WEDNESDAY
1 MARCH 1989

SUMMARY
OF
BRITISH WEATHER

Parts of the North Midlands and Lancashire had a wet night with a band of mainly light rain gradually dying away by daybreak. There were overnight showers in Scotland, as well as Northern Ireland, Wales and western parts of England. Most districts were rather cloudy.

During the day most parts of the British Isles had a mixture of showers and bright periods. For southern coastal counties of England a sunny day. There were some heavier showers over northeast Scotland and a thunderstorm was reported in north Norfolk.

Temperatures were generally above average again but England and Wales had a strong, chilly northwest wind.

SUMMARY
OF
BRITISH WEATHER

There were showers during the night over northern Scotland. Most other central and northern regions of the British Isles had a clear night with light winds, resulting in a widespread frost. Isolated fog patches formed at the end of the night, chiefly in Scotland. Southern Britain was generally frost free. Rain and strong southeasterly winds spread to south and west Wales and southwest England by dawn.

During the morning, rain spread quickly northeast across all of Wales and Northern Ireland, most of England and parts of southwest Scotland. There was some wet snow mixed with the rain in the more northern counties. Brighter weather spread to southwest Britain by midday.

The rain and wet snow continued across the southern half of Scotland during the afternoon. Northern Scotland had a rather cloudy, mostly dry day, though with a few showers.

Northern Ireland, Wales, southern England and most of the Midlands brightened up in the afternoon, though there were some showers.

The evening saw a mixture of rain and showers across the British Isles; clearer skies and light winds led to some patchy fog forming in parts of East Anglia, northern England and Northern Ireland.

Temperatures were near or rather below normal in much of the east and north, but it became mild as it brightened up in the south.

FRIDAY
3 MARCH 1989

**SUMMARY
OF
BRITISH WEATHER**

There was rain overnight in northern Scotland and from time to time over much of southern Britain. Central regions of the British Isles were largely dry with some patchy fog and frost.

The last of the rain in the south cleared away from southeastern counties by late morning. The rain in northern Scotland cleared from the mainland by about mid-afternoon, but was more persistent on Orkney, eventually clearing from there and moving up to Shetland in the evening.

Apart from an isolated light shower it was a dry day nearly everywhere over Britain. There was mostly a lot of cloud, but with some sunshine. The sunniest areas were in southwest England and parts of northeast England, Northern Ireland and southern Scotland.

Temperatures were above normal in most places, and some of the sunnier districts became mild. Temperatures were close to normal over northern Scotland and Norfolk.

A map of the British Isles and the western coast of France, showing the distribution of the 'f' rune in the year 0600. The map includes the British Isles and the western coast of France. The 'f' rune is marked in several locations: on the west coast of Ireland, in the northwest of Scotland, in the central Highlands of Scotland, in the north of Wales, in the north of England, in the northeast of England, and in the south of England. The 'f' rune is also marked in the western part of France, near the English coast.

SUMMARY
OF
BRITISH WEATHER

There was a touch of frost and a few fog patches in some eastern districts overnight. Outbreaks of rain moved from the west across western and northern regions, and patchy rain got across to the east by morning. Amounts of rain were mostly small.

During the day, southern England was mostly dull and damp with drizzly rain, and fog on hills and southwest facing coasts in the southwest. Some inland areas became a little brighter and drier. Further north over England and Wales, the weather gradually improved in most districts after a grey, damp start; there were sunny spells by the afternoon, particularly in the Midlands, North Wales and northwest England.

There were sunny spells over Scotland and Northern Ireland, but showery outbreaks of rain spread from the west during the day, with some heavy rain in Highland region.

It was windy in the northwest, but temperatures were a few degrees above the seasonal normal nearly everywhere. Some of the brighter spots in England became exceptionally mild.

SUMMARY
OF
BRITISH WEATHER

A mild southerly airstream affected much of the country with a warm front pushing north to give most districts a little rain - significant over some western and northern hills.

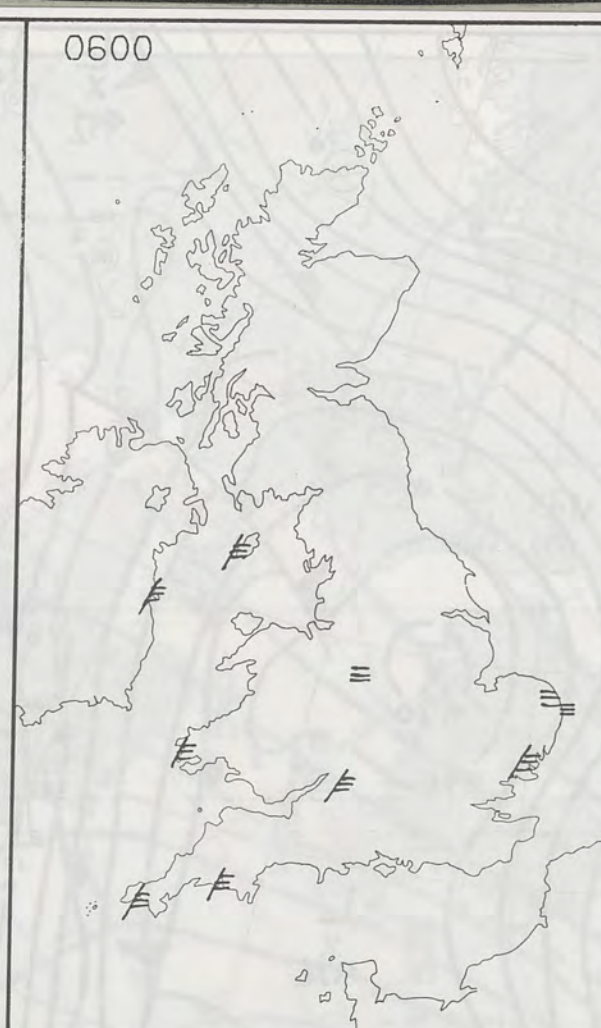

The warm front introduced a very mild airstream and it was excessively mild in parts of the south, East Wales and eastern England.

It was windy in the west and northwest with gusts to 60 mph at Aberporth in West Wales and in the Outer Hebrides.

SUMMARY
OF
BRITISH WEATHER

Much of East Anglia and southeast England had a bright, very warm day; one of the warmest early March days this century, though it has been warmer - eg 24°C was reached in northwest London on 9th March 1948. The extreme southeast was mostly sunny; other parts of southeastern Britain had rather a lot of high cloud at times. Thicker cloud spreading across from the west brought some rain in the late evening.

An area of rain cleared through most of Scotland and Northern Ireland overnight, with rain reaching parts of northwest and southwest England and Wales by morning. The rain area then came to a halt for a few hours through these districts, whilst spreading back north into parts of southern Scotland. Later, the rain moved slowly east, clearing Scotland by late afternoon and a narrowing band of rain moved across central southern England, the Midlands and East Anglia for a time in the evening.

Clearer weather followed the rain, with sunny spells and showers in westernmost regions.

Even away from the southeast it was mild or very mild everywhere, but quite windy in the west and north.

TUESDAY
7 MARCH 1989SUMMARY
OF
BRITISH WEATHER

Overnight, most districts had clear intervals, with some showers, chiefly in the west and north. Northern Scotland was very windy. There was some frost by the morning in some inland districts of the west and north.

Monday's area of rain cleared through the southeast with very little effect there. But the rain area pushed back north-eastwards from northern France to affect east Kent for a time during the day, and a large area of cloud covered central southern and southeastern England and East Anglia.

Most of the rest of the British Isles had a fair amount of sunshine, with the clearer skies reaching the southeast in the evening. There were quite a few showers in northwest Scotland and some hail and snow.

It was a few degrees colder than on Monday nearly everywhere and maxima were 9°C lower in parts of East Anglia. Nevertheless, they were still mostly above normal, and it was mild over southwest England, the Midlands and eastern England. Temperatures were around normal in northwest Scotland. The strong winds in the north died down slowly. By midnight, many parts of the British Isles were frosty.

WEDNESDAY
8 MARCH 1989SUMMARY
OF
BRITISH WEATHER

The night was clear and frosty over most of the British Isles. By morning, cloud and the southerly wind were increasing in westernmost regions.

The cloud spread steadily east during the day, followed by rain, chiefly in the west. However, the morning was sunny over eastern England, and bright over central England and eastern Scotland, and it was late afternoon before the cloud sheet reached the southeast coast.

Western and northern Scotland and Northern Ireland had a spell of wet and windy weather for a few hours during the day, but it became drier and quieter later with clear intervals and a few showers in the evening, when the clearance also got across to eastern Scotland after mostly small amounts of rain there.

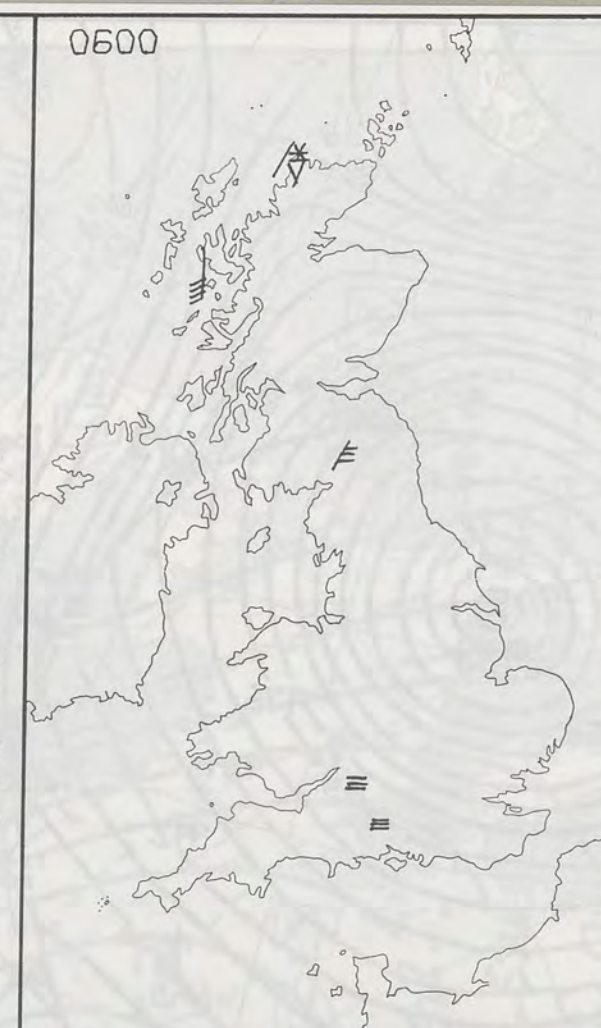

Much of the afternoon and evening was wet over Wales, southwest and northwest England. Some mostly light rain affected central and eastern England during the late afternoon and evening.

After the cold start, temperatures mostly rose a degree or so above normal, East Anglia in particular having a mild afternoon.

FRIDAY
10 MARCH 1989

SUMMARY OF BRITISH WEATHER

England and Wales had a cloudy, mild night with rain in places, heavy at times over northwestern hills.

It stayed cloudy through the day with rain for much of the day across the Midlands and southwestern England, most of it light and spreading to East Anglia and the southeast in the afternoon.

Northern England and North Wales were mostly dry with some sunshine in the far north of England and the Isle of Man.

Scotland and Northern Ireland had a widespread frost overnight and long sunny spells by day, especially in the east, but there were showers in the west, locally heavy with hail and thunder.

Temperatures were generally mild or very mild in the south but near normal in the far north.

SUMMARY
OF
BRITISH WEATHER

The southern half of England and parts of South Wales had a rather cloudy 24 hours, though it was mainly dry. The cloud then cleared away from most places during the evening.

North Wales and northern England had a dry sunny day followed by a clear evening.

Northern Ireland and Scotland had clear spells and showers by night with sunshine and showers during the day. The majority of the showers fell in northwest Scotland and the Islands. A few showers were of hail, sleet or snow, with one or two thunderstorms reported.

Temperatures were generally two or three degrees above average especially in the south.

SUMMARY
OF
BRITISH WEATHER

Clear skies lead to patchy fog and frost in southern England during the early hours though it was generally cloudy for much of England and Wales with outbreaks of rain spreading from the west.

As the centre of a deep depression crossed the Irish Sea it became very windy over Wales and southwest England during the evening; gusts to 62 knots were recorded in west Cornwall.

A moist southwesterly flow brought persistent rain to northern and western Scotland and this merged with rain moving across Ireland during the afternoon ahead of the deepening depression - with persistent rain into southern and central Scotland too, and snow over the Central Highlands.

Temperatures were near average everywhere despite the generally dull and wet conditions.

MONDAY
13 MARCH 1989

SUMMARY
OF
BRITISH WEATHER

During the early hours a deep depression tracked northeastwards across the Irish Sea and the Borders region and strong pressure rising in its wake led to very windy conditions in the west; a gust of 64 knots was reported from Aberporth (Cardigan Bay) in the early hours.

The depression brought outbreaks of rain to most districts particularly in the north; Scotland had a wet night and there was snow over the Highlands.

During the morning it became brighter and showery from the west; all areas enjoyed some sunshine, with showers mainly confined to coastal districts in the west and north. Over Scotland showers were wintry at times.

Much of eastern and southern England had a mainly dry day with only scattered light showers.

Temperatures were near average for most districts, though for southernmost counties it was mild.

TUESDAY
14 MARCH 1989SUMMARY
OF
BRITISH WEATHER

There were showers overnight in Scotland, Northern Ireland and northern England with hail and snow in Scotland and Northern Ireland. In northern Scotland many places were frosty.

Over much of the United Kingdom the weather clouded over and most places in Wales had rain before morning and in England too there was rain here and there.

During the day the extreme north of Scotland had some sunshine but there were showers of rain, hail and snow as well.

Everywhere else was cloudy and wet with heavy rain spreading to many places by early afternoon. In South Wales and southern England there was a lot of heavy rain and it turned windy here as well with severe gales on coasts and at Berry Head the wind gusted to 76 knots.

Temperatures were close to normal.

WEDNESDAY
15 MARCH 1989SUMMARY
OF
BRITISH WEATHER

Many places in Scotland had a clear, frosty night but in northern and western Scotland and Northern Ireland there were showers of rain, hail and snow.

Much of England and Wales were cloudy with rain and drizzle.

During the morning in England and Wales the weather brightened up and then most places had a sunny day, but in the morning there were a few showers in North and West Wales and in northern and central parts of England and in southwest England there was more rain in the evening.

There was some sunshine in Scotland and Northern Ireland and much of eastern Scotland had a sunny day, but there were showers, especially in northern and western Scotland and Northern Ireland with some hail and snow.

Temperatures in Scotland, Northern Ireland, northwest England and West Wales were a little below normal, but central, eastern and southern England and East Wales had a rather warm day.

THURSDAY
16 MARCH 1989SUMMARY
OF
BRITISH WEATHER

Scotland, Northern Ireland and the extreme north of England had clear spells overnight and sunny spells during the day. There were also scattered showers, though showers were most frequent during the afternoon and hail, sleet and snow showers were all widely reported.

The rest of England and Wales were largely cloudy overnight and during the day. During the night rain spread across most of southern England, East Anglia, the Midlands and South Wales to give a wet day, especially in East Anglia and southeast England. In a number of places the rain turned to sleet or wet snow for a time. During the evening the main area of rain moved away eastwards but there were quite a few showers across England and Wales - some of the showers, especially in the north, were of sleet or snow.

After a frosty night in the north, it was generally a cold day. Temperatures were as much as 5 or 6 degrees below average in a few spots in southern England.

FRIDAY
17 MARCH 1989SUMMARY
OF
BRITISH WEATHER

England and Wales had scattered wintry showers overnight, most of them in eastern England.

During the day southeast England, East Anglia and eastern districts north to north Yorkshire had sunny intervals and scattered showers. Showers were of rain, hail, sleet or snow but they became fewer through the day, most places dry and clear in the evening. The rest of England, and Wales had a sunny day followed by a clear evening.

Northern Ireland had a clear night then a sunny day before turning cloudy in the evening.

Scotland had a largely clear night apart from a few hail and snow showers in the northeast. It was then a sunny day generally but Shetland had cloud and snow showers. Some rain reached the Western Isles late evening.

After a widespread sharp frost in Central and northern parts, temperatures during the day were everywhere a degree or two below average, making it rather cold.

PLOTTED SURFACE OBSERVATIONS

SATURDAY
18 MARCH 1989

**SUMMARY
OF
BRITISH WEATHER**

Overnight there was widespread frost over mainland Britain but over Northern Ireland thickening cloud brought rain by the early hours and this spread across most of Scotland by dawn.

The rain was preceded by snow over Scottish mountains but during the afternoon the rain eased off and it became dry and brighter.

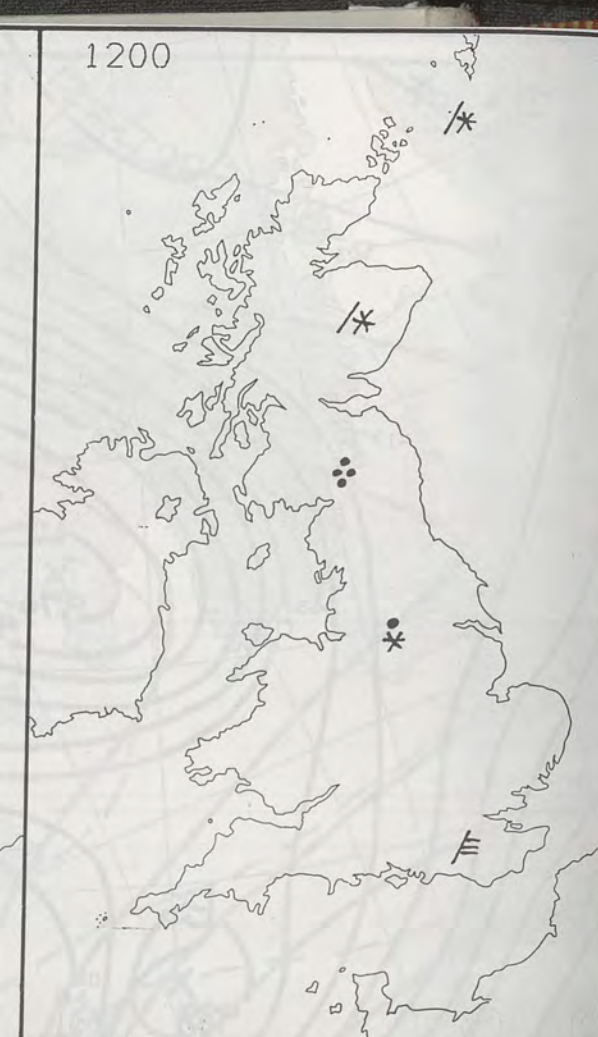

Wales, and northern and western parts of England had rain for much of the day, heavy in the northwest.

The southeastern half of England had a mainly dry day, and after a sunny start, cloud thickened bringing some rain by the evening.

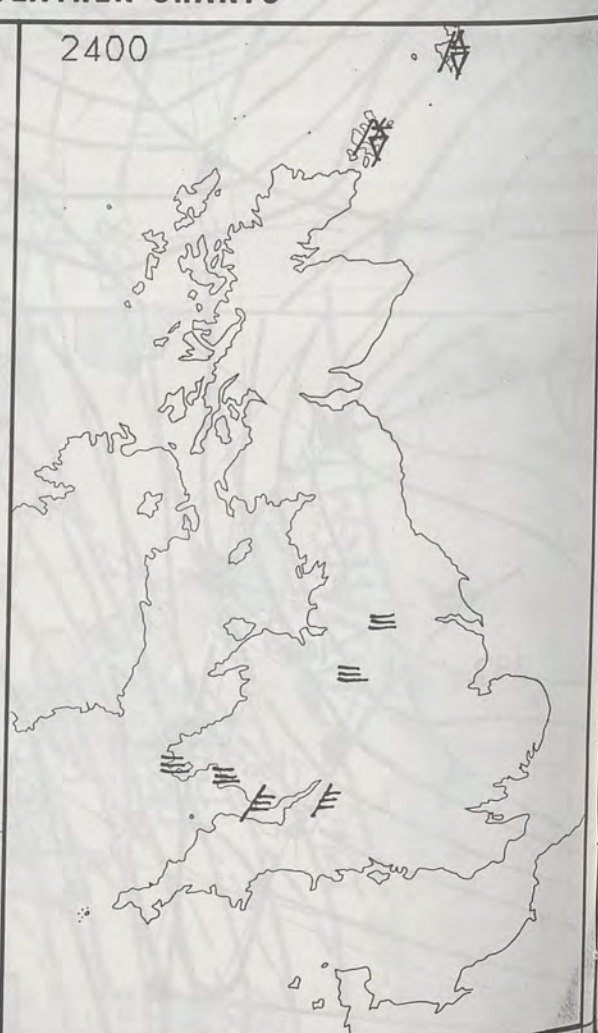

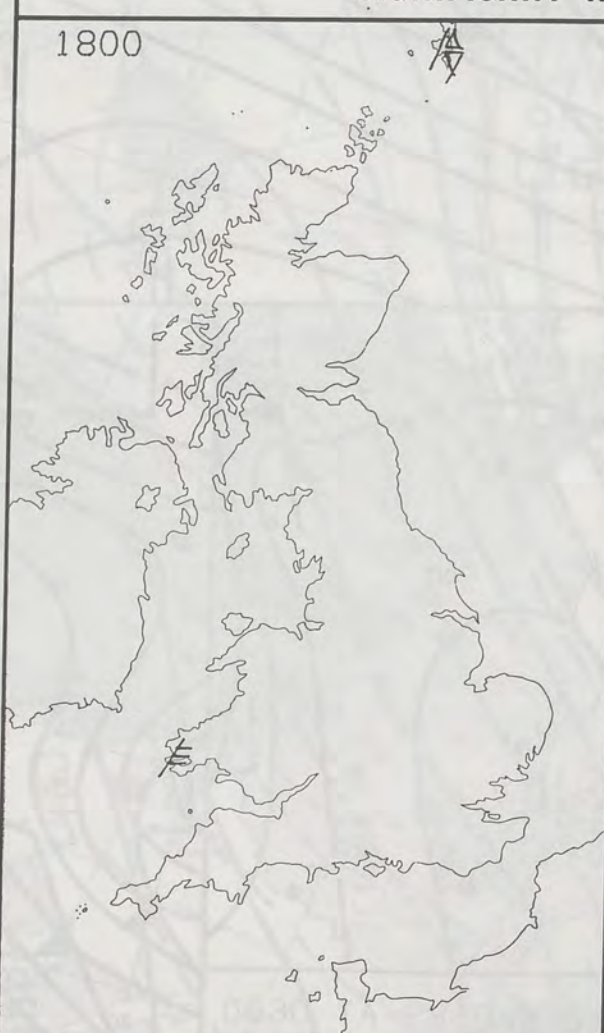

Temperatures reached near-normal values by the afternoon and over much of Scotland it was rather warm.

SUNDAY
19 MARCH 1989SUMMARY
OF
BRITISH WEATHER

Scotland was mostly dry overnight with some clear spells and a slight frost in some eastern parts.

Northern Ireland, England and Wales were cloudy overnight and in the south there was rain at times with some coastal and hill fog.

Rain spread north across Northern Ireland and Scotland in the morning but during the late afternoon and evening clearer weather with wintry showers moved east.

England and Wales had a day of variable cloud and some sunshine, the brightest areas to the north and east of high ground. Rain reached western areas by the end of the afternoon and moved east across England and Wales in the evening.

It was a warm day generally and very warm in some of the brighter regions.

SUMMARY
OF
BRITISH WEATHER

Scotland and Northern Ireland had snow showers overnight and in the north and west of England there were a few showers, but much of Wales and the west and north of England were clear, while central and southeastern parts of England were wet for a time.

During the day there was some sunshine everywhere and parts of eastern England had a sunny day.

In Scotland there were frequent snow and hail showers and in Northern Ireland snow showers too, but much of northern England was dry.

Wet weather reached Dyfed around midday and spread across Wales, central and southern England and more southern parts of northern England. There was a lot of heavy rain and some sleet and snow too for a time in many places, especially over high ground in the Midlands.

Temperatures were close to normal at first but fell back as the day progressed and it became cold in most places by the end of the afternoon.

On the north coast of Scotland and the Isles it was windy and on Shetland the wind gusted to 62 knots.

SUMMARY
OF
BRITISH WEATHER

Many places were frosty overnight and in Scotland there were snow showers, especially in the north and west. In the north and west of England there were a few showers and the extreme southeast had rain or sleet early on. Over Wales it turned cloudy and there were showers later, while Northern Ireland was cloudy with sleet and snow showers.

During the day nearly everywhere in Scotland had some sunshine with parts of the east having a sunny day, but there were showers in many places with snow showers in the north and on hills.

Northern Ireland was cloudy with rain at times and in the morning some sleet and snow.

The extreme north of England had rain and snow showers but Wales was cloudy with rain and this wet weather spread to all central and southern parts of England by early afternoon.

Temperatures in most places were a little below normal but south Wales and southern England turned rather warm later.

SUMMARY
OF
BRITISH WEATHER

The night was very mild over England, Wales and Northern Ireland, with some light rain and drizzle, though the rain was more persistent and heavier over Northern Ireland. Southern Scotland had a wet night, the rain moving slowly north into central Scotland and turning to snow in the hills.

Over Scotland, the rain and snow turned more showery in character during the morning; most places were bright at times, but the showers were quite frequent and often fell as hail or snow. Northern Ireland had some sunshine, but here too showers became frequent and wintry.

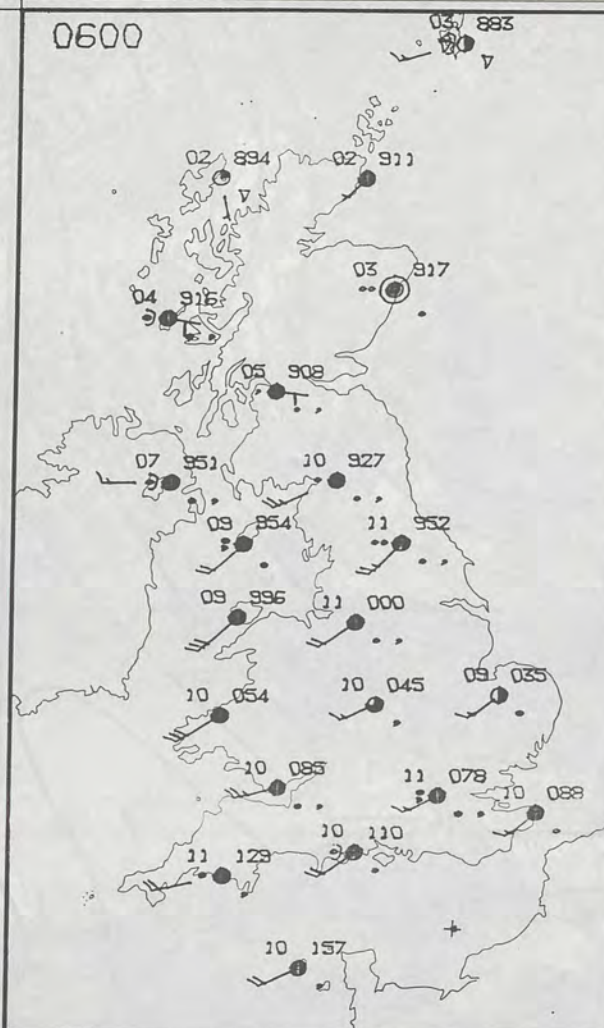

England and Wales had mostly rather large amounts of cloud, but it was bright at times, with some good sunny spells following a band of showery rain which crossed all areas from the northwest by early afternoon. Nevertheless, there were further showers during the day, turning wintry in character later in the north and west.

It was windy everywhere, and became colder during the day from the north and west. Most southeastern districts, though, were mild until late in the day.

THURSDAY
23 MARCH 1989SUMMARY
OF
BRITISH WEATHER

There were a lot of wintry showers overnight in the north and west, with some heavy snow-falls in hilly regions. Winds stayed fresh - strong in the more exposed places - and this, combined with temperatures falling close to freezing over most of the country, resulted in a very cold night.

There were further heavy wintry showers during the day over Scotland, giving way to more prolonged rain spreading from the west during the late afternoon and evening, still with snow at the highest levels. However, there were sunny spells earlier in the day, especially over eastern Scotland, and clearer weather spread from the west in the evening.

Northern Ireland, northern England and North Wales also had showers, wintry in places, but with sunny spells; parts of northeast England had a sunny day. Rain reached Northern Ireland in the late afternoon, spreading east in the evening.

Southern England, South Wales, the Midlands and East Anglia had some sunshine and a few showers, but it clouded over from the west in most places by about the middle of the day, with some spells of rain later.

It was windy and mostly rather cold, though temperatures reached normal in some of the brighter areas.

FRIDAY
24 MARCH 1989

SUMMARY
OF
BRITISH WEATHER

It was a wet night in Wales, the Midlands and parts of East Anglia. Southern England had a cloudy night too with some rain or drizzle.

In Scotland and Northern Ireland it was a night of showers. In Scotland the showers were frequent, heavy and often of sleet or snow, especially in the hills.

Before morning the clearer showery conditions had reached northern England. It was a very windy night everywhere with gales in much of the north and along the English Channel too. A 68 knot gust was reported from Benbecula (Outer Hebrides).

2400

During the day the brighter weather from the north moved south to all but the southern coastal strip of England and was preceded by rain or drizzle. In the meantime showers continued to affect Wales, northern England, Northern Ireland and Scotland. The frequent, heaviest and most wintry showers were over northern and western Scotland.

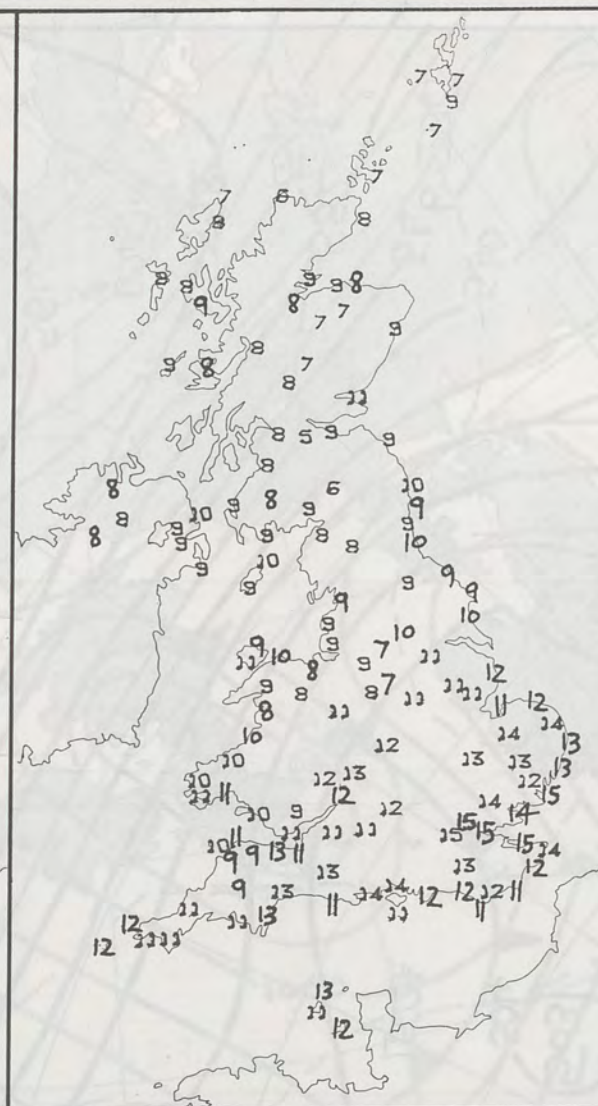

A windy day in all areas, with gales over many districts. Temperatures in southern England were in the rather warm or warm category. Further north the temperatures were closer to normal, but everywhere those strong to gale winds gave a colder edge to the day.

SUMMARY
OF
BRITISH WEATHER

For most of England and Wales the night was dry with long clear periods giving a touch of frost in one or two places. Scotland and Northern Ireland had clear periods and a few wintry showers, most of the showers affecting western Scotland.

During the day cloud and rain spread northeast from southwest England bringing mainly light rain to southwest England, Wales and Northern Ireland during the course of the afternoon. In the meantime most central and northern districts had a sunny morning with a sunny day for eastern England and Scotland. Showers in Scotland became more confined to northern areas.

In the evening the rain crossed northern England and pushed north into Scotland turning to snow over the Scottish hills.

Temperatures were generally near or above normal and on the warm side in extreme southern England.

SUMMARY
OF
BRITISH WEATHER

Scotland and Northern Ireland had a cloudy night with rain at times but it became drier and milder from the south.

The day continued mostly cloudy with light rain in places but there were some brighter spells in eastern Scotland and the Western Isles. Temperatures were in the rather warm or warm category.

England and Wales became dry overnight and there were some fog patches in the southeast.

Northwestern regions were rather cloudy but over the bulk of England and Wales it was a warm or very warm day with sunny spells - the best of the sunshine from southwest England and South Wales to East Anglia.

Southern coasts from Dorset round to Essex were foggy at times with normal temperatures.

SUMMARY
OF
BRITISH WEATHER

Much of the United Kingdom was dry overnight, there were some fog patches in eastern England and over western Scotland and Northern Ireland some rain in places.

Northern Ireland and western Scotland stayed cloudy with some rain at times with some more persistent rain in the evening turning to sleet in places.

Eastern Scotland, northwest England and Wales had some variable cloud and some sunshine but with some showery rain in the evening.

Most of England had a fair amount of sunshine, the best of the sunshine in the southeast. High cloud made the sun rather hazy and around the middle of the day a band of thicker cloud moved north giving some light showery bursts of rain over central parts of England.

It was a very warm day over most of England, Wales and eastern Scotland but temperatures were nearer normal over north and west Scotland and Northern Ireland.

SUMMARY
OF
BRITISH WEATHER

Scotland and Northern Ireland had a mostly cloudy night with outbreaks of rain. All areas became clearer during the morning though and then it was a day of sunshine and scattered showers, one or two of the showers in northern Scotland were of hail or sleet. There were just isolated showers in the evening, most places clear.

Wales and northern and western parts of England had outbreaks of rain during the night, while southeastern parts of England were dry. During the day there was some rain through the Midlands and parts of eastern England but this gradually petered out. The far north of England and parts of Wales had some sunshine, as did southeast England. During the evening skies cleared over most districts but southern counties of England and East Anglia remained mostly cloudy.

Temperatures in most northern and western areas were within a degree or so of average but in southeast England and East Anglia it was warm or very warm.

29 MARCH 1989SUMMARY
OF
BRITISH WEATHER

Scotland and Northern Ireland had a largely clear night. During the morning cloud spread across from the west bringing rain to Northern Ireland and western Scotland, this rain reaching most of the rest of Scotland by dusk. The evening was mostly cloudy with outbreaks of rain.

Northern England, North Wales and the North Midlands had a clear, locally frosty night and then a dry day with spells of sunshine. There was variable cloud during the evening, some rain reaching Cumbria in the late evening.

The south of Wales, southern England, and East Anglia had a cloudy night with the odd spot of drizzle about and still a fair amount of cloud through the day (even some patchy fog on the south coast of England). A number of places were bright though, with a few favoured spots turning sunny. Cloud then started to clear from the west during the evening.

Temperatures were generally around or above average, and locally up to 4 or 5 degrees above average in parts of southern England and East Anglia and very warm in extreme south-east England.

THURSDAY
30 MARCH 1989SUMMARY
OF
BRITISH WEATHER

Many places had a cloudy night and there was rain and drizzle too, especially in Scotland and Northern Ireland, but parts of northeast Scotland, along with southeast Wales and central and southern England had clear skies overnight and in England and Wales some fog.

The fog cleared early in the morning and then central southern England, southeast England and East Anglia were dry and mainly sunny.

Northern England and Wales were mostly cloudy, with just a little sunshine here and there, and there was a little rain and drizzle in northern England and West Wales.

Scotland and Northern Ireland had some sunshine nearly everywhere, but there were showers in most places, although parts of eastern Scotland were fairly sunny.

Temperatures were well above average over much of the United Kingdom, although many places on the west coast had temperatures close to normal. Many places in England especially the east and south were very warm.

FRIDAY
31 MARCH 1989SUMMARY
OF
BRITISH WEATHER

Cloud amounts were variable overnight, and there was a little rain in some western districts and over parts of northern England. Where skies were clear, it became cold with some fog and ground frost, especially over the Midlands, southeast England and southern and central Scotland.

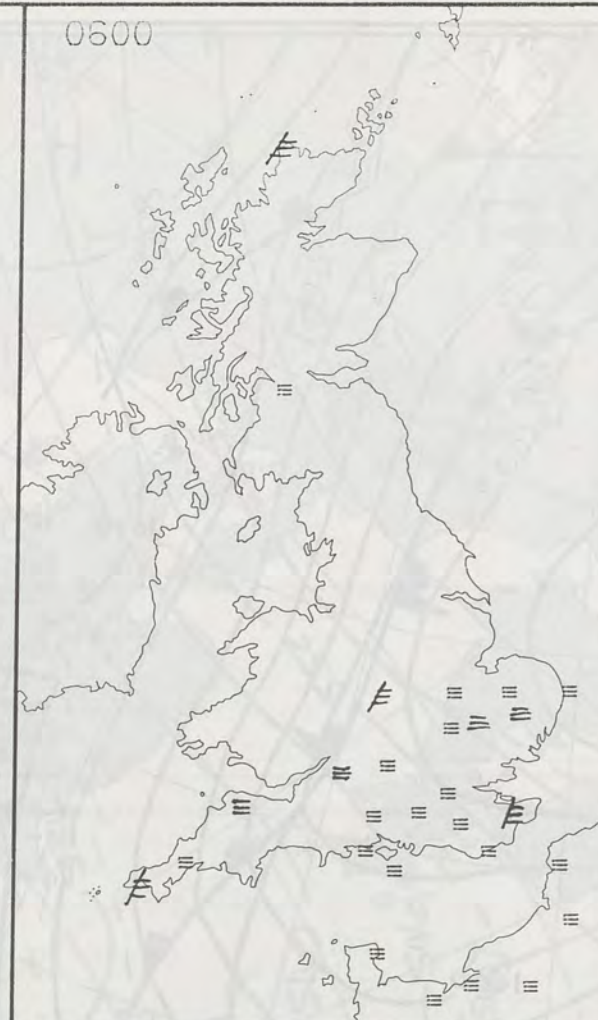

The fog cleared fairly readily from most places, though it took all morning for the resultant mist and low cloud to disperse from parts of central southern England and the Midlands. Much of the south coast from Eastbourne to Swanage stayed foggy all day. Over much of southern Britain, though, there were good sunny spells and it became very warm, especially in and around London, where for the second consecutive day London Weather Centre had its highest March temperature for 21 years.

North Wales, northern England, Northern Ireland and southwest Scotland were mostly cloudy with some light rain or drizzle. Eastern and northern Scotland had sunny spells. Temperatures were above normal over central and northern regions, with some of the sunnier areas becoming warm, and very warm in southeast England and East Anglia.
