SATURDAY  
1 DECEMBER 1984

SUMMARY  
OF  
BRITISH WEATHER

Over England and Wales most places had some rain overnight, particularly in the southwest. Western Scotland had some showers and in northern Scotland there was persistent and heavy rain early in the night, but eastern Scotland and Northern Ireland had a dry, cold night with a touch of frost.

By day northwest Scotland had some sunshine, but there were also showers. Central, eastern and southern Scotland had a bright morning, but a wet afternoon and evening.

Northern Ireland had a dry day with some bright weather, but also some patchy fog.

In Wales and the west of England it was a dull, wet day, with the rain becoming heavy from time to time. Central and eastern England had a little rain in most places, but there were also long dry periods, and even a little sunshine, with Norfolk, Suffolk and Essex having the best of any sunny periods.

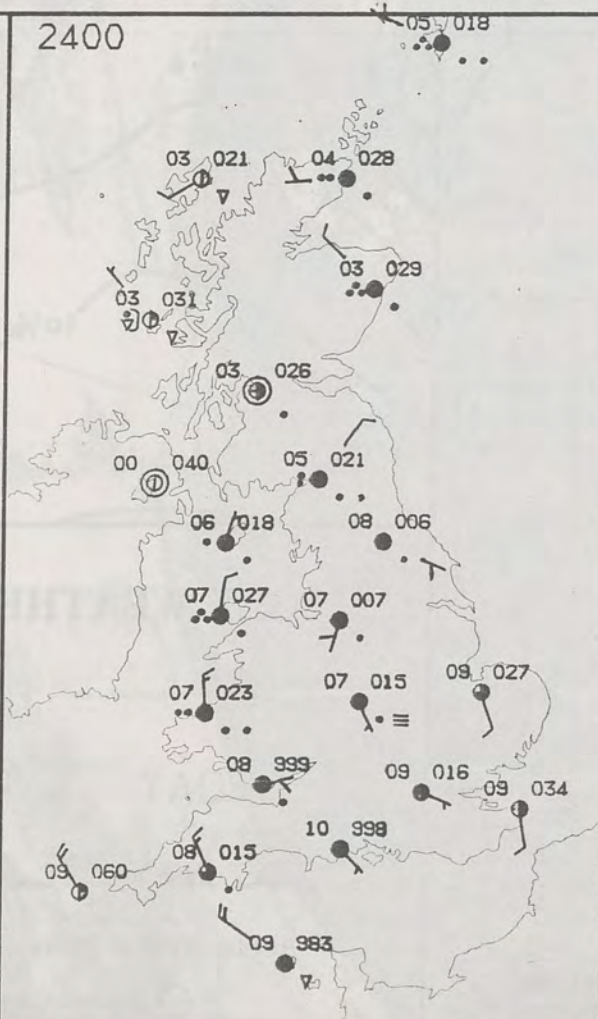

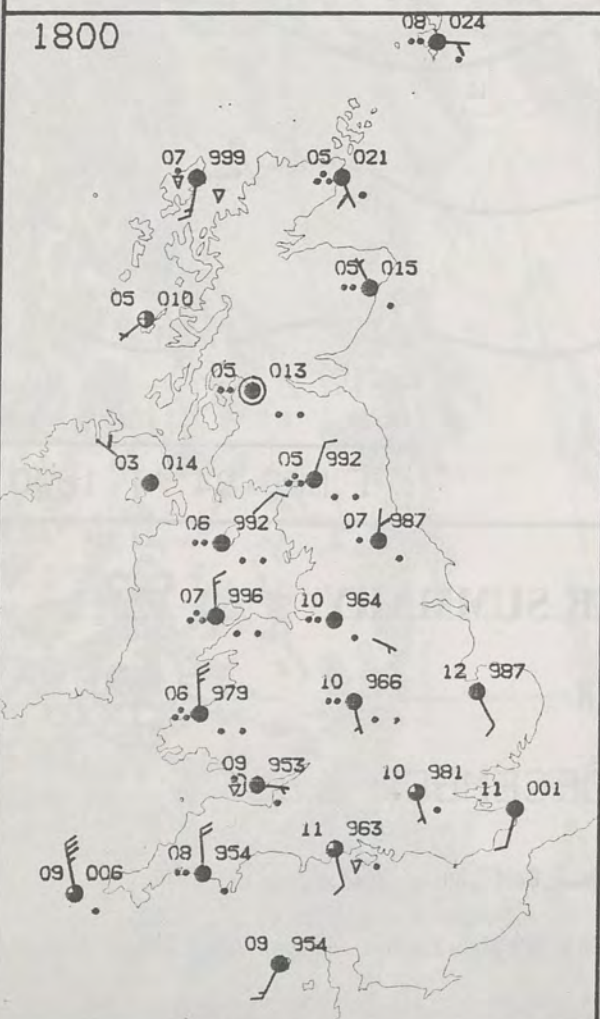

The Midlands, eastern England, East Anglia, central southern and southeastern England had another mainly very mild day but it was cold in Northern Ireland. Scotland, Wales and remaining areas of England had temperatures mostly near or rather below normal.

SUNDAY  
2 DECEMBER 1984

SUMMARY  
OF  
BRITISH WEATHER

Over England, Wales, southern and eastern Scotland most places had rain overnight, but in eastern England it was misty with some fog.

There was fog in Northern Ireland with moderate or severe frost and there was a touch of frost in northwest Scotland.

The fog in Northern Ireland cleared from most places during the morning, giving a sunny afternoon.

Northwest Scotland had good sunny periods but over much of Scotland and England it was a cloudy day and many places had some rain. In southwest England the weather cleared and there were some long sunny spells.

In Wales it became brighter during the morning, and there were some sunny periods. There were also a few showers but in South Wales there was more persistent and heavy rain at times.

Northern Ireland had a cold day. Most remaining areas of the UK had temperatures near or rather below normal. However, East Anglia and southeast England were on the mild side.

MONDAY  
3 DECEMBER 1984

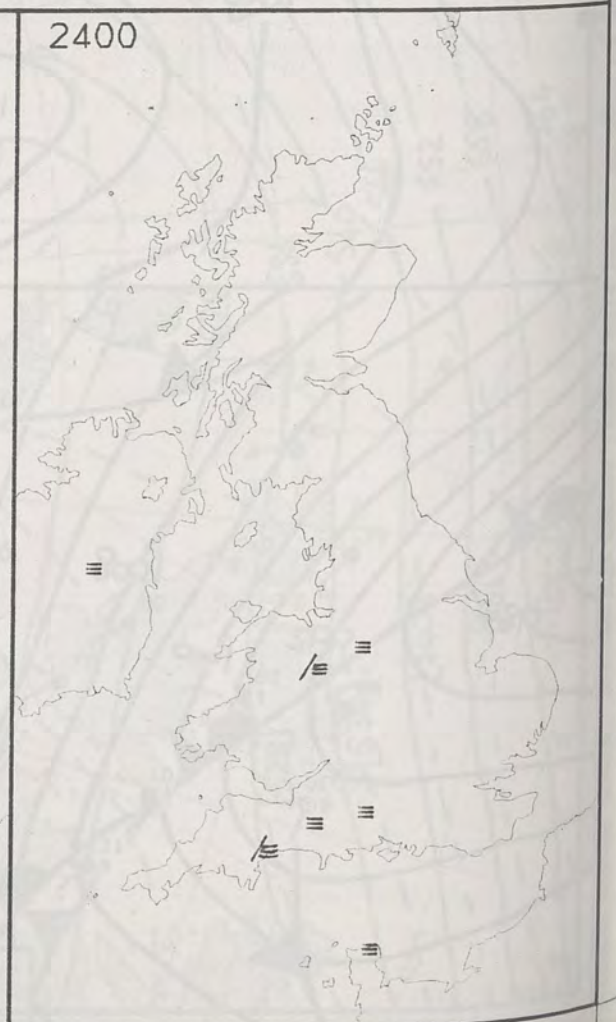

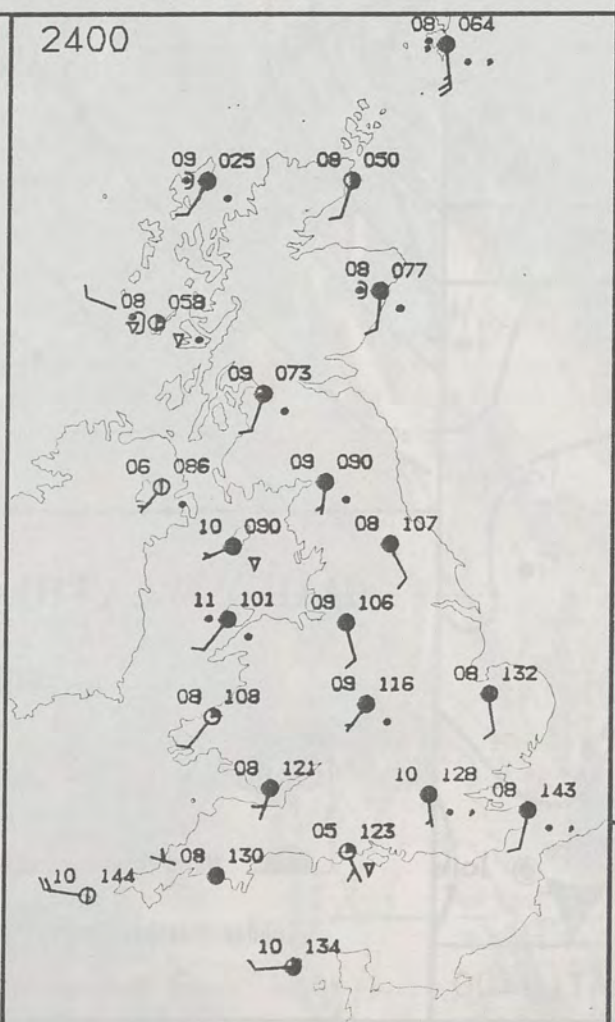

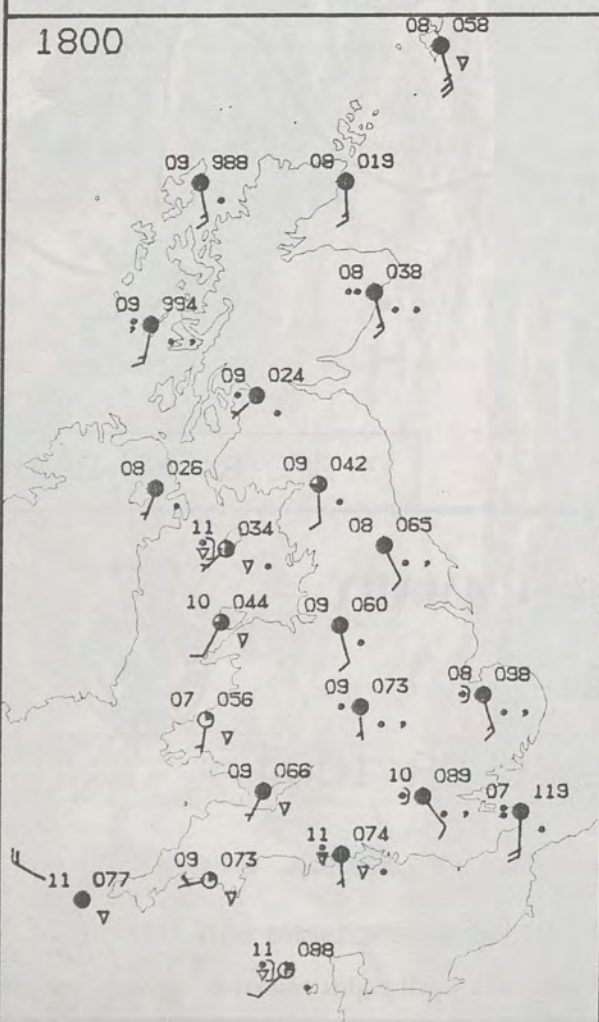

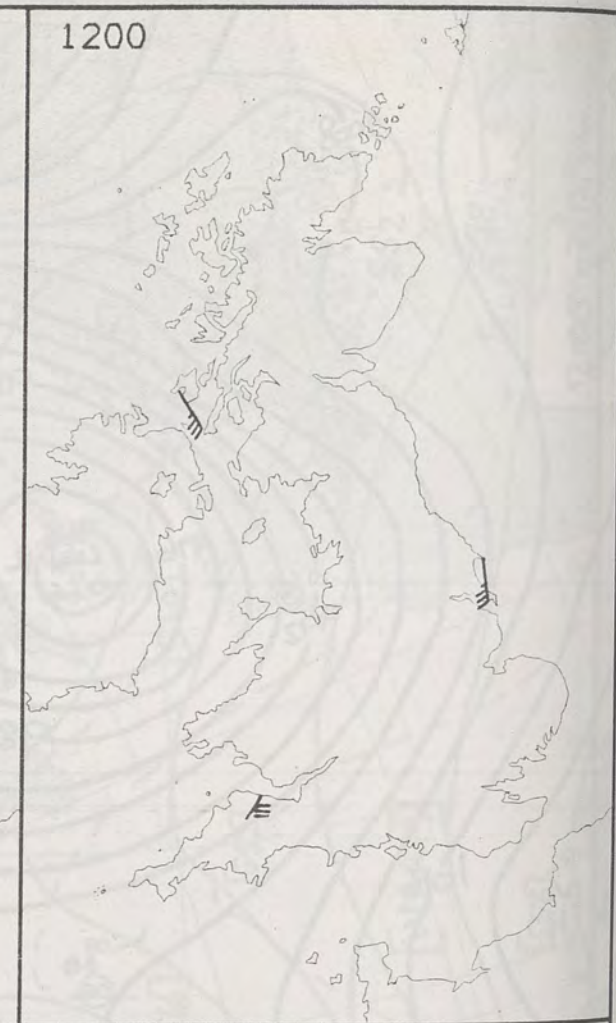

SUMMARY  
OF  
BRITISH WEATHER

Although most places had a mild night, there was slight frost in places. Northeast England and eastern Scotland had some rain for a time. Further rain spread to Northern Ireland, parts of southwest Scotland, Wales and much of England, except the most easterly counties by dawn. The rain then spread on to most remaining eastern and northern regions of the British Isles during the morning. There was some heavy rain in places, and it was also quite windy. However, it turned drier and less windy from the southwest during the day, with some sunshine in places, especially in Cornwall. Nevertheless, there were still showers.

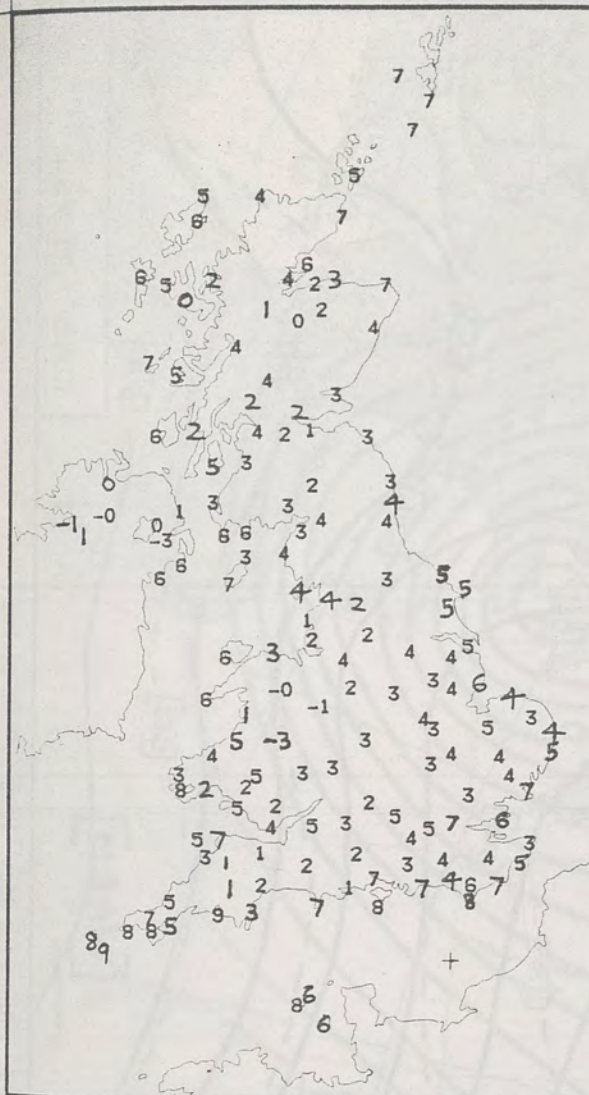

It was generally mild in Wales, southwest England and central southern England. Elsewhere temperatures were mostly near or a little above average.

TUESDAY  
4 DECEMBER 1984

SUMMARY  
OF  
BRITISH WEATHER

The weather was generally cloudy and dry. Patchy fog formed in the early hours over parts of England, Wales and Northern Ireland, especially where skies were partly clear, but in most places the fog did not last very long. There was also some drizzly rain in various parts of the country during the day, but amounts were generally small. However, heavier and more persistent rain affected Northern Ireland and western Scotland later in the day and during the evening.

Sunny intervals were restricted to extreme southern Britain, East Anglia and northeast Scotland.

Temperatures were in the mild category almost everywhere but it became quite windy in western regions.

2400

WEDNESDAY  
5 DECEMBER 1984SUMMARY  
OF  
BRITISH WEATHER

Scotland and Northern Ireland had a wet start to the night with some heavy rain in places, but by dawn the rain was generally confined to the east coast of Scotland and the Northern Isles, with some patchy fog in the colder air over Northern Ireland.

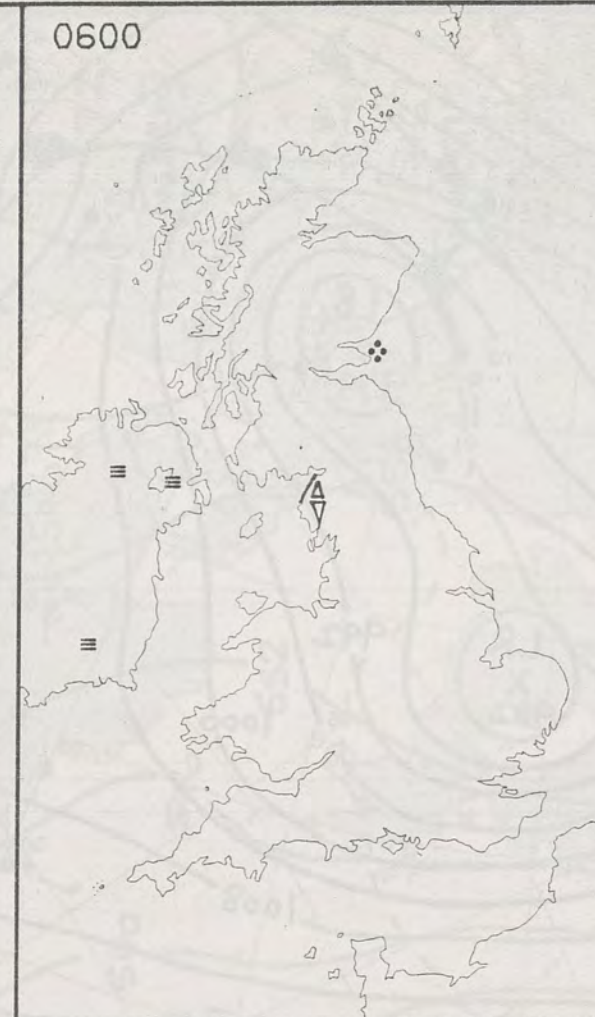

In England and Wales rain gradually became more widespread as the night wore on and here too there were some heavier bursts in the west. During the day Northern Ireland, eastern Scotland and the Northern Isles stayed mostly dull and wet, though it did clear up in the evening. Western Scotland, northern England, Wales, the Midlands, Lincolnshire and southwest England had some bright or sunny spells after early rain, with a few showers in West Wales and northwest England from late morning. Over East Anglia, southeast and central southern England light rain persisted all day. By evening the rain became heavier and extended to parts of southwest England, the Midlands and South Wales.

Over England, Wales and southern Scotland it was a mild day, and in many inland places very mild. Northern Ireland and the remainder of Scotland had near normal temperatures.

THURSDAY  
6 DECEMBER 1984SUMMARY  
OF  
BRITISH WEATHER

There were showers in Scotland overnight but Northern Ireland, Wales and the west and north of England had a dry night. In some places there was slight frost.

Over central and eastern England during the second half of the night there was rain, some of it heavy.

In East Anglia and southeast England there was also rain in the morning, occasionally heavy, but it had mainly cleared before midday and then the afternoon was sunny and the evening clear.

Over the rest of the United Kingdom most places were dry during daylight hours with long sunny periods, however, there were a few showers in Scotland, Wales and the west of England. Later in the afternoon more persistent rain, occasionally heavy, reached the Western Isles of Scotland, then spread to the rest of Scotland and to parts of Northern Ireland during the night.

Temperatures everywhere were close to or a little above normal.

FRIDAY  
7 DECEMBER 1984

SUMMARY  
OF  
BRITISH WEATHER

Scotland and Northern Ireland were mostly cloudy throughout with western and northern districts of Scotland having rain, some of it heavy and persistent. Northern Ireland, eastern Scotland and southern Scotland stayed predominantly dry, with some parts of eastern Scotland having sunny spells.

England and Wales stayed mostly dry throughout with central southern England, southeast England and East Anglia having long sunny periods.

Winds reached gale force in the northwest of Scotland and Wales and in the extreme north of Northern Ireland.

It was very mild again in many places, and exceptionally mild in central and eastern Scotland.

# SUMMARY OF BRITISH WEATHER

Most of Scotland and Northern Ireland started cloudy and in central Scotland there were outbreaks of rain which spread steadily south and east, and by midday it was raining in Northern Ireland and southwest Scotland. By early afternoon, clearer, showery weather had reached the Hebrides and by early evening this had spread southeastwards to all of Scotland and Northern Ireland, the showers mostly occurring near northern and western coasts.

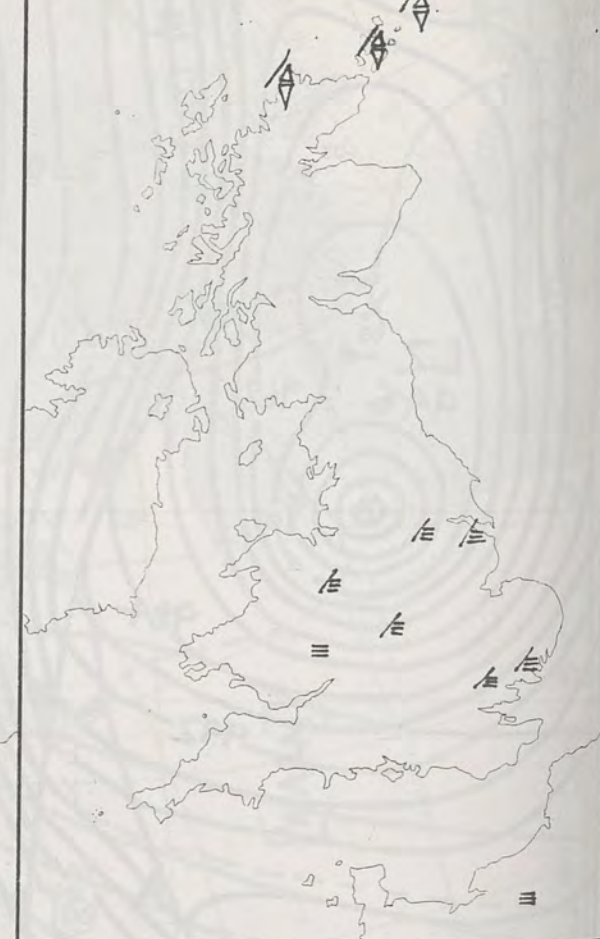

England and Wales started dry but thicker cloud moved north into southern England and there was a little light rain and drizzle in places. Skies stayed fairly clear over the Midlands and here there was patchy fog, some of which was slow to clear in the morning. During the afternoon, rain spread into northern districts of England and Wales and this continued southeastwards to reach the southwest and Midlands by the end of the day, followed by clearing skies.

There was a slight frost overnight in a number of places in England. Daytime temperatures over the UK were mostly near normal. However, south coast counties of England, southwest England, South and West Wales and southern and western coastal areas of Scotland were mild.

SUNDAY  
9 DECEMBER 1984

SUMMARY  
OF  
BRITISH WEATHER

A narrow band of rain moved south across southern England to clear the south coast just before day-break. Southern and eastern England along with the Midlands and South Wales had a sunny day.

In North Wales and northern England it became cloudy but remained dry.

In Scotland and Northern Ireland it was a mostly clear night with only the occasional shower in the northwest. During the day it soon turned cloudy and rain reached western and northern Scotland during the late morning and for most of the day it was then wet and windy, but in Northern Ireland, southern and eastern Scotland it stayed mainly dry.

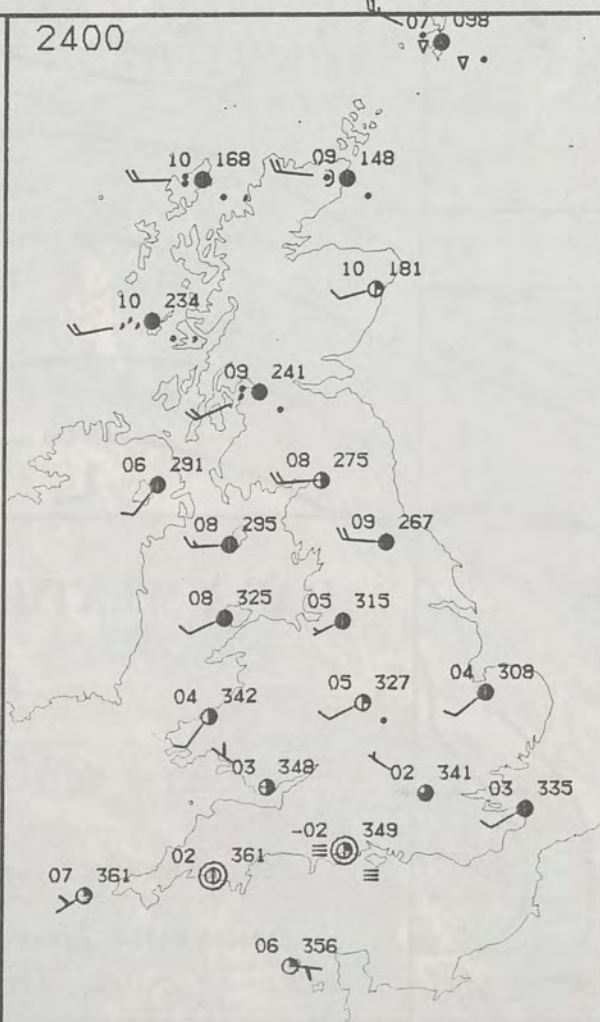

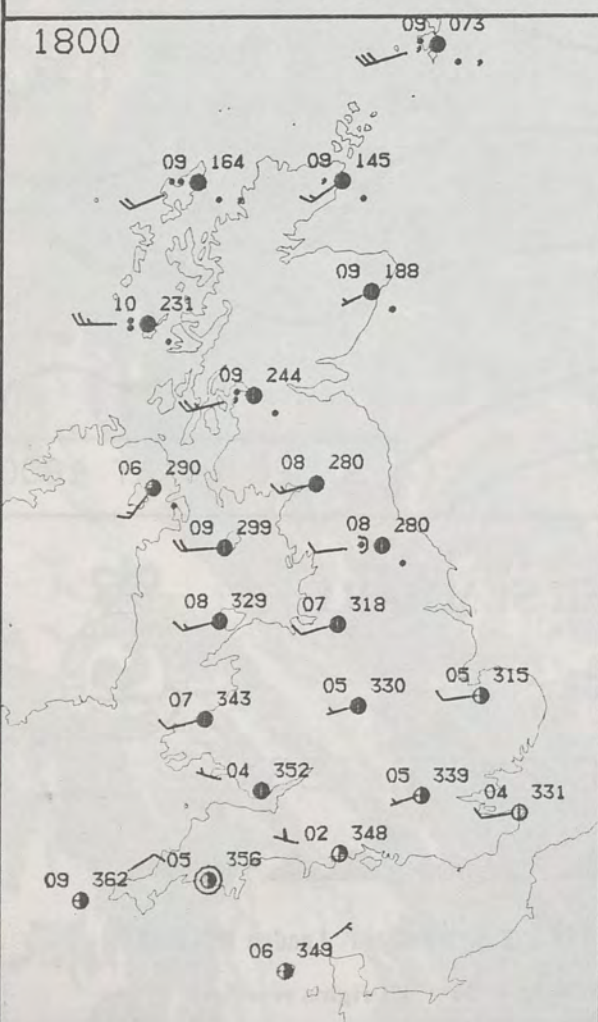

There was a slight frost in some places in Northern Ireland, England and Wales, with daytime temperatures mostly near normal.

SUMMARY  
OF  
BRITISH WEATHER

In parts of eastern England there were outbreaks of light rain overnight but over most of England, Wales and Northern Ireland it remained dry. There were brief sunny intervals in northern and eastern regions while over most of southern Britain there was a good deal of sunshine. There was a slight frost in parts of southern England at first.

In Scotland there were outbreaks of rain and in the northwest the rain was heavy at times overnight. During the day there was light rain or drizzle at times but some eastern regions remained dry and later in the day drizzle became confined to northwestern coasts and hills.

Most parts of the UK were mild during the day and in Scotland it was very mild.

TUESDAY  
11 DECEMBER 1984

SUMMARY  
OF  
BRITISH WEATHER

Many places in England had a foggy, frosty night, and in South Wales there was some fog patches as well. Northern Ireland and Scotland had a cloudy night with rain and drizzle in a few places.

Over England the fog cleared from many places during the morning and then there was some sunshine, some places which escaped the fog having a fairly sunny day. However, some places stayed foggy and in the late afternoon the fog returned to much of England. Wales had a dry day, with some sunshine, but in Northern Ireland it was cloudy and there was a little rain and drizzle.

Scotland had a lot of cloud and there was some rain in many places, but there was a little sunshine in east and southern Scotland.

Scotland and Northern Ireland had a mainly mild day. Over England and Wales temperatures were more variable. Where fog cleared and the sun came out, temperatures were up to normal but in persistently foggy areas it was cold, even very cold in a few places.

12 DECEMBER 1984

### SUMMARY OF BRITISH WEATHER

Southeast Scotland had some fog and frost in the morning. Scotland and Northern Ireland had a mostly dry and bright day but a little rain occurred in the Western Isles later.

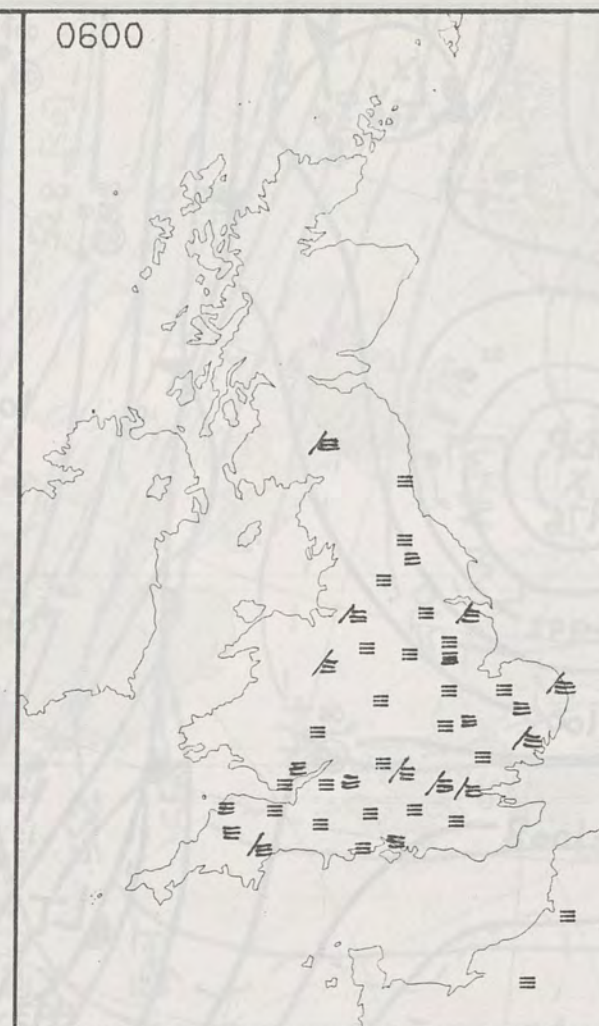

Central and eastern parts of England and Wales had a foggy and frosty night, with some dense patches in the early morning, and the fog persisted for most of the day. For the rest of England and Wales it was dry with bright or sunny intervals, especially over southwest England, West Wales and northwest England. During the evening, fog was still being reported over East Anglia, much of the Midlands and northeast England, but temperatures by then were above freezing.

In the foggy areas it was a rather cold or cold day but elsewhere over Britain temperatures were near or rather above normal.

THURSDAY  
13 DECEMBER 1984

SUMMARY  
OF  
BRITISH WEATHER

It was mostly cloudy throughout, with some rain, chiefly in the south. There were a few clear intervals overnight, with slight frost in a few places and a few fog patches. There were some bright spells during the day, in the extreme southeast of England and in parts of northwest England. In a number of places the fog was very persistent.

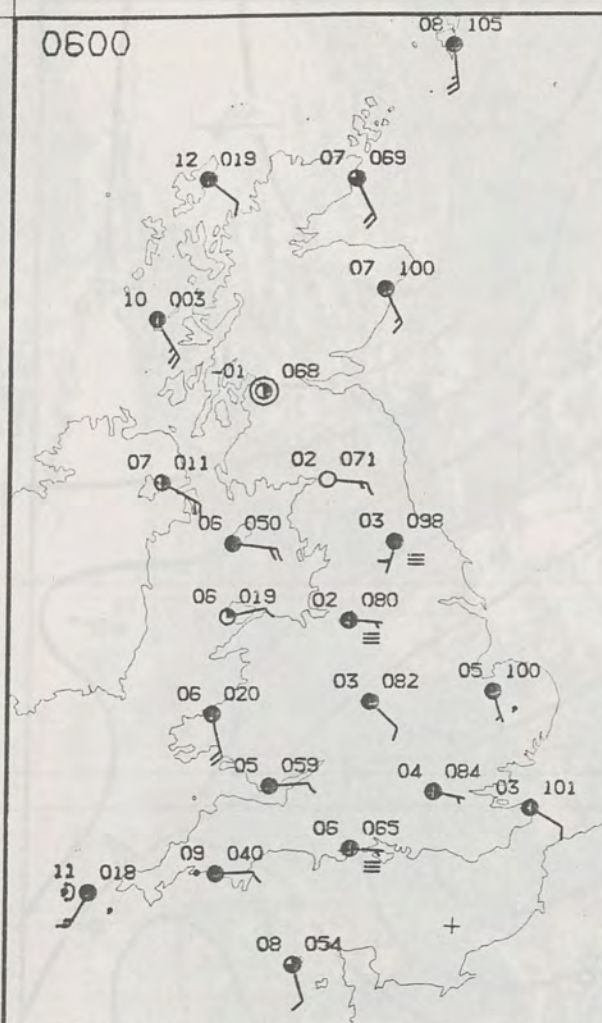

An area of rain moved slowly northeast across southern and central England and Wales during the afternoon and evening, and there were a few patches of light rain elsewhere.

Central, eastern and northern England, East Wales and southern Scotland were mostly rather cold. Elsewhere temperatures were at least up to normal. It was mild in southwest England and very mild in northwest Scotland. At Cape Wrath in extreme northwest Scotland the temperature reached 17.4°C between 6 and 9 am. (During the last 43 years the highest December temperature recorded at Cape Wrath was 17.7°C in 1972 and that happened around the middle of the day). This exceptionally mild morning was caused by the Foehn effect off the Scottish Highlands.

# FRIDAY 14 DECEMBER 1984

## SUMMARY OF BRITISH WEATHER

Rain moved north across England and Wales overnight, but gradually died out from the south. It was misty in places, but southwest to westerly winds freshened in the south during the night. The wind cleared the mist further north in the early afternoon.

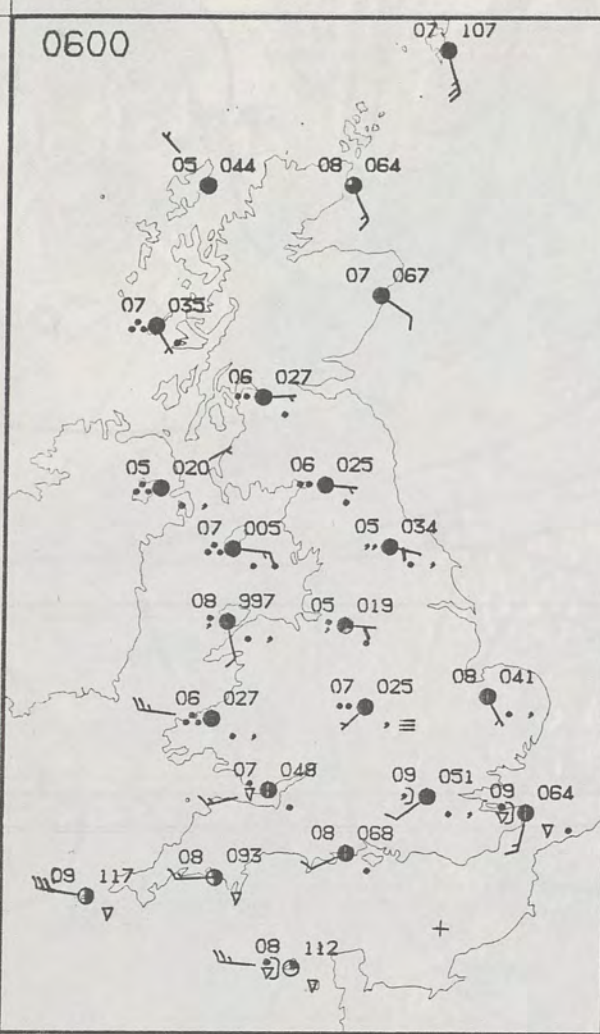

The day became quite sunny and mild in the south of England with just a few showers. Generally over England and Wales there was a lot of cloud, with some occasional rain and temperatures near or a little below normal. The rain was quite persistent in northwest Wales.

Northern Ireland had a wet day with near normal temperatures. Scotland was mostly cloudy and rather mild with rain from time to time.

SATURDAY  
15 DECEMBER 1984

SUMMARY  
OF  
BRITISH WEATHER

Northern Britain started mainly cloudy with outbreaks of mostly light rain. This died away slowly overnight and by daybreak most of mainland Scotland was dry, with sunny spells developing. The Northern Isles stayed cloudy throughout, with rain at times, and cloud and rain returned to parts of eastern Scotland during the evening.

Northern Ireland had showers and clear or sunny intervals. Wales and southwest England had sunny intervals and showers or longer periods of rain, some of which were heavy.

East Anglia and southeast England also had showers or longer spells of rain. Thunder was reported from Kent in the early morning and again in the afternoon. Fog formed during the evening.

After a dry, clear night, fog formed quite quickly around dawn in the Midlands and eastern England and it persisted throughout the day in parts of the Midlands, becoming widespread again in the evening.

There was slight frost overnight in a number of places in England. Daytime temperatures ranged from very cold in the persistently foggy areas of the Midlands and Yorkshire to around normal in most remaining parts of the UK.

SUNDAY  
16 DECEMBER 1984

SUMMARY  
OF  
BRITISH WEATHER

The day started with rain over much of Wales and southwest England with fog patches from the Scottish Border to Surrey. There were thundery showers along the Channel coast, while over northeast Scotland there were showers of rain and hail. By dawn the rain had spread to much of East Anglia, the Midlands, southeast and central southern England, clearing most of the fog.

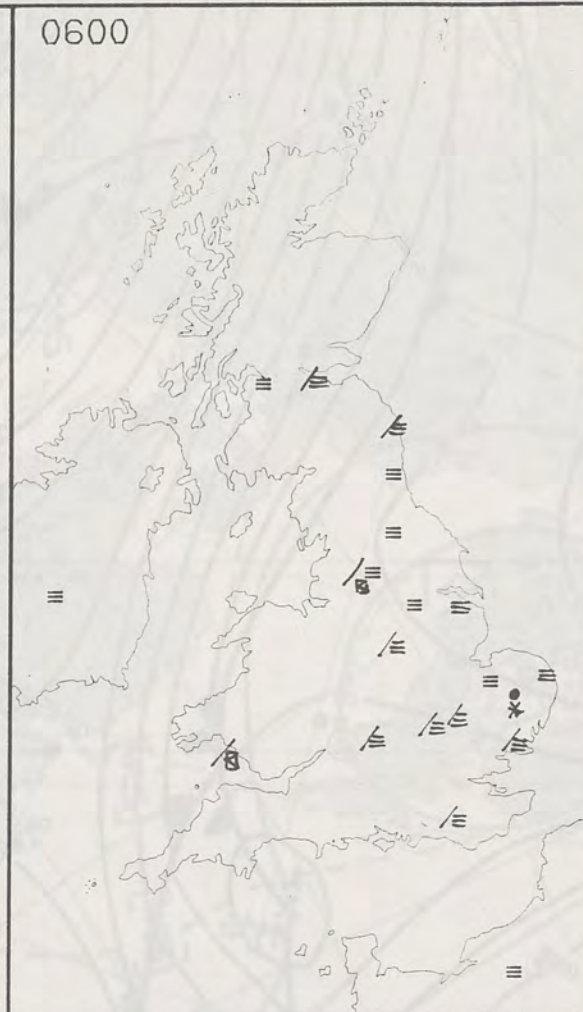

A small amount of snow fell on the southern Pennines during the morning. In the north the fog was slow to clear, and in the Clyde Valley it stayed for much the day. Drier weather which reached most of Wales and southwest England by daybreak spread steadily east to all parts of the UK by the end of the day although there were further showers in the west.

Over southern Scotland and much of England and Wales away from southwestern counties there was a slight frost overnight (moderate in a few places). During the day, the northern half of Scotland, southwest Wales and southwest England had near normal temperatures, elsewhere in the UK it was rather cold, but cold or very cold in some persistently foggy areas.

### SUMMARY OF BRITISH WEATHER

The night began dry over much of Britain but it was not long before rain reached Northern Ireland, West Wales and southwest England.

During the day the rain moved quickly east to clear the east coast of England by late afternoon, followed by wintry showers in the west and north.

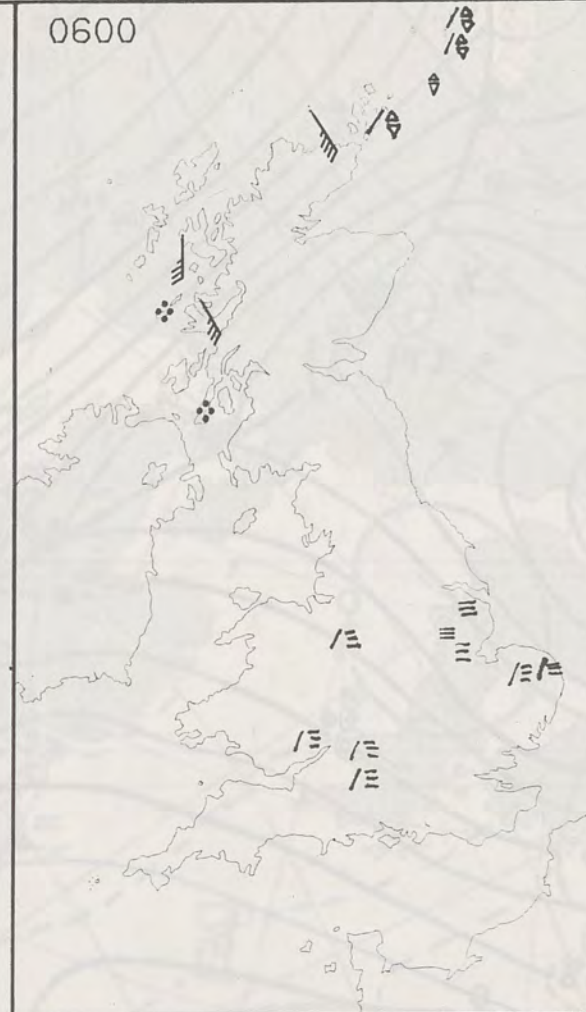

Over eastern and northern Scotland it was a wet day, the rain being heavy at times with snow over high ground. By evening the rain in the northeast of Scotland had turned to sleet or snow, and there were some wintry showers over Northern Ireland, western Scotland and northwest England.

It was mild in southern England at first but temperatures fell several degrees during the afternoon. Elsewhere it was rather cold and by evening it felt cold with a fresh west to northwest wind.

TUESDAY  
18 DECEMBER 1984

SUMMARY  
OF  
BRITISH WEATHER

There were a few wintry showers in western Scotland overnight, elsewhere over Britain skies were clear and slight frost was widespread away from west facing coasts.

During the middle and latter half of the day a band of showers moved across much of the country, some of them falling as sleet or snow over the Welsh and Scottish mountains and along the Pennines. In eastern Scotland there were few if any showers and they had a day of almost unbroken sunshine.

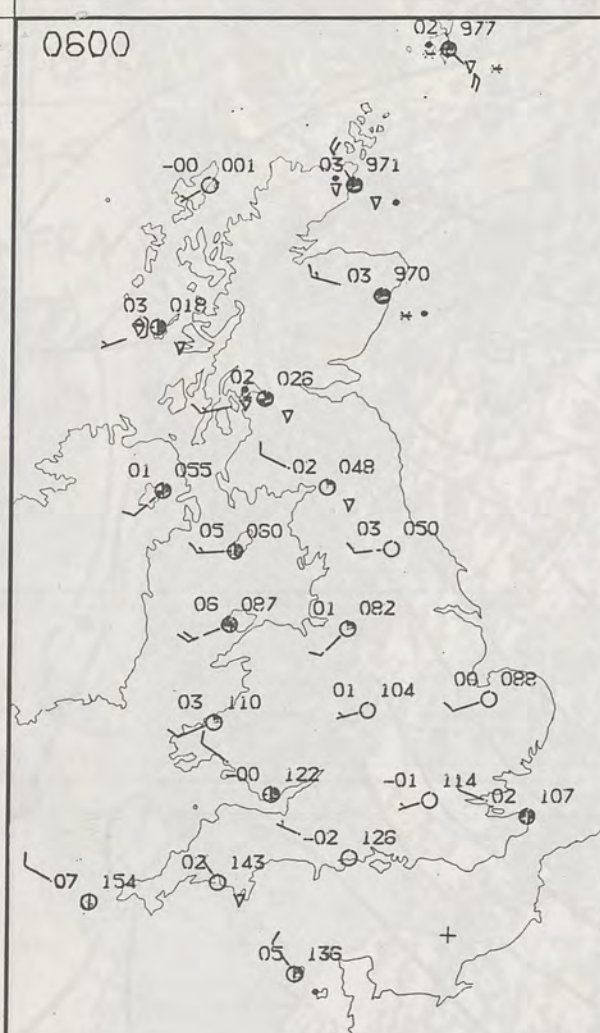

By evening the showers some of which were heavy had reached southeast and central southern England and East Anglia, and there was thunder in the Channel Isles. There were outbreaks of rain in Northern Ireland and western Scotland also.

In western parts of England, Wales and Scotland and along the south coast of England temperatures were near normal. Over the rest of the country including Northern Ireland it was rather cold.

WEDNESDAY  
19 DECEMBER 1984

**SUMMARY  
OF  
BRITISH WEATHER**

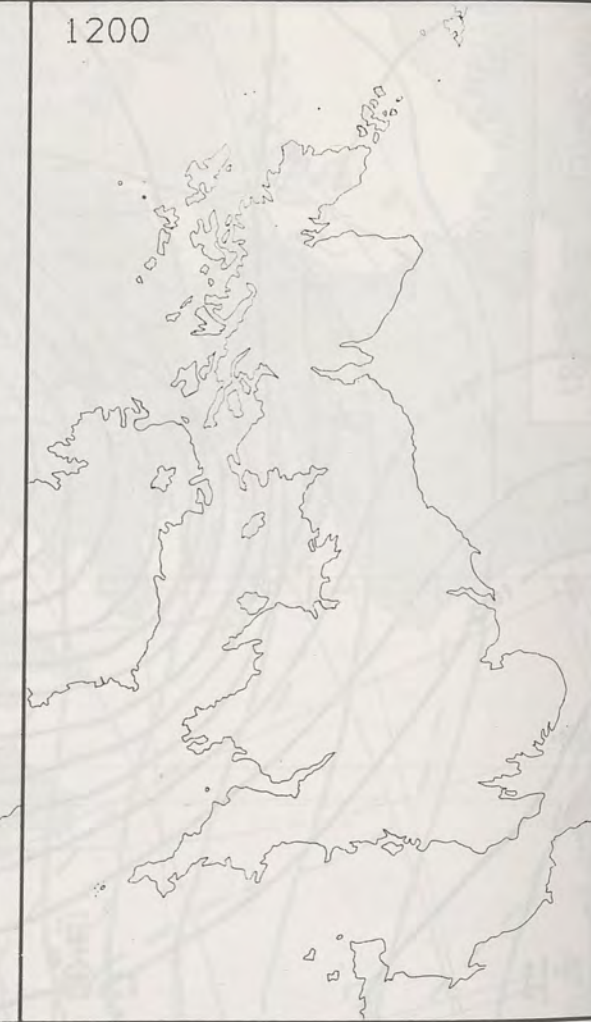

During the night rain spread from the west across all regions. The rain was heavy at times in western parts and over high ground in the north it was preceded by sleet or snow. Clearer weather followed reaching most parts of the country except for southern England and South Wales, before dawn.

During the day in central and eastern England and in eastern Scotland it was mainly dry with sunny periods and only isolated showers. Elsewhere over the UK there were brief bright or sunny intervals between showers or longer outbreaks of rain. In western Scotland and Cumbria there were isolated thunderstorms later in the day.

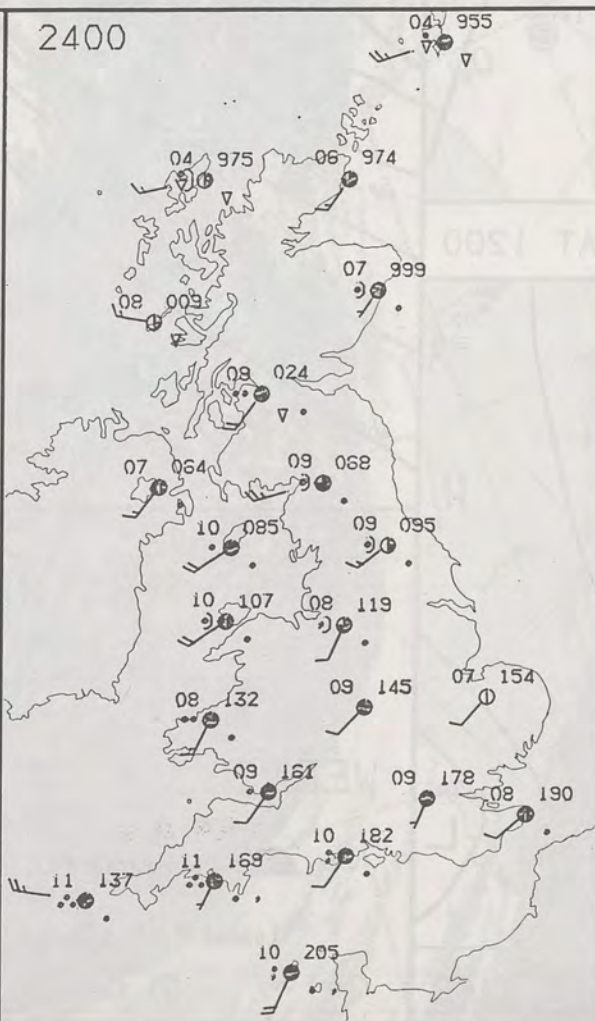

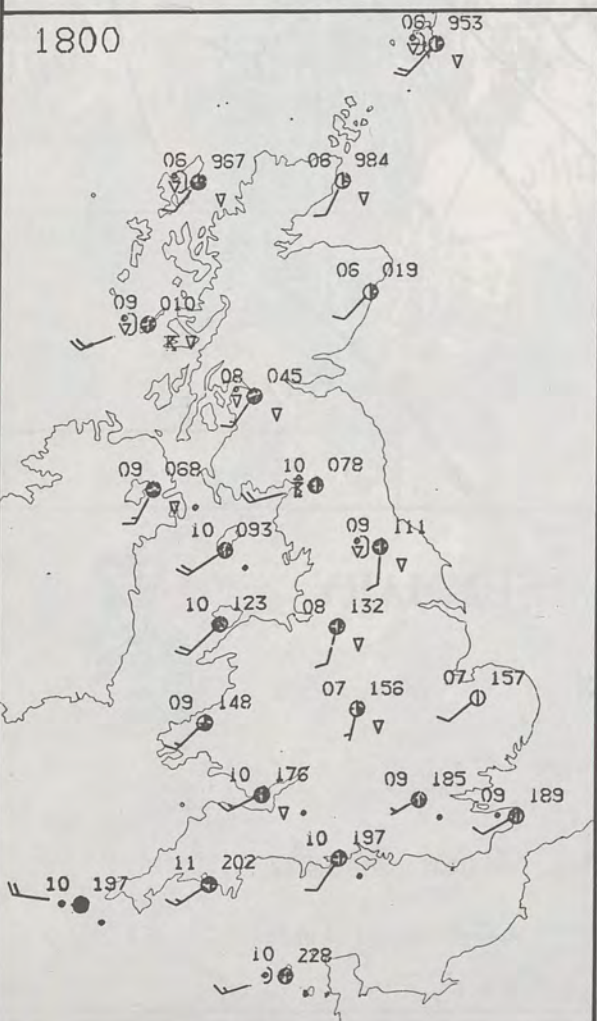

Temperatures rose steadily overnight and it was a very mild day in England and Wales and southern Scotland, while Northern Ireland and the remainder of Scotland were mild.

THURSDAY  
20 DECEMBER 1984

SUMMARY  
OF  
BRITISH WEATHER

In Wales, central and southern England there were outbreaks of rain overnight. The morning was mainly dull and misty with drizzle in most places. By afternoon it was dry in many parts but still mainly cloudy, and in southern counties there were patches of drizzle. During the evening clearer weather spread from the northwest to reach all but the extreme southeast of England by midnight.

In northern England, Northern Ireland and southern Scotland there was rain in places overnight clearing to give sunny intervals and isolated showers in the morning. During the afternoon and early evening there was a period of rain in most places, followed by clearer colder weather.

In central and northern Scotland there were sunny intervals and scattered showers. The showers were most frequent in northwest Scotland and in the Northern Isles, often with hail and over the mountains snow.

It was very mild over most of England and Wales. In Northern Ireland and Scotland temperatures were near normal.

2400

FRIDAY  
21 DECEMBER 1984SUMMARY  
OF  
BRITISH WEATHER

Skies became largely clear overnight and temperatures dropped to near freezing in many places by morning with some slight frost. There were however, wintry showers over much of Scotland and in parts of northwest England, especially near the coasts.

Much of southern Britain had a sunny day, but it was cloudy in Cornwall and became rather cloudy elsewhere later. Northern England, Northern Ireland and Scotland had a little sunshine in the more eastern counties, but for the most part there was a lot of cloud and some showers, with hail and sleet in places over the northern half of Scotland.

Temperatures were mostly not far from normal.

SUMMARY  
OF  
BRITISH WEATHER

In Northern Ireland, the west and north of Scotland, the Isle of Man and parts of West Wales and the west of England there was some rain and drizzle overnight. Central and eastern areas were dry and in central and eastern England it was a cold night, with slight frost in many places.

Most of Britain was cloudy and wet by daybreak, but a few eastern areas and the Channel Islands had a little early morning sunshine before rain and drizzle spread to these regions also. The rain was persistent at times and occasionally heavy in western parts of England and Wales.

The day was mild in Scotland, Northern Ireland, Wales and southwest England. In central and eastern areas of England temperatures were close to or a little above normal.

# SUNDAY 23 DECEMBER 1984

## SUMMARY OF BRITISH WEATHER

It was a cloudy night with rain and drizzle in most places and there was fog on hills and on some southern and western coasts. It turned very mild everywhere before morning.

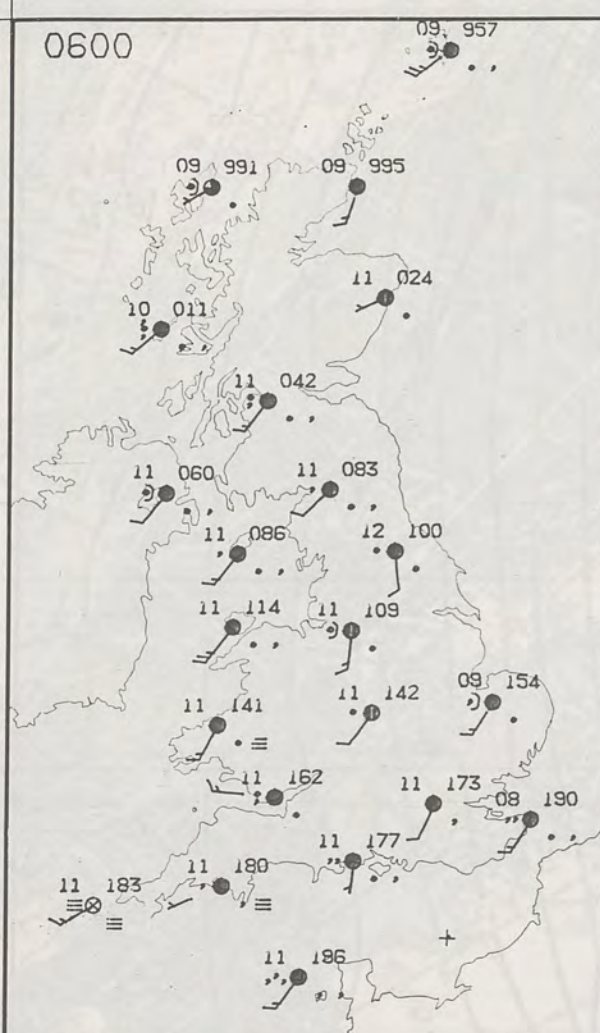

During the day it was very mild, exceptionally mild in parts of Scotland and northeast England. Much of Britain had a cloudy day with some rain and drizzle and the rain became heavier and more persistent for a while in Northern Ireland and western Scotland during the evening. Some places particularly in North Wales, the northern half of England and eastern Scotland had some sunshine.

There were strong south or southwesterly winds in western and northern Britain, with gales on coasts and hills.

### PLOTTED SURFACE OBSERVATIONS

MONDAY  
24 DECEMBER 1984

### SUMMARY OF BRITISH WEATHER

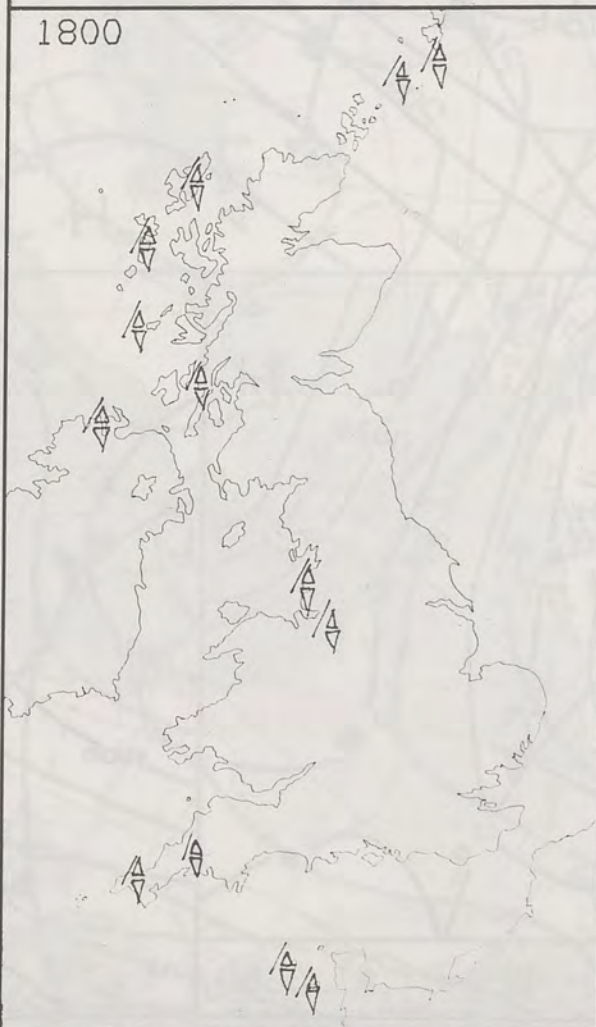

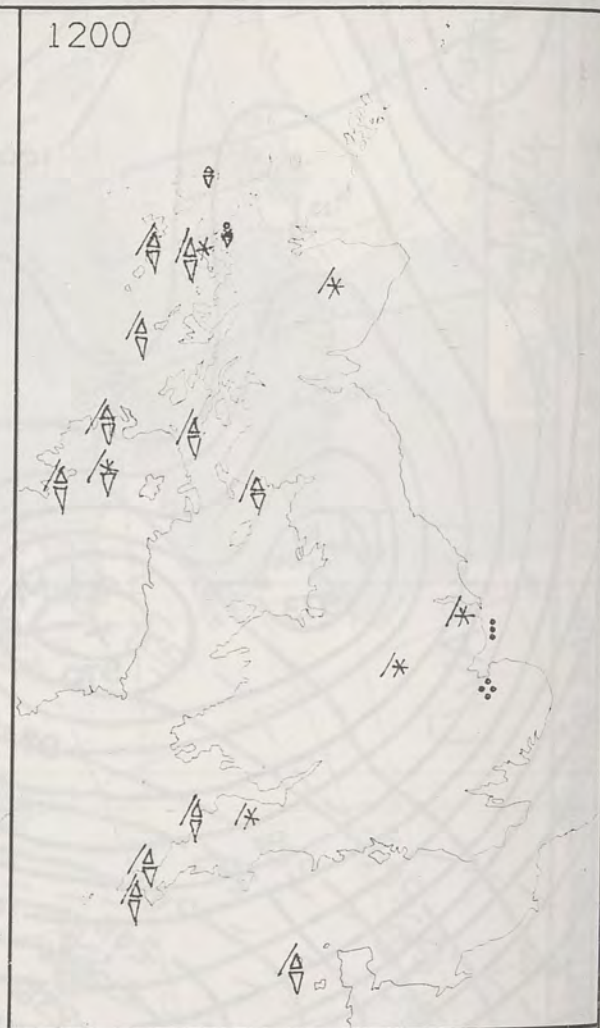

The day started with outbreaks of mostly light rain or drizzle over much of southern England, with a band of more persistent and locally heavy rain affecting much of western Scotland, Northern Ireland, Wales and southwest England.

This band of rain spread steadily east to affect all areas, finally clearing from East Anglia during the early evening. Many places had good sunny periods except for East Anglia and southeast England. It was followed by clearer, drier weather, with scattered showers, these mainly near northern and western coasts and hills. There was snow over some northern hills.

After a mainly mild night daytime temperatures were generally not far from normal. Fresh to strong southerly winds veered west or northwesterly with the passage of the rain, reaching gale force at times near western coasts. Gwennap Head near Lands End reported a gust of 64 knots at 6 am in the morning.

TUESDAY  
25 DECEMBER 1984

SUMMARY  
OF  
BRITISH WEATHER

About midnight, a belt of persistent and locally heavy rain moved into the Hebrides. It pushed steadily east across the whole of Britain during the day, clearing the Northern Isles, East Anglia and the southeast of England during the evening. It was preceded in the eastern and southeastern half of the country by a clear, cold, frosty night, and a dry, bright start to Christmas morning.

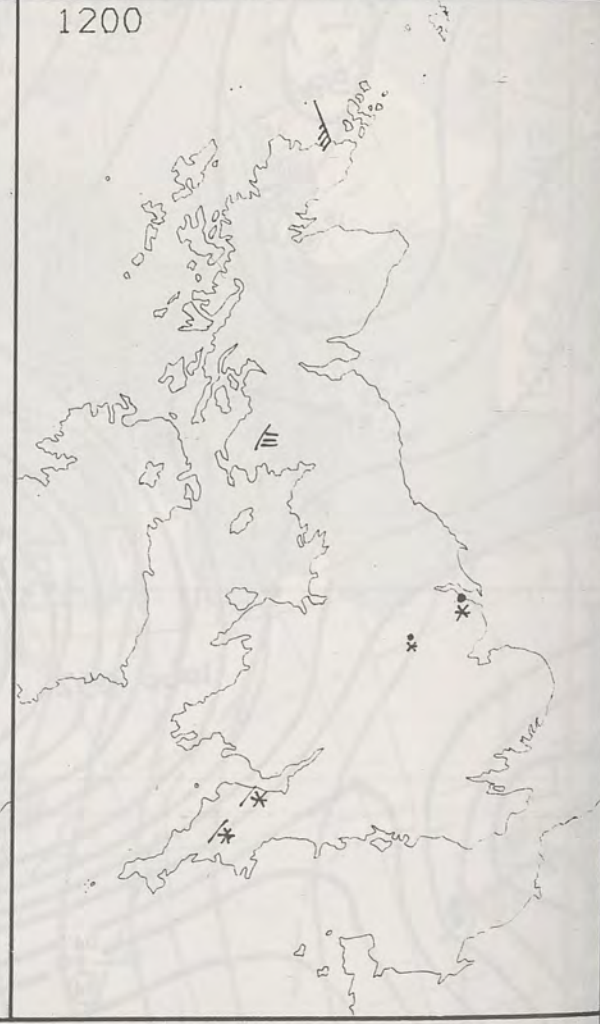

The rain was followed from the west by clearer, showery weather, bringing sunny intervals to many western districts.

Showers fell as snow over northern hills, with sleet as far south and east as the Chilterns. There were hail showers near western coasts. Fresh to strong southerly winds reached gale force over northern and western coasts and hills before veering to the west or southwest.

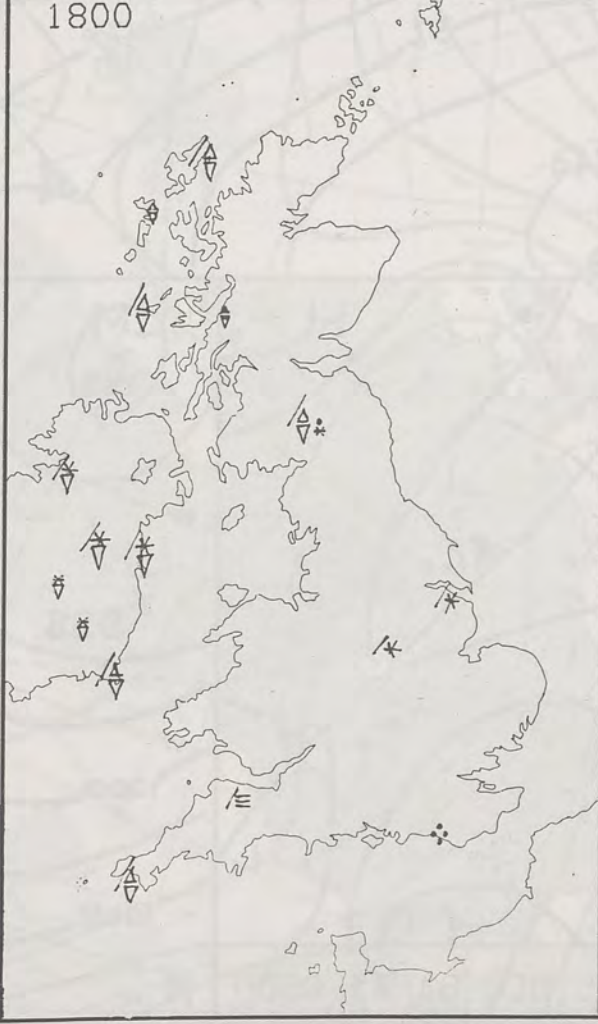

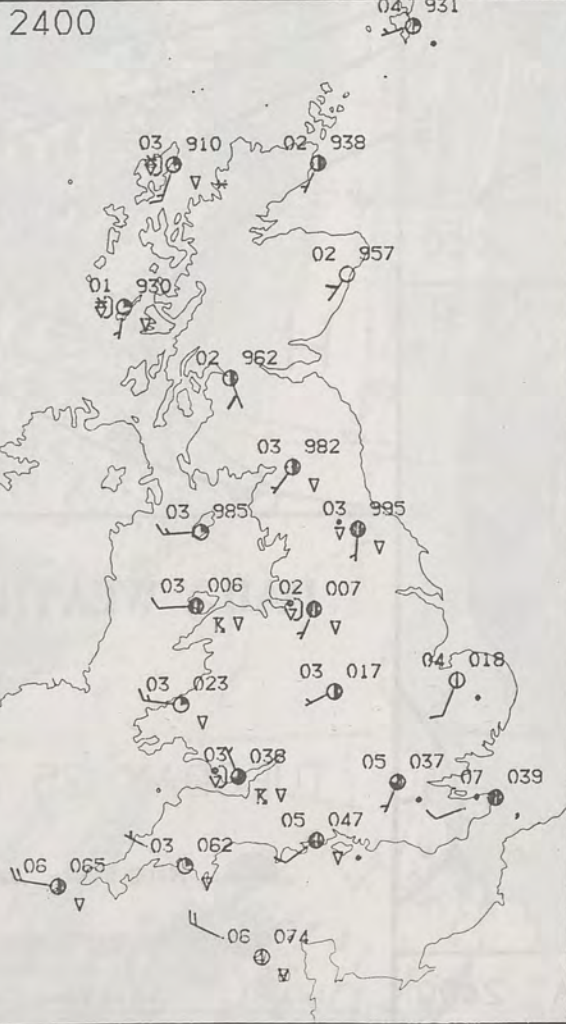

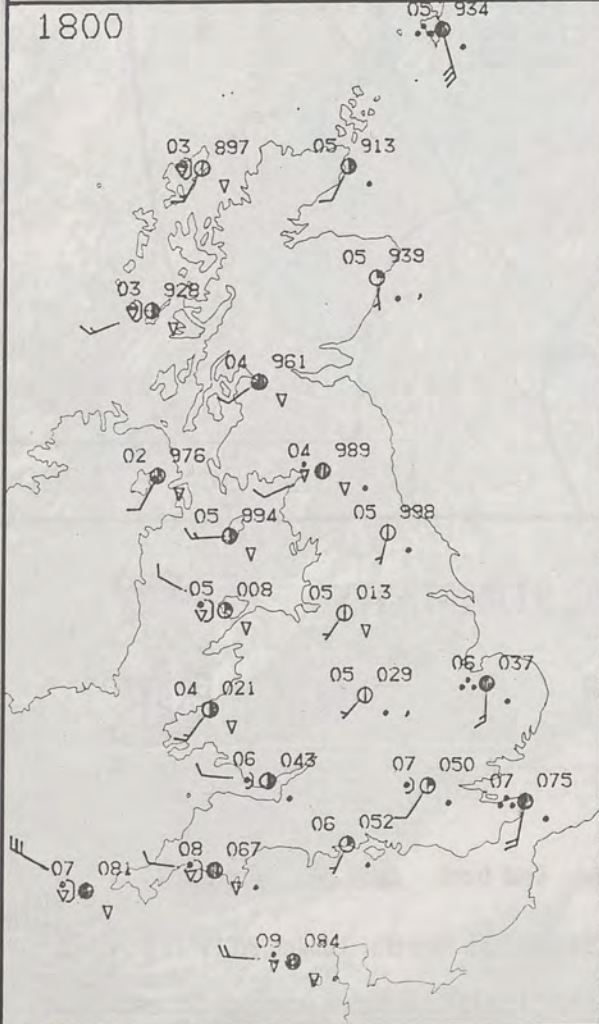

Most places had temperatures a little above the late December normal, even mild at first in Wales and southwest England although it turned colder later in the afternoon especially in the west.

WEDNESDAY  
26 DECEMBER 1984

SUMMARY  
OF  
BRITISH WEATHER

It was a clear frosty night almost everywhere over the UK.

During the day much of England except western coastal areas had dry weather with long sunny periods and in northeast England one or two fog patches developed in the evening.

In Northern Ireland and western Britain there were clear or sunny intervals and scattered showers of rain, hail and snow. The heaviest and most frequent showers were in Wales and southwestern counties of England. In parts of North Wales there were several inches of snow and over the moors of southwest England there were some accumulations.

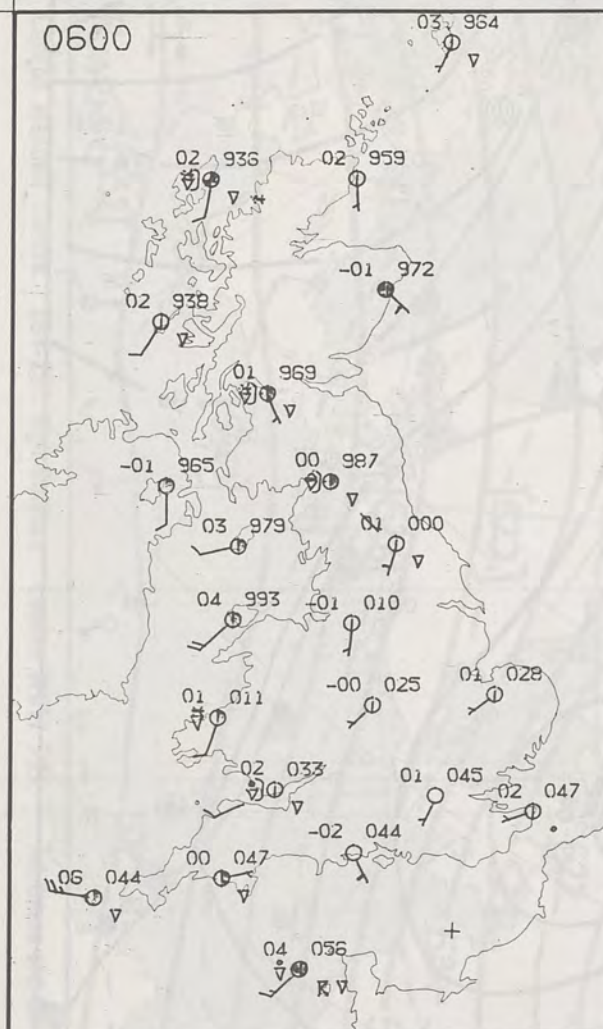

During the evening scattered sleet and snow showers spread eastward across southern counties of England and there were isolated thunderstorms.

It was generally rather cold or cold during the day over the UK with temperatures staying below freezing point in one or two places in Scotland.

THURSDAY  
27 DECEMBER 1984

# SUMMARY OF BRITISH WEATHER

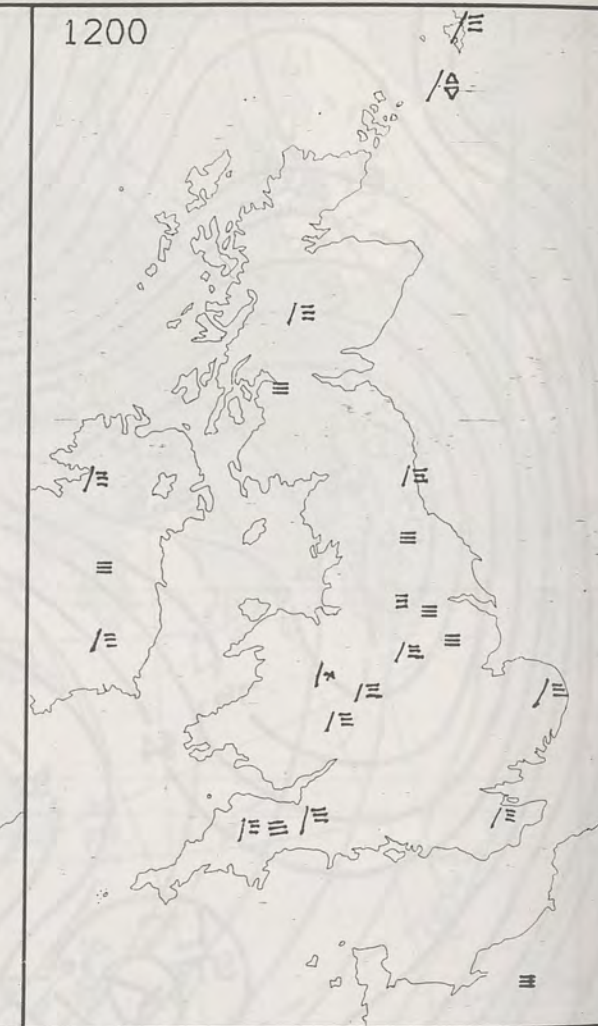

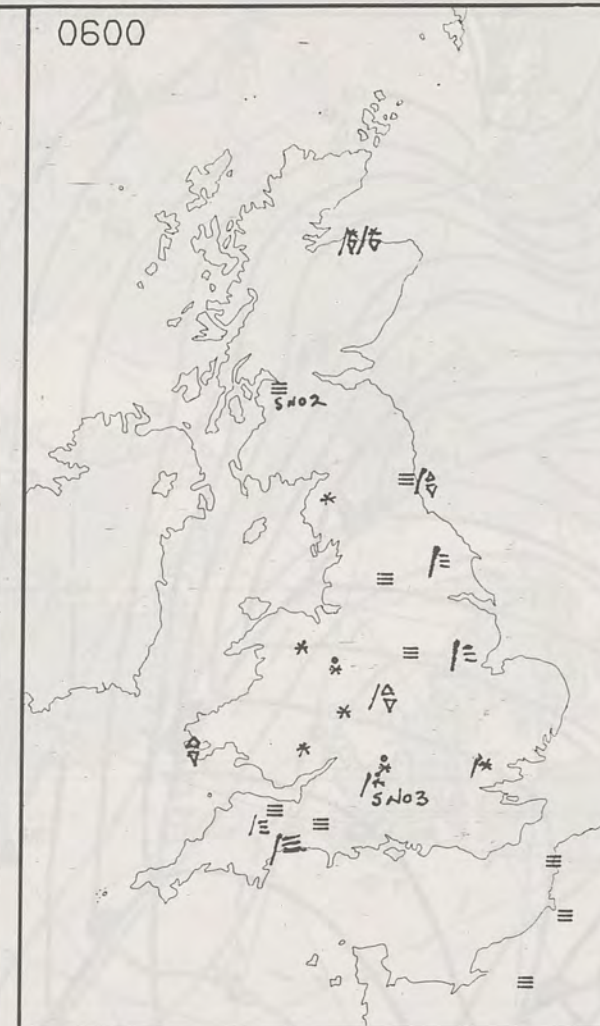

In most regions it remained dry, except for parts of central southern England, the West Midlands and East Wales where there was occasional rain or sleet at first, and in the Northern and Western Isles where isolated showers occurred in the morning.

Skies were clear overnight in most places and over much of Britain the day was quite sunny. Patches of freezing fog formed, especially in Lincolnshire, northeast England and in the central Scottish Lowlands. In Northern Ireland and western Scotland it became cloudy later and in western parts of England and Wales it was rather cloudy at times. During the late afternoon and evening fog patches developed and became widespread in much of East Anglia, central and southeast England.

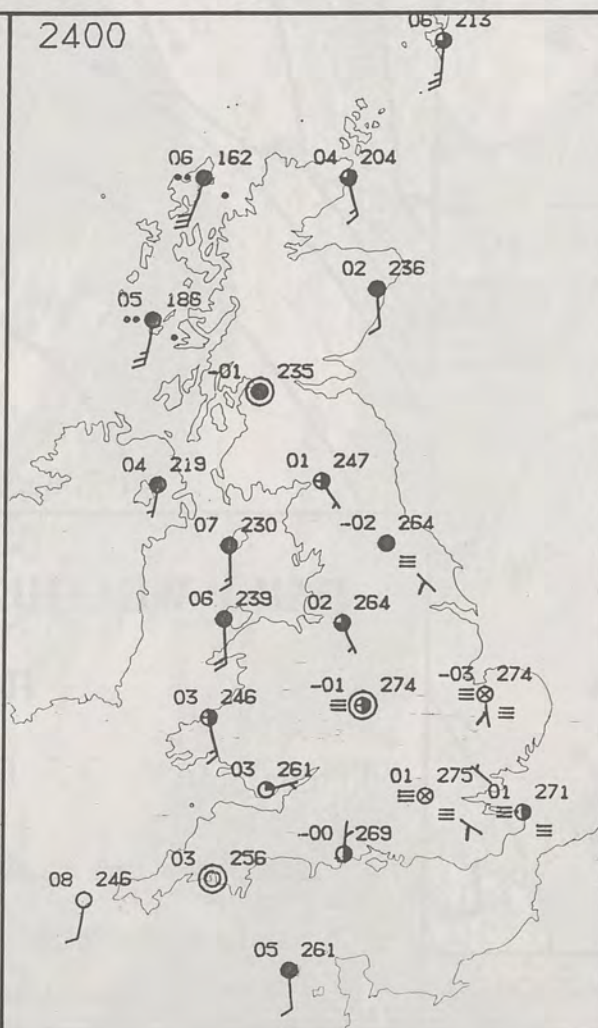

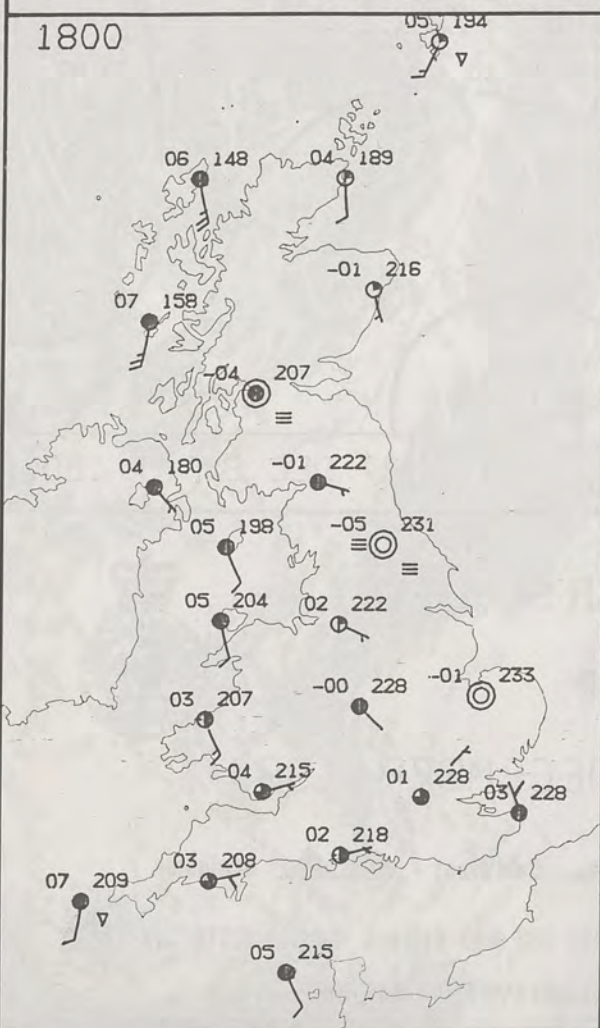

There was a widespread frost, locally severe in parts of southern and central Scotland. The day was rather cold in most regions and very cold in parts of northeast England and central Scotland where fog and frost persisted most of the day. In southern and northwestern coastal regions temperatures were near normal.

## PLOTTED SURFACE OBSERVATIONS

1800

2400

FRIDAY  
28 DECEMBER 1984SUMMARY  
OF  
BRITISH WEATHER

Northern Ireland and much of Scotland had rain overnight and by morning rain with snow on hills had reached extreme northern England. For most of England and Wales it was a dry night with a good deal of frost and fog. In southwest England and West Wales, an increase of wind brought a clear and frost free night.

During daytime the northern half of Scotland was dry and bright, but the overnight rain was reluctant to clear Northern Ireland, southern Scotland and northern England, where much of the day turned out dull and damp with widespread hill fog along the Pennine Chain.

For the Midlands, East Wales, East Anglia and central and southeast England fog persisted for much of the day, though a few places did have a little sunshine. Further west in southwest England and West Wales there was more sunshine with patchy cloud and some places in the East Midlands had good sunny periods.

Temperatures over Northern Ireland, western Scotland, West Wales and southwest England were generally in the mild category. The rest of Britain was rather cold or cold especially where fog persisted.

SATURDAY  
29 DECEMBER 1984

SUMMARY  
OF  
BRITISH WEATHER

In the early hours there was widespread fog and frost over England, except the southwest, the fog being dense in places. Parts of southwest England, Wales and eastern Scotland had frost early in the night with a few fog patches, but this cleared as the wind freshened and cloud increased. Rain spread to Northern Ireland, western Scotland, West Wales and Cornwall by morning.

Although the fog persisted until evening in the Vale of York and parts of Norfolk, it cleared from most places during the morning. There was a little sunshine for a time in the east and south before cloud increased from the northwest.

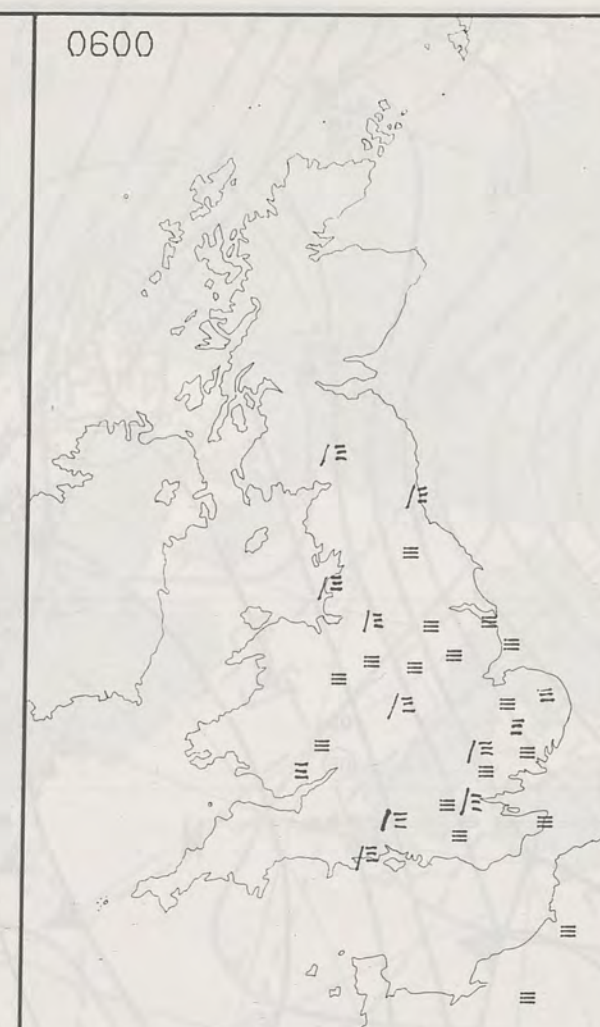

By midday, rain and hill fog had spread to all of Scotland, Wales and the western counties of England and reached all but the southeastern corner of England by early evening. Most places here became wet during the course of the evening.

Drier weather reached northwest Scotland in the afternoon and spread to most of the north and west of Scotland and Northern Ireland by midnight.

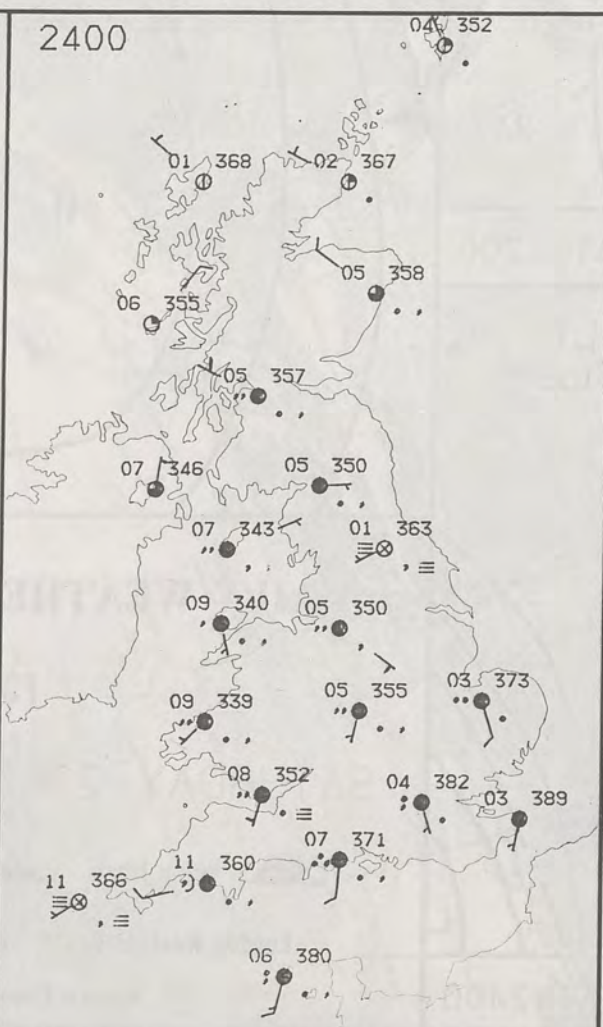

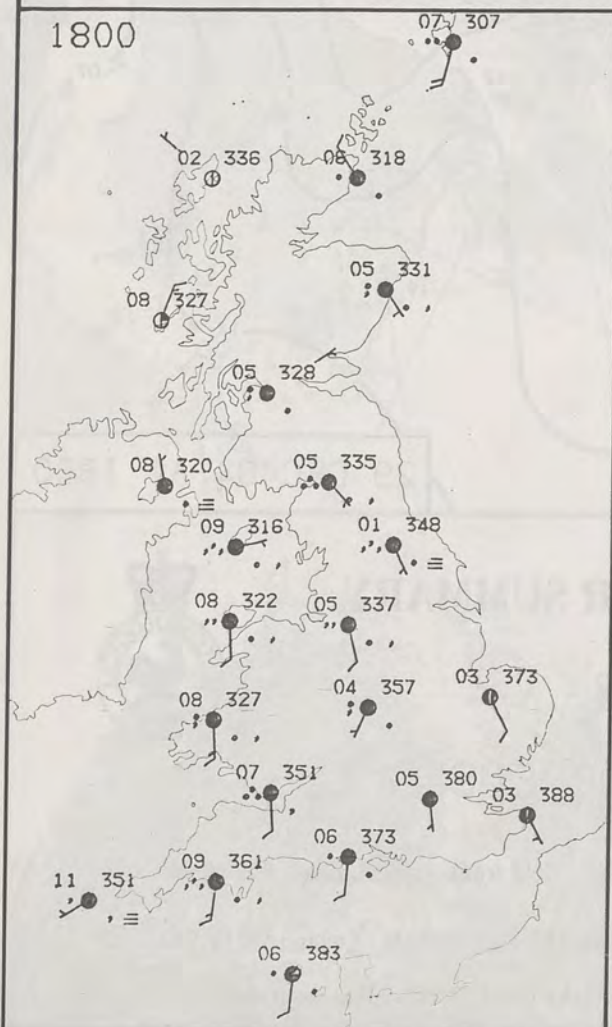

It was cold in areas where fog persisted for most of the day. In western Scotland, Northern Ireland and West Wales it was mild and southwest and southern England had temperatures about the normal for late December.

MONDAY  
31 DECEMBER 1984

**SUMMARY  
OF  
BRITISH WEATHER**

Most of England and Wales started cloudy, with rain or drizzle in places. There was fog over high ground, and also in some lower-lying areas. Most of Scotland and Northern Ireland were in clearer conditions, with blustery showers in the north. This clearer weather spread steadily south to cross most of Wales, the Midlands and East Anglia in the morning, and most of the south in the afternoon. By evening it had reached Devon and Cornwall and the Channel Islands.

Few of the showers reached the south, but in Shetland they merged to give some more persistent rain.

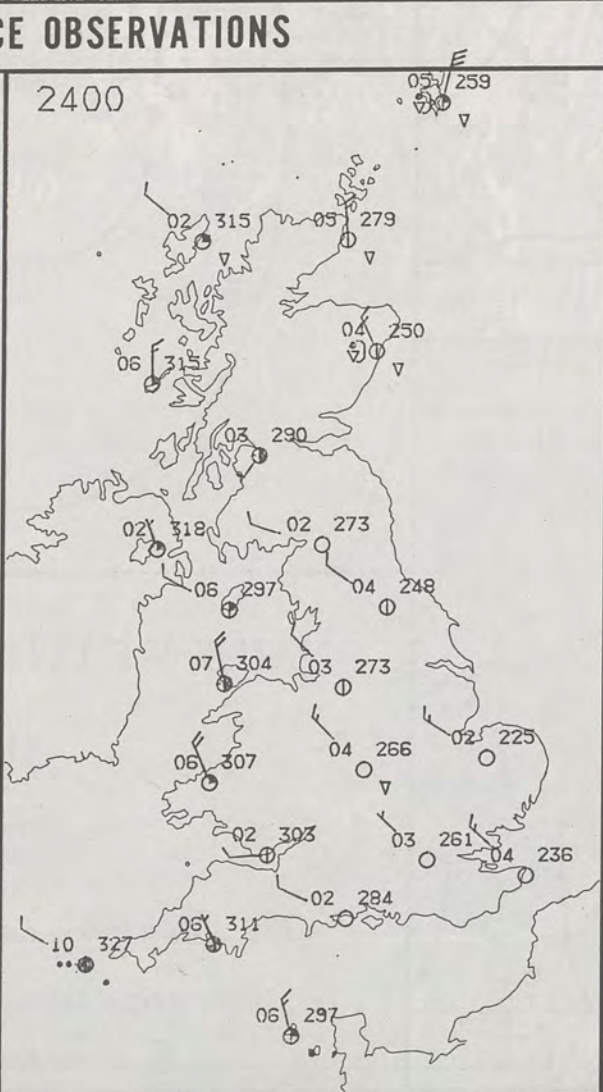

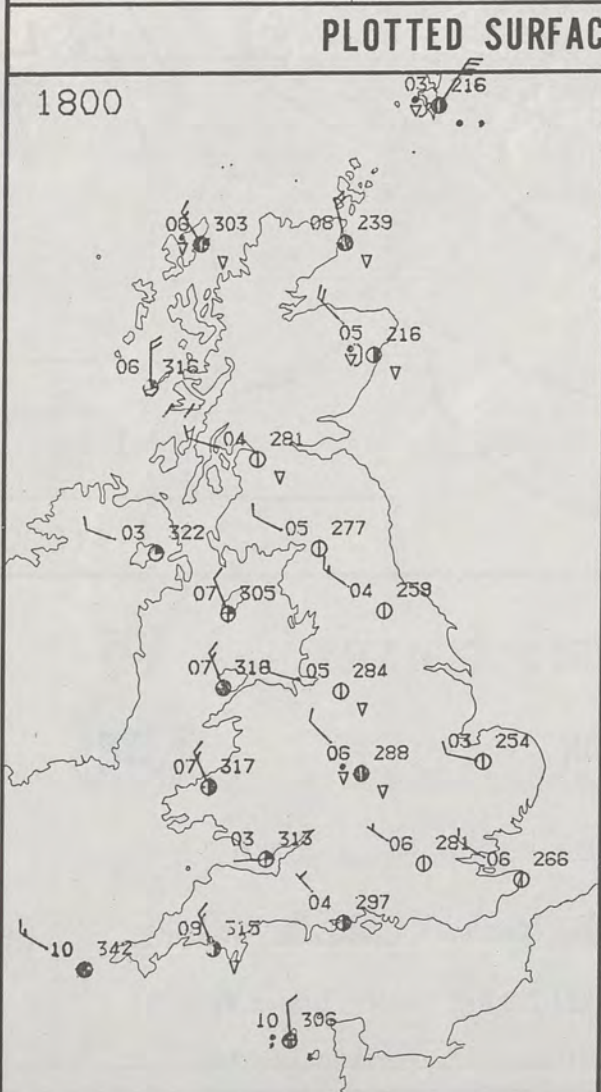

Temperatures generally were near or a little above normal, and it was windy in the north with a gust of 66 knots at Kirkwall in the early morning.
