6.8 Tain Range, Ross & Cromarty</p> <p>Most Rain: 20.0 Kenley Airfield, Surrey</p> <p>Most Sun: 8.6 Leuchars, Fife</p>

SIGNIFICANT WEATHER

0600 GMT 04 SEPTEMBER 2001	SIG WEATHER	1200 GMT 04 SEPTEMBER 2001	SIG WEATHER	<p>Summary of UK Weather for Tuesday 04 September 2001.</p> <p>During the early hours some heavy bursts of rain spread southwards across the southern half of the British Isles with nearly 9mm in an hour at two sites. There were some squally gusts in association and thunder mixed within the rain bands, too. Further to the north it was largely dry although a few light showers affected eastern coasts.</p> <p>By morning the rain was clearing into the English Channel and then it was a fairly sunny morning in many places. Most parts had some sunshine at times through the day, but a few showers did affect northwestern coasts and some rather more frequent light showers affected eastern coasts and parts of East Anglia. It was a rather blustery day with the highest gusts near the east coast of around 40 knots.</p> <p>The winds apart from across East Anglia eased slowly but steadily through the day and eventually cloud started to increase across Northern Ireland from the next frontal system.</p> <p>Temperatures were at best average and most places were rather cool or even cool.</p>

SURFACE REPORTS

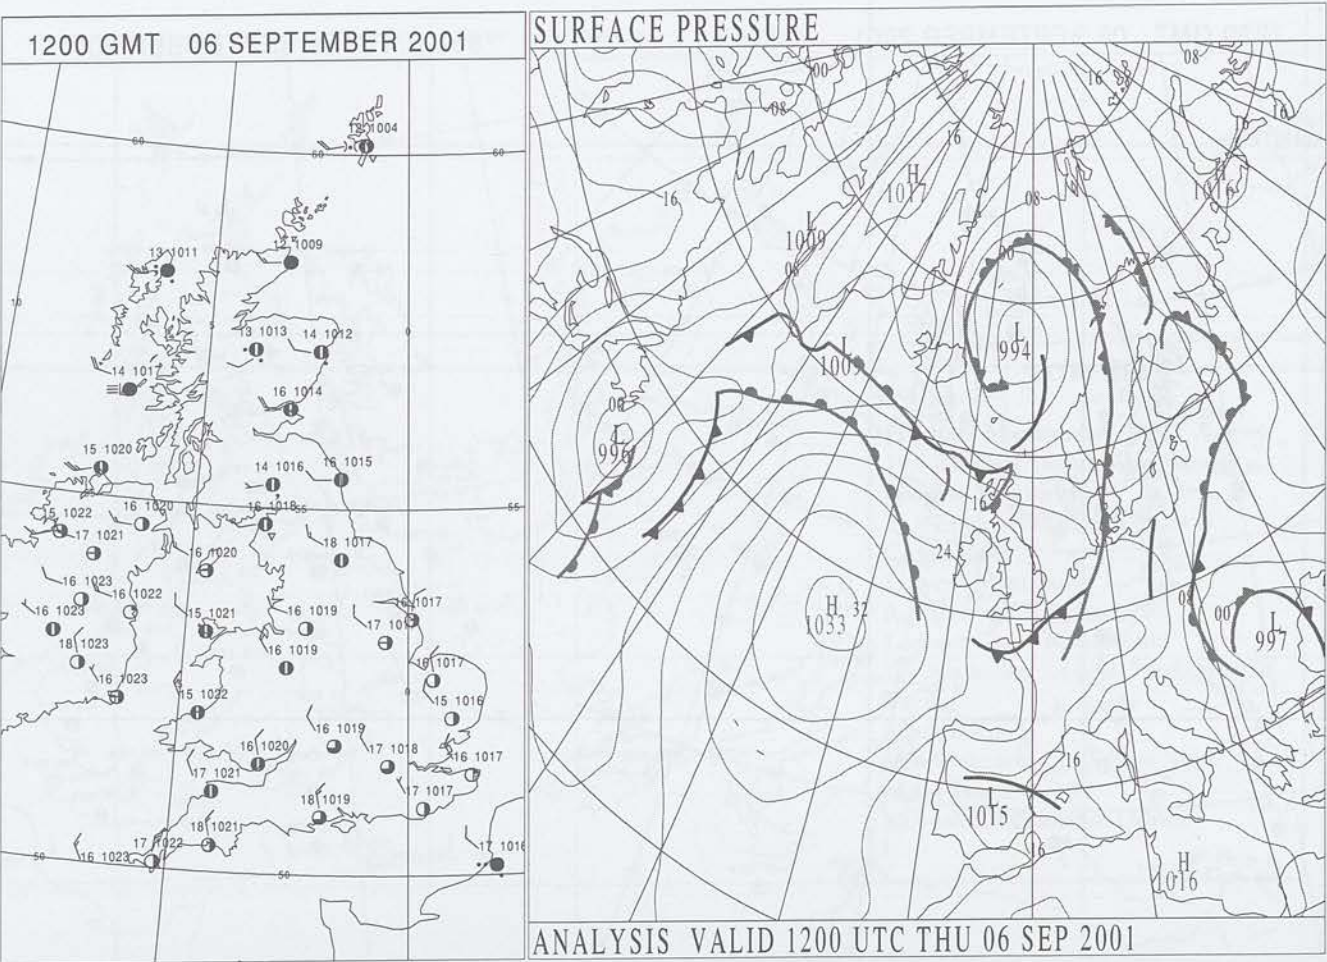

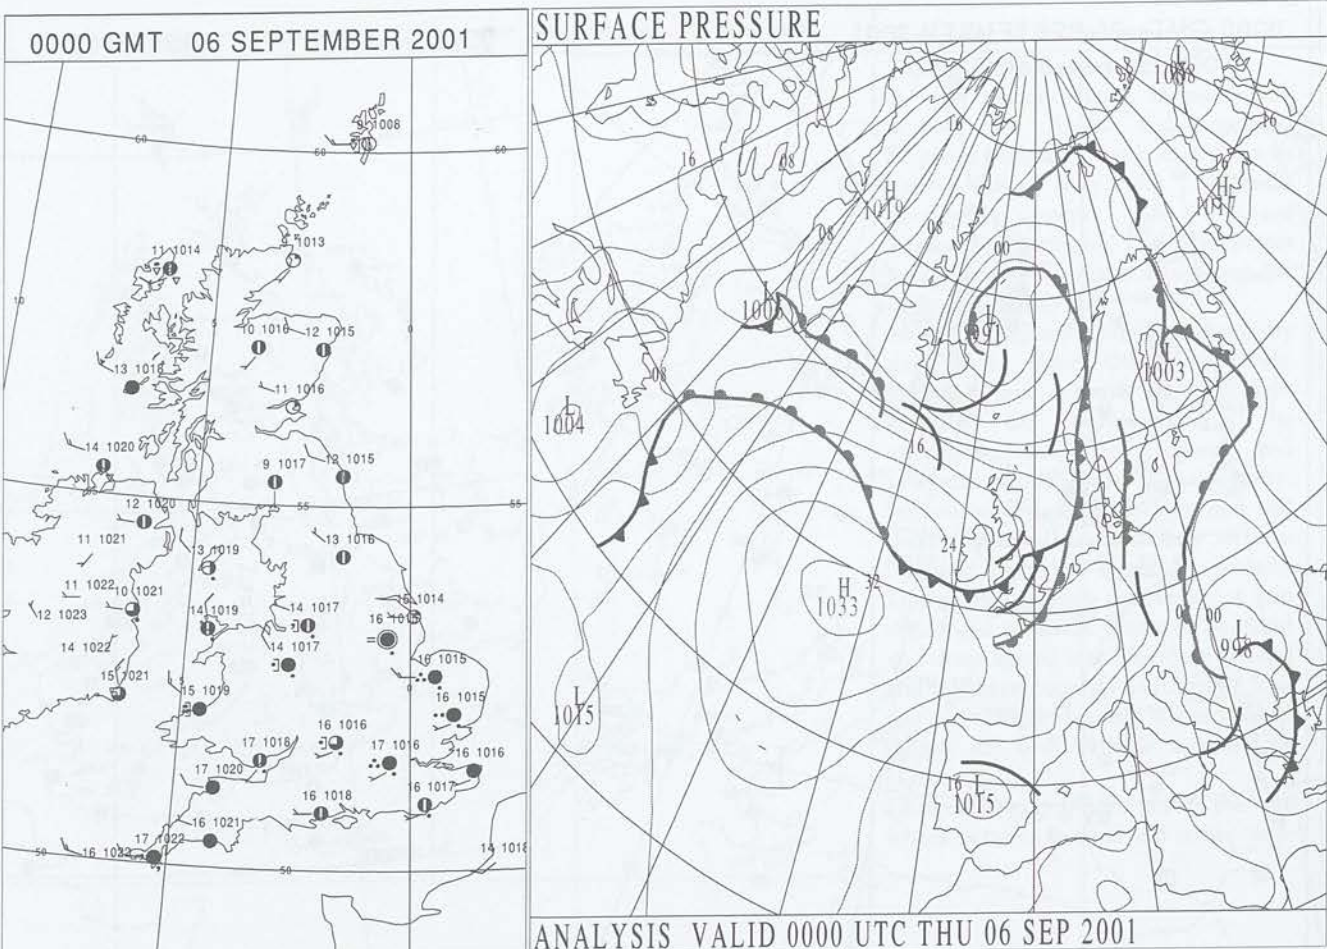

SIGNIFICANT WEATHER

Summary of UK Weather for Saturday 08 September 2001.

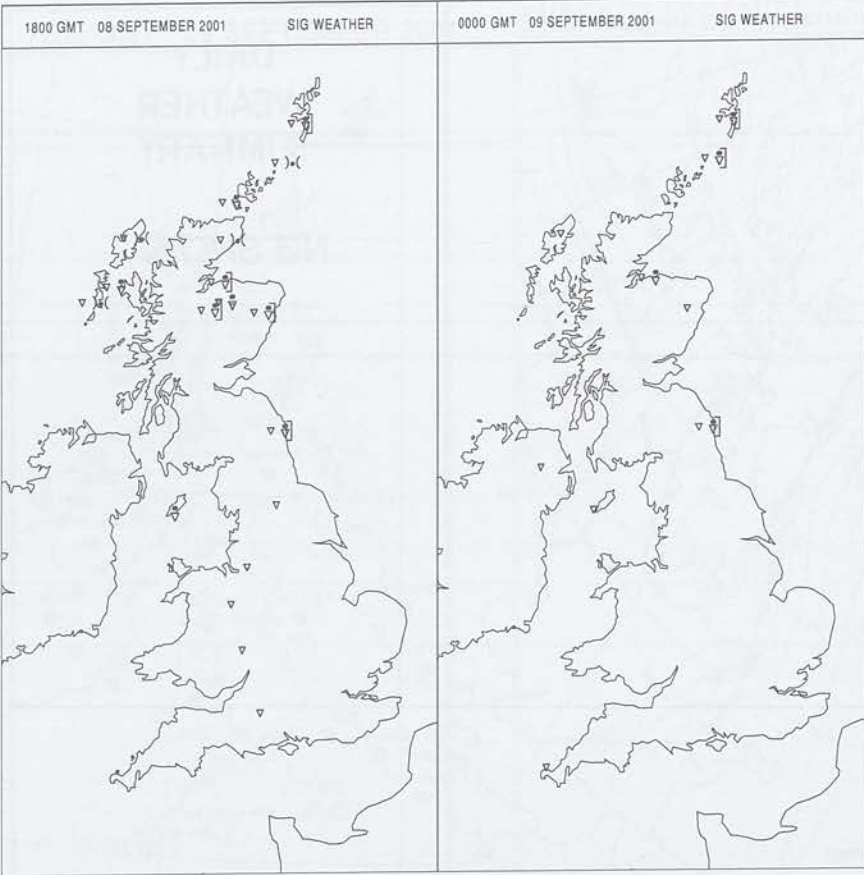

Overnight, showers affected much of northern Scotland, and these extended across western Scotland and Northern Ireland later in the night. A narrow band of rain, initially across north Wales and northern England, edged southwards during the night to affect south Wales and southern England towards daybreak. Scattered showers followed on behind into northern England.

The rain across southern parts cleared by mid morning to leave much of England and Wales with a bright day with sunny spells. Some showers developed, chiefly across north Wales, northwest England, the West Midlands and also across parts of East Anglia. Many places though, had a dry day.

There were further showers for northern Scotland, some of which were heavy. Southern Scotland fared much better with a mainly dry day and some sunny spells.

Northern Ireland saw some showers for a time in the morning, but the rest of the day was dry with sunny spells.

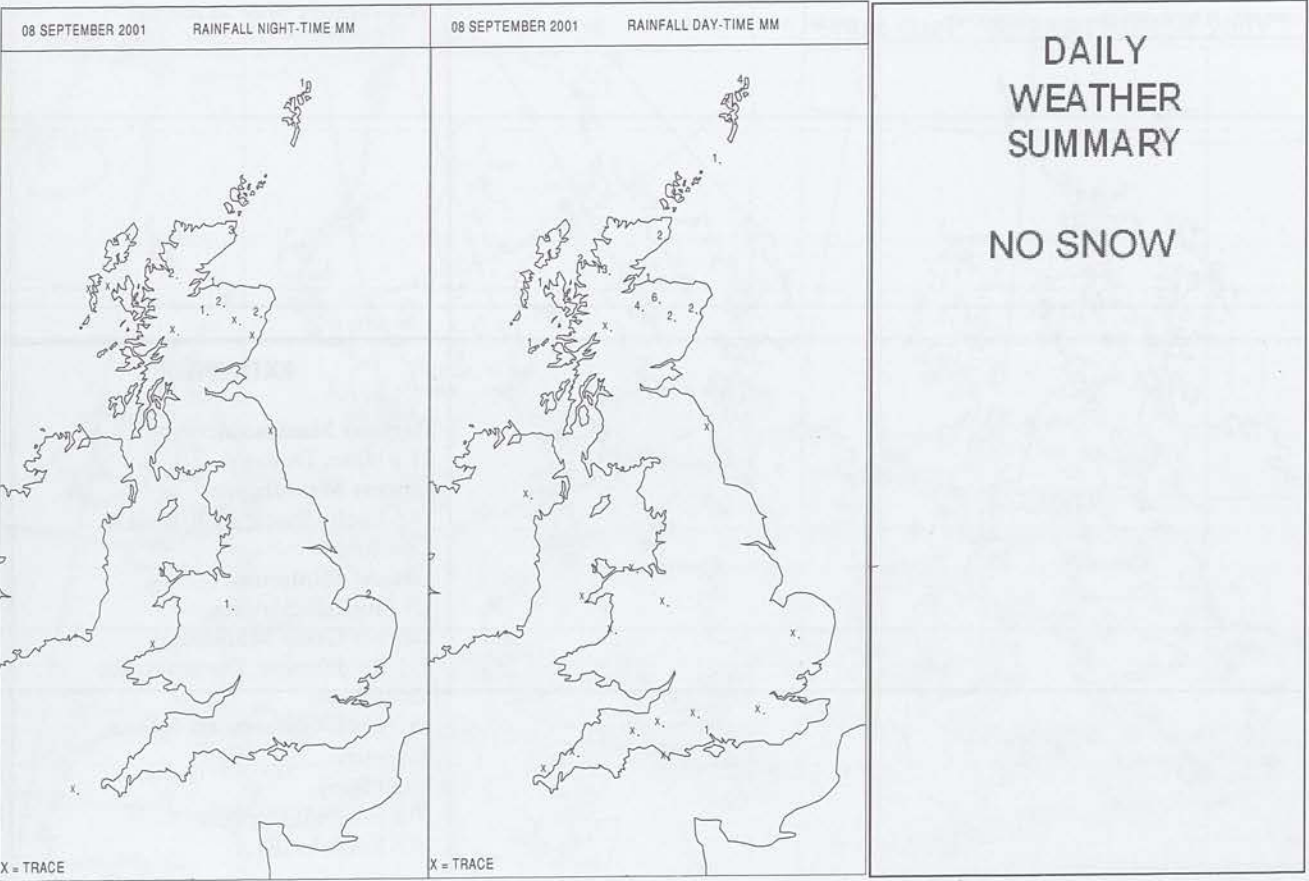

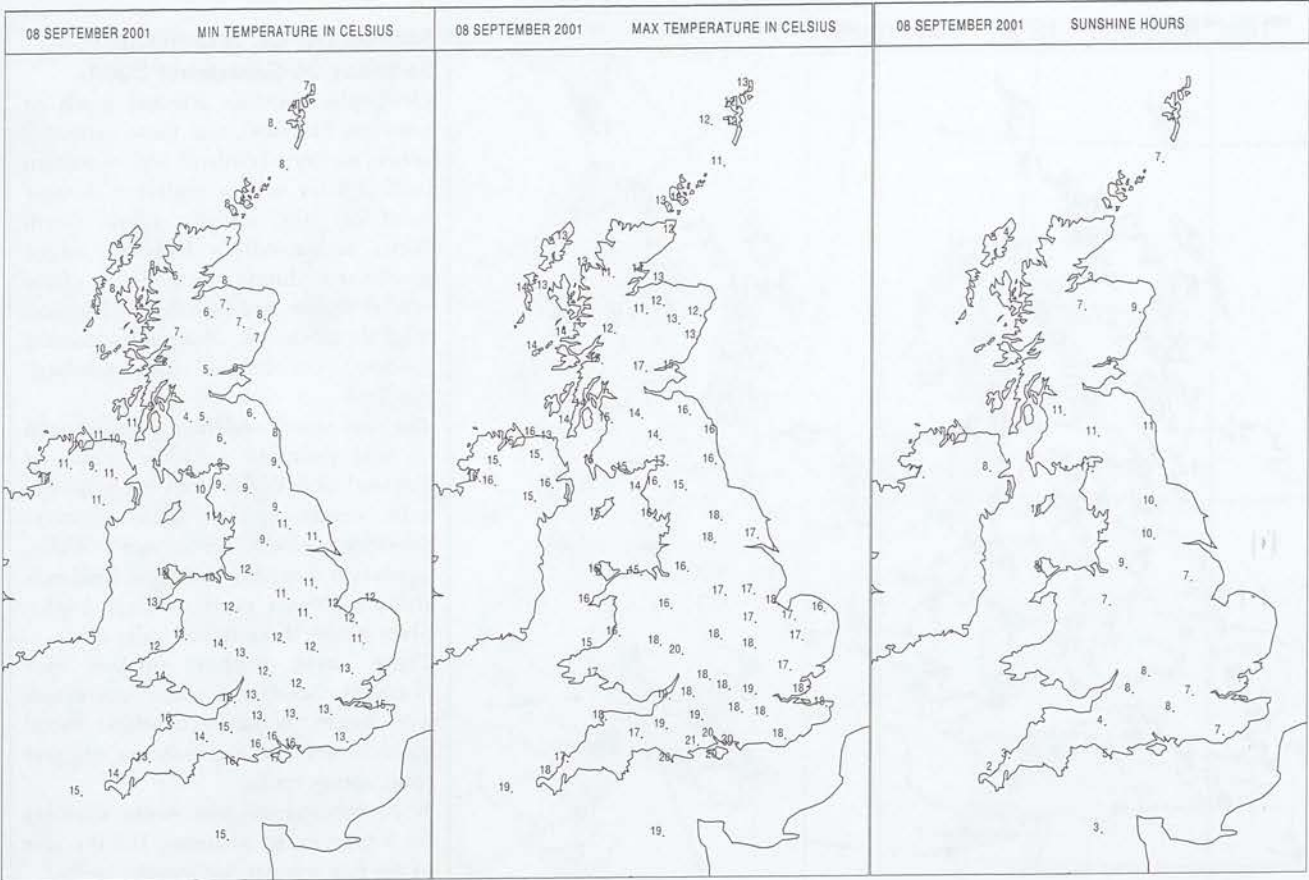

It was a windy day, especially in the north and east. It was generally rather cool, although southwestern parts saw temperatures close to normal.

EXTREMES

- Highest Maximum: 21.3 Hurn, Dorset
- Lowest Maximum: 10.5 Loch Glascarnoch, Ross & Cromarty
- Lowest Minimum: 4.3 Saughall, Ayrshire
- Lowest Grass Minimum: -0.7 Eskdalemuir, Dumfriesshire
- Most Rain: 15.2 Loch Glascarnoch, Ross & Cromarty
- Most Sun: 10.8 Saughall, Ayrshire
- 10.8 Eskdalemuir,

SIGNIFICANT WEATHER

0600 GMT 09 SEPTEMBER 2001	SIG WEATHER	1200 GMT 09 SEPTEMBER 2001	SIG WEATHER	<p>Summary of UK Weather for Sunday 09 September 2001.</p> <p>Sunday began breezy down the eastern side of the country with a scattering of showers. Most central and western parts were dry with somewhat lighter northwesterly breezes, however, the odd light shower did crop up. Under the clearer skies in disparate parts of the United Kingdom there was a touch of ground frost in sheltered locations. The morning saw some heavy showers in places near the east coast but there was little general change elsewhere with mostly dry weather save for the odd rogue light shower and plenty of sunshine in some southern and western localities.</p> <p>During the afternoon the weather pattern changed little, however a minor trough brought showers rather further inland across southern districts early in the evening. At the same time the cloud began to become rather more extensive across northwestern parts of Scotland.</p> <p>Temperatures were mostly well below average, indeed only along the sheltered English Channel coasts in western parts of southern England did temperatures approach average. In many places temperatures were cool or rather cool and in exposed parts near the east coast it was cold.</p>

SURFACE REPORTS

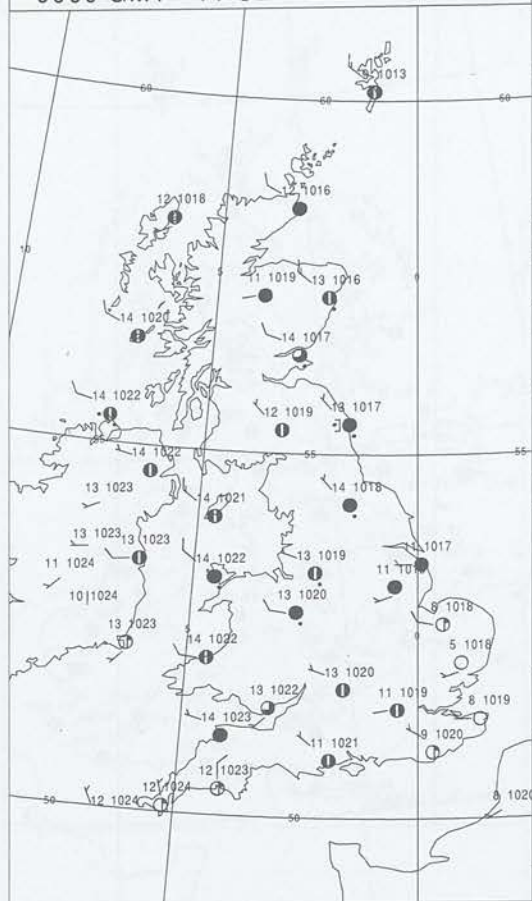

SIGNIFICANT WEATHER

Summary of UK Weather for Tuesday 11 September 2001.

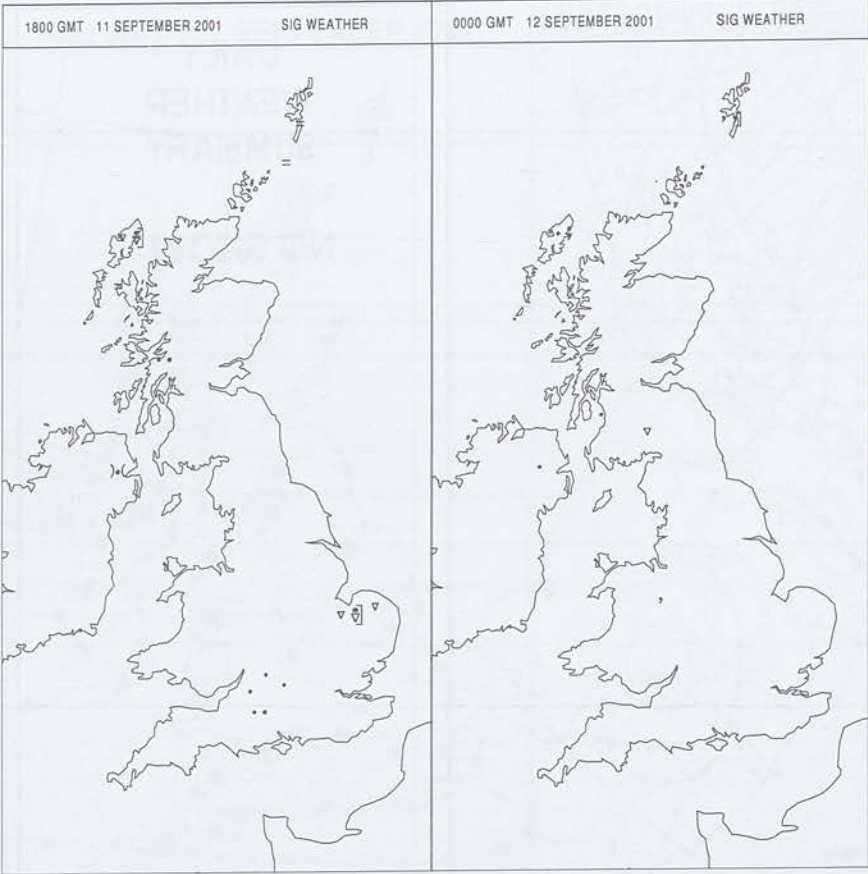

Rain affected Caithness and Orkney at first, while rain in Lincolnshire moved southeast into East Anglia and Essex late in the night. Elsewhere it was mainly dry.

During the early morning further light rain fell in East Anglia, Essex and adjacent counties before sliding southeast to affect the extreme east of Kent. The rest of the morning saw the odd spot of rain or drizzle being reported across England, although the southwest was dry, with sunshine in Cornwall. Northern Ireland had scattered showers.

In the afternoon showers fell in Northern Ireland and in northwest Scotland. Spots of rain and drizzle were reported along the west Wales coast, in East Anglia and southern England, away from the southwest; Cornwall continued to see plenty of sunshine.

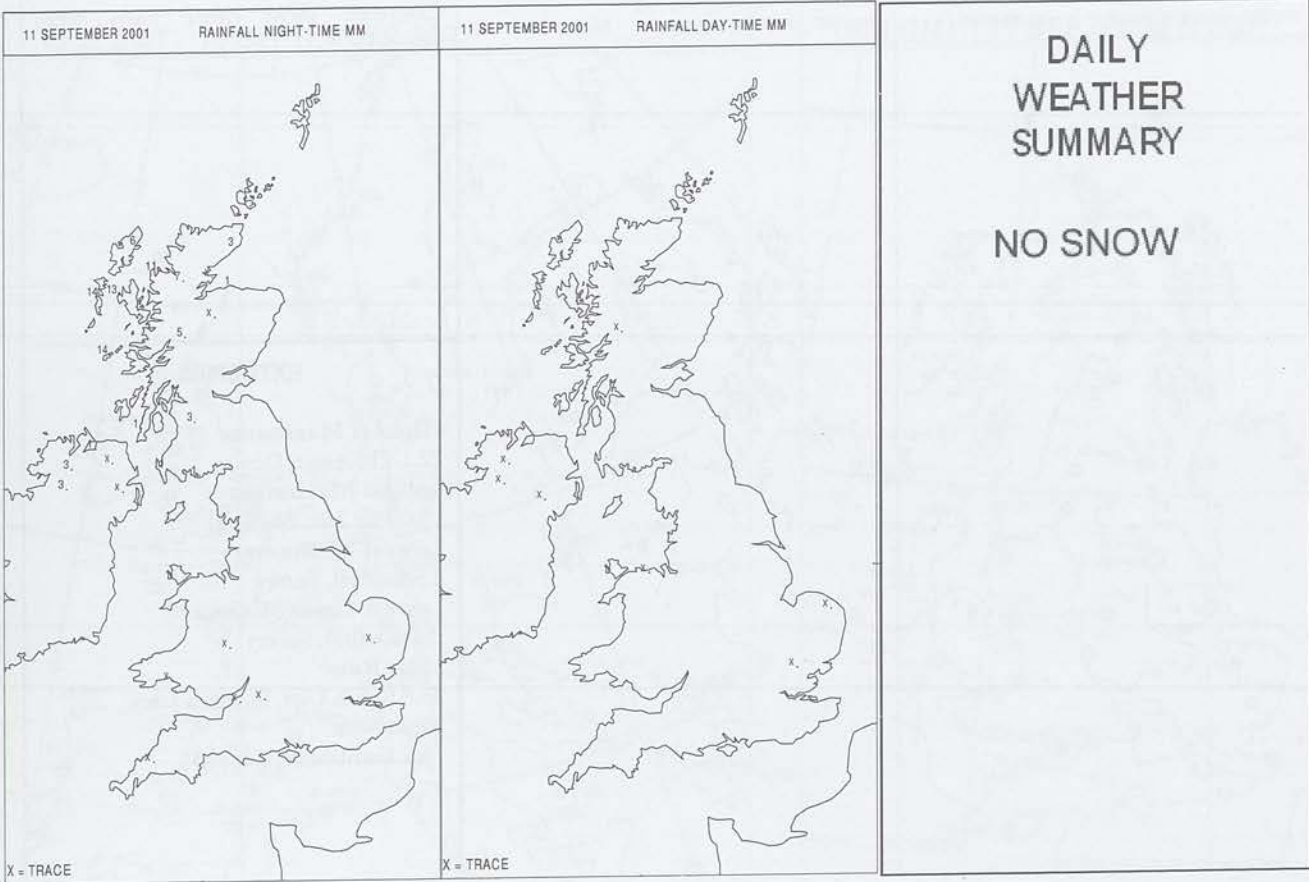

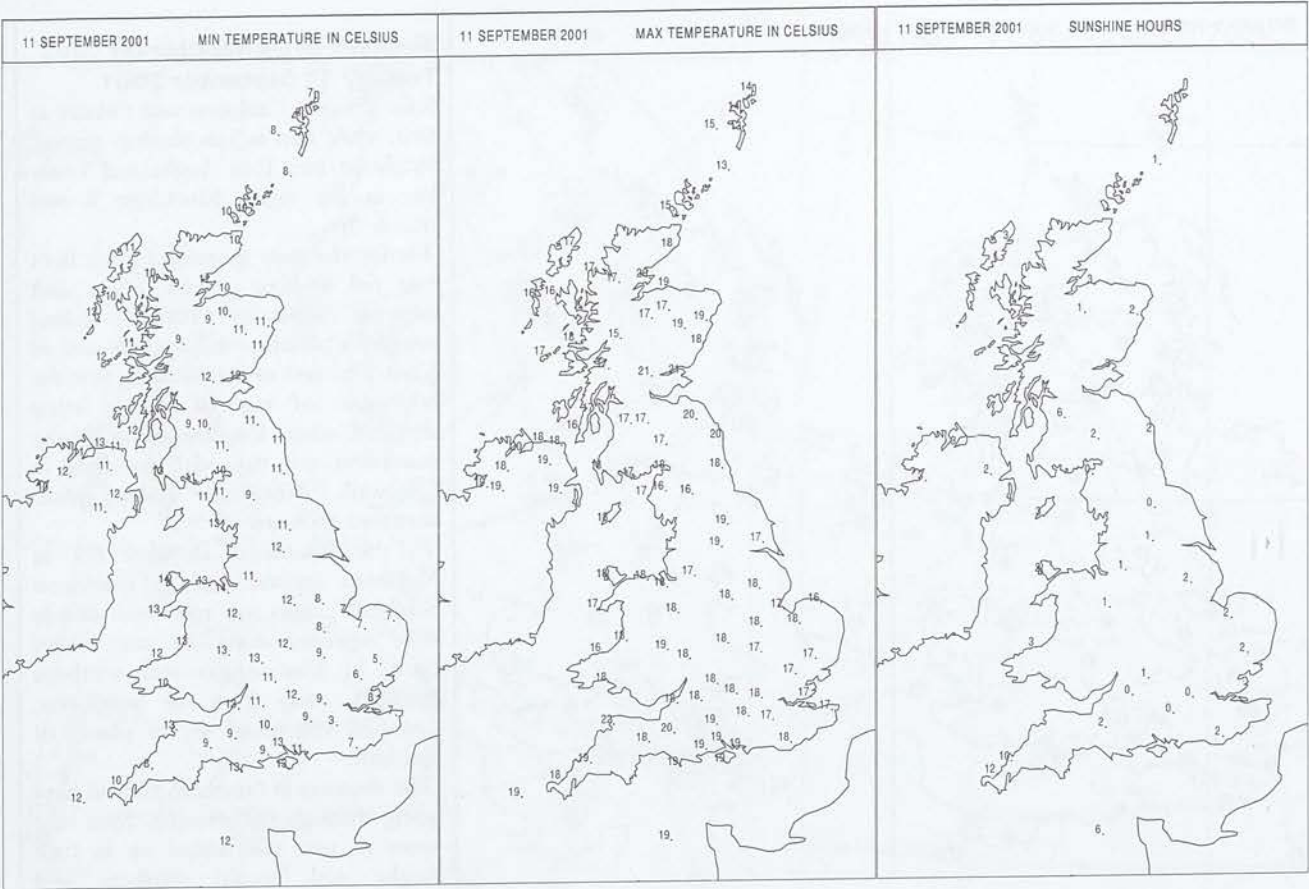

The showers in Northern Ireland kept going through the evening. Spits and spots of rain still turned up in East Anglia and central southern and southeast England.

Temperatures were warm in much of Scotland, Northern Ireland and Cornwall, most other parts were normal.

DAILY WEATHER SUMMARY

SURFACE REPORTS

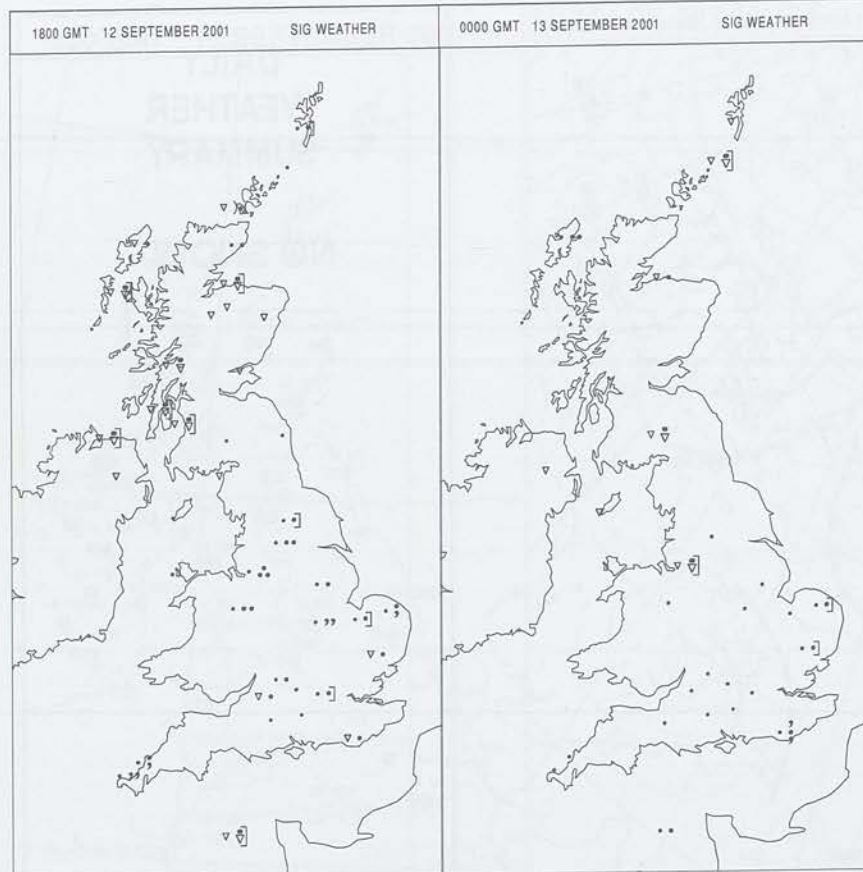

SIGNIFICANT WEATHER

Summary of UK Weather for Wednesday 12 September 2001.

Rain spread into the Hebrides and northwest Scotland soon after midnight and spread slowly southeastwards to reach Inverness to Belfast by dawn. Elsewhere it remained mostly dry but on the cloudy side.

During the morning heavy rain affected western and central Scotland but by midday brighter showery weather arrived across the area and also across Northern Ireland. The main rain area spread into northern England during the morning and had reached Scarborough to Bude by midday. Some heavy bursts of rain affected the Pennines and Welsh mountains during the afternoon, and patchy light rain broke out ahead of the main rain band across central southern England and East Anglia. Clearer weather arrived across northern England and north Wales during the afternoon, and frequent heavy showers occurred over western Scotland. The evening saw the main rain area southeast of a line Lincoln to Plymouth, but more persistent rain spread back into western parts of Scotland. In between it was drier with just scattered showers across western areas.

Temperatures generally across the UK were around normal.

SURFACE REPORTS

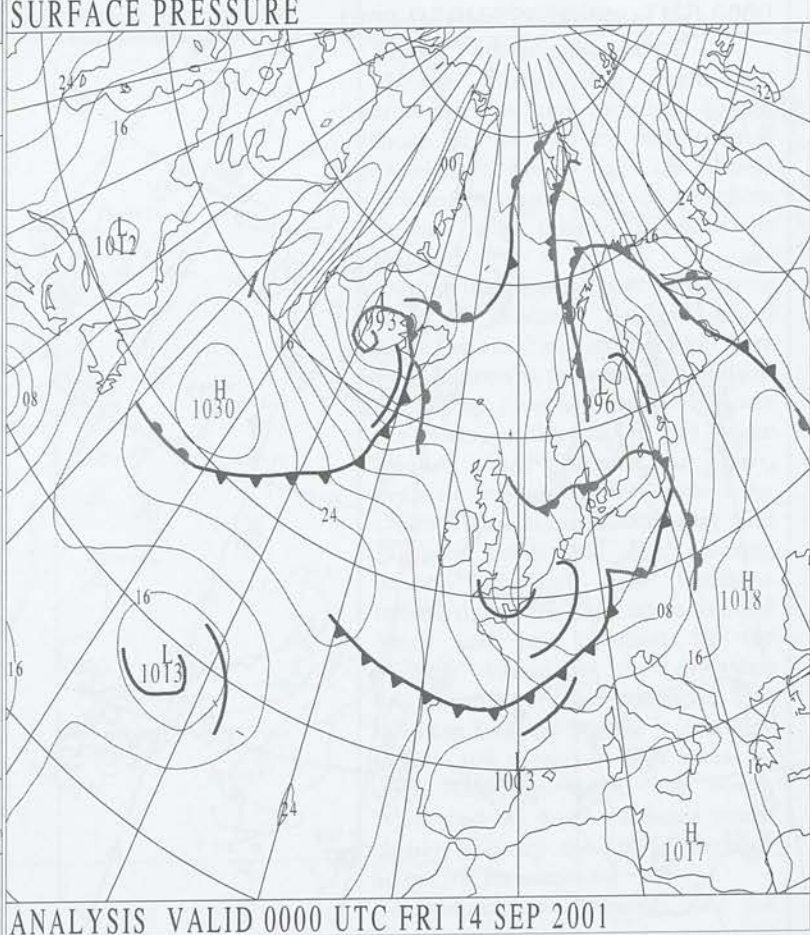

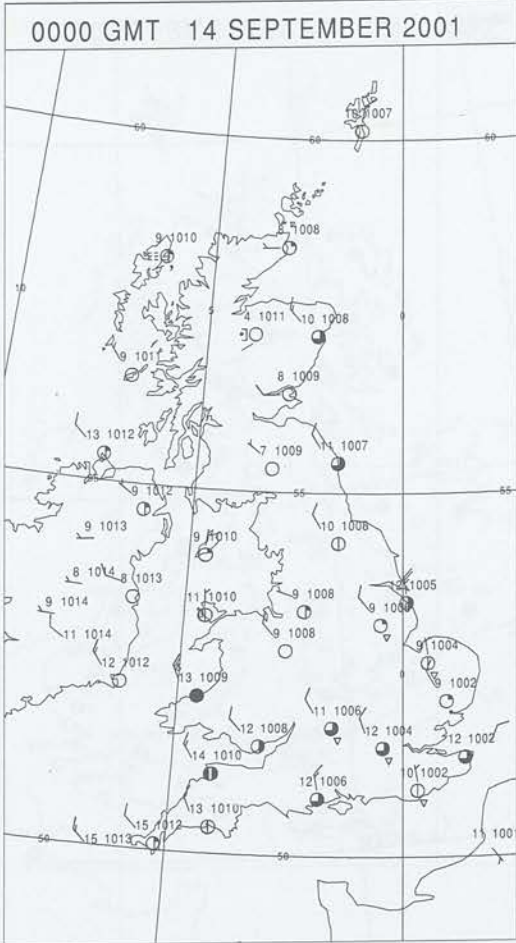

SIGNIFICANT WEATHER

Summary of UK Weather for Friday 14 September 2001.

Showers cleared East Anglia and southeast England overnight leaving much of the UK dry with variable cloud, but patchy light rain/drizzle affected northern parts of Northern Ireland and coasts of northeast England.

During the morning the rain/drizzle close to northeast England edged south across East Anglia and there were showers in the north of Northern Ireland, but elsewhere the weather was dry with variable cloud and some lengthy sunny periods in places, especially the south. Rain reached the Outer Hebrides around midday and extended south and east reaching western Scotland and Northern Ireland during the early afternoon and south and east Scotland by the evening. Elsewhere the dry and bright/sunny weather continued, but northern England became increasingly cloudy and there was rain there by dusk. This then edged into North Wales and the north Midlands whilst clearer, showery conditions extended across the far northwest.

Temperatures were mostly not far from average, but it was warm in sheltered parts of south Wales and southwest England and rather cool in the Western Isles.

EXTREMES

SURFACE REPORTS

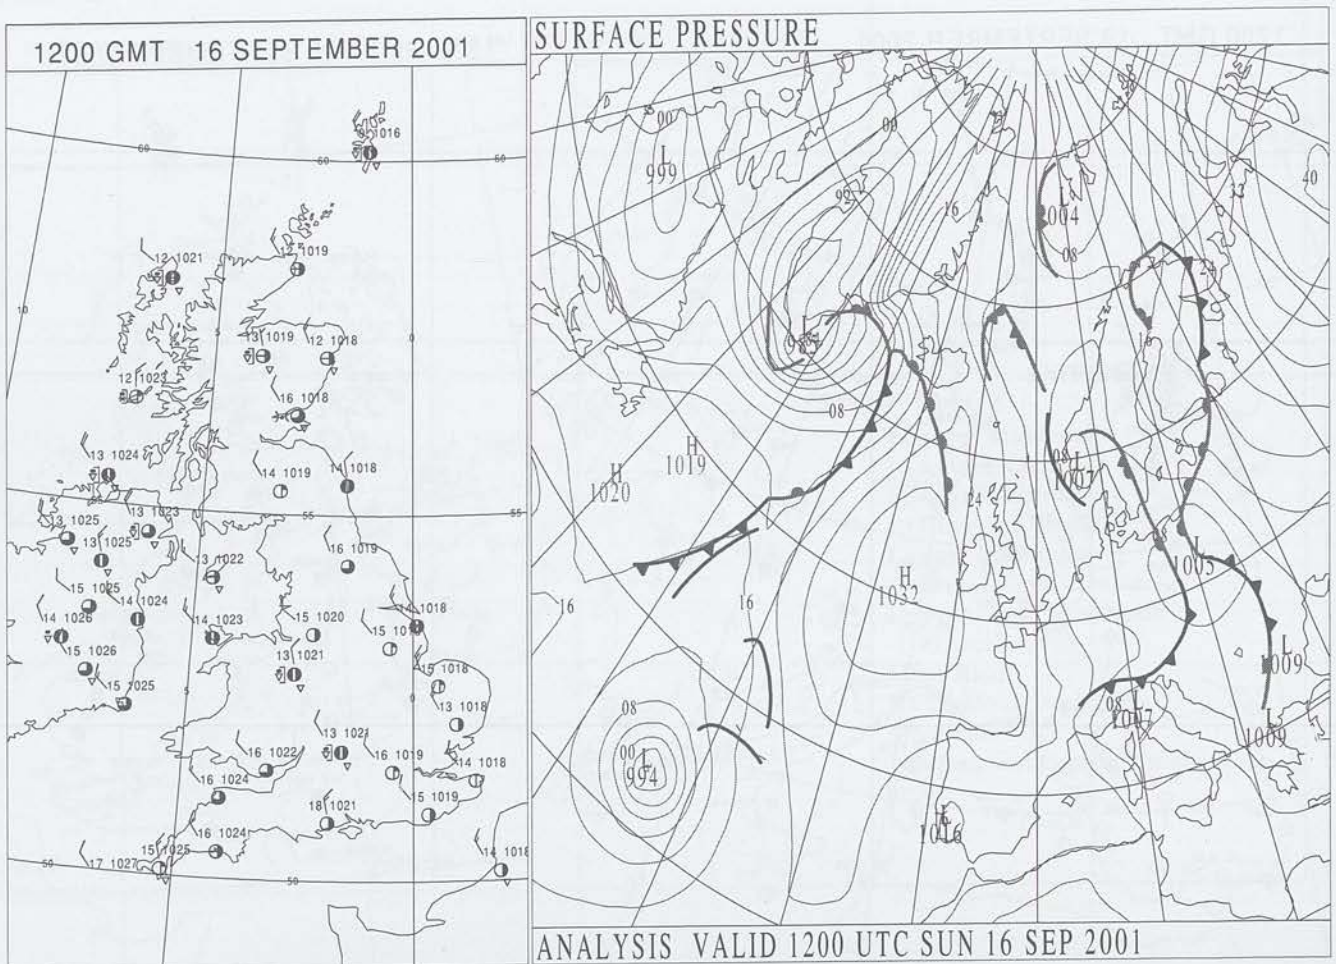

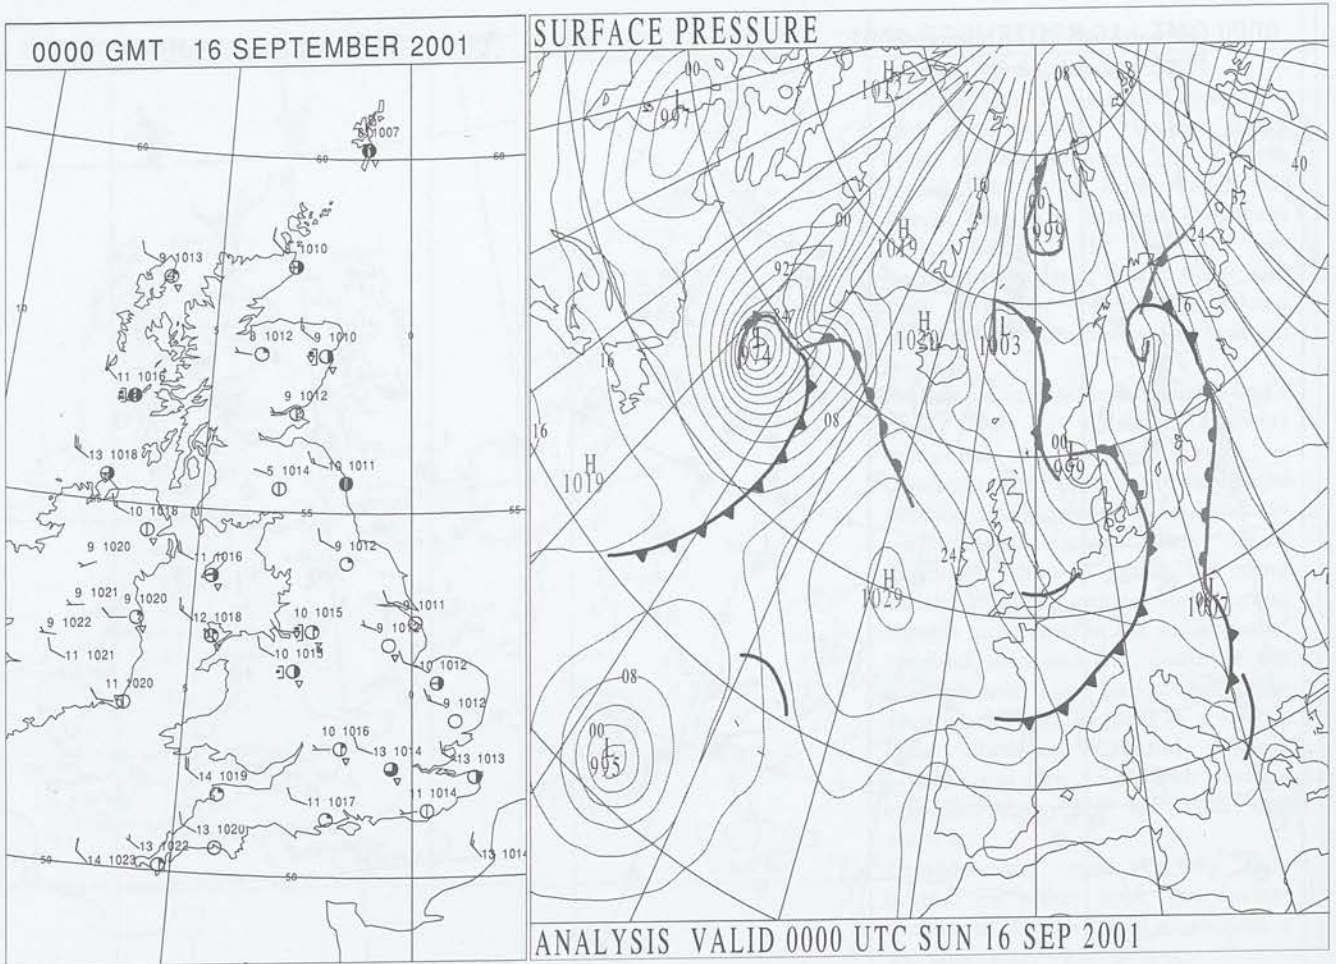

SIGNIFICANT WEATHER

0600 GMT 15 SEPTEMBER 2001	SIG WEATHER	1200 GMT 15 SEPTEMBER 2001	SIG WEATHER	Summary of UK Weather for Saturday 15 September 2001. Overnight, showery rain affected southern England for a time before clearing away southeastwards later in the night. For western and northern Scotland, Northern Ireland and northwest England there were frequent showers. Remaining areas had a largely dry night with clear spells. Showers continued to affect western and northern Scotland, Northern Ireland and northwest England through the morning. The showers became more widespread by the afternoon, affecting the rest of Scotland, northern and eastern England. Between the showers, there were sunny spells. There were a few scattered showers elsewhere but many places had a dry and bright day with plenty of sunshine. The best of the sunshine was in the south and west. The majority of the showers died away during the evening, but were still evident across northern Scotland, Wales, the Midlands and also East Anglia. It was a windy day generally. The temperatures were mostly close to or a little below normal.

SURFACE REPORTS

SIGNIFICANT WEATHER

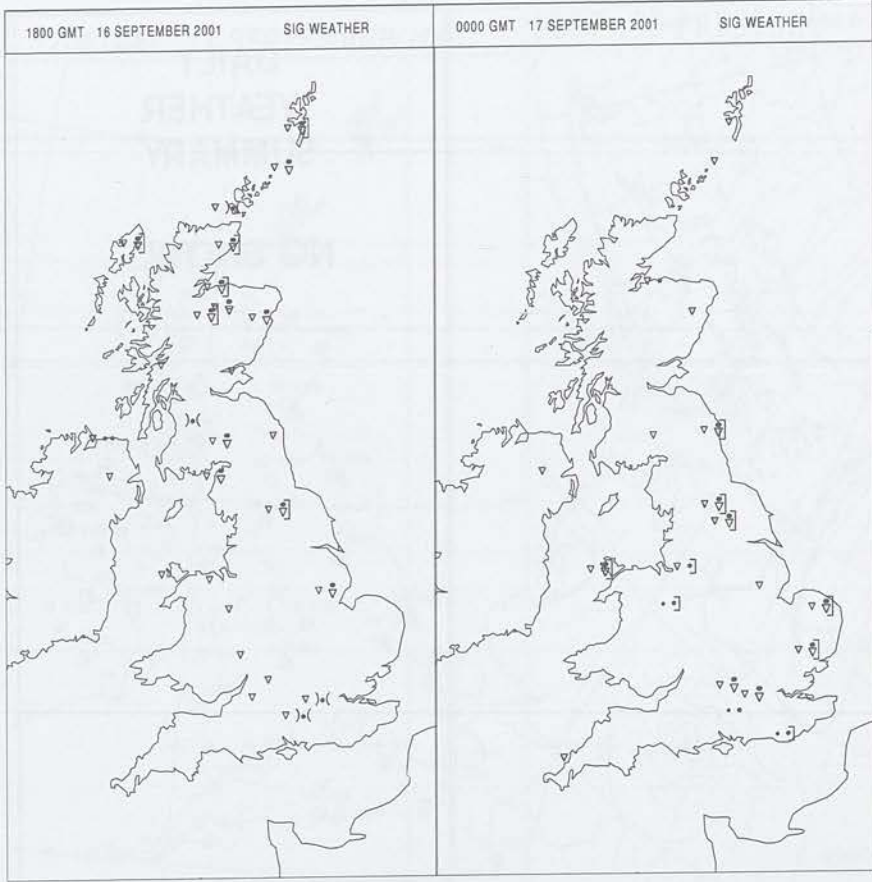

Summary of UK Weather for Sunday 16 September 2001.

Overnight there was a good deal of dry and clear weather. However some areas did see showers. The showers feeding in on a northwesterly air stream blew into Scotland, Northern Ireland and off the Irish Sea into northwest England, North Wales and the northwest Midlands. Isolated showers also brushed across eastern Norfolk.

During the morning many places had a good deal of sunshine. Showers continued in the same areas as overnight, with some more prolonged rain for a time in eastern Scotland. As temperatures rose and cloud developed showers broke out more widely in the afternoon and evening though most areas in the southwest of England remained dry. Some of the showers were quite heavy. During the evening showers lingered in a swathe from northwest England towards London and East Anglia with showers elsewhere becoming light and well scattered.

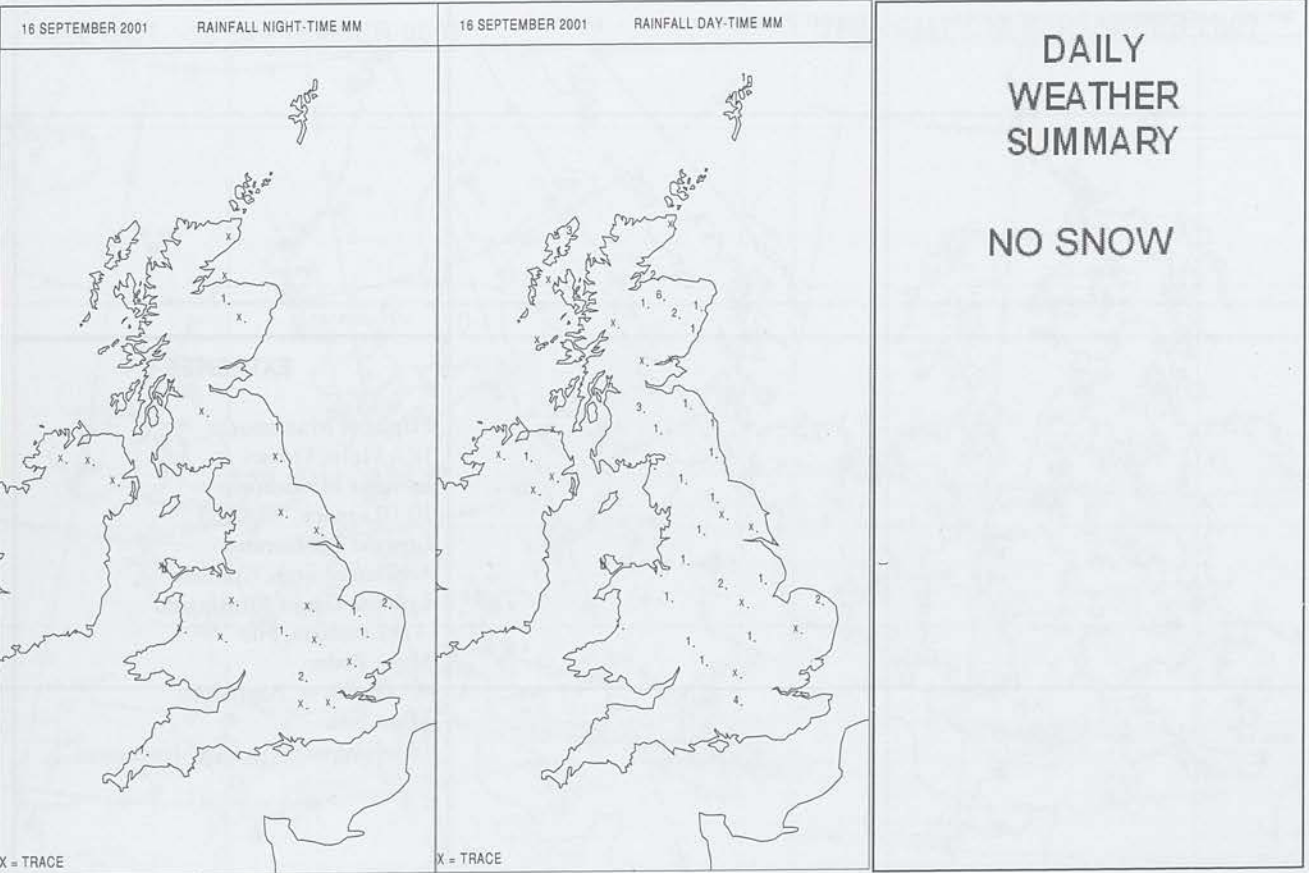

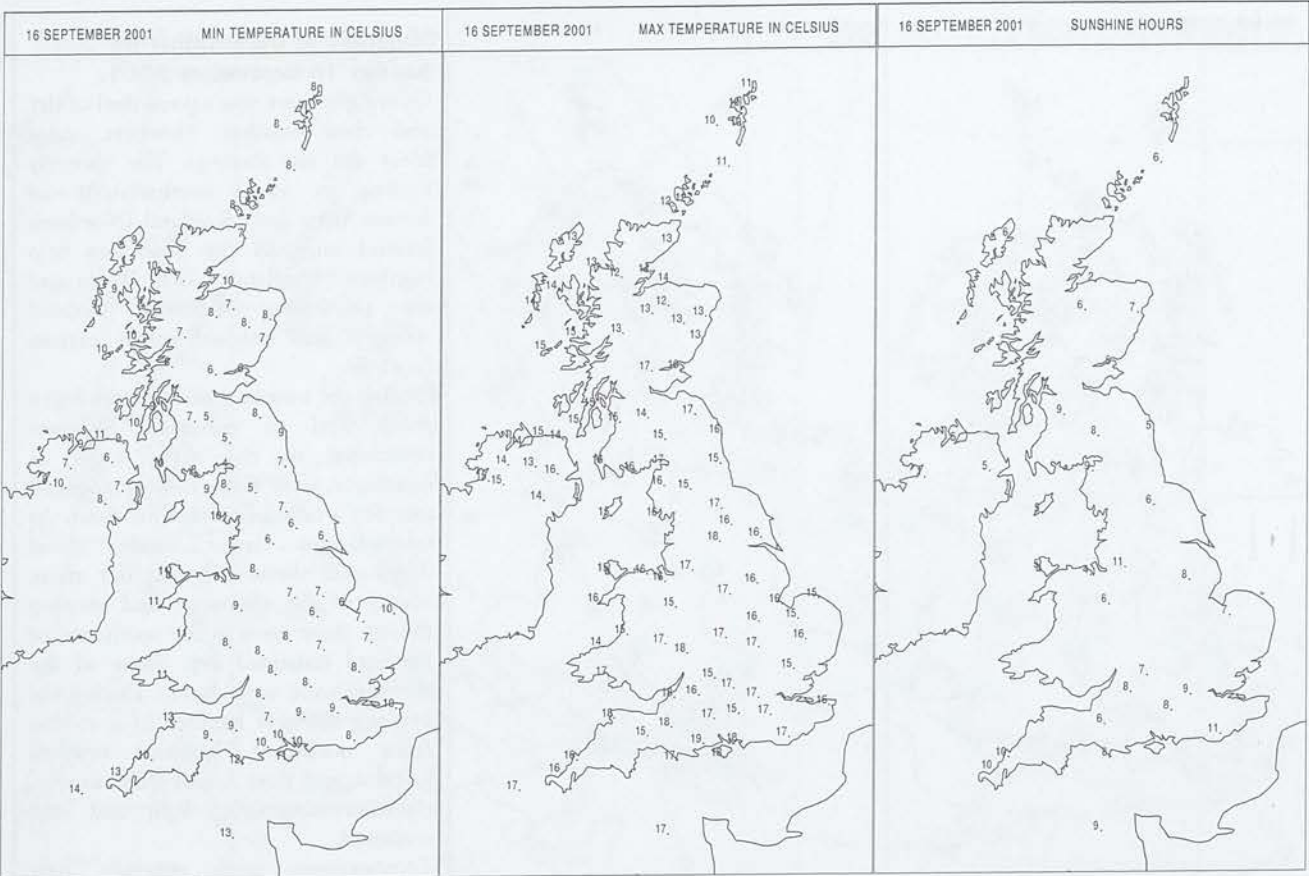

Temperatures were generally near normal or rather cool, the coolest weather in the north and east where it was also rather windy at times.

DAILY WEATHER SUMMARY

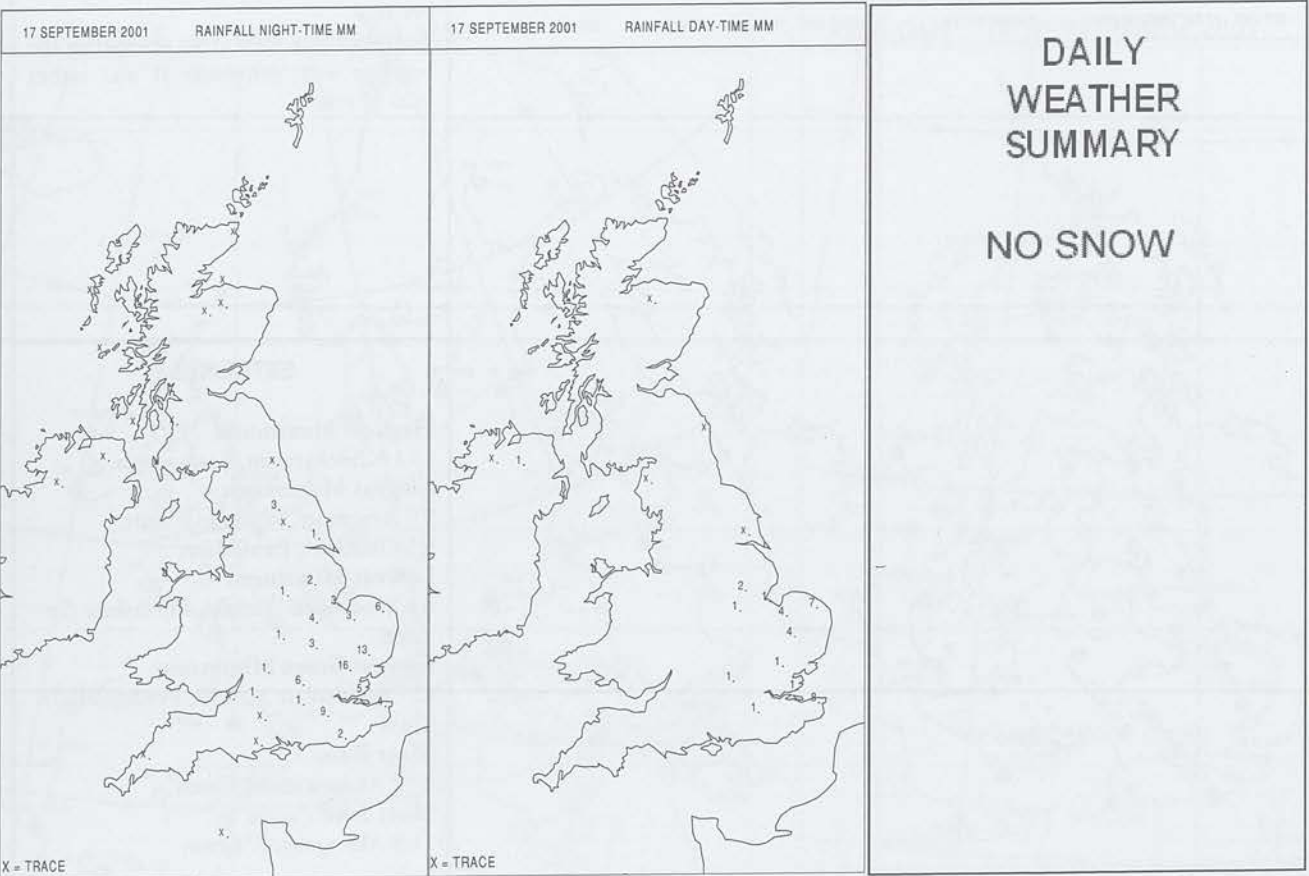

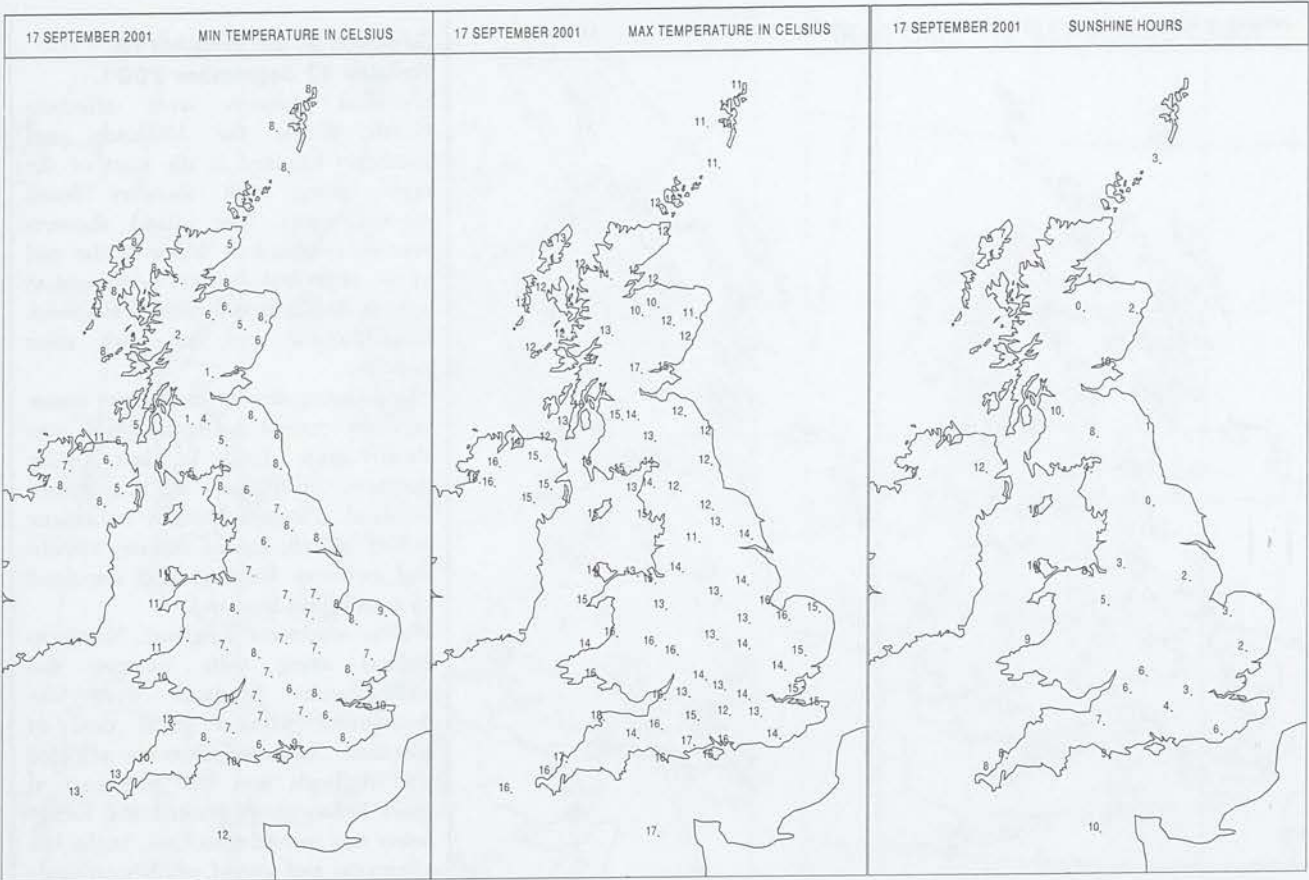

SURFACE REPORTS

SIGNIFICANT WEATHER

Summary of UK Weather for Wednesday 19 September 2001.

Western Scotland and Northern Ireland had a dry night with clear spells, but eastern Scotland remained cloudy with light rain or drizzle. A spell of persistent rain affected East Anglia, The Midlands and southeast England overnight with some heavy bursts in places. Outbreaks of rain also occurred across northern England and eastern Wales.

By dawn the heaviest of the rain still lingered across East Anglia and southeast England but this turned showery during the morning. The rest of England and Wales had a cloudy morning with outbreaks of rain or drizzle. Late morning saw further rain spread into northeast England and eastern Scotland, heavy at times, and this spread across the rest of northern England and into north Wales and the west Midlands during the afternoon. Showers continued to affect eastern England during the afternoon, but in contrast parts of western Scotland had a dry and sunny day. The rain area started to break up during the evening and become lighter, but showers continued across eastern England.

Temperatures were cool or rather cool in the wetter areas, but normal for southwest England and west Wales. Some sheltered parts of southwest Scotland were very warm.

SIGNIFICANT WEATHER

0600 GMT 20 SEPTEMBER 2001	SIG WEATHER	1200 GMT 20 SEPTEMBER 2001	SIG WEATHER	Summary of UK Weather for Thursday 20 September 2001. Showers affected much of England and eastern parts of Wales overnight but most of these had died away by the end of the night. Northern Ireland and western Scotland had a dry night but rain reached northeast Scotland just before dawn. For Northern Ireland, southwest England and much of Wales the day was dry with sunny intervals. The rain over eastern Scotland continued to spread south-westwards during the day and reached northern parts of England during the afternoon. Elsewhere across England showers developed, occasionally heavy over East Anglia and the southeast. During the evening the showers across England slowly became confined to East Anglia and southeast England and thunder was reported across Cambridgeshire. The rain continued over southern and eastern Scotland through the evening but started to peter out across northern parts of England. Temperatures across much of England, Northern Ireland and Wales were near normal, although sheltered spots in southwest England were rather warm. Northeast England and eastern Scotland were cool, whereas some western parts of Scotland stayed rather warm.

DAILY CLIMATE DATA

DAILY WEATHER SUMMARY

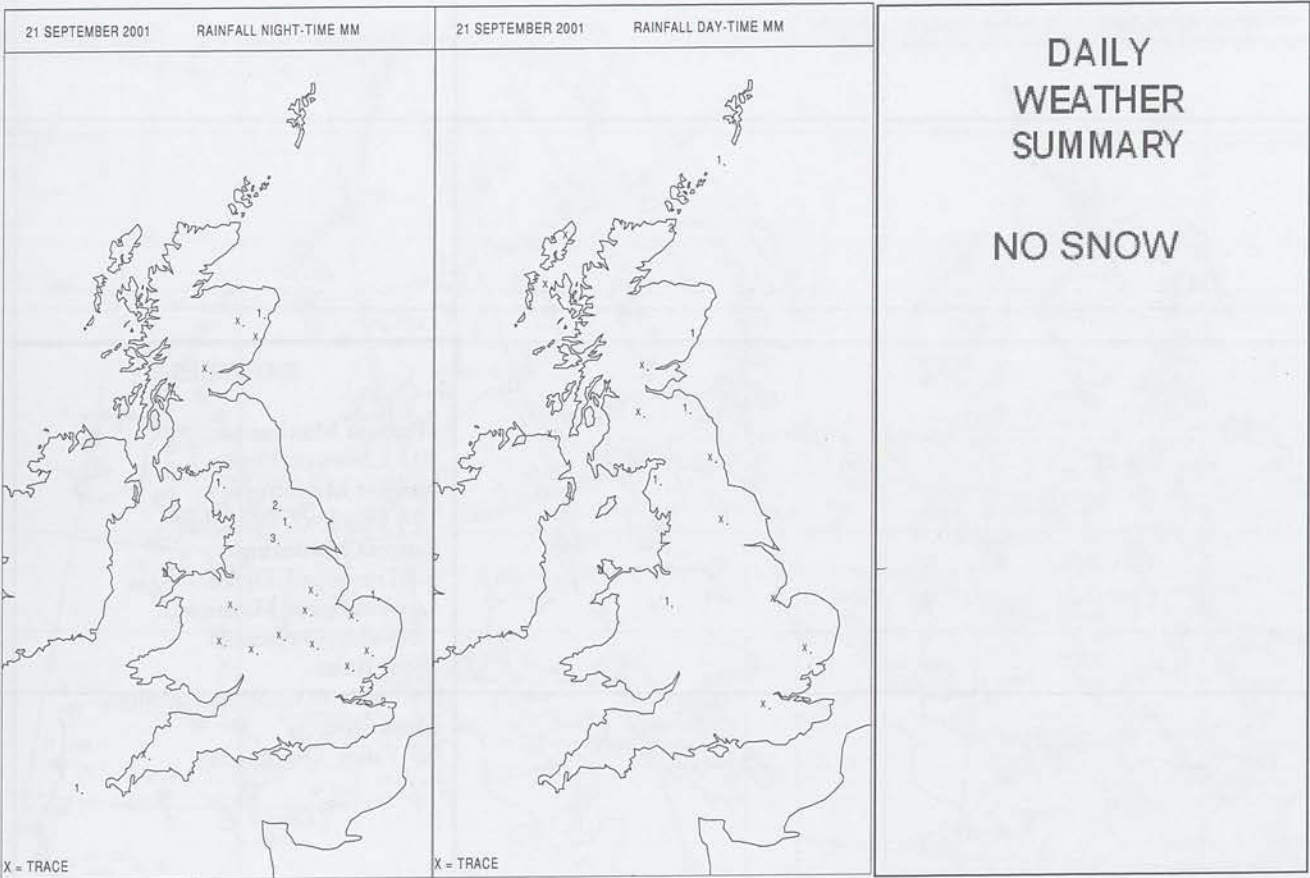

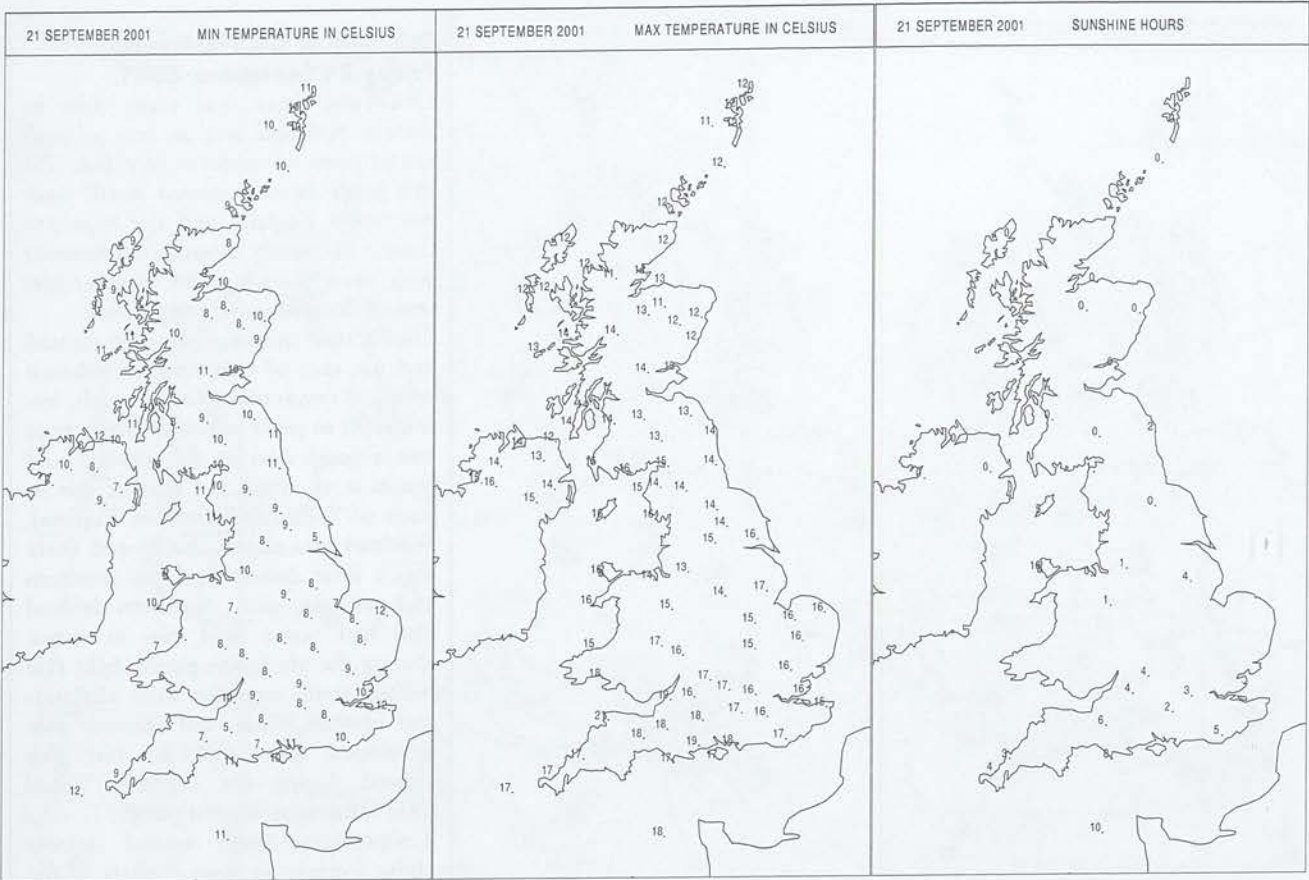

SURFACE REPORTS

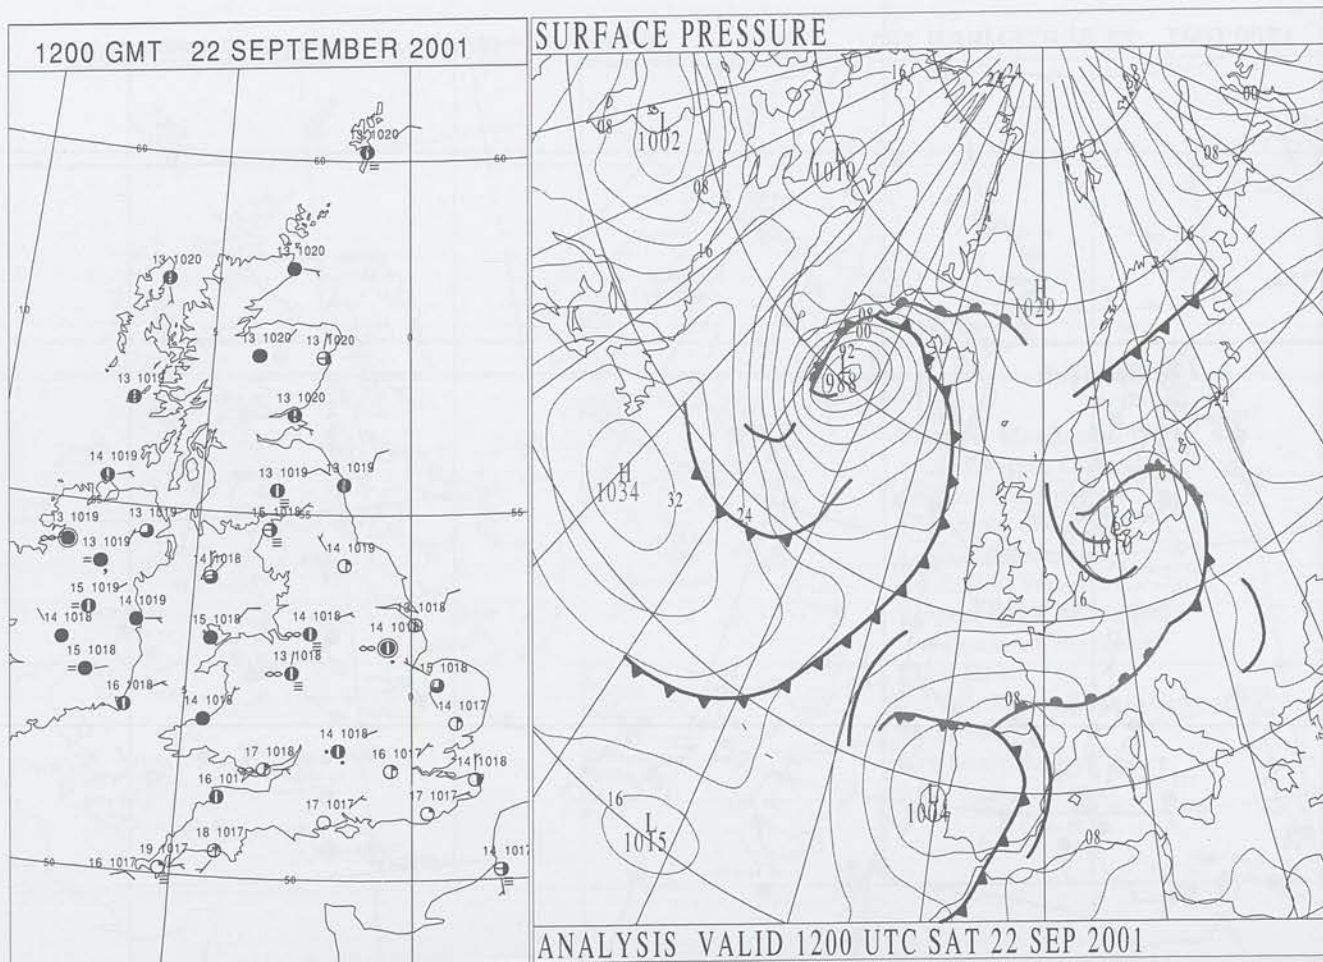

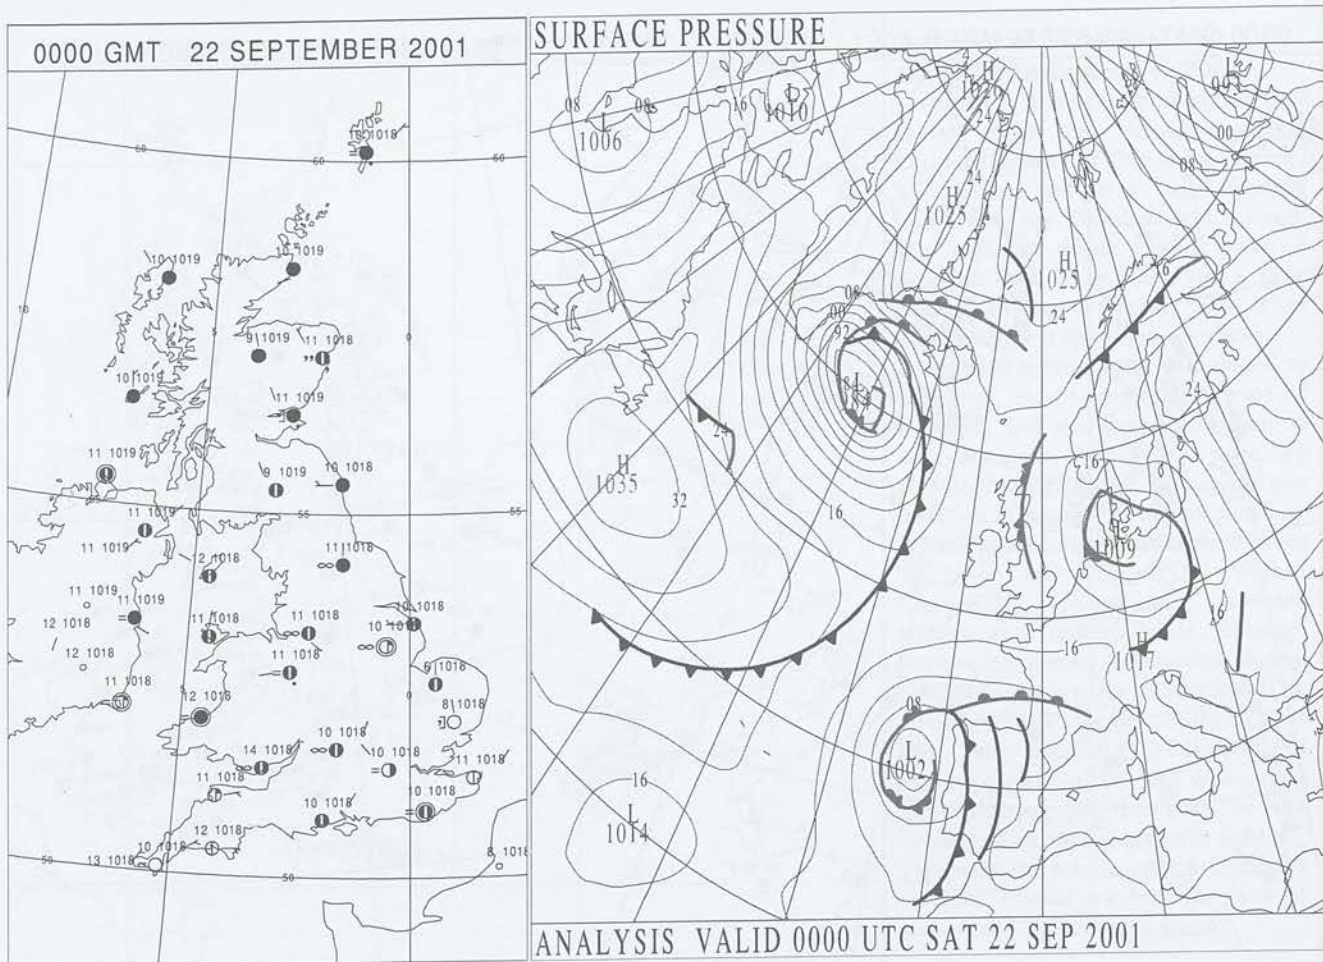

SIGNIFICANT WEATHER

Summary of UK Weather for Monday 24 September 2001.

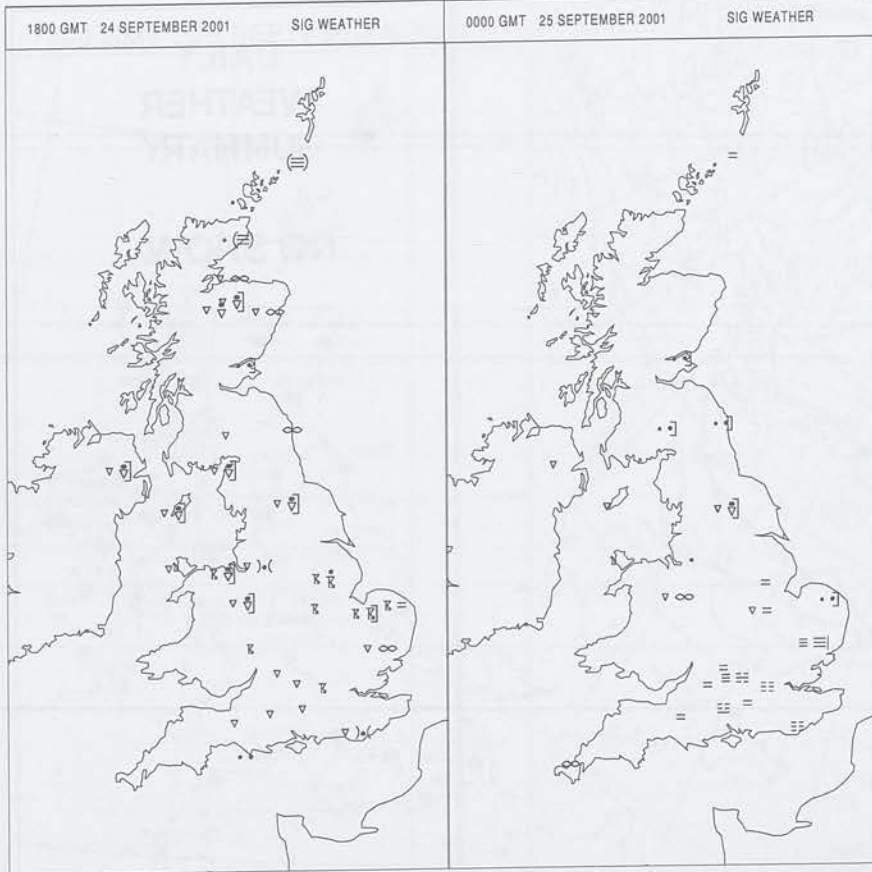

Overnight, a showery band of rain edged across the Midlands, northern England and into Wales. Thundery showers affected those parts close to the North Sea coasts, chiefly East Anglia and eastern parts of Kent. Towards the end of the night the showers started to creep further inland. Remaining areas had a largely dry night but with often large amounts of cloud.

During the morning, showers developed widely across England and Wales. Some of the showers were heavy and thundery although southernmost parts saw very few showers until the afternoon. Between the showers there were some bright or sunny intervals.

Eastern and central Scotland also had a showery day and was largely cloudy. Western Scotland and Northern Ireland fared better with sunny spells and just a few showers. The best of the sunshine was over the Western Isles.

During the evening, the showers readily died away from many places but were still evident across the north Midlands, northern England and also central and eastern Scotland.

The temperatures were generally close to or a little below normal.

SURFACE REPORTS

SIGNIFICANT WEATHER

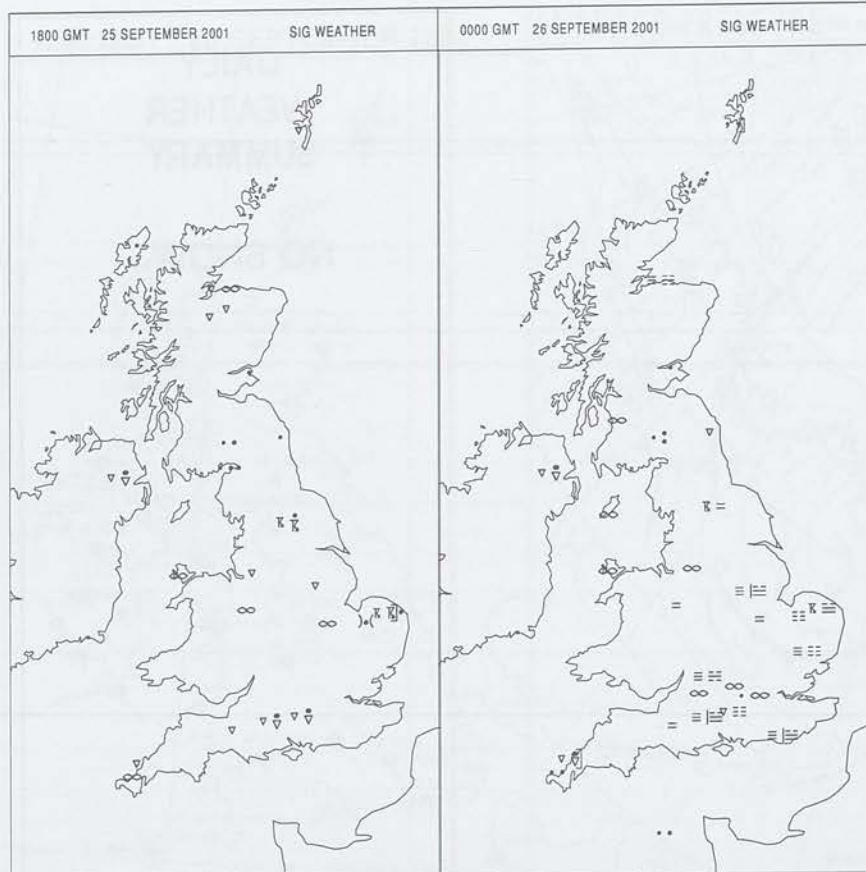

Summary of UK Weather for Tuesday 25 September 2001.

Whilst northern parts of England and southern Scotland continued to see some heavy showers during early hours, southern districts were much quieter with widespread mist and some thick patches of fog developing by the morning. Central and northern Scotland were cloudy and dry until around dawn when some rain arrived in northeast Aberdeenshire.

Further pulses of showery rain ran west across northern England through the morning, whilst the rain affecting eastern parts of Scotland slowly worked west too. Across southern England fog and mist lingered in some areas until late in the morning, although sunshine came through more quickly in the southwest and East Anglia.

During the afternoon and evening the showers in northern parts moved north to affect just Northumbria and southern Scotland. However, further south scattered showers and isolated thunderstorms again developed across Norfolk West Wales and also some other southern parts of England, too.

Temperatures were near normal in many parts of the south but were locally rather warm in the southwest. Northern areas were mostly below normal with a few places cold.

EXTREMES

Highest Maximum:

19.0 Chivenor, Devon

DAILY WEATHER SUMMARY

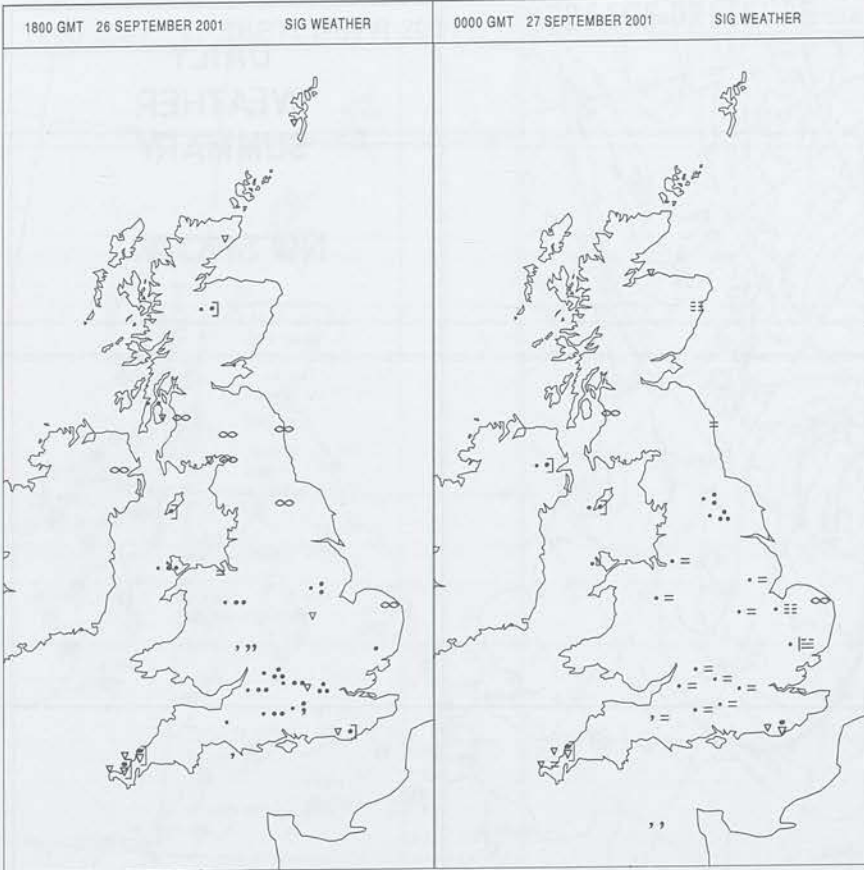

SURFACE REPORTS

SIGNIFICANT WEATHER

Summary of UK Weather for Wednesday 26 September 2001.
Most places began Wednesday dry and under the clear skies in central and eastern parts of England in particular there was some mist and fog. Across western Wales and southwestern England some outbreaks of rain were spreading north, whilst a band of showery rain ran across southern Scotland into Northern Ireland. Towards dawn showery outbreaks extended east across southern counties, although amounts were increasingly light and patchy. The fog in some central and eastern parts took until late morning to lift and disperse but any in southern districts was gone soon after dawn. Outbreaks of rain continued to feed eastwards across southern districts, whilst the rain in the north continued to slowly drift north across Scotland. Early afternoon a pulse of rain spread back across southwest England and this soon began to extend north and east into Wales and may other southern areas. In its wake some sharp showers subsequently broke out in southwest England with the odd thunderstorm. Highest temperatures were rather cold in eastern Scotland, mostly around normal elsewhere, although rather warm in western areas of Scotland, south to the Southwest of England.

EXTREMES

Highest Maximum:
19.1 Jersey Airport, Jersey

Lowest Maximum:
11.2 Glenlivet, Banffshire

SIGNIFICANT WEATHER

Summary of UK Weather for Friday 28 September 2001.
An area of rain crossed southern Scotland and northeast England early in the night to be Outer Hebrides to Dundee by dawn. Wales and northwest England had scattered showers early in the night, but the rest of England remained dry. Fog developed across southern England and East Anglia later in the night but cleared fairly quickly in the morning. Further outbreaks of rain, heavy in places developed over Scotland during the morning but most southern area became dry by mid afternoon. The rest of the UK had a dry morning, but outbreaks of rain spread into Northern Ireland during the afternoon and showers developed along the southern coasts of Devon and Cornwall. During the evening the rain eased away from northern Scotland but fog pushed into eastern coastal areas. The rain became more persistent across Northern Ireland and the West Country with scattered thunderstorms breaking out. Showers also developed more widely over southern England and southern parts of Wales.
Temperatures were warm across England and Wales, rather warm over Northern Ireland and western Scotland but rather cold across eastern Scotland.

DAILY CLIMATE DATA

DAILY WEATHER SUMMARY

SURFACE REPORTS

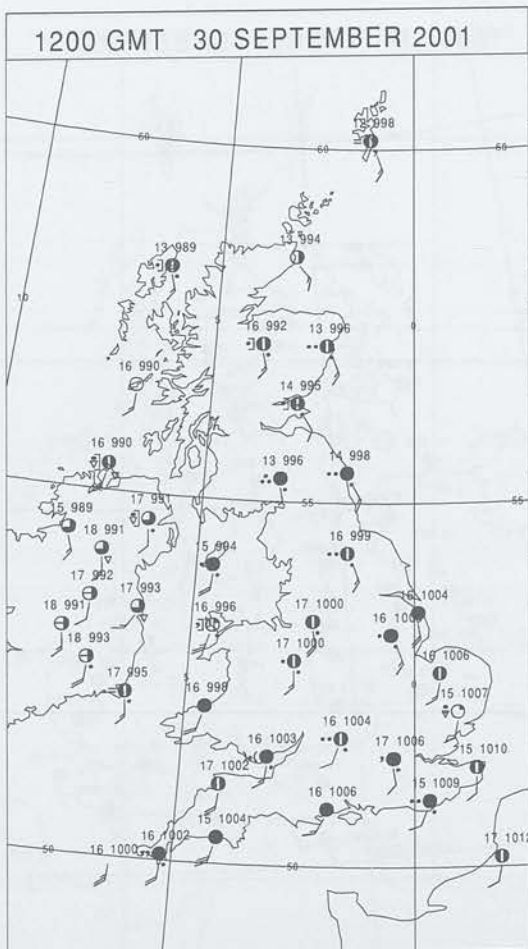

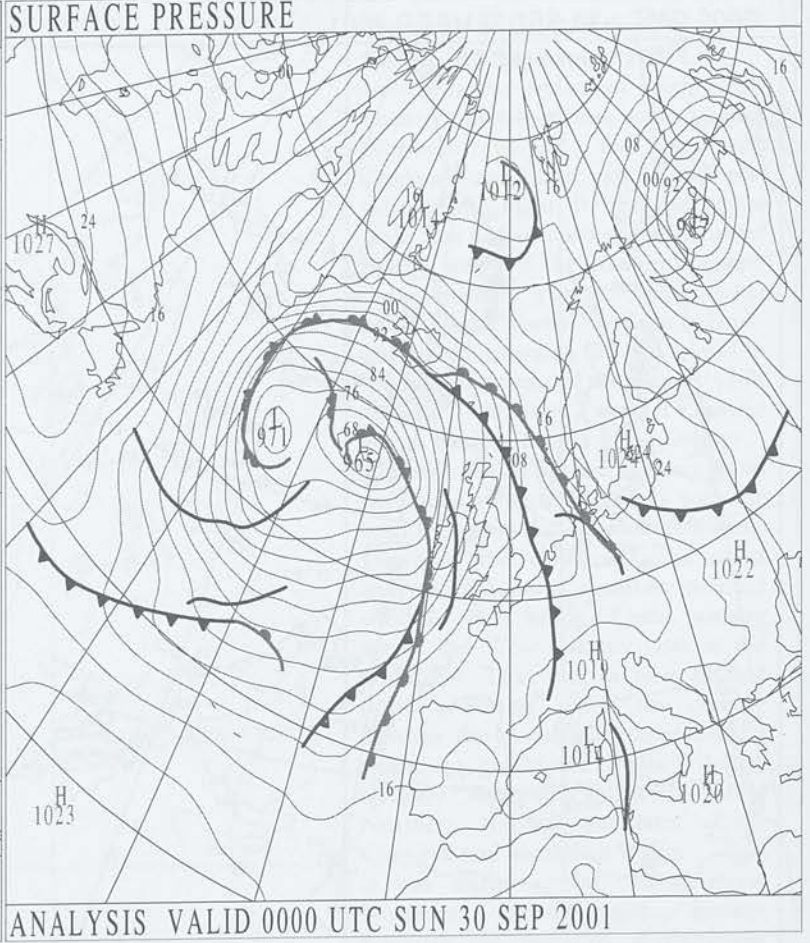

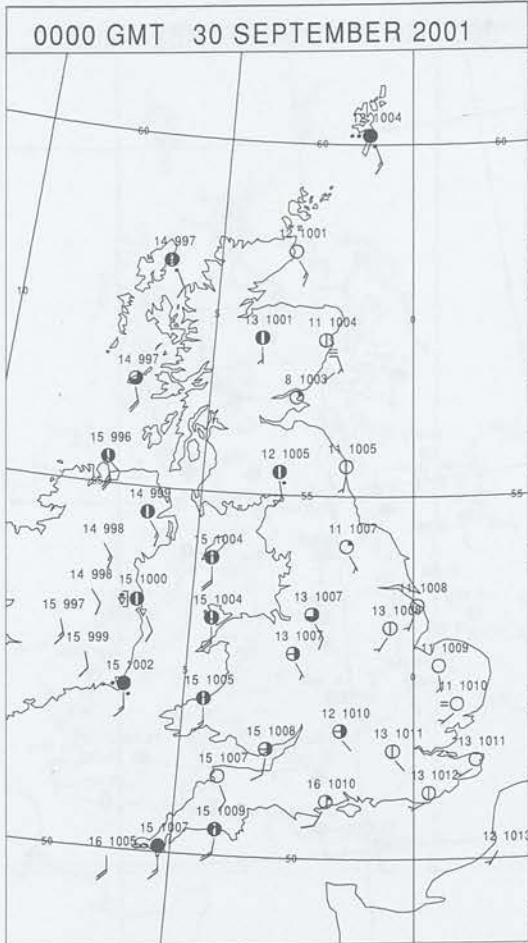

SIGNIFICANT WEATHER

Summary of UK Weather for Sunday 30 September 2001.

Initially it was dry across much of the country. However, rain soon reached Northern Ireland and southwest England, spreading north and east through the night. By the end of the night rain had reached all but the more eastern parts of the country, while at the same time clearer, drier weather had followed across Northern Ireland. During the morning the rain spread to the remaining east of the country while brighter showery weather spread across western fringes of the country. Through the afternoon the rain band continued to clear eastwards with the brighter, showery weather following. However, the cloud and rain never truly cleared more southern counties with the next batch of rain pushing across the West Country later in the afternoon. That rain in turn pushed north and east across the country through the evening accompanied by strong to gale force winds. Clearer, showery weather followed across Northern Ireland and later across Cornwall and southwest Wales.

It was warm or very warm across Northern Ireland and western Scotland but generally temperatures were just on the warm side of normal.
