NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster: the Sunshine entered to Dungeness is recorded at Littlehampton-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR *Wednesday, 1st March, 1905.*

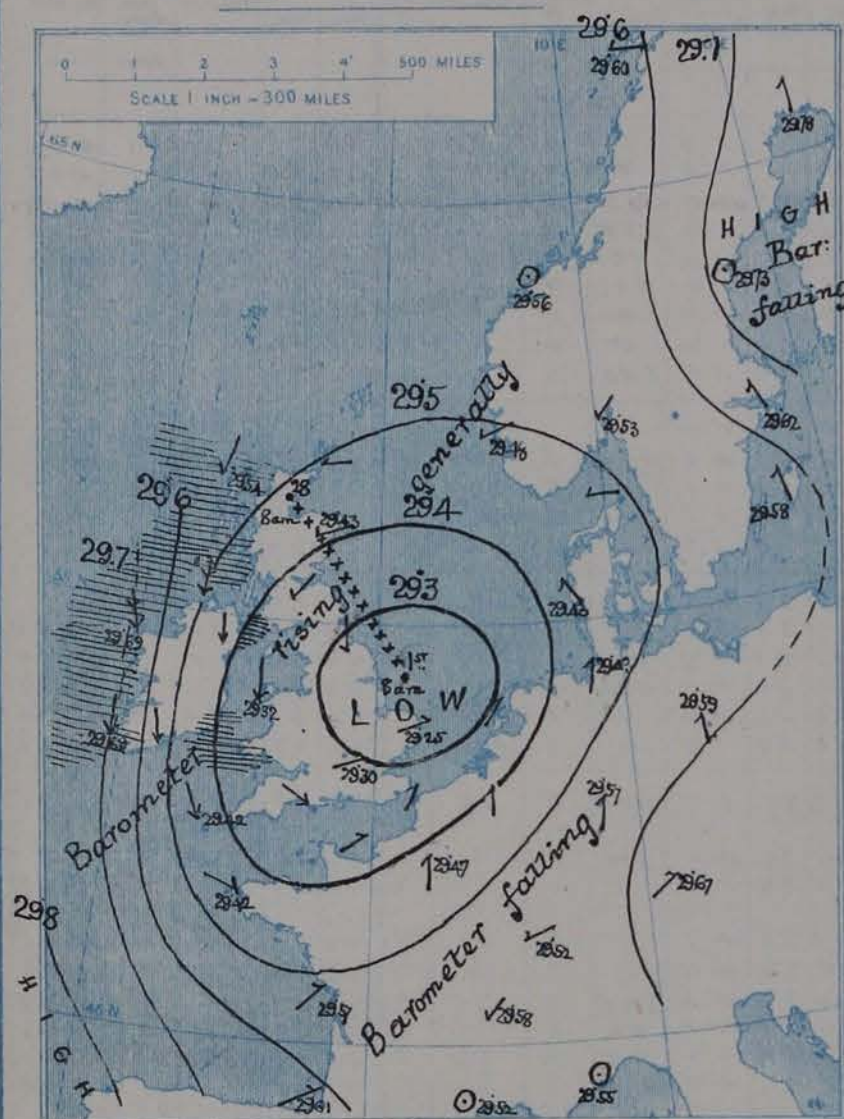

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → : Force 5 to 7 → : } Calm ☉
Force 8 to 10 → : Force 1 to 4 → :

SEA.—Rough, [hatched] High, [solid blue]

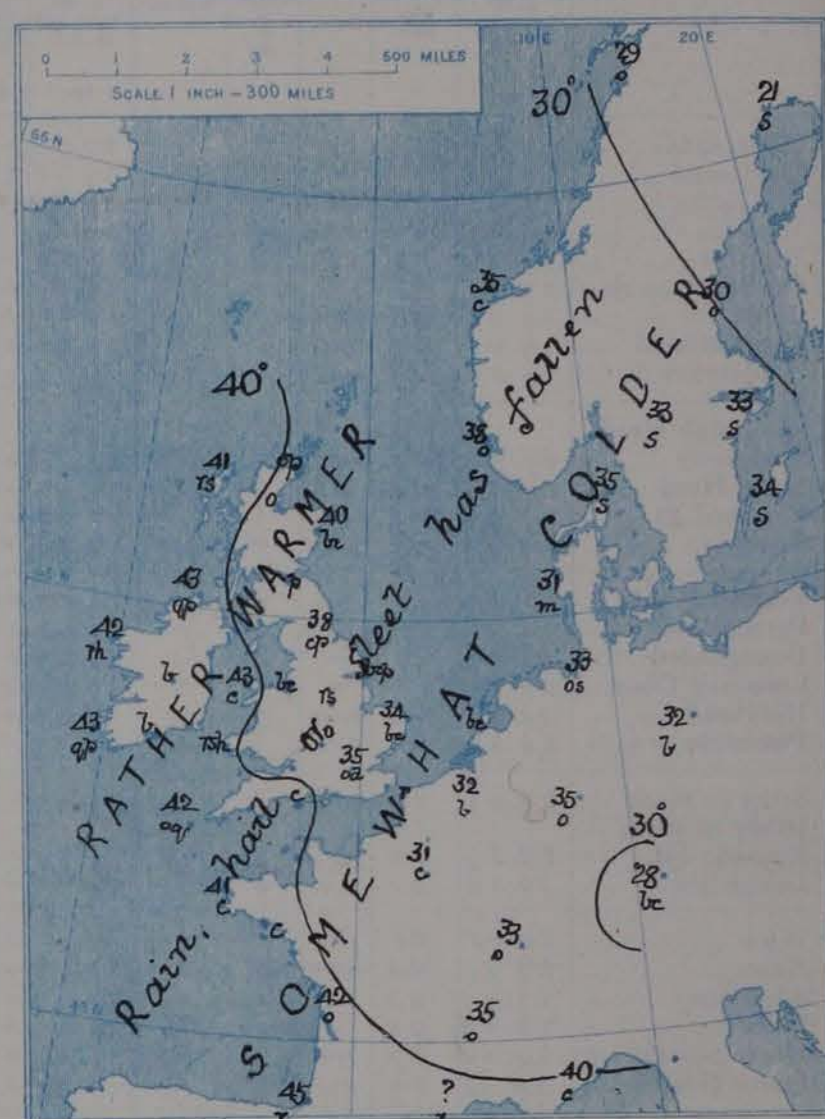

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE.—Isotherms are drawn for each 10°.

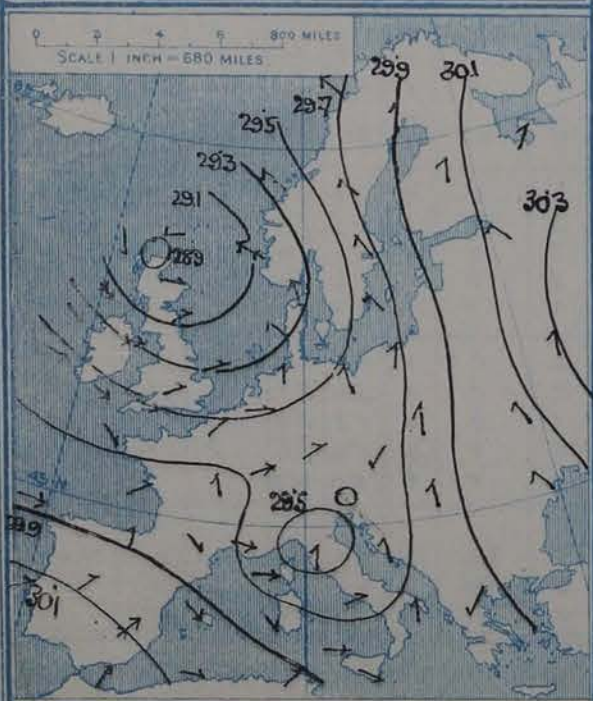

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. LAST WEEK'S RAINFALL.

Amount recorded in various districts of the United Kingdom during the week ended *Saturday, 25th FEBY.*, with the percentage of the average amount for the corresponding week.

V Means of DAILY TEMPERATURE

at 8 A.M. for the Two monthly period

FEBRUARY-MARCH (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The depression recently noticed over Scotland is now moving SE.^{wd} down the North Sea, its centre being situated this morning not far from the Yorkshire coast. Over France the barometer is falling somewhat, but in nearly all other parts of our area the mercury is rising, - briskly in Ireland and Scotland. The highest pressures, 29.7 ins. and upwards, are found in three areas, - one lying over the Gulf of Bothnia, another off the West of Ireland, and a third over the Spanish Peninsula. In the depression over the North Sea the readings are below 29.3 ins.

WIND

TEMPERATURE

WEATHER

AND

SEA

The winds over Northwestern Europe show a complete circulation round the barometrical minimum, and are light in force on all but our own Western coasts, where the N.th breeze is strong, with a gale in the North of Ireland. In the South of France calms or light E.^{ly} airs are reported.

Temperature has risen over the greater part of the United Kingdom, but has fallen slightly in the Southeast of England, as well as at many of the Continental stations. The morning readings in these Islands range from between 40° and 43° on our North and East coasts to 35° in London and at Nottingham, and 34° at Yarmouth and Dungeness. Slight frost prevails in several parts of Germany, Central France and the Netherlands, and sharp frost in the North of Scandinavia, the lowest temperature reported being 21° at Haparanda.

The weather, though fine in a few isolated localities, is cloudy or dull over Northwestern Europe as a whole. Showers of hail or sleet are reported in many parts of the United Kingdom, rain in the South of France, and snow over nearly the whole of Sweden and the Kattegat. The sea is rough on our Western coasts, but is moderate or slight elsewhere.

During yesterday the thermometer rose to 45° or slightly above it at most of our Western and Southern stations; in the North and East the maximum readings were slightly below that level. On our South and Southwest coasts the amount of bright sunshine was large, - more than 8 hrs. in several places, and more than 9 hours at Eastbourne and Hastings. Showers fell yesterday over nearly the whole of Western Europe. Lightning was seen at Roche's Point last night.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The depression off our East coasts will continue to move in a S.^{ly} or SE.^{ly} direction, and the wind will shift to the N.th over the whole of England. Showers of cold rain, or sleet, are probable in many places, but the weather will be generally fair, with a temperature somewhat below the normal. The N.th type of weather is likely to continue for the present.

FORECASTS*

For the 24 hours ending at NOON on 2nd March, 1905.

DISTRICTS.

FORECASTS.

0	{ SCOTLAND NORTH	{ E. ^{ly} and NE. ^{ly} winds, moderate; fair generally, but snow or sleet
1	{ SCOTLAND EAST	{ showers in places.
2	{ ENGLAND N.E.	{ NW. ^{ly} to NE. ^{ly} winds, moderate; changeable, some cold showers.
3	{ ENGLAND EAST	{ Wind shifting to the N. th ; some
4	{ MIDLAND COUNTIES	{ cold showers at first, then fair.
5	{ ENGLAND SOUTH	{ Frost inland at night.

DISTRICTS.

FORECASTS.

6	{ SCOTLAND WEST	Same as Nos. 0 and 1.
7	{ ENGLAND N.W.	{ N. th winds, strong at first, moderating
8	{ ENGLAND S.W.	{ later; fair generally, but hail or
9	{ IRELAND NORTH	{ sleet showers in places.
10	{ IRELAND SOUTH	

WARNINGS

The Signals are still flying in Districts 6 to 10.

Note.—The South Cone, point downwards (⌵), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌶), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.

" Weekly " " "	£1 10 0	"	Single Copies, 6d.
----------------	---------	---	--------------------

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom **Sixpence in addition to the cost of the inquiry and reply Telegrams.** Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on Thursday, 2nd March,

1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. H. SHAW, Secretary.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster: the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR *Thursday, 2nd March, 1905.*

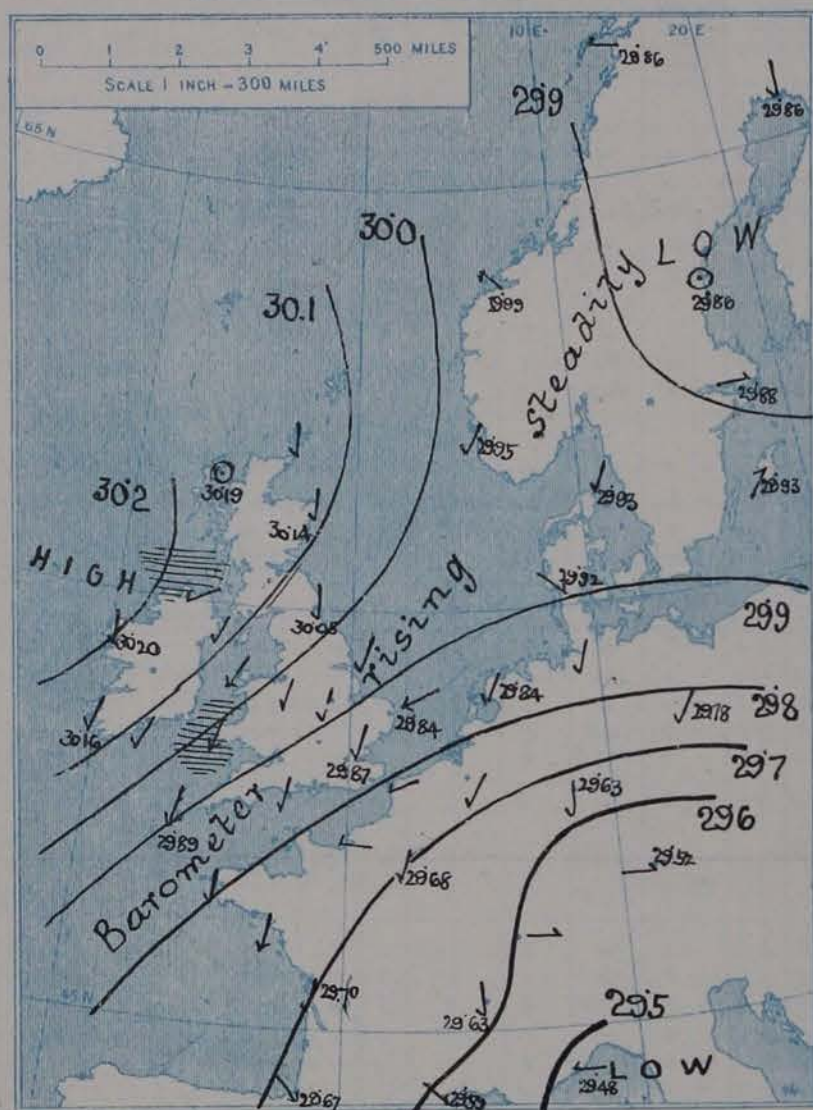

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → : Force 5 to 7 → : } Calm ☉
Force 8 to 10 → : Force 1 to 4 → :

SEA.—Rough  High 

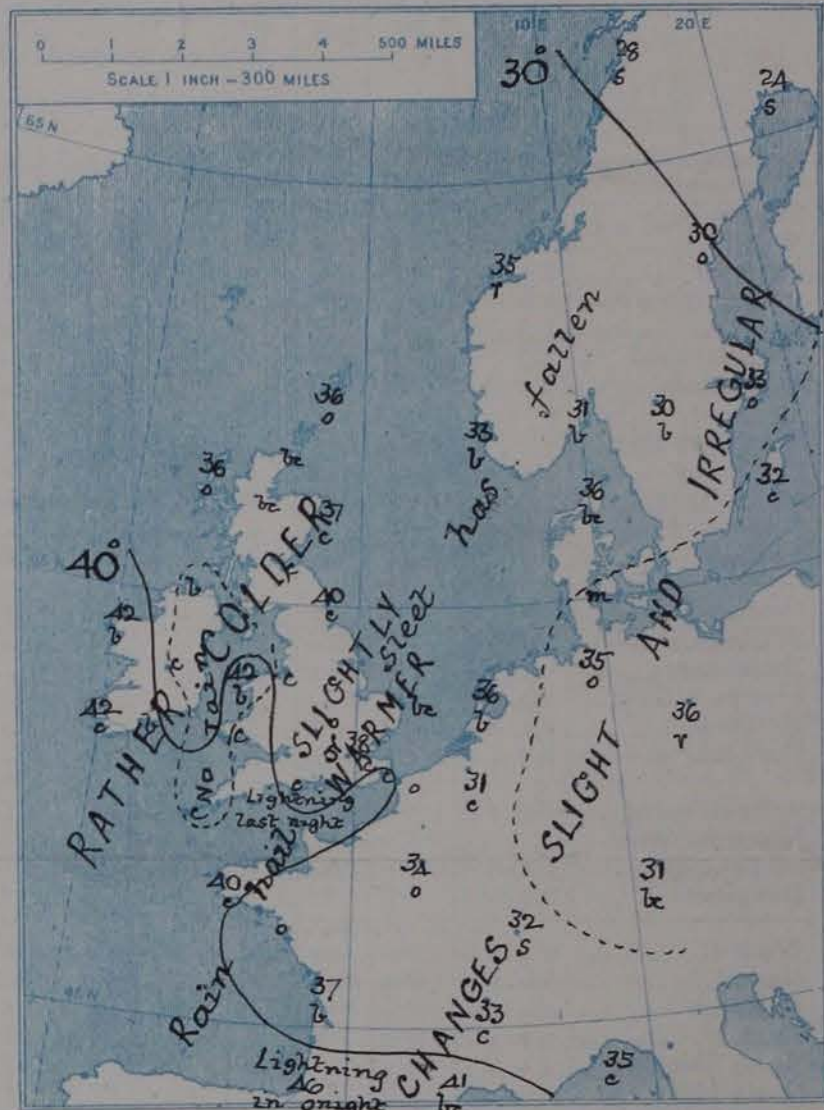

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

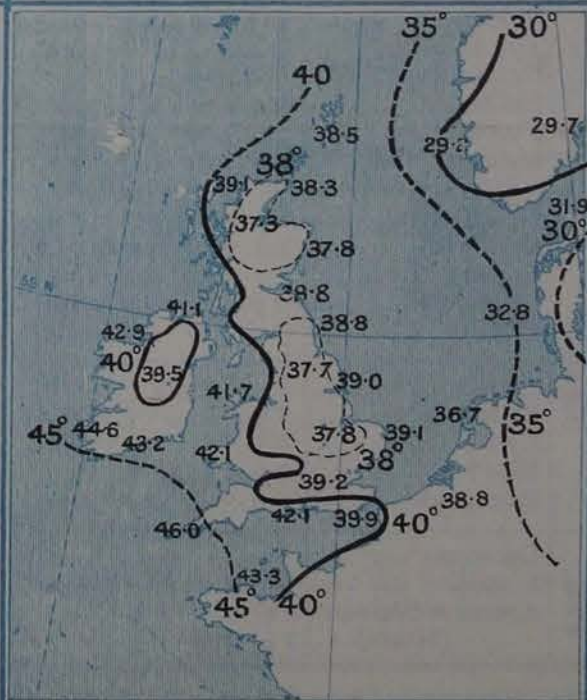

IV. LAST WEEK'S SUNSHINE.

Amount recorded
in various districts of the United Kingdom
during the week ended *Saturday, 25th FEBY.*
with the percentage of the average duration
for the corresponding week.

V Means of DAILY TEMPERATURE
at 8 A.M. for the Two monthly period
FEBRUARY-MARCH (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The depression noticed yesterday morning off the East of England has continued to move SE.^{wards} and is apparently now passing over South Germany, but is steadily filling up. A large anticyclone is spreading over from the Northern parts of the Atlantic, and the barometer is rising steadily over Northwestern Europe generally, the highest readings, 30.2 ins. and upwards, being at present found off our extreme Northwest coasts. The lowest pressures, 29.6 ins. and less are reported over South Germany and the East and South of France.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind has shifted to the N.^{orth} or NE.^{ast} over Western Europe generally, and blows freshly or strongly on several parts of the English and Welsh coasts. In the South of France, however, it draws into NW, while in South Germany it is W.^{est}. Temperature has risen slightly over England, and also in Germany, but has fallen in most other parts of our area. The morning readings in these Islands range from 45° at Scilly and 40° or slightly above it on many parts of our Western coasts to 35° at Wick and Cairn, 34° at Yarmouth and 33° at Parsonstown. Slight frost prevails in some parts of Germany, Belgium and Central France, and a sharper frost in Scandinavia, the lowest temperature reported being 24° at Haparanda. The extension of the anticyclone is accompanied by fair weather over the whole of these Islands and the neighbouring parts of the Continent. In Germany and Central France the sky is still very cloudy, with rain at Berlin and snow at Belfort; snow is also falling in the North of Scandinavia. The sea is moderate or slight generally, but rather rough at Malin Head and Pembroke.

During yesterday the thermometer rose slightly above 45° in many parts of the United Kingdom, the highest reading reported being 48° at Bath, Plymouth and Portland Bill. Frost occurred at night over the central parts of Ireland and Scotland. The amount of bright sunshine yesterday was fairly large in the West and North (as much as 6.6 hrs. at Aberdeen) but small in the South and East. Showers of snow or hail were experienced yesterday over a considerable portion of these Islands, and rain in France. Lightning was seen at night at Portland Bill and Biarritz.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The large anticyclone which is spreading over our Islands will probably continue to extend E.^{ast} and S.^{outh}. Fair, dry weather is, therefore, anticipated over the United Kingdom generally, but showers will probably occur today in some parts of our Eastern and Southern districts. Temperature is likely to decrease, and frost will occur tonight in many parts of the country.

FORECASTS*

For the 24 hours ending at NOON on 3rd March, 1905.

DISTRICTS.

FORECASTS.

0	{ SCOTLAND NORTH	{ N. ^{orth} or N.W. ^{est} winds, light; fair generally, but snow showers in places.
1	{ SCOTLAND EAST	{ Frost tonight.
2	{ ENGLAND N.E.	{ N. ^{orth} or N.E. ^{ast} winds, light; fair generally, but cold showers in places.
3	{ ENGLAND EAST	Same as No. 5.
4	{ MIDLAND COUNTIES	Same as No. 2.
5	{ ENGLAND SOUTH	{ N.E. ^{ast} winds, falling light; fair generally, but cold showers in places. Frosty tonight, local fogs in morning.

DISTRICTS.

FORECASTS.

6	{ SCOTLAND WEST	{ N.E. ^{ast} winds, falling light; fair generally. Frosty tonight in inland districts.
7	{ ENGLAND N.W.	
8	{ ENGLAND S.W.	
9	{ IRELAND NORTH	
10	{ IRELAND SOUTH	

WARNINGS

NONE ISSUED.

Note—The South Cone, point downwards (⌞), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌞), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.

" Weekly " " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on Friday, 3rd March, 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Secretary.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster: the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

FOR Friday, 3rd March, 1905.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 \Rightarrow : Force 5 to 7 \Rightarrow :)

Force above 10		:	Force 5 to 7		:	} Calm ☉
Force 8 to 10		:	Force 1 to 4		:	
SEA—Rough			High			

TEMPERATURE.—Isotherms are drawn for each 10^6

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus—0.6

Yesterday morning.

Total Amount recorded
in various districts of the United Kingdom
in the 8 weeks ended Saturday, 25th FEB^y,
with the percentage of the average amount
for the corresponding period.

GENERAL SITUATION AT 8 A.M.

PRESSURE

The anticyclone which was spreading in from the Atlantic yesterday is now moving Southeastwards across Western Europe, the central portion of the system being situated over the West of England, where the barometer stands at about 30.3 ins. Over all the more Southern and Eastern parts of our area the mercury continues to rise, but on our extreme Western and Northern coasts and in the West of Norway it has commenced to fall. The lowest pressures, 29.7 mm and less, are found in a depression over the Gulf of Genoa; another disturbance, in which readings are apparently below 29.8 ins., is situated off the Northern part of the Norwegian coast.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind remains N.^y or N.E.^y over England and the Western parts of the Continent, and blows freshly in the North and West of France. In Ireland and Scotland it is shifting to the S.^w, and on our extreme Western coasts it is inclined to freshen. Brisk terrestrial radiation has occurred in regions lying within the central parts of the anticyclone, and the morning temperatures in these Islands are nearly all lower than those of yesterday, frost being reported at some of the inland stations in Great Britain. In Ireland, however, the shift of wind to the S.^w is accompanied by a rise of temperature. Over Germany and Central France the thermometer is not much above the freezing point, while in Sweden hard frost prevails, the lowest temperature reported being 3° at Haparanda. The weather is fair or fine over Western Europe as a whole, but has become dull on our own extreme North and Northwest coasts and also in the West of Norway. An overcast sky is reported also in Germany, Belgium and Central France. The sea is slight or smooth generally, but is still rather rough at Yarmouth.

During yesterday the thermometer again rose slightly above 45° in many parts of the United Kingdom; frost was, however, fairly general at night, the sheltered thermometer falling to 24° at Nairn, and the exposed thermometer to 22° at Oxford. The amount of bright sunshine was in many places considerable, the longest duration reported being 8.2 hrs. at Plymouth. Showers of hail or sleet occurred in many parts of England, and a thunderstorm at Biarritz. Aurora was seen at Valencia (Ireland) and Southport, as well as at Karlstad and the Skaw.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The anticyclone over Northwestern Europe will continue to drift E.^w or SE.^w, and the weather in these Islands will be influenced to a gradually increasing extent by cyclonic systems advancing from the Atlantic. Freshening S.^y winds and some rain are probable today over the greater part of Ireland and Scotland. The unsettled weather is likely to extend over England in the course of tomorrow.

FORECASTS*

For the 24 hours ending at NOON on 4th March, 1905.

DISTRICTS.

FORECASTS.

0	{ SCOTLAND NORTH	S. ^y winds, light to fresh; fair and cold at first, milder later, probably some rain.
1	{ SCOTLAND EAST	
2	{ ENGLAND N.E.	Wind shifting to the W. ^w or S.W. ^w ; fair generally, frost at night.
3	{ ENGLAND EAST	
4	{ MIDLAND COUNTIES	Light N. ^y to variable breezes; fair generally, frosty tonight, with fog in many places.
5	{ ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	{ SCOTLAND WEST	Same as Nos. 0 and 1.
7	{ ENGLAND N.W.	
8	{ ENGLAND S.W.	
9	{ IRELAND NORTH	S. ^y winds, increasing in force; unsettled, some rain. Becoming milder.
10	{ IRELAND SOUTH	

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (∩), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (∪), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Woolman Training College, Westminster: the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR *Saturday, 4th March, 1905.*

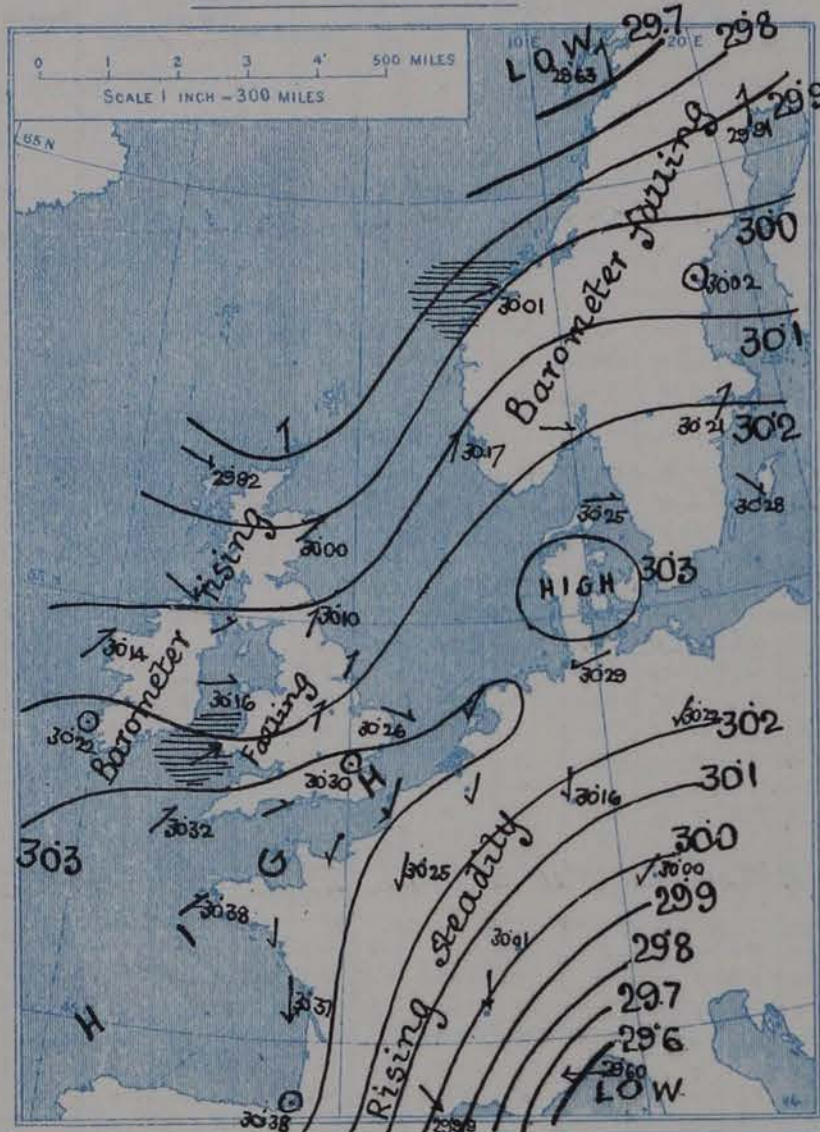

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → : Force 5 to 7 → : } Calm ⊙
Force 8 to 10 → : Force 1 to 4 → :

SEA.—Rough High

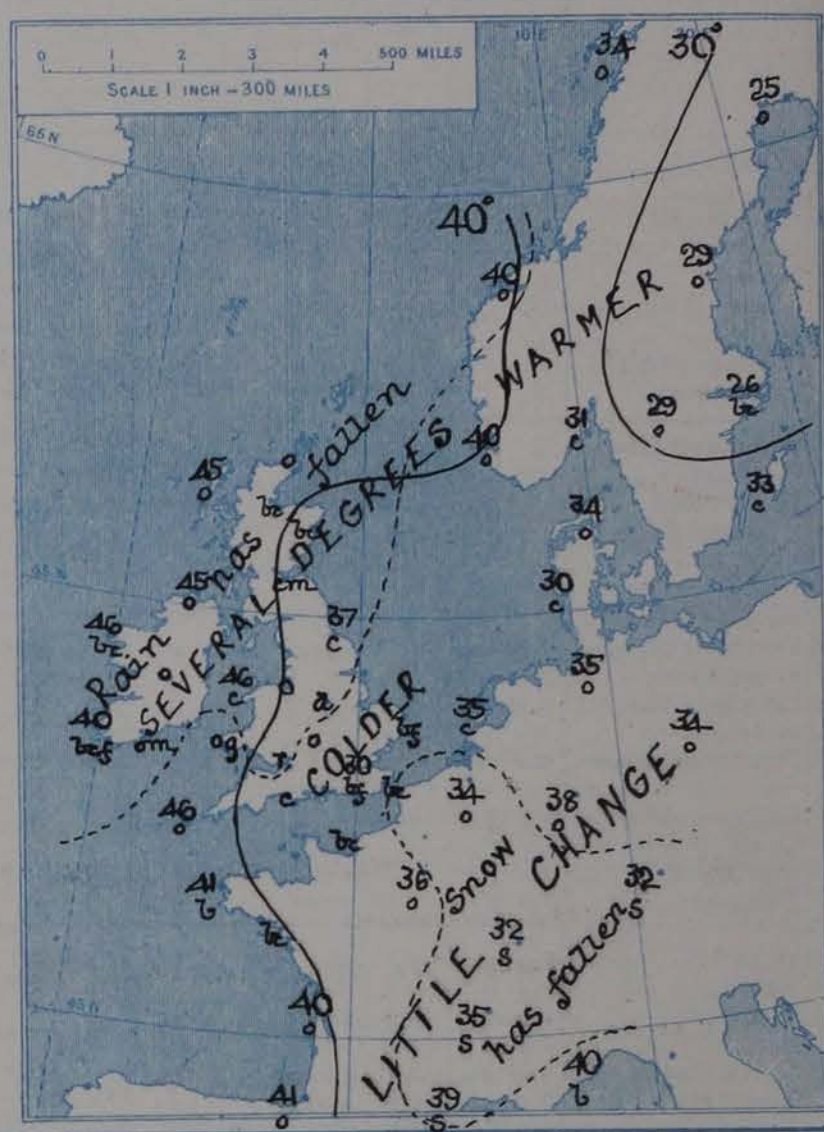

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE.—Isotherms are drawn for each 10°.

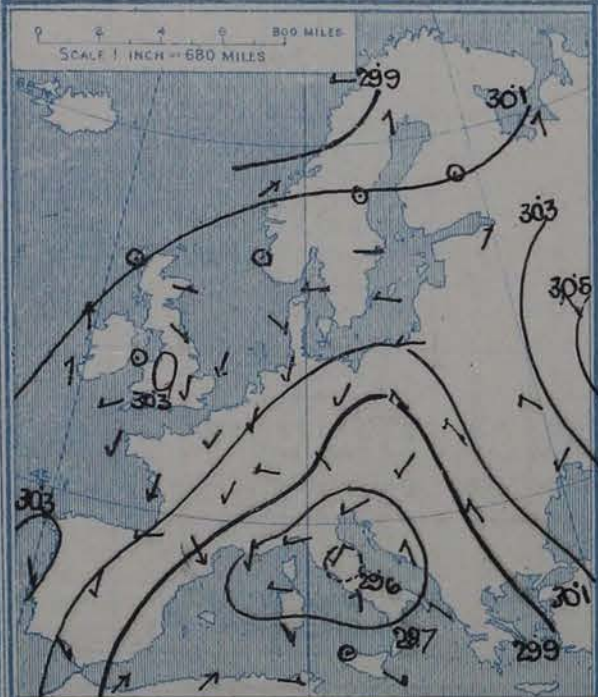

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. BRIGHT SUNSHINE IN 1905.

Total Duration recorded in various districts of the United Kingdom in the 8 weeks ended Saturday 25 Feb. with the percentage of the average duration for the corresponding period.

V Means of DAILY TEMPERATURE at 8 A.M. for the Two monthly period FEBRUARY-MARCH (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

An anticyclone still lies over England and the western parts of the Continent, the highest pressures, 30.3 ins. and upwards, being found, respectively, over Denmark, and over the South of England, the west of France and the Bay of Biscay. A depression which skirted our extreme Northwest coasts last night is now travelling away in a N.E. direction, and the barometer is again rising in the Western and Northern parts of the United Kingdom generally. The lowest pressures, 29.7 ins. and less, are found in two cyclonic areas, one lying off the coasts of Finnmark, the other over the Gulf of Genoa.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind is light from the S.W. or W. over nearly the whole of the United Kingdom, and also in Scandinavia, but remains N. or N.E. in the Western parts of the Continent. The depression over the Gulf of Genoa is causing a fresh E. breeze at Nice, and a moderate N.W. gale at Perpignan. The setting in of a S.W. air current has been accompanied by a brisk rise of temperature in the West and North of these Islands, and also in Scandinavia; at Nairn the change since yesterday amounts to as many as 18°. The thermometer is now slightly above 45° at most of our Western stations, but is much lower in the East and Southeast of England, the readings being as low as 30° in London and 31° at Dungeness. Frost prevails also in Sweden, the lowest temperature reported being 25° at Haparanda. The weather is fair over the United Kingdom as a whole, but is dull in places, with slight rain at Bath and Nottingham. At the Continental stations the weather is generally overcast, with snow over South Germany and the South and East of France. The sea is slight or smooth on nearly all coasts.

The maximum temperatures recorded yesterday were below 45° in the Eastern and Central parts of the Kingdom, but above it in the West; at Valencia, Parsonstown and Scilly the thermometer touched 50°. Sharp frost occurred at night over England; in London the exposed thermometer fell to 22° and at Oxford to 21°. More than 7 hours of bright sunshine were recorded yesterday at several of the English and Welsh stations, and as many as 8.5 hours at Skegness and Scilly. Rain has fallen in the West and North of these Islands generally, but only in small quantity.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The depression off the North of Scotland will continue to travel N.E. and the anticyclone in the South is likely to spread N. again. A very small and shallow secondary disturbance, now lying over the St. George's Channel, will probably occasion slight rain today in some parts of England, with a rise of temperature over our Southern and Eastern counties. As this system passes away from our neighbourhood the weather will again become fair and cold.

FORECASTS*

For the 24 hours ending at NOON on 5th March, 1905.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	W. and S.W. winds, light; fair generally. Colder.
1	SCOTLAND EAST	
2	ENGLAND N.E.	S.W. to W. winds, light; cloudy, slight rain in places. Becoming temporarily milder.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	Light S.W. to variable breezes; becoming milder today, with slight rain in places, then fair and cold again.
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as Nos. 0 & 1
7	ENGLAND N.W.	
8	ENGLAND S.W.	S.W. to W. or N.W. winds, light; fair generally. Colder.
9	IRELAND NORTH	
10	IRELAND SOUTH	
WARNINGS		At 3.10 p.m. yesterday to District 6 and parts of 0 and 9, and at 7.30 p.m. to the remainder of 0 and part of 1, "Hoist South Cone." The signals have been lowered this morning.

Note.—The South Cone, point downwards (⏏), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⏏), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in this or next page.

WEATHER CHARTS

FOR Sunday, 5th March, 1905.

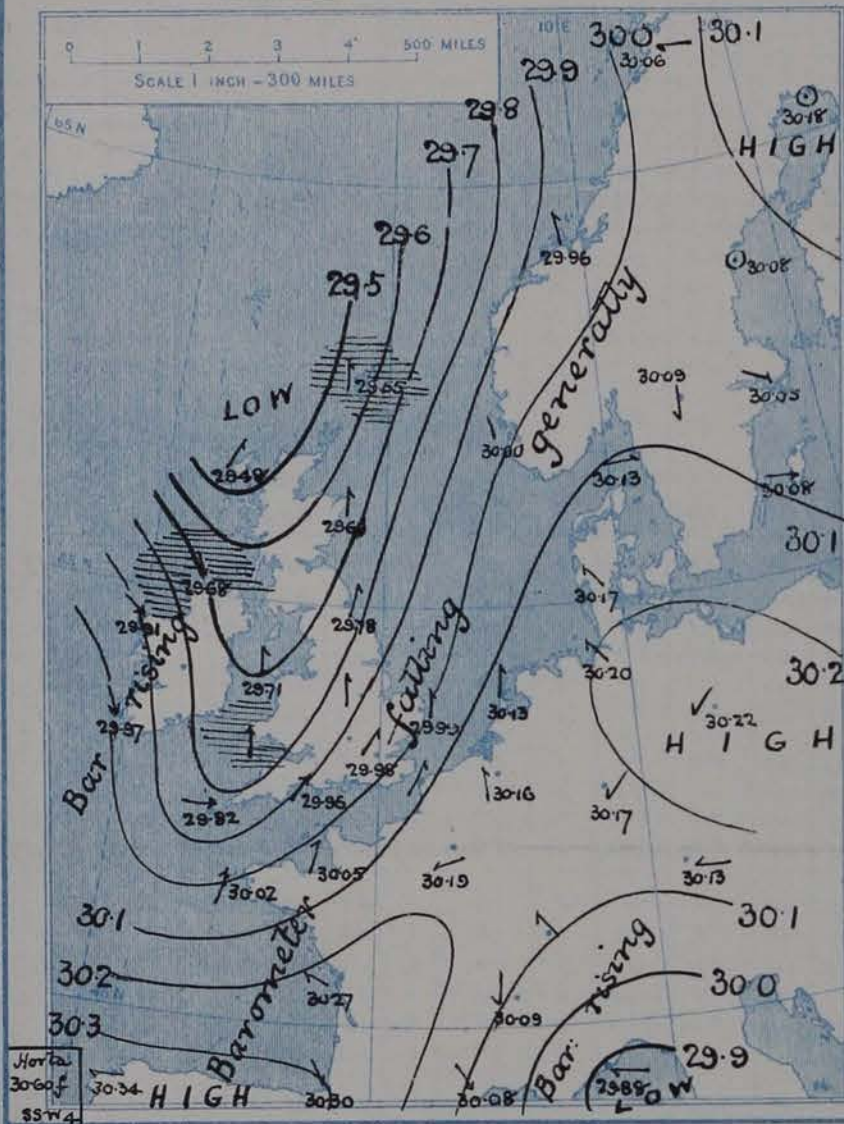

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → : Force 5 to 7 → : } Calm ☉
Force 8 to 10 → : Force 1 to 4 → :

SEA.—Rough High

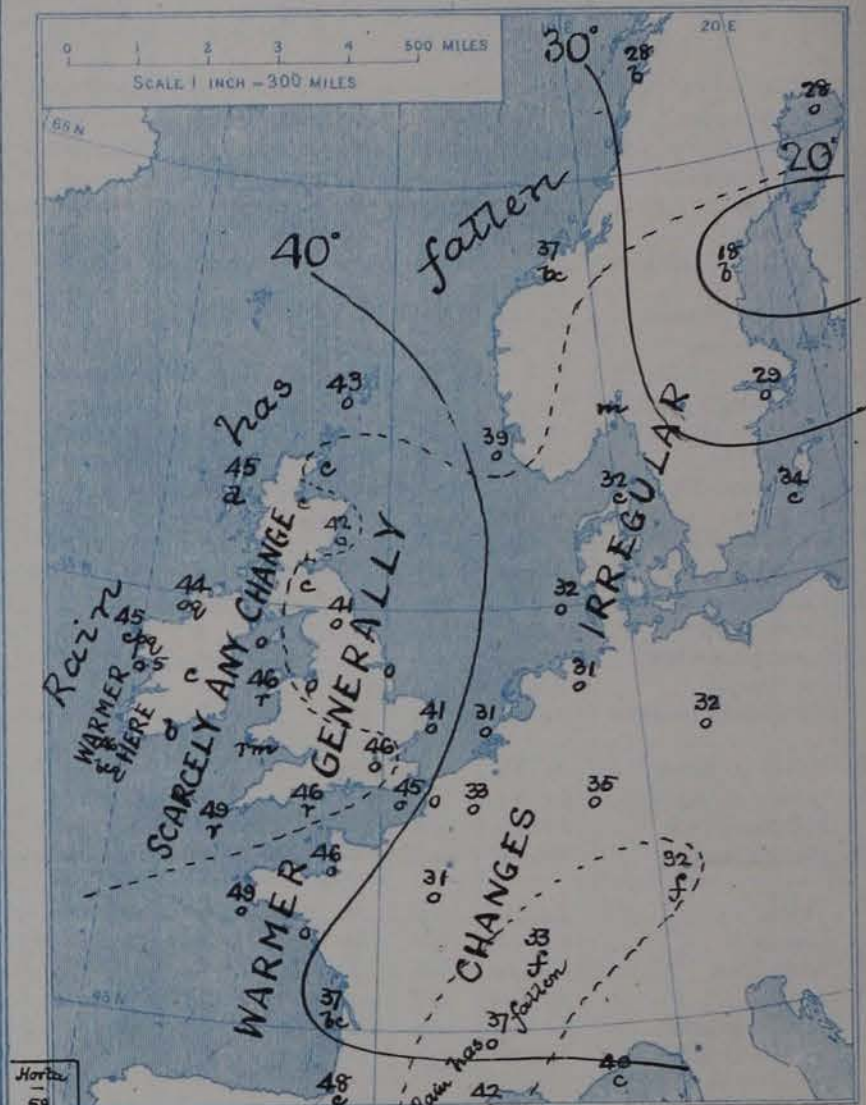

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

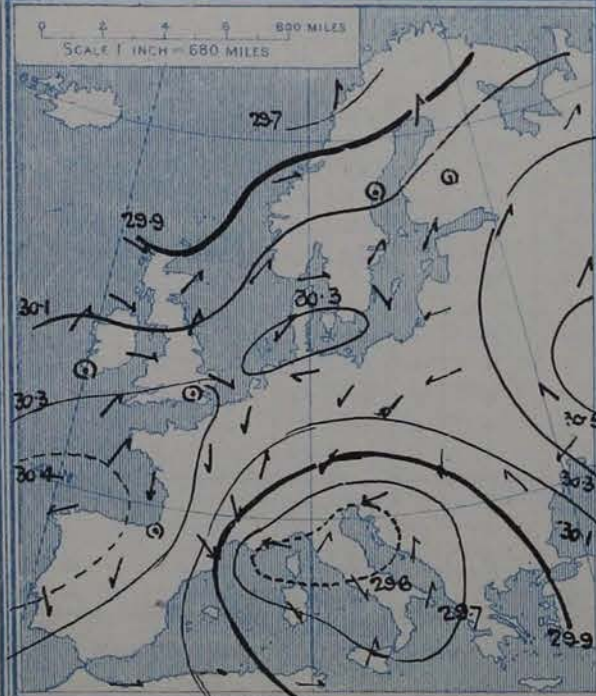

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

Amount recorded in various districts of the United Kingdom during the 3 weeks ended Feb. 25, 1905, with the percentage of the average for the corresponding period.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

V Means of DAILY TEMPERATURE at 8 A.M. for the Two monthly period FEBRUARY-MARCH (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

Since yesterday morning a large and well-marked "V" shaped depression has advanced over our Islands from the Atlantic. It now extends from beyond the North of Scotland to the extreme Southwest of England and the barometer has begun to rise again briskly in the West of Ireland. The readings range from 30.3 ins. and upwards over the Spanish Peninsula and above 30.2 ins. over Germany to 29.82 ins. at Scilly and to about 29.4 ins. to the Northward of the Hebrides.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind has veered to the NW. in Ireland and blow freshly or strongly, but over England, the North Sea, and most of Scotland it is S. and of little force. On the Continent the wind is light and rather variable, but a strong breeze from SSE. prevails in the Southwest of Norway. Temperature has risen in most parts of the United Kingdom and changed irregularly on the Continent. It ranges from 49° at Scilly and 47° at Leith to 41° or 42° on the East coast of England, and at the Continental stations from 51° at Lisbon to 31° at Paris and Buchhaven and to 18° at Hernösand. The weather is very cloudy or dull over our area generally, but the sky is nearly clear at some stations in Scandinavia and over the South of Ireland. Showers are falling at Blacksod Point and rain at Stornoway, in Wales and the adjacent parts of England. At Munich and Belfort fog is reported. The sea is rough or rather so on some parts of our Western coasts, moderate to smooth elsewhere.

Temperature rose to above 50° in many parts of these Islands during yesterday, but at Yarmouth the thermometer only touched 41°. Rain has fallen except in the East of England, the largest amounts being 0.45 in. at Blacksod Point and 0.42 in. at Scilly. Rain or snow was also experienced in the East and South of France and at a few Scandinavian stations. Bright sunshine was most prevalent on our Southeast coasts and at Jersey - Margate had as much as 7.5 hrs.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

FORECASTS*

For the 24 hours ending at NOON on 6th March, 1905.

DISTRICTS.

WARNINGS

At 7.5 pm. yesterday to Districts 6, 7, 9, 10 and parts of 0 and 8, Hoist South Cone.

Note.—The South Cone, point downwards () means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards () means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster: the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Monday, 6th March, 1905.

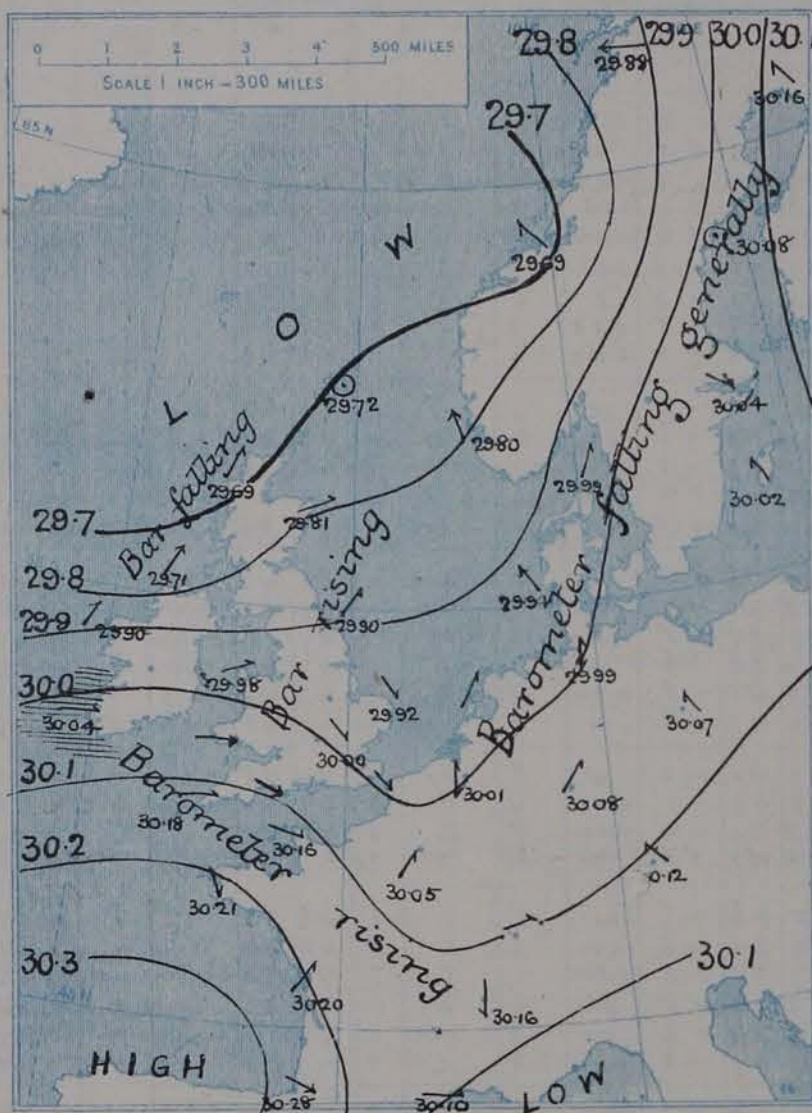

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 \rightarrow : Force 5 to 7 \rightarrow : } Calm \odot
Force 8 to 10 \rightarrow : Force 1 to 4 \rightarrow :

SEA.—Rough  High 

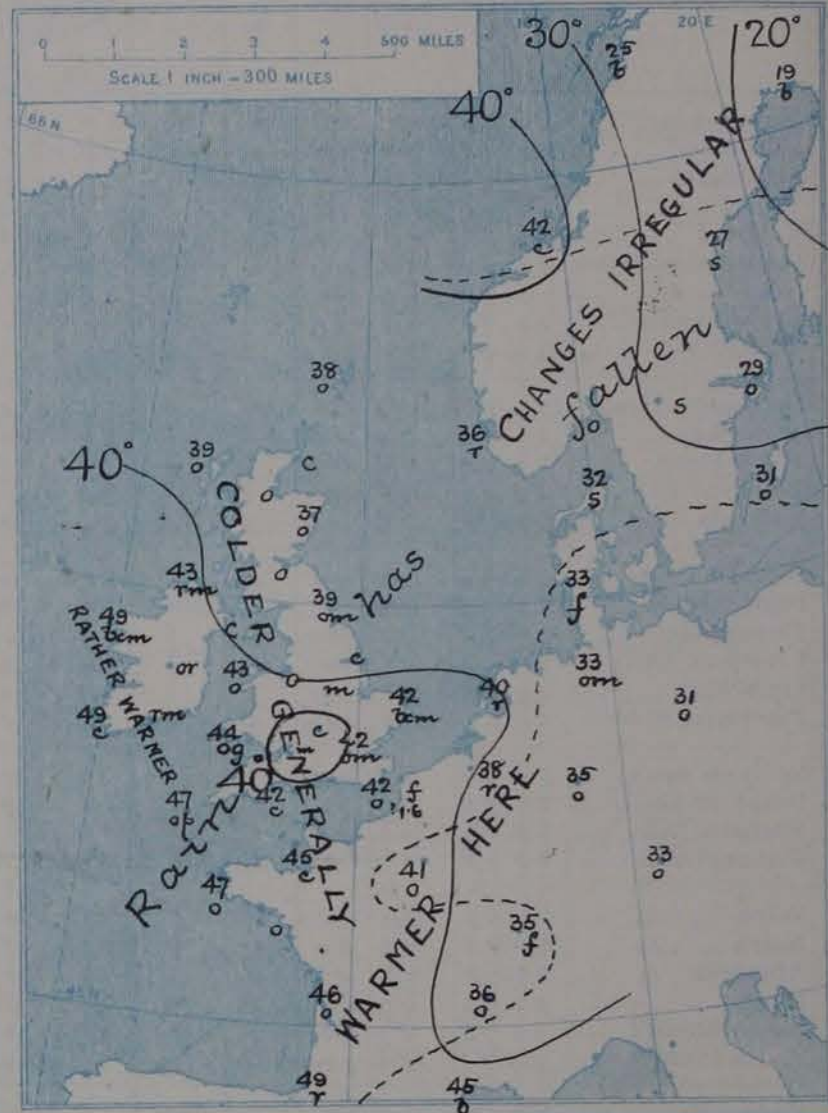

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.8

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

Amount recorded in various districts of the United Kingdom during the week ended 25 February, 1905 with the percentage of the average, for the corresponding week.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

V Means of DAILY TEMPERATURE at 8 A.M. for the Two monthly period FEBRUARY-MARCH (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The barometer is now rising all over England, eastern Scotland, and France and Southern Europe, but is falling in all other regions, the disturbance of yesterday having reached the Norwegian coast, while in the past night a new depression has advanced quickly towards our northwestern coasts. In both disturbances the lowest barometer reading is 29.69 ins., at Stornoway and Christiansund. The principal anticyclone covers the Bay of Biscay and the Spanish Peninsula, with the barometer at Lisbon reading 30.34 ins. Another high pressure system is indicated over Finland, the barometer at Haparanda being at 30.16 ins.

WIND

TEMPERATURE

WEATHER

AND

SEA

Southwesterly breezes prevail over the northern half of our Islands, light in force as a rule, but blowing a moderate gale at Malin Head. Over the southern districts and France the direction is mainly Westerly to Northwesterly and force light to moderate. Beyond the North Sea, from North Germany to the Arctic regions, Southerly to Easterly breezes prevail, generally light, but blowing freshly at some coast stations.

Temperature has changed irregularly at the home and foreign stations. It now ranges from 37° at Aberdeen and 38° at several other stations in England and Scotland to 47° at Roche's Point and Scilly and 49° at Blacksod Point and Valencia, from 19° at Haparanda and 25° at Bodø to 49° at Biarritz and 52° at Lisbon. A cloudless sky is reported in the extreme southwest and north of Europe, elsewhere it is mostly very cloudy to overcast, with mist in many places, fog at Yarm, Belfort and Cape Gris Nez, rain at some of our western stations and at several Continental ones, and snow in some parts of Denmark and Sweden. The sea is rather rough off Valencia, moderate to very smooth in all other localities.

During yesterday temperature rose to 50° in various parts of England and Ireland, but at Aberdeen and Yarmouth the maximum was 45° and at Clacton-on-Sea 44°. In many places there was no bright sunshine, but the more western stations had very good records, Valencia 7 hrs., Scilly 7.4 hrs. and Parsonstown 7.9 hours. Rain has fallen at all stations in the past 24 hours, but only Oxford and Liverpool report as much as $\frac{1}{4}$ inch.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

An unsettled type of conditions prevails over the country generally. The depression to the northwestward will pass away to the northeastward, but the changes in progress favour the appearance of another off the western coasts in the course of the day, and Southwesterly to Westerly winds will be experienced in most localities during the ensuing 24 hours.

FORECASTS*

For the 24 hours ending at NOON on 7th MARCH, 1905.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Freshening SW ^y and W ^y winds, strong in places; changeable, some rain; moderate temperature.
1	SCOTLAND EAST	
2	ENGLAND N.E.	NW ^y to W ^y breezes, light or moderate, freshening later and backing; changeable, some local showers; variable temperature.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as Nos. 0 and 1.
7	ENGLAND N.W.	
8	ENGLAND S.W.	Same as Nos. 2 to 5.
9	IRELAND NORTH	
10	IRELAND SOUTH	

WARNINGS

The South Cone is still flying in Dists. 0, 6, 7, 9, 10, and part of 8.

Note - The South Cone, point downwards (⏚), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (⏚), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

*For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.

" Weekly " "

£1 10 0

Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom **Sixpence in addition to the cost of the inquiry and reply Telegrams.** Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on Tuesday, 7th March, 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Secretary.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Tuesday, 7th March, 1905.

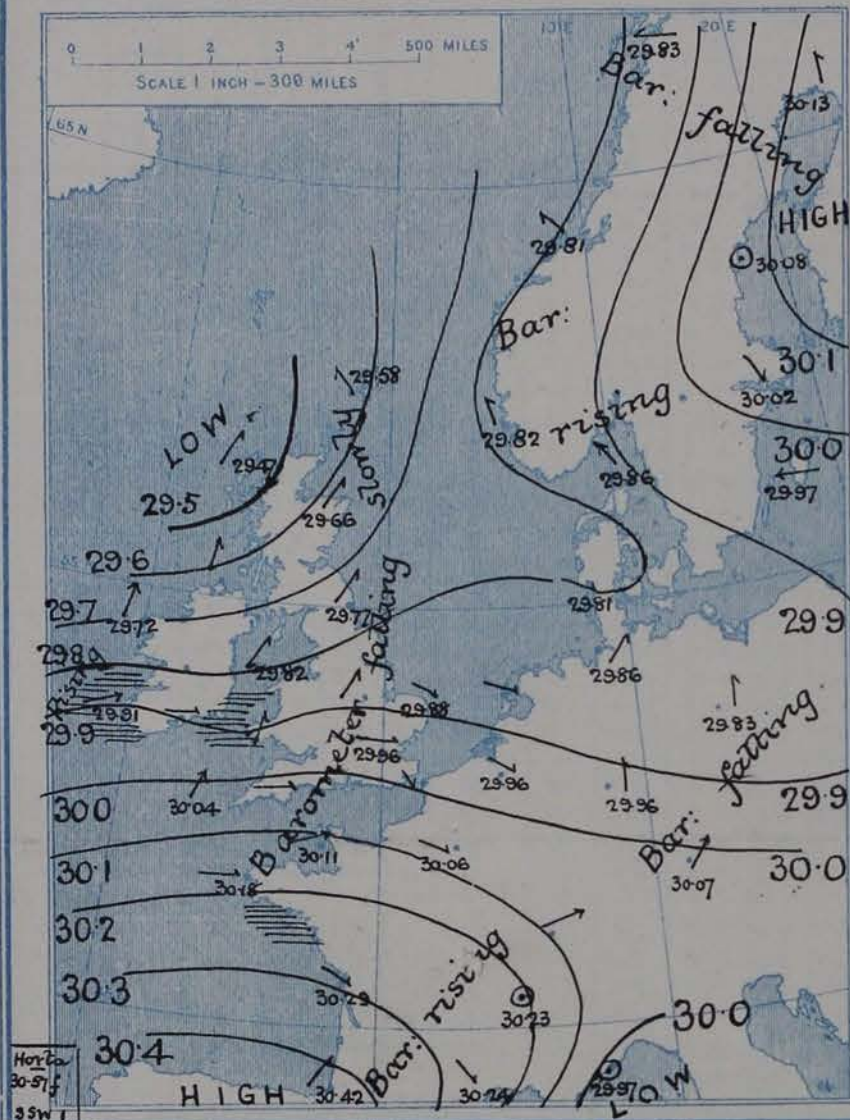

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → : Force 5 to 7 → : } Calm ☉
Force 8 to 10 → : Force 1 to 4 → :

SEA.—Rough High

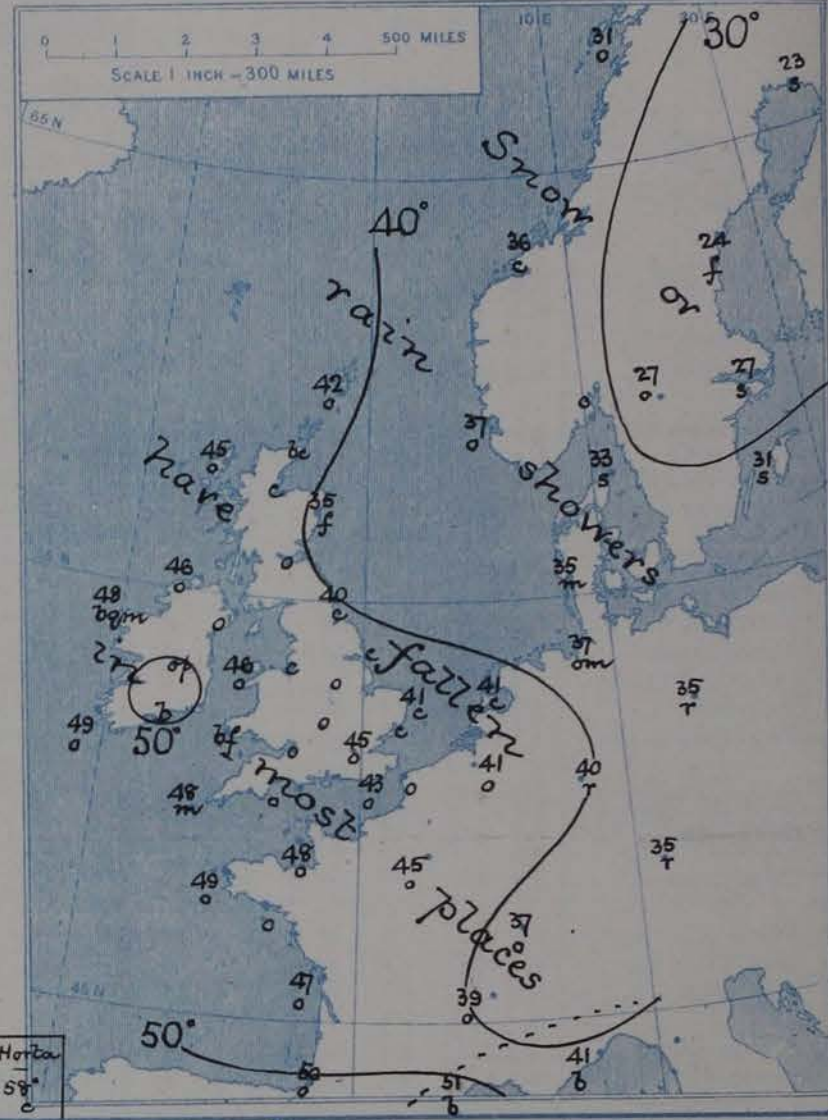

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

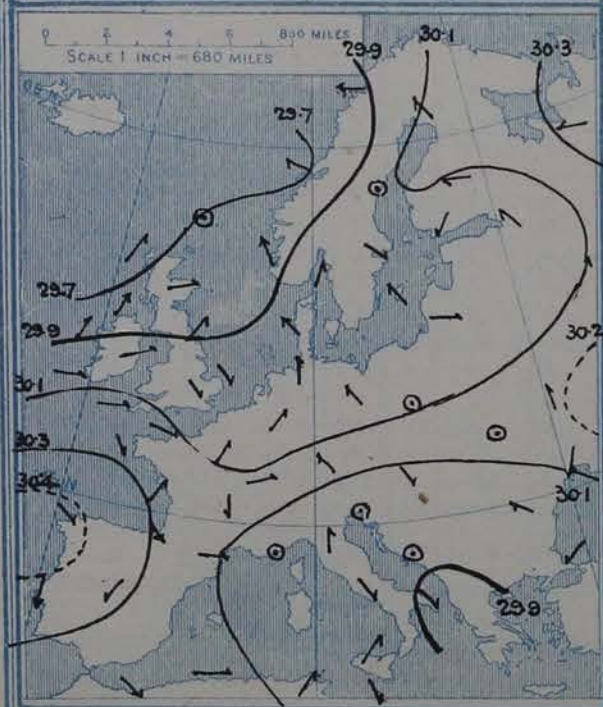

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.8

III. BAROMETER AND WIND

Yesterday morning.

IV. EXTREMES OF TEMPERATURE

recorded

in various districts of the United Kingdom during the week ended Saturday, 4th MAR.

V Means of DAILY TEMPERATURE

at 8 A.M. for the Two monthly period
FEBRUARY-MARCH (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The disturbances of yesterday morning have disappeared from our area, but in the course of the past night a new disturbance has advanced towards our northwestern coasts from the Atlantic, and has occasioned a brisk decrease of pressure at all our northern and western stations, the lowest reading this morning being 29.47 ins. at Stornoway. The anticyclone over the Spanish Peninsula is increasing in intensity and spreading northeastward into France, the highest barometer reading being 30.48 ins. at Lisbon. The high pressure system over the far north of Russia is withdrawing to the eastward, the Haparanda barometer having declined to 30.13 ins.

WIND

TEMPERATURE

WEATHER

AND

SEA

Westerly or Southwesterly winds prevail throughout our Islands and Western Europe, light in force in nearly all localities, but blowing freshly at some of our southwestern coast stations and at Munich, and strongly at Belfort. Over Scandinavia the direction is from between South and East, blowing freshly at the Scaw, and strongly at Nisby. Temperature has risen at nearly all stations at home and abroad. The present readings range from 35° at Aberdeen (in a fog), and 40° at Shields to 49° at Valencia and 50° at Parsonstown and Roche's Point; from 23° at Haparanda and 24° at Hernösand to 50° at Biarritz and Lisbon and 51° at Perpignan. The weather is clear at Roche's Point, and along the south coast of France, but is very cloudy to overcast in nearly all other districts, with fog at Aberdeen, Pembroke and Hernösand, showers at Parsonstown, rain at nearly all the German stations and snow in the north of Denmark, and on the Baltic and gulf of Bothnia. The sea is rather rough off Valencia, Milford Haven and Lorient, moderate to very smooth elsewhere.

During yesterday temperature rose to 50° and upwards in several parts of our Islands, to 54° at Parsonstown and Roche's Point, and many of the night minima were as high as 40° to 47°. The duration of bright sunshine was everywhere small, and only Parsonstown registered 4 hours. Rain fell at nearly all stations, but the amounts were in all cases small.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The changes of pressure now in progress are so very similar to those reported yesterday morning, that no important modification in the general weather conditions over our Islands is anticipated for the present.

FORECASTS*

For the 24 hours ending at NOON on 8th MARCH, 1905.

DISTRICTS.

FORECASTS.

- 0 { SCOTLAND NORTH
- 1 { SCOTLAND EAST
- 2 { ENGLAND N.E.
- 3 { ENGLAND EAST
- 4 { MIDLAND COUNTIES
- 5 { ENGLAND SOUTH

Light to moderate or fresh S.W.^y and W.^y breezes; changeable, some local showers and mist; mild.

DISTRICTS.

FORECASTS.

- 6 { SCOTLAND WEST
- 7 { ENGLAND N.W.
- 8 { ENGLAND S.W.
- 9 { IRELAND NORTH
- 10 { IRELAND SOUTH

Light to moderate or fresh S.W.^y and W.^y breezes; changeable, some local showers and mist; mild.

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (⌞), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌞), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster: the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

FOR WEDNESDAY, 8TH MARCH, 1905.

SEA.—Rough High

Yesterday morning.

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

in various districts of the United Kingdom during the week ended Saturday, 4TH MARCH, with the percentage of the average amount for the corresponding week.

MARCH (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The disturbance which was approaching our northwestern coasts yesterday is now centred between the Shetlands and Norway, with the barometer at Lumburgh Head down to 29.49 ins. A new depression is, however, approaching the west of Ireland, where the barometer has fallen decidedly during the night, and now reads 29.75 ins. at Blacksod Point. (By 10.30 am. the barometer had fallen very rapidly to 29.56 ins. at Blacksod Point, with a fresh S^W gale and heavy squalls.) The fall is spreading eastward and northward. The region of highest pressure remains over France and the Spanish Peninsula, the barometer having risen to 30.50 ins. at Biarritz.

WIND

TEMPERATURE

WEATHER

AND

SEA

A cyclonic wind circulation is shown round the northern depression, light northerly to northwesterly over the north of Scotland, light to strong southeasterly to easterly over Denmark and Scandinavia. With the new disturbance the wind has backed southerly in Ireland, fresh to a moderate gale in force. Over the rest of our Islands and the western portion of the Continent the direction is northwesterly to southwesterly, a fresh or strong breeze being reported in many places. Temperature has fallen at nearly all stations. It now ranges from 55° at Donaghadee and 36° at Stromway, Narin and Oxford to 47° at Scilly and 48° at Valencia; from 19° at Itaparanda and 26° at Honnizand and Stockholm to 50° at Nice and 52° at Perpignan.

The weather varies considerably both at home and abroad, fine and clear in many localities, dull and unsettled in others, with showers of rain at a number of stations, snow at all the Swedish ones, and fog in North Germany and on the Portuguese coast. The sea is rough or rather rough on various parts of our western and southern coasts and along the Dutch and northern French coasts, moderate to very smooth elsewhere.

During yesterday temperature rose to 50° and upwards at the majority of stations, to 54° at Bournemouth and Bettey-y-Cod. A few stations had no bright sunshine, and the amounts generally were very small, but Pembroke had 5.1 hours and Valencia 6.3 hours. Rain or snow has been experienced over nearly the whole of our area, 0.5 inch at Belfort being the largest amount.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The new disturbance approaching Ireland will serve to maintain the unsettled type of conditions over the country generally, with southerly to westerly strong winds or gales on most sections of our southern and western coasts, moderating later and veering northwesterly.

FORECASTS*

For the 24 hours ending at NOON on 9th MARCH, 1905.

DISTRICTS.

FORECASTS.

0 { SCOTLAND
NORTH

Light N^W and N.W. breezes at first, backing SW^W and S^W and increasing decidedly; unsettled, some rain; mild.

1 { SCOTLAND
EAST

2 { ENGLAND
N.E.

Moderate to strong S^W and W^W winds; changeable, some showers; mild.

3 { ENGLAND
EAST

4 { MIDLAND
COUNTIES

5 { ENGLAND
SOUTH

S^W to W^W strong winds or gales, veering and moderating later; unsettled, squally, some rain; temperature above normal.

DISTRICTS.

FORECASTS.

6 { SCOTLAND
WEST

7 { ENGLAND
N.W.

8 { ENGLAND
S.W.

9 { IRELAND
NORTH

10 { IRELAND
SOUTH

S^W to W^W strong winds or gales, veering and moderating later; unsettled, squally, some rain; temperature above normal.

WARNINGS

At 7.10 pm. yesterday to Districts 5 and 7 to 10, and at 9.40 am. today to District 6 and part of 0, "HOIST SOUTH CONE."

Note.—The South Cone, point downwards (T), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (T), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.

" Weekly " " " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on *Thursday, 9th March,* 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. M. SHAW, Secretary.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster: the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Thursday, 9th March, 1905.

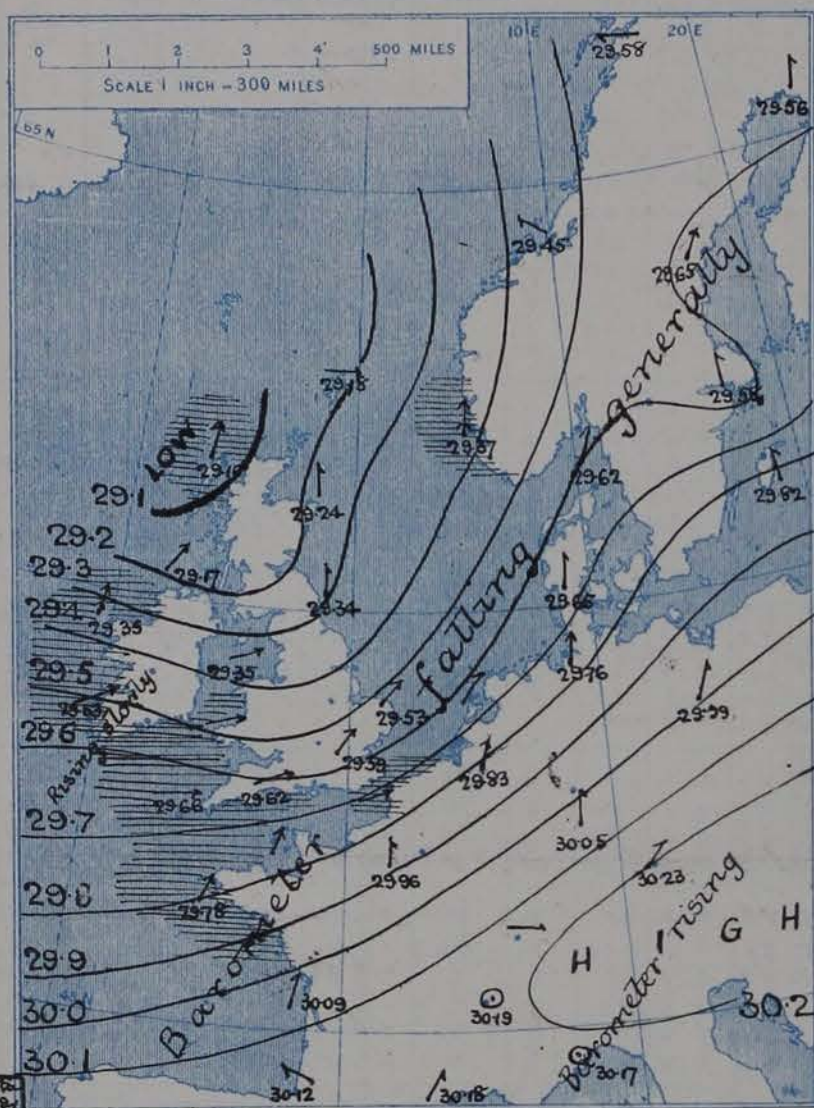

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → : Force 5 to 7 → : } Calm ☉
Force 8 to 10 → : Force 1 to 4 → :

SEA.—Rough High

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. LAST WEEK'S SUNSHINE.

Amount recorded in various districts of the United Kingdom during the week ended Saturday, 4th MARCH, with the percentage of the average duration for the corresponding week.

V Means of DAILY TEMPERATURE

at 8 A.M. for the monthly period

MARCH (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The barometer has risen rather decidedly over Southern and Central Europe, the central space of the anticyclone having been transferred from Northern Spain to South Germany, the reading at Munich being 30.23 ins; at Lisbon it has dropped to 30.25 ins. All over the rest of the region under observation pressure has given way more or less decidedly, a large and deep depression being indicated beyond our northwestern coasts, and small secondary irregularities over the south of Scotland and Sweden. At Stornoway the barometer is down to 29.10 ins. Over our southern districts and the neighbouring parts of the Continent the gradients are rather steep.

WIND

TEMPERATURE

WEATHER

AND

SEA

Southerly to Westerly winds are reported over nearly the whole of our area, an Easterly current locally in Scotland, Norway and the extreme southwest of France. The force is very variable, light in many localities, fresh or strong in others, a moderate gale at Portland Bill, Bath and Pembroke and a fresh gale at Blackhead Point. Temperature has fallen in most parts of Ireland, Germany and Eastern France and Northern Scandinavia, risen elsewhere. The present values range from 35° at Naim and 38° at Parsonstown to 49° at Oxford and 50° at Bath and in London; from 17° at Haparanda and 25° at Bodö to 49° at Biarritz and 50° at Brest and Lorient. The weather is in a variable state both at home and on the Continent, cloudless in many places, overcast and dull in others, with squalls of hail and sleet in the northwest of Ireland, rain at nearly all stations in a band extending from the mouth of the English Channel to the north of Denmark, and snow thence as far as Haparanda. A high sea is running off Ushant and it is rough, or rather rough, on many parts of our western coasts, in the Channel and off the southwest of Norway.

During yesterday temperature rose to 50° and upwards at many of the southern stations, to 53° at Lally and 54° at Valencia. At a few stations no bright sunshine was registered, elsewhere the records were extremely variable, ranging up to 6.8 hours at Margate and 7.4 hours at Blackton-on-Sea. Rain has fallen nearly everywhere, and the amounts are somewhat larger than of late, an inch being measured at Portland Bill. Thunder and lightning occurred in various parts of Ireland in the course of the past night.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The conditions remain of a very unsettled type. Although the barometer has commenced to rise at the extreme southwestern stations, it is still unsteady there, and as the wind on the western coasts clings to Southwest it is probable that another disturbance will declare itself in the course of the ensuing 24 hours.

FORECASTS*

For the 24 hours ending at NOON on 10th MARCH, 1905.

DISTRICTS.

FORECASTS.

0 SCOTLAND NORTH

1 SCOTLAND EAST

2 ENGLAND N.E.

3 ENGLAND EAST

4 MIDLAND COUNTIES

5 ENGLAND SOUTH

Winds very variable, W. to S. and E., finally SW^y, fresh to a gale; changeable, some rain; mild.

S^y to W^y winds, varying greatly in strength, a gale at times; very changeable, some rain, fair intervals; mild.

DISTRICTS.

FORECASTS.

6 SCOTLAND WEST

7 ENGLAND N.W.

8 ENGLAND S.W.

9 IRELAND NORTH

10 IRELAND SOUTH

S^y to W^y winds, varying greatly in strength, a gale at times; very changeable, some rain, fair intervals; mild.

WARNINGS

At 3.10 pm yesterday to Districts 1, 2, 3, and the remainder of 0, "HOIST SOUTH CONE." The signals are now flying on all coasts.

Note.—The South Cone, point downwards (☐), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (☐), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and Reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on *Friday, 10th March,* 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Secretary.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster: the Sunshine entered to Dungeness is recorded at Littlehampton-on-Sea.

Errata:—In yesterday's Report the 8 a.m. barometer readings at Haparanda and Stockholm should read 29.76 and 29.78 ins. respectively.

WEATHER CHARTS

FOR Friday, 10th March, 1905.

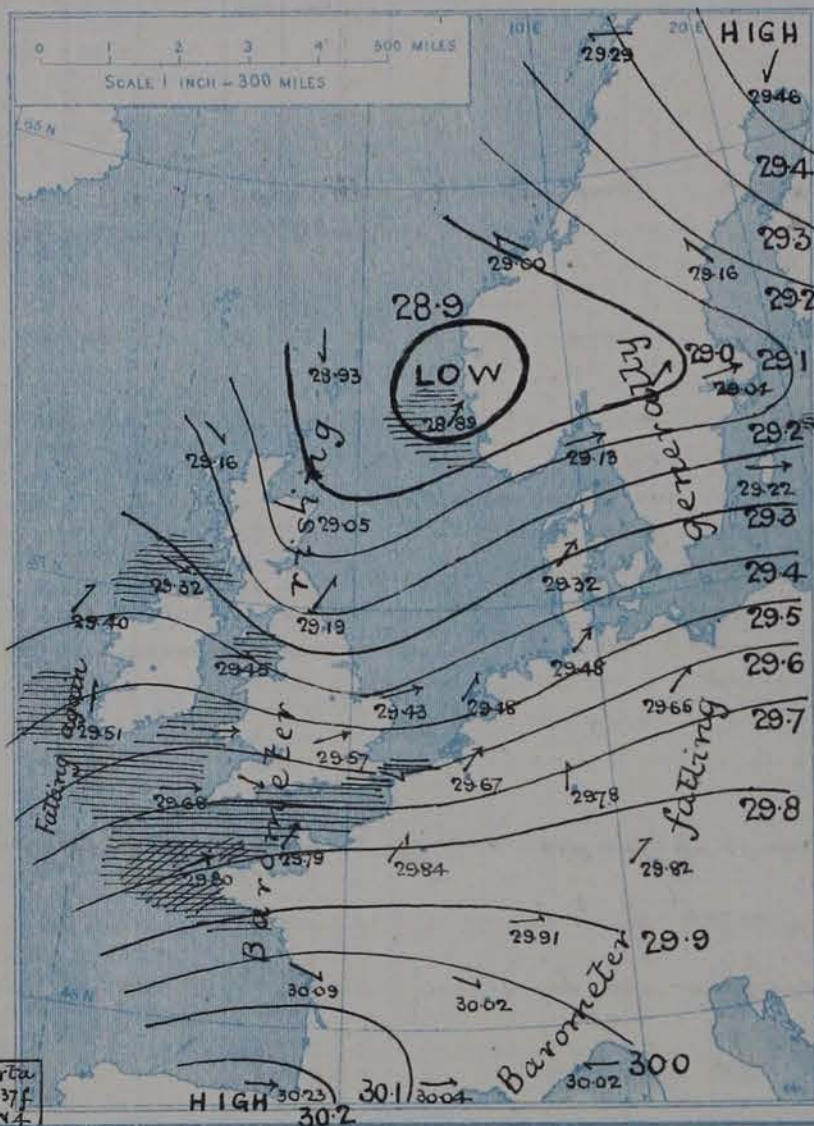

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → : Force 5 to 7 → : } Calm ○
Force 8 to 10 → : Force 1 to 4 → :

SEA.—Rough High

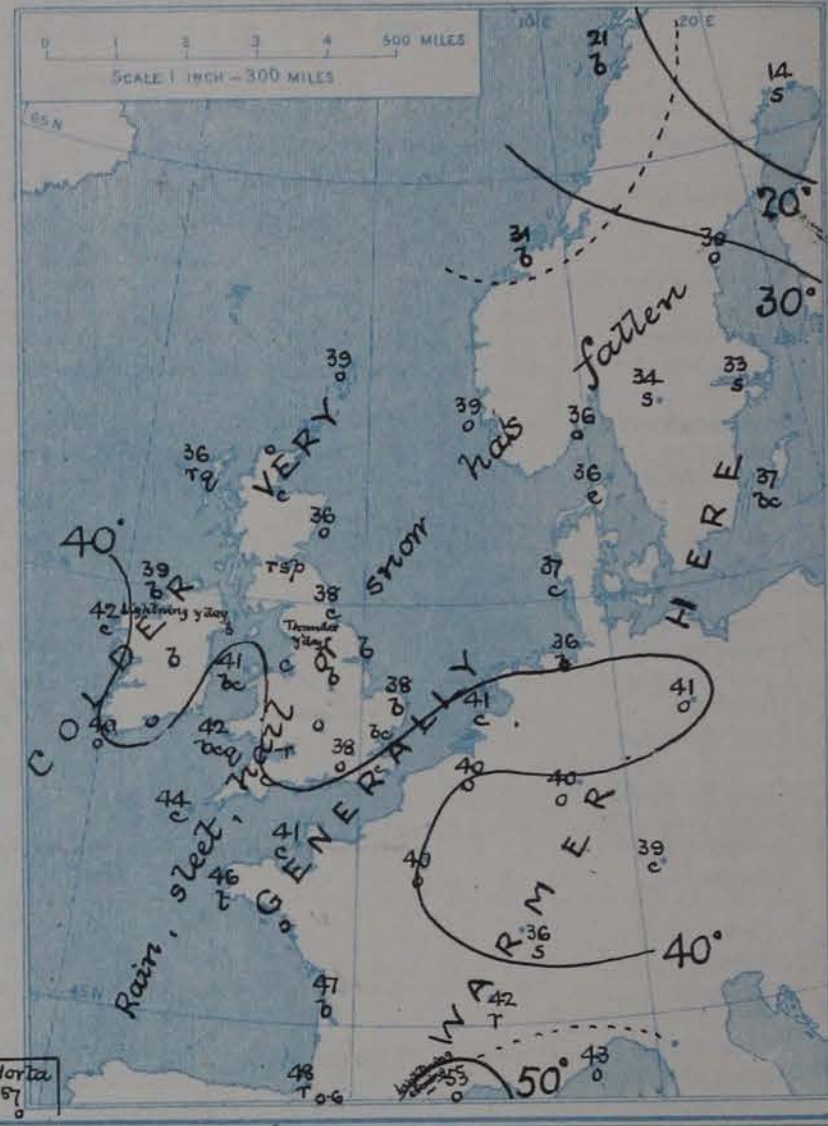

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

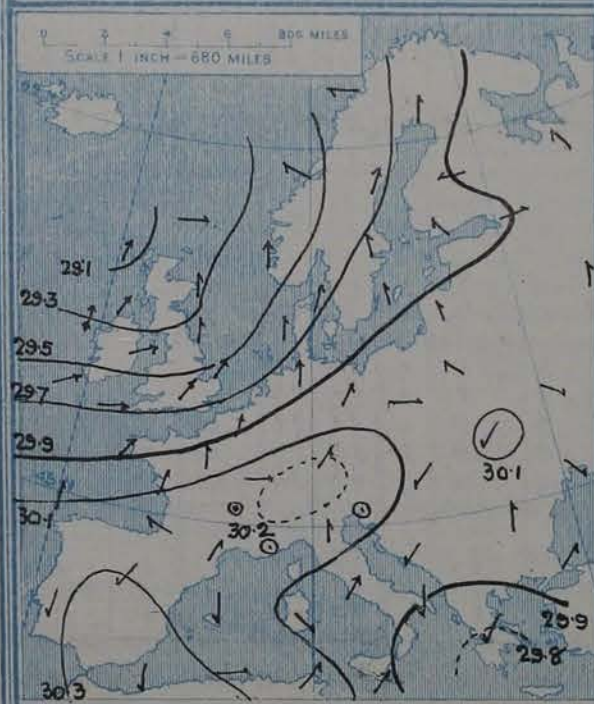

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. RAINFALL IN 1905.

Total Amount recorded in various districts of the United Kingdom in the 9 weeks ended Saturday, 4 March, with the percentage of the average amount for the corresponding period.

V. Means of DAILY TEMPERATURE

at 8 A.M. for the monthly period

MARCH (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The depression which lay over our northern districts yesterday, and another system which travelled across Scotland during the night, are both moving away eastwards. A fresh fall of the barometer, however, accompanied by a backing wind, has now commenced in Ireland and the rise of the mercury has become checked in the Hebrides. Pressure varies from above 30.2 ins. over the Spanish Peninsula to below 28.9 ins. on the southwest coast of Norway.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind circulates round the northern depression. In the north of Scotland it is light from North, over England fresh or strong from West, while over Denmark and Germany it draws into Southwest, and over the north of Scandinavia into East. On the west coast of Ireland it has already backed to the Southward. Temperature has fallen very generally over the United Kingdom and the nearer parts of the Continent, but risen in Germany, the east of France and over the Baltic. The readings range from 53° at Perpignan to below 40° at almost all our own stations to 33° at Stockholm and to 14° at Haparanda. In several parts of our Islands, and at a few stations on the Continent the sky is temporarily clear, but the general character of the weather continues very changeable. Rain is falling at Biarritz, Lyons, Bath, and Stornoway, and sleet showers at Leith, while at Brest thunder is reported. In several parts of Sweden there is snow. The sea is rough, or rather so, on nearly all our coasts.

The highest temperatures reported over this country yesterday were 52° at Scarborough and in London; in the extreme south of France readings a little higher than 60° were recorded. Further falls of rain, hail, or sleet have occurred very generally during the past 24 hours. Lightning was seen in the north and west of Ireland and thunder occurred at Harrogate. A very strong, but brief, Westerly gale was experienced over the western half of the English Channel during the night. The duration of bright sunshine was very short except over the northern counties of England, in Wales, and at some Irish stations. A solar halo was observed yesterday at Oxford and Portland Bill.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

There are no indications of any material change in the general type of weather. The depression which is approaching Ireland will move in an easterly or northeasterly direction, and be accompanied by strong winds and squally, showery weather in almost all parts of the Kingdom.

FORECASTS*

For the 24 hours ending at NOON on 11th MARCH, 1905.

DISTRICTS.

FORECASTS.

- 0  SCOTLAND NORTH
- 1  SCOTLAND EAST
- 2  ENGLAND N.E.
- 3  ENGLAND EAST
- 4  MIDLAND COUNTIES
- 5  ENGLAND SOUTH

Wind varying both in force and direction, but mainly W^y; occasional showers of rain, sleet or snow.

Wind chiefly W^y, fresh or strong; changeable, rather cold, fair, then passing showers of rain or hail.

DISTRICTS.

FORECASTS.

- 6  SCOTLAND WEST
- 7  ENGLAND N.W.
- 8  ENGLAND S.W.
- 9  IRELAND NORTH
- 10  IRELAND SOUTH

Same as Nos. 0 and 1.

SW^y and W^y winds, strong, a gale in places; squally, showery; cool.

S^y or SW^y to W^y; strong winds or gales, moderating later; squally, occasional rain or hail; cool.

WARNINGS.

At 7.0 pm. yesterday to Districts 5, 7, 8, 9 and 10, "RE-HOIST SOUTH CONE". The signals are also flying in Distts. 1, 2, 3 and part of 0.

Note.—The South Cone, point downwards () means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards () means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
 " Weekly " " " £1 10 0 "

Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom **Sixpence in addition to the cost of the inquiry and reply Telegrams.** Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on Saturday, 11th March,

1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Secretary.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster: the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

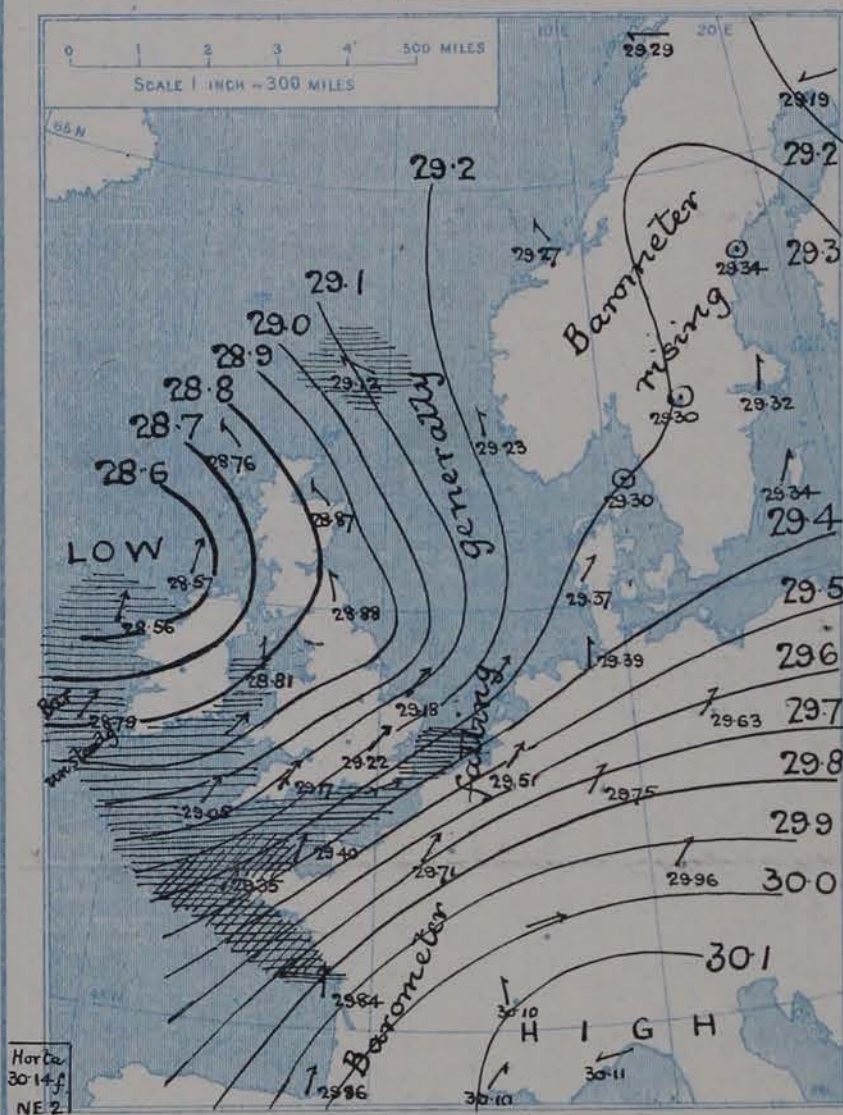

FOR Saturday, 11th March, 1905.

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ☉
Force 8 to 10 → Force 1 to 4 → }
SEA.—Rough High

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. BRIGHT SUNSHINE IN 1905.

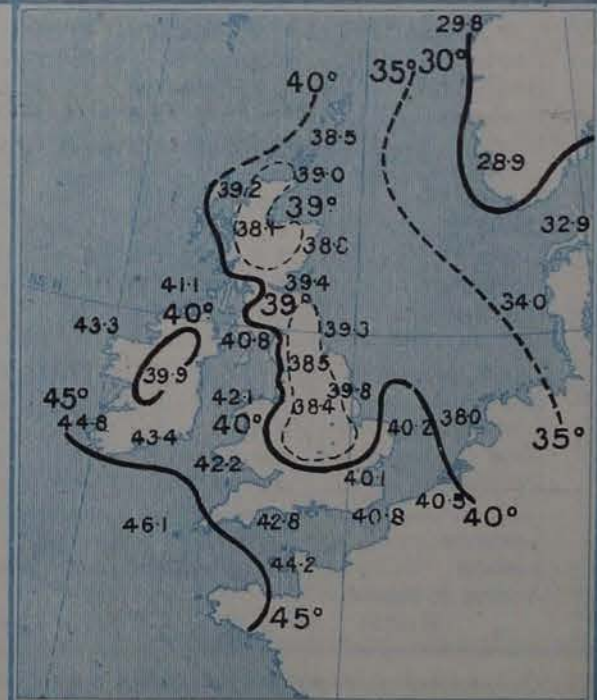

Total Duration recorded in various districts of the United Kingdom in the 9 weeks ended Saturday, 4th MARCH with the percentage of the average duration for the corresponding period.

V Means of DAILY TEMPERATURE

at 8 A.M. for the monthly period

MARCH (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The very deep depression which caused the rapid fall of the barometer in the west of Ireland yesterday afternoon is now centred off our northwest coasts, where the mercury has fallen to about 28.5 ins. The highest readings, 30.1 ins. and upwards, are found over the southeast of France. Gradients are rather irregular owing to the presence of small secondary minima, but, in most districts, they are steep.

WIND

TEMPERATURE

WEATHER

AND

SEA

Strong Southwesterly winds or gales prevail over Ireland, England and the greater part of France and the Netherlands, and increasing Southeasterly winds over Scotland and the northern part of the North Sea. Over Sweden and the extreme southeast of France the wind is light and variable. Temperature has risen rather decidedly in most parts of France and the United Kingdom, changed little and rather irregularly elsewhere. The readings now range from 51° or 50° at several English stations to 39° at Valencia and to 38° at Stornoway. The Continental values range from 57° at Biarritz to 37° at Berlin, 34° at Stockholm and to 16° in the north of Scandinavia. The only parts of our area where the weather is fine and bright are the south of France and the northwest of Norway. Elsewhere the sky is very cloudy or quite overcast with hail showers in the southwest of Ireland, rain in nearly all other British localities and in various parts of the Continent, and snow at Stockholm. The sea is very high off the west coast of Brittany, rough, or rather so, in most other regions.

The highest temperatures recorded over our Islands yesterday were 50°, or a little higher, at some southern and western stations. Further falls of rain have occurred very generally, the largest amounts being 1.0 in. at Dungeness, 0.9 in. in the south of Ireland, 0.7 in. at Scilly and Jersey and 0.5 in. at Bath. A considerable quantity of sunshine was registered yesterday in the southeast and east of England and also at some northwestern stations. A solar halo was observed in various places. A thunderstorm was experienced early this morning at Blackrod Point and lightning had been previously seen in the south of Ireland.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The deep cyclonic disturbance which now has its centre off our northwest coasts, is likely to travel away slowly in a northerly or northeasterly direction. Strong winds or gales, with rainy squally weather will continue general during the greater part of today, but some improvement is expected in all the southern districts by tomorrow.

FORECASTS*

For the 24 hours ending at NOON on 12th MARCH, 1905.

DISTRICTS.

FORECASTS.

- 0  SCOTLAND NORTH
- 1  SCOTLAND EAST
- 2  ENGLAND N.E.
- 3  ENGLAND EAST
- 4  MIDLAND COUNTIES
- 5  ENGLAND SOUTH

SE^{ly} to S^{ly} and SW^{ly} strong winds, a gale in places; squally, rainy.

Strong SW^{ly} winds or gales; rainy, squally, mild. Wind subsequently veering towards W, with improving and cooler weather.

DISTRICTS.

FORECASTS.

- 6  SCOTLAND WEST
- 7  ENGLAND N.W.
- 8  ENGLAND S.W.
- 9  IRELAND NORTH
- 10  IRELAND SOUTH

Same as Nos. 0 to 2.

Same as Nos. 3 to 5.

S^{ly} and SW^{ly} to W^{ly} winds, strong to a gale, moderating later; changeable, rain or hail showers.

WARNINGS

At 7.10 pm. yesterday to Districts 0, 1, 6, "HOIST SOUTH CONE". The signals are still flying on all coasts.

Note.—The South Cone, point downwards () means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards () means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.

„ Weekly „ „ „ „ £1 10 0 „

Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on

Sunday, 12th MARCH, 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. H. SHAW, Secretary.

NOTE: The Sunshine for London given in this Table is for the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR SUNDAY, 12TH MARCH, 1905.

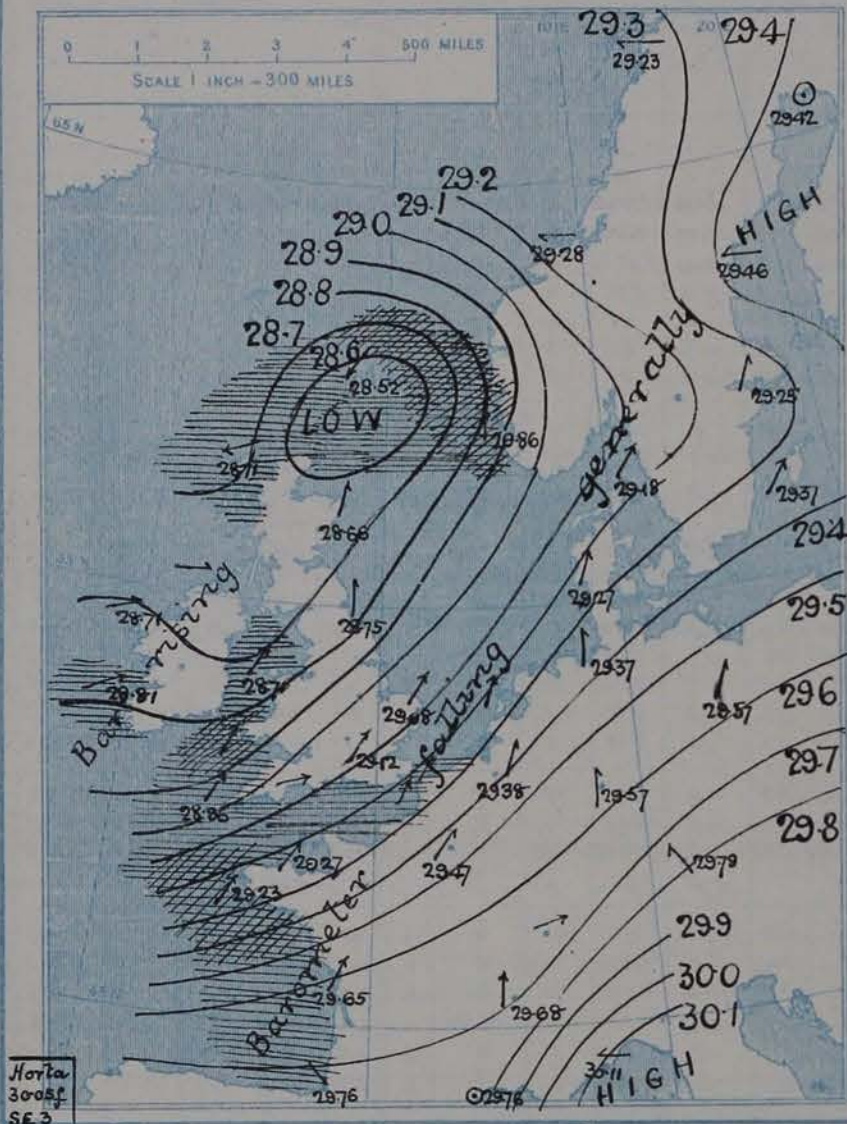

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → : Force 5 to 7 → : Calm ⊙
Force 8 to 10 → : Force 1 to 4 → :

SEA.—Rough  High 

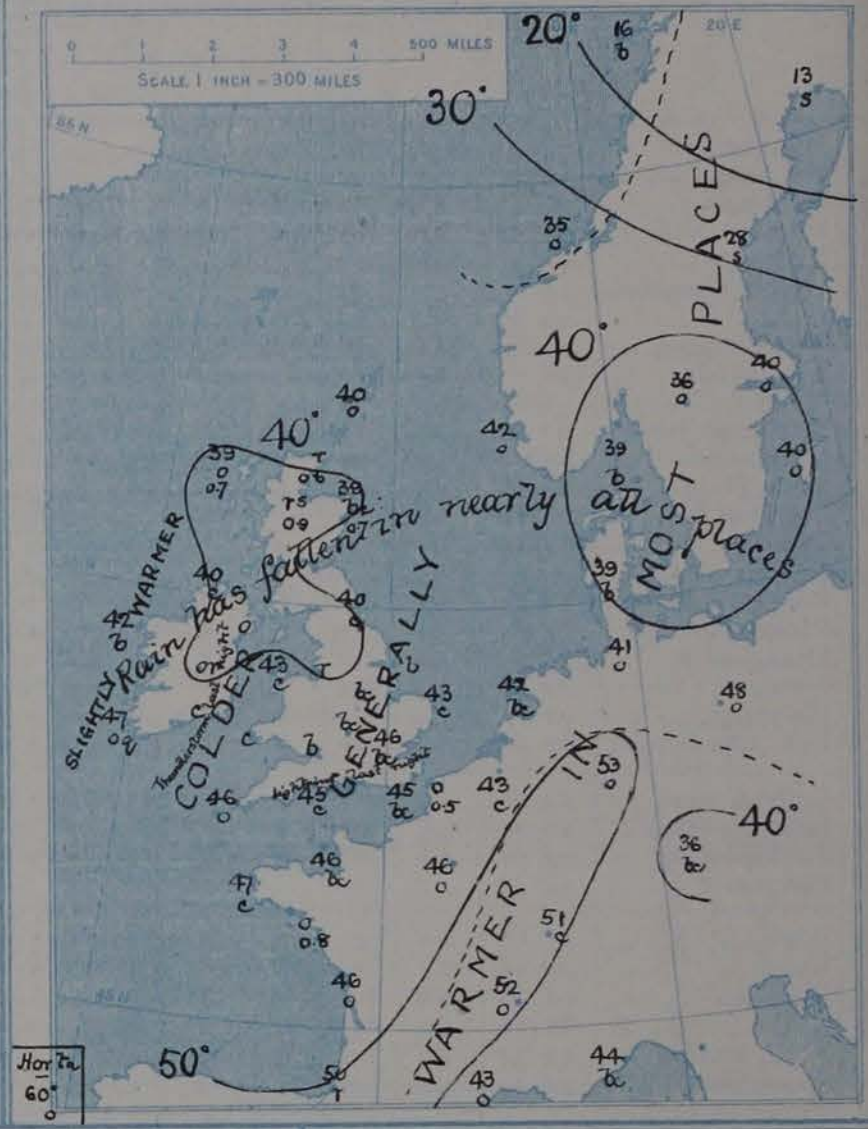

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

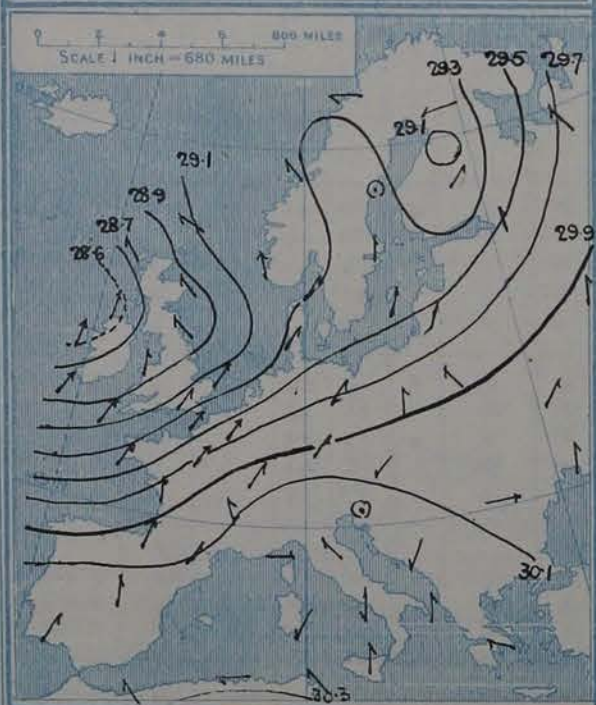

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

Amount recorded in various districts of the United Kingdom during the 9 weeks ended Sat. 4TH MAR., with the percentage of the average for the corresponding period.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

V Means of DAILY TEMPERATURE

at 8 A.M. for the monthly period

MARCH (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The very deep disturbance which reached our Western coasts yesterday morning has moved on a N.E. course and its centre is now found near the extreme Northeast of Scotland, the barometer being as low as 28.52 ins. at Sumburgh Head. Small local irregularities of pressure are moving Eastward across our Southern districts. At most of the Irish stations the mercury is now rising. The gradient for S.W. winds is still steep over England, the North Sea and the neighbouring parts of the Continent.

WIND

TEMPERATURE

WEATHER

AND

SEA

N.E. to E. winds light to a moderate gale are reported in the extreme North of Scotland and the Northern half of Scandinavia. Over the rest of our area the S.W. current prevails, light to moderate in force in Ireland and Scotland, fresh to very strong in most other localities, a fresh gale outside Milford Haven. Temperature has risen over Scandinavia, North Germany, and Eastern France, and also at a few of our most Western and Northern stations, fallen elsewhere. The present readings range from 34° at Nairn and 38° at Donaghadee to 46° at Bath, Jersey, Sicily and in London and 47° at Valencia; from 13° at Haparanda and 16° at Bodö to 52° at Lyons and 53° at Frankfurt, Oporto and Lisbon. The weather is in a very unsettled, changeable state throughout our area, but at the time of observation rain was falling at only a few isolated stations, snow at Haparanda and Hernestrand. A high sea is running on the Bay of Biscay, off Milford Haven and between the Shetlands and Norway, rough or rather rough on nearly all sections of the Western and Southern coasts.

Yesterday afternoon temperature rose to 50° and upwards in many parts of England to 55° at Spurn Head, but only to 41° in the North of Scotland. Thunder and lightning occurred in various localities in England & Ireland; rain was general, hail locally, sleet in the far North. At Stornoway and Aberdeen the rainfall amounted to 0.7 in., and at Nairn 0.9 in. Several stations had no bright sunshine but Aberystwyth had 5 hours and Sicily 5.1 hours.

In the course of the past 24 hours a strong to whole S.W. gale has been experienced over the Southern and Southwestern districts.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

FORECASTS*

For the 24 hours ending at NOON on 13TH March, 1905.

DISTRICTS.

FORECASTS.

- 2 ENGLAND N.E.
- 3 ENGLAND EAST
- 4 MIDLAND COUNTIES
- 5 ENGLAND SOUTH

NONE ISSUED

DISTRICTS.

FORECASTS.

- 6 SCOTLAND WEST
- 7 ENGLAND N.W.
- 8 ENGLAND S.W.
- 9 IRELAND NORTH
- 10 IRELAND SOUTH

WARNINGS

NONE ISSUED

At 6.50 p.m. yesterday to Districts 5 and 7 to 10, "Keep up South Cone". The signals are still flying on all coasts.

Note.—The South Cone, point downwards (⌵), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌶), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

WEATHER CHARTS

FOR MONDAY, 13TH MARCH, 1905.

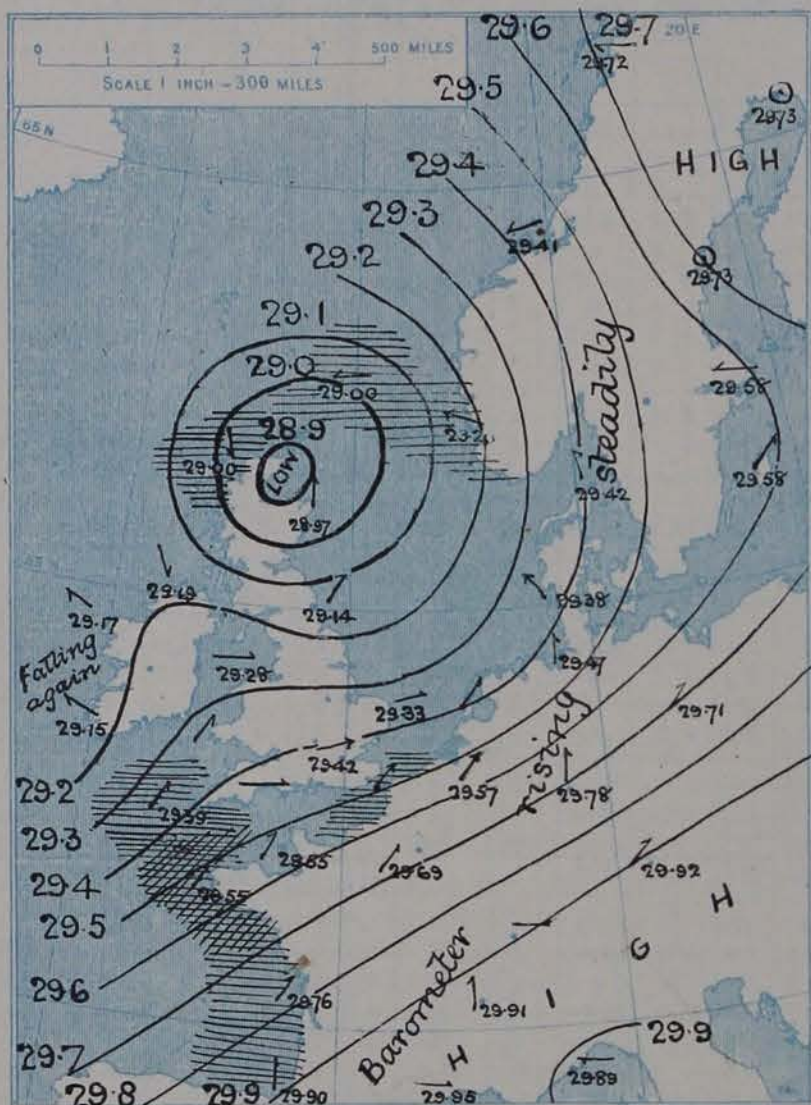

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → : Force 5 to 7 → : } Calm ☉
Force 8 to 10 → : Force 1 to 4 → :

SEA.—Rough High

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

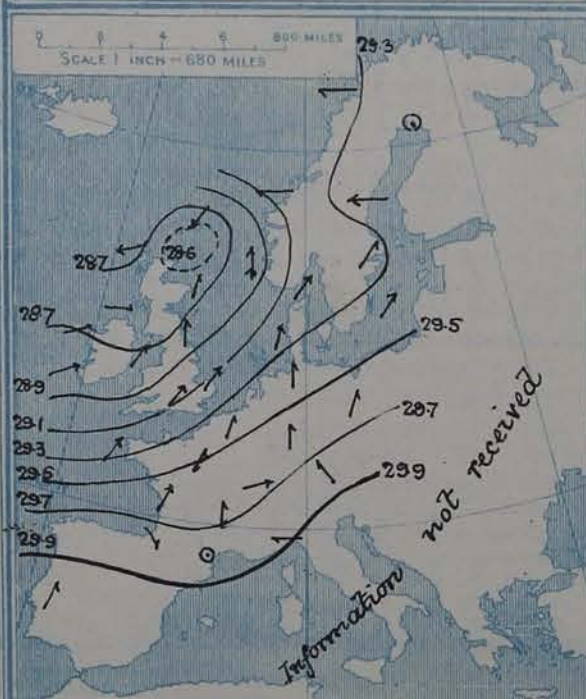

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

Amount recorded in various districts of the United Kingdom during the week ended Saturday, 4TH MARCH, with the percentage of the average for the corresponding week.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours

V Means of DAILY TEMPERATURE

at 8 A.M. for the monthly period

MARCH (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE.

The very deep disturbance of the past two days is still centred over the north of Scotland, where it is filling up, the barometer having risen rather decidedly, the lowest reading now being 28.88 ins. at Wick. Over the whole of Western and Northern Europe there has been an appreciable increase of pressure in the past 24 hours, but in the course of last night a new fall of the mercury has reached the west of Ireland, where a brisk fall is now in progress, and at Valencia the reading is already as low as 29.15 ins. Another disturbance is indicated to the northward of the Azores, the barometer having fallen to 29.93 ins. at Horta. The highest pressure within our area is 29.98 ins. at Lisbon.

WIND

TEMPERATURE

WEATHER

AND

SEA

A complete cyclonic circulation of the winds is shown round the northern depression, Northerly in the west of Scotland, Southerly to Easterly in the northeast of Scotland and beyond the North Sea. A southeasterly current has set in on the west coast of Ireland. Over the rest of our area a Southwesterly current still holds. The force varies in all localities, mainly light or moderate, but fresh or strong at some stations. The temperature changes are irregular. The present values range from 35° at Donaghadee and Parsonstown, and 39° at Nairn, Aberdeen and Shields to 46° at Portland Bill and 47° at Jersey and Scilly; from 3° at Haparanda, 15° at Bodö and 22° at Hernösand to 48° down the west coast of France and at Nice, and to 57° at Lisbon. The weather is fair to very fine over nearly the whole of our Islands and at many of the Continental stations, but rain is falling at Dungeness and Stornoway, and the atmosphere is misty at Belfort and foggy at Stockholm. The sea is diminishing on all coasts, but it is still high off Ushant and rough round the north of Scotland and off Lorient, rather rough in a few other situations.

During yesterday temperature rose to between 50° and 52° at several stations in the south and east of England, but only to 40° at Nairn. Rain fell very generally, but 0.4 in. at Oxford and Stornoway was the largest amount. At Spurn Head and in London a thunderstorm was experienced. Notwithstanding the very disturbed conditions the duration of bright sunshine was very large as a rule, ranging up to 6.5 hours at Eastbourne and Jersey and 7.2 hours at Scilly.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The general improvement in the weather seems to be of a temporary character. The new disturbance approaching Ireland is likely to lead to a renewal of the unsettled conditions, with increasing winds from various directions, some rain, and temperature rather above the normal.

FORECASTS*

For the 24 hours ending at NO²N on 14th MARCH, 1905.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Very variable breezes at first, finally SE ^{ly} to SW ^{ly} , freshening; changeable, some rain, fair intervals; mild.
1	SCOTLAND EAST	
2	ENGLAND N.E.	SW ^{ly} breezes, increasing in force; fine at first, less settled later, squally, some rain; mild.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Moderating N ^{ly} breeze, then SE ^{ly} to SW ^{ly} , freshening; changeable, some rain; mild.
7	ENGLAND N.W.	Same as Nos. 2 to 5.
8	ENGLAND S.W.	
9	IRELAND NORTH	SE ^{ly} to S ^{ly} and SW ^{ly} winds, increasing in force; changeable, squally, some rain; mild.
10	IRELAND SOUTH	

WARNINGS

At 6.45 pm. to Districts 0, 1, and 6, "101ST NORTH CONE", and to Districts 2 and 3, "KEEP UP CONE". The signals are still flying on all coasts.

Note.—The South Cone, point downwards (⌣), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (⌣), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on *Tuesday, 14th March,* 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Secretary.

WEATHER CHARTS

FOR TUESDAY, 14TH MARCH, 1905.

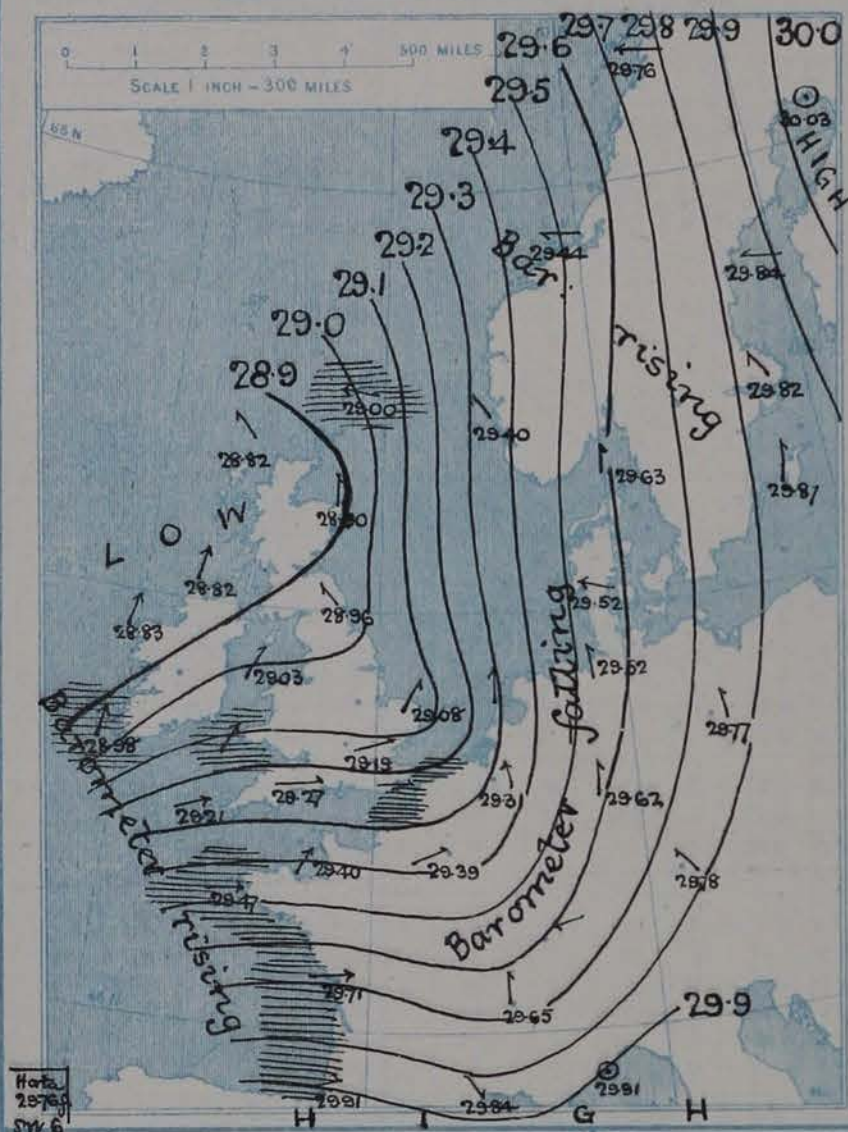

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → : Force 5 to 7 → : } Calm ☉
Force 8 to 10 → : Force 1 to 4 → :

SEA.—Rough  High 

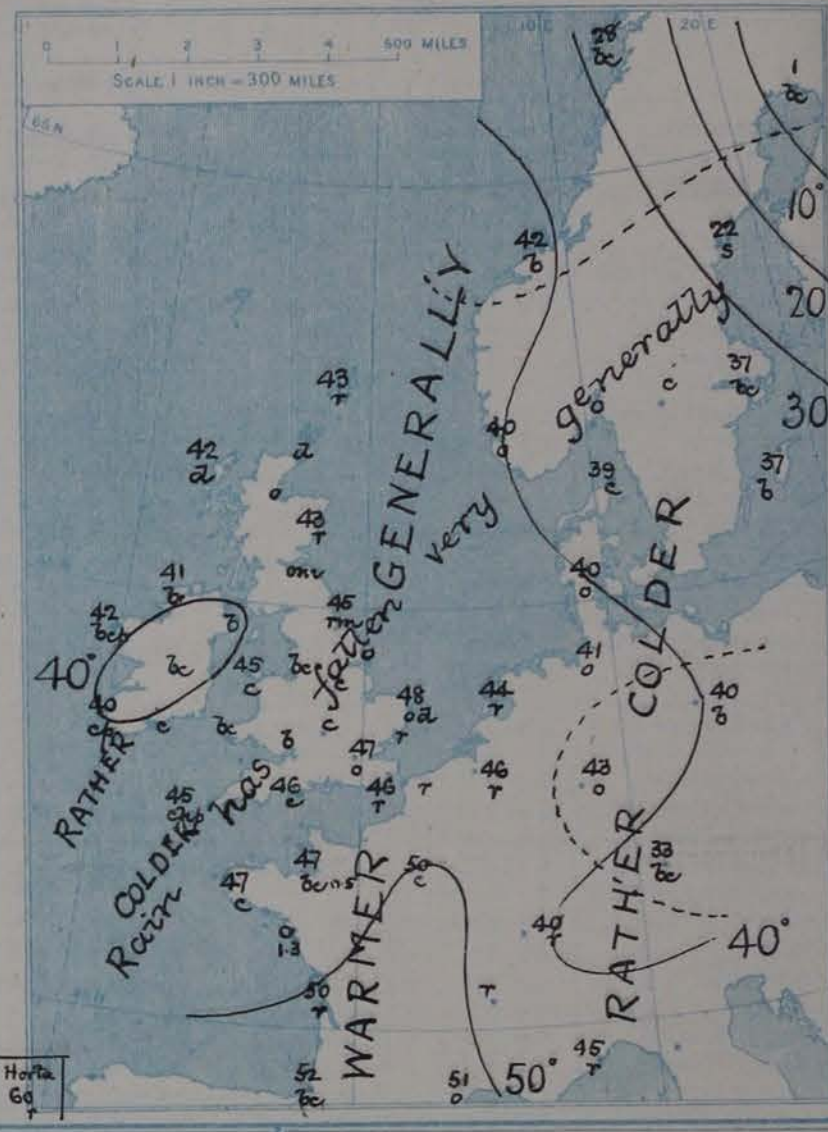

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE.—Isotherms are drawn for each 10°.

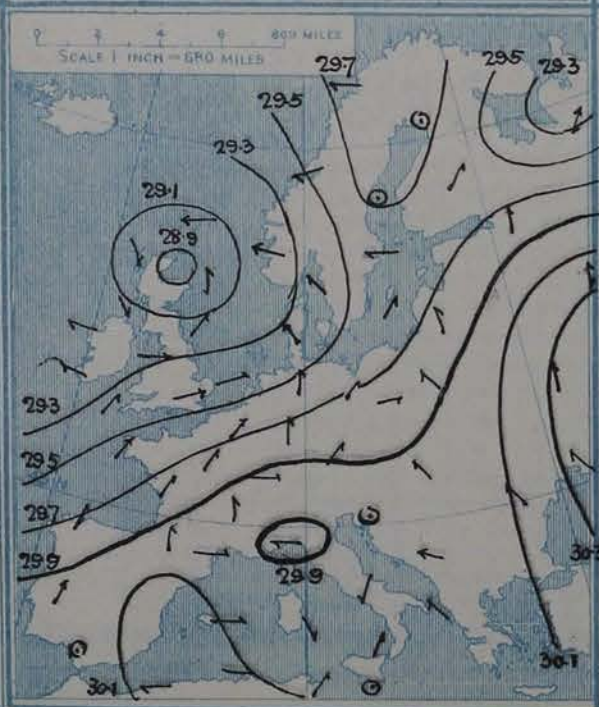

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. EXTREMES OF TEMPERATURE

recorded

in various districts of the United Kingdom
during the week ended Saturday, 11TH MAR.

V. Means of DAILY TEMPERATURE

at 8 A.M. for the monthly period

MARCH (1871-1900)

GENERAL SITUATION AT 8 A.M.

The deep disturbance which was yesterday approaching the Irish coast has moved northeastwards to Scotland, and small irregularities have traversed our southern districts to the lower part of the North Sea. The barometer is falling at all our northern stations, the lowest readings being 28.82 in. at Malin Head and Stornoway and below 29 in. over Scotland, nearly the whole of Ireland and the north of England. Over Scandinavia and from inland down to the Spanish Peninsula, the mercury is rising and is now highest, 30.03 in., at Haparanda and 30.11 in. at Lisbon. A new depression from the westward is approaching the Azores, where the barometer has fallen to 29.76 in.

Southerly to Easterly winds are reported in the north of Scotland, over Scandinavia, Germany and the Netherlands, Southerly to Westerly over the rest of our area. The force is variable, from very light in some localities to a fresh or strong breeze in others, and a moderate gale on the west coast of France.

Temperature ranges from 37° at Parsonstown and 39° at Donaghadee and Naism to 47° at Jersey and in London and 48° at Yarmouth; from 1° at Haparanda, 22° at Hernösand and 28° at Bodö to 52° at Biarritz and 56° at Lisbon.

The weather is in a very changeable state, from clear and cloudless in some districts to dull and overcast in others, showers or steady rain falling at several stations at home and on the Continent, snow at Hernösand, and hail squalls at Scilly.

The sea is rough or rather rough locally on our northern and western coasts and on the Bay of Biscay and off the Portuguese coast, moderate to slight elsewhere.

Temperature rose to 50° and upwards at the majority of stations yesterday, to 54° at Jersey, Bath and in London. Bright sunshine was recorded at all stations, the amount, as a rule, being considerable, ranging up to 8.1 hrs. at Skegness and 8.5 hours at Scarborough. Rain has fallen at all the home stations and at most of the Continental ones, as much as 1.3 in. at Lorient, but the home amounts are all less than $\frac{1}{2}$ an inch.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The disturbance in the north is moving on a northeasterly course, but while the barometer at all the southwestern stations is rising, the wind at the Irish stations maintains a Southerly direction. It is probable, therefore, that another depression lies to the westward, and will declare itself in the course of the day. The conditions generally are unstable.

FORECASTS*

For the 24 hours ending at NOON on 15th MARCH, 1905.

DISTRICTS.	FORECASTS.	DISTRICTS.	FORECASTS.
0  SCOTLAND NORTH	Variable S ^W to E ^W breezes at first, SW ^W and freshening later; changeable, some sleet or rain; mild.	6  SCOTLAND WEST	Increasing SW ^W winds; changeable, squally, some rain; mild.
1  SCOTLAND EAST		7  ENGLAND N.W.	
2  ENGLAND N.E.	W ^W to SW ^W winds, light to moderate at first, freshening later; changeable, some rain, fair or fine intervals; mild.	8  ENGLAND S.W.	Same as Nos. 2 to 5.
3  ENGLAND EAST		9  IRELAND NORTH	Same as Nos. 6 and 7.
4  MIDLAND COUNTIES		10  IRELAND SOUTH	
5  ENGLAND SOUTH		WARNINGS	
		At 7.0 pm yesterday to Distrs. 5 and 7 to 10, "REHOIST SOUTH CONE". The signals are still flying on all coasts.	

Note.—The South Cone, point downwards () , means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards () , means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.

„ Weekly „ „ „ „ £1 10 0 „ Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on Wednesday, 15th March, 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. H. SHAW, Secretary.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster: the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

Observations for this column not generally received.

Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR WEDNESDAY, 15TH MARCH, 1905.

I. BAROMETER, WIND AND SEA. This Morning.

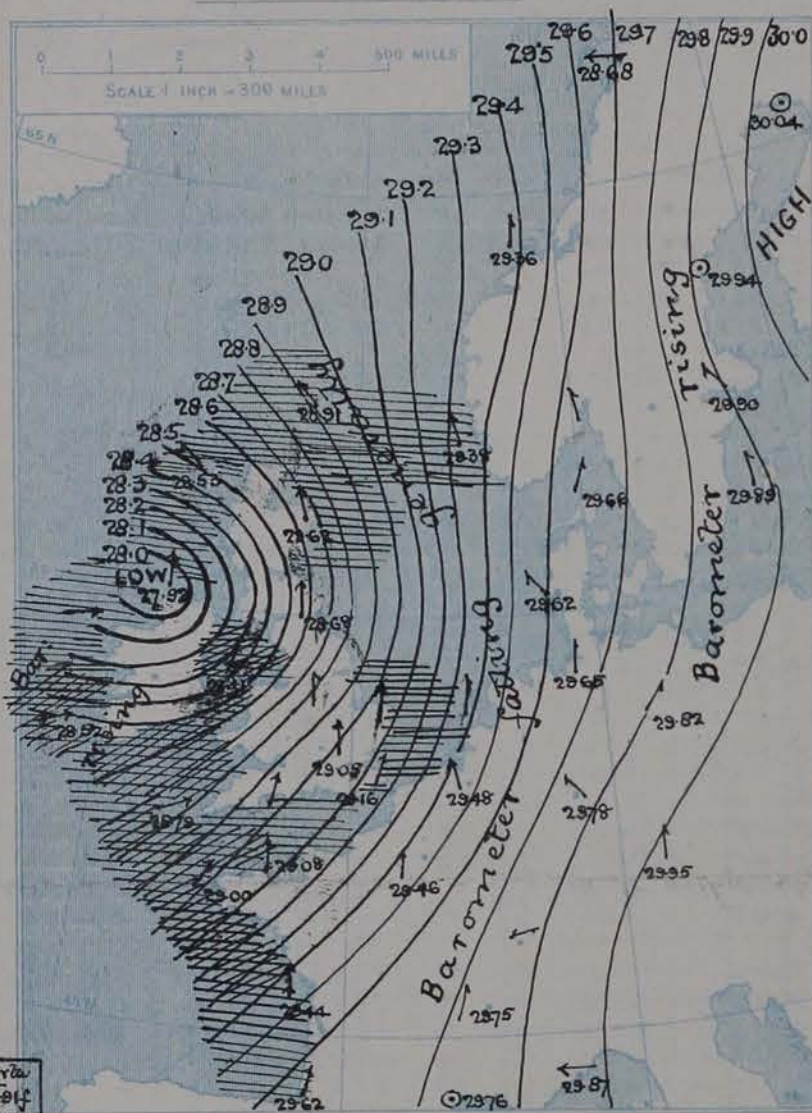

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 : Force 5 to 7 : Calm

Force 8 to 10 : Force 1 to 4

SEA—Rough High

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°.

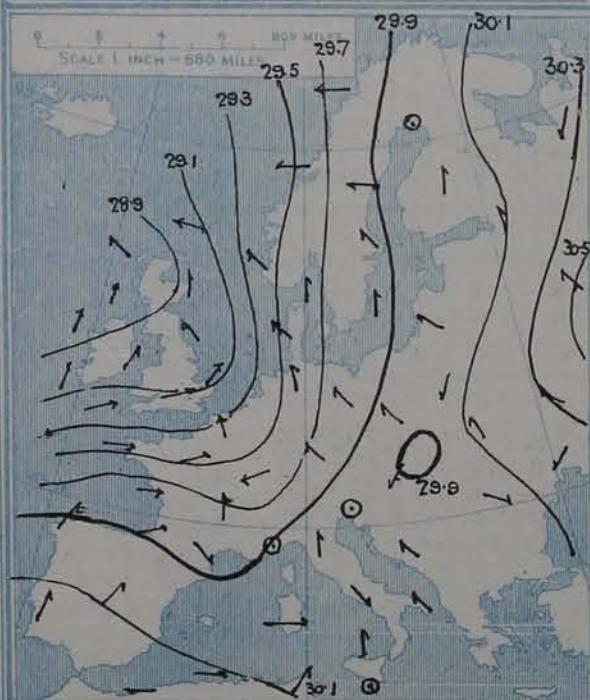

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus: 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. LAST WEEK'S RAINFALL.

Amount recorded in various districts of the United Kingdom during the week ended Saturday, 11TH MARCH, with the percentage of the average amount for the corresponding week.

V Means of DAILY TEMPERATURE

at 8 A.M. for the monthly period

MARCH (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

In the course of the past night another very deep cyclonic system has approached from the Atlantic, its centre now being shown over the north of Ireland, the barometer having fallen to 27.92 ins. at Malin Head. Pressure has decreased rapidly at the western stations, slightly in the east, and has risen beyond the North Sea. This has resulted in an exceptionally steep pressure gradient over the whole of the United Kingdom, the North Sea and the north and west of France, the reading of 29.95 ins. at Munich and of 30.04 ins. at Haparanda, being more than 2 inches above that at Malin Head. The observations from the Azores indicate the passage eastwards of a disturbance some distance northward of the Islands.

WIND

TEMPERATURE

WEATHER

AND

SEA

The winds over the whole of our area are under the influence of the western disturbance, from Westerly in the west of Ireland to Southerly over England and France and Southeasterly to Easterly in the north of Scotland and beyond the North Sea. At our home stations, and the neighbouring Continental ones, strong winds and gales are reported, a strong gale on the Welsh coast. At the more remote Continental stations light or moderate breezes prevail.

Temperature ranges from 40° at Stornoway, Parsonstown and Valencia to 46° or 47° in most parts of England, from 26° at Haparanda and 29° at Bodö to 55° at Rochefort and 59° at Biarritz.

The weather is temporarily fine in places, but generally it is very unsettled, squally and rainy at many home and foreign stations, snow falling at Wisluf, and mist or fog is reported in various parts of Scandinavia. A high or rough sea is running all round.

During yesterday temperature rose to 50° and upwards in most parts of Britain, reaching 54° at Leith. The duration of bright sunshine was considerable in most places, amounting to 7 hours at Jersey. Rain has fallen at all the home stations and at nearly all the foreign ones, the amounts ranging up to 0.8 inch at Lorient and 1.4 inch at Parsonstown. Thunderstorms occurred in the night in various parts of the south and east of England. At most of our southern and western coast stations a very severe gale has blown during the night, accompanied by fierce squalls, the force of a "storm" being felt from Portland round to Queenstown. At about 4 am. a very violent squall, with heavy rain, passed over London, the barometer rising 0.05 inch in 5 minutes.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

An exceedingly disturbed type of conditions prevails over the whole of our Islands and their vicinity. The depression over Ireland is moving northward but the winds on the French coasts remain Southerly, and it seems probable, therefore, that another disturbance is about to approach from the southwestward, so that boisterous, unsettled weather is likely to continue in most localities.

FORECASTS*

For the 24 hours ending at NOON on 16th MARCH, 1905.

DISTRICTS.

FORECASTS.

0 卐 SCOTLAND NORTH	E ^{ly} to S ^{ly} and SW ^{ly} strong winds and gales; very unsettled, rainy, fair intervals; mild.
1 卐 SCOTLAND EAST	
2 卐 ENGLAND N.E.	S ^{ly} and SW ^{ly} strong winds and gales; very changeable, squally rains, some fair intervals; mild.
3 卐 ENGLAND EAST

6 卐 SCOTLAND WEST	S ^{ly} to W ^{ly} strong winds and gales, backing later; very unsettled, squally and rainy, fair intervals; mild.
7 卐 ENGLAND N.W.	
8 卐 ENGLAND S.W.	
9 卐 IRELAND NORTH	
10 卐 IRELAND SOUTH	

WARNINGS

At 7.20 pm. yesterday to Dists. 3, 6 and parts of 0 and 2, and at 8 am. today to Dist. 1 and the remainder of 0 and 2, "HOT SOUTH CONE". The signals are still flying on all coasts.

Note.—The South Cone, point downwards (卐), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (卐), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.

" Weekly " " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on *Thursday, 16th March, 1905.*

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. *W. N. SHAW, Secretary.*

NOTE: The Sunshine for London given in this Table is recorded in the Tower of the Wesleyan Training College, Westminster: the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR THURSDAY, 16TH MARCH, 1905.

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 →

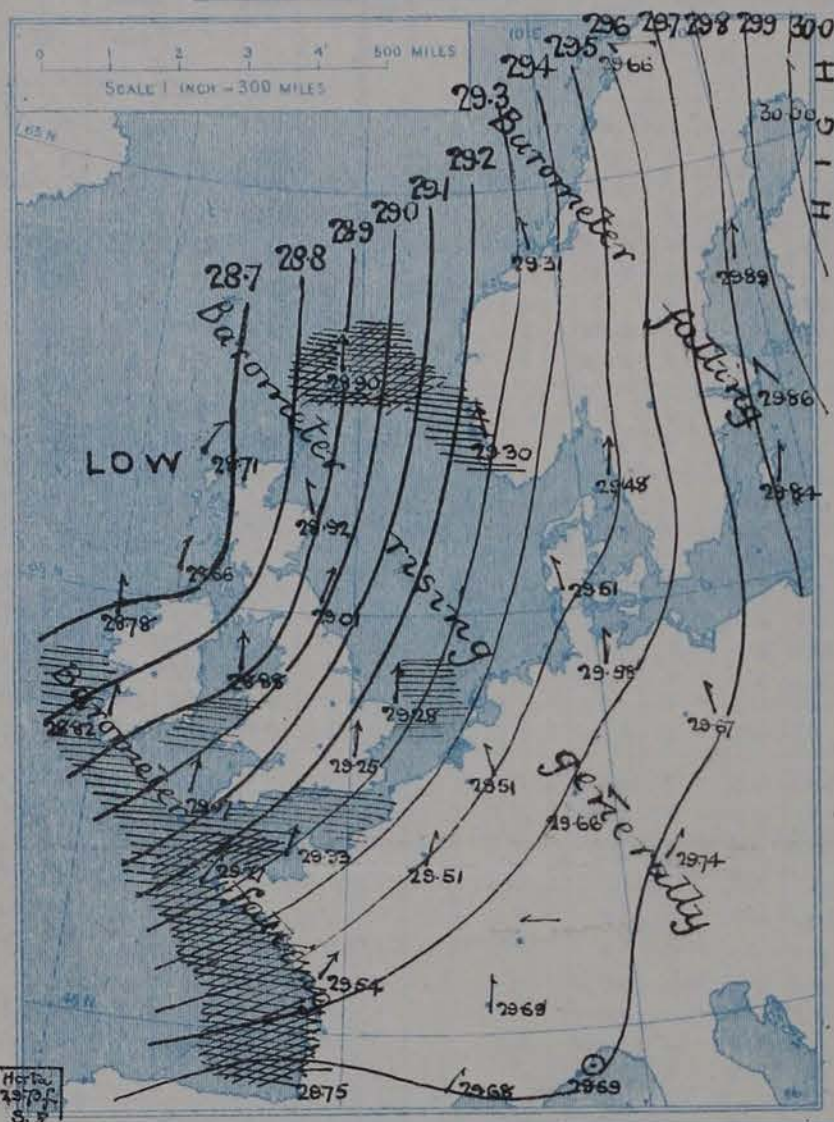

Force 5 to 7 →

Calm ☉

Force 8 to 10 →

Force 1 to 4 →

SEA—Rough  High 

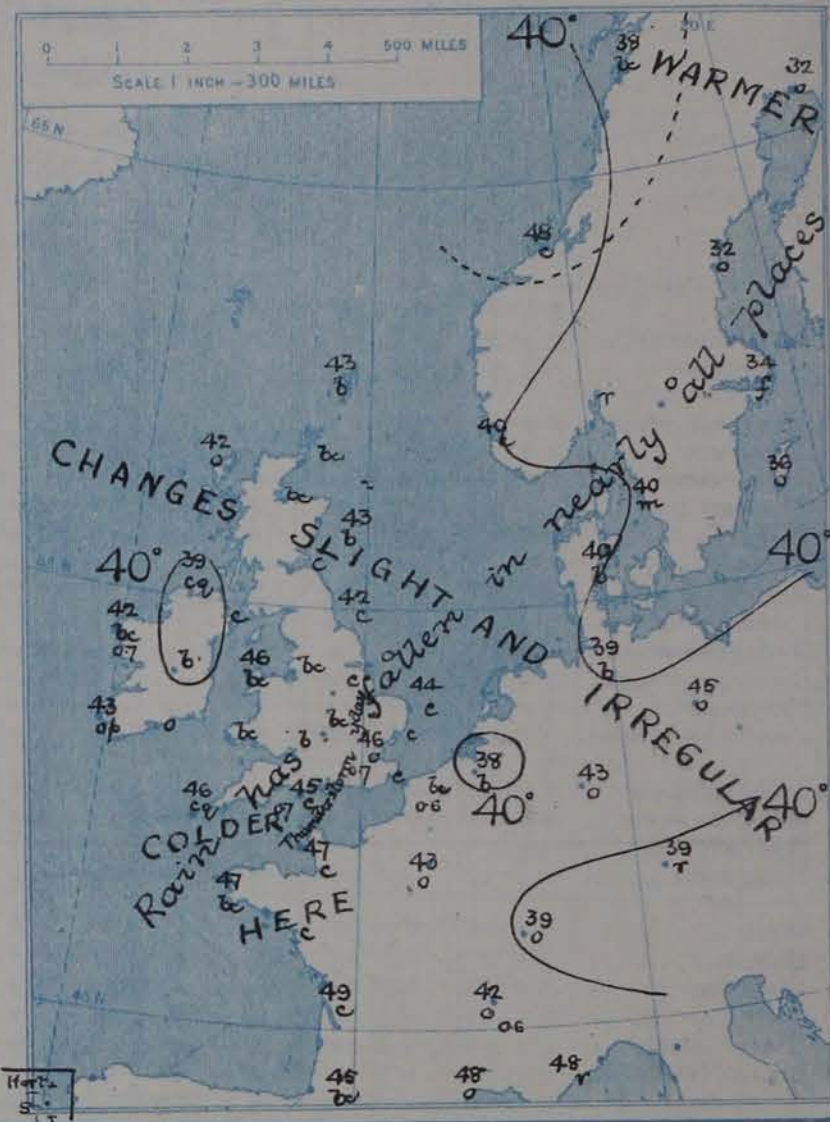

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus -0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. LAST WEEK'S SUNSHINE.

Amount recorded in various districts of the United Kingdom during the week ended Saturday, 11TH MARCH, with the percentage of the average duration for the corresponding week.

V Means of DAILY TEMPERATURE

at 8 A.M. for the monthly period

MARCH (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The exceptionally deep depression of yesterday has moved northward outside the west of Scotland, but although the barometer has risen considerably all over our Islands it is still very low, being at 28.66 in. at Malin Head, and the only station reporting as high as 30 in. is Haparanda, in Lapland. Pressure is again on the decline at all southwestern stations. Yet another depression is approaching the Azores from the westward, the barometer giving way rapidly.

WIND

TEMPERATURE

WEATHER

AND

SEA

Southerly and Southwesterly winds prevail over nearly the whole of the region under observation, between Lisbon and Haparanda, fresh or strong in force at many of the home and Continental stations. Temperature has changed irregularly. It now ranges from 39° at Malin Head and Parsonstown and 42° at several other home stations to 46° at Holyhead, Scilly and in London, and 47° at Jersey and Roche's Point; from 32° at Haparanda and Hernösand and 34° at Stockholm to 49° at Rochefort and 57° at Lisbon. Fair or fine weather is reported in most parts of our area, but showers are falling at Valencia, rain at Nice, Munich, and Faeröer, and the atmosphere is foggy at Stockholm. A high sea is running off the Shetlands, and at all stations between Brest and Lisbon, and it is rough, or rather rough, along our southern coasts between Valencia and Yarmouth.

During yesterday temperatures of 50° and upwards occurred in many parts of England, 53° at Jersey, and many of the night minima were from 40° to 44°. The duration of bright sunshine varied considerably, from half an hour at Bath to 6.8 hours at Rhyl. Except locally in the northeast, rain fell generally, 0.7 in. being registered at Blacksed Point, Portland Bill and in London. Thunderstorms occurred in various parts of the south of England, and sharp squalls of wind and hail were very prevalent during the day. A slight auroral display was witnessed at Narvik last night.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The northwestern disturbance will pass away in the course of the day, but the unsteady barometer in the southwest, and the general backing of the wind to the Southward, are indicative of the continuation of the very unsettled conditions. A new depression seems to be approaching, and increasing winds, with rain, are probable in most districts.

FORECASTS*

For the 24 hours ending at NOON on 17th MARCH, 1905.

DISTRICTS.

FORECASTS.

- 0 SCOTLAND NORTH
- 1 SCOTLAND EAST
- 2 ENGLAND N.E.
- 3 ENGLAND EAST
- 4 MIDLAND COUNTIES
- 5 ENGLAND SOUTH

Freshening S^{ly} to SE^{ly} winds; very changeable, some rain or sleet, fair intervals; mild.

Increasing S^{ly} to SW^{ly} winds, a gale at times; very changeable squally, some rain and hail, thunderstorms locally, fine intervals; mild.

DISTRICTS.

FORECASTS.

- 6 SCOTLAND WEST
- 7 ENGLAND N.W.
- 8 ENGLAND S.W.
- 9 IRELAND NORTH
- 10 IRELAND SOUTH

S^{ly} to W^{ly} strong winds and gales; very unsettled, with squalls of rain and hail, some fair intervals; mild.

WARNINGS

At 7.12 pm. yesterday to Districts 5, and 7 to 10, "KEEP UP CONE". The signals are still flying on all coasts.

Note.—The South Cone, point downwards (⌵), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌴), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.

" Weekly " " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

DAILY WEATHER REPORT

for 8 a.m. on Friday, 17th March, 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Secretary.

WEATHER CHARTS

FOR FRIDAY, 17TH MARCH, 1905.

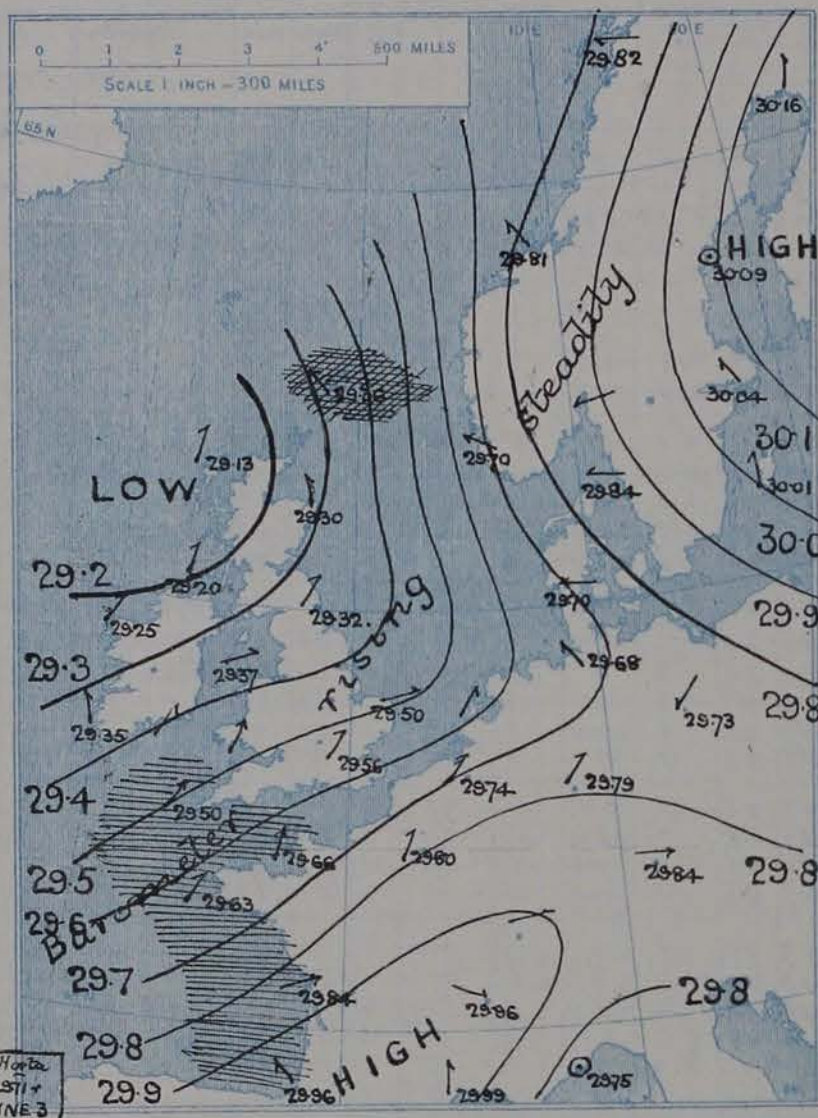

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → : Force 5 to 7 → : } Calm ☉
Force 8 to 10 → : Force 1 to 4 → :

SEA.—Rough  High 

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

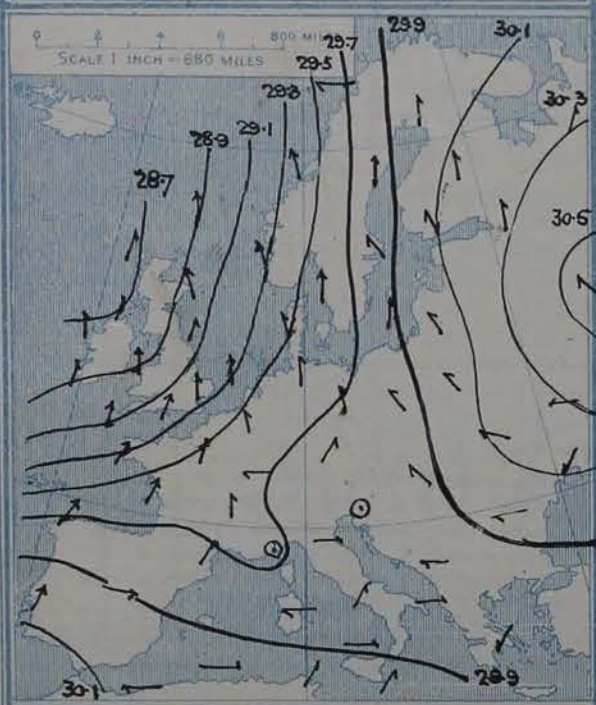

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. RAINFALL IN 1905.

Total Amount recorded
in various districts of the United Kingdom
in the 10 weeks ended Saturday, 11TH MARCH,
with the percentage of the average amount
for the corresponding period.

V Means of DAILY TEMPERATURE

at 8 A.M. for the monthly period

MARCH (1871-1900)

GENERAL SITUATION AT 8 A.M.

The disturbance of the past few days is situated at some distance beyond our northwestern coast, and a small secondary, which reached our southwestern coast last evening, has passed across to the lower part of the North Sea. The barometer is now rising over the whole of the region under observation, the ascent being considerable over our Islands and the adjacent parts of the Continent. Pressure is highest over northeastern Europe, the barometer reading 30.16 ins. at Haparanda. An anticyclone of less intensity is indicated in the extreme southwest, 30.04 ins. at Lisbon. The lowest barometer is 29.13 ins. at Hovnorway. In the Azores it is at 29.7 ins., but pressure is increasing, yesterday's disturbance now moving eastward amongst the Islands.

In the Shetlands and beyond the North Sea, a light to fresh Southeasterly to Easterly breeze is reported; in all other localities it is Southerly to Southwesterly, mainly light to moderate in force, but blowing freshly at Pembroke and at places along the north and west of France, and at Lisbon. Temperature has risen a little at the majority of stations at home and on the Continent. The present values range from 40° at Donaghadee and Parsonstown, and 42° at Malin Head to 46° or 47° at all stations in the south of England; from 32° at Haparanda and 33° at Hersonsand to 50° down the west of France, and 57° at Lisbon. Fair or fine weather prevails, slight rain falling at a few isolated stations in Britain and the Netherlands, and the atmosphere at Hersonsand is foggy. A high sea is running beyond the Shetlands, and it is rough at nearly all stations between Scilly and Lisbon; everywhere else it is moderate to very smooth.

During yesterday temperature rose to 50° and upwards at nearly all stations in our Islands, to 56° at Jersey. The night also was mild generally. As a rule the bright sunshine records were large, exceeding 7 hours at many southern and eastern stations, 8.8 hours at Littlestone-on-Sea. Rain fell at nearly all stations, but the amounts were small over our Islands, and only Cape Gris Nez had as much as 0.7 in. The passage of the secondary disturbance was marked by a strong to whole Westerly gale in the southwestern parts of England in the course of the past night.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The northeasterly protrusion of the Atlantic anticyclone across the Spanish Peninsula into France favours a further improvement in the conditions over our southern and eastern districts, but our extreme western and northwestern coasts are likely to be affected to some extent by other disturbances on the upper part of the Atlantic.

FORECASTS*

For the 24 hours ending at NOON on 18th MARCH, 1905.

DISTRICTS.

- 0 { SCOTLAND NORTH
- 1 { SCOTLAND EAST
- 2 { ENGLAND N.E.
- 3 { ENGLAND EAST
- 4 { MIDLAND COUNTIES
- 5 { ENGLAND SOUTH

FORECASTS.

Light S^{ly} breezes at first, increasing later; fair to showery; mild.

Light or moderate S^{ly} or SW^{ly} breezes; mostly fair or fine, some local showers; mild.

DISTRICTS.

- 6 { SCOTLAND WEST
- 7 { ENGLAND N.W.
- 8 { ENGLAND S.W.
- 9 { IRELAND NORTH
- 10 { IRELAND SOUTH

WARNINGS

FORECASTS.

Same as No. 0

Same as Nos. 1 to 5.

S^{ly} to W^{ly} breezes, light or moderate at first, freshening later; fair or fine, becoming less settled, with some rain; mild.

At 10.25 am today to Districts 5 and 7 to 10, "LOWER CONE."

Note—The South Cone, point downwards (⌋), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌋), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.

" Weekly " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on *Saturday, 18th March, 1905.*

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. *W. N. SHAW, Secretary.*

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Watneyan Training College, Westminster: the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR SATURDAY, 18TH MARCH, 1905.

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 y

Force 5 to 7

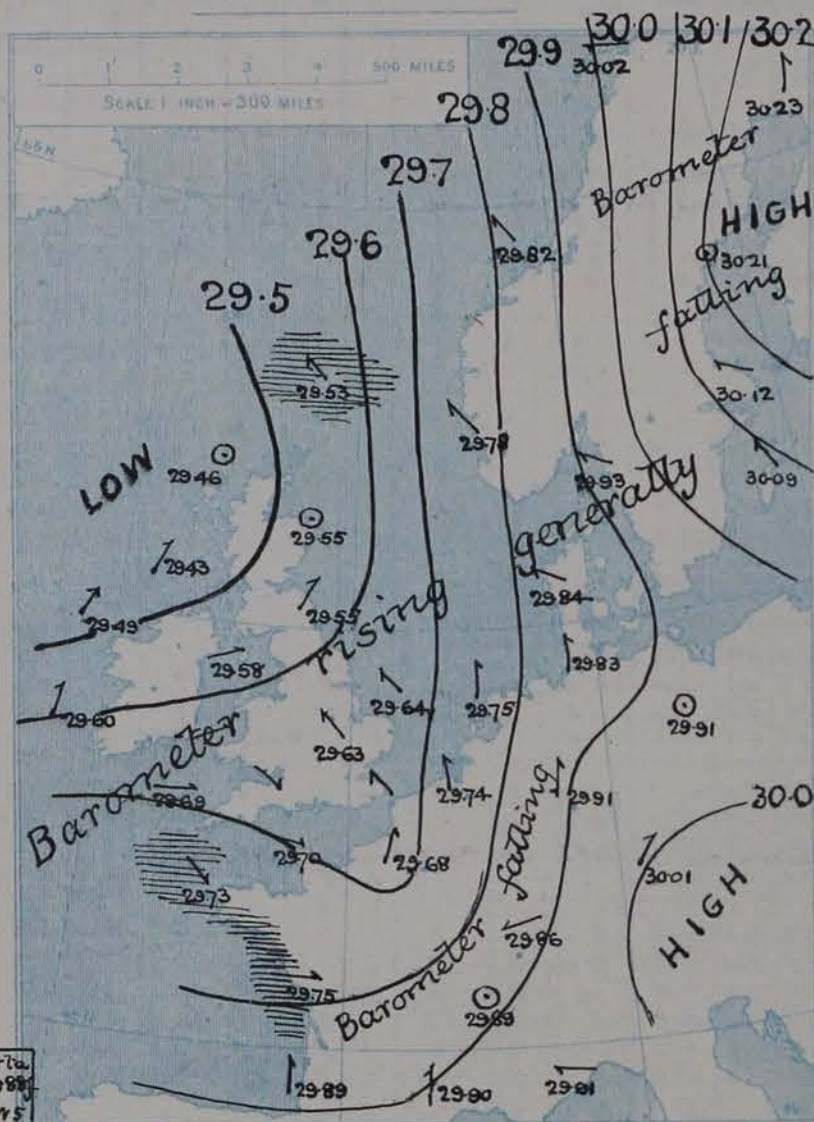

Calm

Force 8 to 10

Force 1 to 4

SEA—Rough

High

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°

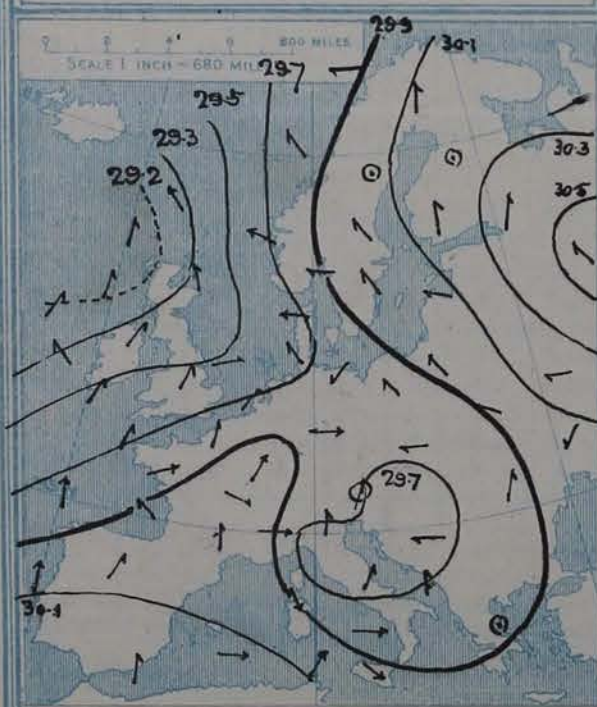

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. BRIGHT SUNSHINE IN 1905.

Total Duration recorded in various districts of the United Kingdom in the 10 weeks ended Saturday, 11TH MARCH, with the percentage of the average duration for the corresponding period.

V Means of DAILY TEMPERATURE

at 8 A.M. for the monthly period

MARCH (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The low pressure system is still situated beyond our northwestern coasts, but the barometer is rising over nearly the whole of our Islands, and most parts of the Continent, a slight fall being in progress over the north and east of France and the Rhineland, due to a small secondary irregularity which is near Paris, moving eastward. Pressure is still highest over Northeastern Europe, the barometer reading 30.23 ins. at Haparanda; in Southwestern Europe it is 30.09 ins. at Lisbon. The lowest pressure is on our northwestern coasts, 29.43 ins. at Malin Head. The gradients have become slight in all regions.

WIND

The winds are rather more variable in direction than they have been of late, Southerly to Easterly between the southeastern quarter of England and the Countries eastward of the North Sea, mainly Southwesterly over our northern and western districts, and Northwesterly over the upper part of the Bay of Biscay. Except for a fresh breeze at Blacksod Point and Lorient, the force is light or moderate, with calms in several places.

TEMPERATURE

Temperature ranges from 35° at Naïon and Stornoway, and 37° at Aberdeen to 47° at Oxford, and 48° at several other southern stations, from 27° at Haparanda, and 31° at Helsingfors to 58° at Biarritz and 59° at Lisbon. The weather varies a good deal, fair or fine at many stations in our Islands and on the Continent, dull and overcast in others, with rain over the southeast of England and the north of France, and snow in some parts of Scandinavia, and fog at Spurn Head and Yarmouth, Berlin and Havre.

WEATHER

AND

SEA

The sea is rough off the Shetlands, rather rough on the west coast of France, moderate to smooth elsewhere.

Nearly the whole of the maximum temperatures for yesterday exceeded 50°, both Shields and Jersey attaining 56°. Frost occurred in the night in the extreme north of Scotland, 29° at Naïon and 30° at Wick. The bright sunshine records were again large nearly everywhere, 9.1 hrs. at Broadstairs and Rhyl. Rain fell very generally, but with the exception of 0.6 inch in London, the amounts were small. Thunderstorms occurred locally in the southeast of England and in Lancashire.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The barometer is unsteady in the Helvides, but there are no definite indications of the existence of a new disturbance in the immediate vicinity of our western coasts, and the small irregularity near Paris will probably disperse. Southerly to Westerly breezes are likely to prevail with fair weather for the most part, and the atmosphere remain soft and humid.

FORECASTS*

For the 24 hours ending at NOON on 19th MARCH, 1905.

DISTRICTS.

FORECASTS.

- 0 { SCOTLAND NORTH
- 1 { SCOTLAND EAST
- 2 { ENGLAND N.E.
- 3 { ENGLAND EAST
- 4 { MIDLAND COUNTIES
- 5 { ENGLAND SOUTH

Calms and light variable breezes, finally S^{ly} or SW^{ly}, light to moderate; changeable, some showers, fine intervals; mild.

Faint SE^{ly} airs and calms, later SW^{ly} to W^{ly}, light to moderate; some fog or rain, with local thunder at first, finer later; mild.

DISTRICTS.

FORECASTS.

- 6 { SCOTLAND WEST
- 7 { ENGLAND N.W.
- 8 { ENGLAND S.W.
- 9 { IRELAND NORTH
- 10 { IRELAND SOUTH

Same as Nos. 0 to 2.

SW^{ly} to W^{ly} light or moderate breezes; fair or fine generally, local showers; mild.

S^{ly} to W^{ly} breezes, light to fresh; fair or fine generally, local showers; mild.

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (⌋), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌋), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.

„ Weekly „ „ „ £1 10 0 „

Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on Sunday, 19th March, 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Secretary.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster. The Sunshine entered in Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

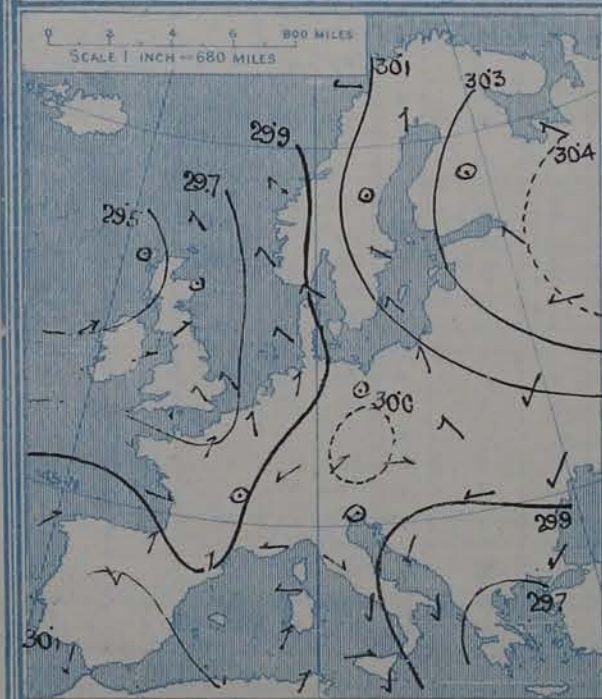

FOR *Sunday, 19th March.* 1905.

SEA.—Rough High 

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus—0.6

Yesterday morning.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

MARCH (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The shallow secondary depression which lay over England and the north of France yesterday has moved away north-eastwards to the North Sea, while a ridge of relatively high pressure now extends from France to beyond the north of Ireland. The barometer is rising over the greater part of our area, but the upward movement has ceased on our most south-western coasts. The readings range from above 30.1 ins. over the major portion of France to below 29.8 ins. over the northern halves of Scotland and the North Sea. Over the Gulf of Bothnia the readings are above 30.1 ins.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind is light or moderate both over our Islands and the Continent; it is mainly W. over Great Britain, but draws into S.E. or E. on the eastern shores of the North Sea and in the north of Norway. In Ireland the wind has backed to the S. or S.E. Temperature has changed little and rather irregularly. Over our Islands it ranges from 48° at Lillie, Jersey, and Holyhead to 40° at Nottingham, 38° at Wick, and 37° at Parsonstown, and at the Continental stations from 56° at Lisbon and 54° at Perpignan to 45° at Cuxhaven, 31° at Stockholm, and 28° at Haparanda. The weather is very fine and bright in almost all parts of the United Kingdom, but rain is falling at Narvik. Over the Continent the sky is more cloudy, with rain at Munich, the mouth of the Elbe, and Skudsmoes, and snow in the south of Sweden, while at Fano fog is reported. The sea is rather rough at Brest and Lorient, moderate to smooth elsewhere.

The highest temperatures recorded over our Islands yesterday were 58° at Plymouth, 57° in London and at Bournemouth and Nottingham. Light rain fell in most parts of this country and larger amounts in Denmark, Germany, and the east of France. The duration of bright sunshine was very considerable in the west and southwest, but in the north and east there was little.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (∩), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (∪), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster: the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR *Monday, 20th March, 1905.*

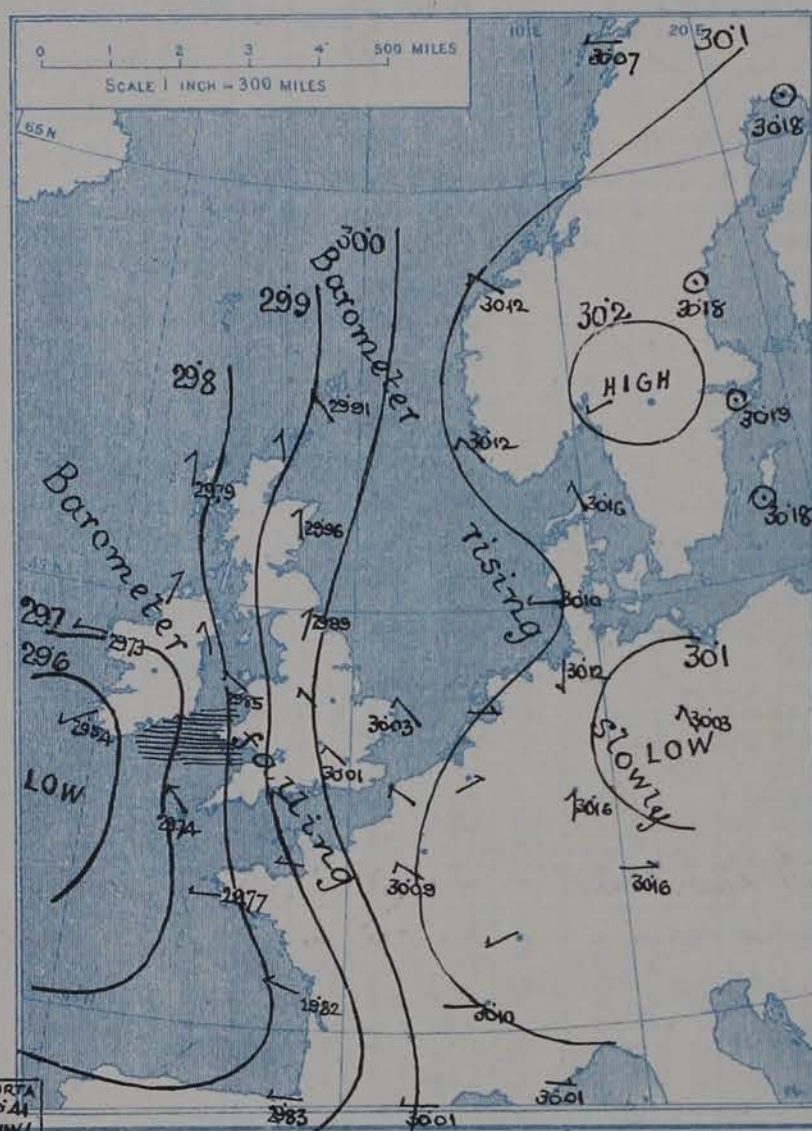

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ○
Force 8 to 10 → Force 1 to 4 → }

SEA.—Rough High

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

Amount recorded in various districts of the United Kingdom during the week ended *11th March, 1905.* with the percentage of the average for the corresponding week.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours

V Means of DAILY TEMPERATURE

at 8 A.M. for the monthly period.

MARCH (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

A fresh disturbance has appeared off Valencia, where the barometer stands at 29.54 ins. The highest pressure is shown over Scandinavia and Central Germany where readings are generally above 30.1 ins. A brisk rise of the barometer has taken place at the Azores, and also at Lisbon.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind has backed to the SE.^W or S.^W throughout our Islands; it is generally light in force, but in the Southwest of England and Ireland it has freshened considerably. Fresh E.^W winds prevail on the West coast of France; at the remaining Continental stations the wind is light in force and variable in direction. The weather is fair or fine in England and Scotland, but the low pressure in the West is causing rain throughout the South and West of Ireland. Fine weather also prevails at most Continental stations, but rain is falling at Munich, and snow in the North of Scandinavia. Temperature has changed little, and remains mild generally. In our Islands the present readings range from 39° at Shields to 48° at Scilly and Valencia. A clear sky caused a brisk fall of temperature during the night, particularly at the inland stations; at Nottingham the thermometer fell to 31°, while in London the reading on the grass sank to 28°. The large amounts of bright sunshine experienced yesterday gave rise to high temperatures during the day, the maxima being frequently above 55°. The range of temperature during the 24 hours was over 20° at many stations. The sea is rather rough in St. George's Channel, moderate or slight elsewhere.

Rainfall in Scotland and England was confined to the extreme Northern and the extreme Southwestern stations, but in Ireland heavy precipitation occurred, at Valencia as much as 0.97 in. was recorded. The amount of bright sunshine measured was generally over 7 hours, and reached 11.3 hours at Eastbourne. Lunar or solar halos were noticed at many Western stations.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The low pressure system off the Southwest of Ireland is likely to spread in an Easterly direction, and cause the weather to become unsettled in the South and West. Our Northern districts will probably come under the influence of a disturbance advancing from the North Atlantic.

FORECASTS*

For the 24 hours ending at NOON on 21ST March. 1905.

DISTRICTS.

FORECASTS.

0	{ SCOTLAND NORTH	Moderate or fresh S. ^W to S.W. ^W winds; fair at first, some showers later. Continuing mild.
1	{ SCOTLAND EAST	
2	{ ENGLAND N.E.	Light S.E. ^W winds; freshening later; fair today, some rain probable tomorrow. Mild.
3	{ ENGLAND EAST	
4	{ MIDLAND COUNTIES	
5	{ ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	{ SCOTLAND WEST	Same as Nos. 0 & 1.
7	{ ENGLAND N.W.	
8	{ ENGLAND S.W.	Freshening S.E. ^W winds; fair at first, some rain later. Mild.
9	{ IRELAND NORTH	
10	{ IRELAND SOUTH	Moderate or fresh S.E. ^W to S.W. ^W winds; some rain, dull. Mild.

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (⌒), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌒), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.

Weekly " " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on *Tuesday, 21st March, 1905.*

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. *W. N. SHAW, Secretary.*

WEATHER CHARTS

FOR Tuesday, 21st March, 1905.

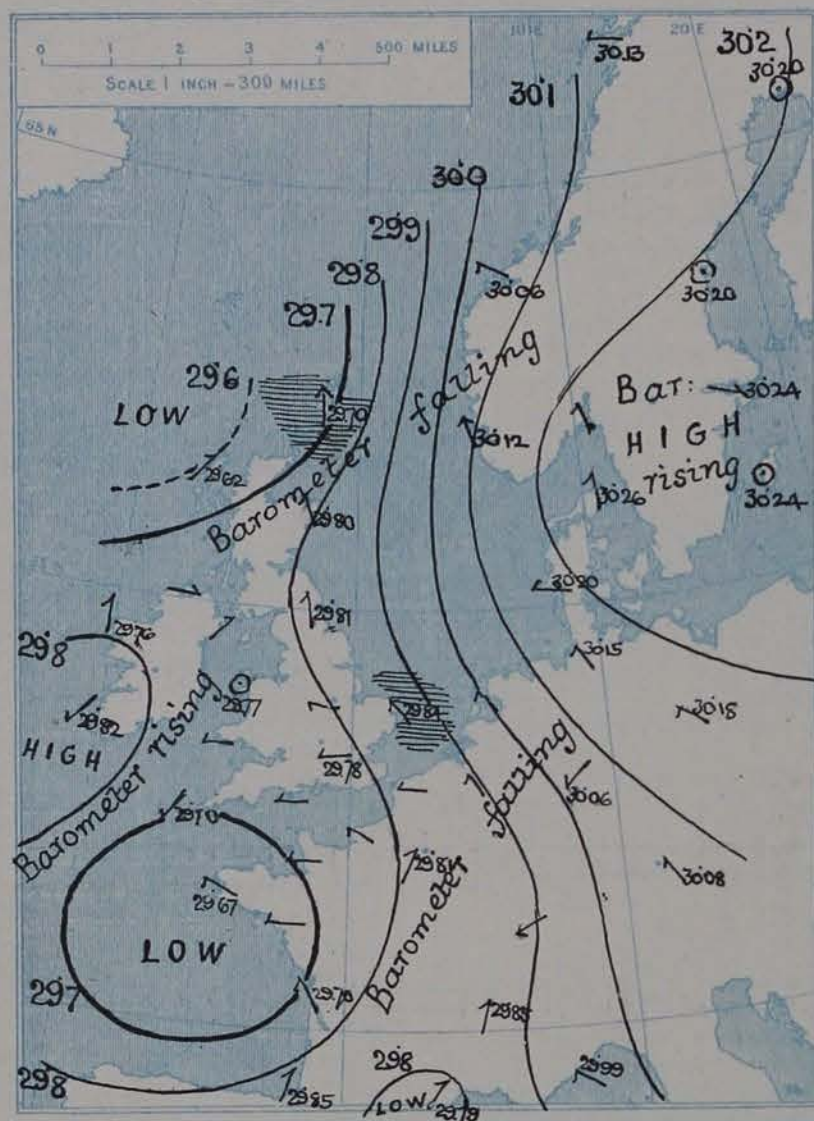

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → : Force 5 to 7 → : } Calm ☉
Force 8 to 10 → : Force 1 to 4 → :

SEA.—Rough  High 

GENERAL SITUATION AT 8 A.M.

PRESSURE

A change of type has occurred in the distribution of pressure over Northwestern Europe since yesterday morning. An anticyclone has appeared in the Southwest of Ireland and is connected with a second region of high pressure situated over Scandinavia, by a shallow "col." A shallow cyclonic depression is shown over the Bay of Biscay and the North of Scotland is also being affected by a disturbance in the far North.

WIND

TEMPERATURE

WEATHER

AND

SEA

Over the greater part of our area the wind is S.E.^y or E.^y in direction and moderate in force. Light variable breezes prevail in the anticyclonic regions over Southern Scandinavia and the South of Ireland. In the North of Scotland the wind is S.^y or S.W.^y.

The weather is fair generally, but cloudy at many stations; rain is falling at Wick. Temperature has changed little in most places and remains mild. The lowest reading in the British Isles reported this morning is 37° at Valencia, the highest 49° at Jersey. Continental readings vary from 23° at Haparanda to 54° at Biarritz. The sea is rough off Sumburgh Head, moderate or slight elsewhere.

During the past 24 hours the weather was fine over England and large amounts of sunshine was again measured in our Southern counties; the largest amount reported is 10.5 hours at Lowestoft. Slight rain fell in the Southwest. In Scotland, Ireland and Wales the sky remained overcast, and heavy rain was again measured in Southwestern Ireland. During the day temperature rose to about 55° at many English stations, but in the West and North the maxima were generally under 50°; the lowest minimum was 35° at Blacksod Point. Solar or lunar halos were again noticed at several stations.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The depression over the Bay of Biscay is filling up, and the barometer is also rising on the "col" between the anticyclones lying to the East and West of our Islands; fair weather may, therefore, be expected over the greater part of the Country. Cyclonic disturbances from the North Atlantic will probably affect our Northern districts.

FORECASTS*

For the 24 hours ending at NOON on 22nd March, 1905.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Moderate or fresh S. ^y to S.W. ^y winds; cloudy, some showers. Mild.
1	SCOTLAND EAST	Moderate or light S.E. ^y breezes; fair generally.
2	ENGLAND N.E.	
3	ENGLAND EAST	Moderate or light E. ^y breezes; fair generally.
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as No. 0
7	ENGLAND N.W.	Light variable breezes; fair generally. Colder at night.
8	ENGLAND S.W.	Same as Nos. 3 to 5.
9	IRELAND NORTH	Same as Nos. 0 & 1.
10	IRELAND SOUTH	Same as No. 7.

WARNINGS

{at 7.30 p.m. yesterday to Districts 3, 5 and part of 8, "Hoist North Cone". At 9.30 a.m. to same districts, "Lower Cone".

Note.—The South Cone, point downwards (⏏), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⏏), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on Wednesday, 22nd March, 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Secretary.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster: the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

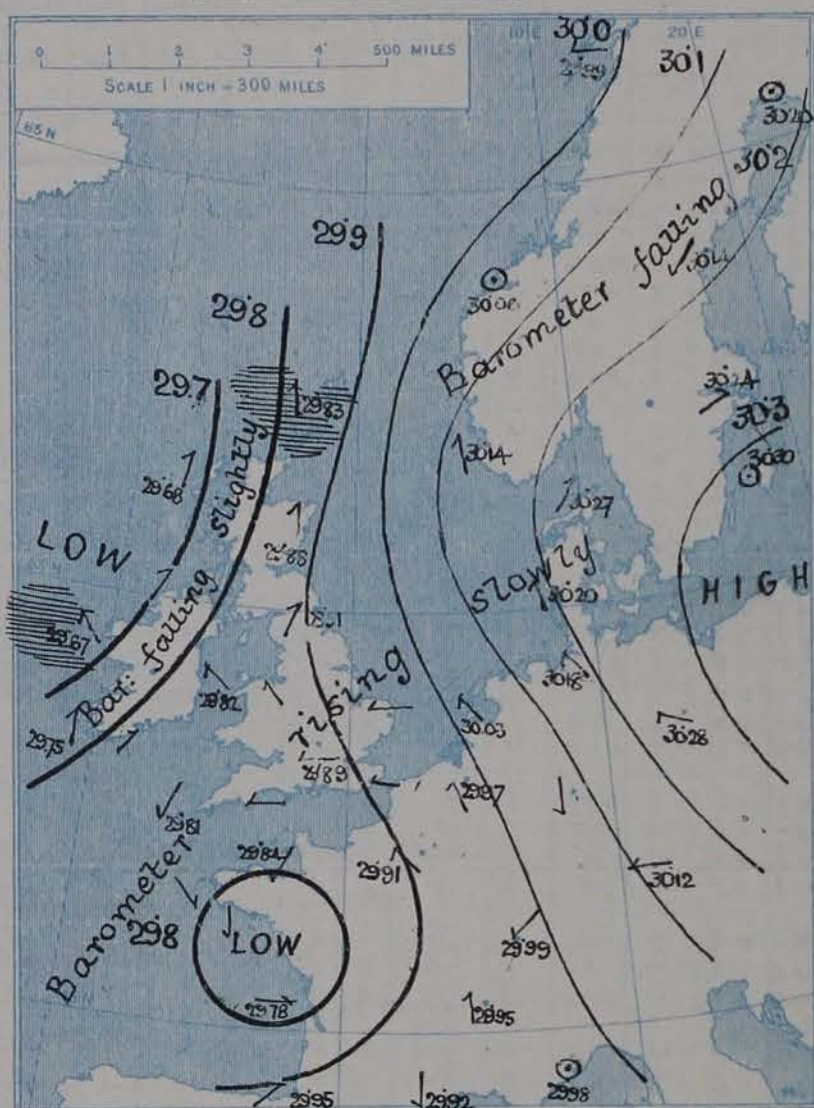

FOR Wednesday, 22nd March, 1905.

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ☉
Force 8 to 10 → Force 1 to 4 → }
SEA.—Rough High

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. LAST WEEK'S RAINFALL.

Amount recorded in various districts of the United Kingdom during the week ended, March 18th, 1905 with the percentage of the average amount for the corresponding week.

V. Means of DAILY TEMPERATURE

at 8 A.M. for the Two-Monthly period MARCH-APRIL (1871-1900.)

GENERAL SITUATION AT 8 A.M.

PRESSURE

Pressure continues highest, in the Southeast of Sweden, whence Wisby reports 30.30 ins. A disturbance passing at some distance from our Northwest coasts has caused a fresh fall of the barometer throughout the Western portion of the British Isles, the lowest reading reported this morning being 29.67 ins. at Blackpool Point. The shallow depression noticed yesterday morning over the Bay of Biscay has moved slightly to the Eastward and filled up; readings in it are now everywhere above 29.7 ins.

WIND

The wind continues light generally; the prevailing direction over England is E., but over Scotland and Ireland it is S.W. The sky is overcast in the extreme West and North, but over the greater part of our area the weather is fine, and the amount of cloud small. Temperature consequently fell decidedly during the night at inland stations, and local mists or fogs are, therefore, prevalent. Fog is also reported from the stations on the Irish Sea and from Aberdeen.

TEMPERATURE

Temperature readings in the British Isles range from 49° at Sillery to 34° at Oxford, and on the Continent from 50° at Rochefort and Perpignan to 26° at Haparanda. The sea is slight generally, but rather rough off Blackpool Point and Sumburgh Head.

WEATHER

AND

SEA

During the previous 24 hours very slight rain fell in the extreme North and West of our Islands, but over the greater part of the country the weather was fine. The amounts of bright sunshine ranged from 10 hours at many south coast stations to zero at Blackpool and Southport. Temperature reached 60° at Jersey, and 59° at Oxford and Bath, but on the East coast readings remained below 50°. The lowest minimum experienced during the night was 31° at Hain. The cyclonic disturbance over the Bay of Biscay caused heavy rain on the West coast of France; at Rochefort 0.59 in. was measured.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The fall of the barometer in the West is checking, so that the influence of the disturbance now passing off our Northwest coasts is likely to be confined to our Northwestern districts. Anticyclonic conditions will probably continue in the East.

FORECASTS*

For the 24 hours ending at NOON on 23rd March. 1905.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Moderate S. ^y to S.W. ^y winds; fair generally, but some showers.
1	SCOTLAND EAST	Moderate or light S.E. ^y to S. ^y breezes; fair generally.
2	ENGLAND N.E.	
3	ENGLAND EAST	Light breezes, mainly E. ^y ; fair generally, cool at night, with morning mists or fog locally.
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as No. 0.
7	ENGLAND N.W.	S.E. ^y to S.W. ^y breezes; fair generally.
8	ENGLAND S.W.	Same as Nos. 3 to 5.
9	IRELAND NORTH	Moderate or light S.E. ^y to S.W. ^y winds; fair as a whole, but some showers in the west.
10	IRELAND SOUTH	

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (⌒), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌒), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.

„ Weekly „ „ „ „ „ £1 10 0 „ Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

DAILY WEATHER REPORT

for 8 a.m. on Thursday, 23rd March,

1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Secretary.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster: the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR *Thursday, 23rd March, 1905.*

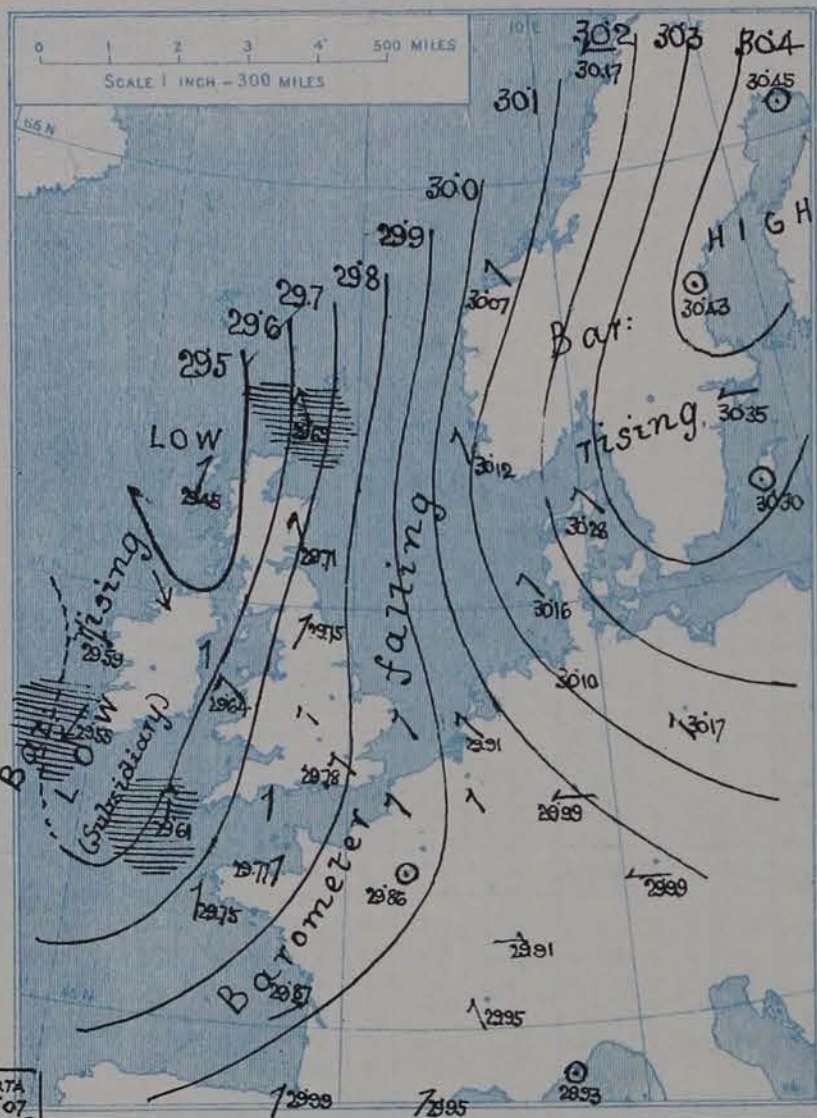

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → : Force 5 to 7 → : } Calm ⊙
Force 8 to 10 → : Force 1 to 4 → :

SEA.—Rough  High 

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. LAST WEEK'S SUNSHINE.

Amount recorded in various districts of the United Kingdom during the week ended *March 18th, 1905.* with the percentage of the average duration for the corresponding week.

V. Means of DAILY TEMPERATURE

at 8 A.M. for the Two-Monthly period

MARCH-APRIL (1871-1900.)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The region of highest pressure has been transferred to the North of Sweden, and a moderate gradient for S.E. winds is thus shown over the greater part of our area. In the extreme West the distribution of pressure is very irregular. A shallow V-shaped disturbance lies off the West coast of Scotland, and a small subsidiary depression is shown in the South of Ireland. Pressure readings range from above 30.4 ins. at Haparanda and Hernösand to 29.45 ins. at Stornoway, and 29.51 ins. at Roche's Point.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind is S.E. or S. over the Eastern portion of our area; in force it is moderate or light. A fresh N.W. wind prevails in the North of Ireland, and becomes N. or N.E. in the South of that country. The weather is fine over Scandinavia and Germany, where the amount of cloud is small; over England, Scotland and the West of France the amount of cloud has increased, but no rain has fallen. In Ireland conditions are very unsettled, and rain is falling in many places. The increased amount of cloud over Great Britain has checked the fall of temperature during the night, so that both this morning's readings and the night minima are higher than those reported yesterday. In Ireland the N.W. winds have caused a fall of temperature. The present readings in the British Isles range from 52° at Hain and Leith to 41° at Malin Head. The sea is rough in the extreme North and the extreme Southwest, moderate or slight elsewhere.

During the previous 24 hours the weather was fine over Great Britain; no rain fell, and the amounts of bright sunshine was everywhere large. High temperatures were in consequence experienced during the day, 66° being reached at Leith. In Ireland conditions were unsettled, and heavy rain fell during the night; over half an inch was measured at the Southern and Western stations.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The W. winds and unsettled conditions now prevailing in Ireland are likely to spread to the Western districts of Great Britain, but it is doubtful whether any material change will take place in the East of England. A fresh fall of the barometer is likely to occur in the West during the ensuing 24 hours.

FORECASTS*

For the 24 hours ending at NOON on 24th March, 1905.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Moderate or fresh S. winds, veering later; weather becoming unsettled, with some rain. Temperature falling.
1	SCOTLAND EAST	
2	ENGLAND N.E.	Moderate S.E. or S. winds; fair as a whole, but more cloud than of late. Temperature steady.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as Nos. 0 and 1.
7	ENGLAND N.W.	
8	ENGLAND S.W.	Moderate S.E. breezes, veering later to W. or NW.; fair at first, then some rain. Becoming cooler.
9	IRELAND NORTH	Fresh N.W. winds, backing subsequently; dull, some rain. Cool.
10	IRELAND SOUTH	

WARNINGS

(At 3.10 p.m. yesterday to parts of Districts 9 and 10, "Hoist South Cone." At 11 a.m. today to same districts, "Lower Cone".

Note.—The South Cone, point downwards (⏏), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (⏏), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.

" Weekly " " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on Friday, 24th March, 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Secretary.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster: the Sunshine entered at Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Friday, 24th March, 1905.

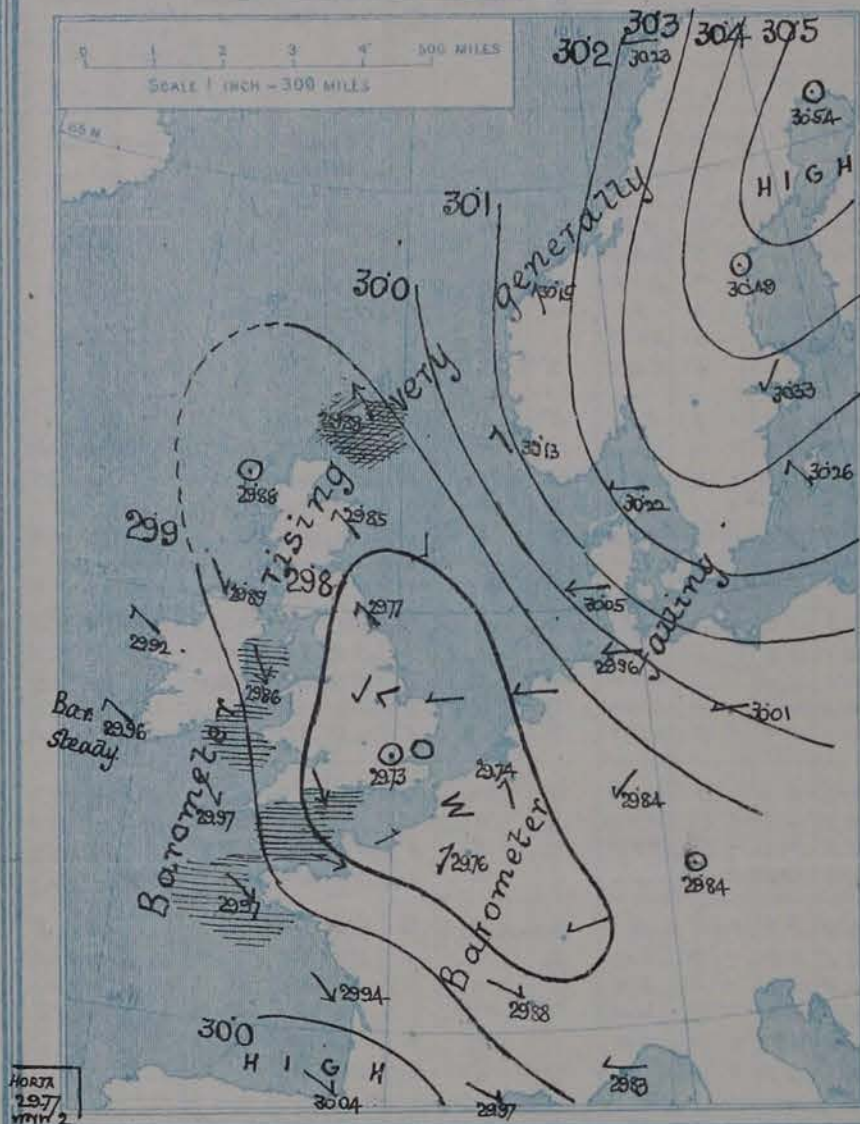

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 — Force 5 to 7 — Force 1 to 4 — Calm

SEA.—Rough — High

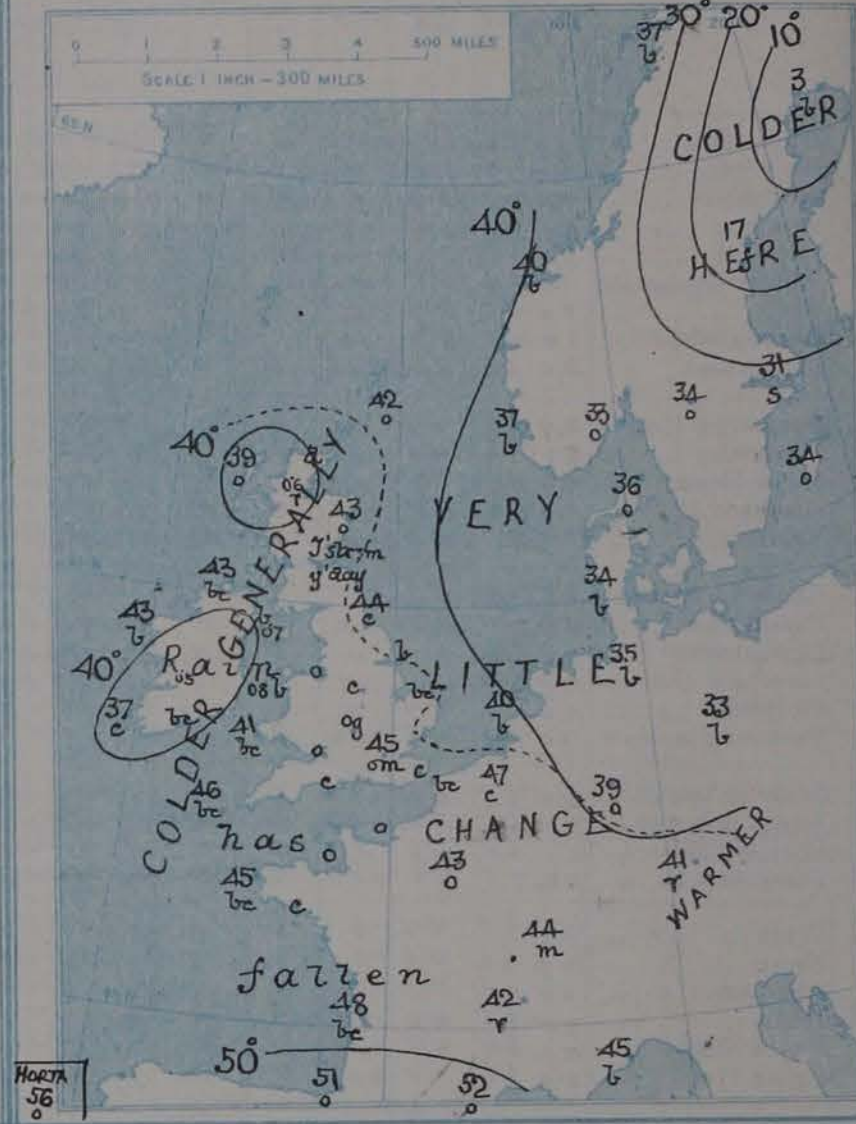

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

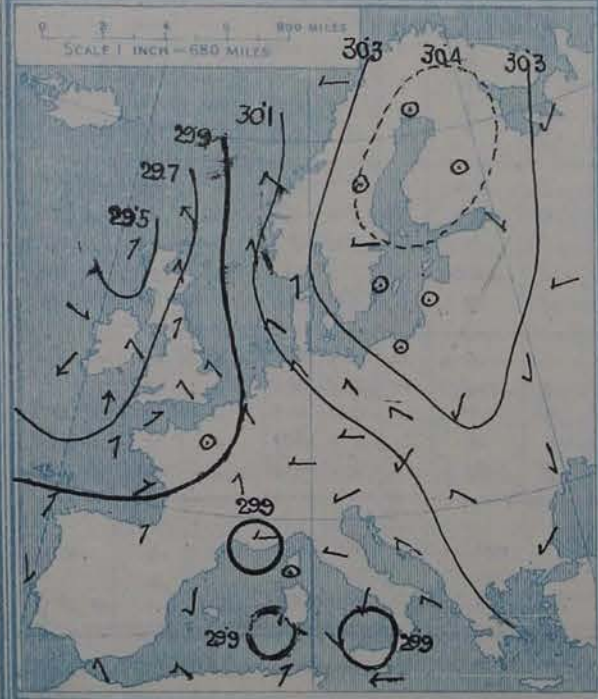

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus — 0.5

III. BAROMETER AND WIND

Yesterday morning.

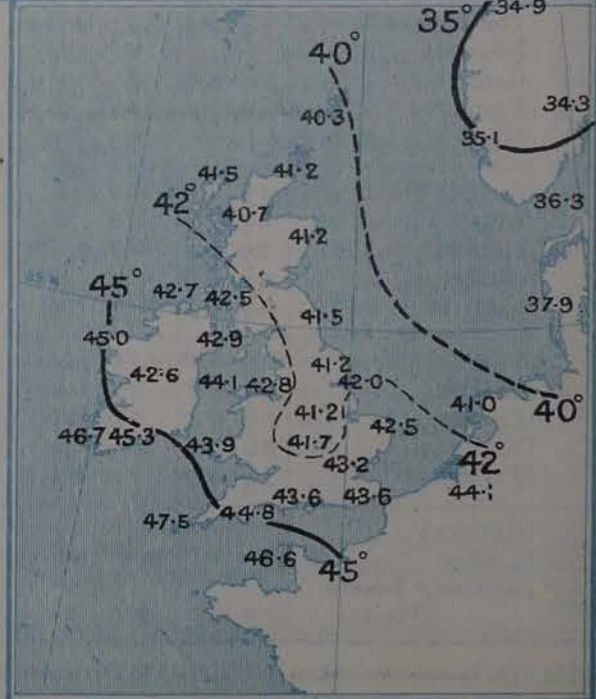

IV. RAINFALL IN 1905.

Total Amount recorded in various districts of the United Kingdom in the 11 weeks ended Saturday, 18th March, with the percentage of the average amount for the corresponding period.

V. Means of DAILY TEMPERATURE

at 8 A.M. for the Two-Monthly period MARCH-APRIL (1871-1900.)

GENERAL SITUATION AT 8 A.M.

PRESSURE

A large and irregular low pressure system, in which readings are below 29.8 ins., covers the greater part of England, the Netherlands, and the Northeast of France. On its western side the gradient is slight, the highest readings reported being 30.8 ins. at Biarritz, and 29.99 ins. at Roche's Point. The anticyclone in the northeast of our area has increased in intensity, the highest reading this morning is 30.54 ins. at Haparanda.

WIND

TEMPERATURE

WEATHER

AND

SEA

Light E.^{ly} winds are blowing at our East coast stations, and also on the Dutch coast, and form the continuation of the fresh E.^{ly} winds which prevail over the South of Scandinavia and Northern Germany. On the west of the region of lowest pressure, i.e., over the Irish Sea, Wales and the Southwest of England, the wind has freshened decidedly from between N. and N.W. Strong N.^{ly} squalls were experienced during the night at Pembroke and Portland Bill. Over Scotland the wind is very light and variable in direction, while on the West coast of Ireland it is also light, but it has backed to the SE.^{ly}, and thus indicates the existence of a further low pressure system in the West. The weather is fair as a whole, but rather cloudy in the neighbourhood of the low pressure system; in the rear of the latter the sky is clear. Over Scotland conditions are dull and unsettled, with rain at Cairn and Wick. On the Continent rain is falling at Lyons and Munich and snow at Stockholm. Temperature has fallen several degrees within the region affected by the N.^{ly} wind; further to the East changes have been slight on the whole; very low readings are reported from the North of Sweden (Haparanda 3°). The sea is rather rough in the Irish Sea, the Bristol Channel and the western portion of the English Channel, and also at Sumburgh Head. Elsewhere it is slight.

The passage of the disturbance across the country during the previous 24 hours caused rain at most of our stations; in many places the amounts measured were large, half an inch being exceeded at Parsonstown, Donaghadee, Holyhead and Cairn. Over 9 hours of bright sunshine were measured in the South-east of England, but further to the West and North the amounts decreased to nil at Bath and Aberdeen; Valencia, however, reports 7.4 hours.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The shallow depression over our Eastern counties will continue to move Eastward, so that the fresh N.^{ly} wind and fine weather now prevailing in the West may be expected to spread over the whole country. The backing wind and steady barometer in the West of Ireland point to the early approach of a fresh disturbance from the Atlantic.

FORECASTS*

For the 24 hours ending at NOON on 25TH March, 1905.

DISTRICTS.

FORECASTS.

0 { SCOTLAND
NORTH

Light variable breezes; unsettled
at first, improving later.

1 { SCOTLAND
EAST

2 { ENGLAND
N.E.

3 { ENGLAND
EAST

4 { MIDLAND
COUNTIES

5 { ENGLAND
SOUTH

Wind freshening from N. or N.W.;
weather fair and cooler than
of late.

DISTRICTS.

FORECASTS.

6 { SCOTLAND
WEST

7 { ENGLAND
N.W.

8 { ENGLAND
S.W.

9 { IRELAND
NORTH

10 { IRELAND
SOUTH

N.^{ly} breezes; fair generally.

Fresh N.^{ly} winds, moderating later;
weather fair and cooler than of late.

Variable breezes, freshening later
from SE. or S.W.; fair at first,
then less settled.

WARNINGS

NONE ISSUED.

Note—The South Cone, point downwards (⌞), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.

The North Cone, point upwards (⌞), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " " " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on *Saturday, 25th March,* 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. *W. N. SHAW, Secretary.*

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster: the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

FOR Saturday, 25th March, 1905.

SEA.—Rough High 

GENERAL SITUATION AT 8 A.M.

PRESSURE

A decided fall of the barometer has occurred in the West, and readings are now below 29.6 ins. in the West of Ireland. Pressure has also decreased in the anticyclone over Sweden, the highest reading reported being 30.34 ins. at Haparanda. Very shallow secondary disturbances are shown over England and the West of Germany, but the pressure distribution over France, Germany and our Eastern counties is very uniform.

WIND

TEMPERATURE

WEATHER

AND

SEA

A fresh S.³ air current is blowing over Ireland and the Western portions of Great Britain; further East the wind is light and rather variable, but the prevailing direction is from E. or SE. The sky is cloudy or overcast at all British stations, and rain is falling at several places in the West and also at Aberdeen. Fog prevails at Nottingham and Yarmouth. The weather is also dull at the majority of Continental stations, rain is reported from Brussels and Frankfurt, and snow from Karlstad. The S.³ wind has caused a decided rise of temperature in the West; in the East of our Islands, and also on the Continent, changes have been slight, but the general tendency has been downward. Home readings this morning range from 49° at Roche's Point to 40° at Sumburgh Head and Aberdeen. The sea is moderate to rather rough off the West of Ireland and in the St. George's Channel; slight in most other places, but high off Sumburgh Head.

During the previous 24 hours rain fell in the Northeast of Scotland and in the Southwest of England and Ireland. At Valencia the amount was again large, .81 in. being measured. 10 hours of bright sunshine were recorded at stations in the extreme Southeast and Southwest of England, and also at Stornoway, but over the greater part of the country the amounts were generally much smaller, sinking to zero at Bath, Jersey and Aberdeen. Temperature rose to 58° at Nottingham and 57° at Oxford and London; the lowest minimum reported is 32° at Parsonstown.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The depression in the West is likely to spread Eastward and cause freshening S.³ winds and unsettled weather in our Eastern districts. The barometer is now rising at Valencia, so that the wind will probably veer shortly at our Western stations, but the conditions favour the advance of further disturbances from the Atlantic during the ensuing 24 hours.

FORECASTS*

For the 24 hours ending at NOON on 26TH March, 1905.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	S. ³ to S.W. ³ winds; dull, unsettled, some rain.
1	SCOTLAND EAST	Moderate or fresh SE. ³ to S. ³ winds; cloudy or dull, occasional rain.
2	ENGLAND N.E.	
3	ENGLAND EAST	Winds freshening from the S.W. ³ ;
4	MIDLAND COUNTIES	cloudy or dull, occasional rain.
5	ENGLAND SOUTH	Moderate temperature.

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as No. 0.
7	ENGLAND N.W.	S. ³ winds, veering later; cloudy or dull, some rain.
8	ENGLAND S.W.	
9	IRELAND NORTH	Winds between S. and W.;
10	IRELAND SOUTH	changeable, rain at times.
WARNINGS		At 3.10 p.m. yesterday to District 10, and at 7.25 p.m. to Districts 6, 7, 9 and parts of 0 and 8, "Hoist South Cone."

Note.—The South Cone, point downwards (⌣), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌢), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " " " " " £1 10 0

Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on Sunday, 26th March, 1905.
Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Secretary.

FOR Sunday, 26th March, 1905.

SEA.—Rough High

GENERAL SITUATION AT 8 A.M.

PRESSURE

The general distribution of atmospheric pressure has undergone comparatively little modification. An area of relatively high barometer readings is still situated over Scandinavia, 30.27 in. at Naparanda, and another over the Spanish Peninsula, 30.21 in. at Lisbon. A disturbance of considerable extent lies outside our western coasts, lowest reading 29.64 in. at Blacksod Point. From this system a shallow secondary has in the past night moved quickly eastward across England and is now shown on the lower part of the North Sea. A new depression, which seems to be rather deep, is approaching the Azores, barometer 29.58 in. at Horta.

WIND

TEMPERATURE

WEATHER

AND

SEA

S^W to W^W winds prevail over our Islands and the western portion of the Continent, SE^W to E^W over Scandinavia, Denmark and North Germany. As a rule the force is light to moderate, but in a few isolated situations a fresh breeze is reported, and at Pembroke a strong breeze. Temperature has risen in the south and east of France, Western Germany and the north of Sweden, but in other regions it is a little lower than at the same hour yesterday. The values range from between 38° and 40° up the east of Scotland to 47° at Roche's Point and 48° at Jersey and Scilly, from 17° at Hernösand and 28° at other Swedish stations to 51° at Biarritz, 54° at Perpignan and 57° at Lisbon. The weather is fair to very fine in nearly all parts of our Islands, cloudy to overcast at most foreign stations. Rain is falling locally in the northeast of Scotland and at various places on the Continent, snow at some of the Scandinavian stations. A high sea is running off Corunna, rough off the Shetlands and rather rough locally off our southwestern coasts and on the upper part of the Bay of Biscay.

Temperature rose yesterday to 54° at Plymouth and 53° at Roche's Point and Scilly, but did not exceed 41° at Aberdeen and Lumburgh Head. In many districts there was no bright sunshine and the records at the others were generally small, but Valencia returns 7.4 hrs. Rain fell nearly everywhere, 0.6 in. at Shields and Leith, and 0.7 in. at Aberdeen, the amounts elsewhere being much smaller.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

WARNINGS

None issued.

The South Cone is still flying in Districts 6, 7, 9, 10 and parts of 0 and 8.

Note.—The South Cone, point downwards (∇), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (∇), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " " £1 10 0 " " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on *Monday, 27th March,*

WEATHER CHARTS

FOR MONDAY, 27th MARCH, 1905.

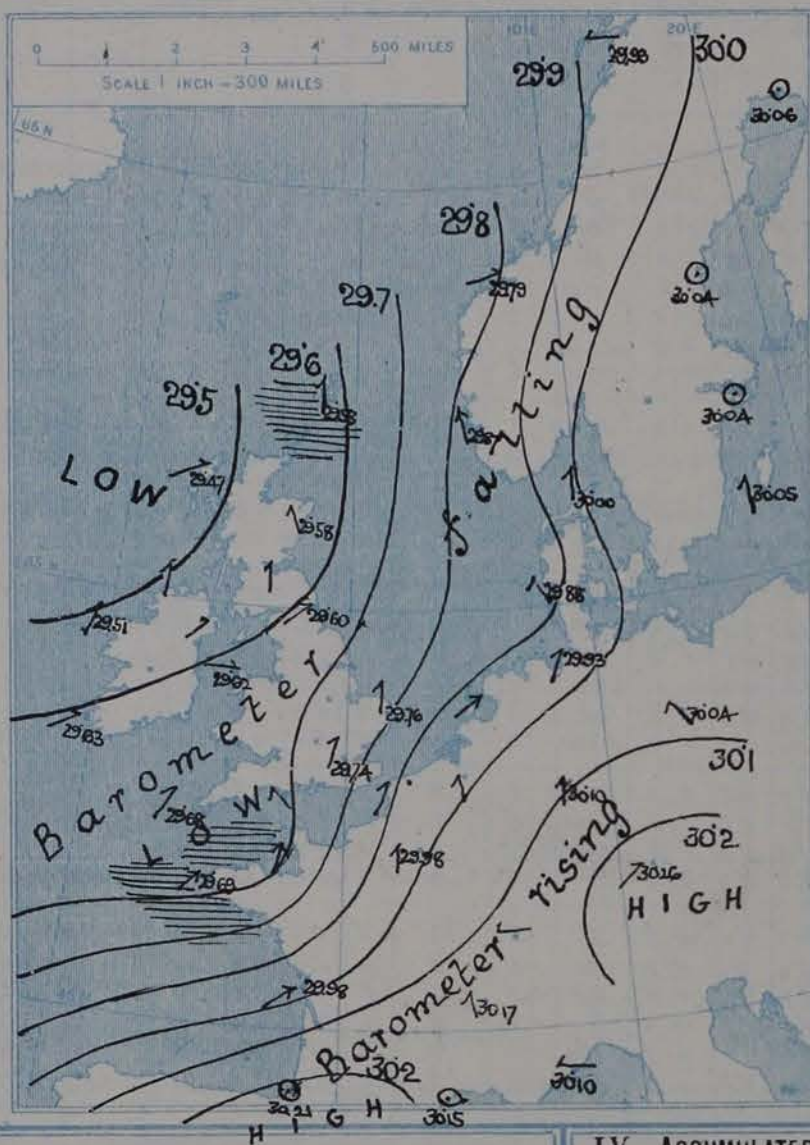

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 \rightarrow Force 5 to 7 \rightarrow } Calm \odot
Force 8 to 10 \rightarrow Force 1 to 4 \rightarrow

SEA.—Rough |||| High |||||

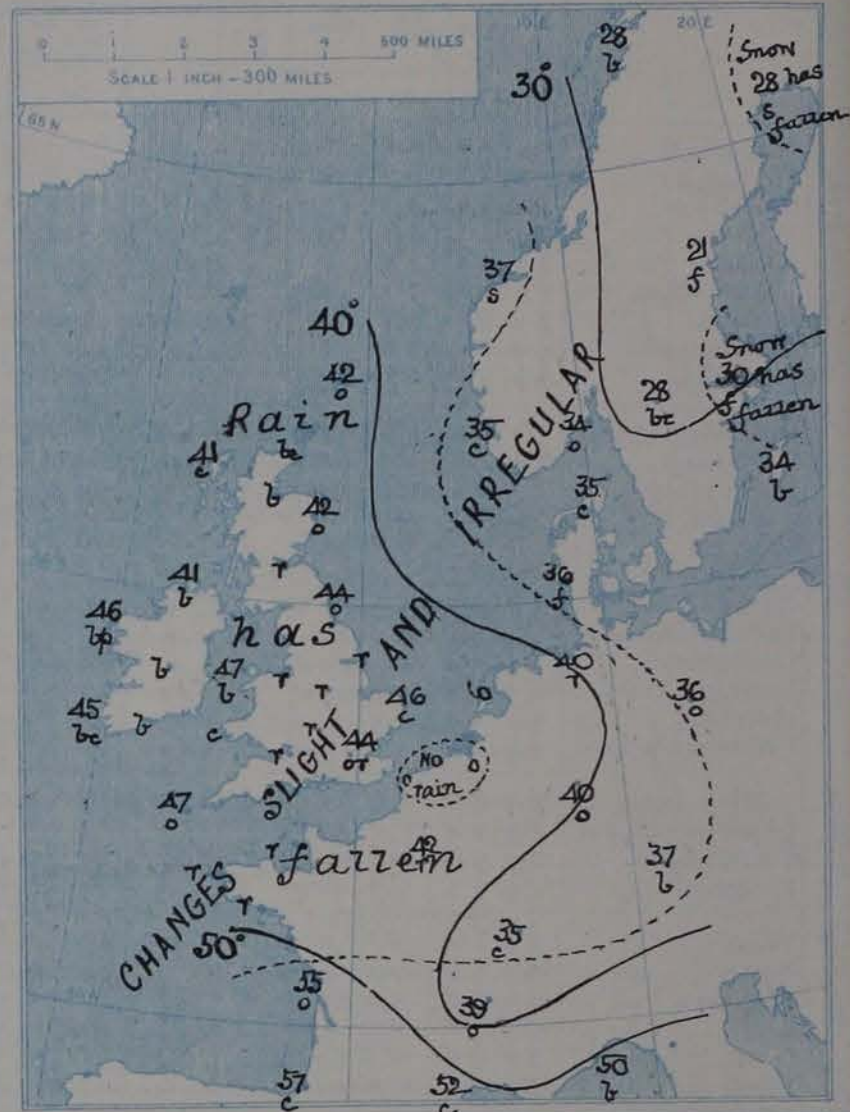

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

Amount recorded in various districts of the United Kingdom during the week ended Saturday, 18th March with the percentage of the average, for the corresponding week.

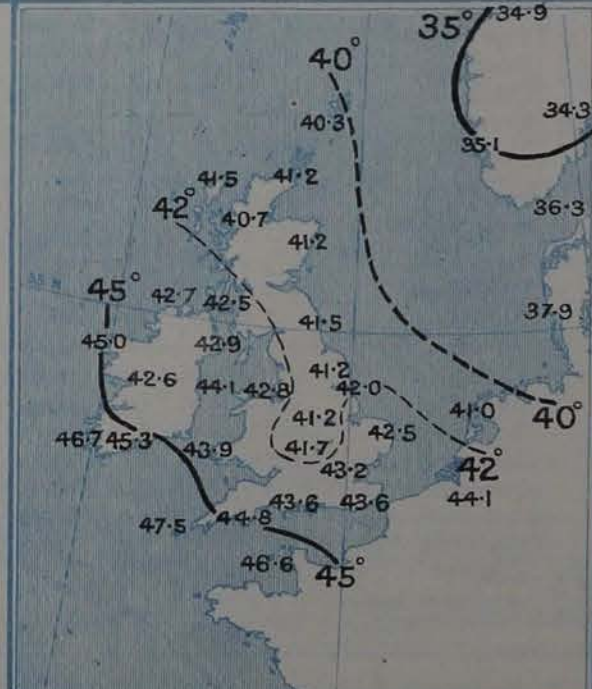

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours

V. Means of DAILY TEMPERATURE

at 8 A.M. for the Two-Monthly period

MARCH-APRIL (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

A shallow low pressure system lies off our northwest coasts, and a rather deep subsidiary disturbance covers the western portion of the Channel. The highest readings are now reported from Spain and the Southwest of France, and the gradient over France and the Bay of Biscay is accordingly steep. The high pressure system recently shown over Northern Sweden has dispersed.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind is S.^y or SE.^y at almost all English stations, and rain is falling very generally throughout the country. In the extreme Southwest and also over Wales and Ireland the wind has shifted towards S.W. or W., and the weather has improved, the sky being free from cloud in Ireland and also at Holyhead. Over Scotland conditions are unsettled and changeable. Moderate S.^y winds prevail at most continental stations, with strong S.W.^y winds on the west coast of France. The rain area extends over the whole of Northern France and further to the South and East much cloud prevails. Changes of temperature have been slight and irregular generally; in the British Isles readings range from 40° at Kairn to 51° at Jersey; the continental values lie between 21° at Hernösand and 57° at Biarritz. The sea is moderate in the English Channel, rough in the Bay of Biscay and off Sumburgh Head, slight or smooth elsewhere.

During the previous 24 hours rain fell at all the British stations except Malin Head; the amounts were heaviest in Wales and the Southeast of Ireland. The amount of sunshine experienced was large over England generally, 11 hours being measured at Eastbourne; at Scilly only 1 hour was recorded. Temperature reached 56° in the Channel Islands and in London; the lowest minimum temperature reported was 33° at Kairn.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

Rainy weather is likely to prevail at first in the Eastern portion of England, but an improvement will occur as the W.^y winds reported from our Western stations spread Eastward. Though the barometer is now rising at Valencia conditions remain very unsettled, and a fresh fall will probably set in before the ensuing 24 hours have expired.

FORECASTS*

For the 24 hours ending at NOON on 28th March, 1905.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	} S. ^y to S.W. ^y breezes; changeable, rain at times, fair intervals.
1	SCOTLAND EAST	
2	ENGLAND N.E.	} S. ^y winds, fresh or strong in places; veering later to S.W. or W.; rainy at first, clearing later, but continuing unsettled. Moderate temperature.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	} Same as Nos. 0 and 1.
7	ENGLAND N.W.	
8	ENGLAND S.W.	} Moderate or light S.W. ^y winds; fair intervals, but some showers.
9	IRELAND NORTH	
10	IRELAND SOUTH	} S.W. ^y to S. ^y winds, light at first, freshening later; fair, some rain later.

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (⌋), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌋), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on Tuesday, 28th March, 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London W. N. SHAW, Secretary.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster: the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR *Tuesday, 28th March, 1905.*

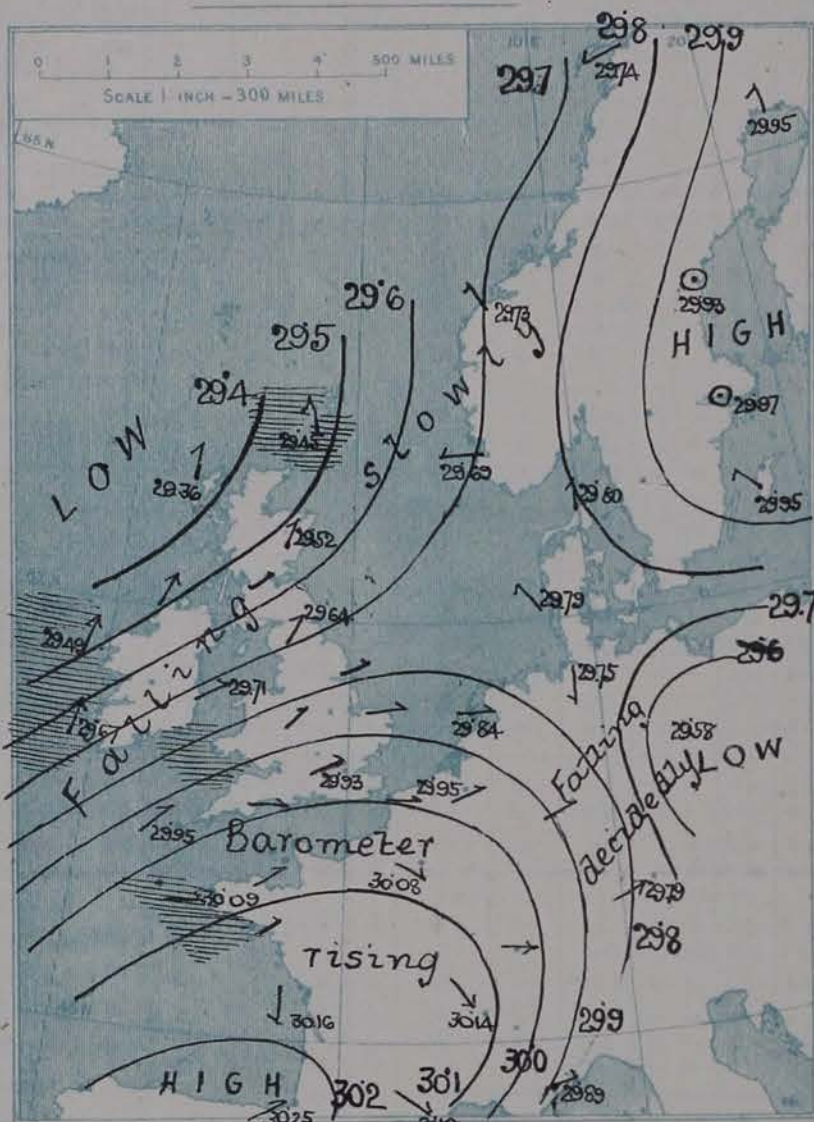

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 \rightarrow : Force 5 to 7 \rightarrow : } Calm \odot
Force 8 to 10 \rightarrow : Force 1 to 4 \rightarrow :

SEA.—Rough  High 

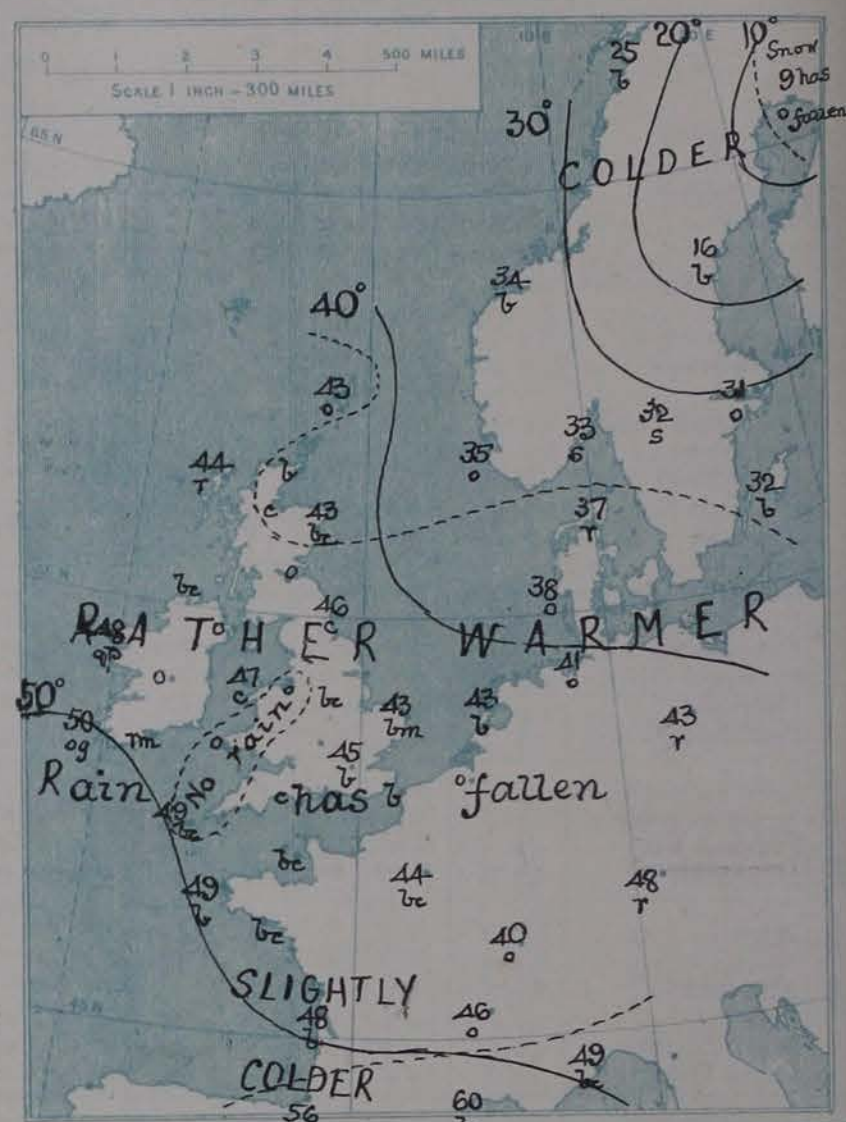

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.8

III. BAROMETER AND WIND

Yesterday morning.

IV. EXTREMES OF TEMPERATURE

recorded

in various districts of the United Kingdom

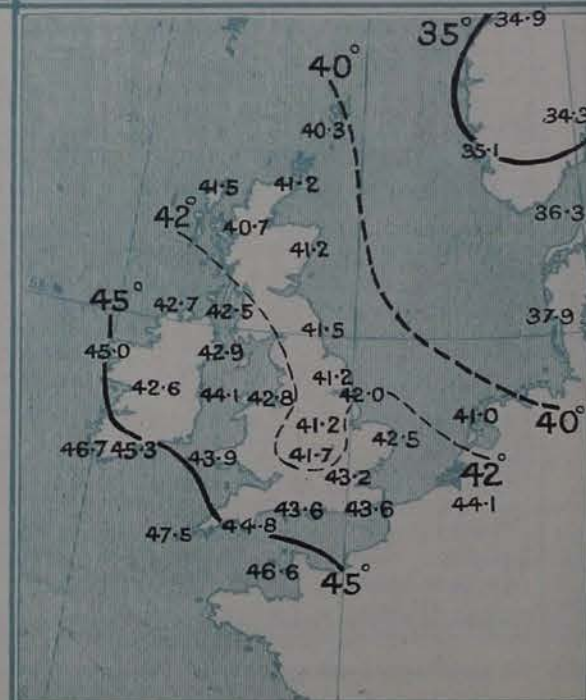

during the week ended Saturday, 25 March.

V. Means of DAILY TEMPERATURE

at 8 A.M. for the Two-Monthly period

MARCH-APRIL (1871-1900.)

GENERAL SITUATION AT 8 A.M.

PRESSURE

This morning's map shows two regions of high pressure; the first of these, in which readings are above 30.2 ins., covers Spain and the Southwest of France, while the second lies over the East of Sweden. In the latter the highest pressure reported is 29.97 ins. at Stockholm. A cyclonic disturbance off our Northwest coasts causes the barometer to stand at 29.36 ins. at Stormoway, and another low pressure system has developed over Eastern Germany, whence Berlin reports a reading of 29.58 ins.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind is S.W.^y or W.^y over England and Ireland, but over Scotland it is S.^y; in force it is fresh or strong in the West, moderate further to the East. W.^y or S.W.^y winds also prevail over France and Germany. E.^y to S.E.^y breezes are reported from the Scandinavian stations. The weather is fair over England, France and the Western parts of Germany. In Ireland and Scotland conditions are very unsettled, and rain is falling at several stations; rain is also reported from Munich, Berlin and Skagen, and snow from Karlstad and Faerder. In Northern Scandinavia the weather is fine. A slight increase of temperature has occurred at most British stations, and home readings this morning range from 41° at Train to 50° at Valencia and Roche's Point. An increase of temperature has also occurred over Germany, but in France and Scandinavia this morning's readings are lower than those of yesterday; at Haparanda the thermometer has fallen to 9°. The sea is rather rough off our extreme Western coasts and in the Bay of Biscay, elsewhere it is moderate or slight.

Slight rain fell at most of our stations during the early part of yesterday, though the East of Scotland and parts of Northern England escaped. The sky cleared during the day in the West, and large amounts of sunshine were recorded. In the East it remained overcast till after sunset. The highest temperature recorded was 53°, and the lowest 36°, so that the range was smaller than of late.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The barometer has commenced to fall, and the wind has backed to S.S.W. at Valencia and Blacksod Point, so that it is probable a further disturbance is advancing from the West. Conditions may accordingly be expected to remain unsettled generally, with most rain and strongest winds in the West.

FORECASTS*

For the 24 hours ending at NOON on 29th March, 1905.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	S. ^y to S.W. ^y winds, moderate or fresh in force; changeable, unsettled, some rain at times.
1	SCOTLAND EAST	
2	ENGLAND N.E.	Moderate or fresh W. ^y or S.W. ^y winds; fair at first, but less settled later. Mild.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as Nos. 0 and 1.
7	ENGLAND N.W.	
8	ENGLAND S.W.	Fresh or strong S.W. ^y or S. ^y winds; unsettled, changeable, some rain.
9	IRELAND NORTH	
10	IRELAND SOUTH	Mild.

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (⌋), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (⌋), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
 " Weekly " " " £1 10 0 "

Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom **Sixpence in addition to the cost of the inquiry and reply Telegrams.** Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on Wednesday, 29th March, 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Secretary.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster: the Sunshine entered at Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR *Wednesday, 29th March, 1905.*

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 →

Force 5 to 7 →

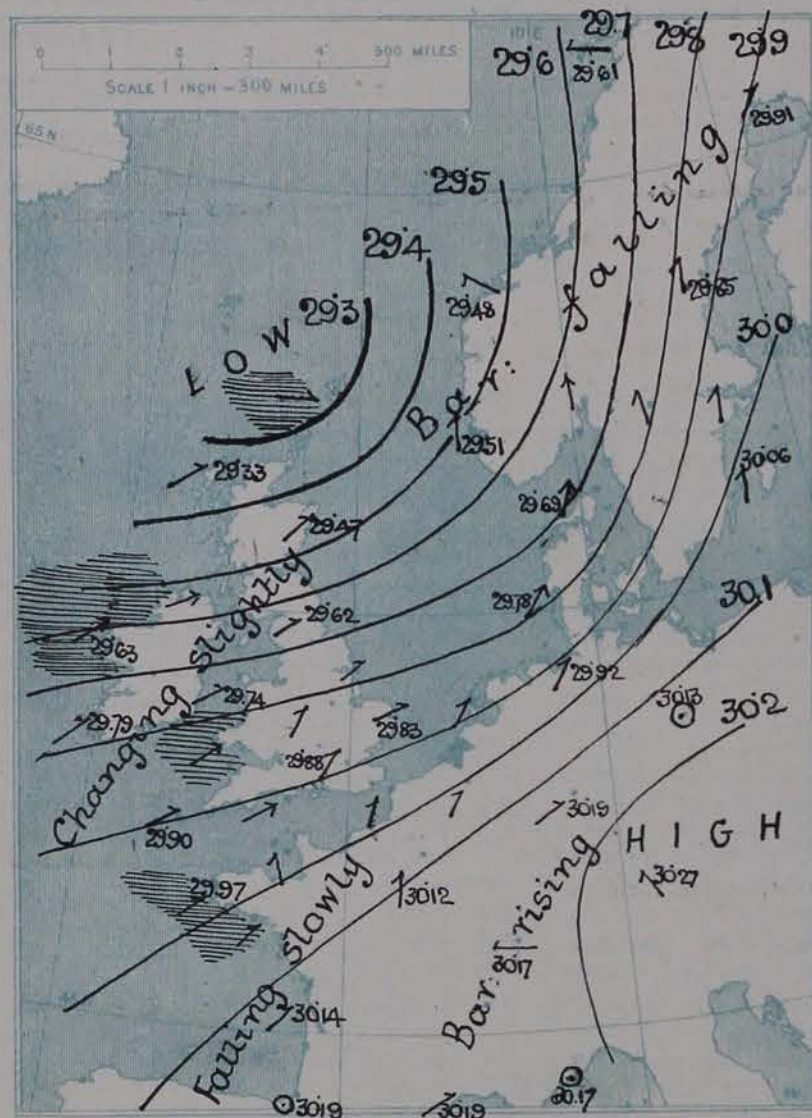

Calm ⊙

Force 8 to 10 →

Force 1 to 4 →

SEA.—Rough

High

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus -0.6

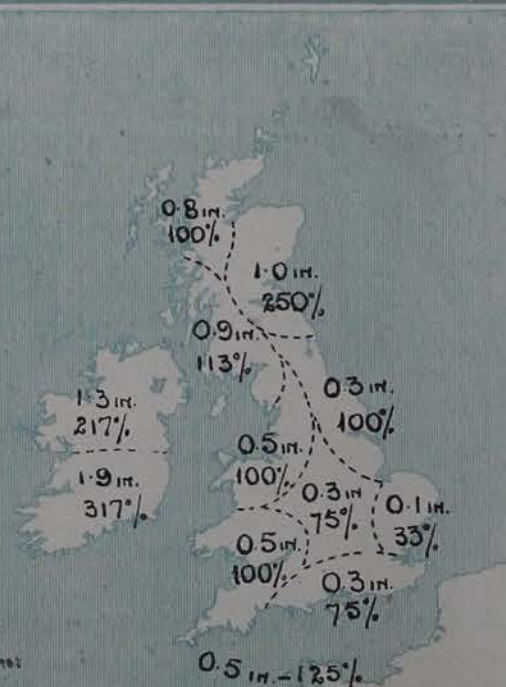

III. BAROMETER AND WIND

Yesterday morning.

IV. LAST WEEK'S RAINFALL.

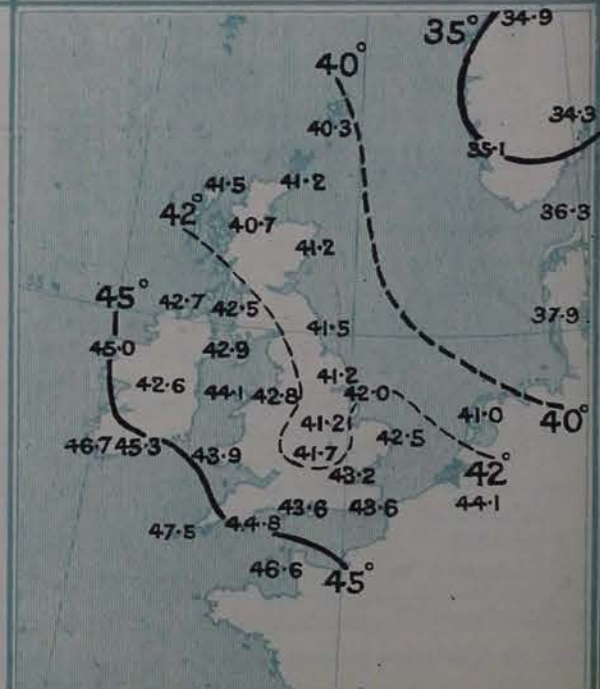

Amount recorded in various districts of the United Kingdom during the week ended *Saturday, 25th March*, with the percentage of the average amount for the corresponding week.

V. Means of DAILY TEMPERATURE

at 8 A.M. for the Two-Monthly period

MARCH-APRIL (1871-1900.)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The distribution of pressure this morning is of a comparatively simple type. Readings are highest in the South of our area and lowest off the North of Scotland and the West of Norway. Values range from 30.19 ins. at Biarritz, 30.27 ins. at Munich and 30.06 ins. at Stockholm, to 29.33 ins. at Stornoway, 29.25 ins. at Sumburgh Head and 29.48 ins. at Christiansund.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind is generally S.W.^y, but over Scandinavia it blows from S. or S.E. It is strong on the Northwest of Ireland, but over our area as a whole it is moderate to fresh in force. The weather is fair in most places; passing showers are reported from several British stations. A minute "secondary" over the Skager Rack is causing rain at Faerder and snow at Karlstad. Under the influence of the S.W.^y wind temperature remains mild throughout our Islands, this morning's readings range from 38° at Stornoway to 58° at Scilly. On the Continent temperature has fallen in the region where the barometer stands highest, but over Sweden a decided rise has occurred. The sea continues rather rough off our extreme Western coasts, and over the Bay of Biscay, elsewhere it is moderate or slight.

During the past 24 hours rain fell generally in Scotland, Ireland and Wales, but in England only a few passing showers were experienced. The largest totals measured were 36 in. at Roche's Point and 31 in. at Stornoway. The amounts of sunshine recorded vary greatly, as many as 10 hours were reported from Eastbourne and Jersey, but at Aberystwyth the sky remained cloudy till after sunset.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

There are at present no indications of the approach of further disturbances from the Atlantic, but a fresh fall of the barometer is likely to set in before the ensuing 24 hours have elapsed. No important modifications in the present conditions are therefore to be expected.

FORECASTS*

For the 24 hours ending at NOON on 30TH March, 1905.

DISTRICTS.

FORECASTS.

0	{ SCOTLAND NORTH	Moderate to strong S.W. ^y to W. ^y winds; changeable, some showers. Mild.
1	{ SCOTLAND EAST	
2	{ ENGLAND N.E.	Moderate to fresh S.W. ^y winds; fair generally, but occasional passing showers. Mild.
3	{ ENGLAND EAST	
4	{ MIDLAND COUNTIES	
5	{ ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	{ SCOTLAND WEST	Same as Nos. 0 and 1.
7	{ ENGLAND N.W.	
8	{ ENGLAND S.W.	Same as Nos. 2 to 5.
9	{ IRELAND NORTH	
10	{ IRELAND SOUTH	Moderate to strong S.W. ^y to S. ^y winds; changeable, rain at times. Mild.

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (⌋), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌋), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster: the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

FOR Thursday, 30th March, 1905.

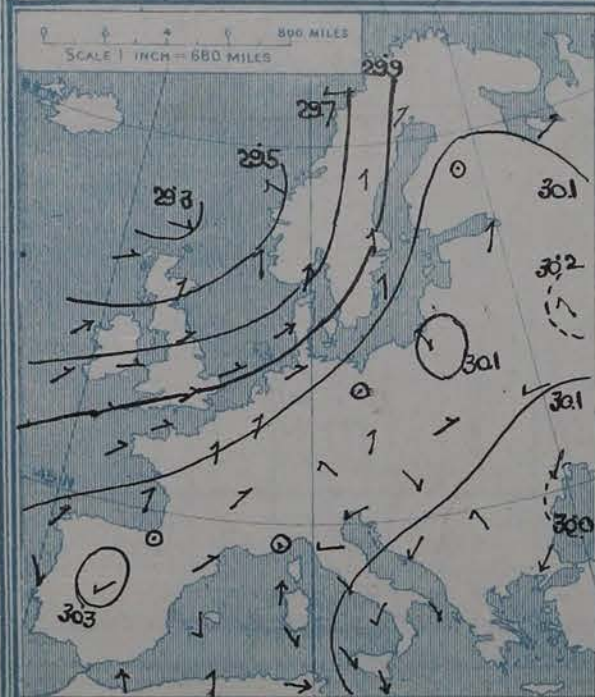

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 $\rightarrow \rightarrow \rightarrow$; Force 5 to 7 $\rightarrow \rightarrow$; } Calm ☉
Force 8 to 10 $\rightarrow \rightarrow \rightarrow$; Force 1 to 4 \rightarrow ;

SEA.—Rough High 

Yesterday morning.

TEMPERATURE.—Isotherms are drawn for each 10°

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

Amount recorded

in various districts of the United Kingdom during the week ended Saturday, 25th March with the percentage of the average duration for the corresponding week.

at 8 A.M. for the Two-Monthly period

MARCH-APRIL (1871-1900.)

GENERAL SITUATION AT 8 A.M.

PRESSURE

Pressure remains highest in the South of France, and lowest to the northward of our Islands. Readings lie between 30.2 ins. and 29.4 ins. There are indications of a very shallow disturbance over the Bay of Biscay, and many small irregularities of pressure are shown over our Southern counties and Northern Germany.

WIND

TEMPERATURE

WEATHER

AND

SEA

Moderate or light W.^s breezes prevail generally over our Islands; on the West coast of France the wind has backed to the S.^{wt}; the remaining Continental stations report winds from between S. and W. The weather is fair at most British stations, but showers are reported from various localities. Steady rain is falling along the north coast of France, and in the extreme Southwest of England, and over the Continental part of our area the amount of cloud is in general large. Temperature remains mild throughout the British Isles; the S.W.^s breezes have caused a rise of several degrees at most continental stations. Readings now range from 28° at Haparanda to above 50° on the shores of the Bay of Biscay. The sea is moderate off our extreme Western coasts and in the St. George's Channel, but slight elsewhere.

During the previous 24 hours slight rain fell at almost all British stations, the largest fall being 0.48 in. at Stornoway. Much cloud prevailed in the South, but over 10 hours of bright sunshine were recorded at stations in Yorkshire, Lancashire and North Wales. Temperature rose to 56° at Oxford and Bath and maxima were everywhere above 50° except in the extreme North. The lowest minimum reported was 37° at Stornoway.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

There are no indications of any important change in the present conditions. The weather is likely to continue fair and mild generally, but the small irregularities of pressure shown, will give rise to showers in many places.

FORECASTS*

For the 24 hours ending at NOON on 31st March, 1905.

DISTRICTS.	FORECASTS.	DISTRICTS.	FORECASTS.
0 { SCOTLAND NORTH	Moderate or fresh W. ^s winds; changeable, some showers. Mild.	6 { SCOTLAND WEST	Same as No. 0
1 { SCOTLAND EAST		7 { ENGLAND N.W.	Same as Nos. 1 to 5
2 { ENGLAND N.E.		8 { ENGLAND S.W.	
3 { ENGLAND EAST		9 { IRELAND NORTH	Same as No. 0
4 { MIDLAND COUNTIES		10 { IRELAND SOUTH	Same as Nos. 1 to 5.
5 { ENGLAND SOUTH	Moderate or light W. ^s or S.W. ^s breezes; fair as a whole, but some showers. Mild.		
		WARNINGS	NONE ISSUED.

Note — The South Cone, point downwards (⌣), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌢), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster. The Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page

WEATHER CHARTS

FOR Friday, 31st March, 1905.

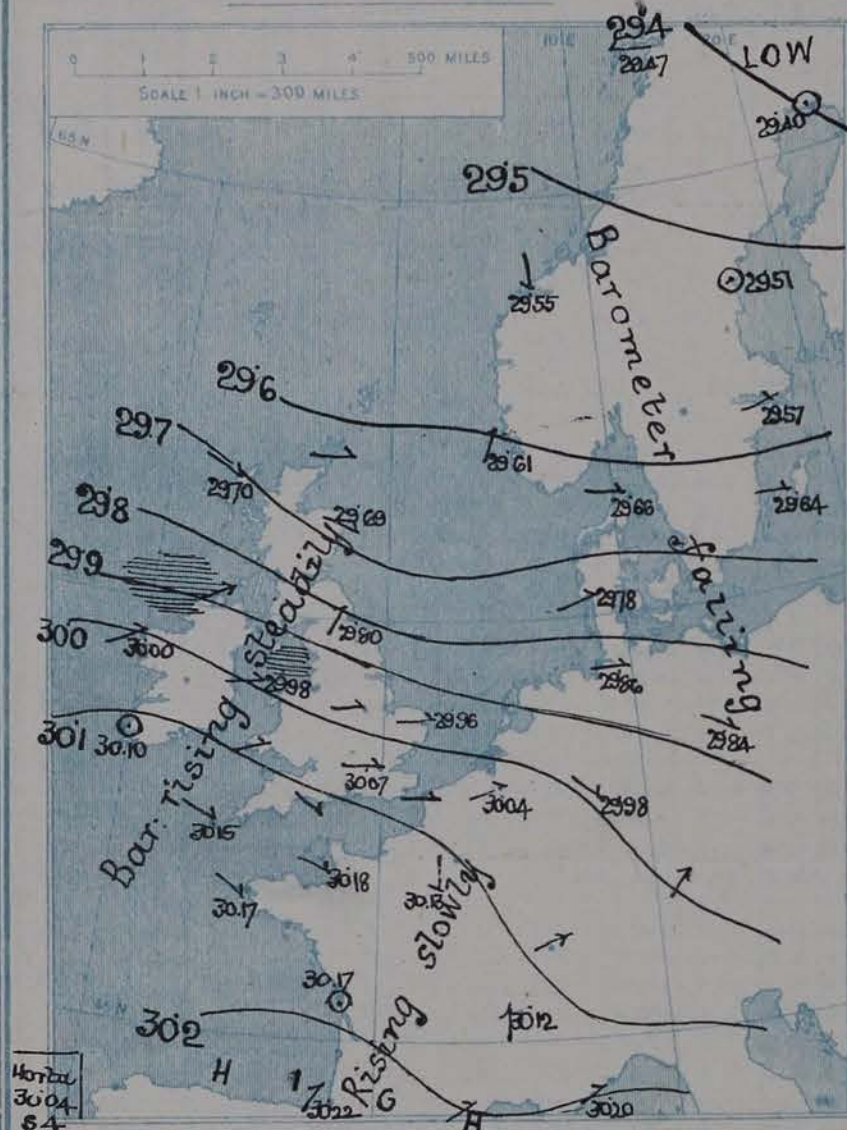

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ○
Force 8 to 10 → Force 1 to 4 →

SEA—Rough High

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°

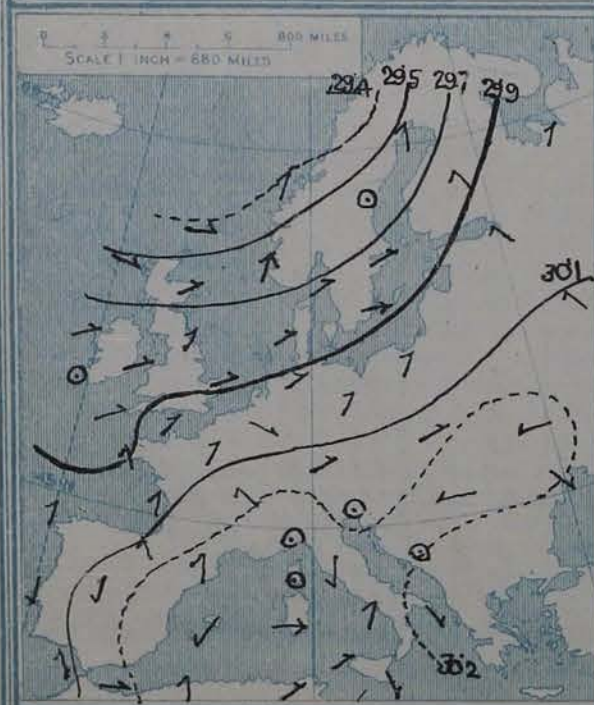

WEATHER—Shown by Letters of the Beaufort Scale (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. RAINFALL IN 1905.

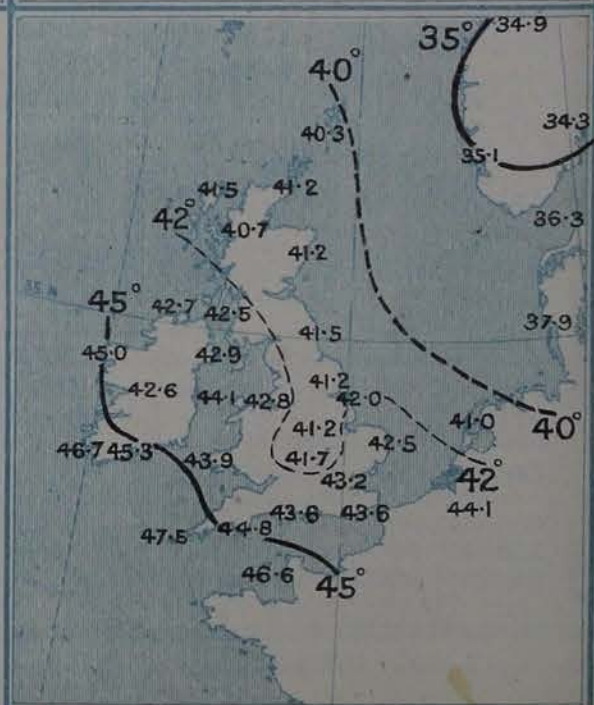

Total Amount recorded in various districts of the United Kingdom in the 12 weeks ended Saturday, 25 March with the percentage of the average amount for the corresponding period.

V. Means of DAILY TEMPERATURE

at 8 A.M. for the Two-Monthly period

MARCH-APRIL (1871-1900.)

GENERAL SITUATION AT 8 A.M.

PRESSURE

Pressure is highest to the Southwest of our Islands and over the Bay of Biscay, and lowest in the extreme Northeast. The gradient is slight, all the readings lying within a range of .6 inch. The small irregularities which formed so conspicuous a feature of yesterday's map have, to a great extent, disappeared.

WIND

TEMPERATURE

WEATHER

AND

SEA

Moderate to fresh W.^s breezes prevail generally, both in this country and on the Continent; in the extreme Southwest of England, and on the West coast of France, the wind has veered to N.W., but a very light S.^s air is reported from Valencia. The weather is fine generally, and the amount of cloud is very small over England and the adjoining parts of the Continent. Showers, occasionally accompanied by hail are reported from the extreme Northwest coasts of Scotland and Ireland, and rain is falling at Berlin. Temperature remains mild in the British Isles, France and Germany; in the extreme West, changes have been very slight, but over our Eastern counties the clear sky was the cause of a rather cool night, so that this morning's readings are in general, several degrees lower than those of yesterday. Rather low readings are still reported from Scandinavia. The sea is smooth generally, but at Malin Head and Liverpool it is rather rough under the influence of a fresh W.^s breeze.

During the previous 24 hours showers occurred throughout the West and North of our Islands, but in our more Eastern districts they were confined to a few isolated places. Heavy rain fell on the North coast of France and also at Jersey. The amounts of bright sunshine were small along the South coast, more particularly at the Eastern stations; over 10 hrs. were recorded at several of our Northern and Western stations. Temperature reached 50° very generally in the Midlands. The lowest minima occurred in the Southeastern districts, the lowest reading being 35° at Dungess. The highest reading recorded was 82° at Biarritz.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The barometer continues to rise at all Western stations, so that it is probable that the anticyclone now lying to the Southwest of our Islands will spread Eastward or Northeastward. W.^s breezes and fine, mild weather may, therefore, be expected generally.

FORECASTS*

For the 24 hours ending at NOON on 1st April, 1905.

DISTRICTS.

FORECASTS.

0	{ SCOTLAND NORTH	{ Moderate or fresh W. ^s breezes; fair generally, occasional showers.
1	{ SCOTLAND EAST	
2	{ ENGLAND N.E.	{ Moderate or light W. ^s breezes; fair or fine generally. Mild, rather cool at night.
3	{ ENGLAND EAST	
4	{ MIDLAND COUNTIES	
5	{ ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	{ SCOTLAND WEST	{ Same as Nos. 1 to 5.
7	{ ENGLAND N.W.	
8	{ ENGLAND S.W.	
9	{ IRELAND NORTH	{ Same as No. 0.
10	{ IRELAND SOUTH	
WARNINGS		NONE ISSUED

Note.—The South Cone, point downwards (⌋), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌋), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " " £1 10 0 " " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.
