SURFACE REPORTS

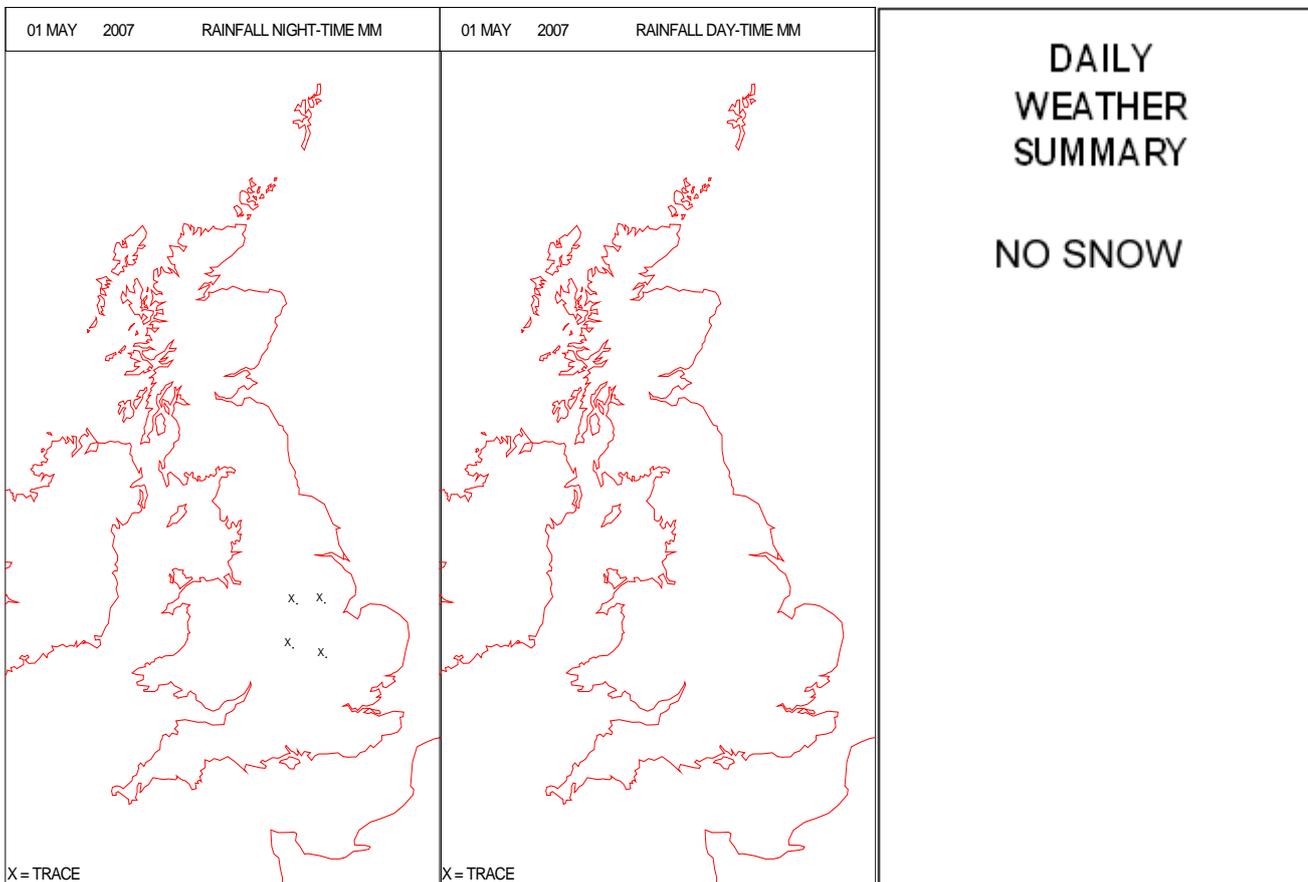

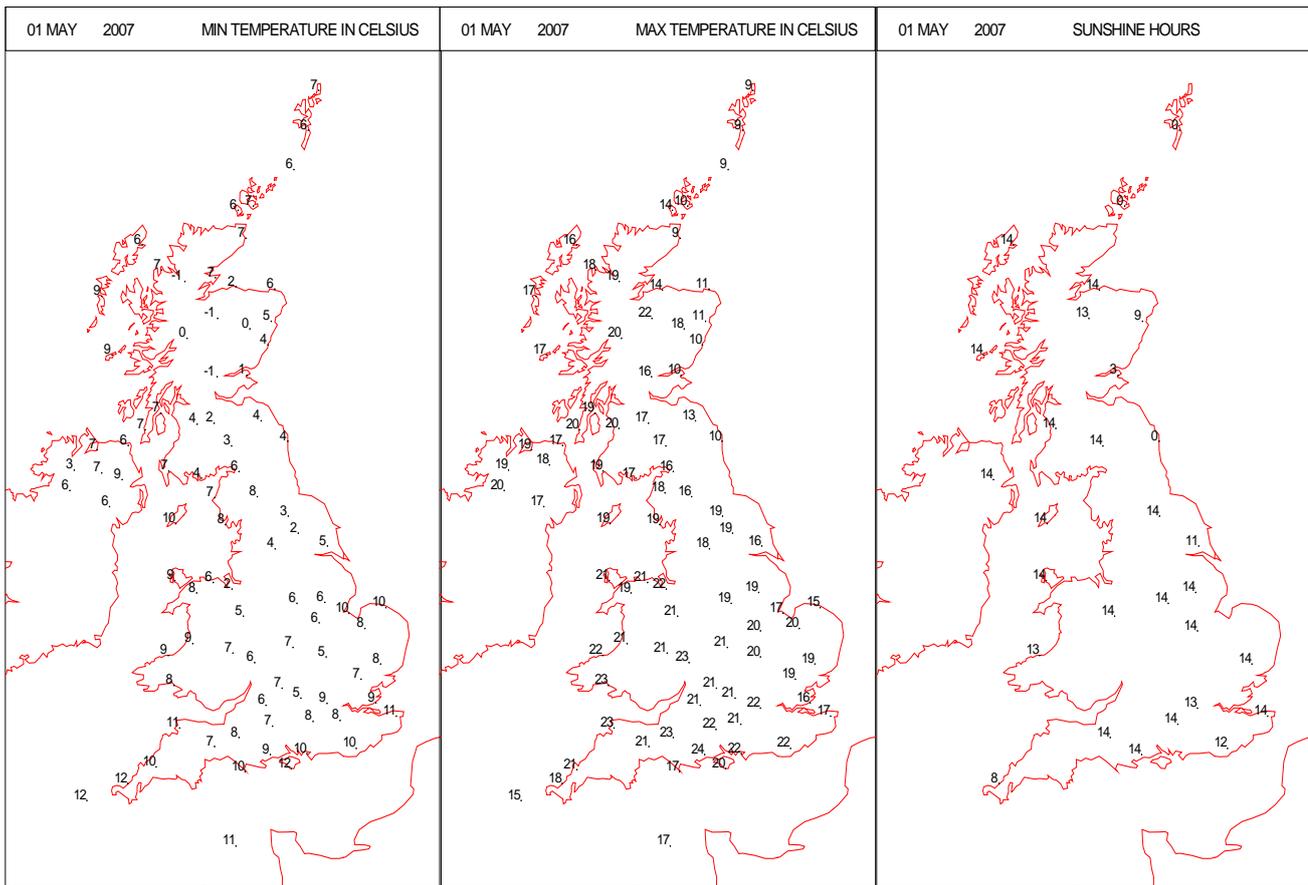

SIGNIFICANT WEATHER

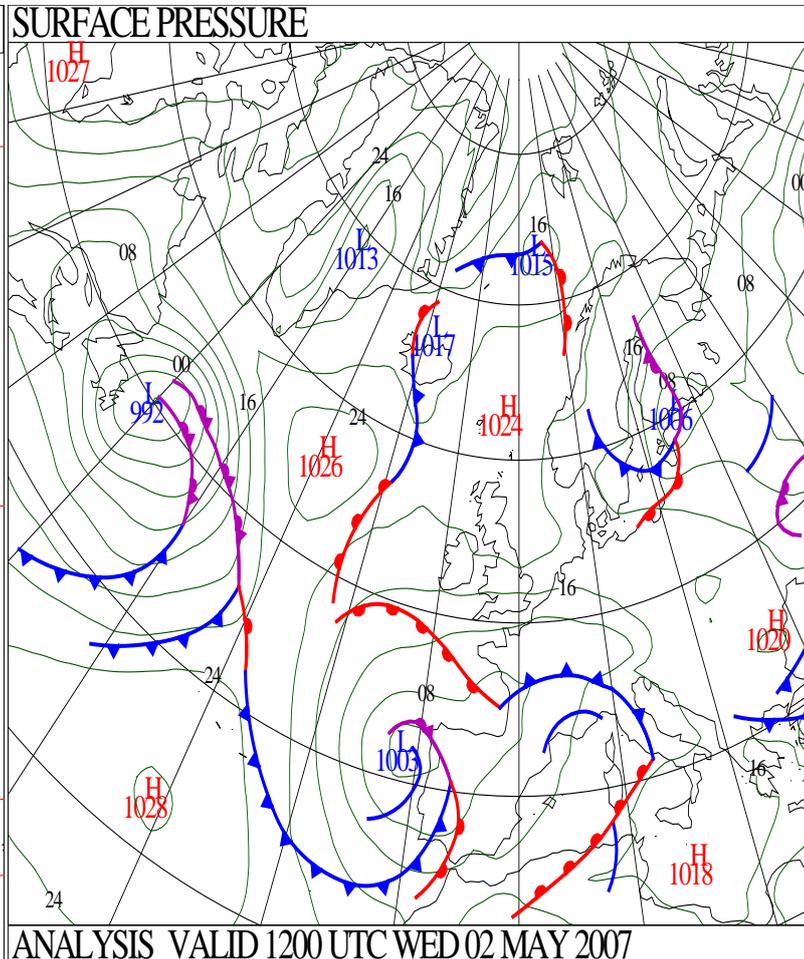

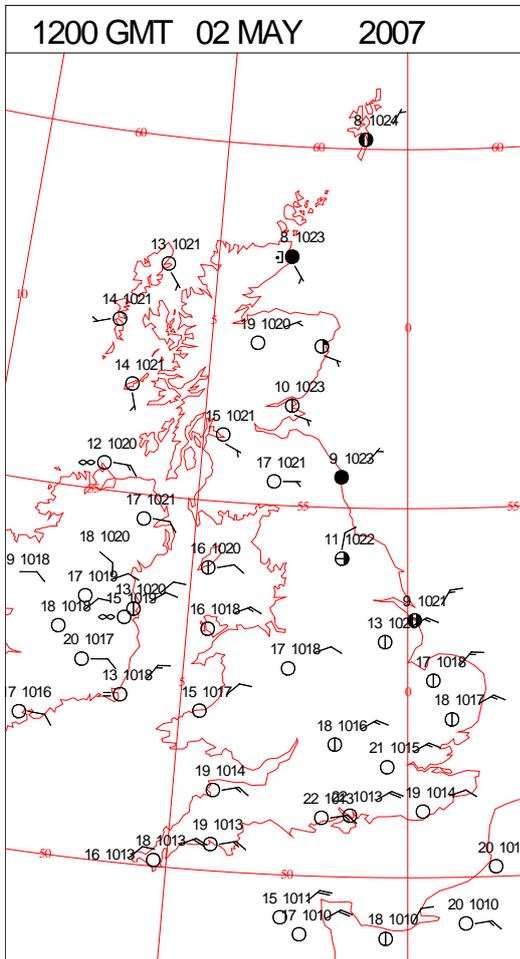

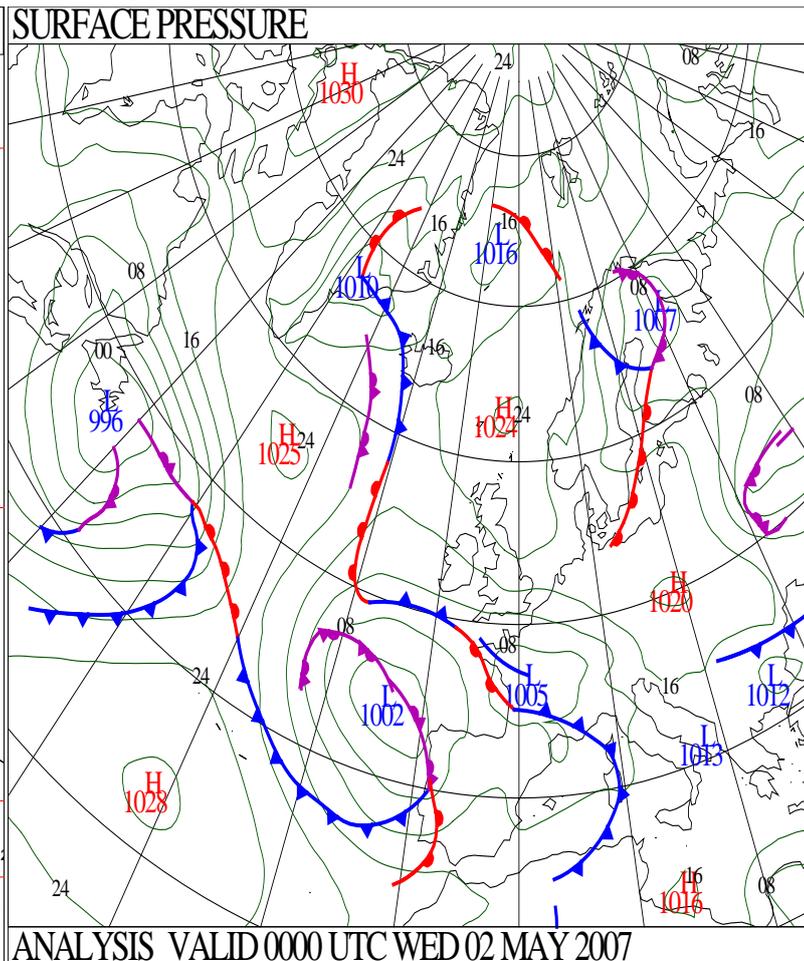

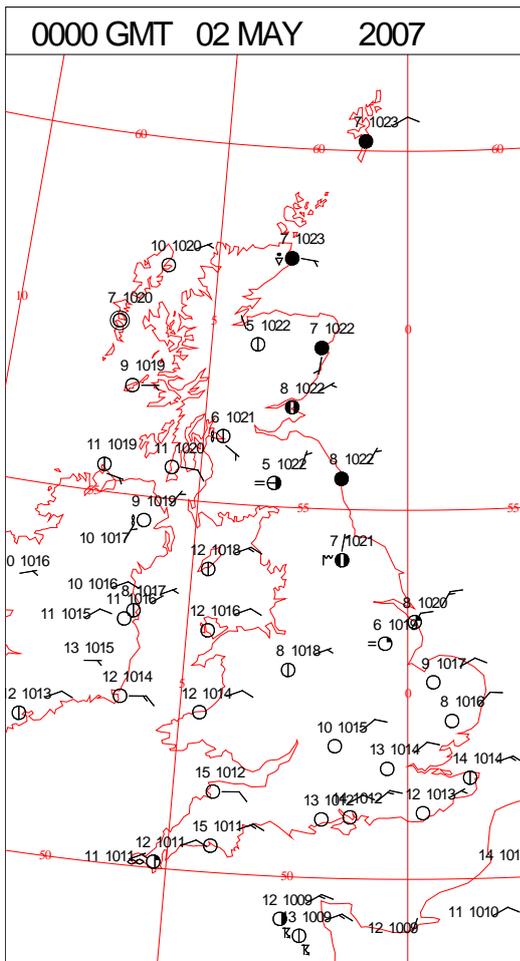

0600 GMT 01 MAY 2007 SIG WEATHER	1200 GMT 01 MAY 2007 SIG WEATHER	<p>Summary of UK Weather for Tuesday 1 May 2007. Thundery showers moved into Devon and Cornwall in the early hours, clearing in a northwesterly direction by dawn. Low cloud over far eastern areas of Scotland and northeast England gradually retreated closer to the coast during the day. Through the course of the evening this low cloud once again moved further inland. Elsewhere it was another fine dry day albeit a little breezy in the Midlands and southern areas. Daytime temperatures were generally well above average over most of the UK, apart from far eastern coastal areas of Scotland and northeast England, where low cloud kept temperatures closer to average.</p>
1800 GMT 01 MAY 2007 SIG WEATHER	0000 GMT 02 MAY 2007 SIG WEATHER	<p>EXTREMES Highest Maximum: 24.1 Hurn, Dorset Lowest Maximum: 8.6 Fair Isle, Shetland Lowest Minimum: -1.4 Aviemore, Inverness-Shire Lowest Grass Minimum: -6.6 Leuchars, Fife Most Rain: 0.2 Bedford, Bedfordshire 0.2 Waddington, Lincolnshire 0.2 Church Lawford, Warwickshire Most Sun: 14.0 Waddington, Lincolnshire 14.0 Marham, Norfolk</p>

SIGNIFICANT WEATHER

0600 GMT 02 MAY 2007 SIG WEATHER	1200 GMT 02 MAY 2007 SIG WEATHER	<p>Summary of UK Weather for Wednesday 2 May 2007. Low cloud and mist over eastern areas of Scotland, northeast England and the Midlands overnight gradually retreated closer to the coast during the day. The low cloud was thick enough to produce a little drizzle for a short time in the far northwest of Scotland during the afternoon. Through the course of the evening this low cloud once again moved further inland. Elsewhere it was another fine dry day albeit a little breezy in the south. Overnight a few stations in western and central Scotland recorded sub-zero temperatures under clear skies. Daytime temperatures were generally well above average over most of the UK, apart from far eastern coastal areas of Scotland and northeast England, where low cloud kept temperatures closer to average.</p>

SURFACE REPORTS

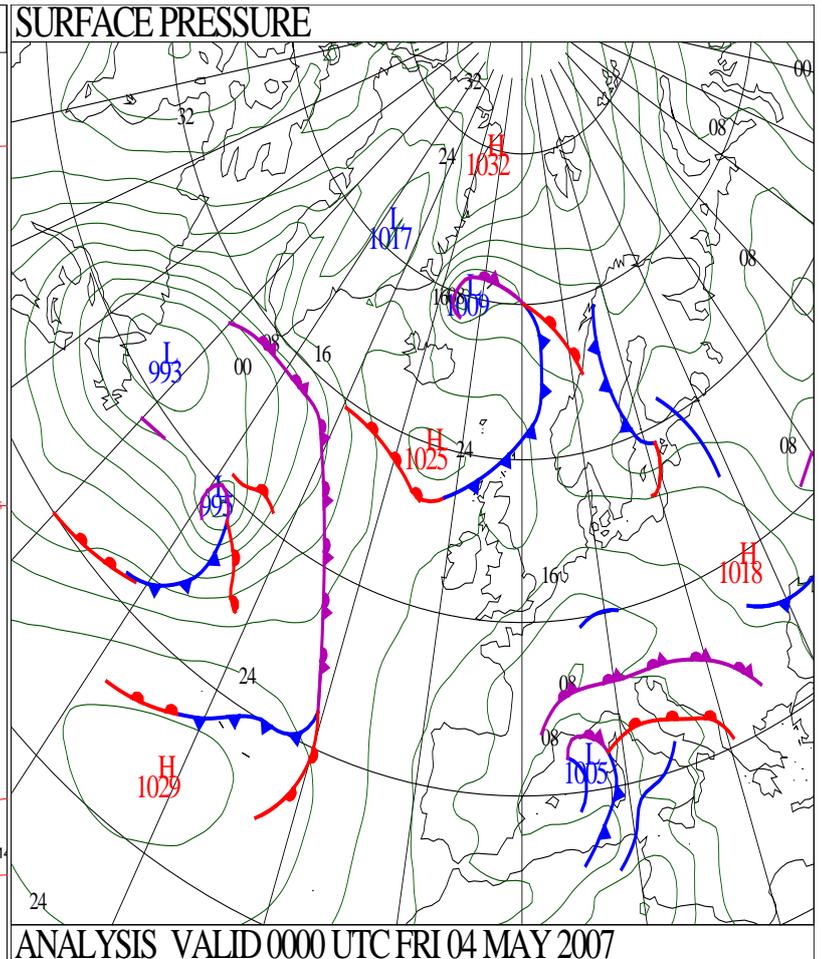

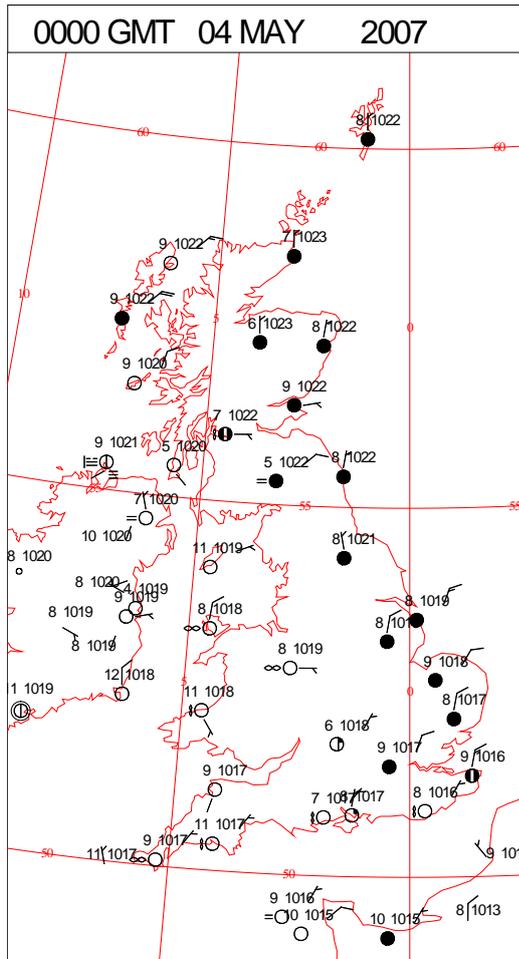

SIGNIFICANT WEATHER

0600 GMT 03 MAY 2007 SIG WEATHER	1200 GMT 03 MAY 2007 SIG WEATHER	<p>Summary of UK Weather for Thursday 03 May 2007. Overnight the weather was mainly dry — clear periods affected western parts of the UK, but cloud over the North Sea drifted inland across eastern and central areas. The cloud reached as far west as mid Wales before retreating to the east during the morning. Slight drizzle was reported in north and east Scotland, and there was mist and patchy fog under clear skies before dawn. During the morning the drizzle petered out and the cloud broke from the west. By midday central and western parts of the UK were dry with sunny periods, but cloud continued to plague the east of Scotland and England. However, the cloud proved reluctant to thin across East Anglia and the home counties. There was not much change in the afternoon with many places enjoying dry and fairly sunny weather, but the extreme east remained cloudy. A shower developed over central Scotland in the evening. Temperatures in many central and western areas were in the warm or very warm category, but it was rather cold near the east coast and in parts of southeast England.</p>

SIGNIFICANT WEATHER

0600 GMT 04 MAY 2007 SIG WEATHER	1200 GMT 04 MAY 2007 SIG WEATHER	<p>Summary of UK Weather for Friday 04 May 2007. Overnight the weather was mainly dry but cloudy. The cloud was thick enough locally in central and eastern parts to give slight rain or drizzle. Northern Ireland and some western parts of Britain had clear spells allowing patchy mist and fog to form. During the morning the mist and fog patches dispersed and western parts of the UK were fine and dry with sunny periods. Some bright or sunny spells developed across central southern England but elsewhere the cloud persisted, although the rain and drizzle mostly petered out. The odd spot of drizzle continued to affect some eastern parts of England and Scotland during the afternoon as cloud persisted in those areas, but there was a good deal of fine and dry weather elsewhere and in Northern Ireland, Wales, western Scotland and western England it was fairly sunny. There was little change in the evening. Temperatures in the south and west were in the normal or rather warm category but it was warm or very warm in Northern Ireland; central and eastern Britain was generally in the rather cold category.</p>

SURFACE REPORTS

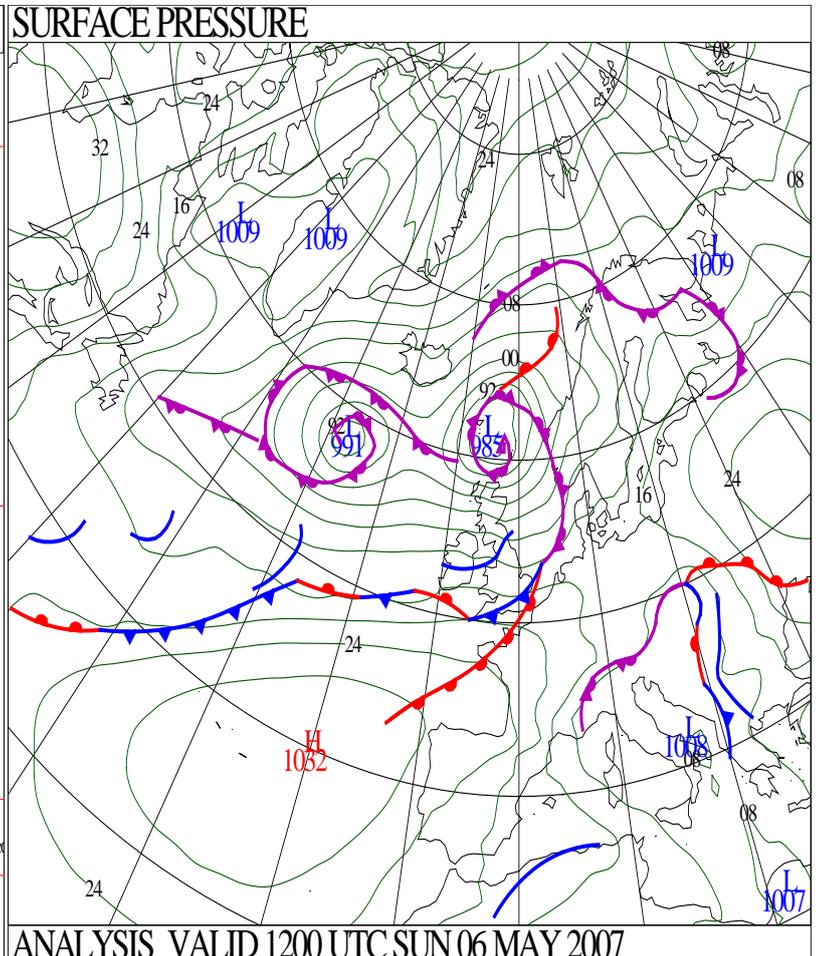

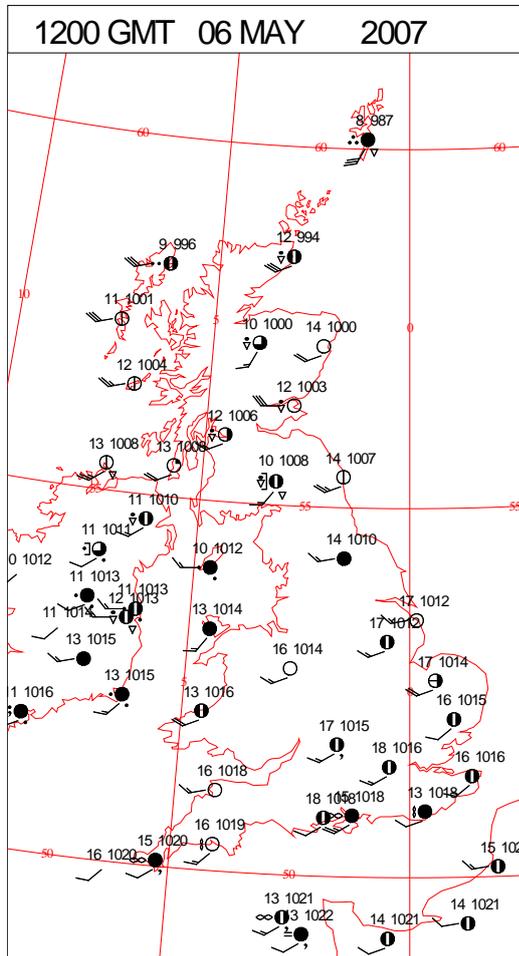

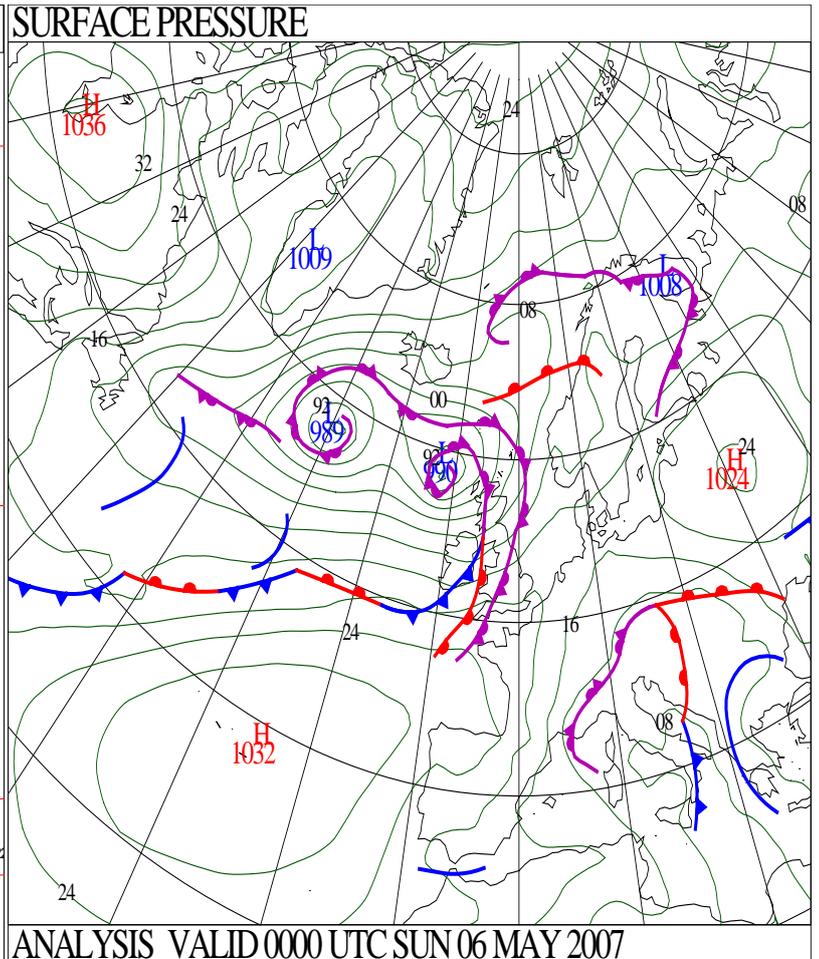

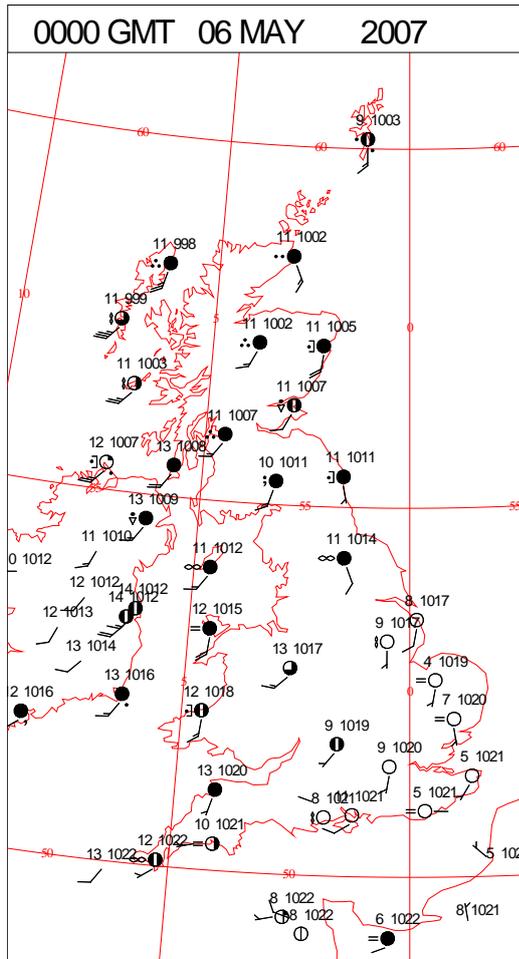

SIGNIFICANT WEATHER

0600 GMT 06 MAY 2007 SIG WEATHER	1200 GMT 06 MAY 2007 SIG WEATHER	
		<p>Summary of UK Weather for Sunday 06 May 2007. It was windy overnight across Scotland, there were gusts of 40–50 knots generally, with 70–85 knots over the mountains. Mainly light rain spread across northern and western parts, some heavy and persistent rain over upslopes of western Scotland. Turning showery across Scotland by dawn, most of the showers were in the west, but it was a dry, sunny start in east. Some cloud breaks developed across England/Wales, but then showery rain moved into the northwest and Wales. Scotland had sunny spells and showers, most of them in the west. Strong winds/gales over Scotland persisted a while longer than expected, lasting most of the afternoon. Feeling cool, the maximum temperatures were generally below average for the time of year.</p>

SIGNIFICANT WEATHER

0600 GMT 07 MAY 2007 SIG WEATHER	1200 GMT 07 MAY 2007 SIG WEATHER	<p>Summary of UK Weather for Monday 07 May 2007. A cloudy start across much of the UK, with showers over Scotland and Northern Ireland, and rain across the far south of the UK. The rain in the south cleared during the morning, but then heavy showers quickly followed across all parts, although some places stayed dry right through the day. Away from the showers there were some good spells of sunshine, and it felt pleasantly warm away from the breeze. Low cloud, drizzle and hill fog plagued western facing coasts in Cornwall, but cleared during the afternoon. The showers eased for most places during the evening, but persisted across western parts of Scotland and Northern Ireland. A breezy day for all, but particularly windy in the south with regular gusts of 30–40 knots along the English Channel coasts. The maximum gust was 50 knots recorded at the Needles, Isle of Wight. Temperatures were near average for the time of year in the south, and generally slightly above in the north.</p>

SIGNIFICANT WEATHER

0600 GMT 08 MAY 2007 SIG WEATHER	1200 GMT 08 MAY 2007 SIG WEATHER	<p>Summary of UK Weather for Tuesday 08 May 2007. Another unsettled day with rain or showers over the UK. Heavy showers over western Scotland and Northern Ireland overnight pushed quickly into northwest Wales and then into northwest England during the early hours. The showers merged at times, and spread across the whole of Wales by dawn. The showers continued to track eastwards during the day, but tended to become more scattered as they did so. During the first part of the afternoon, rain spread into the far southwest of the UK then into west Wales and along the south coast of England by early evening, by which time the showers across the rest of the country had tended to clear. The rain continued to spread eastwards during the evening, with some moderate bursts over western-facing hills and coasts. A breezy and gusty day for many, especially in and around the showers, with a gust of 42 knots at Heathrow and 43 knots at Marham. The winds gradually eased from the west during the evening. Temperatures were generally around average for the time of year in the north, and above average in the south of the UK.</p>

SIGNIFICANT WEATHER

0600 GMT 09 MAY 2007 SIG WEATHER	1200 GMT 09 MAY 2007 SIG WEATHER	<p>Summary of UK Weather for Wednesday 09 May 2007. Another unsettled day with rain or showers over most of the UK. Overnight cloud associated with a warm front, pushed in from the south and west bringing rain and drizzle to southernmost parts. This patchy rain continued during the morning before spreading into Wales by midday and into the Midlands, northern and eastern England during the afternoon. This rainfall was persistent and heavy at times. A second band of rain, associated with a cold front, moved into Northern Ireland and southwest England by late afternoon, then Wales during the evening. This rainfall was also persistent and heavy at times. Scattered showers affected northwestern Scotland through the course of the night becoming more widespread during the afternoon. Winds were generally strong and gusty associated with the passage of the front. Daytime temperatures were generally close to or a little below average.</p>

SIGNIFICANT WEATHER

0600 GMT 10 MAY 2007 SIG WEATHER	1200 GMT 10 MAY 2007 SIG WEATHER	<p>Summary of UK Weather for Thursday 10 May 2007. Another unsettled day with rain or showers over most of the UK. Rain over the south and east of England overnight, had cleared to the east by dawn. There was then a drier interlude for England and Wales for a time before another band of rain edged into the southwest during the morning. This band of rain moved northeastwards across England and Wales affecting the south, central parts, East Anglia and south Wales through the course of the day. The rain was persistent and heavy at times, it was also quite gusty. An occlusion affecting Scotland at the start of the night remained over northern areas into the morning bringing heavy rain at times. This fizzled out during the afternoon to leave a showery regime across Northern Ireland and Scotland. Daytime temperatures were generally close to, or a little below average, particularly in the south of England, where it was raining for much of the day.</p>

SURFACE REPORTS

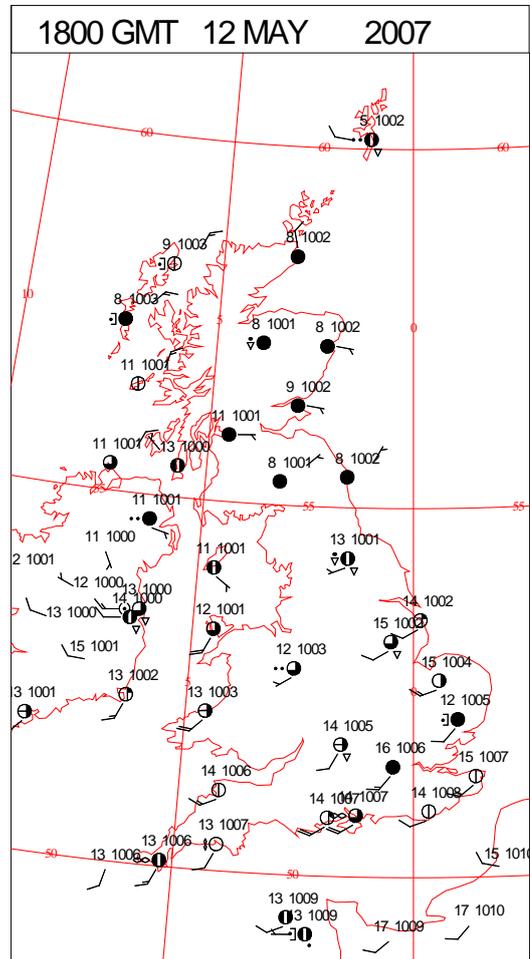

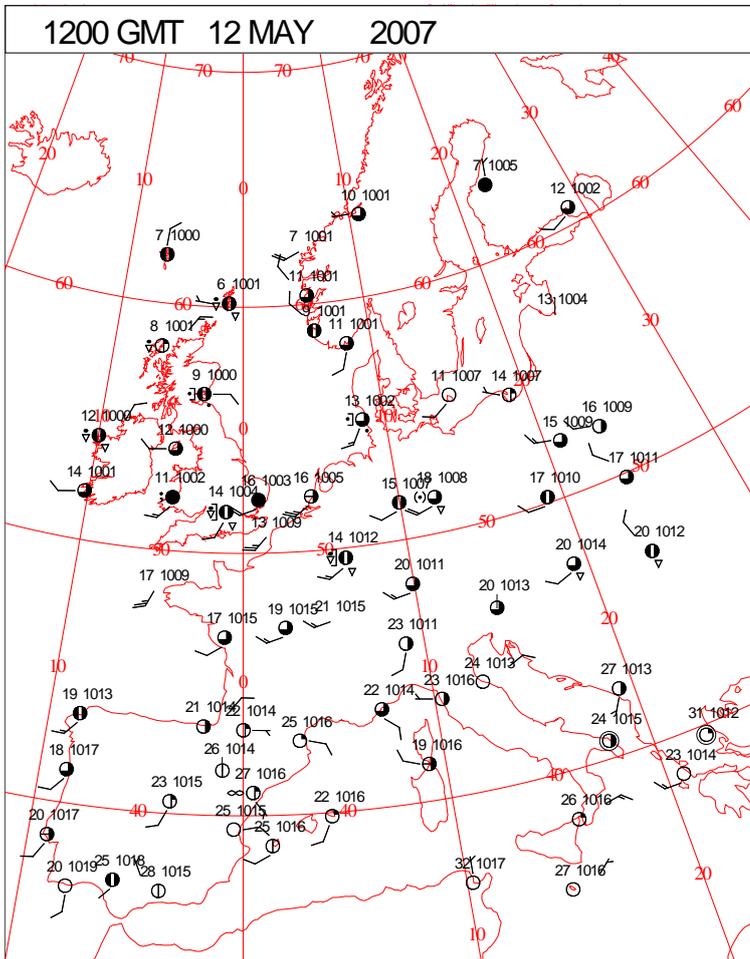

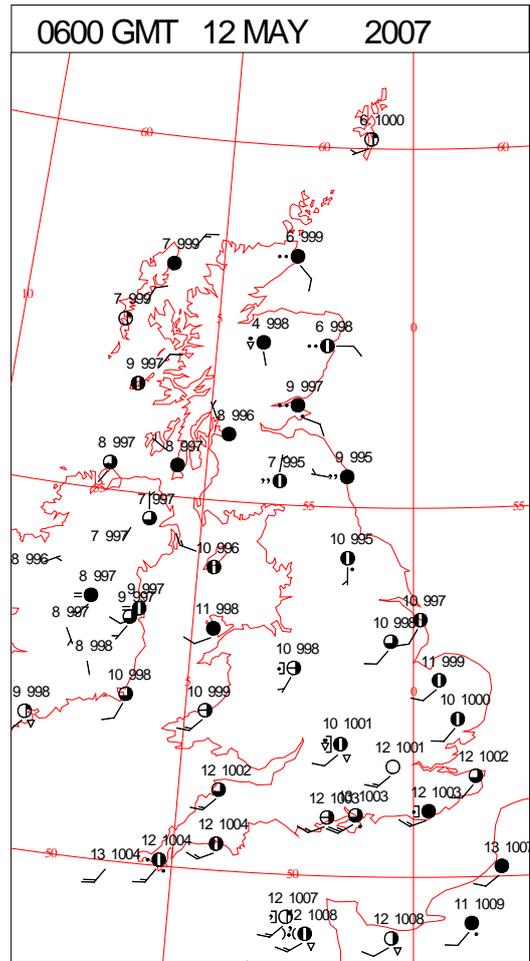

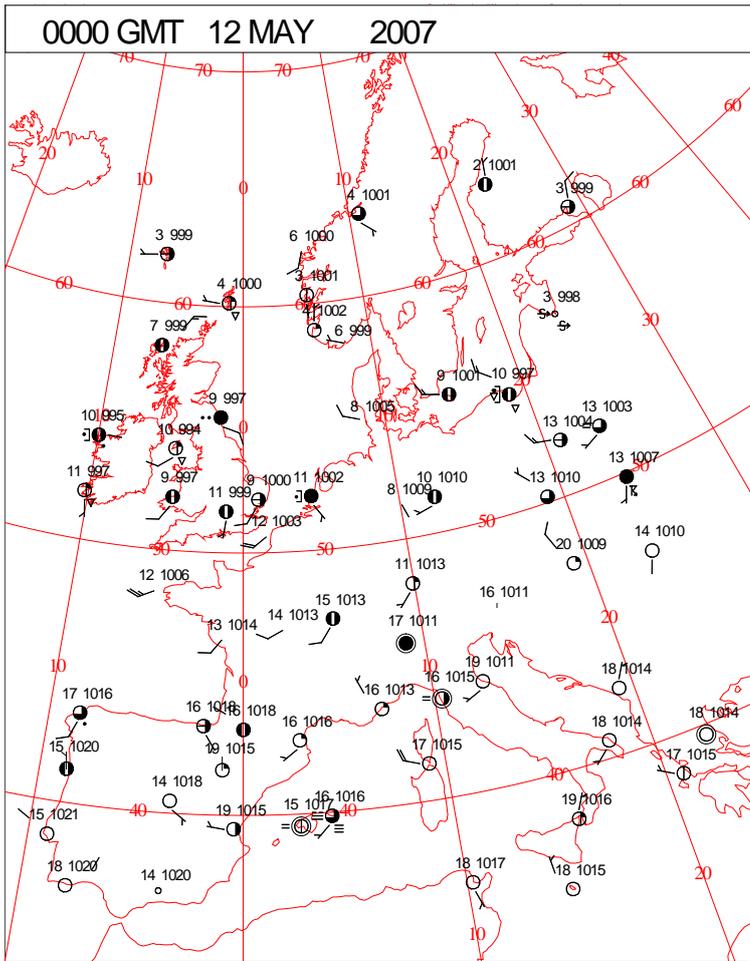

SIGNIFICANT WEATHER

0600 GMT 11 MAY 2007 SIG WEATHER	1200 GMT 11 MAY 2007 SIG WEATHER	<p>Summary of UK Weather for Friday 11 May 2007. Generally unsettled and often wet in the south but drier conditions in the northern half of the UK. Most of England and Wales started wet with persistent rain with some heavier bursts mixed in, but this cleared eastwards from most areas by around dawn. Far western areas were largely dry in this period, though. A band of showery rain, mostly light, lay from southwest Scotland and Northern Ireland southeastward through northwest England to The Wash area through the morning. This area moved slowly northwards during the day, tending to break up and become very patchy with time. By late morning another area of rain, accompanied by brisk southwesterly winds, reached southwest England. This moved steadily northeast to give a spell of wet weather across England and Wales, eventually reaching Northern Ireland and southern Scotland by evening. Scattered showers, some heavy, followed into southwest England by late evening. Much of Scotland had a cloudy day with limited sunshine but with just a little rain in places and mostly light easterly winds. Temperatures were generally near or a little below the average for mid-May.</p>

SIGNIFICANT WEATHER

0600 GMT 12 MAY 2007 SIG WEATHER	1200 GMT 12 MAY 2007 SIG WEATHER	<p>Summary of UK Weather for Saturday 12 May 2007. Scotland was rather cloudy and on the cool side throughout, with showers or longer spells of rain, especially in the east in the first part of the day. The Western Isles were largely dry with some sunshine, though. Northern Ireland and northern England were also mostly cloudy with some showery bursts of rain at times, especially later in the day when some local thunder was reported in Yorkshire in the evening. Temperatures here were nearer the seasonal normal generally. Wales and the rest of England had a brighter day with a mixture of showers and sunny intervals, with a brisk southwesterly breeze. Some of the showers were heavy and thundery, including some which ran eastwards across southeast England in the early hours. Further isolated thunderstorms broke out by afternoon but many places escaped with a dry daytime (i.e. parts of the Midlands, East Anglia and the southeast) with some sunny spells. In the sunshine temperatures were near or a little above the seasonal normal at around 18 °C in some eastern areas, but southwesterly winds along the south coast touched 40 m.p.h. at times.</p>
1800 GMT 12 MAY 2007 SIG WEATHER	0000 GMT 13 MAY 2007 SIG WEATHER	<p>EXTREMES Highest Maximum: 18.1 Coningsby, Lincolnshire Lowest Maximum: 8.1 Lerwick, Shetland Lowest Minimum: 2.0 Baltasound No 2, Shetland Lowest Grass Minimum: -2.2 Fair Isle, Shetland Most Rain: 17.8 High Wycombe, Air Command, Buckinghamshire Most Sun: 11.2 Isle Of Portland, Dorset</p>

SIGNIFICANT WEATHER

0600 GMT 13 MAY 2007 SIG WEATHER	1200 GMT 13 MAY 2007 SIG WEATHER	<p>Summary of UK Weather for Sunday 13 May 2007.</p> <p>Most of Scotland was rather cloudy with occasional light showers, especially in northeastern parts. However, there were some brighter spells, particularly across the northwest Highlands, where there were some decent spells of sunshine. Northern Ireland also had a dry morning with some sunshine, but cloud did increase here during the afternoon.</p> <p>Over England and Wales it was a much more unsettled day. By dawn a band of heavy and persistent reached the far southwest of England and spread slowly northeastwards across the whole of England and Wales through the day, reaching northern England by the evening. The rain was heavy in many places, but particularly so in the southwest of England. Much brighter weather followed the rain into southwestern parts in the afternoon; there were even some sunny spells. However, some hefty showers did follow, the heaviest of these again in southwestern parts of England and Wales.</p> <p>The rain became slow-moving over Northern England and the north Midlands during the evening, although it did begin to ease somewhat towards midnight before heading back southwards.</p>

SURFACE REPORTS

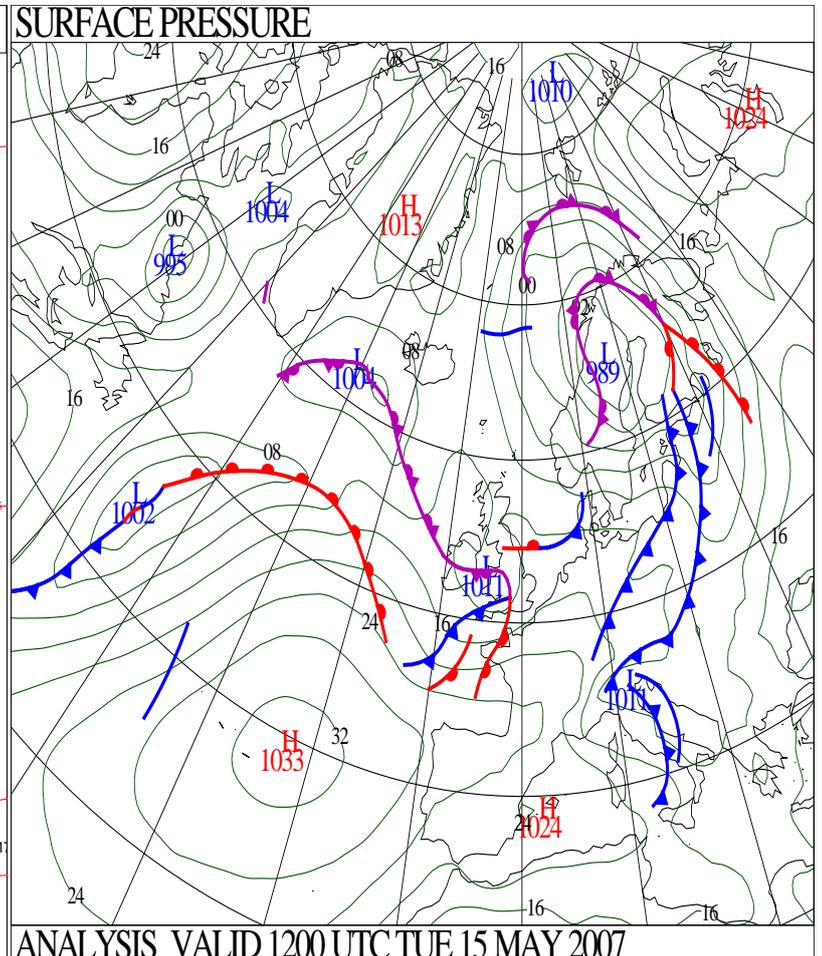

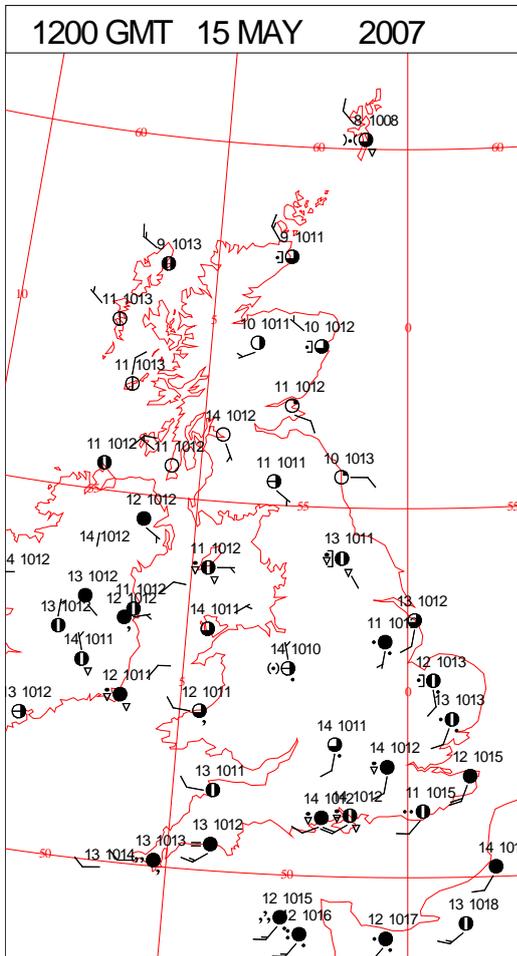

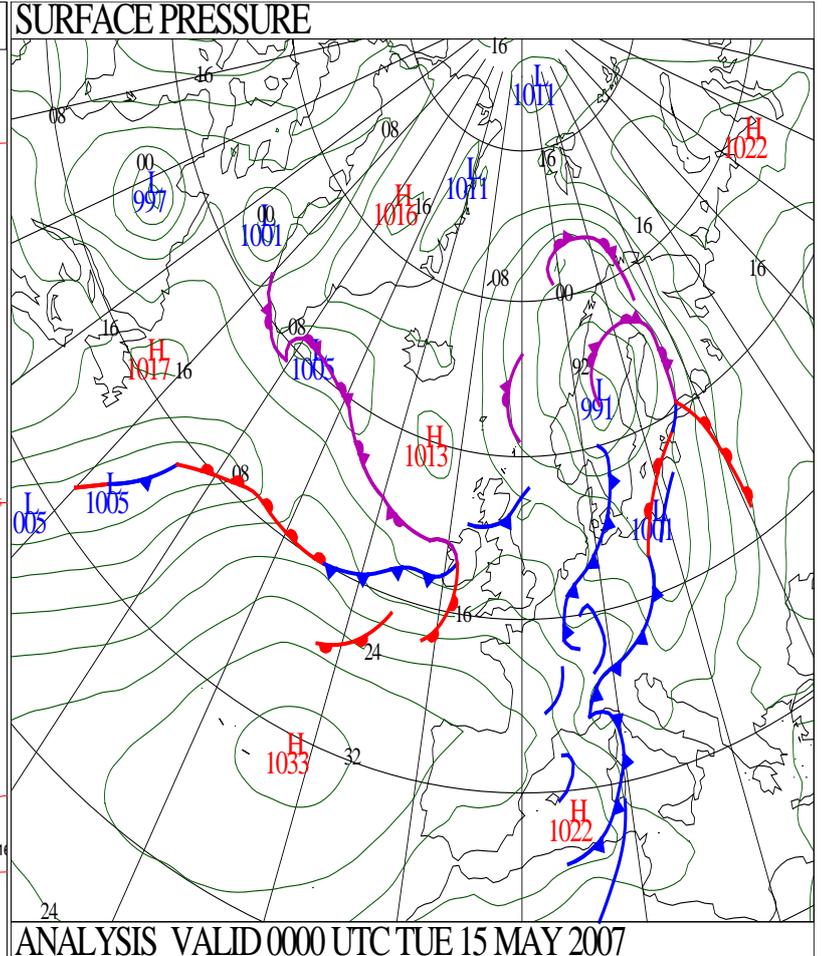

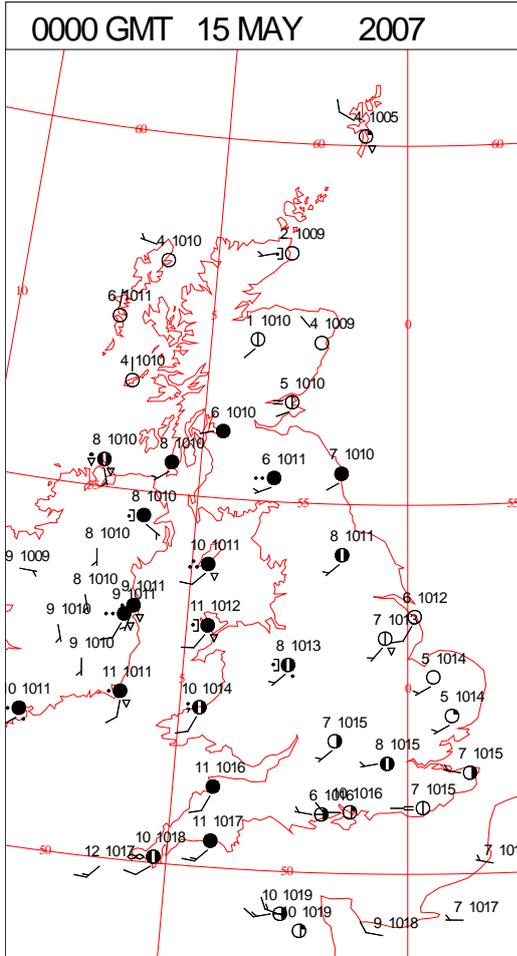

SIGNIFICANT WEATHER

0600 GMT 14 MAY 2007 SIG WEATHER	1200 GMT 14 MAY 2007 SIG WEATHER	<p>Summary of UK Weather for Monday 14 May 2007. Across Scotland and Northern Ireland it was a largely dry and sunny start to the day. However, this did not last and showers did develop through the morning, firstly across the Highlands and in the west, but more widely in the afternoon. Later in the afternoon the showers turn heavy at times and merged into more prolonged spells of rain by the evening. In the far northwest though there was a dry and sunny end to the day. Most of England and Wales had a cloudy start to the day with outbreaks of rain. Most of the rain was light, but there were some heavier bursts in places, such as the Midlands and later in the day southeastern parts of England. The rain did slowly edge east through the morning and became restricted to eastern England by lunchtime, though it did take until the early evening for it to clear the Kent coast. Following the rain were much brighter conditions and most areas had some sunshine. A few showers did follow, especially northeastern parts of England and here the showers did turn quite heavy at times and hail and thunder was reported.</p>
		
1800 GMT 14 MAY 2007 SIG WEATHER	0000 GMT 15 MAY 2007 SIG WEATHER	<p>EXTREMES Highest Maximum: 16.5 Great Malvern, Hereford & Worcester Lowest Maximum: 9.2 Fair Isle, Shetland Lowest Minimum: -1.5 Tulloch Bridge, Inverness-Shire Lowest Grass Minimum: -6.3 Tulloch Bridge, Inverness-Shire Most Rain: 11.4 Saughall, Ayrshire Most Sun: 13.6 Fair Isle, Shetland</p>

DAILY WEATHER SUMMARY

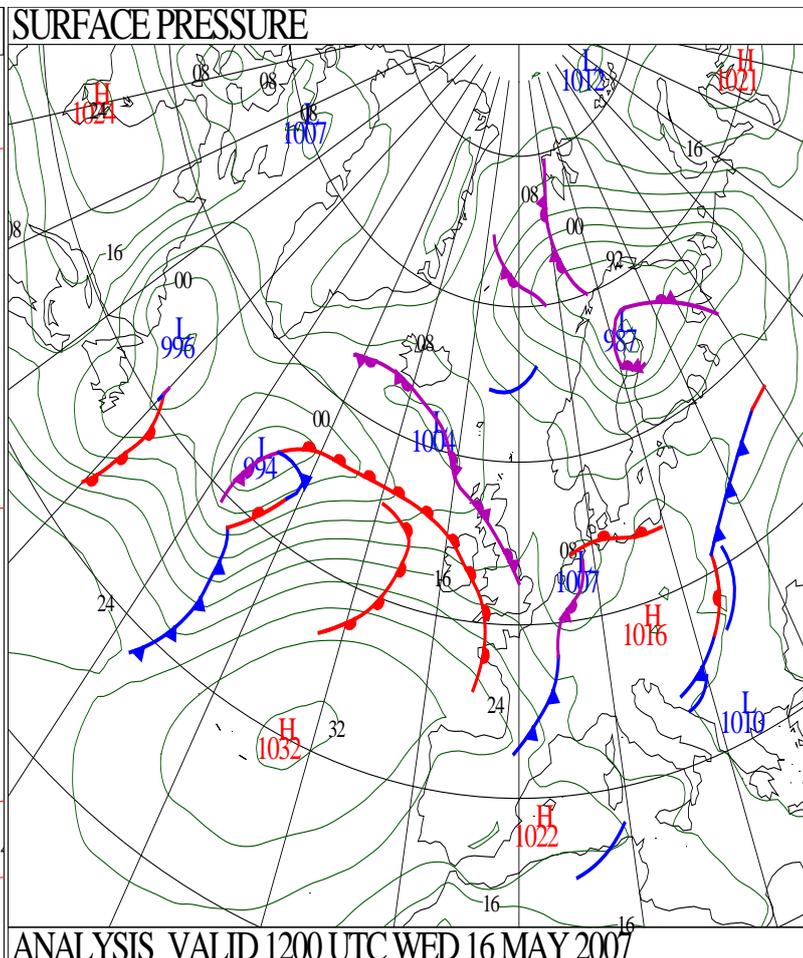

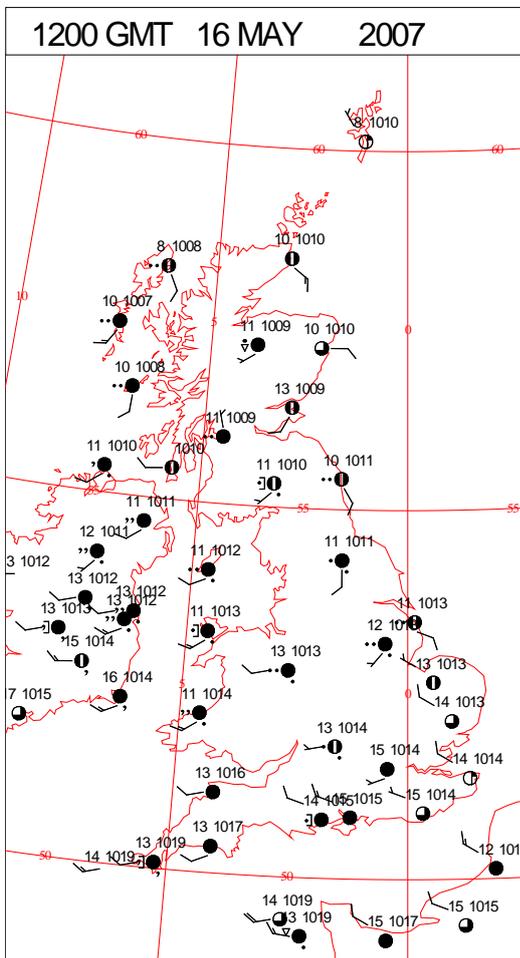

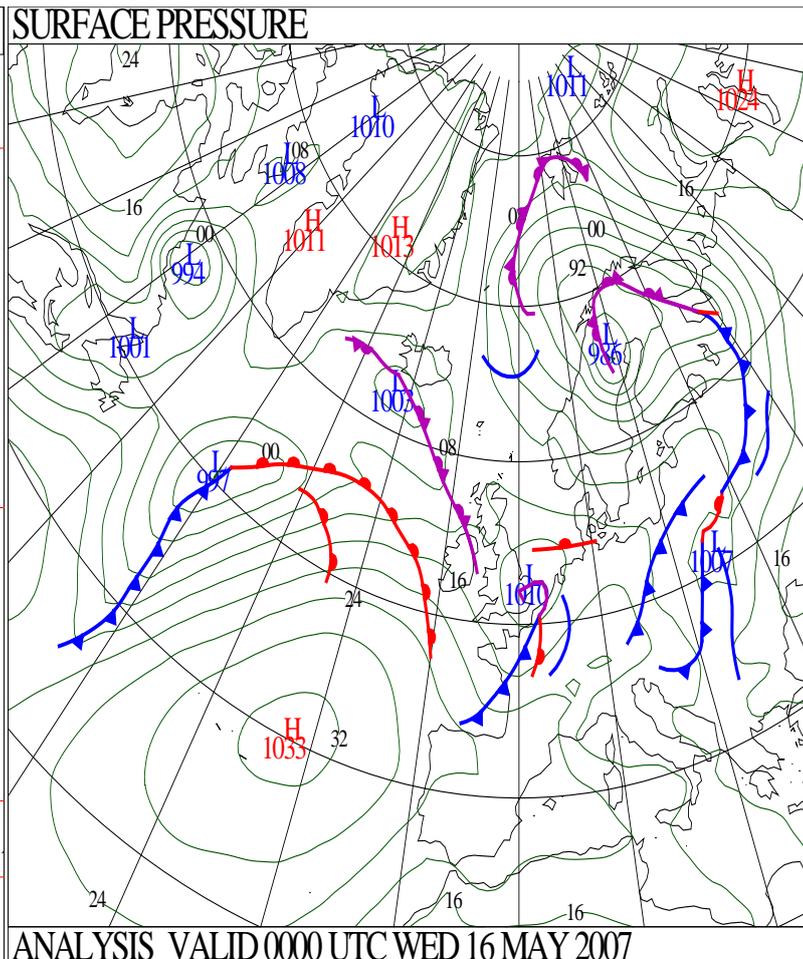

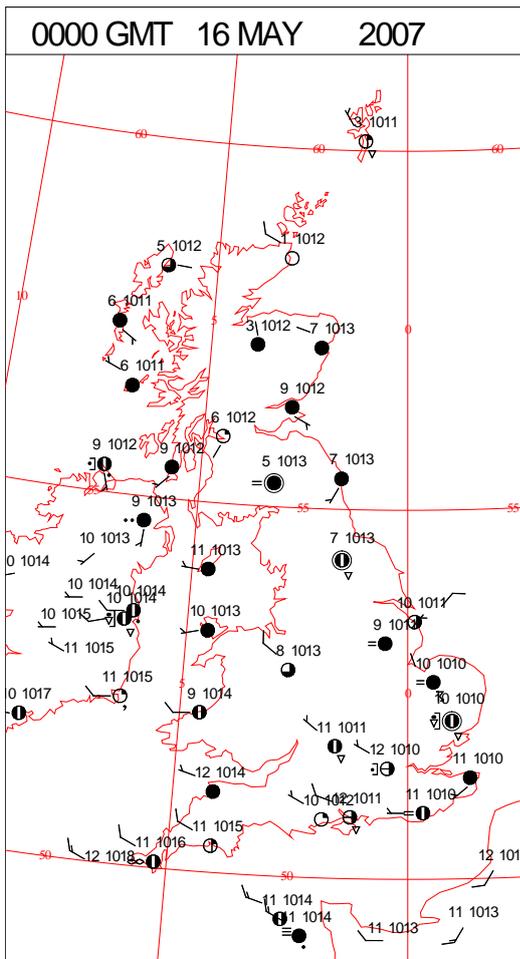

SIGNIFICANT WEATHER

0600 GMT 15 MAY 2007 SIG WEATHER	1200 GMT 15 MAY 2007 SIG WEATHER	<p>Summary of UK Weather for Tuesday 15 May 2007. A band of rain pushed eastwards across much of England and Wales during the early hours, although it tended to fizzle out across the north of England, with some heavy bursts further south. The rain eventually cleared the far southeast during the early afternoon, with sunny spells across much of the UK, but already heavy showers had developed across Wales and the Westcountry. These tracked slowly eastwards across the Midlands and central southern England during the day, eventually reaching East Anglia and the southeast during the evening. A few heavy showers persisted across parts of the Midlands, central southern England and East Anglia right through until midnight. Scotland saw a different day, with a lot of sunshine, and a good deal of dry weather. Just a few scattered showers blew across the northwest of Scotland, and then a few heavy showers developed later across the Borders. For Northern Ireland it was a mainly dry day, but cloud thickened during the morning, with a few showers later in the day. Temperatures recovered from pervious cooler days, and were generally around average for the time of year.</p>

SIGNIFICANT WEATHER

0600 GMT 18 MAY 2007 SIG WEATHER	1200 GMT 18 MAY 2007 SIG WEATHER	Summary of UK Weather for Friday 18 May 2007.
		<p>A band of persistent rainfall associated with a cold front pushed into Northern Ireland and the Hebrides overnight. This rainfall was heavy at times particularly over the Scottish mountains. Meanwhile, further to the south, low cloud resulted in a misty and murky start for much of Wales and southern England. During the day, the rain band worked its way southeastwards, reaching the southeast of England during the evening. The band weakened significantly through the day, with most parts of England seeing only patchy light rain or drizzle. Behind the cold front, cooler and fresher conditions followed with some sunny spells. Showers developed through the day over Scotland, Northern Ireland, northern England and Wales, some of these turning heavy and thundery, particularly in Scotland. It was very gusty with strong southwesterly winds reaching gale force for a time in the northwest of Scotland and Northern Ireland. Daytime temperatures were above average over eastern and central parts of England, due to long spells of sunshine. Elsewhere temperatures remained close to average.</p>

Saturday 19 May 2007

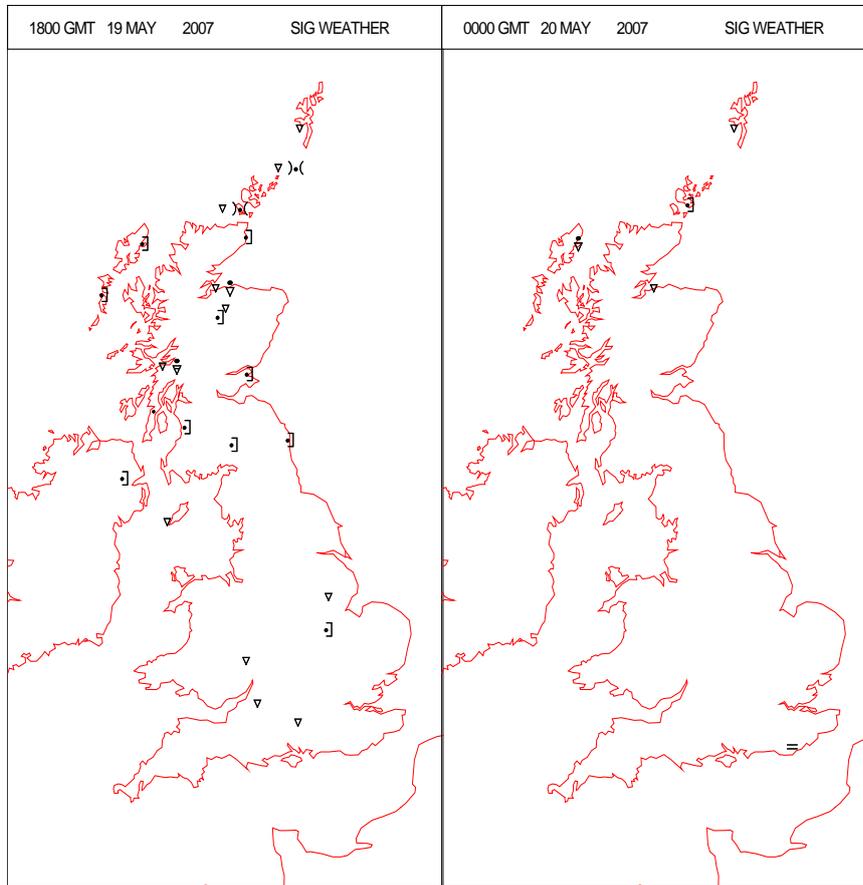

SURFACE REPORTS

SIGNIFICANT WEATHER

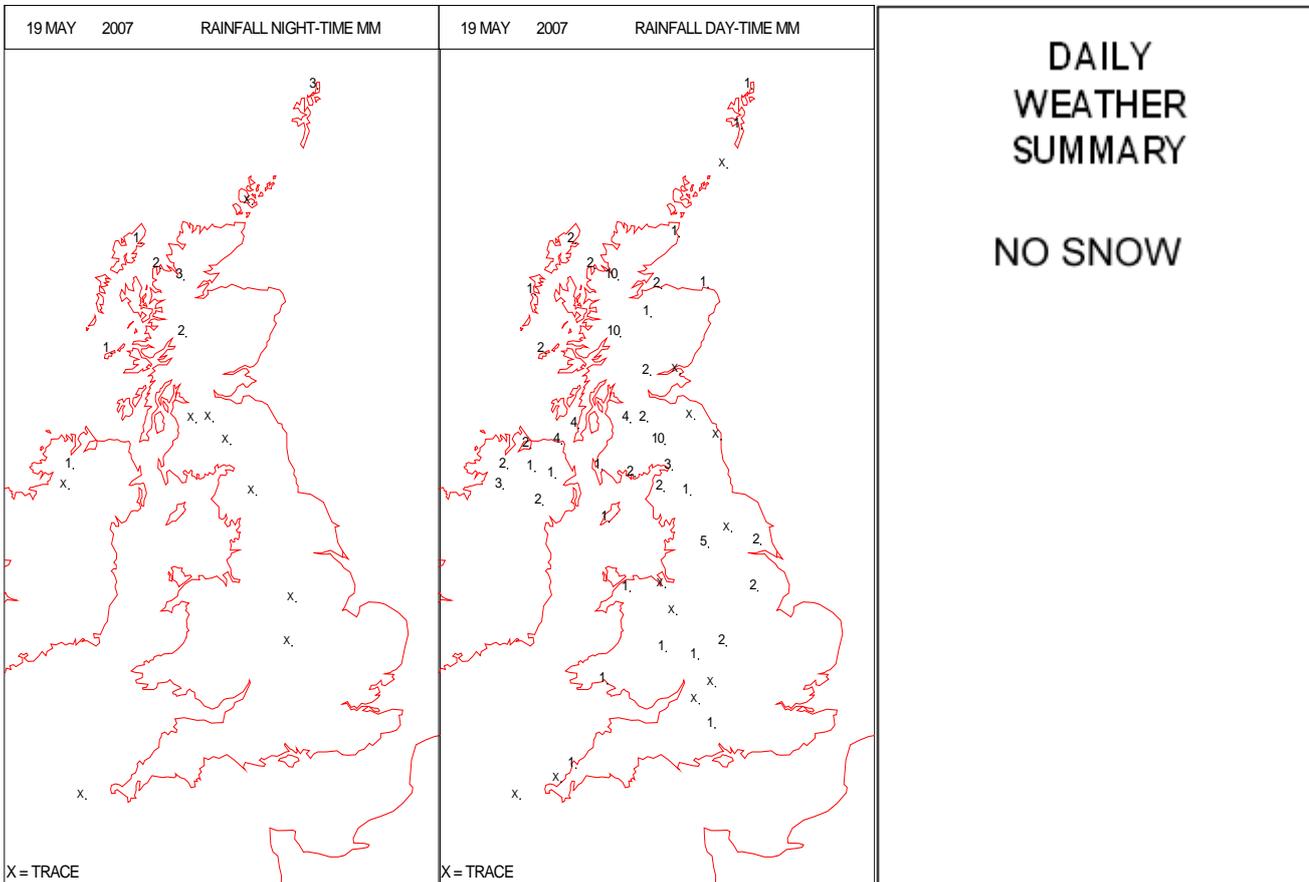

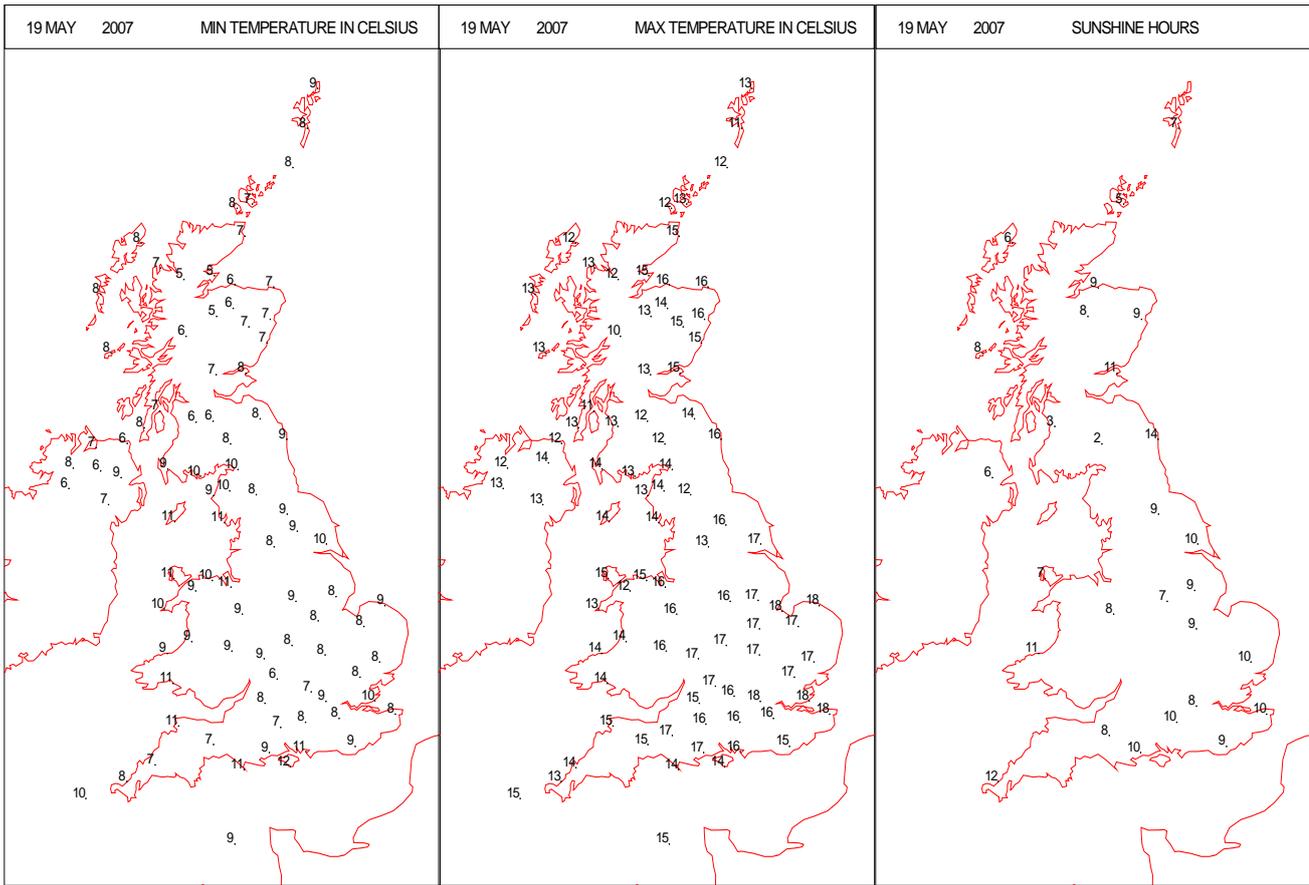

Summary of UK Weather for Saturday 19 May 2007.
 Low pressure was centred to the north of Scotland, with a brisk unstable westerly airstream across the UK during the day. There was a 'rash' of showers across Northern Ireland, Scotland and northern and western parts of England during the early hours, with these merging to give longer spells for rain for parts of Scotland with locally heavy bursts too. There was also some strong and gusty southwest winds with gales around exposed northern and western parts of the UK. The showers became more widespread during the day, pushing into more central and eastern parts of England but with the southeast corner escaping as the driest. Some of the showers turned thundery across northern England and Scotland during the afternoon. There were some sunny spells around too, though. The showers started to die away later in the afternoon, and much of England and Wales saw a dry and fine evening, although showers continued across Scotland and Northern Ireland. Winds continued to ease. Temperatures were generally around normal.

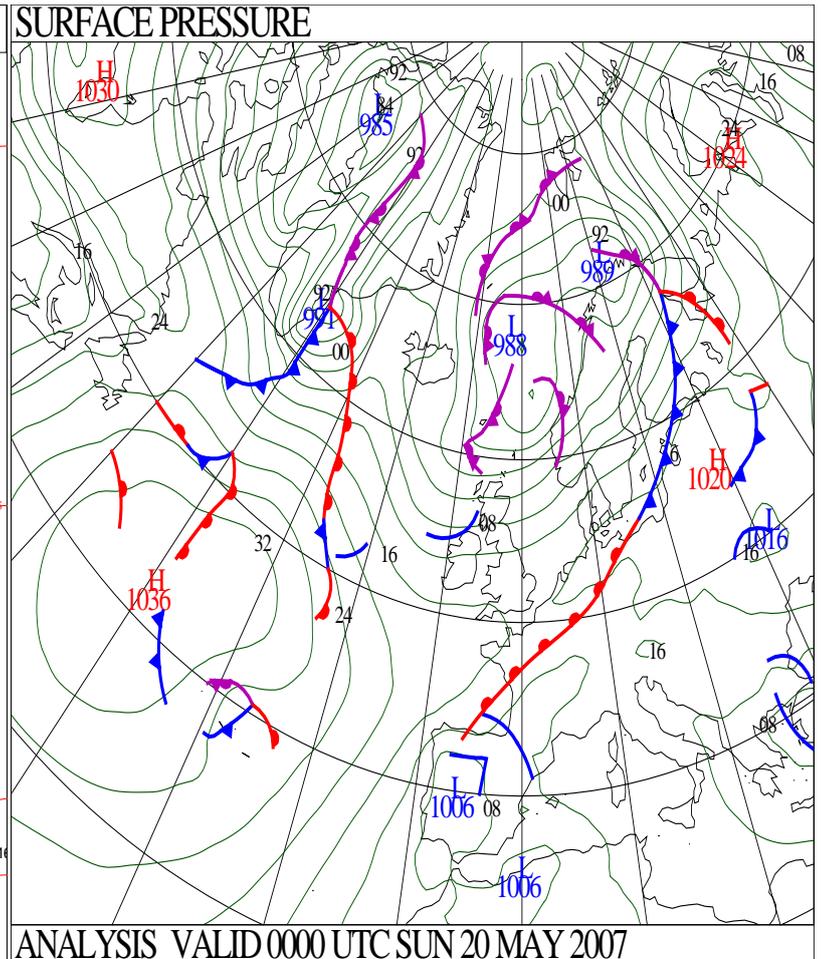

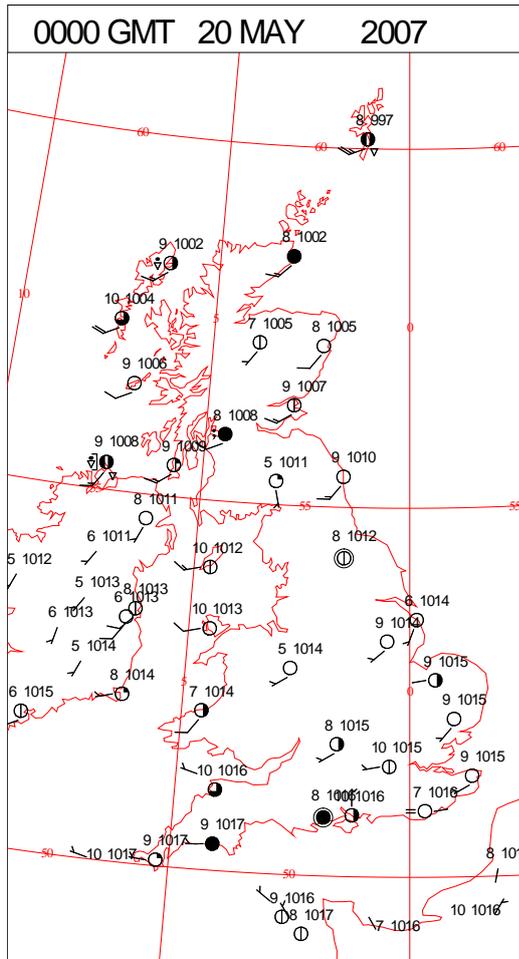

EXTREMES
Highest Maximum:
 18.0 Heathrow, Greater London
Lowest Maximum:

SIGNIFICANT WEATHER

0600 GMT 20 MAY 2007 SIG WEATHER	1200 GMT 20 MAY 2007 SIG WEATHER	<p>Summary of UK Weather for Sunday 20 May 2007. Many parts of the UK had a dry day and, although there was a fair amount of cloud, there were some bright and even sunny spells around. The best of the sunshine was across more western areas, particularly coastal parts of Wales and Devon and Cornwall. There was a continued scattering of showers across Northern Ireland and Scotland, the odd locally heavy one too, with even some thunder in places. A few showers also developed across the mountains of Wales later in the afternoon. Showers continued into the evening across Northern Ireland and Scotland but gradually died off as the evening progressed. Thicker cloud also streamed into the southeast of the UK during the evening with a few spots of rain. Further to the north and west there were clearer spells. Winds were light across the southern half of the UK but slightly more moderate and from the west or southwest across the north. Temperatures generally around normal.</p>

SURFACE REPORTS

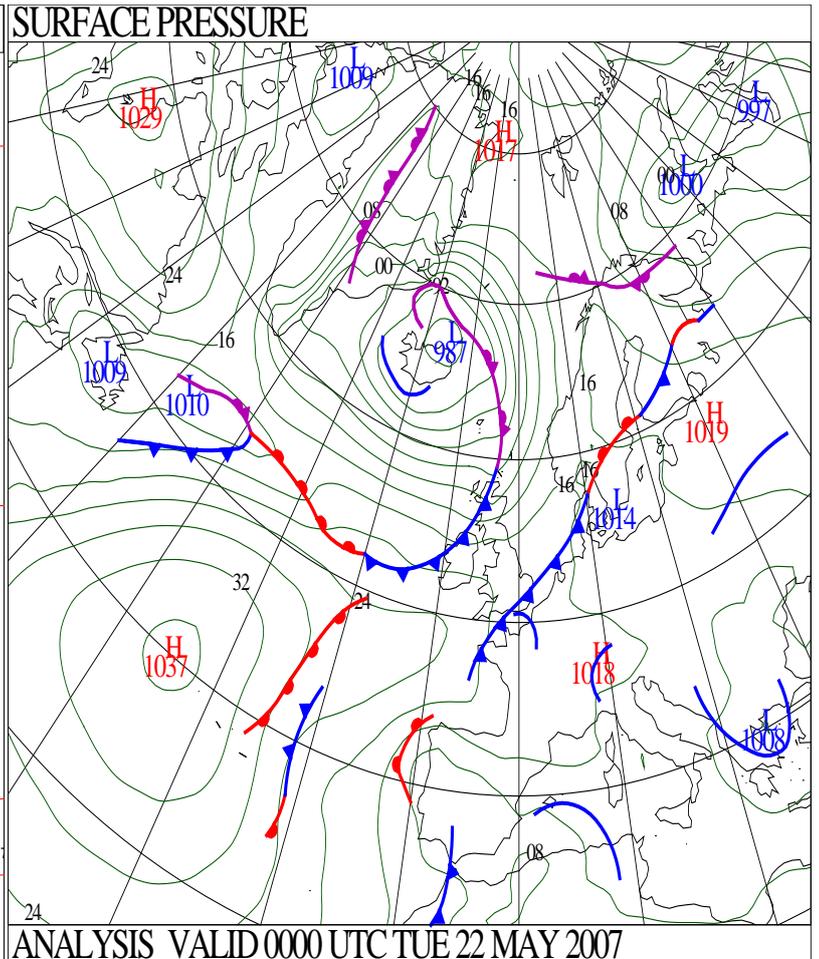

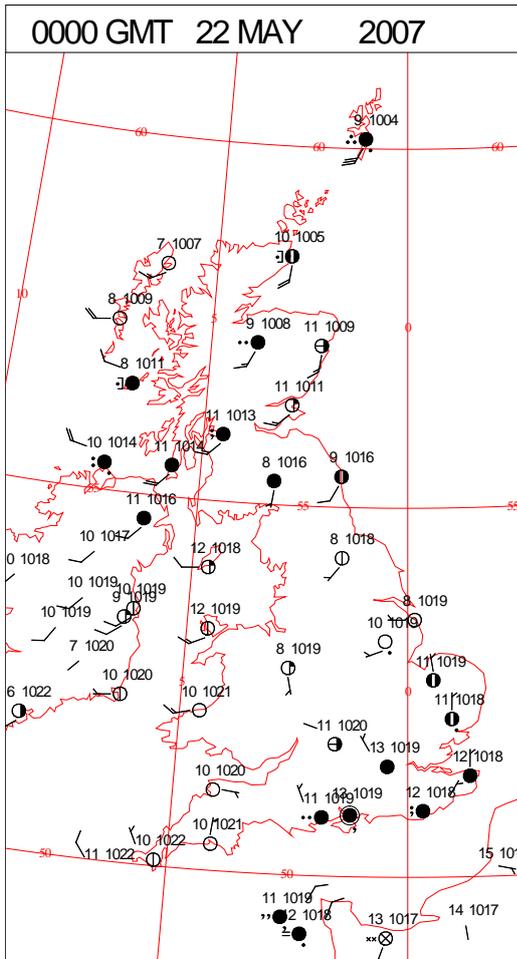

SIGNIFICANT WEATHER

0600 GMT 21 MAY 2007 SIG WEATHER	1200 GMT 21 MAY 2007 SIG WEATHER	<p>Summary of UK Weather for Monday 21 May 2007. It was a chilly start to the day with ground frost recorded across north Wales and northern England. Air temperatures fell as low as 1 °C in Gwynedd, Cumbria and Northumberland. Cloud was already spreading into northern Scotland by the morning forward of an approaching Atlantic weather system. Freshening winds brought the first signs of rain to the Hebrides towards midday. The rain set in to become persistent later in the day, and the evening was to be wet across much of northern and western Scotland as southerly winds increased to gale force. A gust as high as 46 knots was recorded at Uist. Central southern and southeast England together with the Channel Islands had a cloudy day with sporadic outbreaks of rain which resulted in play being severely curtailed at the Lords cricket test match. Wales, northern England, the north Midlands, southern Scotland and Cornwall, by contrast, enjoyed a fine day's weather with hazy sunshine. Temperatures in these areas reached a high of 18 °C, but the southeast was on the cool side with temperatures struggling to reach 15 °C.</p>

SURFACE REPORTS

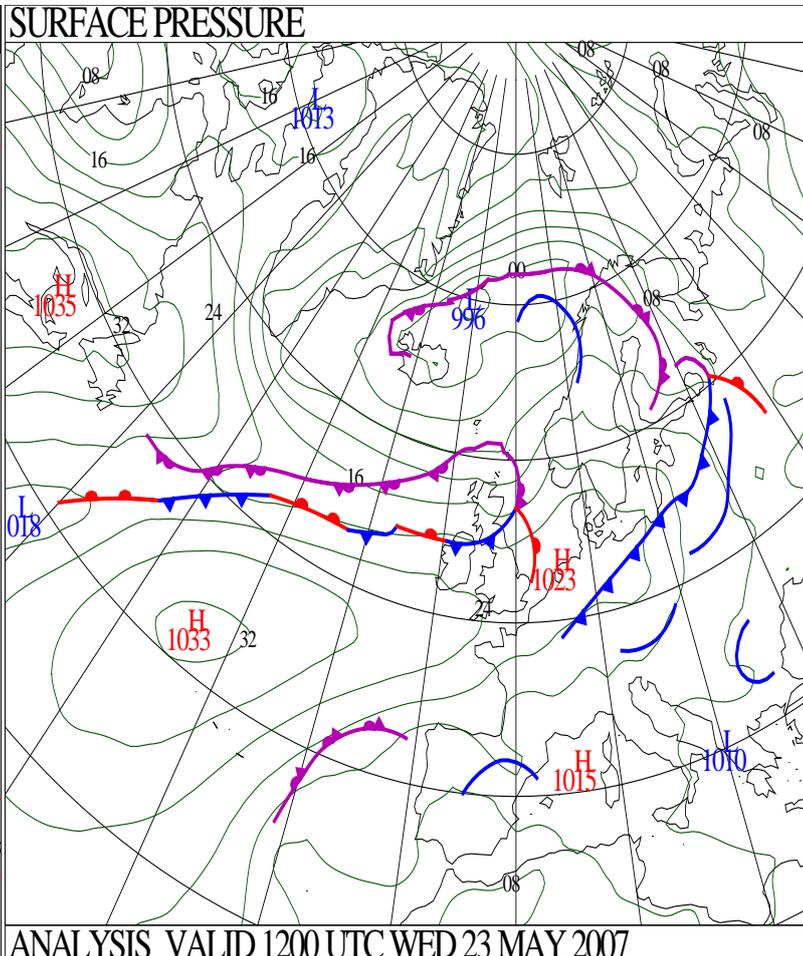

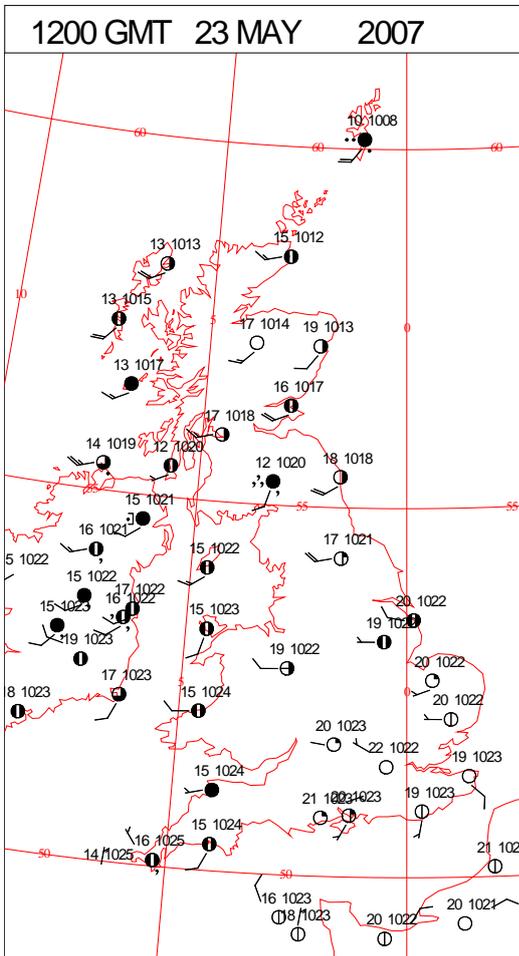

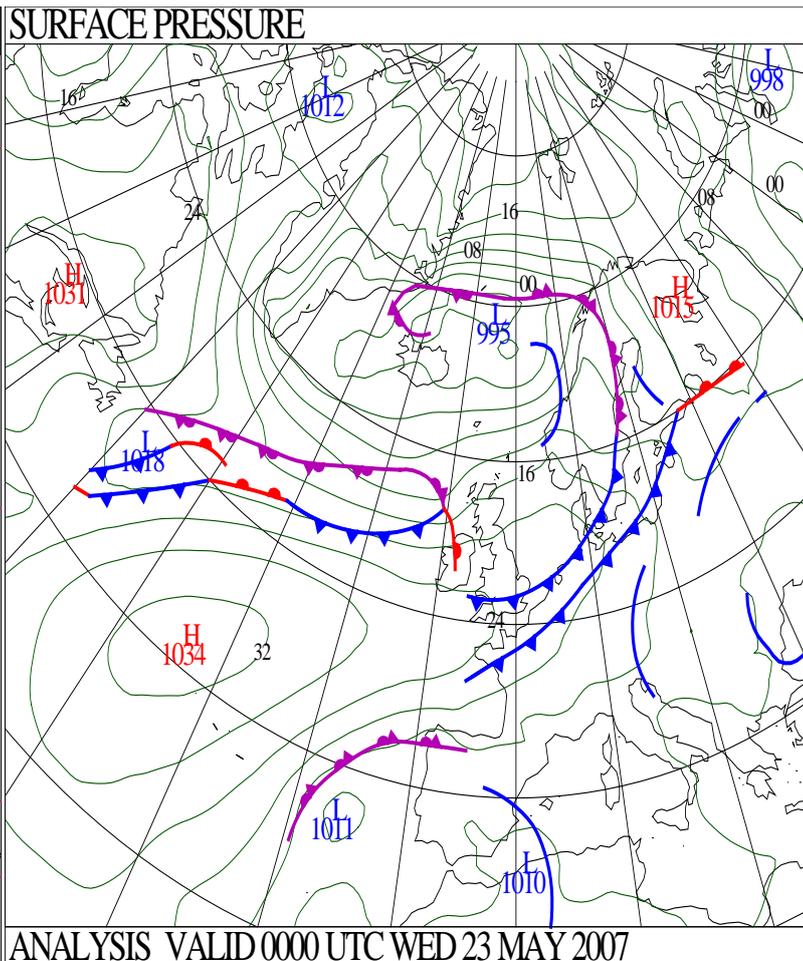

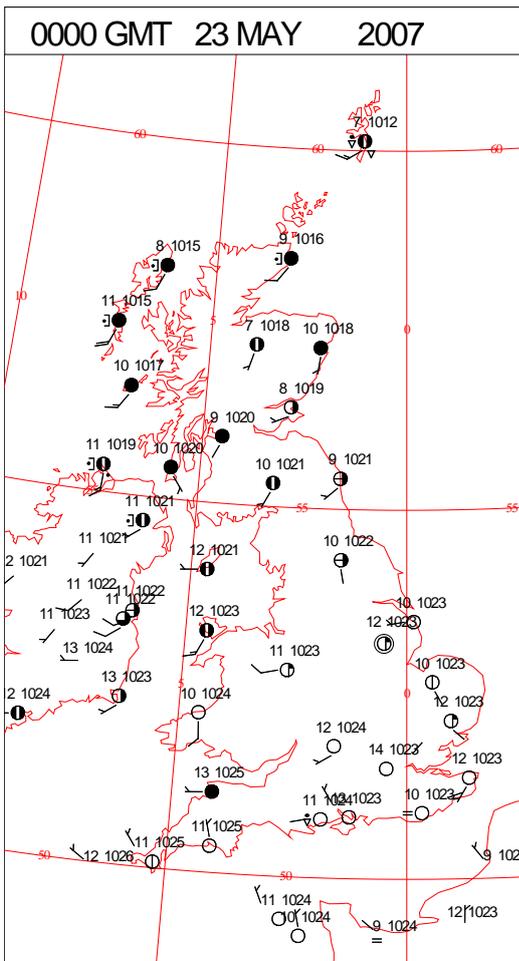

SIGNIFICANT WEATHER

0600 GMT 22 MAY 2007 SIG WEATHER	1200 GMT 22 MAY 2007 SIG WEATHER	<p>Summary of UK Weather for Tuesday 22 May 2007. Another chilly start to the day with temperatures falling close to zero in some rural areas of Wales and Scotland. Many people woke up to a bright start, with largely clear skies recorded across much of England and southern Wales. For northern England and northern Wales it was a cloudier affair with the odd patch of light rain about. Scotland also saw a generally fine start, with just the occasional shower cropping up from time to time. The showers affecting Scotland continued throughout the day, although many places did remain dry. Elsewhere the band of cloud across northern England pushed slowly southwards and broke up to leave a brighter afternoon. Over the southern parts of England, which saw the best of the sunshine, temperatures widely topped 20 °C. Combined with some light winds, this produced a warm feel. Elsewhere, a cooler 15–17 °C was reached.</p>

SIGNIFICANT WEATHER

0600 GMT 23 MAY 2007 SIG WEATHER	1200 GMT 23 MAY 2007 SIG WEATHER	<p>Summary of UK Weather for Wednesday 23 May 2007. There was some low cloud, especially in southwestern parts at first, but this burnt back to the Bristol Channel coasts through the day. Most parts of southern and central England and Wales then had a dry and fine day with bright or sunny spells, and just some patchy cloud developing. Further north it was a cloudier picture with occasional drizzle for north and west Scotland, but to the lee of hills it brightened up reasonably well. Just light winds in the south, but a brisk westerly across the northern half of the UK. It was another warm day particularly in the south with temperatures widely above average for the time of year, but perhaps slightly below average where the cloud plagued some western coasts.</p>

SIGNIFICANT WEATHER

0600 GMT 24 MAY 2007 SIG WEATHER	1200 GMT 24 MAY 2007 SIG WEATHER	<p>Summary of UK Weather for Thursday 24 May 2007. Fog was quite extensive over much of the southwest of the UK at first, but it cleared by mid morning. Most of England and Wales remained dry and generally warm and, although sunny at first in parts of the south, it was generally more cloudy than of late. It was cloudy over Scotland and Northern Ireland as a band of rain moved slowly south, giving some heavy and persistent rain over western upslopes of Scotland during the day. As the rain pushed south, showers followed across northern Scotland. The rain reaching the far north of England during the evening, but had become significantly lighter and more patchy by this stage, fading to almost nothing during the rest of the evening. Generally cooler over Scotland, with a moderate to fresh westerly breeze, and a lighter breeze further south. Temperatures were widely above average for the time of year, but close to or perhaps just below average in the west of Scotland.</p>

SIGNIFICANT WEATHER

0600 GMT 25 MAY 2007 SIG WEATHER	1200 GMT 25 MAY 2007 SIG WEATHER	<p>Summary of UK Weather for Friday 25 May 2007. Overnight, some patchy light rain and drizzle, associated with a cold front, affected Wales and northern England, reaching the midlands by morning. At the same time, northern Scotland and Northern Ireland were affected by widespread showers. Most other parts of the UK saw a dry night, with extensive areas of low cloud, mist and fog moving over Wales and southern England off the sea. During the day, the band of cloud, light rain and drizzle move southwards and weakened, reaching the far southeast during the evening. By this time the rain had almost eased completely. Further north, widespread showers continued over Northern Ireland and northern Scotland, spreading to the south of Scotland during the morning. Most other parts of the UK were mostly dry, with just a few showers here and there. There were sunny spells for most, even over Northern Ireland and Scotland, where it was showery. It was warm and humid in the southeast ahead of the cold front, with temperatures generally close to, or a little warmer than average. It was cooler and fresher elsewhere with temperatures generally close to, or a little below average.</p>

SIGNIFICANT WEATHER

0600 GMT 26 MAY 2007 SIG WEATHER	1200 GMT 26 MAY 2007 SIG WEATHER	<p>Summary of UK Weather for Saturday 26 May 2007. Scattered showers affected Scotland and Northern Ireland overnight. A few showers also developed across southeast England, otherwise, it was a dry night for most places. It was a chilly night for many with an air frost over parts of Scotland. During the day most places had some sunny intervals, however, more isolated showers developed over England, while the existing showers over Northern Ireland and Scotland became more widespread. Some showers in the north became quite heavy with one or two developing to thunderstorms. During the afternoon cloud increased with some outbreaks of mostly light rain developing over England, Wales and Northern Ireland. During the evening these outbreaks became more persistent and heavy, particularly over Northern Ireland and the Midlands. Daytime temperatures were generally below average across the UK.</p>

SIGNIFICANT WEATHER

0600 GMT 27 MAY 2007 SIG WEATHER	1200 GMT 27 MAY 2007 SIG WEATHER	<p>Summary of UK Weather for Sunday 27 May 2007. A generally cloudy night throughout the country with rain affecting all areas except the far northwest of Scotland. It was a chilly night for many but the only air frosts were in Scotland, mainly over the higher ground. During the day, persistent rain continued to affect England and Wales with some very heavy rainfall at times particularly in the south. Further north the rain was patchier and less intense with much of Scotland only seeing showers feeding south west through the Great Glen. Strong winds arrived over the south west early in the afternoon then strengthened to near gale force in places while spreading to much of England and Wales. The strong winds and rain persisted into the evening and night. Daytime temperatures were below average over the UK, particularly under the persistent rain where some sites remained in single figures throughout.</p>

SIGNIFICANT WEATHER

0600 GMT 28 MAY 2007 SIG WEATHER	1200 GMT 28 MAY 2007 SIG WEATHER	<p>Summary of UK Weather for Monday 28 May 2007.</p> <p>A large area of persistent and sometimes heavy rain affected much of England overnight with some very large amounts of rain falling at times. The Isle of Wight received the most with 50 mm of rain. There were also some very strong winds with gales along the north Norfolk coast and this led to a fairly miserable night for many.</p> <p>The cloud and rain began to move to the east overnight with the western side of the country starting off with mainly clear skies and these lasted for much of the day with only isolated showers. In the east the rain continued with a dull and grey day, though the winds did ease off a little.</p> <p>In the sunshine in the west temperatures reached near average values for the time of year but in the rain band many sites struggled to reach double figures.</p>

SIGNIFICANT WEATHER

0600 GMT 29 MAY 2007 SIG WEATHER	1200 GMT 29 MAY 2007 SIG WEATHER	<p>Summary of UK Weather for Tuesday 29 May 2007.</p> <p>During the early hours Scotland and northern and eastern England were overcast with outbreaks of rain, and it was also windy in exposed eastern areas. There were also some showers in northern Wales. Central and southern Wales along with southern and southwestern England and Northern Ireland were generally dry with clear spells. It was cold in these areas with a ground frost forming in some rural locations, along with isolated air frost patches in frost hollows.</p> <p>During the day Scotland and northeastern England remained wet with further spells of rain, some of which were heavy in eastern and northeastern Scotland. Northern Ireland, Wales and southern parts of England had a day of sunny intervals and scattered showers, although many areas remained dry. A few of the showers became heavy with isolated thunderstorms. Central and northwestern parts of England started cloudy with rain in places but the skies brightened up during the day to leave an afternoon of sunny intervals and scattered heavy showers. Afternoon temperatures were slightly below the May average, although many southeastern areas were notably less cold compared to the previous day.</p>

SIGNIFICANT WEATHER

0600 GMT 30 MAY 2007 SIG WEATHER	1200 GMT 30 MAY 2007 SIG WEATHER	<p>Summary of UK Weather for Wednesday 30 May 2007. All of Scotland (except the west and southwest) and northeastern England had a wet night with widespread rain, some of which was heavy in Aberdeenshire. Further south across Northern Ireland, the remainder of northern England, central England and northern Wales it was a dry and cold night with clear spells. There was a patchy ground frost and the temperature even fell below freezing in one or two spots. Southern England and southern Wales were dry at first but rain moved in from the southwest during the early hours. Northern Scotland had a miserable day's weather with more or less non-stop rain, some of which was heavy. There was probably some localised flooding. On the other hand central and southern Scotland and northeastern England brightened up for a while. The rain in southern England and southern Wales spread northeastwards into Northern Ireland and northern England, although it gradually fragmented as it did so. Brighter weather with sunshine and scattered showers followed northeastwards across southern and western England and Wales. Temperatures were generally close to average in the south but below average in northern areas.</p>
