Daily Weather Summaries for February 2021

If you have any questions or feedback about this product or wish to obtain further data please contact the Met Office.

This document contains daily weather summaries for each day of February 2021. The Met Office National Meteorological Library and Archive holds a continuous record of daily weather summaries or daily weather reports from 1860, and these daily weather summaries form a continuation of that series.

The purpose of each summary is to provide an overview of the weather conditions across the UK on that day, with the historical emphasis mainly based on observations from surface network of weather stations, although the format has varied over the decades. While the emphasis remains on observations from the surface network, the current daily weather summaries supplement these by including satellite and rain-radar imagery to provide a more complete overview. The current format of the daily weather summaries is as follows:

1. Text summary of the main characteristics of the weather during the day, written by an operational meteorologist in the Met Office operations centre.
2. Table of daily extremes for the UK for key climate variables including temperature, rainfall, sunshine and gust speeds.
3. Overview of the synoptic situation at 00 and 12 UTC comprising: analysis charts showing the surface pressure pattern and associated weather fronts; North Atlantic and European infra-red satellite images showing cloud-cover; combined infra-red and rain-radar images of the UK; maps of wind speed and direction at 00 and 12 UTC; observations of pressure, wind speed and direction, cloud cover, air and dewpoint temperature at selected UK and European stations in data tables.
4. UK maps of key climate variables from observing stations including maximum, minimum and grass minimum temperature, rainfall, sunshine, gust speed and snow.
5. Further guidance notes

If you spot any data errors or omissions in this product please contact the Met Office.

Daily Weather Summary for Monday 01 February 2021

This day's summary created 08/02/2021 03:00

Summary of the UK Weather for Monday 01 February 2021

During the early hours low cloud brought drizzle over East Anglia with some clearer spells developing for a times over England and Wales. Patchy cloud occurred over Scotland with cloud increasing through the night in the west, covering Northern Ireland. A northerly flow brought wintry showers to Shetland and northern Scotland with some showers down the northeast coast. Through the morning cloud thickened in the northwest of England and Scotland with outbreaks of rain over Northern Ireland. Meanwhile a few wintry showers continued in the northeast. Elsewhere it was largely dry with some low cloud in the southwest and brief sunny spells over central areas longest in the east. Through the afternoon rain continued east over Northern Ireland, spreading into northwest England and Scotland gradually weakening to drizzle. Over southwest England cloud thickened as a front approached from the southwest bringing initially drizzle. During the evening the front continued northeast bringing outbreaks of heavy rain over southwest England and later into Wales, the Midlands and into Northern Ireland. Rain started to turn to snow over the hills of Northern Ireland.

Summary of the UK Weather for Tuesday 02 February 2021

During the early hours a front bringing rain was positioned over southwest England, Wales, across the Midlands and reaching into the southeast of England and Northern Ireland. Initially bringing some hill snow. Elsewhere cloud from this front spread over most of England and Wales and into Scotland, with clearer spells over the far northeast of Scotland and emerging in the far southwest. Wintry showers occurred in the far north of Scotland and Shetland. Through the night as the front pushed north, snow started to fall widely across northern England with a signal of freezing rain on the back edge. Across southern areas it became largely dry and mild with clearing skies. The band of rain and snow slowly continued northwards lingering over northern England, southern Scotland and Northern Ireland throughout the day. Meanwhile heavy showery rain began pushing northeast across Wales and into northern England causing low-level snow to thaw in the northwest. A few lightning strikes were recorded over Wales. During the evening, further heavy showers continued across the UK with drier spells for a time in the south.

Summary of the UK Weather for Wednesday 03 February 2021

Wednesday began with a lingering front bringing outbreaks of rain, sleet and hill snow over northern England, and southern and central Scotland. Showers which had merged into spells of rain cleared East Anglia during the early hours with clear spells developing behind over Wales and southern and central England. Over northern Scotland it was largely clear with wintry showers in a cold easterly wind. Later in the night an area of cloud spread into the southeast giving outbreaks of heavy rain by dawn. The front continued lingering over Northern Ireland, northern England and central and southern Scotland for the rest of the day, with continuous rain, sleet and hill snow. In northern Scotland, bright but cold weather with wintry showers continued. In the far south the heavy rain cleared eastwards by mid-afternoon, leaving otherwise a mix of sunshine and scattered showers for most in Wales, central, and south England. The night continued much the same, though the showers eased leaving clear spells across the southern half of England and Wales.

Summary of the UK Weather for Thursday 04 February 2021

The onslaught of rain and snow continued over central and northern Scotland. Meanwhile, rain pushed across Northern Ireland and into northern England and southern Scotland, leaving further heavy downpours in parts. Many southern parts of the UK were dry with fog in places. Around dawn time, an area of widespread heavy showers approached the South West from the English Channel. It was chilly in places across southern parts of the country, but coldest in the north. Heavy rain in the north persisted and spread, covering most of Scotland and the very north of England through the day, becoming wintry over high elevations. Meanwhile, locally heavy showery rain in the southwest spread north and east across England and Wales throughout the day, with further scattered showers following behind, covering parts of south and central England and south and west Wales by the end of the day. Through the evening the heavy rain in the north continued, with snow affecting the hills. It was very mild in the south, colder in the north.

Summary of the UK Weather for Friday 05 February 2021

Heavy and persistent snow continued over inland areas of central and northern Scotland, with blizzards over high ground. This fell as rain over some lower level areas. Southeastern parts of Scotland and eastern England saw outbreaks of rain, which gradually cleared into the North Sea. A band of showers developed over the Irish Sea, falling over coastal areas of Wales and Northern Ireland. Southwest generally clear. During the morning outbreaks of rain occurred across parts of Northern Ireland, northern England and much of Scotland accompanied by significant snowfall especially over the Scottish hills. Further south it was much milder with a few sunny spells and a scattering of showers these continued into the afternoon especially over Wales and southwestern England. In the evening, bands of showers, locally heavy, affected Wales, Northern Ireland and the Midlands, being particularly persistent in northwest Wales. The showers were mostly rain. Snow lingered over upland Scotland, lasting throughout the night, while south England and Wales saw a mix of clear spells and showers. It turned chilly across Wales and western England.

This day's summary created 13/02/2021 03:00

Summary of the UK Weather for Saturday 06 February 2021

Persistent, often heavy rain and snow continued over eastern Scotland and northeast England to start the weekend. Meanwhile, several bands of rain, often heavy, rotated around Wales, covering most of Wales and northern and eastern England. The southwest remained relatively dry and clear, though showers, occasionally thundery, affected the far southwest of England. There was some frost and icy patches, especially where skies cleared from time to time across parts of Wales and western England. During the day the showery rain over Wales moved generally southwards, lingering over the southwest into the evening. At the same time rain continued to affect the east of Scotland, northern and eastern England, falling as snow towards the north and over more southern locations later. That rain and snow across eastern Scotland eased during the day, but began to extend westwards across England going into the evening, reaching east Wales and central southern England. Western Scotland and Northern Ireland remained largely dry throughout. It was quite a windy day in the north and winds began to increase nationwide overnight bringing increasing wind chill.

Daily Weather Summary for Sunday 07 February 2021

This day's summary created 15/02/2021 20:56

Summary of the UK Weather for Sunday 07 February 2021

Sunday started with two main areas of rain and snow; in Scotland and northern England, snow showers continued to push in from the east. In south and central England, widespread rain and snow, often heavy, moved southwest, reaching as far west as Wales before fading. The rest of the country was largely dry with clear spells. The most widespread frost developed in the north, and a wind chill developed across most parts as easterly winds began to strengthen. Into the morning, showers began moving in across the east coast of the UK, starting with eastern Scotland and affecting down much of the east coast by midday. These showers were predominantly snow and brought accumulations to higher and lower ground in Scotland and England. Further snow arrived over the southeast early on and lingered throughout the day, bringing significant accumulations to eastern parts of Kent and East Anglia. Western areas remained largely dry, apart from some showers over Northern Ireland. It was quite a cold day, with brisk easterly winds throughout exacerbating this.

Daily Weather Summary for Monday 08 February 2021

This day's summary created 15/02/2021 20:56

Summary of the UK Weather for Monday 08 February 2021

The night commenced with snow showers across much of eastern England and Scotland, with some reaching further west. These continued until dawn, becoming more intermittent, except towards southeast England, where the wintry weather remained persistent. Elsewhere, in westernmost areas of England, Scotland and across much of Wales and Northern Ireland, it stayed largely dry. Temperatures remained low throughout, with brisk easterlies exaggerating the cold, in combination with occasional clear spells, leading to widespread frosts. Snow continued to fall throughout the day in the southeast, showery at times but allowing for further accumulations. Towards the north and east, frequent blustery snow showers continued to feed in from the North Sea. Organised bands formed, bringing significant snowfall near The Wash and in northeastern Scotland. Sunnier spells in the west but with a few snow showers in central Wales and Northern Ireland. A very cold day for all in a biting northeasterly wind. During the evening, snow showers continued in eastern areas, edging into the west and remaining windy. It was a cold night for all with widespread frost.

Daily Weather Summary for Tuesday 09 February 2021

This day's summary created 16/02/2021 03:00

Summary of the UK Weather for Tuesday 09 February 2021

The day began with patchy low cloud moving in from the east across the country. This low cloud was accompanied by showers, predominantly snow, that fell heaviest over eastern areas but affected most of the country at times. Only southwest England and western Scotland remained largely unaffected. Southeastern Northern Ireland also saw snow showers throughout. Winds were strongest in southwest England, but brisk nationwide. This wind chill, combined with low temperatures nationwide, made it a very cold night. It was a bitterly cold day with strong easterly winds bringing snow showers from the North Sea. Frequent, organised bands of snow and hail affected most eastern areas, particularly the Central Belt of Scotland and The Wash, and edging into western parts throughout. Southeast England saw continuous snow which slowly eased and became more scattered. A few snow flurries were seen in the far southwest, however it was a largely dry day there, with sunny spells but remaining windy with coastal gales. It was a cold evening, with further snow showers across eastern areas, but winds eased and there was widespread frost.

Daily Weather Summary for Wednesday 10 February 2021

This day's summary created 17/02/2021 03:00

Summary of the UK Weather for Wednesday 10 February 2021

The day began with snow showers feeding in from the North Sea across the eastern coast, heaviest across the Central Belt of Scotland and The Wash. These snow showers penetrated inland, bringing lighter snowfall to central and western parts at times. The south of Northern Ireland also saw snow showers throughout. It was very windy in the southwest, with coastal gales, and winds were brisk nationwide. It was another bitterly cold night, made colder by wind chill. Throughout the day showers continued along the eastern coast of the UK, the worst of which fell in the southeast, and frequently fell as snow. Sferics were also recorded at 8am in Nottingham. Cloud cover was mostly confined to the eastern coast with other areas seeing frequent sunny spells. Into the night the showers began to ease somewhat, though a convergence line along the south began to push showers further inland towards the southwest. Winds were generally calm throughout the day, but began to pick up to the southwest during the night. Another cold day, with the mildest temperatures in the southwest.

Summary of the UK Weather for Thursday 11 February 2021

It was a rather quiet night for many, with most of the UK staying dry with plenty of clear skies. Light rain and snow flurries affected the southeast of England, particularly over Kent which gradually edged into the southwestern coasts during the early hours. Northern Ireland also saw a few rain showers mixed with sleet and snow, heaviest in the south. Winds strengthened throughout the night in the south and west. Elsewhere, under the clear skies, temperatures dropped significantly giving a widespread frost and localised freezing fog. It was bitterly cold across north-east Scotland, with the temperature falling to -23.0 °C at Braemar, Aberdeenshire; the UK's lowest temperature since December 1995. Into the day, any remaining showers over Northern Ireland soon faded as a band of rain approached the southwest. This made little progression, with only trace amount of rainfall and snow being seen along coasts in the southwest and southern Wales. Winds remained strong in the southwest and along the west coasts of the UK as well as in Northern Ireland. A cloudy and cold day for most, cloudiest in the southwest. Into the night some showers continued in the south, while a small band of wintry shower approached northeast Scotland.

This day's summary created 19/02/2021 03:00

Summary of the UK Weather for Friday 12 February 2021

A largely dry, clear, and cold night and day. Although slightly milder in the southwest. Most of the day places did not rise above low single figures, warmest places where those near to the sea, parts of Northern Ireland, the Outer Hebrides, and Cornwall so mid-single figures. In the early hours, some cloud and outbreaks of rain scattered over the southwest and Northern Ireland, as well as cloud and patchy snow showers down the north eastern coast which lingered all day. Winds were strong, with coastal gales and gusting inland, increasing along all coasts and over land in the south through the day and night. As the showers and cloud in Northern Ireland, Wales and the southwest of England petered out, it joined the rest of the UK in seeing clear skies and bitterly cold gusts.

This day's summary created 20/02/2021 03:00

Summary of the UK Weather for Saturday 13 February 2021

The day began mostly dry, with only a few light showers over eastern Scotland. A band of rain then began to approach from the southwest, first hitting Northern Ireland and then parts of southwest England and southern Wales. Although cloud cover broke up briefly at times, the UK was mostly covered in cloud - the thickest of which proceeding the band of rain. Along the west coast winds were strong, with coastal gales in the south. Parts of eastern Scotland and the eastern coast of northern England also saw strong winds. Overall it was another cold night, with the mildest temperatures being seen in the southwest. The temperature trend continued into the day and night, with most of the UK not rising above 2 degrees the entire day, the exception being Northern Ireland and Cornwall. The occlusion, dragged along by a deep low in the North Atlantic, which brought the morning rain continued to snake its way northeast up the Irish sea then over Britain, bringing with it downpours of rain, sleet, and snow. This low brought strong southerly and southeasterly winds.

Summary of the UK Weather for Sunday 14 February 2021

The day began with low pressure to the northwest dominating the weather story. Temperatures remained a west/eastern split -western most areas seeing milder temperatures, and cold further east. Strong southerly winds battered western coasts of England, Scotland and Wales and along Northern Ireland, as well as in the north and through the Irish Sea, with strong, fresh breezes felt inland. A band of rain arrived from the west and spread across the country associated with thick cloud with the heaviest downpours seen in western areas. Meanwhile, over Scotland and northeast England there was freezing rain leading to some ice. Towards the end of the day, strong winds persisted with western Scotland and parts of Northern Ireland seeing severe gales. The rain was continuous for many parts of the country although the southeast remained mostly dry and cloudy.

Summary of the UK Weather for Monday 15 February 2021

A common synoptic set up for the UK; seeing fronts pass over from the west traveling northeastwards. This brought the more usual southerly's rather than the cold easterly's the UK had experienced last week, with a few showers passing northeast over north Scotland, and the south coast of England over to East Anglia, along with higher temperatures: much milder than the week before, with everywhere reporting positive temperatures. These light winds a wet air mass helped create the widespread fog or low cloud during the morning. Showers, occasionally heavy, pushed eastwards and were observed over Northern Ireland, southeast England, and Scotland. Moving into the afternoon showers persisted for the western parts of the country whilst elsewhere it remained dry and mild with plenty of bright spells with the best of the sunshine spotted across the eastern parts of the UK. It remained largely dry for many during the evening but showery rain spread across many southern and western areas. The wind strengthened this evening with gales affecting the far northwest overnight and into Tuesday.

Summary of the UK Weather for Tuesday 16 February 2021

A murky night for the UK, mild with thick cloud, drizzle and occasional heavy rain. Scattered showers fell over Northern Ireland during the small hours, but then eased before day break. Along the west coasts of Britain, a band of heavy rain fell, turning lighter into drizzle as it moved north east, falling over most areas before dawn. Most places saw minimum temperatures in the mid to high single figures. The band of heavy rain continued to track eastwards across central and southern England, clearing Kent by sunset. Patchy heavy rain fell over the northwest Highlands. From midday, a band of heavy, organised showers crossed Wales and England from west to east, producing a few strikes of lightning over Somerset. Frequent lighter showers occurred over western areas. Eastern and southern Scotland, and Northern Ireland received the clearest skies through the day, while other areas were predominantly cloudy with only a few sunny spells developing later. Strong southerly winds were experienced across Scotland and in western areas. By the evening, most areas were dry with largely clear skies. Daytime temperatures were widely mild.

Summary of the UK Weather for Wednesday 17 February 2021

From midnight onwards, a band of rain, initially over Northern Ireland and southwestern areas, pushed northeastwards, crossing the country by late-morning. The heaviest rain occurred over southwest England and western Scotland. Cloud covered much of the country overnight, but eastern Scotland saw some clear skies initially. Strong winds were reported along the west and south coasts, with gales in the far northwest. Overnight temperatures in the south were mild. Heavy showers occurred over the western and central Highlands, and Northern Ireland through the day. Most areas were shrouded by a thin layer of high-level cloud. Eastern and southern Scotland, and Northern Ireland missed this and received some sunny spells. The wind strengthened across Scotland during the morning and many lightning strikes occurred over the Isle of Skye around midday. Thicker cloud spread in from the south during the afternoon, covering the UK by midnight. Accompanying this, outbreaks of rain progressed northwards, affecting most areas through the evening. Wind speeds increased across England and Wales during the evening, causing coastal gales in the Southwest and Wales.

Summary of the UK Weather for Thursday 18 February 2021

At the start of the night, thick clouds covered the majority of the country. Southern areas of the UK remained dry as the night progressed, whilst heavy rain fell over northern England, the Midlands, Northern Ireland, Wales, and Scotland. Into the early hours, a band of rain spread eastwards across the country with some snow falling over Scottish hills.

Temperatures were very mild for the southwest, mild across England and close to zero over Scotland. Winds were strong across the country with severe gales for the west coast. This cold front and associated band of rain moved eastwards across the UK, reaching East Anglia by mid-morning. Behind this rain band, there were drier and clearer conditions with scattered showers. Northern Ireland and western Scotland also saw widespread rain throughout the morning. By mid-afternoon the rain had cleared East Anglia, and the rain over Northern Ireland had reached Cumbria and more central parts of Scotland. Elsewhere saw isolated showers with clear spells. It was a windy day, with the strongest winds seen along the west coast.

Summary of the UK Weather for Friday 19 February 2021

The day started off with rain in Northern Ireland, but other areas were dry. Much of Scotland and England experienced clear skies initially, but cloud pushed in from the southwest through the early hours, covering most areas by dawn. With the advancement of the cloud, outbreaks of rain spread into most western areas and across Scotland. It was a windy night in the west, with strong southerly winds causing gales along exposed coastal areas. The rain, heaviest in the west, continued eastwards throughout the morning affecting most of the UK at times, just missing some areas in the southeast. Skies stayed largely cloudy with occasional clear spells over southeastern England. Northern Ireland saw some dry spells as the rain pushed eastwards. The heavy rain persisted through the afternoon and into the evening over the western half of the UK, heaviest over the Southwest and south Wales. The rain was both lighter and intermittent to the east of the Midlands. It was mild throughout, despite being windy. Coastal gales were seen along the west coast of Wales.

Summary of the UK Weather for Saturday 20 February 2021

Strong southwesterly winds brought a steady stream of cloud to much of the UK, generally missing Northern Ireland and later diverted to the east of Scotland until dawn. Outbreaks of rain affected England and Wales through the early morning, falling heaviest over the uplands of south Wales and the Southwest. Central and southern Scotland received some showers. Elsewhere stayed dry. Gale-force winds buffeted exposed coastal areas in the southwest, but despite strong winds it was a mild night, with many southern locations experiencing double-figure minimum temperatures. Rain persisted over western areas of the UK through the morning, excluding Scotland. The heaviest outbursts were across northwest England and Wales, and Northern Ireland. This weather system continued northeastwards through the day, affecting most of Scotland through the afternoon, falling heavy in places. East of England, as far north as Yorkshire, remained dry. Rain eased and slowly cleared into the night, the last remnants in the north. Winds remained strong across the UK, with coastal gales throughout, excluding southeastern England. Temperatures remained mild.

This day's summary created 01/03/2021 21:17

Summary of the UK Weather for Sunday 21 February 2021

Through the early hours light rain spread from the south coast of England northeastwards, soon stretching from the Isle of Wight to the north Norfolk coast. Showers over Wales, central Scotland, and Northern Ireland eased, and ceased completely at times. Cloud was widespread with early clear skies over the east of England, Northern Ireland, and much of Scotland soon clouding over. Winds were strong along the west coast of Scotland, but largely calm elsewhere. As the morning progressed, light rain spread northwest across the country, across southwest and central England, and southern Wales. By the evening, this rain was over northwest England, and further rain was arriving in the southwest. Western Scotland and Northern Ireland saw isolated showers throughout. Winds remained strong along the west coast of Scotland, while largely calm elsewhere. Skies were quite clear, with sunny spells for most of the country, while areas under rainfall saw a much gloomier day. It was a very mild day for all areas, particularly southeast England, which saw the most sunshine.

Summary of the UK Weather for Monday 22 February 2021

The night commenced with rain across the west of Wales and England. This tracked northeastwards through the early hours, also affecting parts of the West Midlands, and northeastern areas of England. Skies remained cloudy throughout the UK, with notable exception to western parts of Northern Ireland, where conditions remained clear. Winds were light throughout the UK. Northern and western Scotland, in addition to the southeast of England and East Anglia, stayed dry. The night was relatively mild, but colder than recently. As the morning progressed, the rain cleared the northeast coast and moved into the North Sea. Following this, a further small area of rain passed over southeast England through the afternoon; western areas remained largely dry throughout. Widespread cloud persisted throughout the day, but cleared slightly from western areas through the afternoon. It was a very windy day for Scottish coasts, with strong gusts and sustained wind speeds. High level southerly winds, fed by a low to the northwest of the UK, brought Saharan dust to some parts of southern England. Temperatures remained quite mild, but colder than recently.

Summary of the UK Weather for Tuesday 23 February 2021

Rain progressed northeastwards over Northern Ireland, southern Scotland, and northern England, towards the beginning of the night. This produced occasionally heavy outbursts, especially over western parts of Scotland. Except for the odd outbreak clipping the westernmost areas of Wales and northern England, elsewhere remained dry and fine. Though cloud enveloped much of the UK, clear spells developed across Wales and western England through the early hours. Winds strengthened throughout, with gales arising along western coasts, particularly in the north. Despite this, temperatures remained mild across the UK. During the morning, heavy and persistent rain affected northern areas, particularly across Scotland, Northwest England and Northern Ireland which continued through much of the day. Into the afternoon, rain also moved into Wales with some heavy bursts in the north. Elsewhere in England, a dry day for many with patchy cloud with the best of the sunshine in the southeast and East Anglia. Winds were strong for much of the UK with gusts affecting northern and western areas which continued through the night, as well as further outbreaks of rain in the north.

This day's summary created 03/03/2021 03:00

Summary of the UK Weather for Wednesday 24 February 2021

It was a wet start for most western areas of the UK, with at times heavy rain affecting Wales, Scotland, northern England, and western coasts throughout the early hours. This led to quite high accumulations in south Wales and Cumbria. Northern Ireland, and parts of southern England, saw patchier rain. It was also a very windy morning, with western coasts seeing the strongest. Despite the adverse conditions, it was a very mild night, with double-figured temperatures common nationwide. During the day a conveyor belt of rain moved across south Scotland, Wales and north England. Outbreaks of rain were heavy at times, especially over northwest England where it turned more persistent during the afternoon. Elsewhere, it was a largely dry day with variable cloud amounts, sunny spells and some blustery showers. By the evening, a band of rain moved southeastwards across England and Wales, with some heavy downpours in the western areas which gradually eased overnight. Winds remained strong for most throughout the day however it was a mild day, especially in the south and southeast for the time of year.

This day's summary created 04/03/2021 03:00

Summary of the UK Weather for Thursday 25 February 2021

The day began with a small band of patchy rain and cloud moving southeastwards across central England, leaving clearing skies and drier conditions in its wake. As this was happening, heavy showers were moving in over western Scotland, which also saw some blustery winds, and Northern Ireland. It was another quite mild night for many, albeit less so than recently, especially in southeast England. Into the day showers continued across western Scotland, though they slowly weakened and became lighter - eventually ceasing by nightfall. Down in England a band of rain sat from Portsmouth to Norfolk which slowly moved eastwards, meaning light rain fell across most parts of the southeast at some point through the day - again, ceasing by nightfall. It was a bright day with frequent sunny spells for most of the UK, with only those areas around any rainfall seeing much of any cloud cover and with most of the UK seeing clear skies into the night. Breezy up north, but calm down south. Another mild day.

Summary of the UK Weather for Friday 26 February 2021

A quiet start for much of the UK bar northern Scotland which saw a few spots of light rain at times with patchy cloud and stronger winds. Elsewhere, it remained dry with clear skies overnight which allowed for frost and isolated fog patches to develop. Under the clear skies, temperature dropped significantly. Into the day some fog patches were slow to clear in the southwest of England and southern Wales but eventually passed giving clear skies for most which, with any rainfall in the far north of Scotland clearing, developed further. Patchy cloud was mostly seen along the western coasts. Winds were generally light across the UK, with only northern Scotland and Northern Ireland seeing breezy conditions. Into the night, fog patches began to reform in northwest England and the west of Wales, and cloud cover began to thicken in northern Scotland ahead of a front - this front had begun to make landfall with the west of Northern Ireland and the west of Scotland by midnight. It was another mild day.

Summary of the UK Weather for Saturday 27 February 2021

During the early hours outbreaks of rain moved eastwards across Northern Ireland and into Scotland, which continued into dawn. A cloudier and windier start to the day here with temperatures remaining mild under the cloud. Elsewhere it remained calm with light winds and plenty of clear skies allowing for mist, fog, and frost to develop. It was a rather chilly night for most. Patchy rain over Northern Ireland and the central belt of Scotland soon cleared, alongside fog soon fading away through the morning to start off a predominately dry and bright day. Some cloud was seen over Wales and northwestern England before becoming patchier through the afternoon allowing for intermittent sunshine. Cloud was more persistent over Northern Ireland and central Scotland however. Through the afternoon cloud moved back into northern England and a minority in Northern Ireland experienced drizzle. Winds were light throughout the day, but the far north of Scotland, and conditions were relatively mild for all.

Summary of the UK Weather for Sunday 28 February 2021

The day began with settled weather across the entirety of the UK, with mostly clear skies. Any cloud was predominately low and mostly confined to Scotland and Northern Ireland, with some patchy higher cloud over northern England and Anglesey. Fog was commonplace along the eastern Coast of England, and some fog patches also seen in central and northern parts. Very little rain fell with trace amounts (<1mm/hr) over Northern Ireland and Scotland. Winds were generally light, with only some slightly breezy conditions being seen in the far south west of England and the far north of Scotland. It was another chilly night under any clear skies, though slightly milder under the shelter of any cloud. Any fog soon cleared through the morning leaving a bright sunny day for England and Wales, with patchy low cloud over Scotland and Northern Ireland. Some cloud was also seen over Greater London. Isolated areas of light rain fell over western Scotland, with Northern Ireland turning dry. Conditions remained much the same through the afternoon, with skies over southern Scotland and Greater London clearing, as well as the little rain over western Scotland ceasing completely later. Through the evening pockets of fog formed across the UK, forming more substantially over Suffolk and parts of Norfolk. Away from any fog, clear spells were seen over Northern Ireland and Scotland.

Daily Weather Summary for Sunday 28 February 2021

Daily Weather Summary for Sunday 28 February 2021

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Guidance Notes

UTC = Universal Coordinated Time. For the UK UTC is the same as GMT (Greenwich Mean Time).

National boundaries shown on the European station map are for illustrative purposes only.

Daily extremes

- Daily extremes have been manually confirmed by Met Office Observations Quality Management as valid observations from the live database at the time of checking. However, more extreme values may still be possible if they occur after the time of production.
- Mountain stations above 500 masl are excluded from lowest temperatures, highest gust speeds and greatest snow depths at 0900 UTC. This is because they are not considered representative of low level areas.
- Counties quoted against each station are based on historical county boundaries pre-1974 and may not reflect current administrative boundaries.

Analysis charts and satellite imagery

- The satellite imagery is infra-red imagery from the geostationary MSG satellite.
- The rainfall image is derived from satellite data from MSG and rain-radar data. This represents a snapshot of instantaneous rain-rates at 0000 UTC and 1200 UTC and so does not necessarily reflect daily accumulations in the rainfall station map.
- Any analysis charts or satellite images which are unavailable will be displayed as white space.

Station maps

- The UK maps show station data for the same set of stations presented UK data table. These stations are selected to provide good spatial coverage across the UK; they represent only a fraction of the overall UK observing network.
- Wind speed maps show wind speed in Kt and direction both averaged over the hour up to the time of observation. 1 Kt = 1.151 mph.

Hourly station data

- The data tables provide spot hourly observations from synoptic messages at 0000 and 1200 UTC. Missing data are denoted by '-'.

- Pressures are mean sea level pressure in hPa.
- For UK stations, Gibraltar and Jersey, the wind speeds and directions are both averaged over the hour up to the time of observation. However, for European stations wind speeds and directions are both averaged over a 10-minute period up to the time of observation.
- Wind speeds are in Kt. Wind directions are stored in the database every 10 degrees and have been converted to the nearest point of the compass. These give the direction the wind is blowing from, not to.
- Cloud amounts are in Oktas from 0 (clear) to 8 (overcast). 9 indicates sky obscured (eg by fog).
- Air temperature and dew point temperature are in Celsius.

Temperature maps

- Daily maximum, minimum and grass minimum temperatures are in Celsius.
- The period for the daily maximum temperature on day D is defined from 0900 UTC day D to 0900 UTC day D+1.
- The period for the daily minimum and grass minimum temperatures on day D is defined as 0900 UTC day D-1 to 0900 UTC day D.
- On any given day D the minimum will typically occur in the early hours of the morning and the maximum in early afternoon.

Rainfall, sunshine and max gust speed maps

- Daily rainfall is in mm from 0900 UTC day D to 0900 UTC day D+1.
- Daily sunshine is in hours from Kipp and Zonen CSD1 automatic sunshine records. Bright sunshine is defined as exceeding 120 W/m².
- Max gust speeds are the daily max gust in Kt from 0000-0000 UTC

Snow maps

- The day of snow falling map displays data from present weather sensors, showing stations which have recorded sleet or snow falling at any point in the day (0000-0000 UTC).
- The snow lying map shows level snow depth as recorded by the automatic snow depth sensors at 0900 UTC. These snow depth sensors do not record snow depth if this is less than 1cm.
- Snow depth sensors are normally operational from October to April, in the event of snow falling outside this period data availability may be limited.
- Snow maps will only be displayed if one or more of the selected stations on that date have recorded either snow falling or non-zero snow depths. If snow maps are not

displayed it is still possible that other stations in the network have recorded a day of sleet or snow falling or non-zero snow depth.
