

National Severe Weather Warning Service

Chief Forecasters Assessment

An active frontal system will arrive across northern and central parts of the UK on Saturday and into Sunday associated with strong winds and a stream of very moist air. This system is now expected to be further north and so the impacts over northern Wales are thought to be less significant than previously forecast.

This system is still expected to generate some large rainfall accumulations within the warning area, especially across high ground. 20 to 40 mm could fall quite widely with over 60 mm possible across Snowdonia. Given the saturated state of the ground from recent rainfall, this amount of rain could lead to some localised flooding.

The Met Office have issued a **Yellow Warning of Rain**

Valid from **00:15 on Sat, 05th Dec 2015** until **09:00 on Sun, 06th Dec 2015**

Spells of heavy rain are expected on Saturday and early Sunday. Given saturated ground and high river levels, be aware of the potential for localised flooding with some low level disruption looking likely.
