Daily Weather Summaries for January 2020

If you have any questions or feedback about this product or wish to obtain further data please contact the Met Office.

This document contains daily weather summaries for each day of January 2020. The Met Office National Meteorological Library and Archive holds a continuous record of daily weather summaries or daily weather reports from 1860, and these daily weather summaries form a continuation of that series.

The purpose of each summary is to provide an overview of the weather conditions across the UK on that day, with the historical emphasis mainly based on observations from surface network of weather stations, although the format has varied over the decades. While the emphasis remains on observations from the surface network, the current daily weather summaries supplement these by including satellite and rain-radar imagery to provide a more complete overview. The current format of the daily weather summaries is as follows:

1. Text summary of the main characteristics of the weather during the day, written by an operational meteorologist in the Met Office operations centre.
2. Table of daily extremes for the UK for key climate variables including temperature, rainfall, sunshine and gust speeds.
3. Overview of the synoptic situation at 00 and 12 UTC comprising: analysis charts showing the surface pressure pattern and associated weather fronts; North Atlantic and European infra-red satellite images showing cloud-cover; combined infra-red and rain-radar images of the UK; maps of wind speed and direction at 00 and 12 UTC; observations of pressure, wind speed and direction, cloud cover, air and dewpoint temperature at selected UK and European stations in data tables.
4. UK maps of key climate variables from observing stations including maximum, minimum and grass minimum temperature, rainfall, sunshine, gust speed and snow.
5. Further guidance notes

If you spot any data errors or omissions in this product please contact the Met Office.

Daily Weather Summary for Wednesday 01 January 2020

This day's summary created 08/01/2020 02:00

Summary of the UK Weather for Wednesday 01 January 2020

Overnight, the mix of cloud and fog pushed north into Scotland, lifting frost that had formed in the first part of the night. Everywhere was dry, with calm winds. Towards dawn, winds would begin to strengthen in the far northwest of Scotland. A mostly dry and cloudy day across the country with patchy fog and drizzle across the southwest and southeast. Sunny spells at first across northern England became confined to northeastern coasts through the afternoon as the cloud thickened.

Summary of the UK Weather for Thursday 02 January 2020

A cloudy night for most, with some clear spells developing at times, particularly over northern England. A southerly wind throughout with some gustiness over Scotland, Northern Ireland, and the north of England and Wales. A band of rain approached from the west over Northern Ireland and Scotland in the early hours. The band of rain pushed into Northern Ireland and western Scotland during the morning, accompanied by gusty winds. Elsewhere was predominantly cloudy and mild for the time of year. By mid-afternoon afternoon, the band of rain had pushed away from Northern Ireland into northern England and southern Scotland. The evening brought a renewed batch of rain to western Scotland, with some heavy falls over high ground, as the earlier band was hovering over Wales and northern England, gradually losing intensity. The first part of the night would see patchy rain in the west, while conditions were mostly dry in the east, but breezy everywhere.

Summary of the UK Weather for Friday 03 January 2020

Outbreaks of rain, at times turning heavy, pushed across the southwest and Wales during the early hours before gradually moving eastwards through the night. East Anglia saw the worst of the rain towards morning with many places starting the day wet. The rest of the country stayed predominantly dry, though some experienced some light showers, particularly in the west. Winds were strong along western coastlines as well as parts of the midlands. Through the morning, much of the rain moved away from southeast England, though a few showers lingered until the afternoon. Elsewhere stayed dry for most of the day with plenty of sunshine. Some showers drifted into northern and western parts of Scotland through the late afternoon, some of which turned heavy for a time. Into the evening, most places stayed dry with clear spells.

Summary of the UK Weather for Saturday 04 January 2020

Heavy rain persisted across the north of Scotland, with some lighter outbursts of rain spread across the rest of the country. This rain pushed east through the night. There were some localised showers across the midlands, along with some strong winds. Northern Ireland saw some light showers at times. The rest of the UK remained dry, with some strong winds along the Welsh coastline. A cloudy day for most, with some spells of sunshine at times.

Remaining mostly dry across the UK, with showers dying out over Scotland and the odd spot of rain in SW of England, SW Wales and Northern Ireland.

Summary of the UK Weather for Sunday 05 January 2020

Through the evening, the remaining rain in far east Scotland continued to push away leaving the country mostly dry overnight. Elsewhere, it stayed dry for much of the night with many places seeing cloudy skies. A few clear spells developed for a time, these longest in the southeast. Through the early hours, some showers made their way onto western coastlines and drifted inland into Wales and northwest England. Northern Ireland also saw some showers too. Another cloudy and bright day for most, with some patchy rain, heavy at times, over Scotland throughout. Some showers also occurred during the afternoon in the northwest of England.

Summary of the UK Weather for Monday 06 January 2020

Much of the UK stayed dry but cloudy through the evening and overnight. A few showers pushed across Scotland towards the early hours, though these faded away. Through the course of the morning a southerly breezy and cloud kept it rather mild. A band of rain moved across the west of the UK through the morning and afternoon, dwindling to showers in the north, Scotland and southeast by the evening. The heaviest of the rain was seen over the southwest, Wales, Scotland and the northeast.

Summary of the UK Weather for Tuesday 07 January 2020

Mostly dry overnight, with a few showers lingering over Scotland and Northern Ireland, with clearer skies to the east of the UK, although becoming misty and hazy here at times. Further rain and cloud approached from the west in the early hours, bringing heavy spells of rain to Northern Ireland and the west of Scotland, spreading down into Wales and north England. Lightning was observed in Cornwall. Into the morning heavier spells of rain pushed into Scotland and the northwest of the UK. This persisted in to the afternoon with rain reaching Wales and the midlands, as well as the northeast. In the south where it remained dry it was also rather cloudy and breezy. Towards the evening rain began to ease, with some showers remaining over the Pennines and Scotland. A few scattered showers continued in the evening, and although rather heavy at times in Scotland they began to dwindle.

Summary of the UK Weather for Wednesday 08 January 2020

Staying mostly cloudy overnight, with the best of the clearer spells in Northern Ireland and northeast England. Scattered showers, which were heavy at times, persisted over Scotland, whilst outbreaks of rain cleared eastwards across the south of England. Lightning was observed around the East Anglian coast and around the north of Scotland and the Shetland Isles. Much of the UK stayed dry through the day with variable amounts of cloud. Some places saw some brighter or sunny spells, but these were mainly in the north. Through the afternoon, a band of wet and rather windy weather approached southwest England and pushed eastwards across the UK, covering much of Wales and central England by the evening. Further north, most places stayed dry though Scotland and parts of Northern Ireland saw some scattered, and at times heavy showers.

Daily Weather Summary for Thursday 09 January 2020

This day's summary created 16/01/2020 02:00

Summary of the UK Weather for Thursday 09 January 2020

It was a cloudy night for most with showery rain moving in from the southwest across the UK. This began to clear in the small hours, leaving clear skies in its wake in the south. The rain, however, continued until dawn in the north. There was some snow in the northwest overnight, settling in the coldest areas. Through the morning, the rain in the north moved away leaving most places dry and cloudy by the afternoon. Further south, another band of wet and windy weather pushed into southwest England before making its way across parts of south Wales, East Anglia and the Midlands throughout the day. Some outbreaks of rain turned very heavy at times. Elsewhere, it remained dry during the afternoon with some brighter and sunny spells developing. Towards evening, Northern Ireland and the far north of Scotland saw some showers.

Summary of the UK Weather for Friday 10 January 2020

It started as a largely cloudy night with some lingering showery rain over the south and east of England. This was heavy at times but cleared quickly eastwards in the small hours. Some showers were still seen over the UK, in Wales and the south of England. However, these cleared along with the remaining cloud cover in the early morning. It was a dry day for most with plenty of sunshine across the south. Further north it was cloudy with heavy rain moving in from the west across Northern Ireland and western Scotland during the afternoon.

Summary of the UK Weather for Sunday 12 January 2020

A damp night for much of England and Wales, though winds did ease compared to the previous day. Some clear skies in the north of the UK allowed temperatures to drop low enough to cause a touch of frost. Around dawn, some heavy rain moved into Wales and parts of north western England. During the day, this heavier band of rain pushed northeast into the midlands, and it reached the northeast coast by late morning. Elsewhere, it was mostly dry through the morning, barring some showers across Scotland. Winds were strong at times, particularly in the southeast. A mostly dry afternoon, with plenty of sunshine throughout. West Scotland saw some coastal showers at times and some scattered showers across Northern Ireland. Overnight, it stayed dry and breezy in the east, with the west seeing some showers.

This day's summary created 21/01/2020 02:00

Summary of the UK Weather for Tuesday 14 January 2020

Heavy rain cleared the southeast overnight whilst scattered locally heavy showers moved across Northern Ireland, Scotland, Wales, and northern, central and southwestern England through the early hours. The showers were wintry across hill in western Scotland. Strong winds at first slowly eased during the night. Through the morning a band of rain moved in from the southwest affecting Wales and large parts of England. Winds strengthened across the UK with gales in the southwest. The southeast had the best of the drier weather whilst showers persisted across the far northwest. During the course of the afternoon the rain spread north affecting much of Scotland but there were some drier periods across Northern Ireland. Rain continued across Wales and southern England with central and parts of eastern England becoming drier, although remaining cloudy. Winds remained strong for the UK with gales spreading to southern and eastern England. Through the evening it remained cloudy as rain edged further east across southern parts with additional rain across northern England and northern Scotland. Some areas did become drier, particularly in Wales and Northern Ireland. Winds eased slightly through the evening.

Summary of the UK Weather for Wednesday 15 January 2020

There was a north/south split overnight, with the north of the UK seeing cold temperatures and a fairly widespread frost, though there was still a few showers around in western parts of Northern Ireland and Scotland. The south of the UK was very wet, accompanied by blustery winds, though considerably milder than the north. Through the morning there rain slowly cleared southeast England. Rain, heavy at times, moved into northern Scotland with further showers for western parts and Northern Ireland. Although cloudy to start, sunny spells developed through the course of the morning. The afternoon was dry for many, but with some showers across Wales and southern England. It was cloudy in Scotland with the morning rain persisting and spreading further south. Elsewhere the cloud cleared to leave some long spells of sunshine. A breezy day across the UK. The evening saw cloud building although there were still plenty of clear spells. Rain eased across central parts of Scotland but heavy downpours continued for the north. Elsewhere western areas had some showers but it remained drier in the east.

Summary of the UK Weather for Thursday 16 January 2020

It was predominantly dry overnight throughout the UK, though rain was working its way through Northern Ireland into western Scotland in the early hours. Much of Scotland and the far north of England saw a patchy frost forming, but further south, a bank of cloud and brisk mild winds from the south led to some mild minimums for the time of the year. Most places saw a dry but cloudy start to Thursday morning, though southwest England and parts of western Scotland began the day with some wet and rather windy weather. Through the day, the rain and wind in the southwest pushed across the UK, reaching Wales, the Midlands and parts of the southeast by the early afternoon. Some outbreaks of rain turned particularly heavy, especially in west Wales, Scotland and southwest England. As the band of rain progressed, it became increasingly patchy, though there were some longer spells of heavy rain in the southeast. Drier conditions followed as the rain cleared, though some parts of Wales saw scattered showers.

Summary of the UK Weather for Friday 17 January 2020

Overnight was cloudier across the south with clear spells in the north. A band of rain cleared southeastern areas whilst a band of rain moved in from the west affecting many western and central parts of England. However, some organised showers moved into the west of England and Wales, with some heavy downpours spreading east. Northern Ireland remained largely dry with patchy rain in Scotland clearing central areas and being confined to the far northwest. A breezy night across the south and far north. During the morning, the line of showers merged into a more uniform rain band, with some heavy bursts for Wales and Northern England. Showers continued in the southwest, but the southeast, Northern Ireland and most of Scotland were predominantly dry, with a few bright spells. The band spread east towards central England, gradually losing intensity during the afternoon, though further showers, some heavy and thundery, pushed in behind, to leave sunshine and showers for many areas. Through the evening and overnight period, colder air and mostly clear skies allowed temperatures to start tumbling across the UK, with a small line of showers over northwest England bringing a wintry mix to the tops of hills.

Summary of the UK Weather for Saturday 18 January 2020

Overnight any rain and cloud cleared across southern and central parts as well as in Northern Ireland, allowing some long clear spells to develop. It was largely cloudy across northern and western Scotland as showery rain persisted, clearer spells developed further east. Towards dawn, the odd spot of rain moved into northwest England. A cold night across the UK with a frost forming. Patches of freezing fog along the south coast of England persisted into the late morning. Otherwise, it was a clear and bright day for most, with some cloud accompanying showers over the northwest of England, Northern Ireland and Scotland. The showers over northwest England cleared by midday, but continued throughout the day in Northern Ireland and Scotland. Towards the evening, some lighting was observed off the coast of northern Scotland.

Summary of the UK Weather for Sunday 19 January 2020

It was a very cold and clear night across the whole of the UK, allowing extensive frost to form, as temperatures widely fell well below freezing. Patchy freezing fog formed here and there, with some slightly more expansive areas near Manchester. East Anglia saw some very isolated showers in coastal regions, but everywhere else was dry. The early morning saw some heavy showers spreading southeastwards over Scotland, whilst the south coast of England and the midlands saw some lingering fog. The rest of the UK remained dry with long clear spells, although the skies were cloudier over Northern Ireland, Scotland and the north of England.

Summary of the UK Weather for Tuesday 21 January 2020

A dry night for most, with some light showers over the north of Scotland from the evening onwards, bringing thickening clouds and gusts. The southeast of England saw some patches of mist and fog developing during the evening and persist until the morning. A milder night than of late for Scotland and Northern Ireland, with the coldest of the temperatures reached across England and Wales under the clearer skies. Some lightning was observed on the far tip of Cornwall and East Anglia. Through the morning and afternoon it remained largely dry, bar some showers on the west coast of Scotland and the northeast of England. It was cloudy across the north and parts of Wales and the midlands, with the south and east England seeing plenty of sunshine. In these regions frost was also slow to clear through the morning.

Summary of the UK Weather for Wednesday 22 January 2020

A mostly cloudy and dry night across the UK, with some showers moving eastwards across Scotland throughout and the odd shower in the north of England. A north/south split in temperatures, with the north being milder and a frosty night in the far south. A murky start to the early hours, with patches of fog and mist across the central and eastern parts of England persisting until the morning. Visibility improved into the afternoon for most, but fog remained for quite a few central counties, where temperatures struggled to reach much above mid-single figures. The best of any brightness was found in northeast England, eastern Northern Ireland and eastern Scotland. Fog in central parts expanded during the first part of the night, but there were some clear skies in northeast England and Scotland. It was dry everywhere, apart from a few very isolated spots of drizzle.

Summary of the UK Weather for Thursday 23 January 2020

It was a generally mild night across the UK with plenty of cloud cover across the board. Fog formed across the midlands, east England and Wales relatively early in the evening on the Wednesday, and this persisted throughout the night. There was a light breeze. Although it was largely dry, some showers broke out on the west coast of northern Scotland shortly after midnight. It was another dreary but calm day everywhere, with fog slow to lift from many central counties. It was slightly windier in western parts of Scotland, where a few spots of rain were still affecting the Western Isles. A few brighter spells in northern England allowed temperatures to reach double figures in a few spots, but generally it was a chilly day under a blanket of cloud.

Summary of the UK Weather for Friday 24 January 2020

Overnight it was rather cloudy, with mist and patches of fog forming in many areas across the country. It was largely dry, however some drizzle and light rain moved in across Scotland overnight, largely across the west coast. It stayed mostly dry and cloudy across much of the country during the day with patchy fog slow to clear. The best of any bright spells were across parts of the northeast. A few outbreaks of rain developed across northwestern Scotland towards dusk.

Summary of the UK Weather for Sunday 26 January 2020

Clear skies were few and far between once again, preventing any frost forming throughout the UK. Some showers affected western parts, but most places remained dry. By dawn, a band of rain, accompanied by strengthened winds, had moved through much of Northern Ireland and was pushing eastwards through Western Scotland, almost arriving in western parts of England and Wales. The band of rain continued to push eastwards through the day with heavy bursts and strong winds at times. Once the rain had cleared these areas, bright spells followed. The South East and East Anglia saw the rain much later in the afternoon, and after nightfall. As the rain cleared the east during early evening, a new band of heavy rain began to push northeastwards across Northern Ireland.

Summary of the UK Weather for Tuesday 28 January 2020

It was breezy with scattered locally heavy showers which moved westwards overnight leading to a widespread frost and icy conditions across northern areas. The showers produced snow over higher ground across Scotland, Northern Ireland, northern Wales and northwestern and southwestern England. Longer outbreaks of rain moved across the southeast and East Anglia through the early hours. Through the morning showers moved into western parts. The showers were heavy in places and also wintry with snow falling over the higher ground, especially in the north. Northern parts were rather cloudy but some good spells of clear weather were seen in the south and east. Cloud built up in the south through the afternoon but there were still sunny spells. Showers, wintry at times, continued in the west with some reaching eastern areas. There was rain in the far north which was heavy at times with further snow over the high ground. The evening saw showers ease for many parts of England and Wales although some scattered showers did still persist. Rain continued in the north. A windy day across the country, strongest in the west.

This day's summary created 05/02/2020 02:00

Summary of the UK Weather for Wednesday 29 January 2020

During the night, there were scattered showers across western Scotland, Northern Ireland and parts of northern England. These continued through the night, with an increase in winds, particularly along coastlines. The south remained mostly dry with much lighter winds. At times, there were some showers across Cornwall, but these were light and brief. The morning saw rain, heavy in places, edging inland from the west to affect many northern parts. Elsewhere was largely dry with some good spells of sunshine, especially in the south. The band of heavy rain continued to move eastwards across the northern half of the country in the afternoon with further rain in Wales. Many parts of the south and east of England remained dry with sunny spells, although cloud did start to build. A north/ south split continued through the evening with further heavy rain in the north, although this missing many parts of Northern Ireland and the far north of Scotland. Rain in Wales became confined to the far north with cloud increasing across the south of the UK, but staying dry for many. A windy day away from the far south.

Summary of the UK Weather for Thursday 30 January 2020

During the night, a band of rain moved into Scotland. It remained fairly dry further south, with the odd scattered shower across the rest of the UK. The rain in Scotland eased for a time before further rain arrived in the west of the country during the early hours. Parts of southwest England also saw the arrival of rain towards dawn. During the morning, the band of wet and rather windy weather pushed further across Scotland, reaching eastern parts by mid-morning. The rain in southwest England persisted for a time, though moved through by the afternoon leaving dry but cloudy conditions. Wales, northern and central England and Northern Ireland saw the best of the dry weather with some seeing a few bright or sunny spells. Towards evening, the rain over Scotland eased though some heavy spells and showers remained, particularly in the west. Some parts of Northern Ireland saw some showers as well, though elsewhere it remained dry with some clear spells. It was a much milder day than of late.

Summary of the UK Weather for Friday 31 January 2020

Overnight saw a north/south split for the UK. Southern parts stayed dry and largely cloudy with some clear spells breaking through, especially in the southwest. In the north, it was cloudy as a band of rain, heavy in places, arrived from the west and travelled eastwards across the country. The rain eased in some parts towards dawn but continued for many, particularly across northern England and Northern Ireland. Through the morning, the band of rain continued to push across the UK, becoming patchier as it moved further east. Outbreaks of rain persisted across western Scotland with some heavy downpours around the coasts. As the day progressed, the south saw progressively drier and brighter weather, though some parts, particularly the southwest, saw scattered showers, some turning heavy at times. Towards evening, most places across the UK were dry with patchy cloud, allowing for some clear spells to develop. Scotland was the exception as it continued to see long spells of rain, often heavy, particularly in the north and west.

Daily Weather Summary for Friday 31 January 2020

Daily Weather Summary for Friday 31 January 2020

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Guidance Notes

UTC = Universal Coordinated Time. For the UK UTC is the same as GMT (Greenwich Mean Time).

National boundaries shown on the European station map are for illustrative purposes only.

Daily extremes

- Daily extremes have been manually confirmed by Met Office Observations Quality Management as valid observations from the live database at the time of checking. However, more extreme values may still be possible if they occur after the time of production.
- Mountain stations above 500 masl are excluded from lowest temperatures, highest gust speeds and greatest snow depths at 0900 UTC. This is because they are not considered representative of low level areas.
- Counties quoted against each station are based on historical county boundaries pre-1974 and may not reflect current administrative boundaries.

Analysis charts and satellite imagery

- The satellite imagery is infra-red imagery from the geostationary MSG satellite.
- The rainfall image is derived from satellite data from MSG and rain-radar data. This represents a snapshot of instantaneous rain-rates at 0000 UTC and 1200 UTC and so does not necessarily reflect daily accumulations in the rainfall station map.
- Any analysis charts or satellite images which are unavailable will be displayed as white space.

Station maps

- The UK maps show station data for the same set of stations presented UK data table. These stations are selected to provide good spatial coverage across the UK; they represent only a fraction of the overall UK observing network.
- Wind speed maps show wind speed in Kt and direction both averaged over the hour up to the time of observation. 1 Kt = 1.151 mph.

Hourly station data

- The data tables provide spot hourly observations from synoptic messages at 0000 and 1200 UTC. Missing data are denoted by '-'.

- Pressures are mean sea level pressure in hPa.
- For UK stations, Gibraltar and Jersey, the wind speeds and directions are both averaged over the hour up to the time of observation. However, for European stations wind speeds and directions are both averaged over a 10-minute period up to the time of observation.
- Wind speeds are in Kt. Wind directions are stored in the database every 10 degrees and have been converted to the nearest point of the compass. These give the direction the wind is blowing from, not to.
- Cloud amounts are in Oktas from 0 (clear) to 8 (overcast). 9 indicates sky obscured (eg by fog).
- Air temperature and dew point temperature are in Celsius.

Temperature maps

- Daily maximum, minimum and grass minimum temperatures are in Celsius.
- The period for the daily maximum temperature on day D is defined from 0900 UTC day D to 0900 UTC day D+1.
- The period for the daily minimum and grass minimum temperatures on day D is defined as 0900 UTC day D-1 to 0900 UTC day D.
- On any given day D the minimum will typically occur in the early hours of the morning and the maximum in early afternoon.

Rainfall, sunshine and max gust speed maps

- Daily rainfall is in mm from 0900 UTC day D to 0900 UTC day D+1.
- Daily sunshine is in hours from Kipp and Zonen CSD1 automatic sunshine records. Bright sunshine is defined as exceeding 120 W/m².
- Max gust speeds are the daily max gust in Kt from 0000-0000 UTC

Snow maps

- The day of snow falling map displays data from present weather sensors, showing stations which have recorded sleet or snow falling at any point in the day (0000-0000 UTC).
- The snow lying map shows level snow depth as recorded by the automatic snow depth sensors at 0900 UTC. These snow depth sensors do not record snow depth if this is less than 1cm.
- Snow depth sensors are normally operational from October to April, in the event of snow falling outside this period data availability may be limited.
- Snow maps will only be displayed if one or more of the selected stations on that date have recorded either snow falling or non-zero snow depths. If snow maps are not

displayed it is still possible that other stations in the network have recorded a day of sleet or snow falling or non-zero snow depth.
