NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Monday, 1st January 1906.

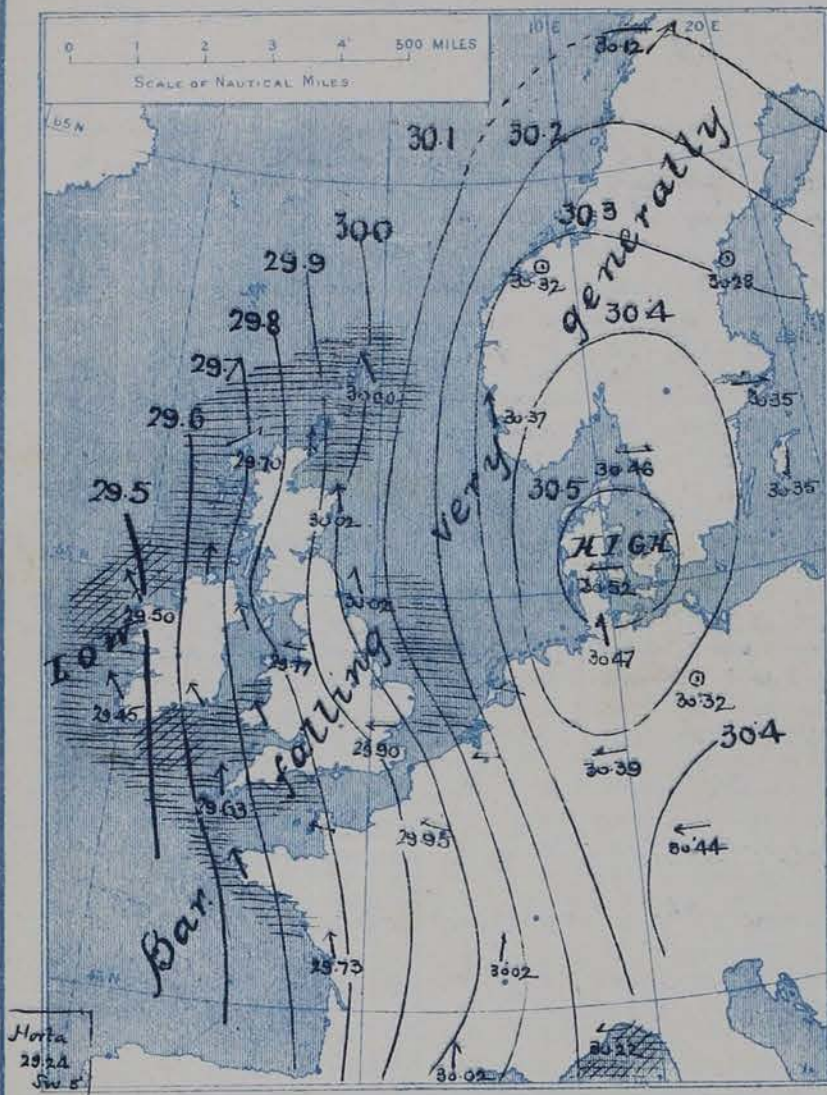

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ☉
Force 8 to 10 → Force 1 to 4 → }

SEA.—Rough High

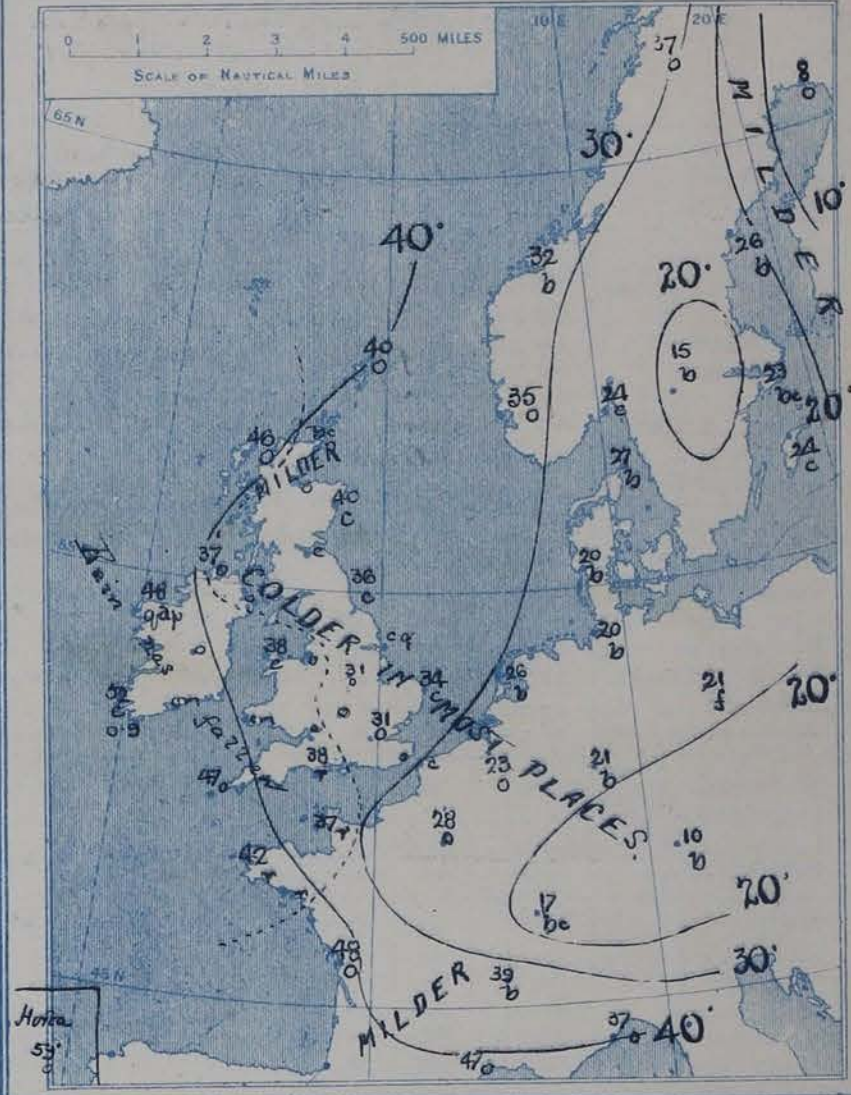

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

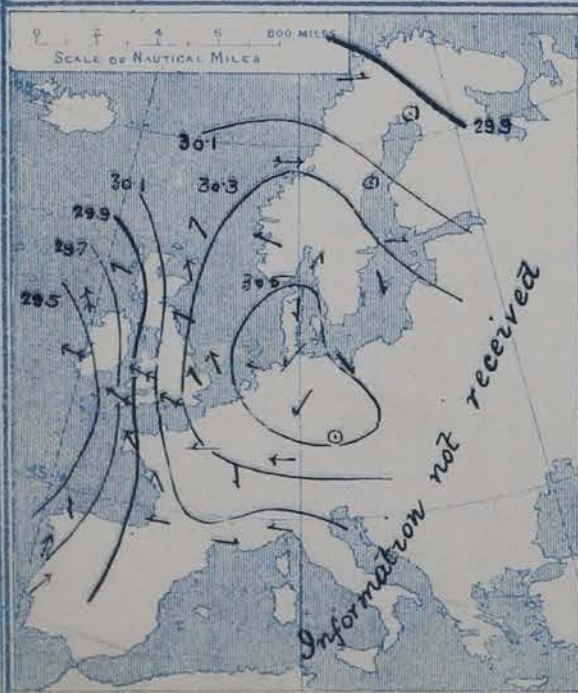

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

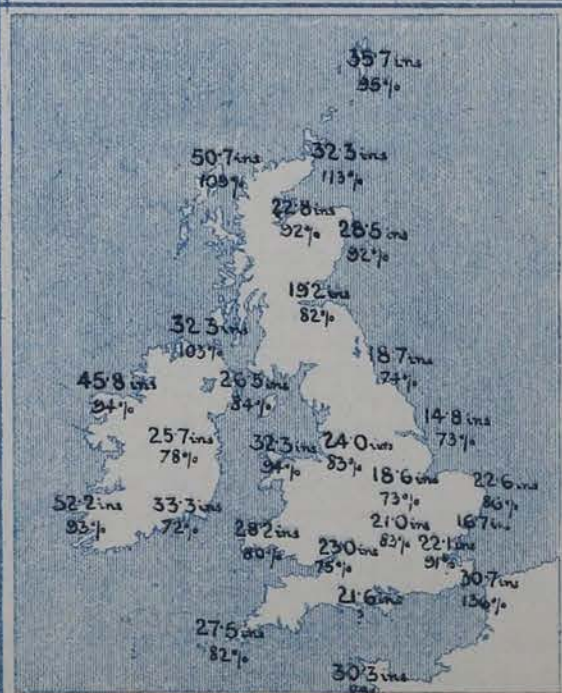

III. BAROMETER AND WIND

Yesterday morning.

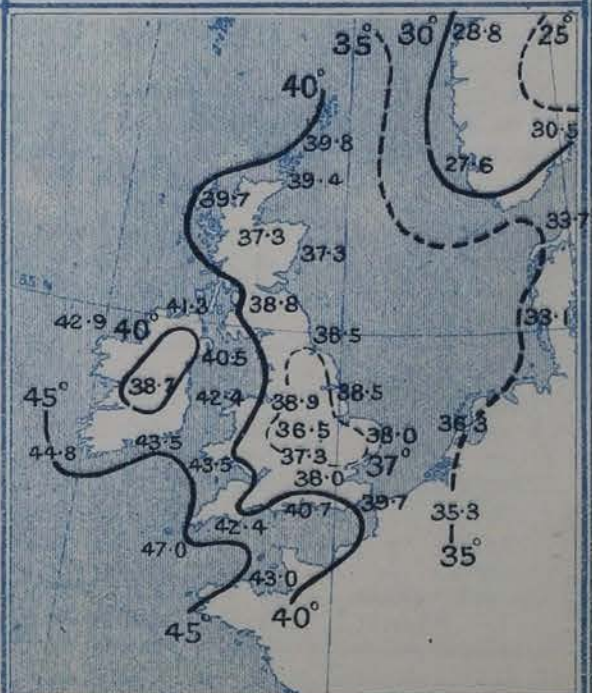

IV. RAINFALL IN 1905.

Total Amount recorded at the Telegraphic Reporting Stations in the year ended 31st DEC., with the percentage of the average amount for the corresponding period.

V. Means of DAILY TEMPERATURE

at 8 A.M. for the Two monthly period DECEMBER - JANUARY. (1871-1900.)

GENERAL SITUATION AT 8 A.M.

PRESSURE

An anticyclone in which the highest reading is 30.52 ins. at Janö, lies over Denmark. On its western side pressure falls off briskly and on the west coast of Ireland we find readings of less than 29.5 ins. There is thus a steep gradient across the North Sea and the British Isles. The gradient is also rather steep over the continental portion of our area, readings ranging from 30.44 ins. at Munich to 29.73 ins. at Rochefort. In the extreme north the lowest reading is 30.06 ins. at Aaparanda.

WIND

Strong S³ to S.E.³ winds prevail generally over France and the British Isles. During the night strong gales from the same quarter were experienced at our Irish stations. In the eastern portion of our area the wind is less strong in force, the prevailing direction being E.³ over Germany and W.³ in the north of Scandinavia. The weather is fine and bright in the anticyclonic region over Scandinavia and Germany but further to the westward it is cloudy or dull and rain is falling in the northwest of France and also at Jersey and Portland Bill. Temperature continues very low in the east. Munich reports a reading of 10°, Aaparanda one of 8°. Over Central England readings are slightly below the freezing point, but over our western districts temperature increases briskly, and at Valencia we find a reading of 52°. The sea is high at several Irish stations and rough or rather rough on the British coasts generally.

TEMPERATURE

WEATHER

AND

SEA

During the previous 24 hours rain fell throughout Ireland and in the extreme west of Scotland and England; at Valencia 0.92 inch was measured. The amounts of bright sunshine reported are all small, the largest total being 1.8 hour at Skegness. In the east of England temperature did not rise appreciably above the freezing point, but in the west comparatively mild weather was experienced.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The slight fall of the barometer which has set in in the southwest will cause strong S.E.³ winds to continue during the ensuing 24 hours. The weather will become unsettled and rain or snow is probable very generally.

FORECASTS*

For the 24 hours ending at NOON on 2nd January, 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	} Strong S.E. ³ to S.W. ³ winds; dull and unsettled, some rain or sleet.
1	SCOTLAND EAST	
2	ENGLAND N.E.	} Strong S. ³ to S.E. ³ or E. ³ winds; dull, some rain or snow. Cold.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	} Same as Nos. 0 & 1.
7	ENGLAND N.W.	
8	ENGLAND S.W.	} Strong S.E. ³ winds; dull and unsettled, some rain or sleet.
9	IRELAND NORTH	
10	IRELAND SOUTH	} Strong S.E. ³ or S. ³ winds; dull, some rain.
	WARNINGS	

Note.—The South Cone, point downwards (⌣), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌢), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post.

W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR *Tuesday, 2nd January* 1906.

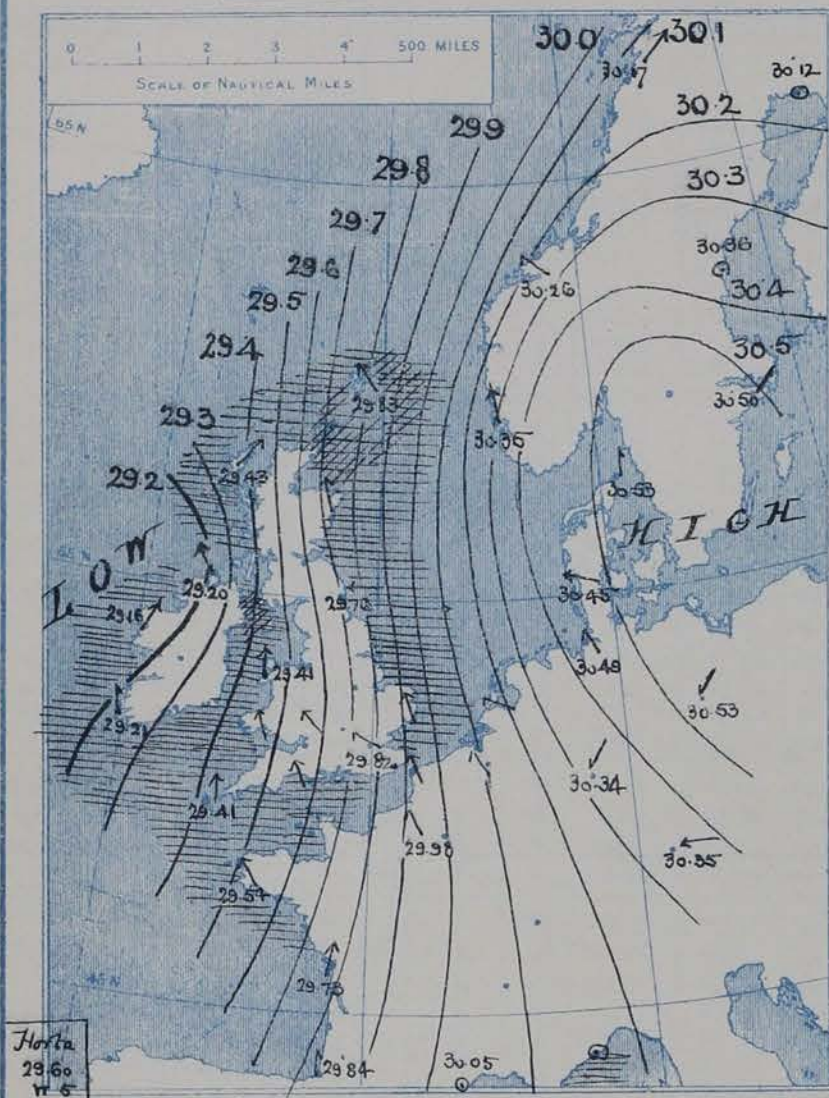

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ☉
Force 8 to 10 → Force 1 to 4 → }

SEA.—Rough High

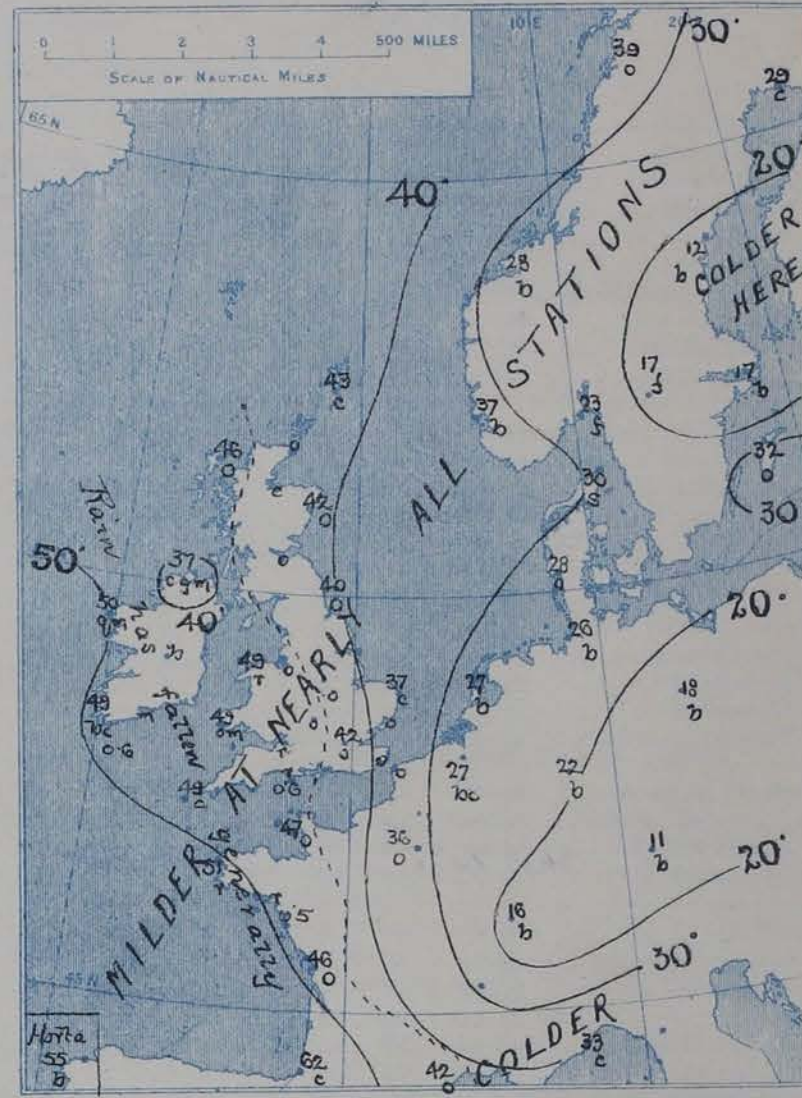

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE.—Isotherms are drawn for each 10°.

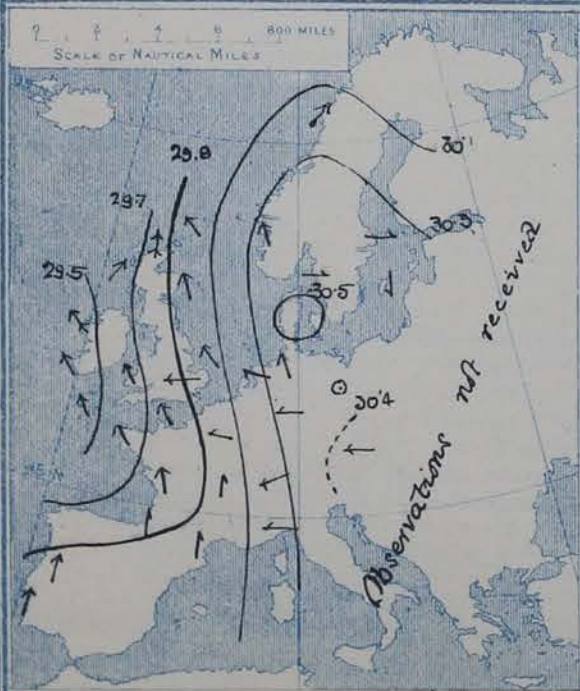

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. EXTREMES OF TEMPERATURE

recorded

in various districts of the United Kingdom during the week ended Saturday, Dec. 30th

V. Means of DAILY TEMPERATURE

at 8 A.M. for the Two monthly period DECEMBER - JANUARY. (1871-1900.)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The barometer has risen slightly in the anticyclone over Southern Scandinavia, the highest readings now being 30.55 ins. at Karlstad and Wisby. A further decrease of pressure has occurred over the British Isles and in the extreme west readings are now below 29.2 ins. A steep gradient for S.^s winds is thus shown over the whole of our area.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind blows from between S. and S.E. over the British Isles, France, Germany and the North Sea; in force it is generally strong and at several stations it blows with the force of a gale. The weather continues fine and very cold in the anticyclonic region in the east, but in the west it is very unsettled and a decided rise of temperature has taken place; this morning's readings are over 10° higher than those of yesterday at many stations in the S. of England. Rain is falling at Holyhead, Bath, Portland Bill and at several stations in the north of France. The sea continues rough on all our coasts.

During the previous 24 hours the weather remained very dull throughout our Islands the only stations at which more than one hour of bright sunshine was experienced were Scilly, 1.5 hours, and Lowestoft, 3.5 hours. Rain fell throughout Ireland and also in the west of Scotland and England; over half an inch was measured at Valencia and Portland Bill. Heavy rain is also reported from several French stations.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The brisk rise of the barometer which set in during the night in the extreme southwest has ceased, and the barometer is still high over Scandinavia. The steep gradient over our Islands and the adjoining regions will thus be maintained and there is little prospect of any important change in the present unsettled conditions.

FORECASTS*

For the 24 hours ending at NOON on 3rd. January. 1906.

DISTRICTS.

FORECASTS.

- | | | | |
|---|------------------|---|---|
| 0 | SCOTLAND NORTH | } | Gales or strong winds from between S.E. and S.W.; dull, some rain. Moderate temperature |
| 1 | SCOTLAND EAST | | |
| 2 | ENGLAND N.E. | } | Strong S.E. ^s or S. ^s winds, a gale in places; dull, some rain. |
| 3 | ENGLAND EAST | | |
| 4 | MIDLAND COUNTIES | | |
| 5 | ENGLAND SOUTH | | Moderate temperature. |

DISTRICTS.

FORECASTS.

- | | | | |
|----|---------------|---|---|
| 6 | SCOTLAND WEST | } | Same as Nos. 0 & 1.

Fresh or strong S. ^s winds, a gale in places; changeable, and very unsettled with some rain. Rather mild. |
| 7 | ENGLAND N.W. | | |
| 8 | ENGLAND S.W. | | |
| 9 | IRELAND NORTH | | |
| 10 | IRELAND SOUTH | | |

WARNINGS

At 7.16 pm yesterday to Districts 5, 6 and 8, and at 9.30 am today to Districts 1, 2, 3, "Keep up South Cone." The signals are now flying on all our coasts.

Note.—The South Cone, point downwards (⌵), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (⌴), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post.

W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Wednesday, 3 January 1906.

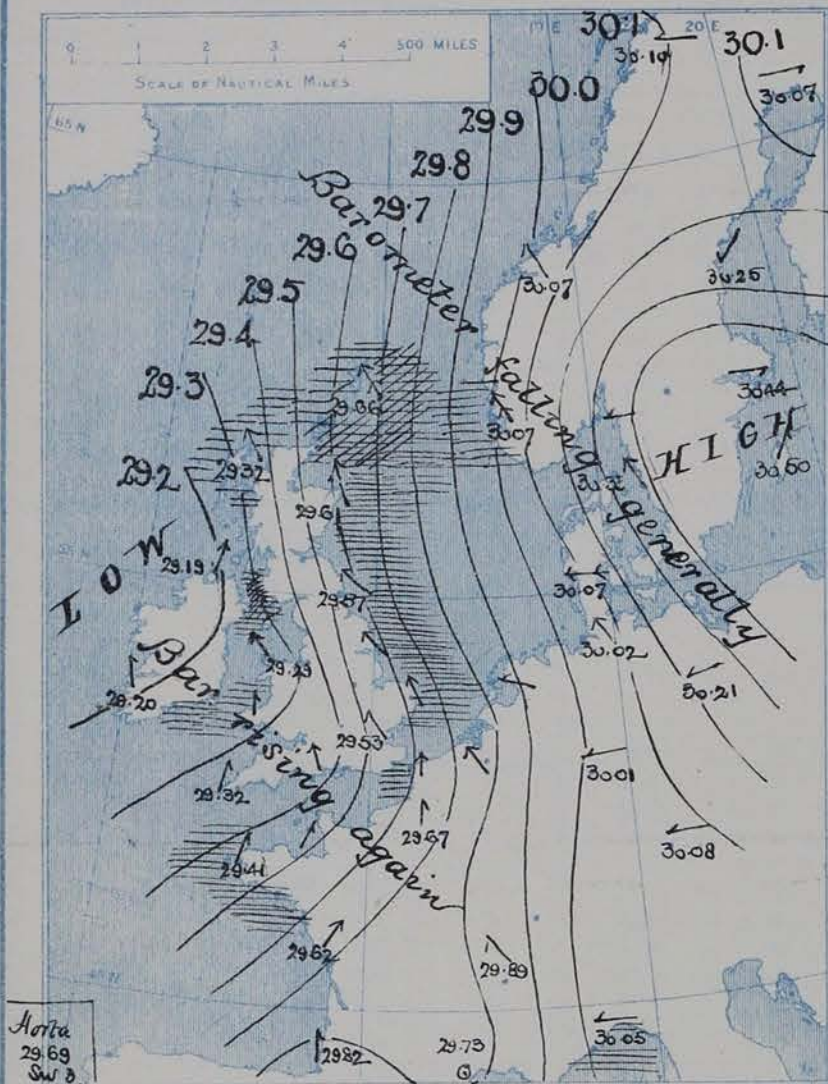

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 ——— Force 5 to 7 ——— } Calm ☉
Force 8 to 10 ——— Force 1 to 4 ———

SEA.—Rough ——— High ———

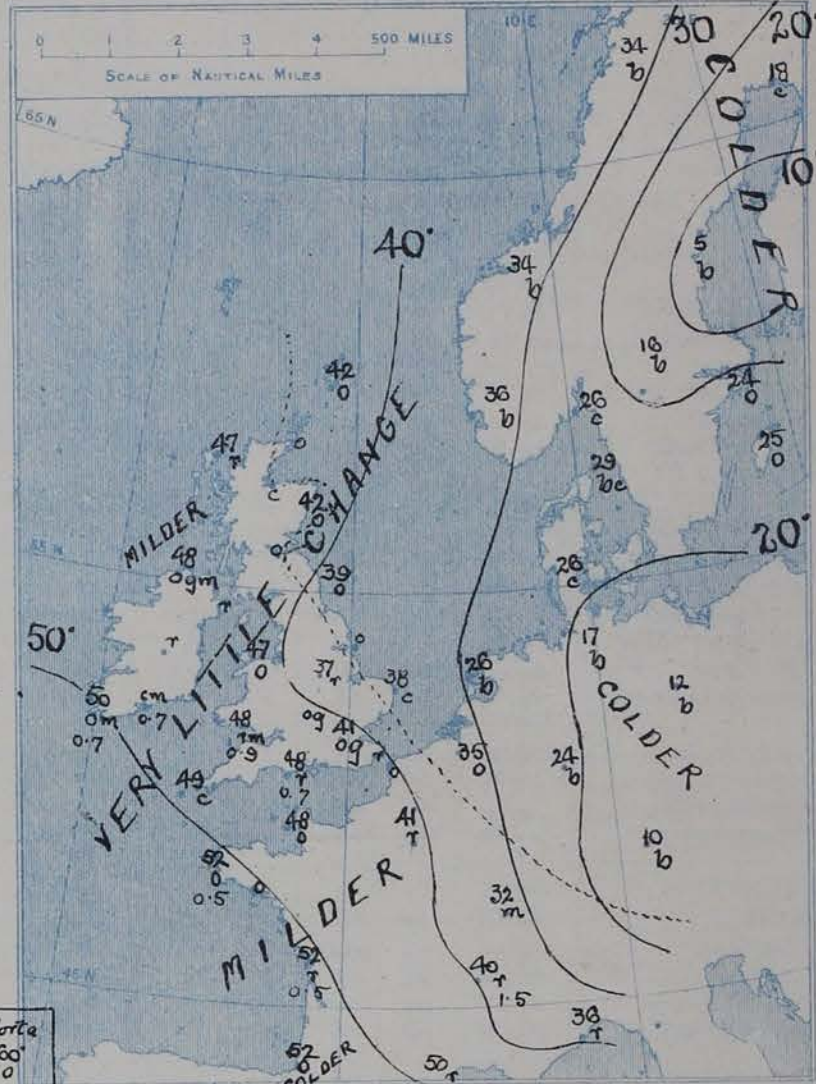

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°

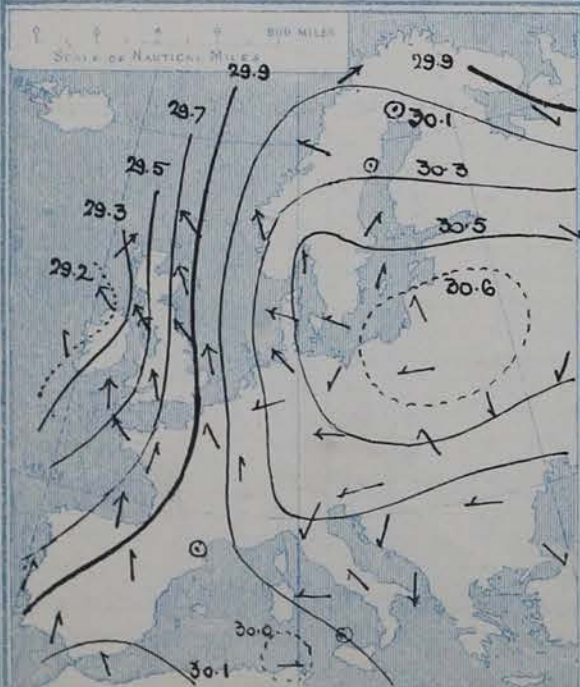

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. LAST WEEK'S RAINFALL.

Amount recorded in various districts of the United Kingdom during the week ended Saturday, Dec. 30, 1905, with the percentage of the average amount for the corresponding week.

V. Means of DAILY TEMPERATURE at 8 A.M. for the Two monthly period DECEMBER - JANUARY. (1871-1900.)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The most conspicuous change in the distribution of pressure which has occurred since yesterday morning is a brisk fall of the barometer over France and Germany, and the formation of a shallow secondary depression over the southwest of the former country. In the north of our area changes have been slight; the anticyclone over Scandinavia is giving way slowly, and in the extreme west of our Islands pressure is now increasing. The extreme readings this morning are 30.50 ins. at Wisby and 29.15 ins. at Birr Castle.

WIND

Strong S.E.^s to E.^s winds still prevail over the North Sea and the eastern portion of the British Isles, but over Ireland and the southwest of England and also on the west coast of France the wind has moderated considerably and veered towards S.W. The weather continues dull and exceedingly unsettled over France and the British Isles. Rain is falling over a large part of Central and Northern France and of the south of England. The majority of German and Scandinavian stations report a cloudless sky and accordingly the temperature in these regions is very low; Munich sends a reading of 10°, Berlin 12° and Hernösand 5°. In the west of our area much milder conditions prevail; over the east of England readings are about normal, but in Ireland and on the west coast of France they are as high as 50° in many cases. The sea continues rough in the Irish Sea and the German Ocean, in the English Channel and over the Bay of Biscay it has moderated.

TEMPERATURE

WEATHER

AND

SEA

During the previous 24 hours heavy rain was experienced at many stations in the southwest of the British Isles and also at several French stations; Lyons reports a total of 1.54 inch. The amounts of bright sunshine experienced were again very small.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The anticyclone in the east is giving way and the barometer is now rising briskly at Valencia and the gradient over Northwestern Europe is accordingly becoming less steep. The wind may therefore be expected to moderate gradually, and it is probable that the change of direction towards S.W. which has commenced in our western districts will spread slowly E.^{wards}. The weather is likely to remain very unsettled.

FORECASTS*

For the 24 hours ending at NOON on 4TH January, 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Strong S.E. ^s winds, moderating gradually and veering towards S.W.; dull, some rain. Moderate temperature.
1	SCOTLAND EAST	
2	ENGLAND N.E.	
3	ENGLAND EAST	Fresh to moderate S.E. ^s winds, shifting later towards S.W.; dull, some rain. Moderate temperature.
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as Nos. 0 to 2.
7	ENGLAND N.W.	
8	ENGLAND S.W.	S. ^s to S.W. ^s winds, moderate or fresh in force; dull, unsettled, some rain. Rather mild.
9	IRELAND NORTH	
10	IRELAND SOUTH	

WARNINGS

At 7.0 p.m. yesterday, to Districts 5 to 10 and part of 0, "Keep up South Cone". The signals are still flying on all coasts.

Note.—The South Cone, point downwards (⏏), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⏏), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.

" Weekly " " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post.

W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

FOR Thursday, 4th January, 1906.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Direction and Force, flying with the wind.

Force abuse 10 \rightarrow : Force 5 to 7 \rightarrow :)

Force above 10 \rightarrow : Force 5 to 7 \rightarrow :
Force 8 to 10 \rightarrow : Force 1 to 4 \rightarrow : } Calm ☉

SEA—Rough High

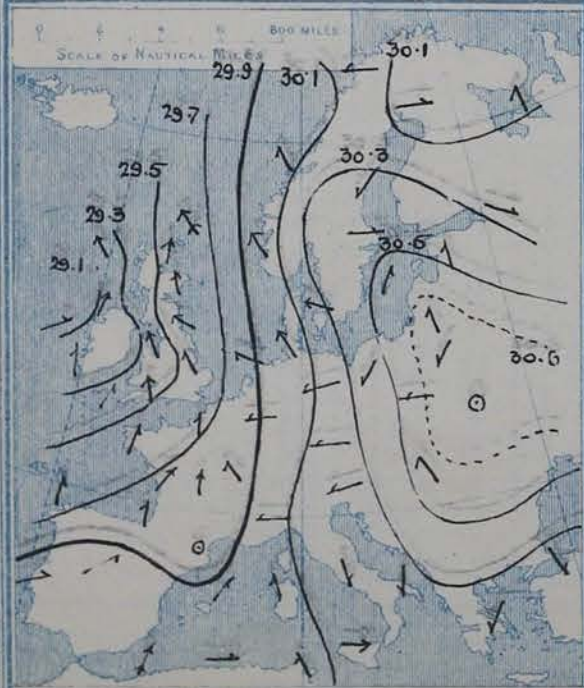

TEMPERATURE.—Isotherms are drawn for each 10°

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus—0.6

Yesterday morning.

Amount recorded
in various districts of the United Kingdom
during the week ended Saturday, 30th Dec., 1905.
with the percentage of the average duration
for the corresponding week.

V. Means of DAILY TEMPERATURE
at 8 A.M. for the Two monthly period
DECEMBER - JANUARY. (1871-1900.)

GENERAL SITUATION AT 8 A.M.

PRESSURE

Since yesterday morning the barometer has fallen decidedly in the east of Scandinavia and risen briskly over France and the Iberian Peninsula, and the Atlantic low pressure system has thus spread in an E.^s direction towards our Islands. Readings now range from 29.3 ins. in the extreme northwest to above 30.2 ins. along the southern and eastern margins of our area.

WIND

TEMPERATURE

WEATHER

AND

SEA

Fresh S.W.^s winds are blowing over the Bay of Biscay and the mouth of the Channel. Light S.^s to S.W.^s breezes prevail over the British Isles, but from Western Scandinavia fresh to strong S.E.^s winds are still reported. The weather is still very unsettled though the sky has cleared at several of our stations. Rain is falling in the southeast of England and also at the Stelder, Paris, Lorient and Rochefort, while showers are reported from many of our own western stations. Over Germany and Scandinavia the weather continues fine as a whole, but a small disturbance situated over the head of the Skager Rack is causing snow at Faerder. Temperature has become very mild in our Islands and the west of France; many of the home readings are but slightly below 50°, and at the French stations this limit is frequently exceeded. Over Germany and Scandinavia temperature has risen very generally, but readings are still below the freezing point in most places. The sea is still high off the northeast of Scotland and rough in the Bay of Biscay, but on the coasts of the British Isles it has moderated very generally.

During the previous 24 hours rain fell at almost all home stations, the largest total reported being 6.1 inch at Portland Bill. No bright sunshine was experienced in the east and north, but in the southwest the sky cleared partially; at Sully as many as 4.3 hours were recorded.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

During the ensuing 24 hours the permanent Atlantic low pressure system is likely to spread further eastward and S.W.^s winds may accordingly be expected to become general over our Islands. The weather will be changeable and mild and rather brighter than of late.

FORECASTS*

For the 24 hours ending at NOON on 5TH January, 1906.

DISTRICTS.

FORECASTS.

- 0 { SCOTLAND NORTH
- 1 { SCOTLAND EAST
- 2 { ENGLAND N.E.
- 3 { ENGLAND EAST
- 4 { MIDLAND COUNTIES
- 5 { ENGLAND SOUTH

Moderate or fresh S.^s to S.W.^s winds; changeable, fair intervals with some showers. Mild.

DISTRICTS.

FORECASTS.

- 6 { SCOTLAND WEST
- 7 { ENGLAND N.W.
- 8 { ENGLAND S.W.
- 9 { IRELAND NORTH
- 10 { IRELAND SOUTH

Moderate or fresh S.W.^s to W.^s winds, strong in places; changeable, fair intervals with some showers. Mild.

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (⌒), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (⌒), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

*For terms for transmission of Forecasts by Telegraph, see next page.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Friday, 5th January, 1906.

I. BAROMETER, WIND AND SEA. This Morning.

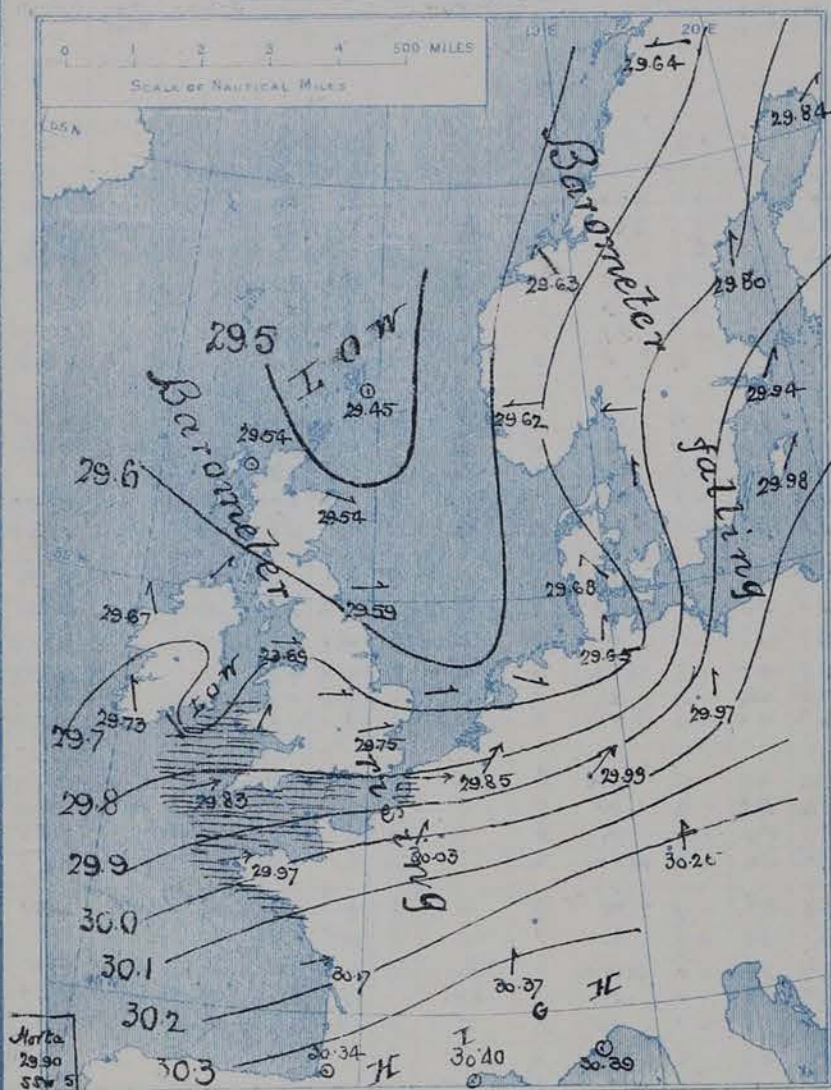

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 Force 5 to 7 } Calm

Force 8 to 10 Force 1 to 4 }

SEA.—Rough High

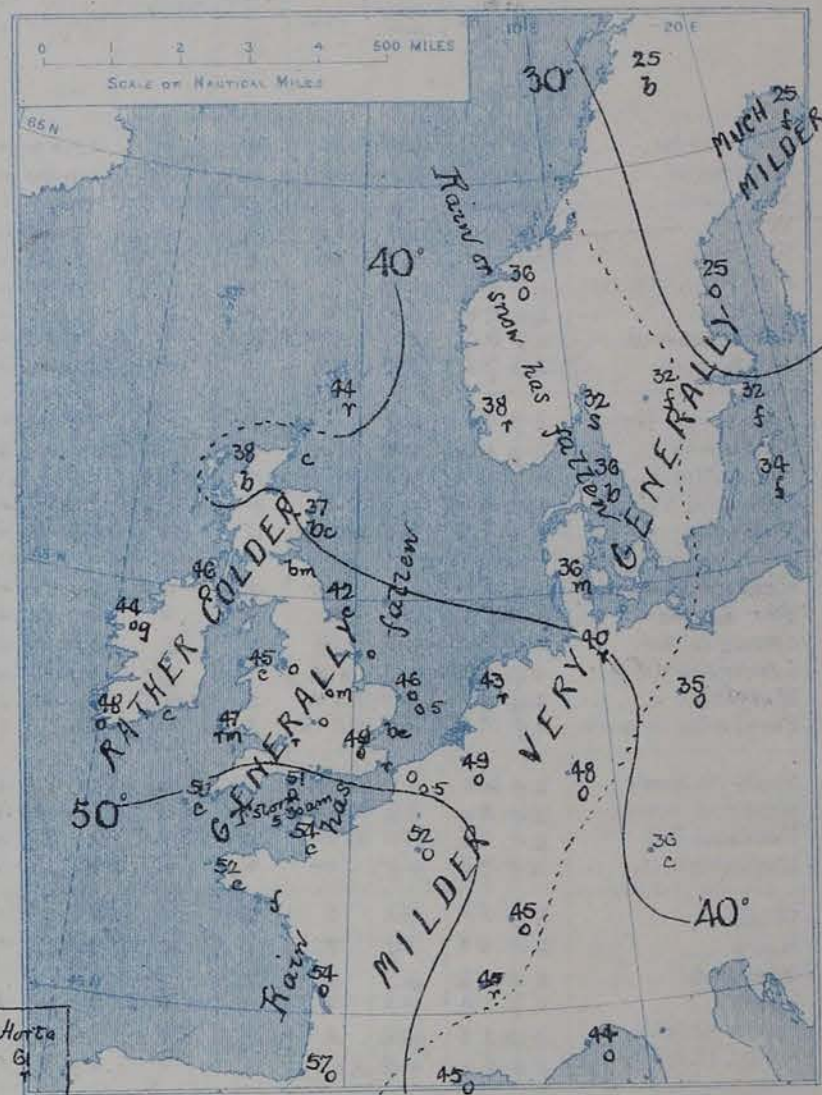

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

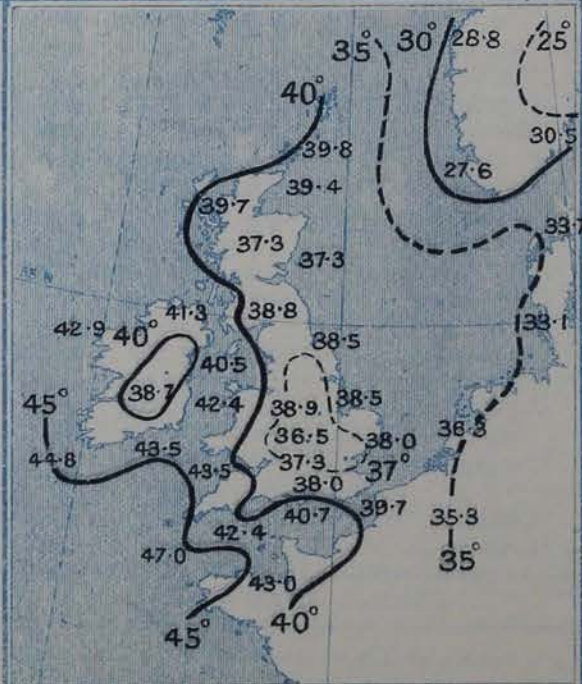

IV. RAINFALL IN 1905.

Total Amount recorded in various districts of the United Kingdom in the 52 weeks ended Saturday, Dec. 30th, 1905, with the percentage of the average amount for the corresponding period.

V. Means of DAILY TEMPERATURE at 8 A.M. for the Two monthly period DECEMBER - JANUARY. (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

A trough of low pressure extends across the North Sea, the readings on the line of minimum ranging from 29.44 ins. at Wick to 29.62 ins. at the Helder. Over the British Isles the gradient is slight; over France it has become steep in consequence of a rapid rise of the barometer in the south. The highest reading reported this morning is 30.40 ins. at Perpignan. Over Scandinavia the barometer has fallen decidedly and it now stands below 30.0 ins. throughout the north of area.

WIND

TEMPERATURE

WEATHER

AND

SEA

Strong W. winds prevail over France, the Bay of Biscay and the English Channel. Over the British Isles the wind is in general light from the W. but on the west coast of Ireland it has backed to S.E. S.E. winds still continue over Scandinavia. The weather is dull at the majority of stations both at home and abroad; the sky has cleared in parts of Scotland, but rain is falling at Sumburgh Head, Pembroke, Bath and Dungeness, and also at the Helder, Buschaven and Skudsmoes. Fog is reported from many parts of Sweden. Temperature continues mild over the British Isles and France; the readings over Germany and Scandinavia have also increased considerably. Bodö, Napaanda and Hernösand are the only stations at which the temperature is still below the freezing point. The sea continues rough or rather rough in the English Channel and over the Bay of Biscay, on the remaining coasts of the British Isles it is moderate or slight.

During the previous 24 hours rain fell at almost all stations in the British Isles, and at many places, particularly in the South, the amounts measured were considerable. The amounts of bright sunshine experienced were slightly larger than on the previous day, but they were still small.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

Conditions remain very unsettled in character. The barometer is at present rising briskly in the west of Ireland, but as the wind has backed to S.E. at both Valencia and Blacksod Point it appears probable that further disturbances will shortly affect the western margin of our area.

FORECASTS*

For the 24 hours ending at NOON on 6th January, 1906.

DISTRICTS.

Same as nos. 0 to 2.

Strong W. to S. winds; changeable, and unsettled, rain at times. Mild.

S.E. or S.W. winds, freshening; dull, some rain. Mild.

WARNINGS

At 7 pm. yesterday, to Districts 7, 9, 10 and part of 8, "Hoist North Cone", and to District 5 and remainder of 8, "Hoist South Cone".

Note.—The South Cone, point downwards (⏚), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.

The North Cone, point upwards (⏚), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post. W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered in Dungeness is recorded at Littleton-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Saturday, 6th January, 1906.

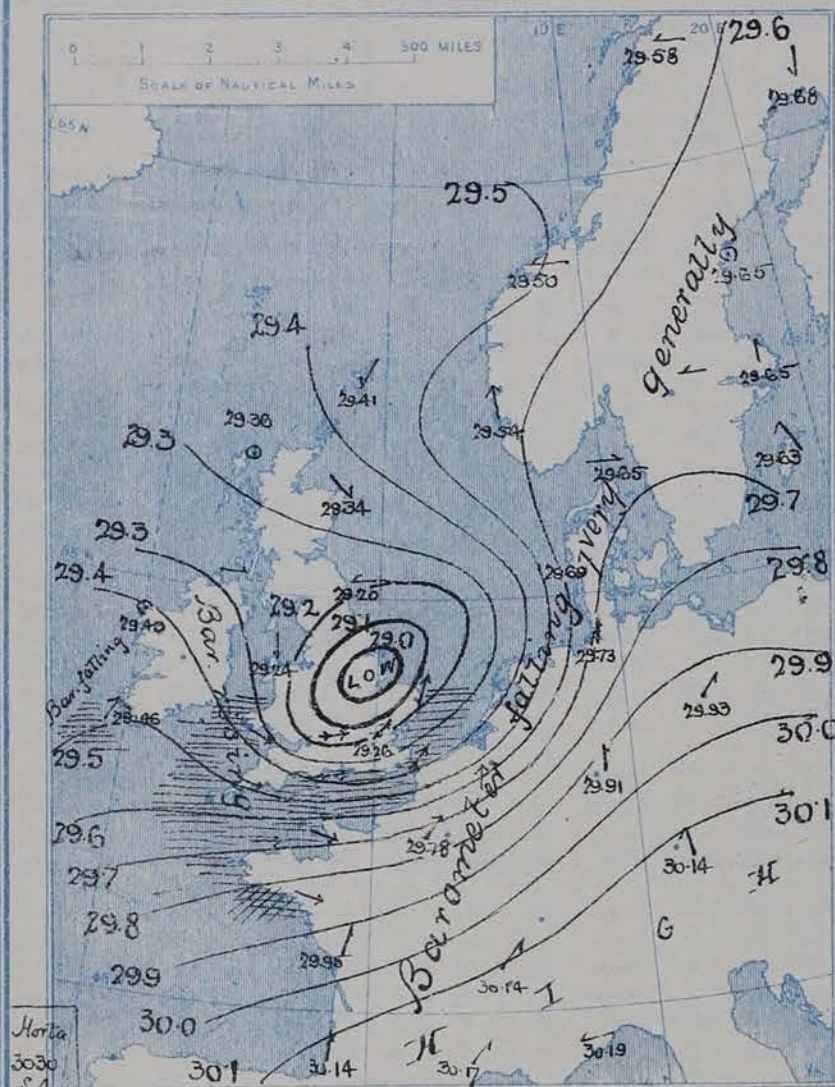

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ☉
Force 8 to 10 → Force 1 to 4 →

SEA.—Rough High

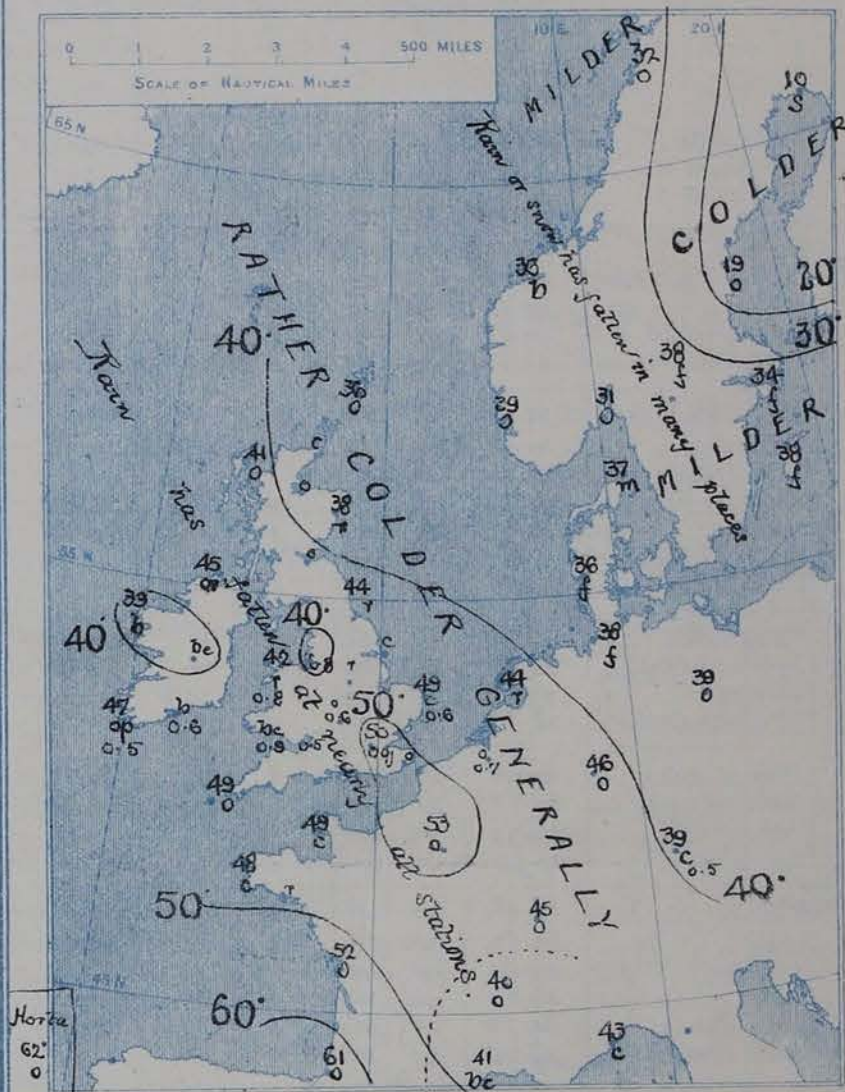

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. BRIGHT SUNSHINE IN 1905.

Total Duration recorded in various districts of the United Kingdom in the 52 weeks ended Saturday, Dec. 30, 1905, with the percentage of the average duration for the corresponding period.

V. Means of DAILY TEMPERATURE at 8 A.M. for the Two monthly periods DECEMBER - JANUARY. (1871-1900.)

GENERAL SITUATION AT 8 A.M.

PRESSURE

An unusually deep disturbance of which the map for 6 pm yesterday showed little indication, has appeared over our Islands during the night. Its central area, in which readings are below 29.0 ins. now lies over Lincolnshire. On the eastern and southern side of the region of lowest pressure the gradient is steep, the barometer standing at 29.93 ins. at Berlin, and 30.14 ins. at Lyons. On the northern side of the disturbance the gradient is slight and in the west it is moderate.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind is very strong on the southern side of the disturbance, strong gales prevailing in the English Channel. The wind direction is S.W. in the southeast of England, at Portland Bill and La Hève it is W. and in the western portion of the Channel we find it drawing into N.W. Light and rather variable breezes prevail on the northern and northwestern side of the region of lowest pressure; at Valencia the wind has backed to S.W. The weather over England is dull and unsettled and rain is falling over our northern counties and over the Irish Sea. In Scotland the sky is overcast but in the south and west of Ireland it has cleared in many places. Temperature remains mild over France and the south of England, though readings are in most cases slightly lower than those reported yesterday; at several of our Scottish stations a rather decided fall of temperature has taken place. The sea is rough over the Bay of Biscay and in the St. George's and English Channels, on our remaining coasts it is moderate or slight.

During the previous 24 hours rain fell at all home stations with the exception of Wick, but in spite of the depth of the disturbance which has traversed our Islands, the totals reported are everywhere less than one inch. Half an inch of rainfall or upwards was measured at Valencia, Roche's Point, Liverpool, Holyhead, Pembroke, Yarmouth and Oxford. The amounts of bright sunshine were again small.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The deep disturbance over Lincolnshire will probably move away to the E.^{ward}, but as the barometer is falling briskly at Valencia it will probably be followed very shortly by another low pressure system and the improvement in the weather which has set in in the west is therefore likely to be only temporary in character.

FORECASTS*

For the 24 hours ending at NOON on 7th January, 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Light variable breezes, freshening later; dull and unsettled, some rain.
1	SCOTLAND EAST	
2	ENGLAND N.E.	E. winds, backing to N.W. or S.W.; weather improving temporarily.
3	ENGLAND EAST	Strong winds from between N.W. and S.W.; weather improving temporarily, some rain later. Mild.
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as Nos. 0 & 1.
7	ENGLAND N.W.	
8	ENGLAND S.W.	Same as Nos. 3 to 5.
9	IRELAND NORTH	
10	IRELAND SOUTH	Wind freshening again from W. or S.W.; becoming dull, with some rain. Mild.
WARNINGS		At 7 p.m. yesterday to Districts 7 to 10, "Hoist South Cone."

Note.—The South Cone, point downwards (⏏), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⏏), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post.

W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR SUNDAY, 7th JANUARY, 1906.

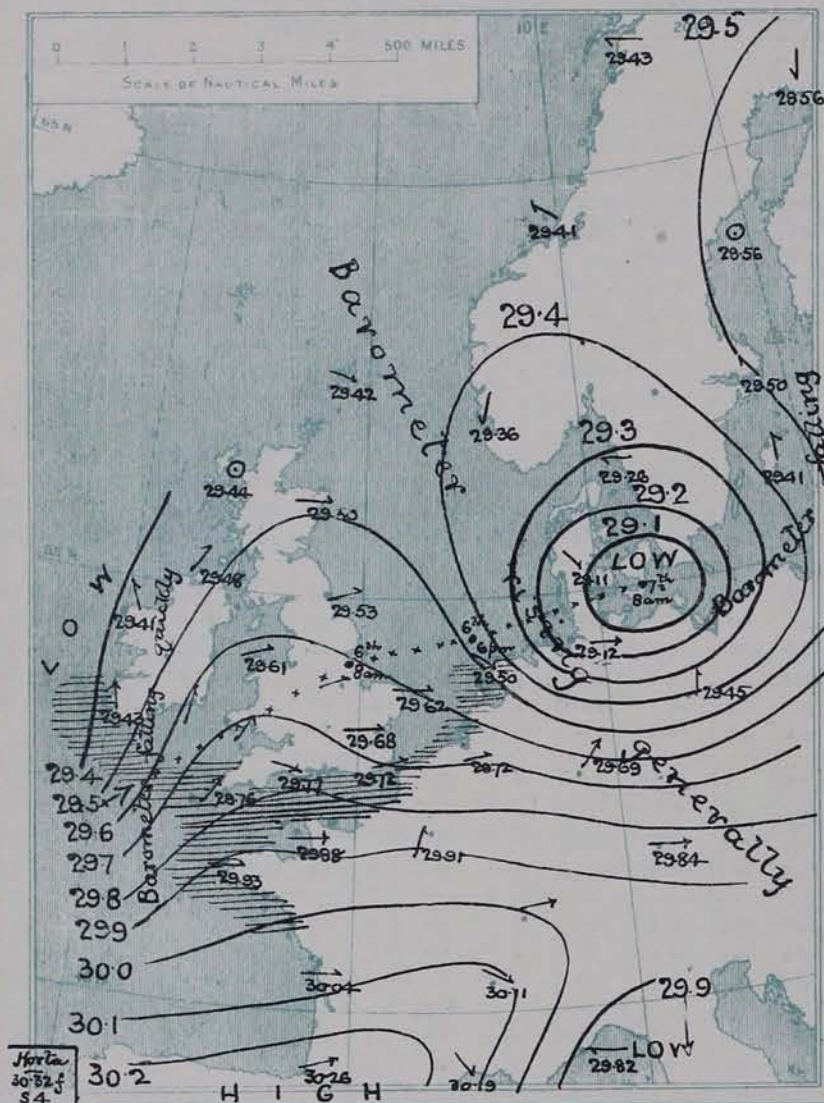

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 \rightarrow Force 5 to 7 \rightarrow } Calm \odot
Force 8 to 10 \rightarrow Force 1 to 4 \rightarrow

SEA.—Rough |||| High ■

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus -0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°

Amount recorded in various districts of the United Kingdom during the 52 weeks ended 30th DEC.^r with the percentage of the average for the corresponding period.

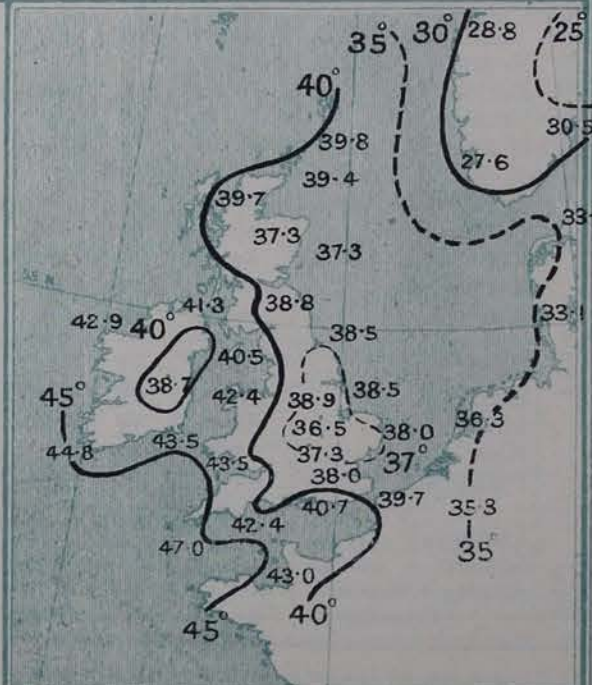

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

V. Means of DAILY TEMPERATURE

at 8 A.M. for the Two monthly period

DECEMBER - JANUARY. (1871-1900.)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The deep depression which had its central space over our eastern counties yesterday morning has since crossed the North Sea on an E^s course, and now lies over Denmark and North Germany, with the barometer at about 29.1 ins. In its rear there has been a recovery of pressure all over the British Islands, but another and decided fall of the barometer has set in on the southwestern coasts. An anticyclonic system still occupies southwestern Europe, the barometer at Lisbon reading 30.47 ins. The gradient is steep over North Germany, and it is increasing in the southwest.

WIND

TEMPERATURE

WEATHER

AND

SEA

Calms and very light airs prevail over North Britain and Northern Scandinavia; light to fresh S^s breezes at our western stations; moderate to strong W^s winds between the Bay of Biscay and Denmark; and light to moderate S^s to E^s over Southern Scandinavia. Temperature has risen at most of our western and northern and the Swedish and North German stations, fallen elsewhere. The present values range from between 33° and 36° in Scotland to 47° at Jersey and Roche's Point and 48° at Scilly and Valencia; from 21° at Haparanda and 30° at Hernösand to 50° at Biarritz, 54° at Oporto and 58° at Lisbon. The weather is fair or fine in most parts of these Islands, but rain has again set in on the southwestern coasts. At the Continental stations the sky is mostly overcast, rain is falling at Oporto, Belfort, Skagen and Karlstad, snow at Faerder, and the atmosphere is foggy at Stockholm and Wisby. The sea is rough along the north and northwest coasts of France, rather rough on our side of the Channel and off Valencia and the Helder, moderate to very smooth elsewhere.

During yesterday temperature rose to 50° or above at several stations in the south of England, to 52° at Jersey and 53° at Plymouth. In the extreme north of Scotland the maxima were 37° or 38°. Rain fell at nearly all stations, and the duration of bright sunshine was very variable, none at all in many places, while Brix Castle had 4.2 hours and Pembroke 4.8 hours.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

FORECASTS*

For the 24 hours ending at NOON on 8th January, 1906.

DISTRICTS.

FORECASTS.

- 0 SCOTLAND NORTH
- 1 SCOTLAND EAST
- 2 ENGLAND N.E.
- 3 ENGLAND EAST
- 4 MIDLAND COUNTIES
- 5 ENGLAND SOUTH

NONE ISSUED.

DISTRICTS.

FORECASTS.

- 6 SCOTLAND WEST
- 7 ENGLAND N.W.
- 8 ENGLAND S.W.
- 9 IRELAND NORTH
- 10 IRELAND SOUTH

WARNINGS

NONE ISSUED.

At 3.0 pm yesterday to Districts 2, 3 and 5, "Hoist North Cone", and at 6.50 pm to Districts, 7 to 10, "Keep up South Cone".

Note: The South Cone, point downwards (⌴), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (⌴), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post.

W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS
FOR MONDAY, 8TH JANUARY, 1906.

WEATHER CHARTS
FOR MONDAY, 8TH JANUARY, 1906.

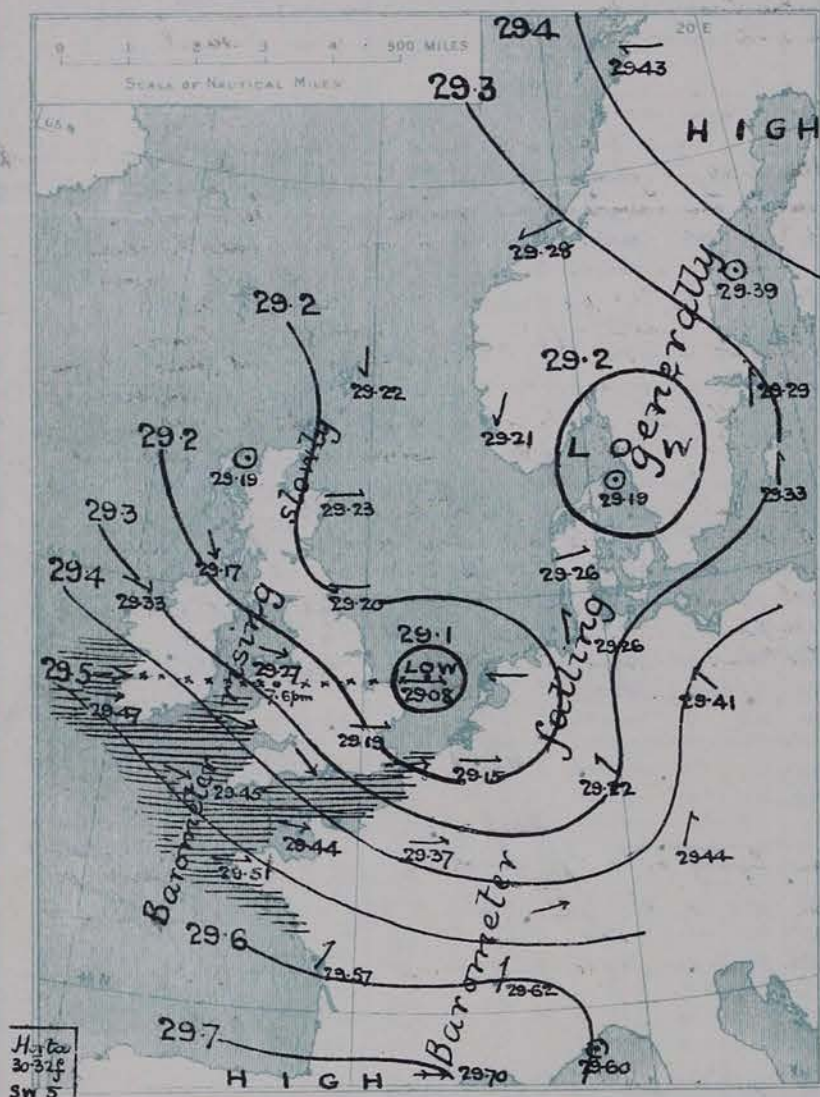

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind

Calm ©

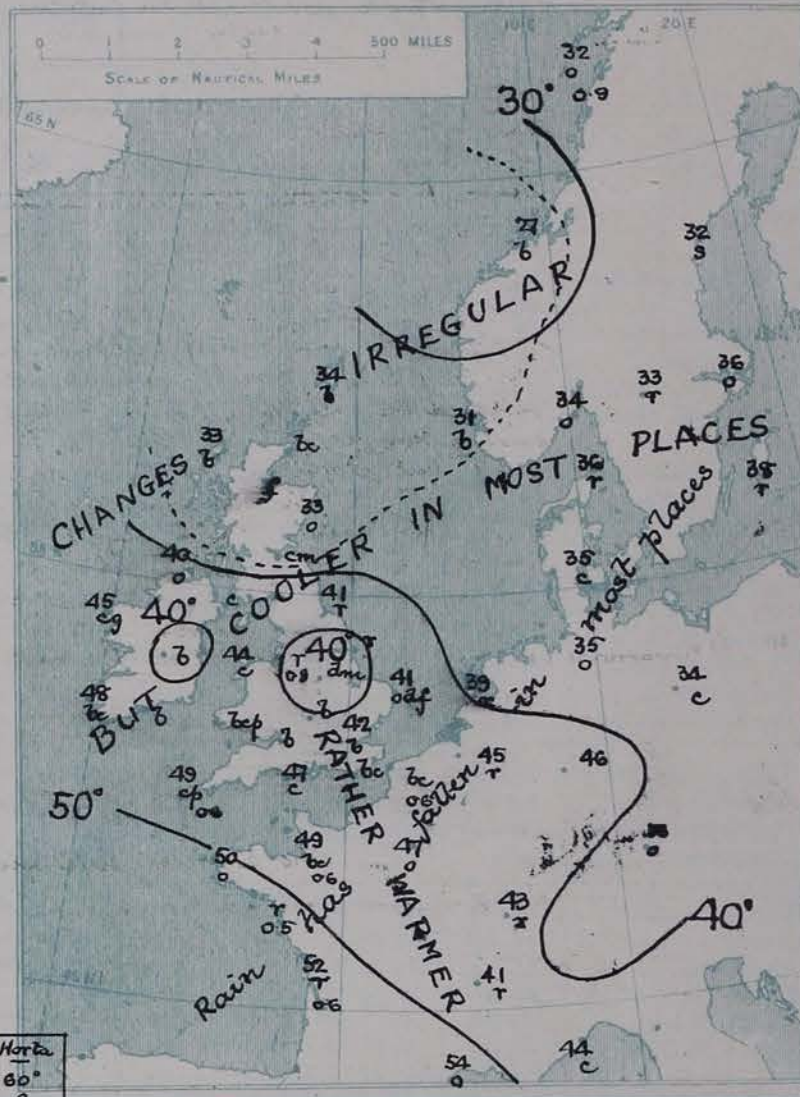

High

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE.—Isotherms are drawn for each 10°

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus—0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

Amount recorded
in various districts of the United Kingdom
during the week ended Sat. 30 Dec.
with the percentage of the average, for the
corresponding week.

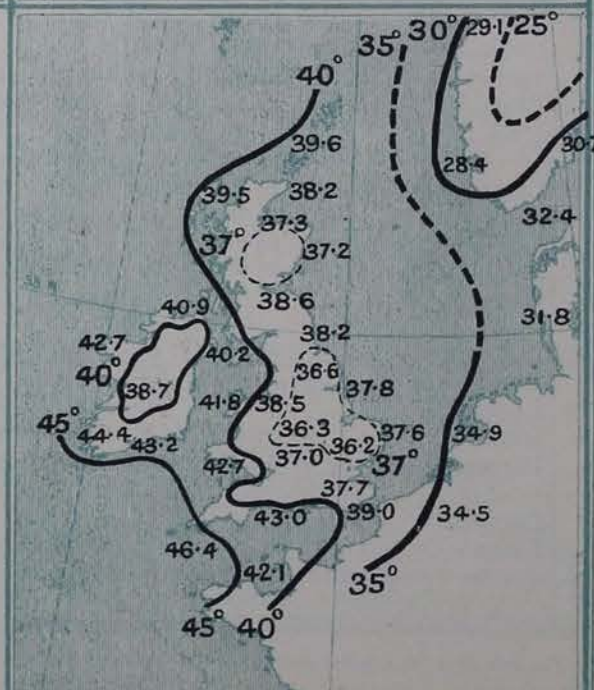

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period
JANUARY

*(Derived chiefly from Observations
extending over the 35 years 1871-1905).*

GENERAL SITUATION AT 8 A.M.

PRESSURE

The distribution of pressure over Northwestern Europe is now very irregular. A complex depression is lying over the northern and eastern parts of the United Kingdom, the Netherlands, and the southern part of the North Sea, with a small baric minimum (29.1 ins. and less) off the coast of Norfolk. Another well marked, but shallow, depression is situated over the south of Sweden, and a fall of the barometer is in progress at all the Continental stations. In these Islands a slight rise is reported. The highest pressures, 30.3 ins. and upwards, are still found over Portugal.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind is moderate to strong from the Westward or Northward over the greater part of England, Ireland and France, but is Southeasterly in Germany and Easterly in some parts of our own N.E. coasts. In the north of Scotland it is calm or variable, while in Scandinavia and Denmark a cyclonic circulation is shown round the Swedish depression. Temperature has risen over France, Belgium and the south of England, but has changed rather irregularly elsewhere. The morning readings in these Islands range from 45° and upwards on our south and southwest coasts to 35° and less in the north and east of Scotland, and to 30° at Naism. In the west of France the readings are about 50°, while in Scandinavia slight frost prevails. Rain is falling in the north and east of England, as well as at many of the Continental stations, and snow at Heriöland. Local showers are also reported on our western coasts, but in the south of England the weather is fine and bright. The sky is clear in the north of Scotland and the west of Norway. The sea is rough or rather rough on our western, southern, and the French coasts, but slight in the north and east.

The maximum temperatures recorded yesterday were below 45° at our northern and eastern stations, but slightly above 50° on our extreme southwest coasts. Frost occurred in the north of Scotland at night; at Naism the thermometer fell to 24°. Very little bright sunshine was recorded yesterday in the west and north, but on some parts of our east and southeast coasts the duration amounted to at least 4 hours, and at Margate to more than 5 hours. Rain has again fallen except in the north of Scotland, heavily at some western stations.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The complex depression now lying over the northern and eastern parts of the Kingdom will pass away shortly over the North Sea, and in its rear a temporary improvement in the weather will take place in our eastern districts. Fresh disturbances are likely to appear in the west in the course of the ensuing 24 hours, and changeable weather will, therefore, continue over the United Kingdom generally.

FORECASTS*

For the 24 hours ending at NOON on 9TH JANUARY, 1906.

DISTRICTS.

FORECASTS.

- 0 { SCOTLAND NORTH
- 1 { SCOTLAND EAST
- 2 { ENGLAND N.E.
- 3 { ENGLAND EAST
- 4 { MIDLAND COUNTIES
- 5 { ENGLAND SOUTH

Variable breezes, finally NW²; fair, cold, frosty at night.

NW² winds, light or moderate; showery at first, then fair. Frost inland at night.

W² and NW² winds, light; fair generally. Frost at night.

W² and NW² winds, moderate or fresh; fair generally, but not settled. Frost inland at night.

DISTRICTS.

FORECASTS.

- 6 { SCOTLAND WEST
- 7 { ENGLAND N.W.
- 8 { ENGLAND S.W.
- 9 { IRELAND NORTH
- 10 { IRELAND SOUTH

NW² to W² winds, fresh; some showers, then fair.

Strong W² and NW² winds, backing later to the SW² or S²; fair at first, then unsettled again, with some rain.

WARNINGS

At 7.0 pm. yesterday to Districts 2, 3, 5 and part of 8, "Hail SOUTH COAST."

Note.—The South Cone, point downwards (⌞), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (⌞), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

*For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.

" Weekly " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post. W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Lilliestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR TUESDAY, 9th JANUARY, 1906.

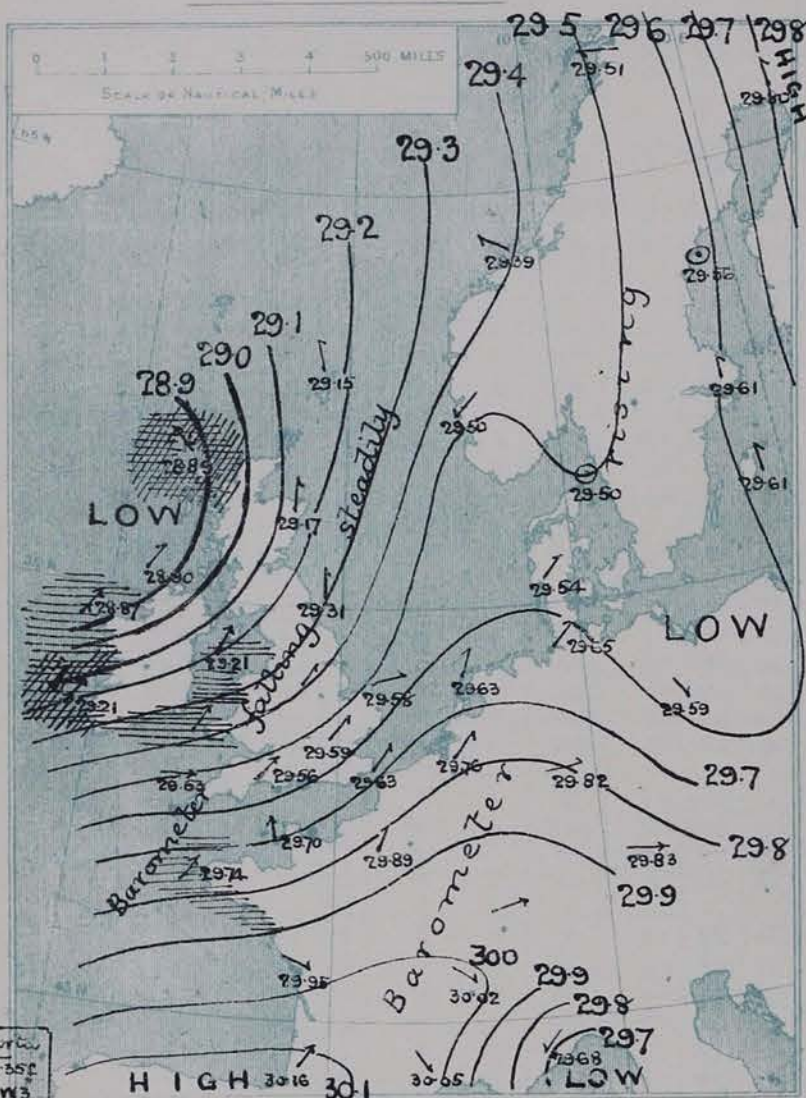

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → Force 3 to 4 → Force 1 to 4 → } Calm ☉

SEA—Rough High

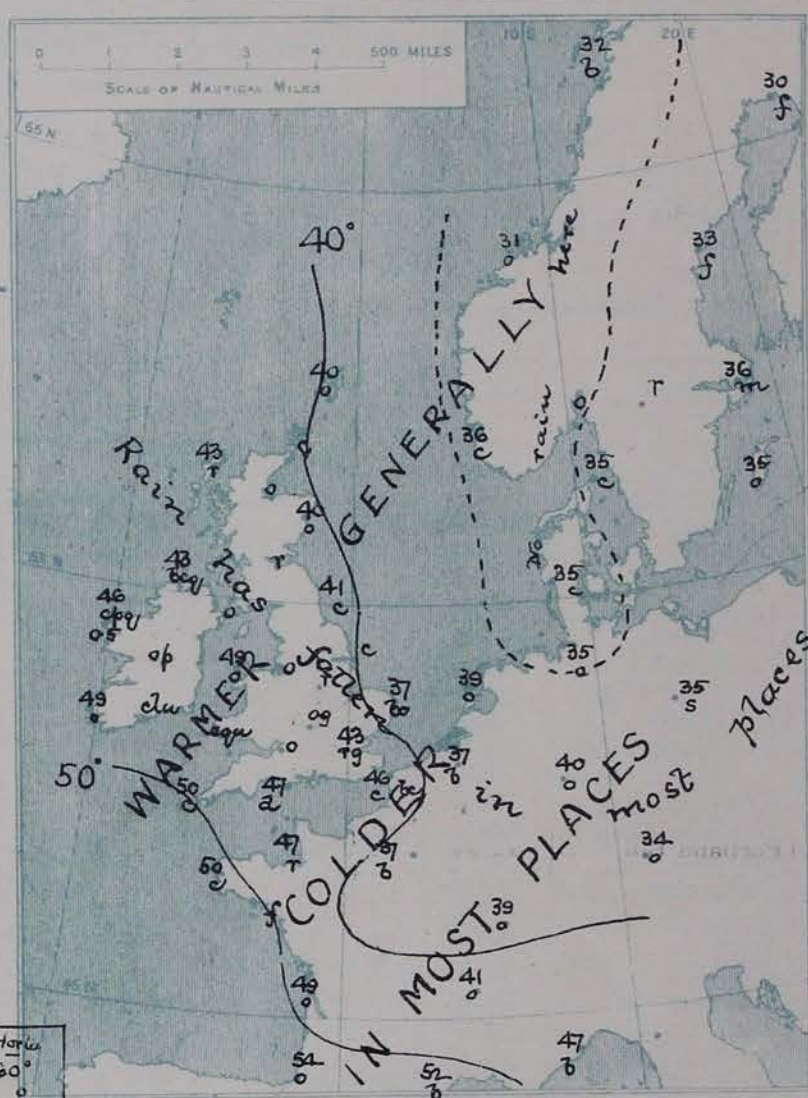

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

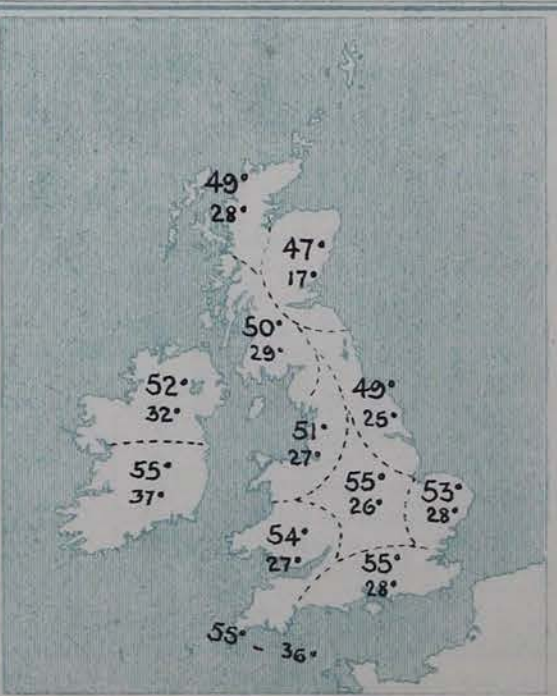

III. BAROMETER AND WIND

Yesterday morning.

IV. EXTREMES OF TEMPERATURE recorded

in various districts of the United Kingdom during the week ended Sat. 6th JAN.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period JANUARY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The depressions noticed on yesterday's weather map have disappeared from our area, but a new disturbance of considerable depth is spreading over these Islands from the Atlantic. The central portion of the system, with readings below 28.9 ins., is at present situated at some distance to the westward of Scotland, but over all the more western and northern parts of the United Kingdom the barometer's gradient is already steep. The highest pressures, 30.3 ins. and upwards, are still found over Portugal.

WIND

TEMPERATURE

WEATHER

AND

SEA

With the advance of the new disturbance the wind has backed to the Southward over Ireland, England and the neighbouring parts of the Continent, and has shifted to South or Southeast in Scotland; on all our western coasts it is increasing rapidly in strength, a Southwesterly gale being reported at Valencia and a Southeasterly gale at Stornoway. In Germany the wind is Westerly or Northwesterly, while in Scandinavia it varies between South and East. Temperature has risen over the greater part of the United Kingdom, and is now above the average at all but our eastern stations, where the thermometer is below 40°; on many parts of our western coasts the readings are only a trifle below 50°. Over France, Germany and the Netherlands the thermometer has fallen, and is now below 40° at all inland stations. The weather is cloudy or dull over Northwestern Europe as a whole, with rain in several scattered portions of the United Kingdom, and lightning at Roche's Point. Fog prevails at most of the Swedish stations, and snow is falling at Berlin. Over Central and Southern France the weather is fine and bright. The sea is high at Stornoway and Valencia, and rather rough off the west coasts of these Islands and France generally.

During yesterday the thermometer rose to between 50° and 53° on our southwest coasts, but failed to reach 45° in the northern, eastern and central parts of the Kingdom. At many places in the west and south the amount of bright sunshine was considerable, 6 hours or more being reported at several stations, and 7 hours at Bognor. Rain has fallen in most parts of our area, and a thunderstorm occurred at Valencia (Ireland) at 6 am. today.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The depression off the west of Scotland is likely to travel in an easterly direction and to occasion gales on nearly all our coasts, - chiefly from points between Southwest and Northwest. Mild, rainy weather is probable today in all districts, but in the course of tomorrow the conditions will improve temporarily, and the air will become colder.

FORECASTS*

For the 24 hours ending at NOON on 10TH JANUARY, 1906.

DISTRICTS.

FORECASTS.

- | | | |
|---|------------------|---|
| 0 | SCOTLAND NORTH | { S ^W and SE ^W gales, shifting later to the NW ^W or N ^W ; unsettled, some cold rain or sleet. |
| 1 | SCOTLAND EAST | |
| 2 | ENGLAND N.E. | { S ^W to W ^W or N.W ^W winds, increasing to a gale; mild and rainy to-day, improving to-morrow and becoming colder. |
| 3 | ENGLAND EAST | |
| 4 | MIDLAND COUNTIES | { S.W ^W to W ^W or N.W ^W winds, increasing to a gale; mild and rainy to-day, improving to-morrow and becoming colder. |
| 5 | ENGLAND SOUTH | |

DISTRICTS.

FORECASTS.

- | | | |
|----|---------------|--|
| 6 | SCOTLAND WEST | { S.W ^W to N.W ^W gales and strong winds; mild and rainy to-day, improving to-morrow and becoming colder. |
| 7 | ENGLAND N.W. | |
| 8 | ENGLAND S.W. | |
| 9 | IRELAND NORTH | |
| 10 | IRELAND SOUTH | |

WARNINGS

At 9.30 am. to-day to all coasts, "HOIST SOUTH CONE."

Note.—The South Cone, point downwards (⌋), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (⌋), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " " £1 10 0 " " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post.

W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR WEDNESDAY, 10TH JANUARY, 1906.

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10

Force 5 to 7

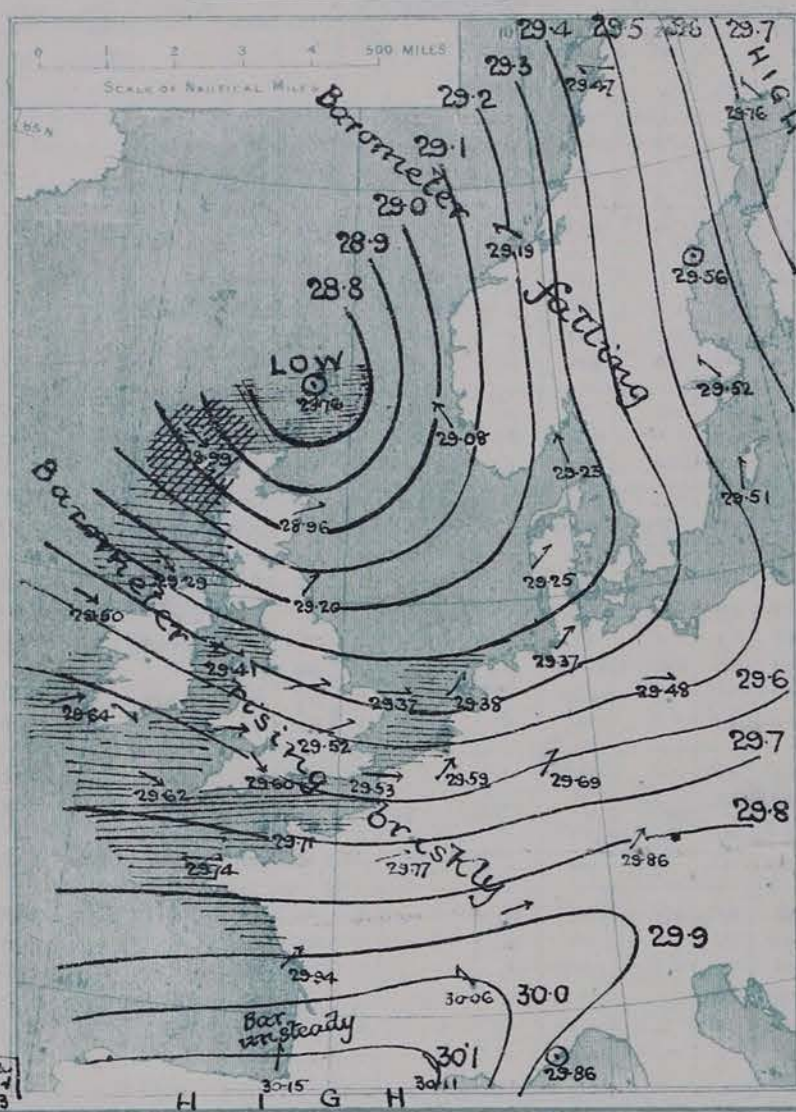

Calm

Force 8 to 10

Force 1 to 4

SEA—Rough

High

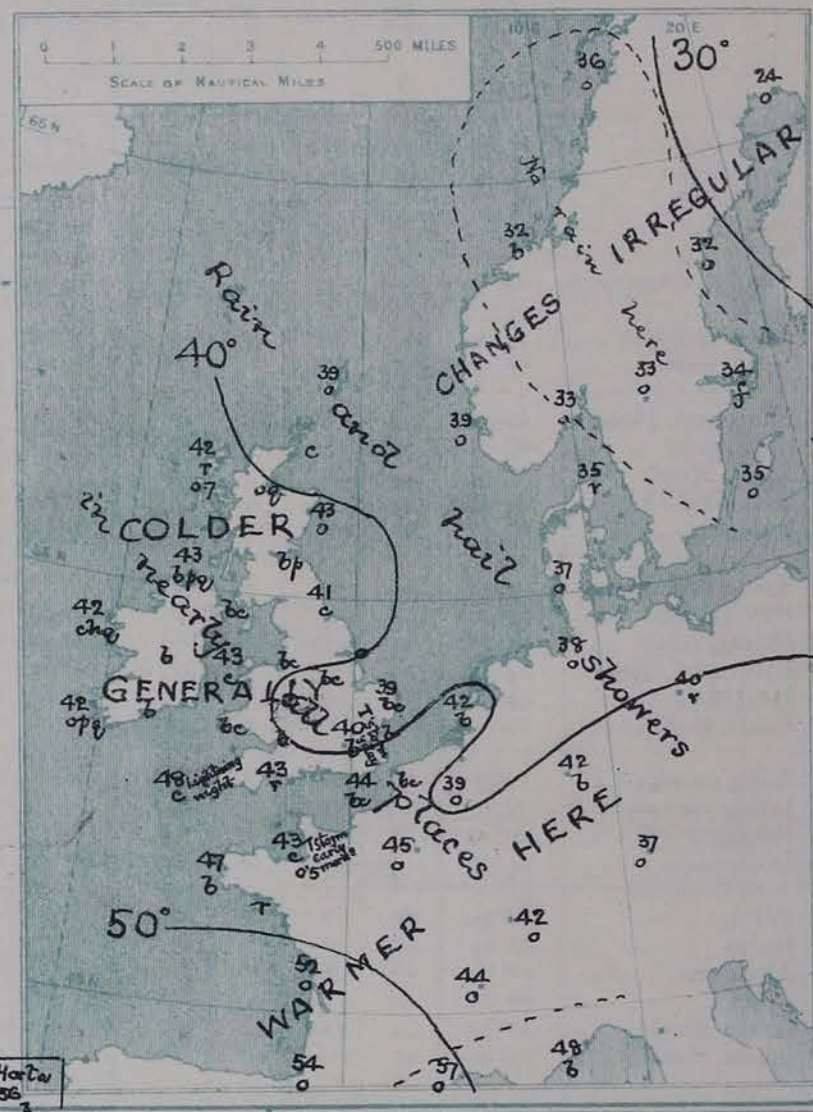

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE.—Isotherms are drawn for each 10°

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus -0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. LAST WEEK'S RAINFALL.

Amount recorded in various districts of the United Kingdom during the week ended Sat. 6TH JAN. with the percentage of the average amount for the corresponding week.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period JANUARY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The deep depression which was approaching the west of Scotland yesterday is travelling northeastward, its centre being at present found over the Shetlands, where the barometer has fallen below 28.8 ins. The mercury is rising over the United Kingdom generally, — briskly in the extreme west, but is falling in Scandinavia, Denmark and North Germany; a tendency to fall is also reported in the west of France. The highest pressures, 30.3 ins. and upwards, are still found over the southern parts of the Spanish Peninsula.

WIND

TEMPERATURE

WEATHER

AND

SEA

Over the greater part of Northwestern Europe the wind circulated round the northern low pressure system, being Westerly or Northwesterly over the United Kingdom as a whole, with a gale at Stornoway and Holyhead, but Southwesterly along our east coasts, as well as over the greater part of France, Germany and the Netherlands. In Scandinavia it drove into Southeast or East, and blows strongly at Skudenes.

The change of wind in these Islands has been accompanied by a general fall of temperature, but at the majority of our stations the readings are still above the average. Over the eastern and central parts both of England and Ireland and also in the extreme north of Scotland the morning readings are a trifle below 40°, but in other districts that value is slightly exceeded. In the southwest of France the thermometer is above 50°. The weather is fine over the greater part of England and Ireland, but is showery in the extreme west, with hail at Blacksod Point. In Scotland and over the western parts of the Continent the sky remains very cloudy, with rain in a few isolated places. The sea is high at Stornoway, and rough on all but our east coasts.

During yesterday the thermometer rose slightly above 50° at most of our southern stations, but remained below 45° on several parts of our north and northeast coasts. The duration of bright sunshine was generally small, but amounted to 3.3 hours at Torquay. Rain has fallen generally. A thunderstorm was experienced yesterday in London and at Clacton-on-Sea, and this morning at Jersey; lightning was seen at Scilly last night.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The depression off the north of Scotland will shortly pass away from our area, and the weather in the north will improve temporarily. There are some indications (at present faint) of the advance of a secondary disturbance towards our southwest coasts, and the fine weather now prevailing over England is likely to be followed in the course of the next 24 hours by rainy conditions, and increasing winds in the south.

FORECASTS*

For the 24 hours ending at NOON on 11TH JANUARY, 1906.

DISTRICTS.

FORECASTS.

0 SCOTLAND
NORTH

W^{ly} and N.W^{ly} winds, backing later; some showers at first, then fair.

1 SCOTLAND
EAST

2 ENGLAND
N.E.

3 ENGLAND
EAST

S.W.^{ly} to S^{ly} winds; fair at first, some rain later. Moderate temperature.

4 MIDLAND
COUNTIES

5 ENGLAND
SOUTH

W^{ly} to S^{ly} winds, increasing in force; fair at first, some rain later; mild generally.

DISTRICTS.

FORECASTS.

6 SCOTLAND
WEST

Same as Nos. 0 and 1.

7 ENGLAND
N.W.

W^{ly} winds, backing later; changeable, some showers.

8 ENGLAND
S.W.

Wind backing to the S.W.^d or S^d and increasing in strength; becoming rainy again.

9 IRELAND
NORTH

Same as No. 7.

10 IRELAND
SOUTH

Same as No. 8.

WARNINGS

The South Cone is still flying on all coasts.

Note: The South Cone, point downwards (⌵), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌴), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.

" Weekly " " " " £1 10 0

Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post.

W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Chart on next page.

WEATHER CHARTS

FOR THURSDAY, 11TH JANUARY, 1906.

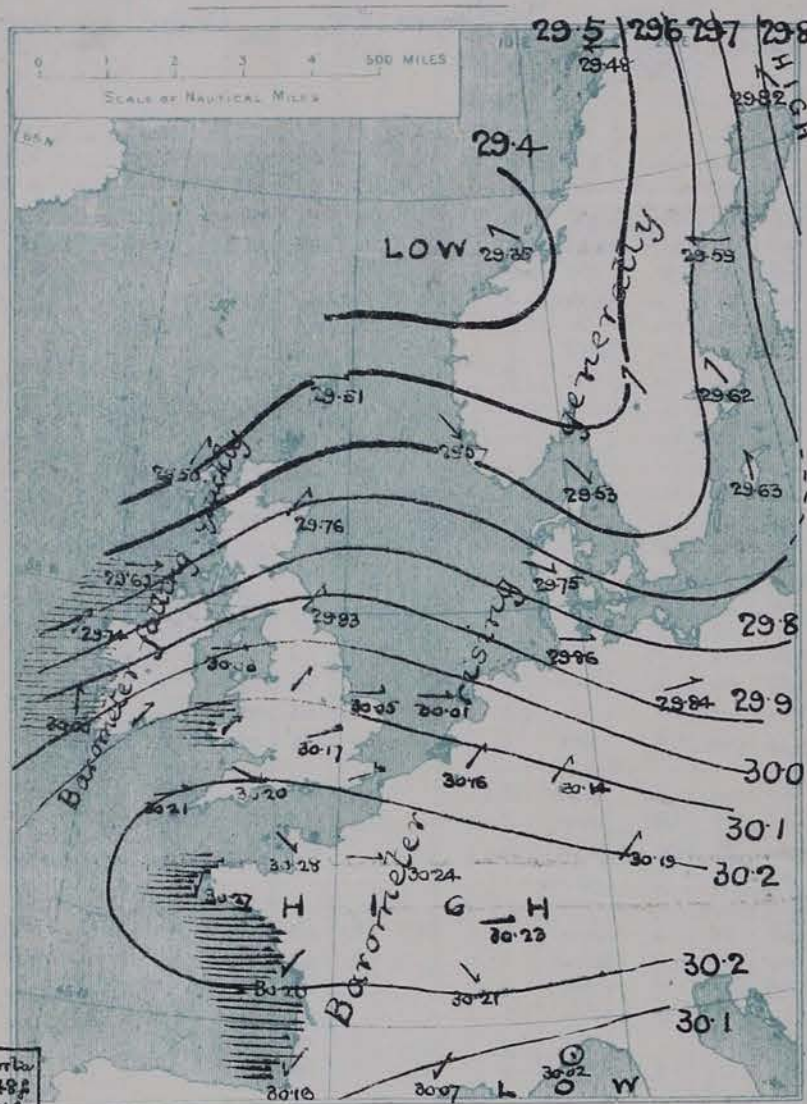

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ⊙
Force 8 to 10 → Force 1 to 4 →

SEA.—Rough High

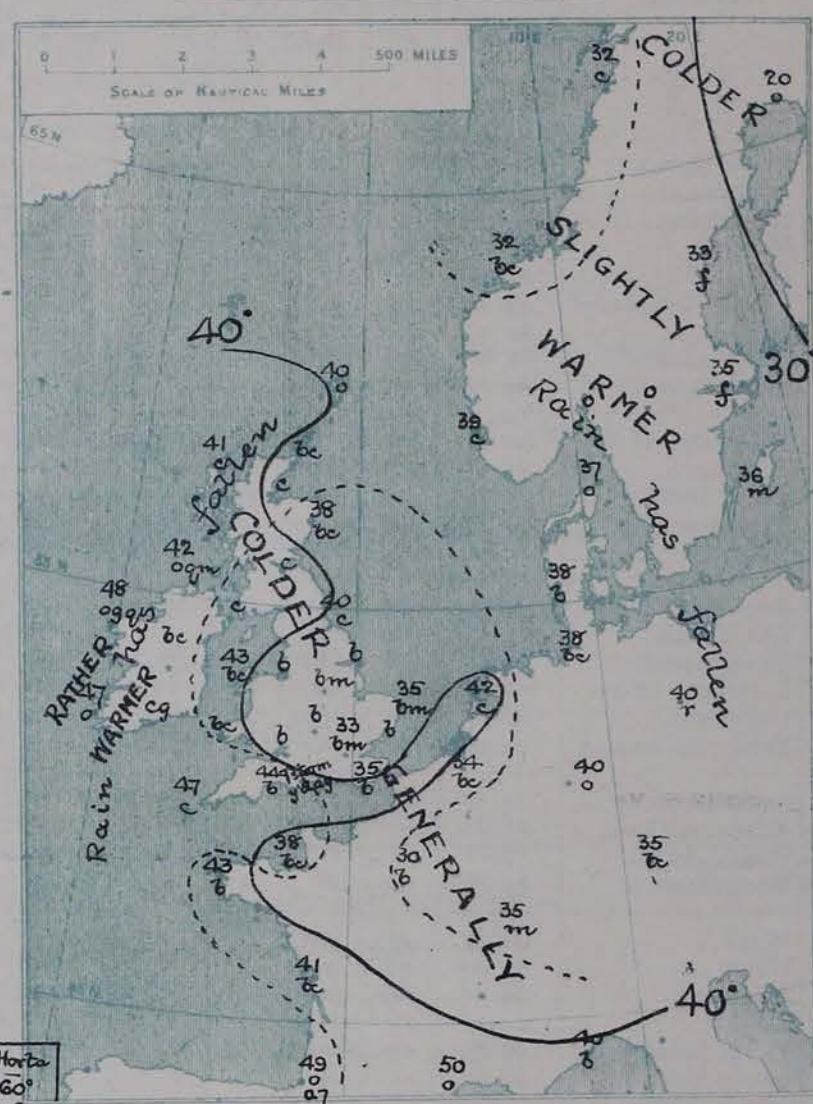

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

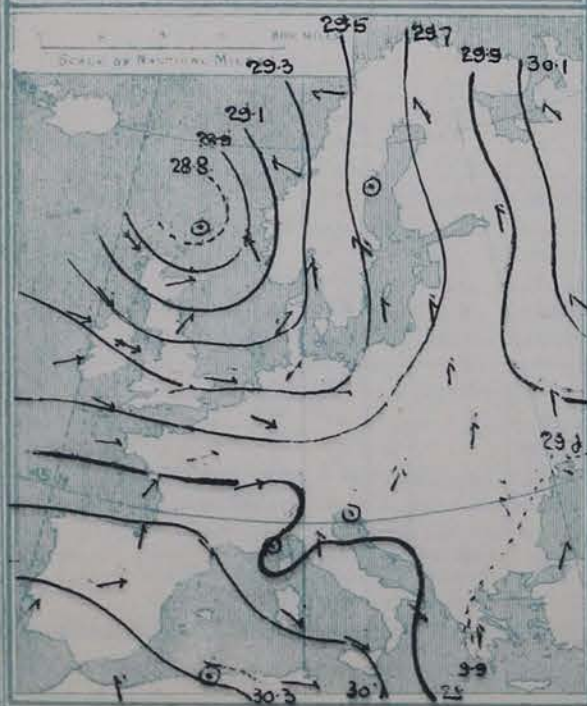

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

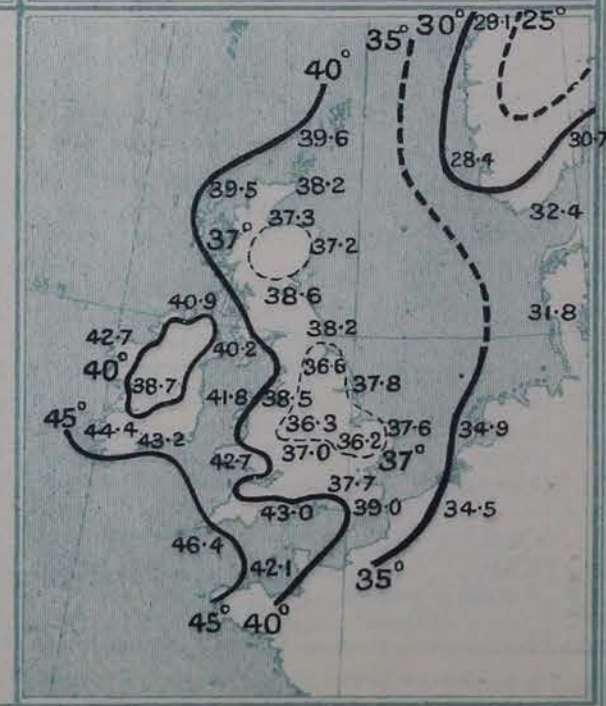

IV. LAST WEEK'S SUNSHINE.

Amount recorded in various districts of the United Kingdom during the week ended SAT. 6TH JAN with the percentage of the average duration for the corresponding week.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period JANUARY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The anticyclone recently noticed over Southwestern Europe has moved northeastwards, the central portion of the system, with readings above 30.2 ins., being at present situated over the Channel and the northern parts of France and the Bay of Biscay. A shallow depression, in which readings are below 29.4 ins., is lying off the west of Norway, and another disturbance is approaching our own extreme northwest coasts. The latter system is occasioning a sharp fall of the mercury on the west coasts of Ireland and Scotland, but in all other parts of Northwestern Europe the barometer is at present rising.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind is Southwesterly over nearly the whole of the United Kingdom, with a moderate gale at Blackhead Point, but is Westerly in the English Channel and also on the eastern shores of the North Sea. In Sweden and the north of Norway it is Southeasterly or Easterly, while in the west and south of France there is a light wind from the Northeastward. The extensions of the anticyclone have been accompanied by a general fall of temperature over Great Britain and France, and at many of the English and French stations slight frost is now reported. In Ireland the thermometer has risen, and on our extreme west and southwest coasts generally the readings are above 45°. Sharp frost prevails in Lapland, at Haparanda the thermometer stands at 20°. The weather is at present fine over Western Europe as a whole, but is dull in the west of Ireland, as well as in Sweden and North Germany; rain is falling at Berlin. The sea is rough or rather rough on our own extreme western coasts, and also on the Bay of Biscay, but is slight or smooth elsewhere.

The maximum temperatures recorded yesterday were below 45° at most of our northern and eastern stations, but above that point in the west and south. Over the United Kingdom generally the amount of bright sunshine was considerable, between 5 and 6 hours being recorded at many places, and more than 6 hours at Broadstairs and Bournemouth. Slight rain fell in Ireland and the west and north of Scotland, as well as at some of the Channel stations. A thunderstorm occurred yesterday afternoon at Portland Bill.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

Over the greater part of England the weather is likely to remain for the present under the influence of the large anticyclone which has spread up from the southward. In Ireland and Scotland the conditions will be affected by a new depression which is approaching our northwestern coasts. Increasing Southerly and Southwesterly winds are, therefore, probable in those countries, with mild weather, and rain in most places.

FORECASTS*

For the 24 hours ending at NOON on 12TH JANUARY, 1906.

DISTRICTS.

FORECASTS.

- 0 SCOTLAND NORTH
- 1 SCOTLAND EAST
- 2 ENGLAND N.E.
- 3 ENGLAND EAST
- 4 MIDLAND COUNTIES
- 5 ENGLAND SOUTH

SW^{ly} winds, increasing to a gale; dull, some rain; milder.
S^{ly} and SW^{ly} winds, freshening; fair at first, some rain later.
SW^{ly} winds, freshening; fair at first, some showers later.
SW^{ly} winds, light to fresh; fair generally; rather milder.

DISTRICTS.

FORECASTS.

- 6 SCOTLAND WEST
- 7 ENGLAND N.W.
- 8 ENGLAND S.W.
- 9 IRELAND NORTH
- 10 IRELAND SOUTH

Same as No. 0.
Same as No. 2.
SW^{ly} winds, freshening; fair; mild.
SW^{ly} winds, increasing in strength; mild, dull, some rain.
At 9.40 am. to-day to District 6 and parts of 0 and 9, "HOIST SOUTH CONE."

WARNINGS

Note.—The South Cone, point downwards (⌵), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌴), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post.

W. N. SHAW, (Director).

* At Oxford the observations are taken at 8 p.m.

High

TEMPERATURE—Isotherms are drawn for each 10°

Yesterday morning.

Amount recorded
in various districts of the United Kingdom
during the 52 weeks ended 30TH DEC. 1905
with the percentage of the average for the
corresponding period.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

at 8 A.M. for the monthly period
JANUARY

*(Derived chiefly from Observations
extending over the 35 years 1871-1905)*

GENERAL SITUATION AT 8 A.M.

PRESSURE

The depression which was approaching our northwest coasts yesterday has travelled northeastwards and is now off the west of Norway. The lowest reading of the barometer this morning being 29.09 ins. at Christiansund. In the rear of the disturbance the mercury is at present rising in most parts of the United Kingdom, but at many of the Continental stations it is still falling. The highest pressures, 30.4 ins. and upwards, are found over Switzerland and the south of France, and a rather steep gradient for Southwesterly and Southerly winds prevails over North-western Europe generally.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind is moderate to fresh from the Westward or Southwestward over nearly the whole of these Islands, but blows strongly from the latter quarter in the eastern part of the Channel and also over the Netherlands. Strong Southerly winds are reported over Denmark and the Christiania Fiord. In the south of France the wind is light and rather variable. Temperature has risen briskly over England, Belgium and the north of France, and at our own southern stations, as well as on the other side of the Channel the morning readings are above 45°, and are considerably in excess of the normal. In Ireland and Scotland the thermometer has fallen slightly, the lowest reading reported being 35° at Wick and Narin. Frost prevails in South Germany and the east of France. Over the greater part of the United Kingdom a decided improvement in the weather has taken place in the rear of yesterday's depression, clear skies being now reported at several of our more northern stations. Over the English Channel and on the western coasts of the Continent the weather is dull, with rain in several places; snow is falling at Wisby. The sea is rough or rather so round the west, south and extreme north of these Islands, and also on the French coasts.

At several places in the north and east of England the thermometer yesterday failed to reach 45°, but in other parts of the Kingdom that value was exceeded; on our southwest coasts the maximum readings were as high as 50° or slightly above it. In the south and east of England the duration of bright sunshine was again considerable, between 6 and 6½ hours being recorded at several of the coast stations. Rain has fallen over northwestern Europe generally.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The distribution of pressure is favourable for the advance of further disturbances from the Atlantic, and the improvement in the weather which has taken place in the rear of yesterday's depression is likely to prove merely temporary. A renewal of strong winds or gales from the Southwestward is probable on many parts of our coasts before the close of the ensuing 24 hours.

FORECASTS*

For the 24 hours ending at NOON on 13TH JANUARY, 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Wind backing to the S ² and increasing in strength; fair at first, some rain later.
1	SCOTLAND EAST	SW ² winds, freshening; fair to-day, some rain again to-morrow.
2	ENGLAND N.E.	
3	ENGLAND EAST	SW ² winds, freshening; fair at first, some rain later. Continuing mild.
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as No. 0.
7	ENGLAND N.W.	
8	ENGLAND S.W.	SW ² to S ² winds, increasing in strength; dull, unsettled, some rain.
9	IRELAND NORTH	Same as No. 0.
10	IRELAND SOUTH	Same as No. 8.

WARNINGS

At 0.40 pm. yesterday to Dists. 1, 7 and remainder of 0, at 3.10 pm. to Dists. 2, 8, and 10, and at 4.30 pm. to Dists. 3 and 5, "HOIST SOUTH CONE"

Note.—The South Cone, point downwards (⌒), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌒), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post. W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

FOR SATURDAY 13TH JANUARY. 1906.

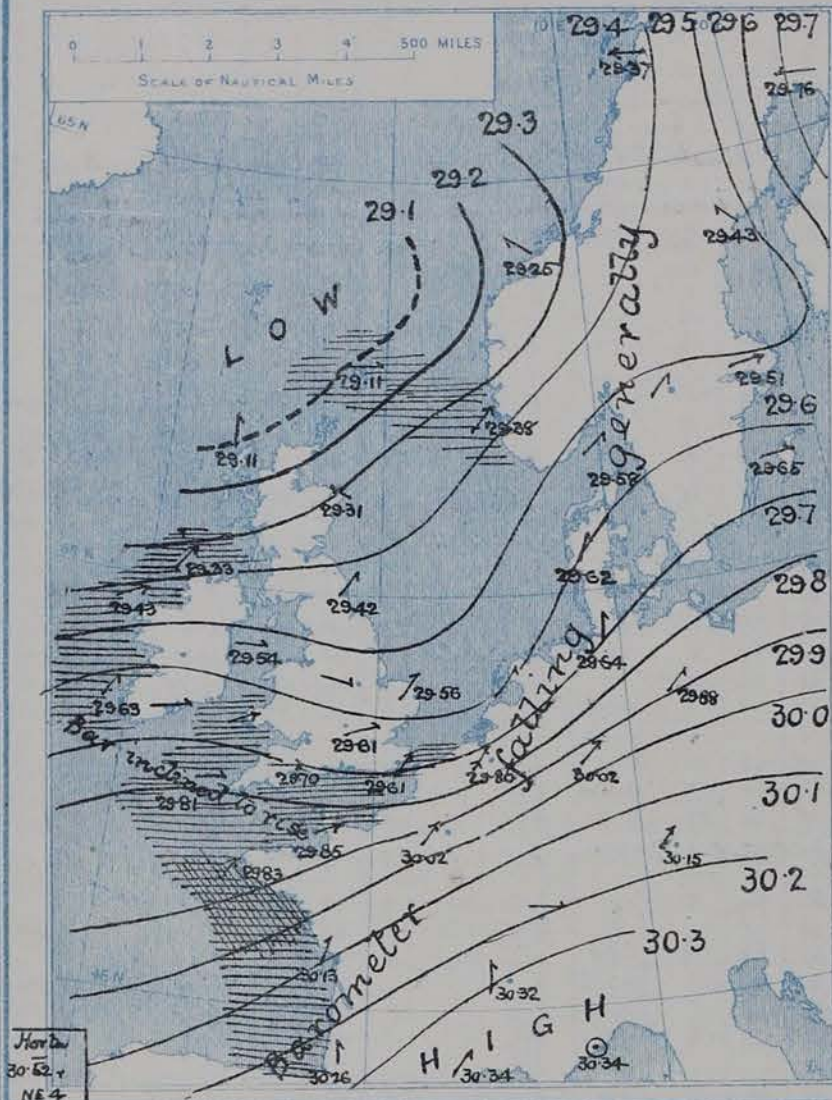

FOR SATURDAY, 13TH JANUARY, 1906.

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 \Rightarrow \longrightarrow ; Force 5 to 7 \longrightarrow ; } Calm \odot
Force 8 to 10 \Rightarrow \longrightarrow ; Force 1 to 4 \longrightarrow ;

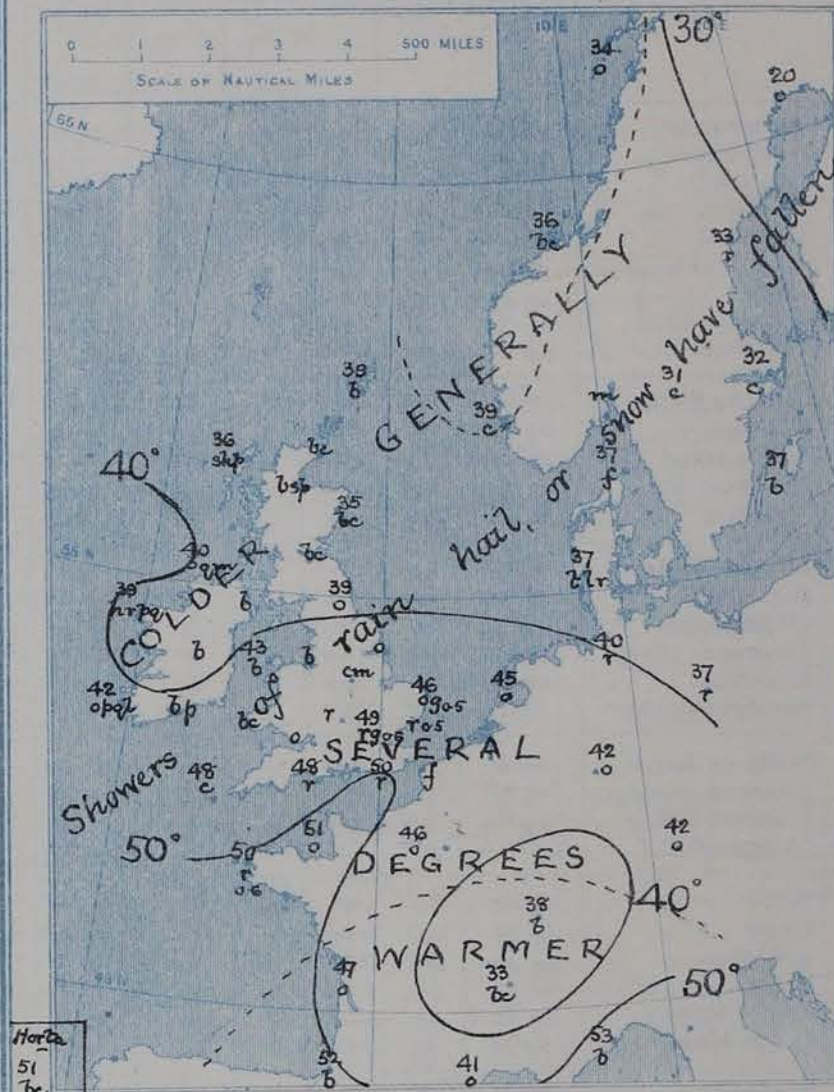

SEA.—Rough High 

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE.—Isotherms are drawn for each 10°

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. RAIN-DAYS IN 1905.

Total Number of days on which Rain was measured at the various Telegraphic Reporting Stations, with the percentage of the average number.

V. Averages of DAILY TEMPERATURE
at 8 A.M. for the monthly period
JANUARY

(Derived chiefly from Observations
extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The general distribution of pressure over Western Europe remains unchanged. The barometer is still highest, 30.3 ins. and upwards, over Switzerland and the south of France, and lowest, 29.1 ins. and less, in a large depression lying to the northward of these Islands. The appearance of small secondary disturbances over the United Kingdom and the North Sea has resulted in a reduction of the barometric gradient over the northern parts of our area, but in the south the gradient is still rather steep.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind is chiefly from the Westward or Southwestward, and although light or moderate in force generally it blows strongly over the English Channel and the Netherlands. In the northern parts of Scandinavia a Southeasterly to Easterly breeze prevails. Temperature has risen slightly over central and southern England, and more decidedly at some of the French and German stations, but has fallen in nearly all other parts of our area. The morning readings in these Islands range from between 48° and 51° over the south of England and the Channel to rather below 40° in most parts of Ireland and North Britain, and to 35° at Wick and Aberdeen. Light frost prevails in the south of Sweden, and sharp frost in Lapland.

The weather is fine in the eastern parts of Ireland and Scotland, and in Wales and the northwest of England. Over the remainder of our area it is cloudy and unsettled, with rain in the south of England and in North Germany, hail in the west of Ireland, and snow showers in the north of Scotland. Lightning is reported at Valencia (Ireland), and a thunderstorm at Fano.

The sea is rough or rather rough round the west, south, and extreme north of these Islands, and also on the French coasts.

At some of our southern stations, including London, the maximum temperatures recorded this morning were above 50°, and occurred during the night. In the northern parts of Great Britain the maximum readings for the 24 hours were in many cases below 45°. The duration of bright sunshine yesterday was, as a rule, small, but amounted to 5½ hours at Aberdeen. Rain has again fallen generally, — rather heavily in the south of England.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

Further depressions are likely to advance over these Islands from the westward, but in their rear the wind will probably veer to the Northwestward on our western coasts. The weather will continue in a very changeable condition, and over England the thermometer is likely to fall rather decidedly.

FORECASTS*

For the 24 hours ending at NOON on 14th JANUARY, 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	S.W. ² to W. ² or N.W. ² winds; cold and changeable, snow or sleet showers.
1	SCOTLAND EAST	
2	ENGLAND N.E.	Same as No. 5.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	S.W. ² winds, moderate or fresh; weather improving temporarily, but showers probable later. Becoming cooler.

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as Nos. 0 and 1.
7	ENGLAND N.W.	
8	ENGLAND S.W.	S.W. ² to N.W. ² winds, strong in places; changeable, showery. Rather colder.
9	IRELAND NORTH	
10	IRELAND SOUTH	

WARNINGS

NONE ISSUED.

Note—The South Cone, point downwards (⌒), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌒), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
 " Weekly " " " £1 10 0 "

Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom **Sixpence in addition to the cost of the inquiry and reply Telegrams.** Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post. W. N. SHAW (*Director*).

* At Oxford the observations are taken at 8 p.m.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

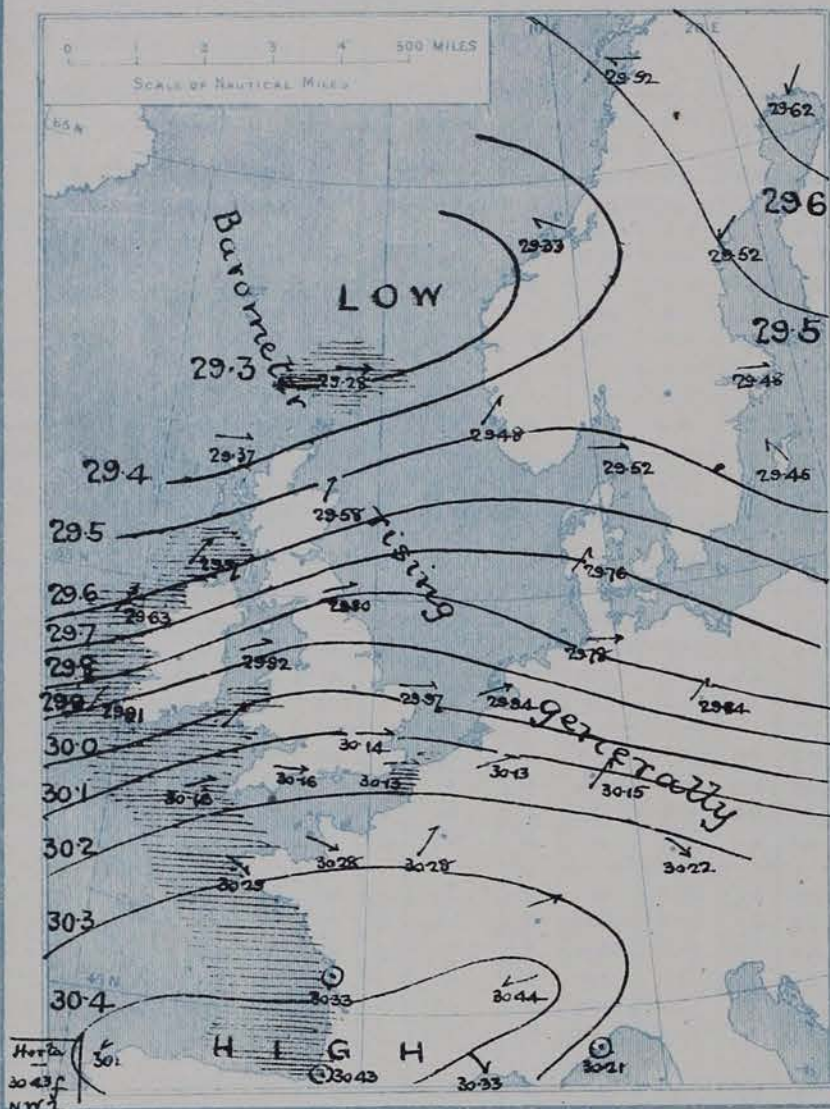

FOR SUNDAY, 14TH JANUARY, 1906.

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ☉
Force 8 to 10 → Force 1 to 4 → }
SEA—Rough High

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE—Isotherms are drawn for each 10°.

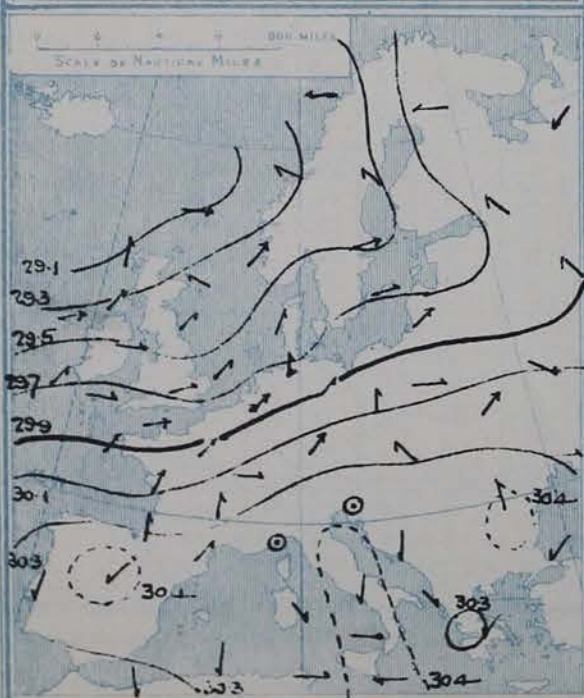

WEATHER—Shown by Letters of the Beaufort Scale (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

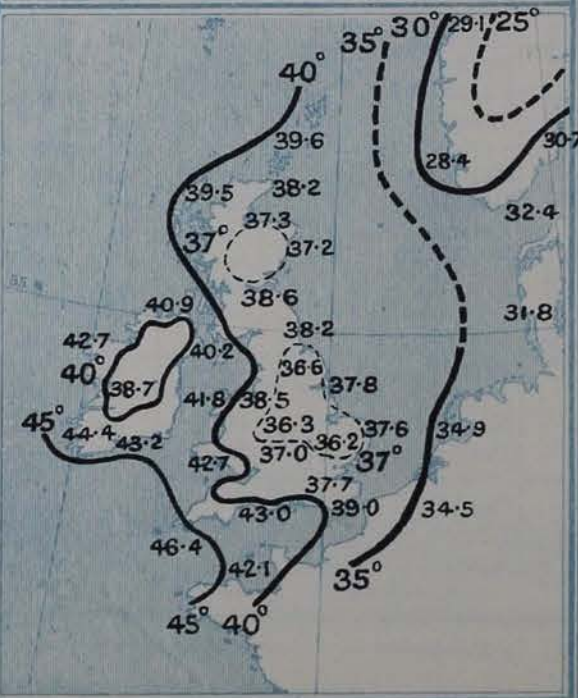

IV. BRIGHT SUNSHINE IN 1905.

Total Duration recorded at various stations in the United Kingdom during the Year, with the percentage of the average duration for the corresponding period.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period JANUARY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

Pressure is now highest, above 30.4 ins., in an anticyclone over the south of France and the north of Spain and lowest in a cyclonic depression of which the centre lies off the north of Scotland. In the northeast of our area the highest reading is 29.62 ins at Haparanda.

WIND

TEMPERATURE

WEATHER

AND

SEA

Fresh W. winds prevail over the north of France, our Islands and the southern portion of Scandinavia, but over the northern portion of the latter country the circulation is from the E. The weather continues cloudy and showery over Ireland and the west of Great Britain, but in all our eastern counties and also over France it is fine and bright. Snow or rain is reported from most Swedish stations. Temperature has fallen decidedly over the east of England and the northeast of France; in Ireland and Scotland today's readings are several degrees higher than those reported yesterday morning. Values range from 48° at Valencia and Blacksod Point to 36° at Yarmouth. With the exception of the changes over the north of France mentioned above, the variations in the Continental readings are small. The sea is rough in the Bay of Biscay & on all our western coasts, moderate to slight in the North Sea and the eastern part of the Channel.

During the previous 24 hours rain fell at almost all our stations; 0.3 in. was reached or exceeded at Sumburgh Head, Stornoway, Scilly and Jersey. The amounts of bright sunshine varied up to 5.2 hrs. at Scilly. The maximum temperatures experienced during yesterday did not exceed 50° at any station in the British Isles. The lowest minimum reported is 33° which occurred at both Nairn and Aberdeen.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

FORECASTS*

For the 24 hours ending at NOON on 15th January, 1906.

WARNINGS

{ At 9.15 am. Today To Districts 6, 7, 9, 10 and parts of 0 and 8, "Hoist South Cone".

Note.—The South Cone, point downwards (⏚), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⏚), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

*For terms for transmission of Forecasts by Telegraph, see next page.

SEA.—Rough High

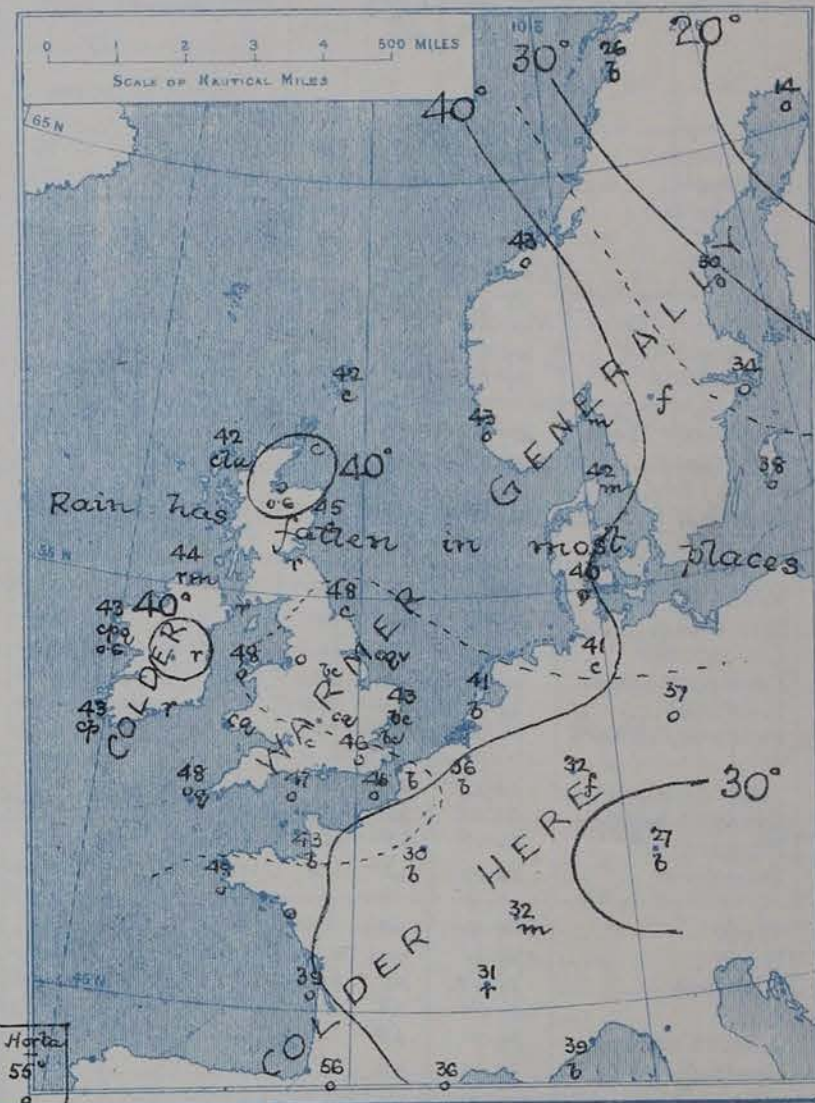

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus -0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

Amount recorded in various districts of the United Kingdom during the week ended Saturday, 6th JANUARY, with the percentage of the average for the corresponding week.

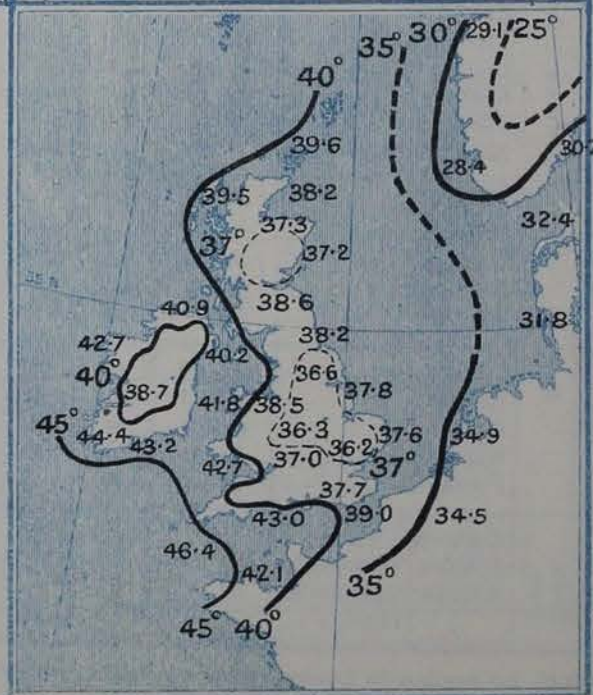

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period JANUARY

(Derived chiefly from Observations extending over the 35 years 1871-1905)

GENERAL SITUATION AT 8 A.M.

PRESSURE

An extensive and deep minimum of pressure is centred beyond the north of Scotland, where the barometer is down to nearly 29 ins. The central space of an anticyclone is situated over South Germany, the barometer at Munich reading 30.47 ins. Steep gradients are shown over the British Isles, the North Sea and Scandinavia.

WIND

TEMPERATURE

WEATHER

AND

SEA

Southerly or Southwesterly winds prevail over nearly the whole of the region under observation, mostly fresh or strong in force, a moderate gale in the northwest of Ireland, on the Bristol Channel and the Dutch coast, a fresh gale at Holyhead. Temperature has risen over nearly the whole of Britain, the northeast of Ireland, Scandinavia and Denmark, fallen elsewhere. The readings range from 38° at Berr Castle and Wick, 39° at Naion and 41° at Roche's Point to 47° or 48° over the west and north of England; from 14° at Haparanda, 26° at Bodö and 30° at Heröland and Paris to 43° at Brest and 56° at Biarritz. The weather is dull and rainy all over Ireland, overcast in most parts of Britain, Scandinavia, North Germany and the west coast of France, with fog at Karlstad and Frankfurt. Over the Low Countries and the greater part of France cloudless skies are reported. The sea is rough or rather rough in the north and west, from Christiansund round to the Bay of Biscay, moderate to smooth elsewhere.

During yesterday temperature rose to 53° at Jersey, to 52° at Lillie and Torquay, and to 50° or 51° at a number of other western and southern stations and at Leith. At Blackhead Point and Naion 0.6 in. of rain was measured. The duration of bright sunshine was very variable. Some of the northern stations had none at all, while Worthing, Eastbourne and Hastings had 6 hours, Margate 6.5 hours, and Jersey 7.2 hours.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The northern disturbance is passing away, but a brisk fall of the barometer at Lillie indicates the approach of a new disturbance towards our southwest coasts, and a continuation of similar windy and unsettled weather is expected during the ensuing 24 hours.

FORECASTS*

For the 24 hours ending at NOON on 16th JANUARY, 1906.

DISTRICTS.

FORECASTS.

- 0 SCOTLAND NORTH
- 1 SCOTLAND EAST
- 2 ENGLAND N.E.
- 3 ENGLAND EAST
- 4 MIDLAND COUNTIES
- 5 ENGLAND SOUTH

Light or moderate S.W. breezes, increasing later; changeable, some showers; mild.

S. and S.W. winds, fresh or strong, a gale at times in places; changeable, some rain; mild.

DISTRICTS.

FORECASTS.

- 6 SCOTLAND WEST
- 7 ENGLAND N.W.
- 8 ENGLAND S.W.
- 9 IRELAND NORTH
- 10 IRELAND SOUTH

Same as Nos. 0 and 1.

Same as Nos. 2 to 5.

WARNINGS

At 7 pm. yesterday to Districts 1, 2, 3, 5 and the remainder of 0 and 8, "HOIST SOUTH CONE." The signals are still flying on all coasts.

Note.—The South Cone, point downwards (⌵), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (⌴), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post. W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR TUESDAY, 16TH JANUARY, 1906.

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10

Force 5 to 7

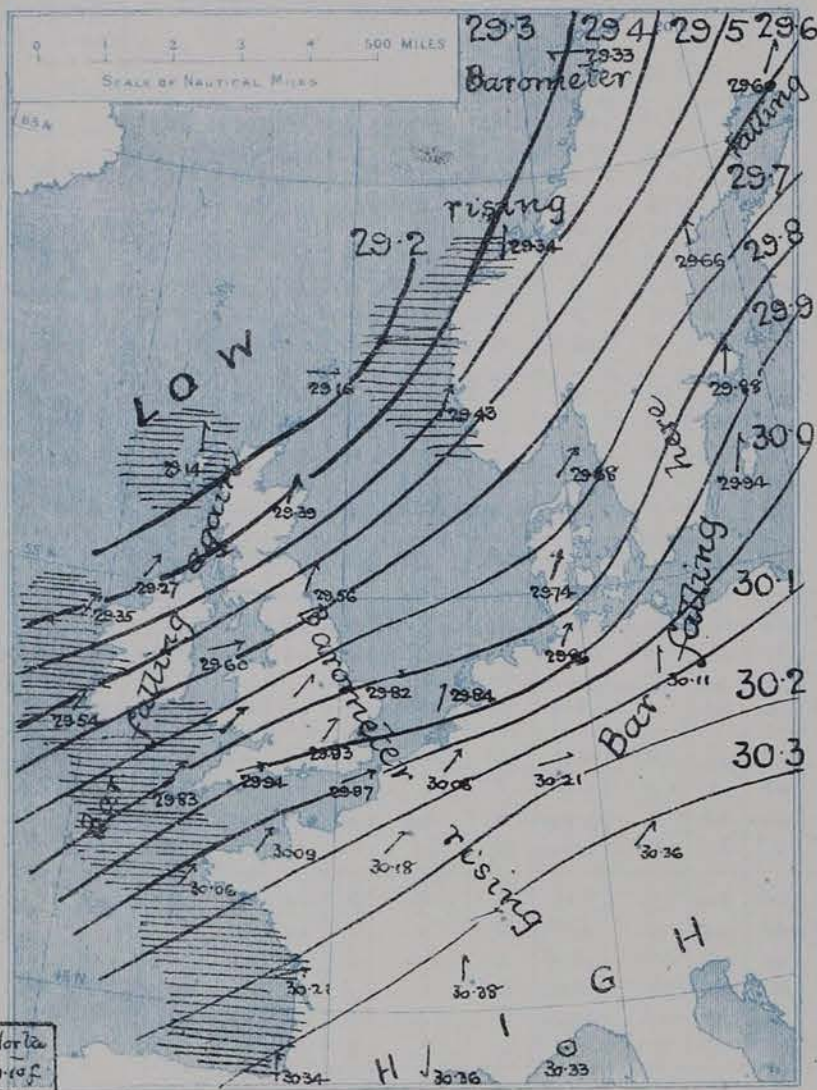

Calm

Force 8 to 10

Force 1 to 4

SEA.—Rough

High

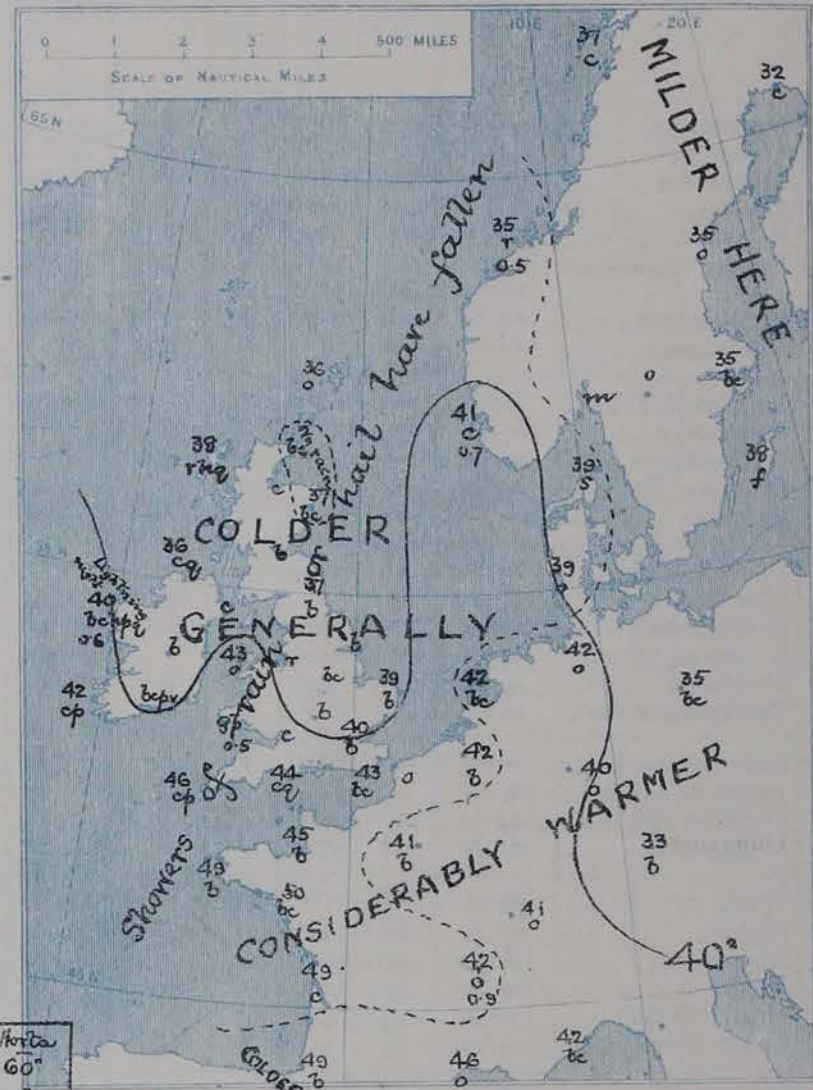

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. EXTREMES OF TEMPERATURE

recorded

in various districts of the United Kingdom during the week ended Saturday, 13TH JAN.

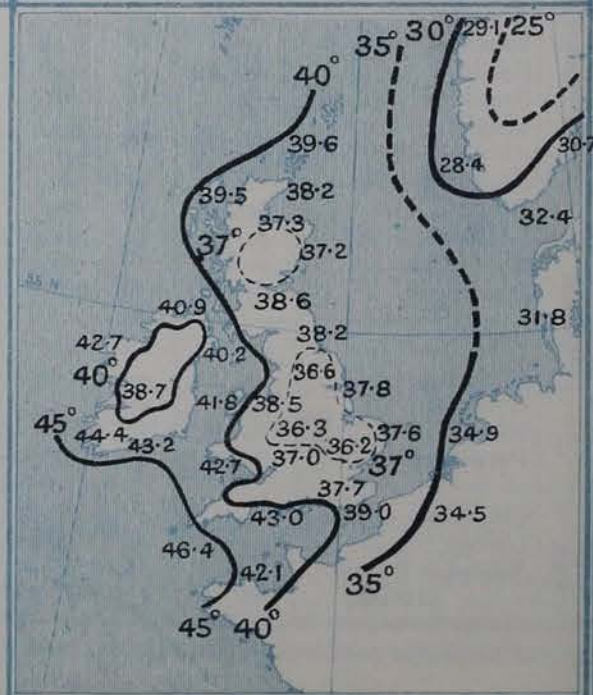

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period

JANUARY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

There has been no material change in the distribution of pressure, the barometer being still lowest, about 29.1 ins., off the north of Scotland, and highest, about 30.3 ins., over Southern Europe. The gradient over nearly the whole of our region is moderate to rather steep.

WIND

TEMPERATURE

WEATHER

AND

SEA

Southerly or Southwesterly winds are reported at nearly all the home and foreign stations, fresh or strong in force on our western coasts, along the English Channel and on the eastern shores of the North Sea, light or moderate in most other localities. Temperature has fallen all over the British Isles, Denmark and Southern Norway, risen elsewhere. The present values range from 35° at Naim and Wick and below 40° at the majority of the home stations to 45° at Jersey and 46° at Scilly; from 32° at Haparanda and 33° at Munich to 49° or 50° down the west coast of France.

Fair or fine weather prevails over the greater part of our area, rain is falling on many parts of our western coasts and at Christiansund, hail at Blackod Point and Stornoway and snow at Skagen. Fog is reported at Wisby. A rough sea is running off Pembroke, Cape Gris Nez and the west of Norway, and it is rather rough on most sections of our western coasts and on the Bay of Biscay, moderate to smooth elsewhere.

During yesterday temperature rose to 50° at Bettws-y-coed and Southport, 51° at Llandudno, and to 53° at Plymouth, but did not exceed 40° at Naim and Wick. Rain fell nearly everywhere, 0.5 in. at Pembroke and 0.6 in. at Blackod Point. The bright sunshine records were generally small, several stations had none, but Scarborough reports 4 hours.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The conditions remain of an unsettled Southwesterly type. A new and brisk decrease of pressure has set in at the southwestern stations, and strong winds and gales are likely to spread to various parts of our coasts in the course of the day, accompanied by squalls and rain.

FORECASTS*

For the 24 hours ending at NOON on 17TH JANUARY, 1906.

DISTRICTS.

FORECASTS.

- 0 { SCOTLAND NORTH
- 1 { SCOTLAND EAST
- 2 { ENGLAND N.E.
- 3 { ENGLAND EAST
- 4 { MIDLAND COUNTIES
- 5 { ENGLAND SOUTH

Light or moderate S^W and SW^W breezes, freshening later; changeable, some showers; normal temperature.

Moderate to fresh or strong SW^W winds; changeable, some rain; temperature rising.

DISTRICTS.

FORECASTS.

- 6 { SCOTLAND WEST
- 7 { ENGLAND N.W.
- 8 { ENGLAND S.W.
- 9 { IRELAND NORTH
- 10 { IRELAND SOUTH

Increasing SW^W winds; squally, rain at times; moderate temperature.

SW^W winds, strong to a gale, moderating later; squally, some rain; moderate temperature.

WARNINGS

At 9.5 am. to-day to Districts 7 to 10.
"HOIST SOUTH CONE".

Note. The South Cone, point downwards (⏏), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⏏), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.

" Weekly " " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post. W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

FOR WEDNESDAY, 17TH JANUARY, 1906.

Yesterday morning,

*Amount recorded
in various districts of the United Kingdom
during the week ended Saturday, 13th JANY.
with the percentage of the average amount
for the corresponding week.*

*(Derived chiefly from Observations
extending over the 35 years 1871-1905).*

GENERAL SITUATION AT 8 A.M.

PRESSURE

The general distribution of pressure has undergone hardly any change, the area of minimum barometer being still situated to the northward of Scotland, where the readings are below 29.1 in. The region of highest readings covers the southern part of the Continent, the mercury being above 30.3 in., and as high as 30.43 in. at Lisbon. The barometer is now rising over the greater part of our Islands, falling at nearly all the Continental stations. The small disturbance which crossed the south of England last night has now reached Belgium. The gradients remain rather steep in most localities.

WIND

The wind has drawn to the northward of West on the English Channel and in the Hebrides, otherwise Southerly to Westerly winds prevail both at home and abroad, fresh or strong in force in many places, a moderate gale at Holyhead and Faerøer, a fresh gale at Skudeenæs and Brussels.

TEMPERATURE

Temperature has risen at the majority of stations, and now ranges from between 35° and 38° in Scotland, the north of Ireland and the English Midlands to 47° at Jersey and 48° at Scilly; from 31° at Munich and 33° at Haparanda and Hernösand to 40° at Nice, 50° at Brussels and Lorient and 55° at Biarritz.

WEATHER

The weather is in an exceedingly variable condition at home and abroad, very fine and clear at many stations, overcast and dull at others, showery in Ireland, raining over Northern France, Northern Germany and Central Sweden, hail and sleet showers in Scotland.

AND

SEA

The sea is rough or rather rough on most of the northern and western coasts, from Norway round to the Bay of Biscay, moderate to smooth elsewhere.

During yesterday temperature rose to 53° at Jersey and to between 50° and 52° at several other southern stations, but it only touched 38° or 39° in various parts of Scotland, where a slight frost occurred during the night. Rain has fallen very generally, about half an inch being measured at several stations. At Harrogate and Darwen there was no bright sunshine, the amounts elsewhere ranging upwards to 6.4 hours at Folkestone and 6.5 hours at Hastings.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

Unsettled conditions are still indicated. Although the barometer is rising more or less decidedly generally, the wind at the Irish stations maintains its Southwesterly direction, and it is probable, therefore, that another low pressure area will declare itself on the western coasts in the course of the next 24 hours.

FORECASTS*

For the 24 hours ending at NOON on 18th JANUARY, 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Fresh N.W. ² breezes, backing S.W. ² ; changeable, some rain or sleet; moderate temperature.
1	SCOTLAND EAST	} Light to fresh S.W. ² winds; changeable, some showers; moderate temperature.
2	ENGLAND N.E.	
3	ENGLAND EAST	} Light to fresh W. ² and S.W. ² winds, strong on coast; changeable, squally, rain at times; moderate temperature.
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as No. 0.
7	ENGLAND N.W.	} Fresh or strong N.W. ² to S.W. ² winds; changeable, squally, rain at times; moderate temperature.
8	ENGLAND S.W.	
9	IRELAND NORTH	} Fresh or strong S.W. ² winds; changeable, squally, some rain; moderate temperature.
10	IRELAND SOUTH	
WARNINGS		The South Cone is still flying in Districts 7 to 10.

Note. The South Cone, point downwards (☐), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (☐), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post. W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

WEATHER CHARTS

FOR THURSDAY, 18TH JANUARY, 1906.

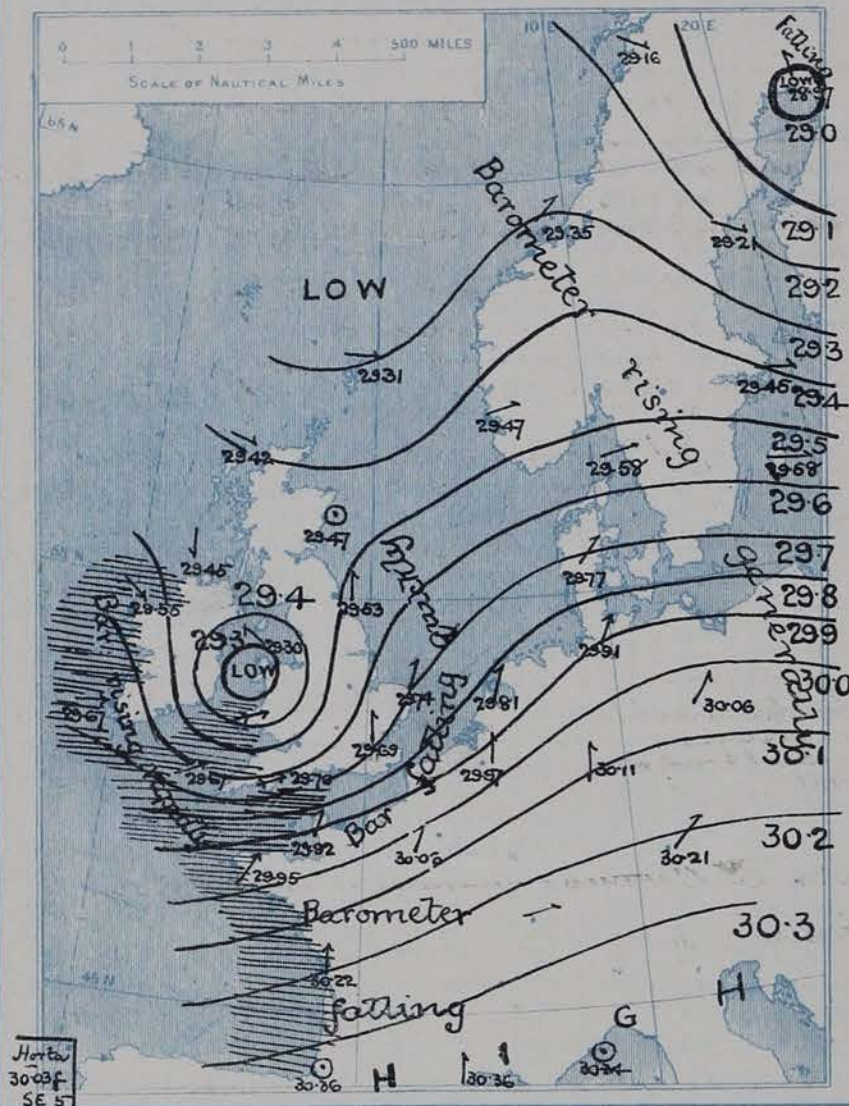

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 \rightarrow Force 5 to 7 \rightarrow Force 1 to 4 \rightarrow Calm \odot

SEA.—Rough |||| High |||||

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

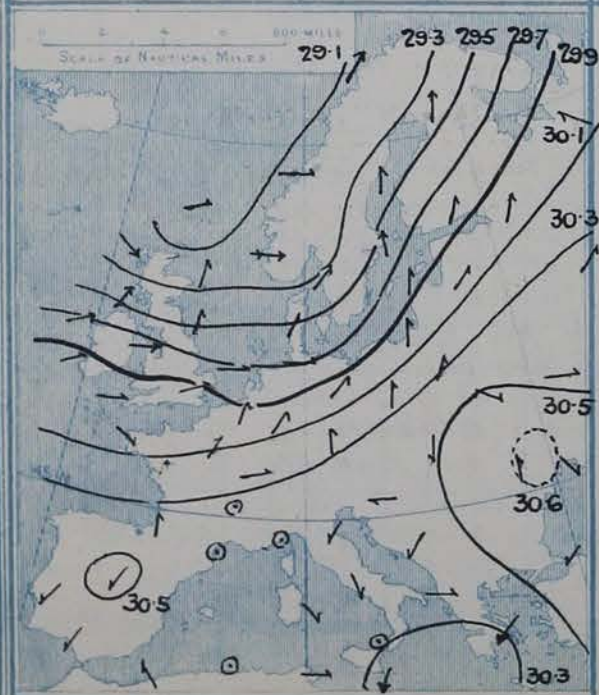

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

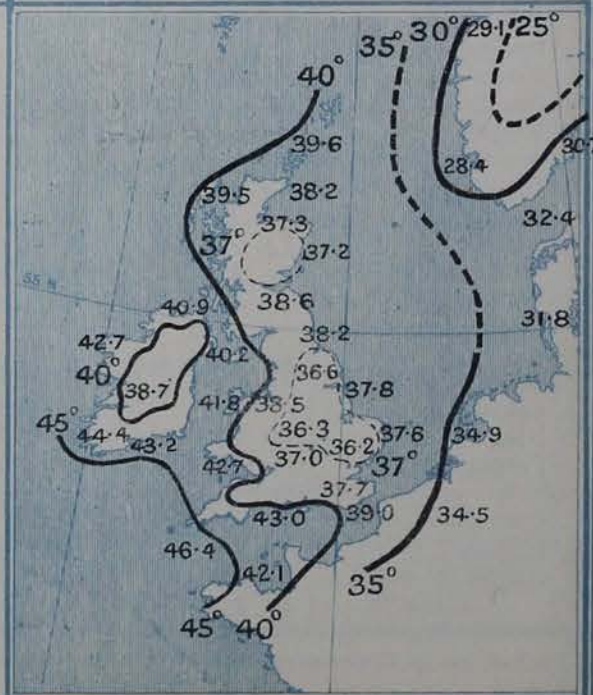

IV. LAST WEEK'S SUNSHINE.

Amount recorded in various districts of the United Kingdom during the week ended Saturday, 18TH JAN., with the percentage of the average duration for the corresponding week.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period JANUARY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

In the course of the past night a depression has advanced quickly across Ireland, and its centre is now near Holyhead, where the barometer has fallen to 29.30 ins. Another depression has appeared over Northern Sweden, the barometer being as low as 28.97 ins. at Staparanda. An area of low pressure is still indicated to the northward of Scotland. Pressure remains highest, 30.3 ins. over Southern Europe. The gradient is steep over our southern districts and the north of France, moderate to slight elsewhere. The barometer is falling rapidly over Eastern England, rising as rapidly in the west.

WIND

A complete cyclonic wind circulation is shown round the western depression, Southwesterly to Westerly, strong to a gale, over our southwestern districts, but of little strength in other localities. In Scotland and at the continental stations light or moderate Southwesterly to Westerly winds prevail.

TEMPERATURE

Temperature has risen over the south and east of England and across Northern France into Southern Germany, fallen in most other regions. The readings southern stations; from 32° at Nairn and 35° at Aberdeen and Stornoway to 49° at several Brest and 50° at Paris and Rochefort.

WEATHER

The weather is fair or fine in Scotland and the greater part of Scandinavia, but elsewhere it is very unsettled, rain falling at many of the home and foreign stations, snow at Staparanda.

AND

SEA

A high sea is running off Pembroke and it is rough or rather rough off the west of Ireland, in the English Channel and on the Bay of Biscay.

During yesterday's temperature rose to 50° at a few of the south and south-west coast stations and to 51° at Jersey, but did not exceed 40° in the north of Scotland.

Rain has fallen nearly everywhere, heavily in the west, 0.8 in. at Blackhead Point, an inch at Valencia. At Birn Castle snow fell this morning, and at Darwen a thunderstorm with rain and hail occurred yesterday. On the east and southeast coasts of England the duration of bright sunshine was 6 hours or more, but at some of the western and northern stations the amounts were very small.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The depression over St. Georges Channel is moving eastward and will occasion rough, rainy weather over England, the wind veering Westerly or Northwesterly later and blowing strongly, with showers and fair intervals and some decrease of temperature.

FORECASTS*

For the 24 hours ending at NOON on 19th January, 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Light or moderate Westerly and Southwesterly breezes, changeable, some showers; moderate temperature.
1	SCOTLAND EAST	
2	ENGLAND N.E.	Southerly winds strong to a gale, veering Westerly later; very unsettled, squally and rainy, improving later; very mild at first, then cooler.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as Nos. 0 and 1.
7	ENGLAND N.W.	
8	ENGLAND S.W.	Southeasterly to Northeasterly and Northwesterly winds strong to a gale; some rain or sleet, fair intervals, cooler.
9	IRELAND NORTH	
10	IRELAND SOUTH	Southwesterly to Northwesterly winds strong to a gale; squally and rainy, improving later, with lower temperature.
		Fresh or strong Westerly to Northerly winds, a gale at times, backing later, unsettled, some rain; cooler.

WARNINGS

At 9.20 a.m. to Districts 2, 3 and part of 5 "HOIST SOUTH CONE"; and at 9.40 a.m. to Districts 7 to 10 and the remainder of 5 "HOIST NORTH CONE".

Note—The South Cone, point downwards (⌵), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌴), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.

" Weekly " " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent, daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post. W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

FOR FRIDAY, 19TH JANUARY, 1906.

II. TEMPERATURE AND WEATHER, *This Morning*

TEMPERATURE—Isotherms are drawn for each 10°

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

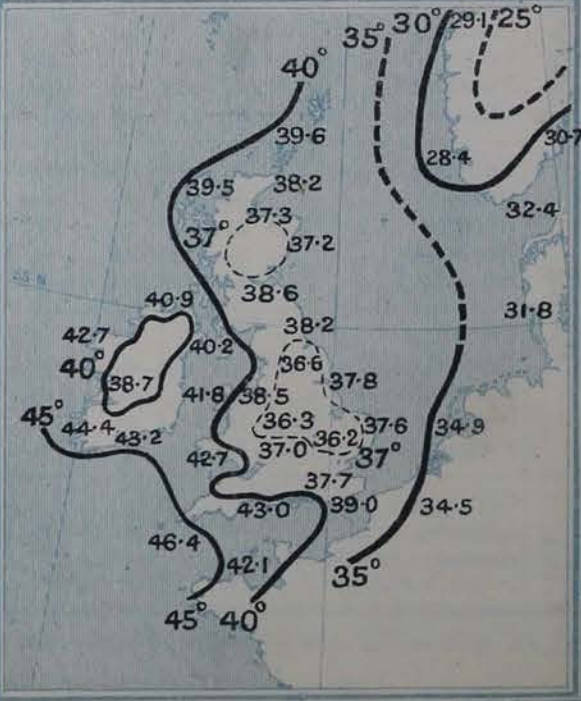

RAINFALL— $\left\{ \begin{array}{l} \text{A dotted line separates areas where rain has fallen from those} \\ \text{without rain. The fall in past 24 hours when exceeding half} \\ \text{an inch is shown thus—} 0\cdot6 \end{array} \right.$

IV. RAINFALL IN 1906.

Total Amount recorded
in various districts of the United Kingdom
in the 2 weeks ended Saturday, 13th JANUARY,
with the percentage of the average amount
for the corresponding period.

(Derived chiefly from Observations
extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The central space of the deep depression which moved across Ireland and England yesterday has now reached the Baltic, where the barometer readings are below 29.3 ins. All over the more western parts of Europe and Northern Scandinavia pressure has increased very rapidly, and the mercury is above 30.4 ins. over the western half of Ireland and thence down to the Spanish Peninsula. Steep gradients are shown over the North Sea, the Netherlands and Germany, moderate over our western districts and France, but slight over Scandinavia.

WIND

TEMPERATURE

WEATHER

AND

SEA

A strong Southwesterly wind is reported over Southern and Eastern Germany, and a moderate Easterly breeze on the eastern part of the Baltic, but over the rest of our area Northerly and North-westerly winds prevail, fresh or strong in most localities, a gale at Holyhead, Loughswilly and Lough Erne. At several of the Irish stations it has now fallen light.

Temperature has risen over Ireland, Scotland, the northwest of England and in some parts of Germany, fallen elsewhere. The readings range from 36° at Dungeness and Brix Castle and 37° to 39° over Scotland and eastern England to 44° at Valencia, Holyhead and Jersey and 45° at Scilly; from 18° at Helsingfors, 19° at Haparanda and 30° at some other Scandinavian stations to 50° at Biarritz and 51° at Lisbon.

Fair to very fine weather prevails at most of our home stations, but showers are falling at Spurn Head, and Aberdeen and Stornoway report hail squalls. On the Continent the sky is mainly overcast, rain is falling over Denmark, snow in various parts of Sweden and Norway.

A high or rough sea is running round the north of Scotland, on the Welsh coast and along the north and northwest of France, and it is rather rough on the western and southern coasts generally, and also off the Humber.

During yesterday temperature rose to 50° or 51° at the inland English stations and at Plymouth, Torquay and Jersey, but failed to reach 40° in some parts of Scotland. Rain fell nearly everywhere, snow and hail at many of the northern and northwestern stations. At Harrogate a very heavy snow storm in the afternoon yielded 0.7 in. of water. Scilly had 4.1 hours of bright sunshine, but many places had none.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The Northerly type of conditions will be maintained during the greater part of the ensuing 24 hours, but the increase of temperature reported over the western and northern districts probably points to the existence of a milder Westerly current at no great distance beyond the western coasts, which is likely to affect us later.

FORECASTS*

For the 24 hours ending at NOON on 20TH JANUARY, 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	N ^W and N ^W winds, strong to a gale, moderating later; fair generally, local showers; moderate temperature.
1	SCOTLAND EAST	
2	ENGLAND N.E.	Fresh or strong N ^W winds, moderating gradually; fair or fine, some local showers; moderate temperature.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Strong N ^W to N ^W winds, moderating and backing; fair or fine; local showers; moderate temperature.
7	ENGLAND N.W.	
8	ENGLAND S.W.	Fresh to light N ^W to W ^W breezes; generally fair or fine, less settled later; moderate temperature.
9	IRELAND NORTH	
10	IRELAND SOUTH	

WARNINGS

At 9.30 am to-day to District 1 and part of 0, "HOIST NORTH CONE." The signals are flying on all coasts except District 6 and part of 0.

Note—The South Cone, point downwards (⌵), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.

The North Cone, point upwards (⌴), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post.

W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

WEATHER CHARTS

FOR SATURDAY, 20TH JANUARY, 1906.

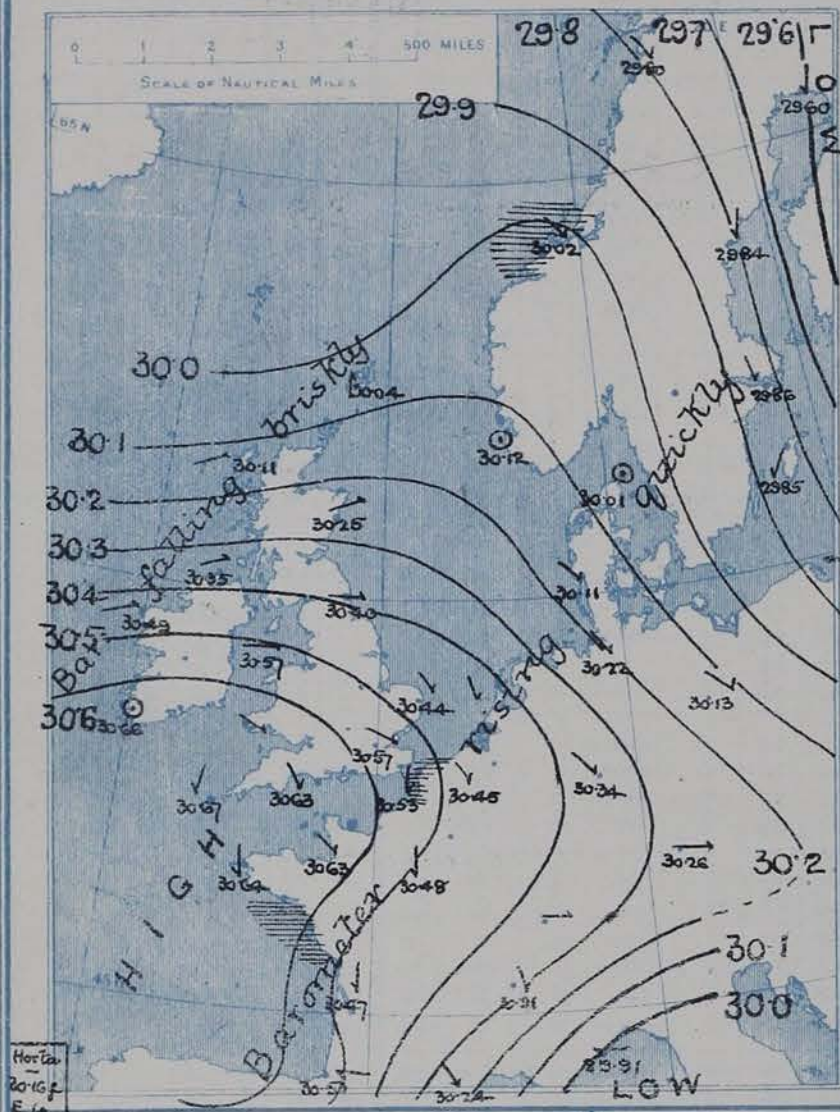

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 ——— Force 5 to 7 ——— } Calm ☉
Force 8 to 10 ——— Force 1 to 4 ———

SEA.—Rough High

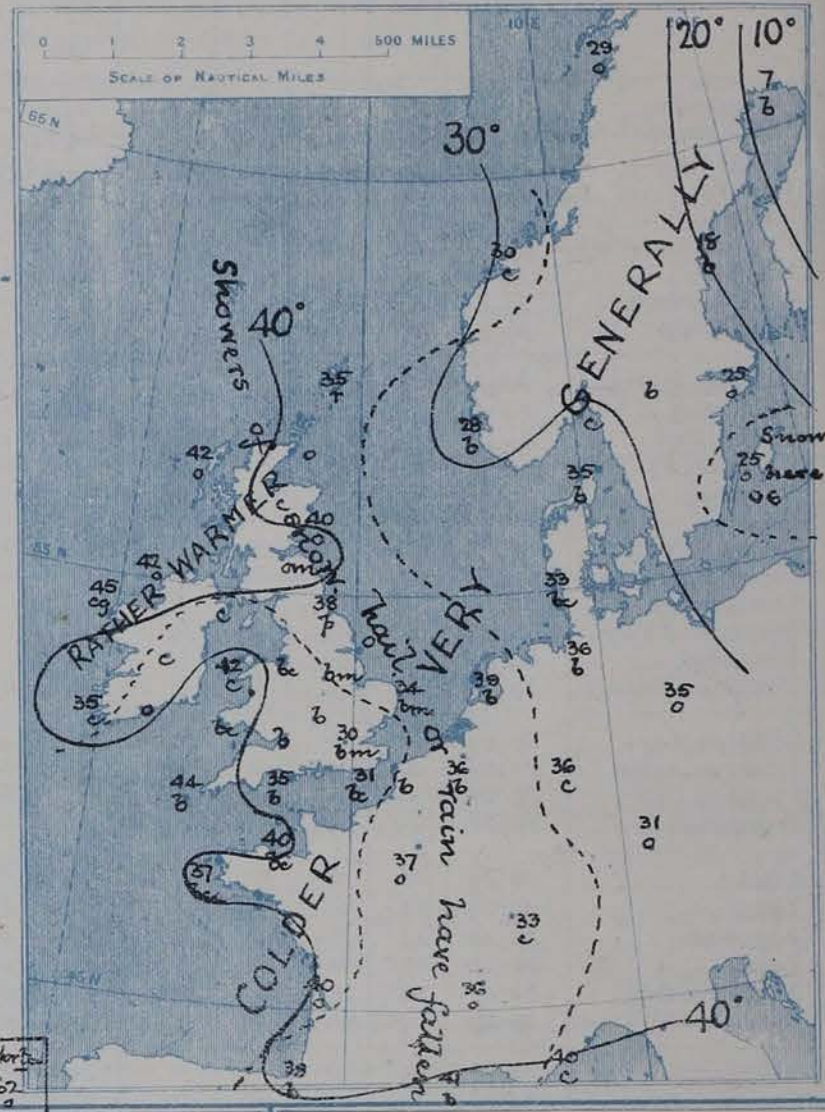

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. BRIGHT SUNSHINE IN 1906.

Total Duration recorded in various districts of the United Kingdom in the 2 weeks ended Saturday, 13TH JANUARY, with the percentage of the average duration for the corresponding period.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period JANUARY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The deep depression which was yesterday morning over the Baltic has passed on into Russia, and a considerable increase of pressure has taken place over the whole of the region under observation. The barometer is now highest, above 30.6 ins., over our southwestern districts, the north of France and the Bay of Biscay. Already, however, the mercury is falling all over our northwestern and northern districts, an area of minimum pressure being indicated in the direction of Iceland. The lowest barometer reading reported is 29.60 ins. at Haparanda. A moderately steep gradient exists over our northern districts.

WIND

TEMPERATURE

WEATHER

AND

SEA

At the Continental stations and on the English Channel coast N^o or NW^o winds prevail, but over the British Isles generally the direction has become W^o to S.W^o. Both at home and abroad the force is mostly light to moderate. Temperature has risen over Scotland and in the northwest of Ireland, fallen in all other regions. The present values range from 30° at Bath, Nottingham and in London, and 31° at Oxford to 48° at Scilly and 45° at Blackhead Point; from 7° at Haparanda, 18° at Helsingfors, and several degrees of frost over Scandinavia generally to 41° at Perpignan and Lorient and 42° at Lisbon. The weather is variable between fine and clear and very overcast, showers being reported at Shields and rain in the extreme northeast of Scotland. A rough sea is running off Cape Gris Nez and Christiansund, and it is rather rough off Lorient; on all other coasts it is moderate to smooth.

During yesterday temperature rose to 49° at Jersey and Torquay, but it did not exceed 39° at Darwen and 38° at Harrogate and Lumburgh Head. The duration of bright sunshine was unusually large for the time of year, exceeding 6 hours in many places, and amounting to 7.5 hours at Torquay; the smallest record was 1.2 hour at Aberdeen and Stromway.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The anticyclone is moving slowly SE.^{ward} and will probably take up a position on the Continent later. Barometric depressions are consequently expected to skirt the western and northern coasts and bring about a renewal of the Southwesterly type of conditions.

FORECASTS*

For the 24 hours ending at NOON on 21st January. 1906.

DISTRICTS.

FORECASTS.

1	SCOTLAND NORTH	Increasing S.W. ^o winds; becoming less settled, rain at times.
2	SCOTLAND EAST	
3	ENGLAND N.E.	Moderate temperature.
4	ENGLAND EAST	Light W. ^o breezes, backing S.W. ^o later and freshening; fine today, less settled, some showers tomorrow. Temperature rising.
5	MIDLAND COUNTIES	
6	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

7	SCOTLAND WEST	Same as nos. 0 & 1.
8	ENGLAND N.W.	
9	ENGLAND S.W.	Variable N ^o breezes, finally W. ^o or S.W. ^o ; freshening; fine generally, some showers later; moderate temperature.
10	IRELAND NORTH	Same as nos. 0 & 1.
11	IRELAND SOUTH	
WARNINGS		At 11.30 am today to Districts 0, 1, 6 and part of 9, "Hoist South Cone."

Note.—The South Cone, point downwards (⏏), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⏏), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

*For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.

" Weekly " " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post. W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Sunday, 21st January, 1906.

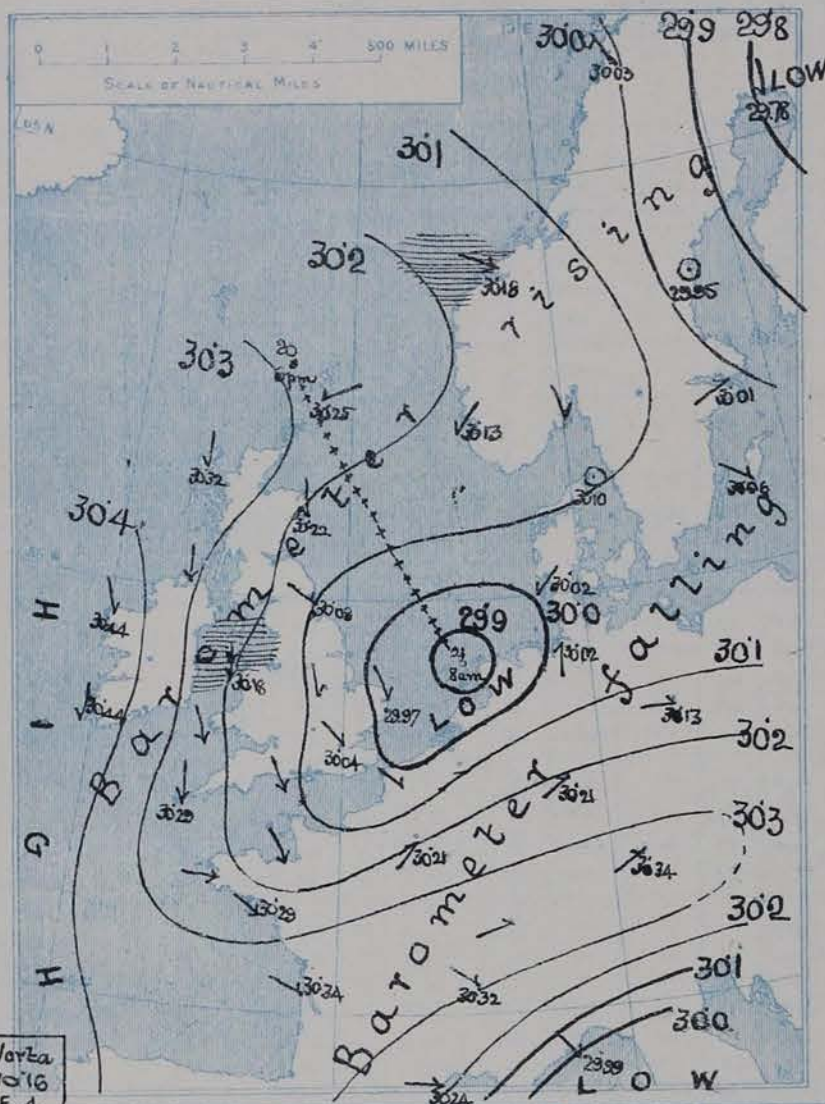

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 \rightarrow Force 5 to 7 \rightarrow } Calm \odot
Force 8 to 10 \rightarrow Force 1 to 4 \rightarrow

SEA.—Rough |||| High |||||

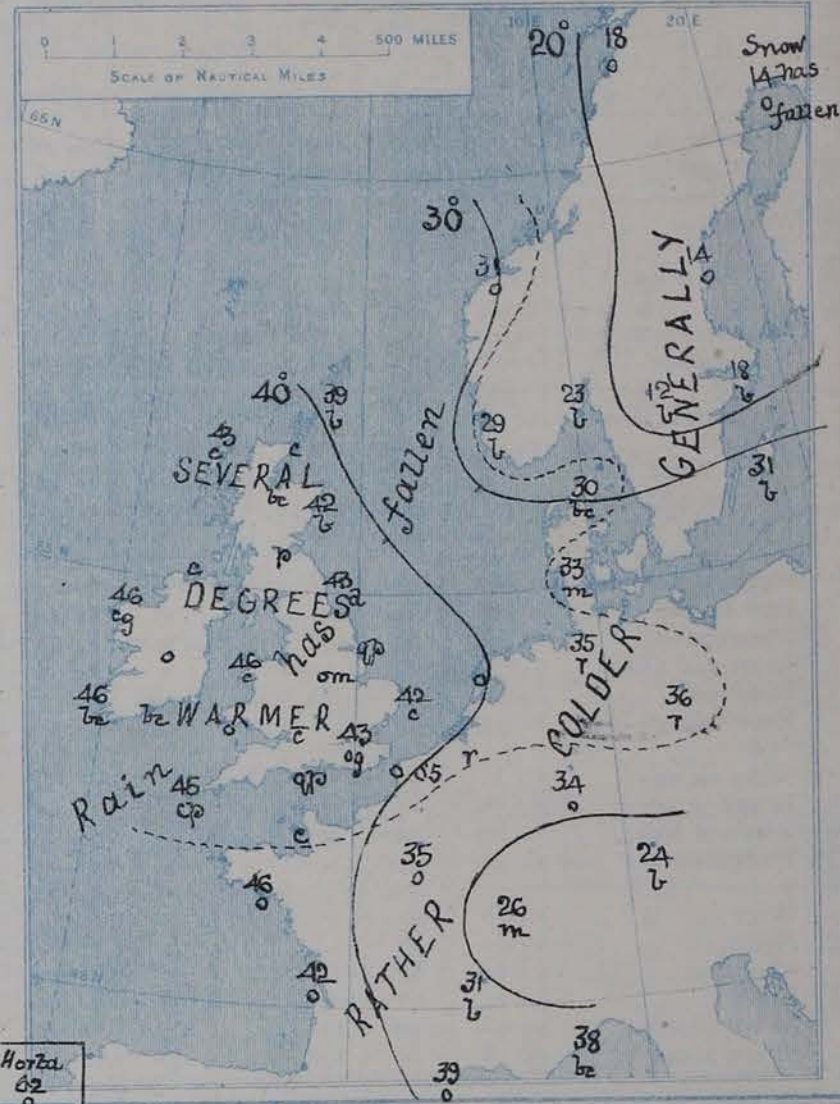

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus -0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°

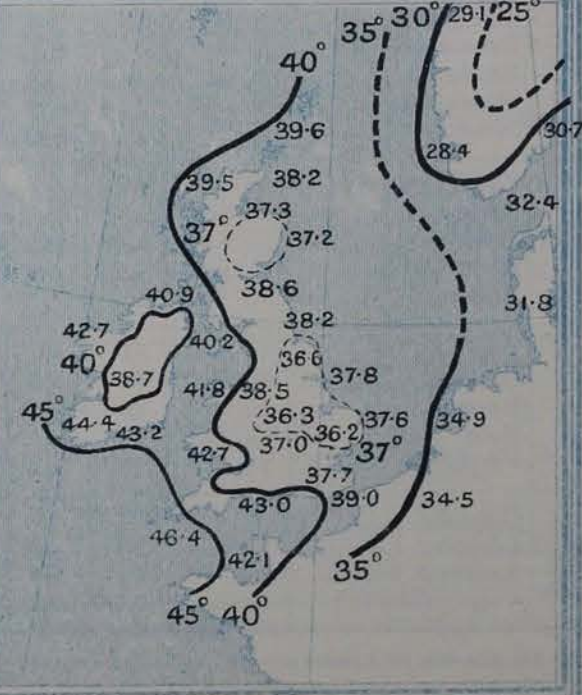

Amount recorded in various districts of the United Kingdom during the 2 weeks ended Jan. 13th 1906, with the percentage of the average for the corresponding period.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period JANUARY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

A rather shallow minimum of pressure lies over the North Sea, the lowest reading shown being 29.90 ins. at the Helder. Pressure is also low over the Western Mediterranean, and in the extreme northeast of our area. The highest readings, slightly above 30.4 ins., are reported from the west coast of Ireland. Many small irregularities of pressure are shown over the British Isles.

WIND

TEMPERATURE

WEATHER

AND

SEA

Northerly winds prevail at all home stations; in the Irish Sea the wind is strong to a gale. Westerly winds, at some places of considerable strength, are reported from the French and German stations. Over Scandinavia light and rather variable breezes prevail. The weather is generally very unsettled. In the British Isles conditions are very variable, but showers and squalls and overcast skies predominate. Rain or sleet is falling in the north of France and Germany. Temperature has risen decidedly since yesterday morning at the British stations; today's readings are for the most part between 40° and 45°. Cold weather continues on the Continent. The sea is rough in the Irish Sea, moderate elsewhere.

During the previous 24 hours rain or sleet fell in all parts of the British Isles; but the amounts measured were generally not large. But little bright sunshine was experienced, the largest total is 5.6 hours at Boynot. Temperature rose to close on 50° at many stations during the day; the minima of temperatures recorded during the 24 hours were in many cases the readings taken at 8 am yesterday.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

FORECASTS*

For the 24 hours ending at NOON on 22ND JANUARY, 1906.

DISTRICTS.

FORECASTS.

- 0 SCOTLAND NORTH
- 1 SCOTLAND EAST
- 2 ENGLAND N.E.
- 3 ENGLAND EAST
- 4 MIDLAND COUNTIES
- 5 ENGLAND SOUTH

None issued.

DISTRICTS.

FORECASTS.

- 6 SCOTLAND WEST
- 7 ENGLAND N.W.
- 8 ENGLAND S.W.
- 9 IRELAND NORTH
- 10 IRELAND SOUTH

WARNINGS

None issued.

At 11.25 am. yesterday to Districts 0, 1, 6 and part of 9, "HOIST SOUTH CONE."

Note - The South Cone, point downwards (⏚), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (⏚), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Monday, 22nd January, 1906.

I. BAROMETER, WIND AND SEA. This Morning.

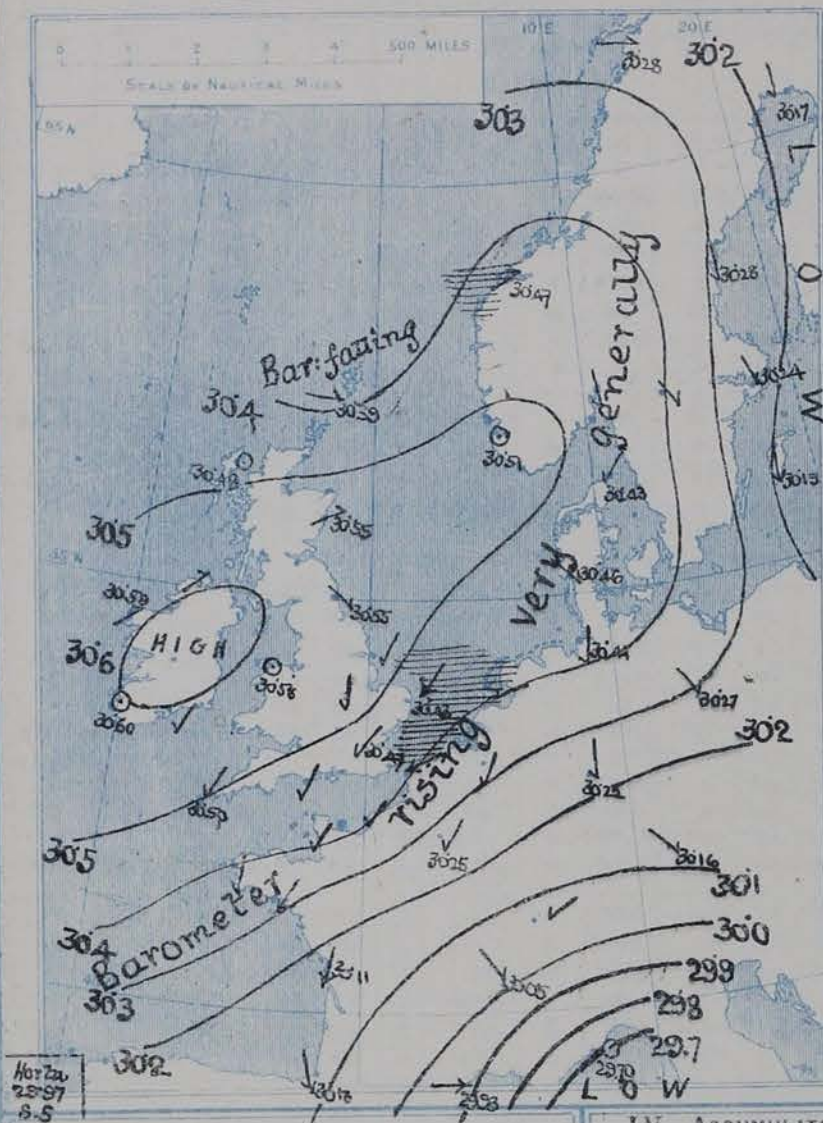

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Direction and Force, flying with the wind.

Force above 10 \rightarrow Force 5 to 7 \rightarrow Calm \odot

Force 8 to 10 \rightarrow Force 1 to 4 \rightarrow

SEA—Rough |||| High |||||

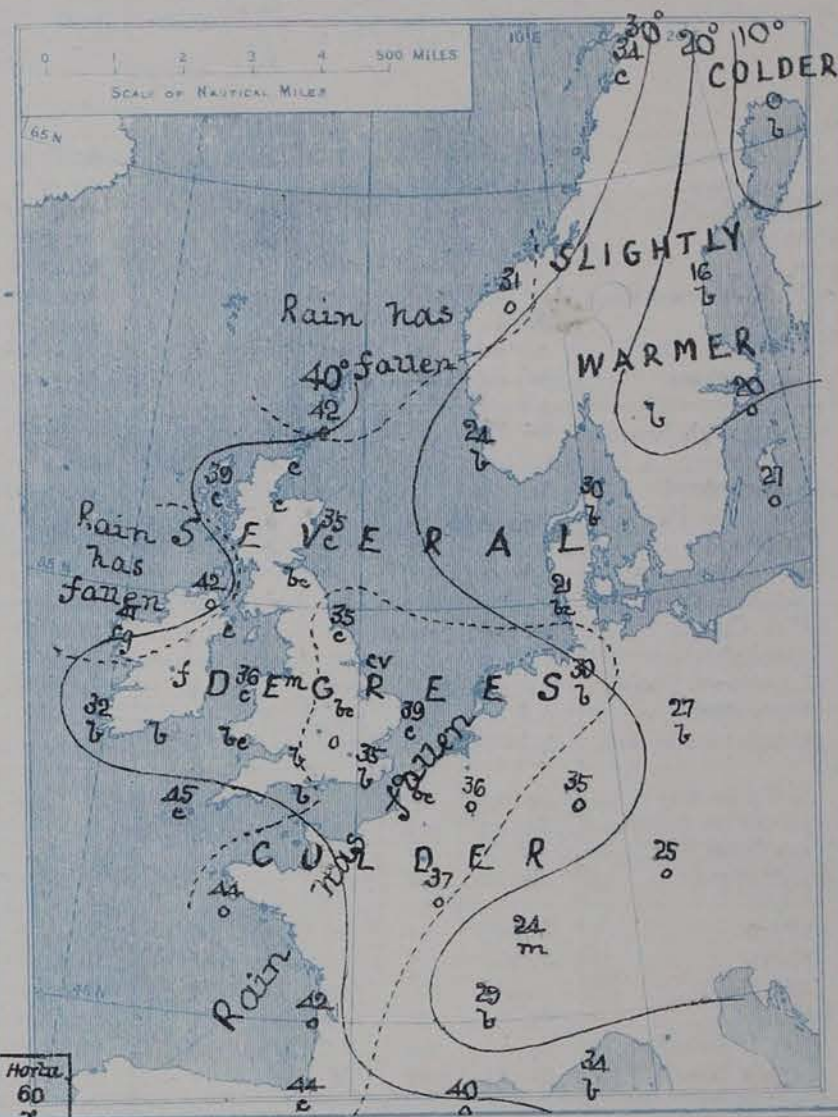

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°.

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus—0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

Amount recorded in various districts of the United Kingdom during the week ended Sat. 13th JAN. with the percentage of the average for the corresponding week.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period JANUARY — FEBRUARY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

In the rear of yesterday's depression a large anticyclone has extended from the Atlantic over the whole of Northwestern Europe. The central portion of the system, in which pressure exceeds 30.6 ins., lies over Ireland, and the barometer continues to rise on all but our extreme northern coasts, where a new fall has commenced. The lowest pressures, 29.9 ins. and less, are found over the extreme south of France.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind is N.^o or N.E.^o over the greater part of our area, and blows freshly or strongly on our own east and southeast coasts, as well as in the Bay of Biscay. In Scotland, the north of Ireland and the west of Norway, however, light breezes from W. or S.W. are reported. The extension of the anticyclone has been accompanied by a general fall of temperature. Over the United Kingdom the readings of the thermometer are as a rule slightly below the average, the lowest values reported being 31° at Birr Castle, 32° at Valencia and 34° at Leith, Bath and Portland Bill. Sharp frost prevails in Scandinavia, Denmark and Germany, the thermometer standing below 20° at most of the Swedish stations, and as low as 21° at Janö and Skudsmoes. The weather is fair or fine over Western Europe generally, but mist prevails at some of the English stations, and fog at Birr Castle. The sea is slight or smooth generally, but is rather rough round the east and southeast coasts of England, as well as at Christiansund.

At many of our northern stations yesterday the thermometer failed to reach 45°, but on our western and southern coasts that point was exceeded, the highest reading reported being 51° at Loughlyn. Frost occurred at night over a large portion of the United Kingdom. Small amounts of bright sunshine were recorded yesterday in most districts, but showers fell at most of the English stations, and more decided rains in the north and west of France.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

Over all the more southern parts of the United Kingdom the weather is likely to remain for the present under the influence of the large anticyclone now existing over Western Europe. The system will, however, probably move southwards, and in our northern districts the conditions will be influenced shortly by a new area of low pressure advancing from the Atlantic.

FORECASTS*

For the 24 hours ending at NOON on 23rd. January, 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Light W. ^s winds, and fair cold weather; followed by freshening S.W. ^s winds, some rain and a rising temperature.
1	SCOTLAND EAST	
2	ENGLAND N.E.	N. ^s to W. ^s winds, light; fair and cold today, becoming milder tomorrow.
3	ENGLAND EAST	N.E. ^s to variable breezes; fair generally, but misty or foggy in places. Remaining cold.
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	S.W. ^s winds, light to fresh; fair at first, some rain later. Becoming milder.
7	ENGLAND N.W.	
8	ENGLAND S.W.	Variable breezes, finally S.W. ^s ; fair, cold.
9	IRELAND NORTH	Same as Nos. 3 to 5.
10	IRELAND SOUTH	Same as No. 7.
WARNINGS		NONE ISSUED.

Note: The South Cone, point downwards (T), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (T), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.

" Weekly " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post.

W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR *Tuesday, 23rd January, 1906.*

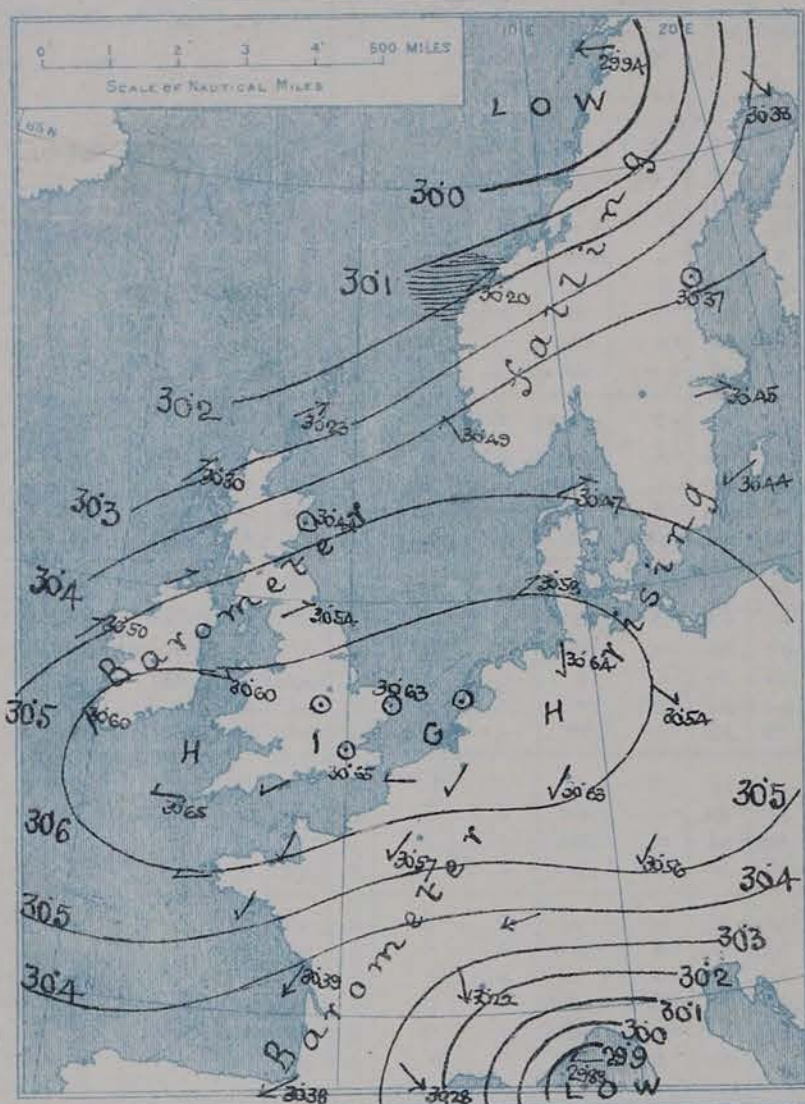

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 \rightarrow : Force 5 to 7 \rightarrow : } Calm \odot
Force 8 to 10 \rightarrow : Force 1 to 4 \rightarrow :

SEA.—Rough |||| High |||||

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. EXTREMES OF TEMPERATURE

recorded

in various districts of the United Kingdom

during the week ended *Sat. 20th JAN*

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period

JANUARY — FEBRUARY

(Derived chiefly from Observations extending over the 35 years 1871-1905)

GENERAL SITUATION AT 8 A.M.

PRESSURE

Over the greater part of Western Europe the weather remains under the influence of a large anticyclone, the central area (in which pressure exceeds 30.6 ins.) extending from west to east across the south of Ireland, England and the Channel to Western Germany. To the northward of this region the readings of the barometer decrease to 30.0 ins. and less, in a depression off the coasts of Finmark, while to the southward of it they decrease to 29.9 ins. and less, in an area lying over the western parts of the Mediterranean. At all our more northern stations the barometer is at present falling.

WIND

Within the area of highest pressure the wind is calm or variable, but over Belgium, France and South Germany it is chiefly N.E.^d, and at Belfort it blows a moderate gale. Over the northern parts of these Islands and the North Sea light S.W.^d breezes are reported, while in the west of Norway there is a partial cyclonic circulation round the depression in that neighbourhood. Temperature has risen in Ireland

TEMPERATURE

and Scotland, and also on the eastern side of the North Sea, but has fallen elsewhere. At Blackhead Point the thermometer is as high as 46°, and at Stornoway it stands at 45°, but over Central England it is from four to six degrees below the freezing point. A sharper frost prevails in Belgium, Germany and Central France, and hard frost in Sweden, the thermometer at Haparanda registering 5° below zero. The weather is dull in many parts of Ireland, Scotland and Scandinavia, with rain at Sumburgh Head, and snow at Bodö and Hernösand. In most other parts of Western Europe the weather is fine, but in the inland portions of England fog is prevalent. The sea is slight or smooth generally, but rough at Christiansund.

WEATHER

AND

SEA

On our extreme west and southwest coasts the thermometer yesterday rose slightly above 45°, but in other parts of the Kingdom it scarcely exceeded 40°. Sharp frost occurred over England at night; on the surface of the grass the thermometer fell to 17° in London and 22° at Oxford. Slight rain has fallen in many parts of Ireland and the west and north of Scotland.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The anticyclone will probably continue to move southward, and the weather in all the more northern parts of these Islands will be affected to an increasing extent by cyclonic systems traversing the upper portion of the Atlantic. Freshening S.W.^d winds and mild, unsettled weather are therefore probable in our northern districts, and in the course of the next day or two, similar conditions are likely to be experienced further south.

FORECASTS*

For the 24 hours ending at NOON on 24th January, 1906.

DISTRICTS.

FORECASTS.

0	{ SCOTLAND NORTH	{ S.W. ^d winds, freshening; mild. unsettled, some rain.
1	{ SCOTLAND EAST	{ S.W. ^d winds, light or moderate; fair at first, some rain later.
2	{ ENGLAND N.E.	{ Becoming milder.
3	{ ENGLAND EAST	{ Calms or light variable airs, and cold foggy weather; followed
4	{ MIDLAND COUNTIES	{ to-morrow by light S.W. ^d winds, fair
5	{ ENGLAND SOUTH	{ weather, and a rising temperature.

DISTRICTS.

FORECASTS.

6	{ SCOTLAND WEST	{ Same as No. 0.
7	{ ENGLAND N.W.	{
8	{ ENGLAND S.W.	{ Variable breezes, finally S.W. ^d ; fair generally. Rather milder.
9	{ IRELAND NORTH	{ Same as No. 0.
10	{ IRELAND SOUTH	{ S. ^d winds, freshening; dull, some rain. Becoming milder.

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (☐), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (☐), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post. W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Wednesday, 24th January, 1906.

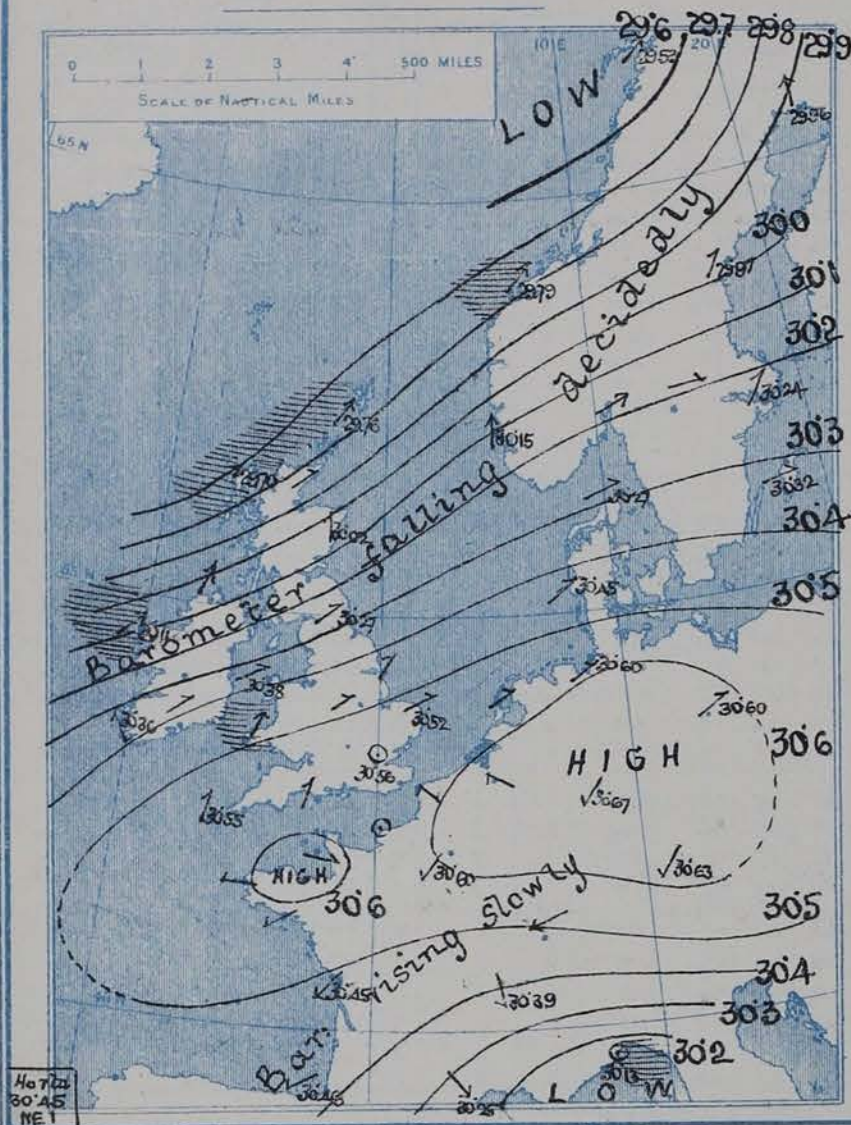

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → : Force 5 to 7 → : } Calm ☉
Force 8 to 10 → : Force 1 to 4 → :

SEA.—Rough  High 

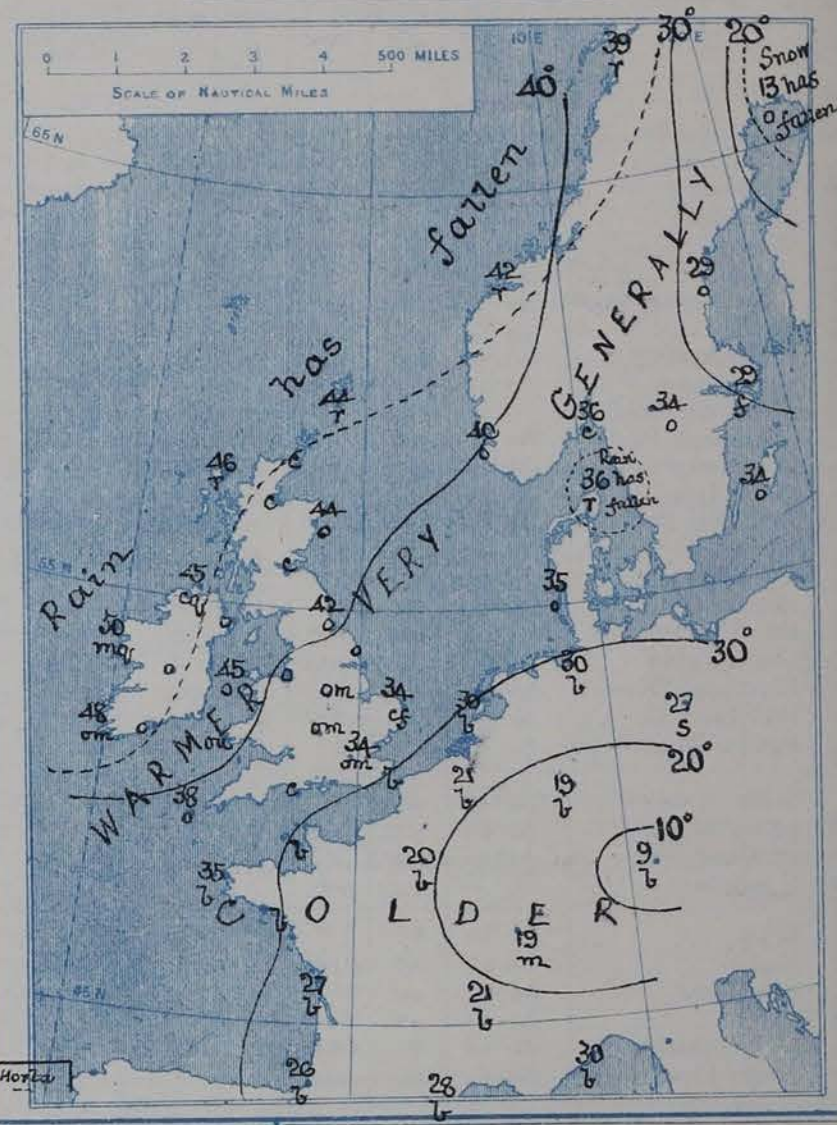

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°

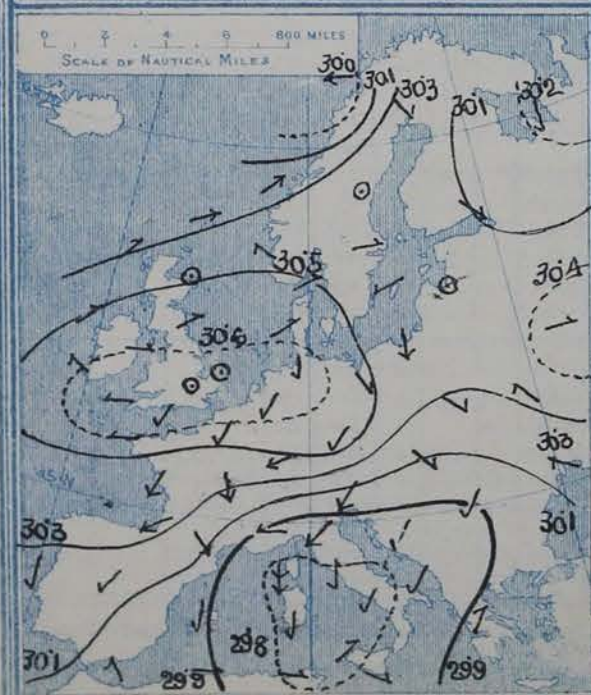

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

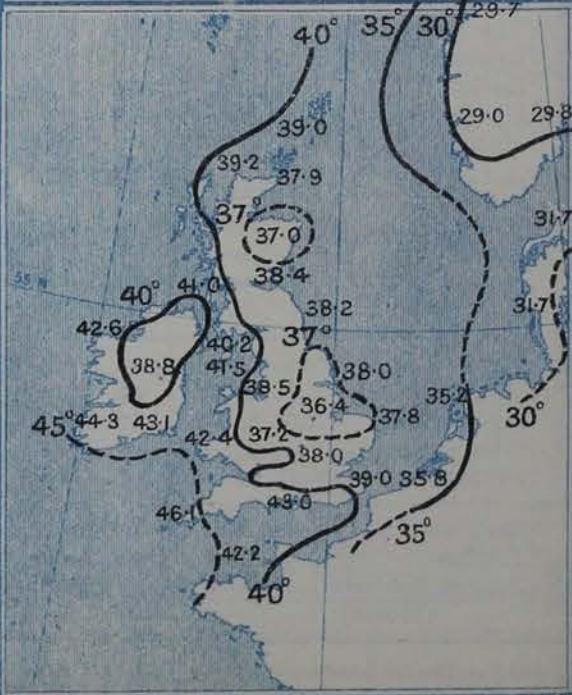

IV. LAST WEEK'S RAINFALL.

Amount recorded in various districts of the United Kingdom during the week ended Sat^y 20th JAN., with the percentage of the average amount for the corresponding week.

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period JANUARY - FEBRUARY (Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The anticyclone recently noticed over Western Europe is moving Southeastwards, the highest pressures, 30.6 in. and upwards, being now found over Germany, the Netherlands and the northeast of France, and also in a small area over Brittany. Depressions of considerable size and intensity are advancing from the upper portion of the Atlantic towards the Norwegian coasts, and are occasioning a general fall of the barometer over Northwestern Europe, the lowest readings, 29.6 in. and less, being found in an area lying off the coasts of Finmark.

WIND

TEMPERATURE

WEATHER

AND

SEA

Under the influence of the northern depressions a current of air from the S.W. has extended over the whole of these Islands and the northern parts of the Continent, and on our extreme northwestern and northern coasts, as well as in the west of Norway, it blows with the force of a strong breeze. To the southward of the highest pressures, i.e. over France and South Germany, the wind remains N.E. In regions over which the S.W. wind passes the thermometer has risen generally, the weather being at present warmer in Ireland and Scotland than in any other part of Western Europe. In these Islands the morning readings range from 50° at Blacksod Point and 46° at Stromway and Kairn to 28° at Dungeness and Jersey. Over France, Belgium and south Germany a sharp frost still prevails, the lowest temperatures reported being 9° at Munich and 19° at Frankfurt and Belfort. The weather is cloudy or dull over these Islands and the northern parts of the Continent, with rain in the Shetlands and Hebrides, and also in the west of Norway. Over France, Germany and the Netherlands the weather is mostly fine, but snow is falling at Berlin. The sea is rough off our extreme north and north-west coasts and the west of Norway, but slight or smooth elsewhere.

At many of the English stations the thermometer yesterday failed to rise much above the freezing point, but on our south coast the amount of bright sunshine was very large, more than 7 hours being recorded in many places, and more than 8 hours at Folkestone and Jersey. Slight rain has again fallen in Ireland and the west and north of Scotland.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The large cyclonic systems which are beginning to skirt our extreme northern coasts are likely to spread southwards over the whole Kingdom. Increasing S.W. winds are therefore probable, with gales in the north and northwest, and with a decided rise of temperature over England. In the southeastern portions of the country the weather is likely to remain dry for the present.

FORECASTS*

For the 24 hours ending at NOON on 25th January, 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	S.W. winds, increasing to a gale; unsettled, some rain. Milder.
1	SCOTLAND EAST	
2	ENGLAND N.E.	S.W. winds, increasing in force; fair at first, some rain later. Becoming milder.
3	ENGLAND EAST	S.W. winds, light to fresh; fair generally, but cloudy. Becoming milder.
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as Nos. 0 & 1.
7	ENGLAND N.W.	Same as No. 2.
8	ENGLAND S.W.	S. and S.W. winds, increasing in force; cloudy, with rain in places. Becoming milder.
9	IRELAND NORTH	S. and S.W. winds, increasing to a gale; mild, unsettled, some rain.
10	IRELAND SOUTH	
WARNINGS		At 7.5 p.m. yesterday to District 6 and parts of 0 and 9, and at 9 a.m. today to Districts 1, 2, 7, 10 and remainder of 0 and 9 "Hoist South Cone."

Note.—The South Cone, point downwards (⏚), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⏚), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post. W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts: next page.

WEATHER CHARTS

FOR Thursday 25th January, 1906.

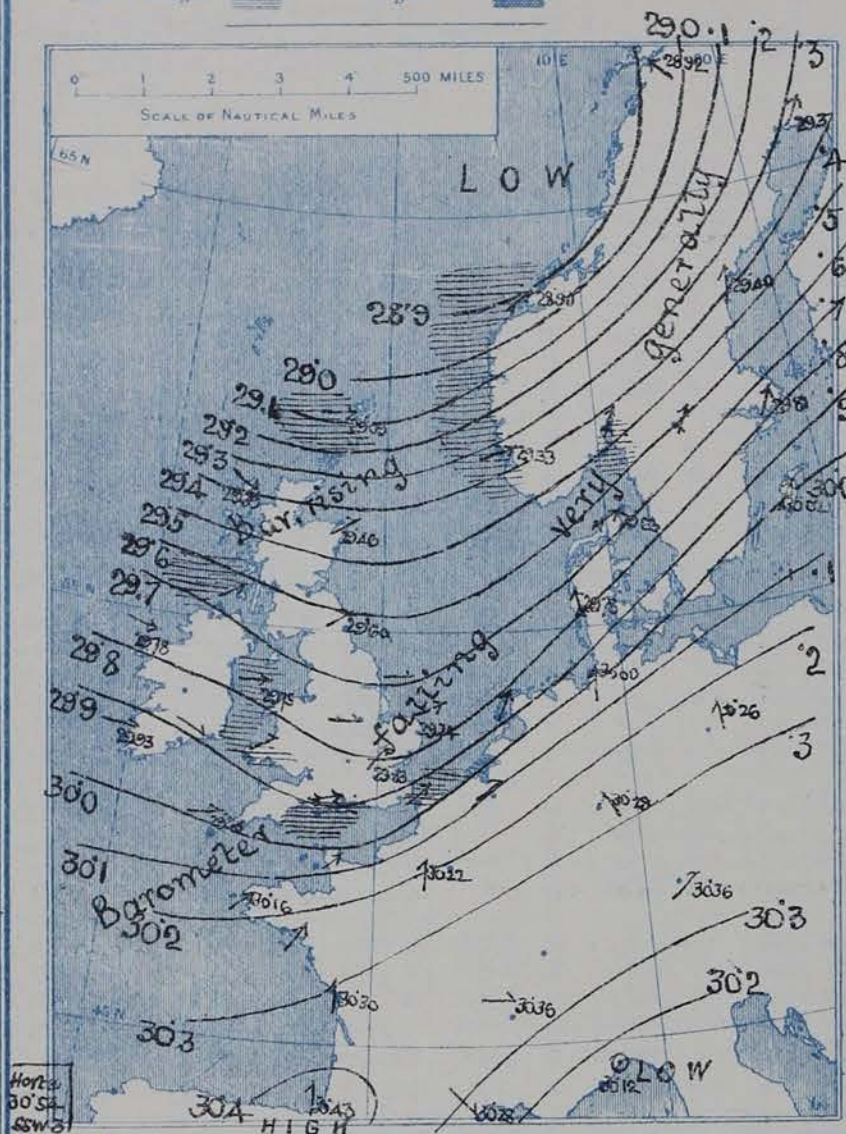

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 Force 5 to 7 Force 8 to 10 Force 1 to 4 Calm

SEA.—Rough High

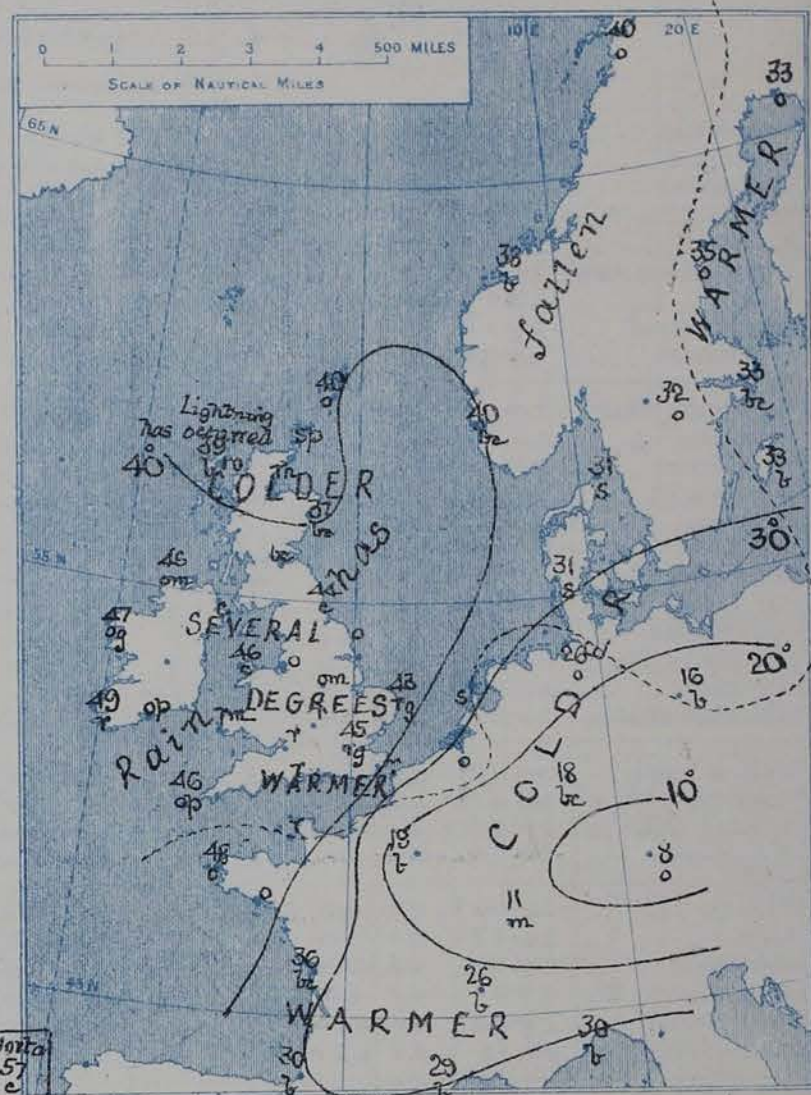

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

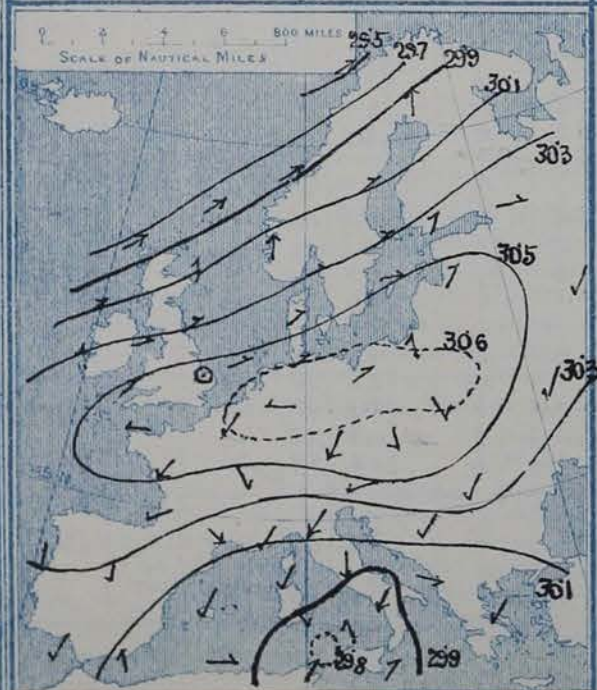

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

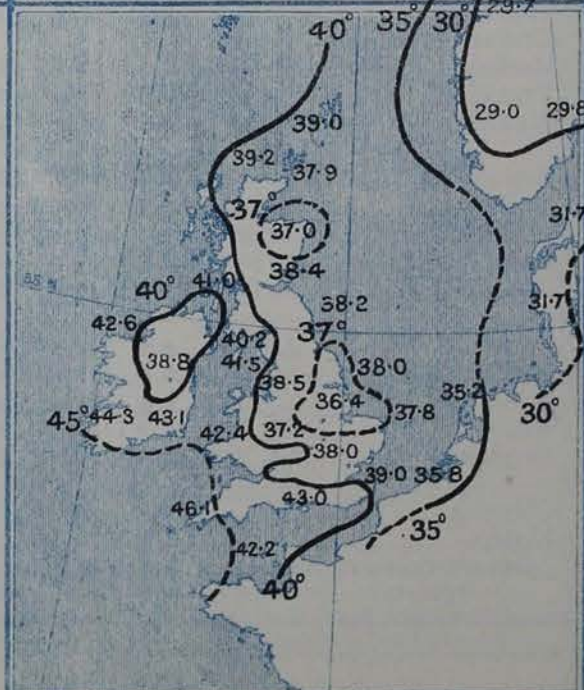

IV. LAST WEEK'S SUNSHINE.

Amount recorded in various districts of the United Kingdom during the week ended SAT. 20th JAN. with the percentage of the average duration for the corresponding week.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period JANUARY — FEBRUARY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The deep depression noticed yesterday off our extreme northern coast is travelling away in a N.E.^y direction, and the barometer is now rising again on our more northern coasts. In other parts of our area a general fall is reported, but over France and South Germany an anticyclone, in which readings are above 30.3 ins., is still in existence. The lowest pressures, 28.9 ins. and less, are found in the depression lying off the northern part of the Norwegian coasts, and over Scandinavia and Denmark the barometric gradient for S.^y and S.W.^y winds is steep.

WIND

The wind is W.^y over the greater part of the United Kingdom, and is strong to a gale in force in the English Channel. In the western parts of the Continent the wind draws into S.W. or S., and in Denmark and the south of Norway a strong gale is reported. Temperature has risen considerably over England and the north of France, and also in Sweden, but has fallen in most other parts of our area. The readings in our Islands now range from 49° at Valencia and 45° or more at our western and southern stations generally, to 40° or less in the north and east of Scotland, and to 34° at Wick.

TEMPERATURE

WEATHER

AND

SEA

Hard frost prevails over Germany and Central France, the morning temperatures being below 20° in most places, and as low as 8° at Munich. Rain is falling over the southern parts of the United Kingdom generally, and snow in Holland and Denmark. At most of our northern stations the weather has improved temporarily, but snow showers are falling at Wick. Clear skies are reported over the greater part of France. The sea is rough off the north of Scotland and rather rough in the English and St. George's Channels, but moderate or slight elsewhere.

During yesterday the thermometer rose to 50° or slightly above it, at most of the Irish and Scotch stations, but on the east and Southeast coasts of England it did not reach 40°. The amount of bright sunshine was again large on our south coasts, more than 6 hrs. being reported at several places, and more than 7 hrs. at Broadstairs. Rain has fallen over the United Kingdom generally, and lightning has been seen at Stornoway.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The depression in the north will continue to travel away in an E.^y or N.E.^y direction, but the conditions remain favourable for the advance of other disturbances from the Atlantic. A temporary improvement in the weather will take place over our southern districts, but the atmosphere is likely to continue in a very unsettled state over Northwestern Europe generally.

FORECASTS*

For the 24 hours ending at NOON on 26th January, 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	} W. ^y or N.W. ^y winds, backing later to the S.W. ^y ; changeable, some hail or snow showers.
1	SCOTLAND EAST	
2	ENGLAND N.E.	} W. ^y to S.W. ^y winds, fresh; changeable, some showers. Colder.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	Same as no. 5.
5	ENGLAND SOUTH	Same as no. 2.
		} W. ^y and S.W. ^y winds, strong in places; showery at first, improving temporarily later, and becoming rather colder.

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	} Same as nos. 0 & 1.
7	ENGLAND N.W.	
8	ENGLAND S.W.	} W. ^y and N.W. ^y winds, backing later and increasing; changeable, rain at times.
9	IRELAND NORTH	
10	IRELAND SOUTH	} At 7.0 p.m. yesterday to Districts 3, 5 and 8, "Hoist South Cone." The signals are also flying in Districts 1, 2 and 10.

WARNINGS

Note.—The South Cone, point downwards (⏏), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⏏), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following termini:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post. W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

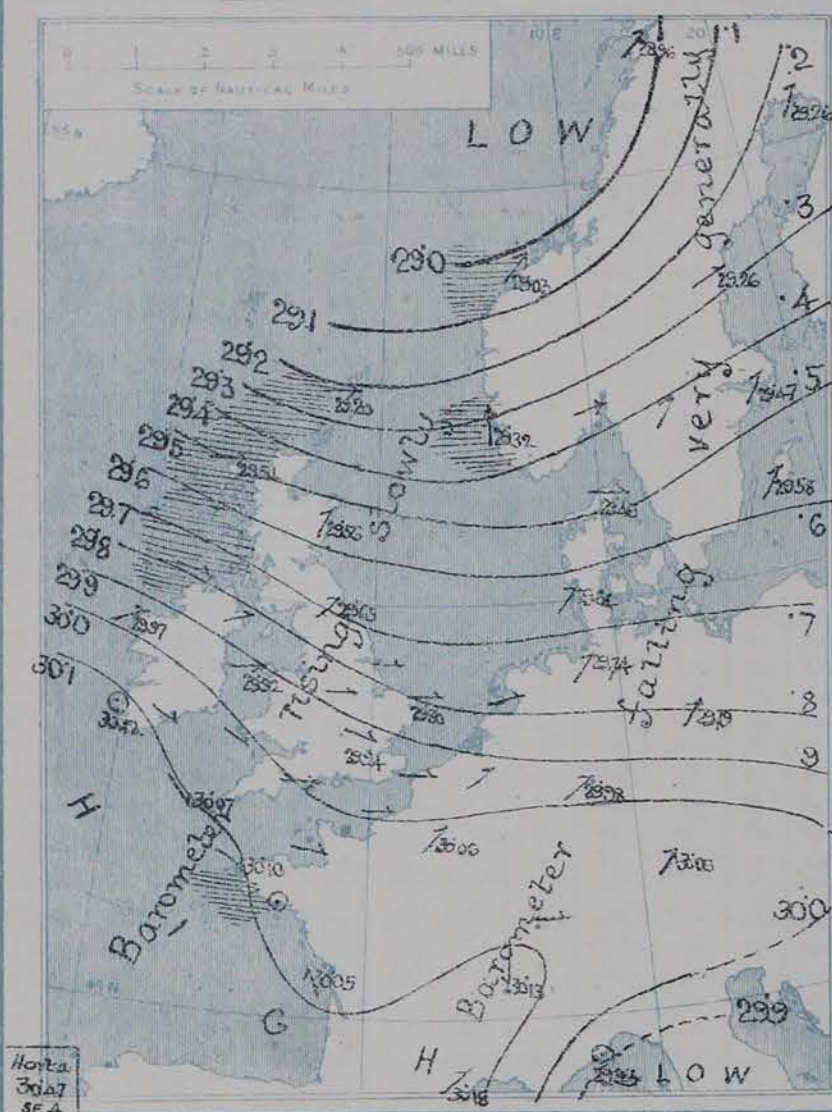

FOR *Friday, 26th January, 1906.*

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 ——— Force 5 to 7 ——— } Calm ☉
Force 8 to 10 ——— Force 1 to 4 ——— }
SEA.—Rough ——— High ———

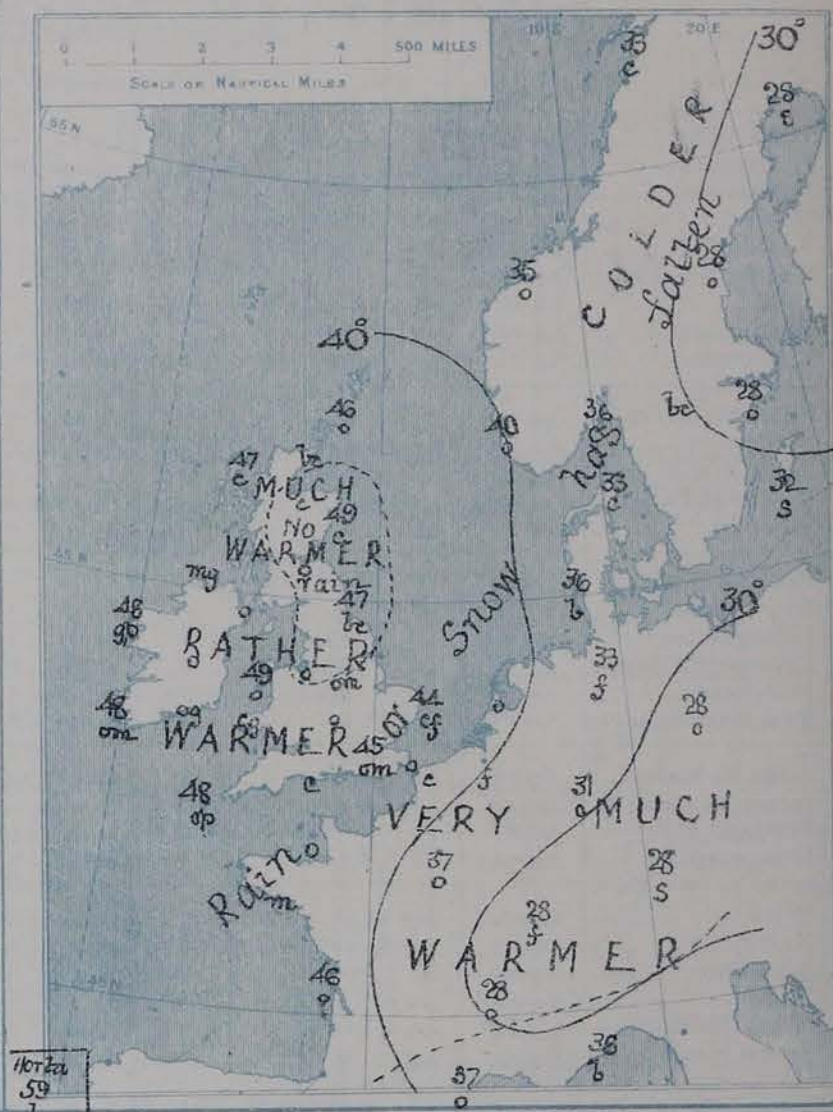

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE.—Isotherms are drawn for each 10°

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus — 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. RAINFALL IN 1906

Total Amount recorded
in various districts of the United Kingdom
in the 3 weeks ended Saturday 20th JAN
with the percentage of the average amount
for the corresponding period.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period JANUARY — FEBRUARY

(Derived chiefly from Observations
extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

WIND

TEMPERATURE

WEATHER

AND

SEA

A large depression, in which the readings of the barometer are below 29.0 inches, still lies off the northern parts of the Norwegian coast, but the mercury is rising over the whole of the United Kingdom, and an anticyclone is apparently spreading over these islands from the south-westward. In Germany and the south of France the barometer is falling. The highest pressures, 30.1 inches and upwards are found in an irregularly shaped area extending from the Spanish peninsula over the Bay of Biscay, the extreme south of Ireland, and the south-western parts of France.

Over the United Kingdom the wind is light to fresh from the westward (south-west to north-west), but in the northern parts of the Continent it is SW^{ly}, and on the Norwegian coast it blows strongly. In France it is light and rather variable. Temperature has risen over Western Europe generally, and in these islands it is now considerably above the average. On the south-east coast of England the morning readings of the thermometer are not much above 40°, but in nearly all other parts of the Kingdom they are above 45°, the highest value reported being 50° at Slith, Nottingham and Rock's Point. On the Continent the cold is much less severe than it was yesterday, but in Germany and Central France slight frost is still reported. The weather is fine on several parts of our own north and east coasts, but is cloudy or dull over Western Europe as a whole, with slight showers on the west coast of Ireland. Fog is reported at Yarmouth, Cuxhaven, Brussels and Belfort, and snow is falling at Munich. The sea is rough off the north coasts of Ireland and Scotland, and also off the west of Norway, but is moderate or slight elsewhere.

During yesterday the thermometer rose to between 45° and 50° over the United Kingdom generally, and is slightly above 50° on our extreme south-west coasts. At a majority of our stations there was an entire absence of bright sunshine, and in places where any amount was registered the duration was small. Rain fell on all but our north-east coasts, as well as in the north-western parts of the Continent generally.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

There are at present no signs of the approach of any fresh disturbance, and a brief interval of fair weather is therefore probable in most districts. The reports from the Azores show, however, that depressions are still moving over the upper parts of the Atlantic, and it is not unlikely that one of these systems will begin to affect the weather on our western and northern coasts before the close of the ensuing 24 hours.

FORECASTS*

For the 24 hours ending at NOON on 27th January 1906.

DISTRICTS.		FORECASTS.	DISTRICTS.		FORECASTS.
0	{ SCOTLAND NORTH	} NW ^{ly} winds, backing later; fair to-day, some rain to-morrow. Con- tinuing mild.	6	{ SCOTLAND WEST	} Same as Nos 0 and 1.
1	{ SCOTLAND EAST		7	{ ENGLAND N.W.	
2	{ ENGLAND N.E.	} Same as No 5.	8	{ ENGLAND S.W.	} NW ^{ly} to W ^{ly} winds, cloudy, mild.
3	{ ENGLAND EAST		9	{ IRELAND NORTH	
4	{ MIDLAND COUNTIES	} W ^{ly} winds, light or moderate; fair, mild.	10	{ IRELAND SOUTH	} W ^{ly} to SW ^{ly} or S ^{ly} winds, freshening, mild, dull, some rain.
5	{ ENGLAND SOUTH				
			WARNINGS		None issued

Note.—The South Cone, point downwards (∩), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.

The North Cone, point upwards (∪), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post. W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR *Saturday, 27th January, 1906.*

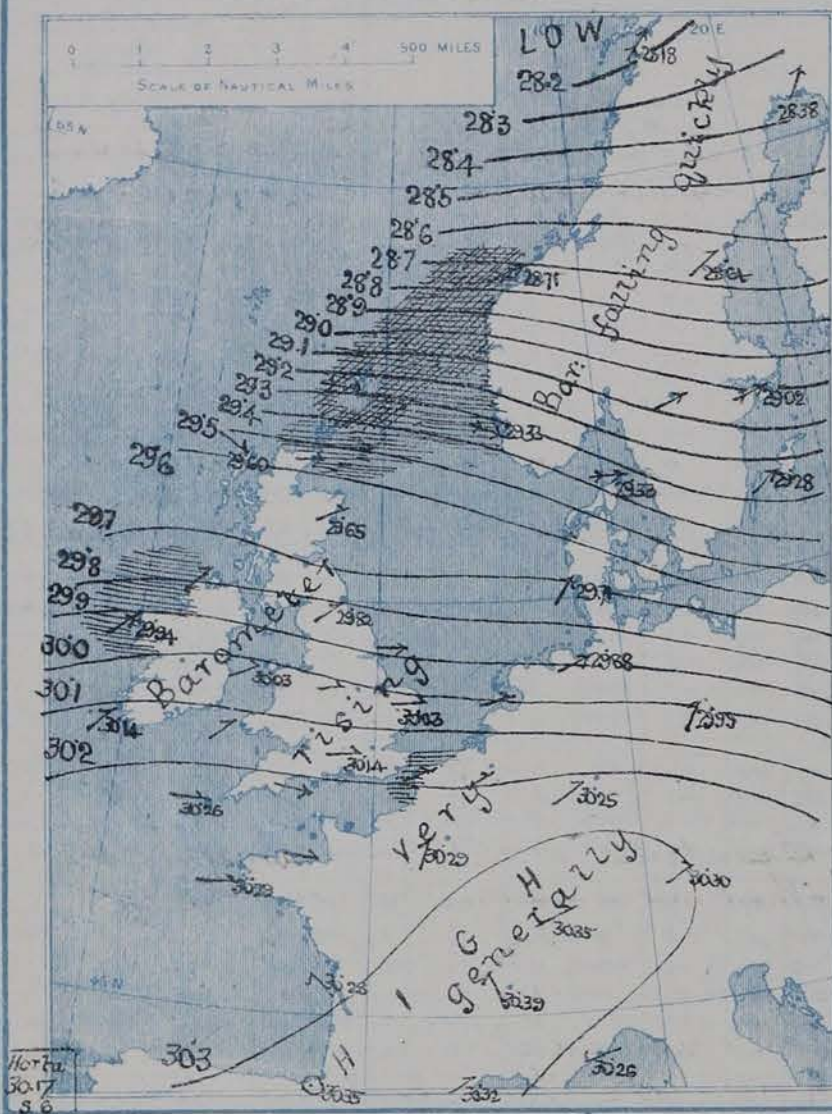

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER—Isobars are drawn for each 1/10th of an inch.

WIND—Arrows show Direction and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ☉
Force 8 to 10 → Force 1 to 4 →

SEA—Rough High

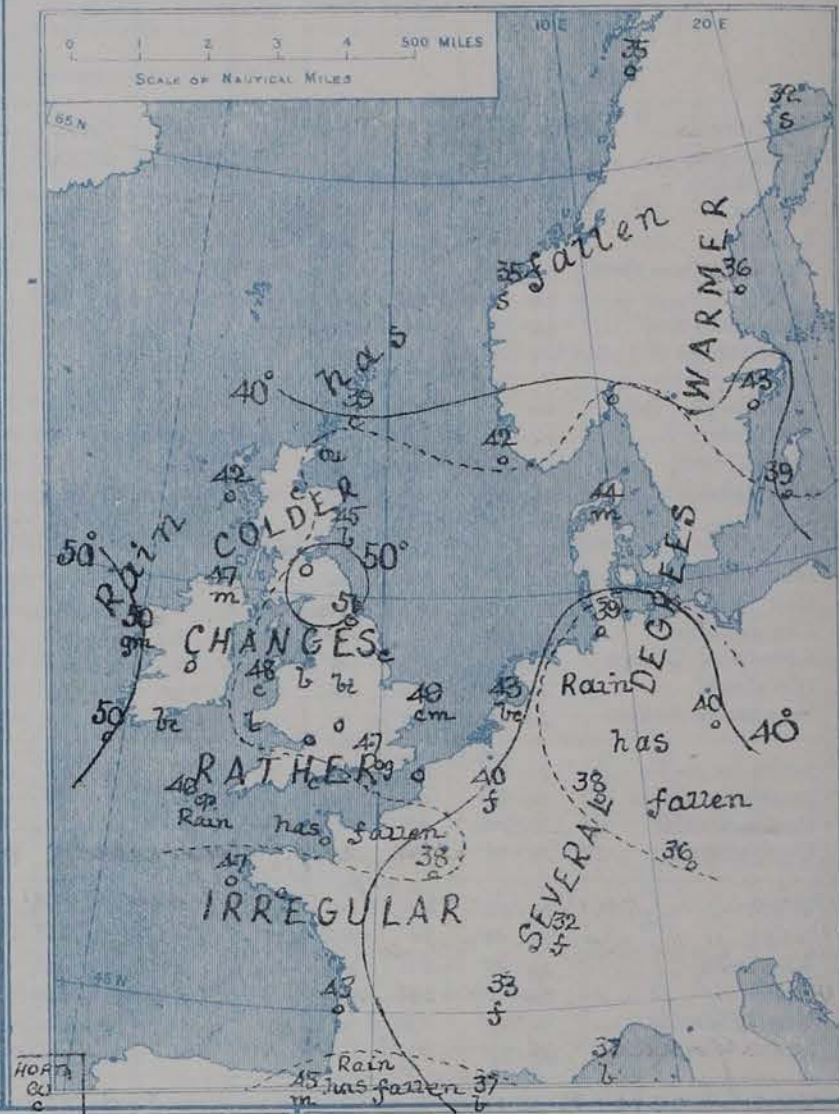

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE—Isotherms are drawn for each 10°.

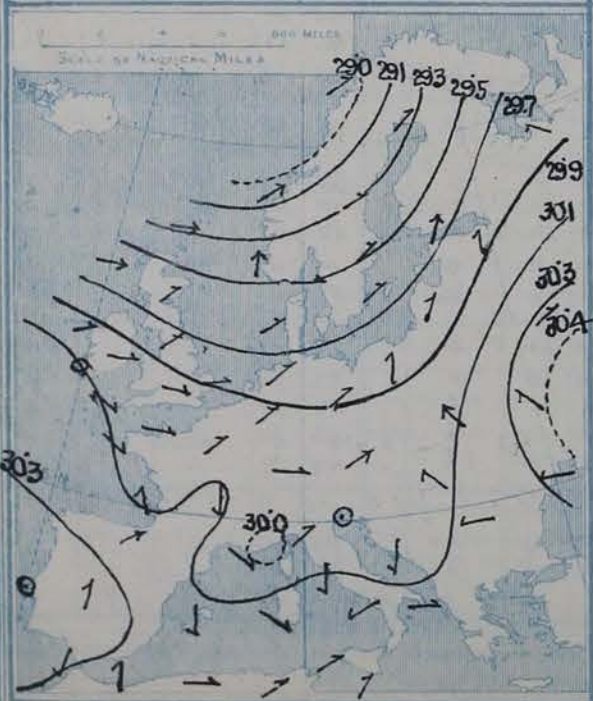

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus—0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. BRIGHT SUNSHINE IN 1906.

Total Duration recorded in various districts of the United Kingdom in the 3 weeks ended Saturday 20th JAN. with the percentage of the average duration for the corresponding period.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period JANUARY — FEBRUARY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

A cyclonic disturbance of great size and intensity is passing eastwards across northern Europe; the centre of the system is at present lying off the north coast of Norway, and at Bodø, the barometer has fallen slightly below 28.2 inches. Over the greater part of these Islands, France and Germany the mercury is rising, and over Central and Southern France the readings are above 30.3 inches. The barometric gradient over the northern part of the continent and also over our own extreme northern coasts is very steep.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind is Westerly or South-westerly over North-western Europe generally, and blows with the force of a fresh to strong gale over nearly the whole of Scandinavia and Denmark, as well as in the Shetlands. In the region of highest pressure over the south of France light variable airs are reported. Temperature has changed rather irregularly over England, Ireland and France, but has fallen in Scotland, and risen in Scandinavia, Denmark and Germany. The readings of the thermometer are now above the average generally, those in our own Islands ranging from 51° at Leith and Shields to 44° at Blackon-on-sea, and to a trifle below 40° in Caithness and the Shetlands. The frost recently reported over Germany and Central France has broken up. The weather, though fine in several parts of the United Kingdom, is cloudy or dull over western Europe as a whole. Fog prevails in Belgium and Central France, rain is falling at Malin Head, and snow at Christiansund and Itaparanda. The sea is high off the Shetlands and the west of Norway, and rather rough on the north coasts of Ireland, but moderate or slight elsewhere.

During yesterday the thermometer rose well above 50° over a considerable portion of the United Kingdom, and reached 56° at Aberdeen, Bath and Oxford. The amount of bright sunshine was very variable; at several stations there was none, but at Aberdeen 6 hours were recorded, and at Scarborough nearly 5 hours. Rain has again fallen in Ireland and the west and north of Scotland, and slight showers at some of the English Channel Stations.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The deep depression over Scandinavia will pass away to the eastward, and is not likely to have any further effect upon the weather in these Islands. The wind is, however, backing to the South-westward on all our western coasts, and it is therefore probable that a fresh disturbance will shortly advance from the Atlantic and occasion rough unsettled weather in all the more western and northern parts of the United Kingdom.

FORECASTS*

For the 24 hours ending at NOON on 28th January 1906.

DISTRICTS.

FORECASTS.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	} W ^{ly} to SW ^{ly} winds, increasing in force; fair at first, some rain later.
1	SCOTLAND EAST	
2	ENGLAND N.E.	} Milder.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	} Same as No. 5.
5	ENGLAND SOUTH	
		} W ^{ly} to SW ^{ly} winds, freshening considerably, fair to-day, showery to-morrow, continuing mild.

6	SCOTLAND WEST	} SW ^{ly} winds, increasing in force; mild, dull, some rain.
7	ENGLAND N.W.	
8	ENGLAND S.W.	} SW ^{ly} winds, increasing in force; fair at first, some rain later continuing mild.
9	IRELAND NORTH	
10	IRELAND SOUTH	} Same as No. 6.
	WARNINGS	

At 7^{am}. yesterday to districts 0, 1, 6, 7, and 9, HOIST SOUTH CONE.

Note: The South Cone, point downwards (⌵), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (⌴), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post.

W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR *Sunday, 28th January, 1906.*

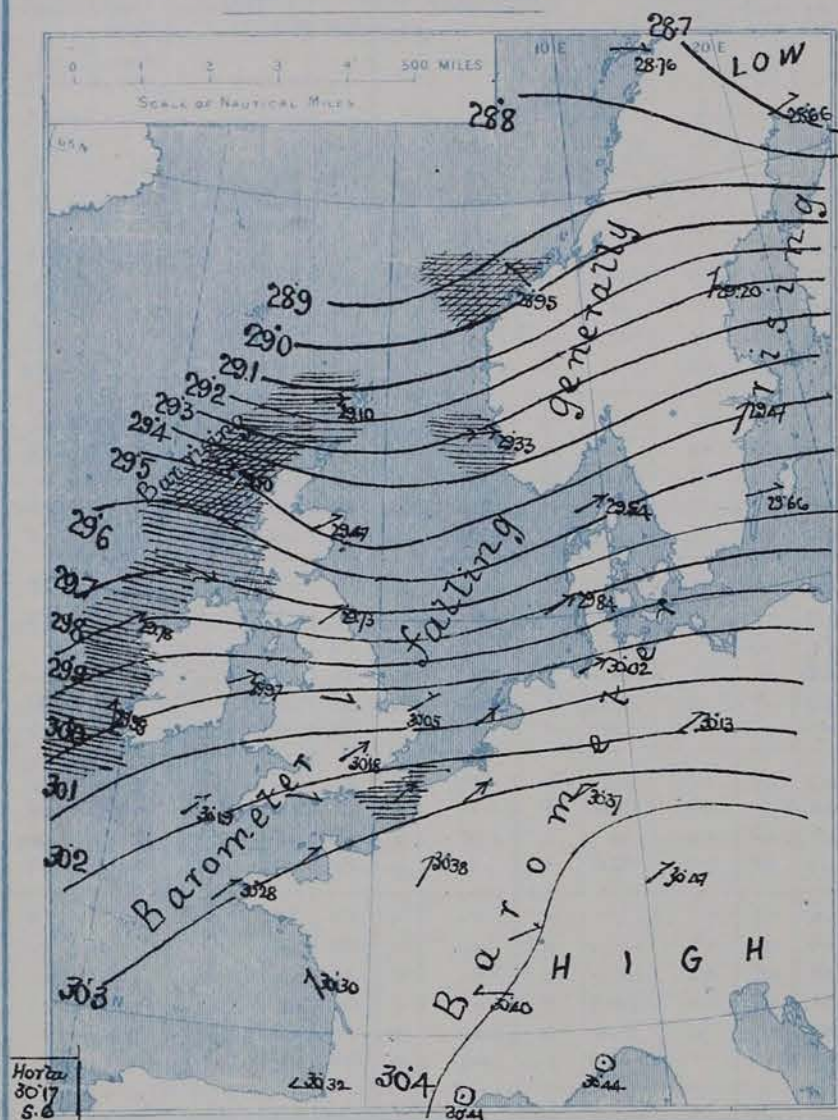

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER—Isobars are drawn for each tenth of an inch

WIND—Arrows show Direction and Force, flying with the wind

Force above 10 Force 5 to 7 } Calm
Force 8 to 10 Force 1 to 4

SEA—Rough High

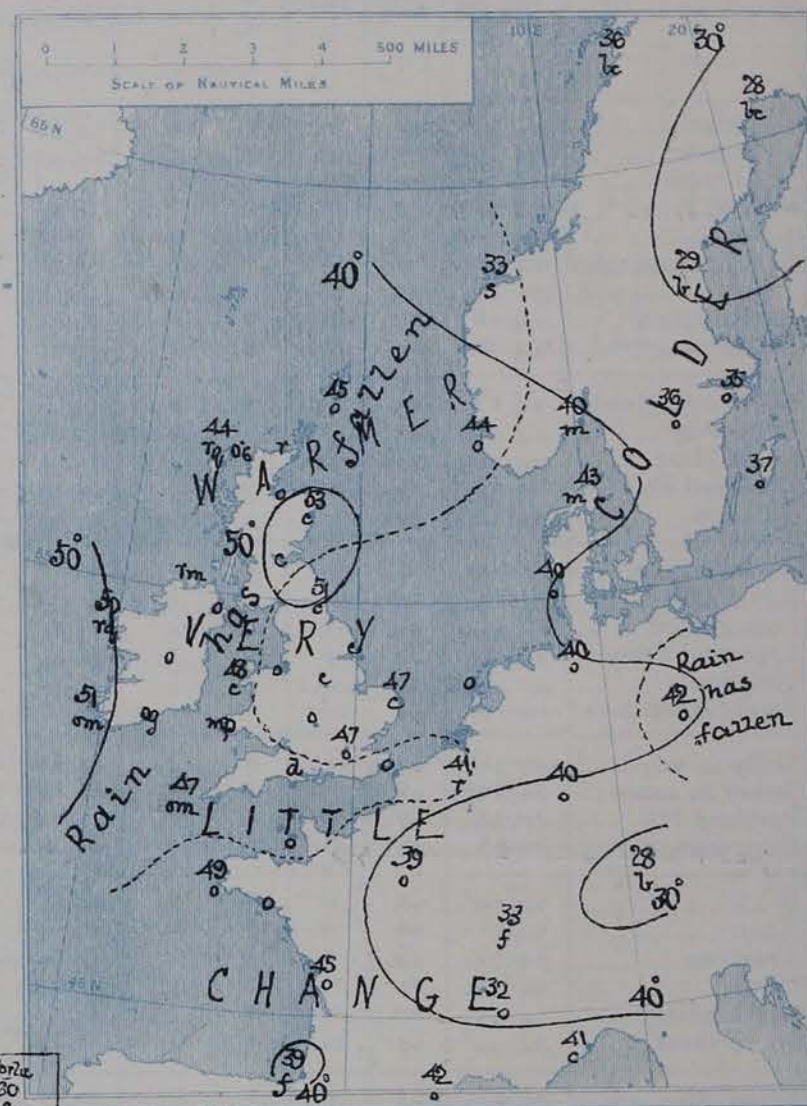

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE—Isotherms are drawn for each 10°

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

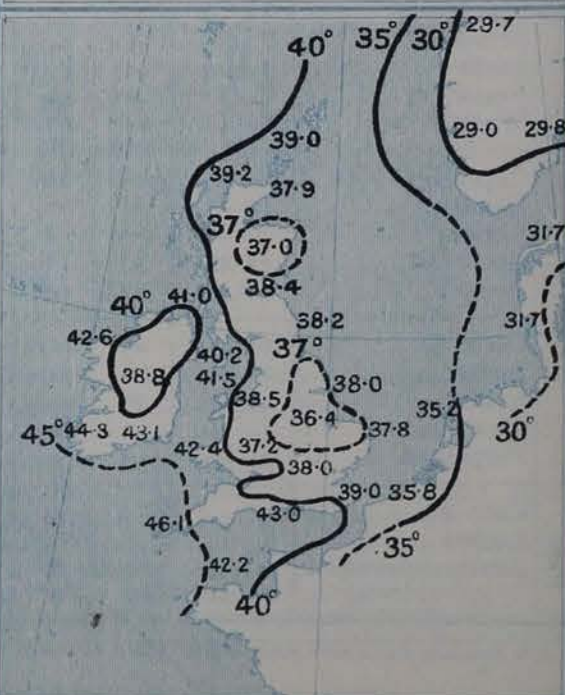

Amount recorded in various districts of the United Kingdom during the 3 weeks ended 20th JANUARY with the percentage of the average for the corresponding period.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period JANUARY - FEBRUARY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

A very large and deep cyclonic disturbance is travelling eastwards over Northern Europe, while some local irregularities in pressure, which have appeared over the northern part of these Islands, are moving in the same direction. The readings now range from 30.4 ins. and above over South Germany and the adjacent portion of France and Italy to 29.1 ins. at Lumburgh Head and to 28.66 ins. at Haparanda. Gradients are very slight in the region of highest pressure, but steep or rather steep over this country and the northern part of the Continent.

WIND

TEMPERATURE

WEATHER

AND

SEA

The general current of wind over Western and Northwestern Europe is Southwesterly to Westerly; it blows a fresh gale at Donaghadee and Leith and also on the southwest coast of Norway, and with the force of a fresh or strong breeze in several places; at many of our southern stations and over Germany and France, however, it is light or moderate. Temperature has risen in Scotland, fallen in Sweden and at Munich and Biarritz, changed little and rather irregularly elsewhere. Over these Islands the readings range from 53° at Aberdeen to 47° or 48° generally, and to 44° at Stornoway. The Continental values are lower, ranging from 49° at Brest and 48° at Lorient to below 40° generally, and to 28° at Haparanda and Munich. The sky is clear in the north of Scandinavia and at Munich; very cloudy or entirely overcast over our area as a whole. Rain is falling at Portland Bill and on our north and northwest coasts and also at Brussels, and snow at Christiansund, while at Biarritz and Belfort fog is reported. The sea is very high off the west of Norway, high in the Minch and rough or rather so off our north and northwest coasts generally, as well as at Cape Gris Nez. Elsewhere it is moderate to smooth.

During yesterday the thermometer again rose to 50° or above in almost all parts of the United Kingdom. About half an inch of rain was measured at 8 a.m. in the Shetlands and Hebrides and small amounts in the north and west of these Islands generally. The duration of sunshine was slight as a whole, but Inverness and Nottingham recorded 4 hours and Pembroke 6.4 hours.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

FORECASTS*

For the 24 hours ending at NOON on 29TH JANUARY, 1906.

- 3 { ENGLAND EAST
- 4 { MIDLAND COUNTIES
- 5 { ENGLAND SOUTH

None issued.

DISTRICTS.

FORECASTS.

- 6 ∇ SCOTLAND WEST
- 7 ∇ ENGLAND N.W.
- 8 { ENGLAND S.W.
- 9 ∇ IRELAND NORTH
- 10 ∇ IRELAND SOUTH

None issued.

WARNINGS

At 7.0 p.m. yesterday to Districts 0, 1, 6, 7, 9 and 10, "RE-HOIST SOUTH CONE."

Note: - The South Cone, point downwards (∇), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (∇), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

*For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post.

W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR MONDAY 29th JANUARY, 1906.

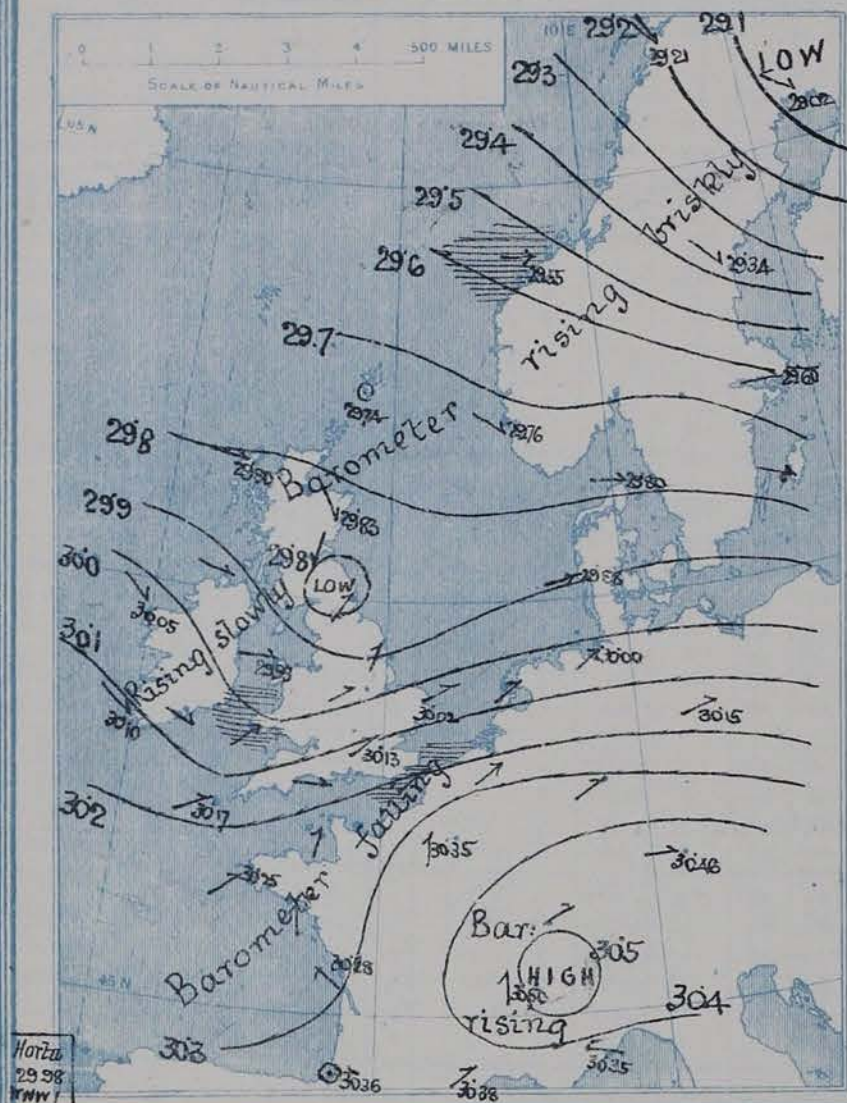

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 ——— Force 5 to 7 ——— } Calm ☉
Force 8 to 10 ——— Force 1 to 4 ———

SEA—Rough ——— High ———

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus -0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

Amount recorded in various districts of the United Kingdom during the week ended SAT. 20 JAN. with the percentage of the average for the corresponding week.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period

JANUARY - FEBRUARY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The large depression noticed yesterday to the northward of these Islands is travelling away to the eastward, and the barometer is rising briskly in Scandinavia, and less decidedly in most parts of the United Kingdom. Barometrical pressure now ranges from between 30.4 ins. and 30.5 ins. over South Germany and Central France to below 29.1 ins. in Lapland. A small secondary depression is lying over Berwickshire, and there are indications of a similar disturbance over the St. George's Channel.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind is light from the North-westward in Ireland and Scotland but is moderate to fresh from the South-westward over England and all the neighbouring parts of the Continent. In Scandinavia it is chiefly Westerly while in the southern parts of France it is light and variable. Temperature remains high for the time of year over England and Ireland, the morning readings being mostly above 45° and as high as 51° at Shields and Roches Point. In Scotland the thermometer has fallen decidedly (as many as 17° at Aberdeen), the readings now ranging between 35° and 39°, and agreeing very closely with the normal. Frost prevails over Central France and South Germany. The weather is cloudy or dull over Western Europe as a whole, with rain at Leith and also at Tanö. In the north of Ireland, in Sweden, and in the south of France the sky is clear or nearly so. The sea is moderate or slight generally, but is rough at Christiansund, and rather rough at Pembroke and Cape Grinez.

During yesterday the thermometer rose to 50° or slightly above it in most parts of the United Kingdom. The amount of bright sunshine was generally small; at most of the Irish and English Channel stations there was none. Rain has fallen at all but our eastern, central and south-eastern stations, heavily in the north of Ireland and south of Scotland. At Blacksod Point the amount measured was as much as 1.1 in.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The small secondary disturbances which are now lying over various parts of our western and northern districts are likely to move eastwards and to occasion showers in the east and southeast of England. In their rear the wind will veer temporarily to the North-westward, with fair and colder weather. Depressions are still traversing the upper parts of the Atlantic, and in Ireland and Scotland the wind will probably back to the South-westward or Southward, with a renewal of unsettled weather.

FORECASTS*

For the 24 hours ending at NOON on 30th January 1906.

DISTRICTS.

FORECASTS.

- 0 { SCOTLAND NORTH
- 1 { SCOTLAND EAST
- 2 { ENGLAND N.E.
- 3 { ENGLAND EAST
- 4 { MIDLAND COUNTIES
- 5 { ENGLAND SOUTH

- 0 } Light NW^{ly} winds, backing later to the SWrd and freshening; fair, and cold, milder and unsettled, with some rain or sleet.
- 1 } Same as No 5.
- 2 } Same as No 5.
- 3 } Same as No 5.
- 4 } Same as No 5.
- 5 } SW^{ly} to NW^{ly} winds, moderate; some showers at first, then fair, becoming temporarily cooler

DISTRICTS.

FORECASTS.

- 6 { SCOTLAND WEST
- 7 { ENGLAND N.W.
- 8 { ENGLAND S.W.
- 9 { IRELAND NORTH
- 10 { IRELAND SOUTH

- 6 } Same as Nos. 0 and 1.
- 7 } NW^{ly} winds, backing later; fair generally, becoming temporarily cooler.
- 8 } NW^{ly} winds, backing later to the SWrd and freshening, fair at first, then cloudy, with some rain.
- 9 } NW^{ly} winds, backing later to the SWrd and freshening, fair at first, then cloudy, with some rain.
- 10 } NW^{ly} winds, backing later to the SWrd and freshening, fair at first, then cloudy, with some rain.

WARNINGS

The signals hoisted last evening on our north-west coasts have been lowered this morning.

Note.—The South Cone, point downwards (⏚), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⏚), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.

" Weekly " " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post. W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

TE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR **TUESDAY, 30TH JANUARY, 1906.**

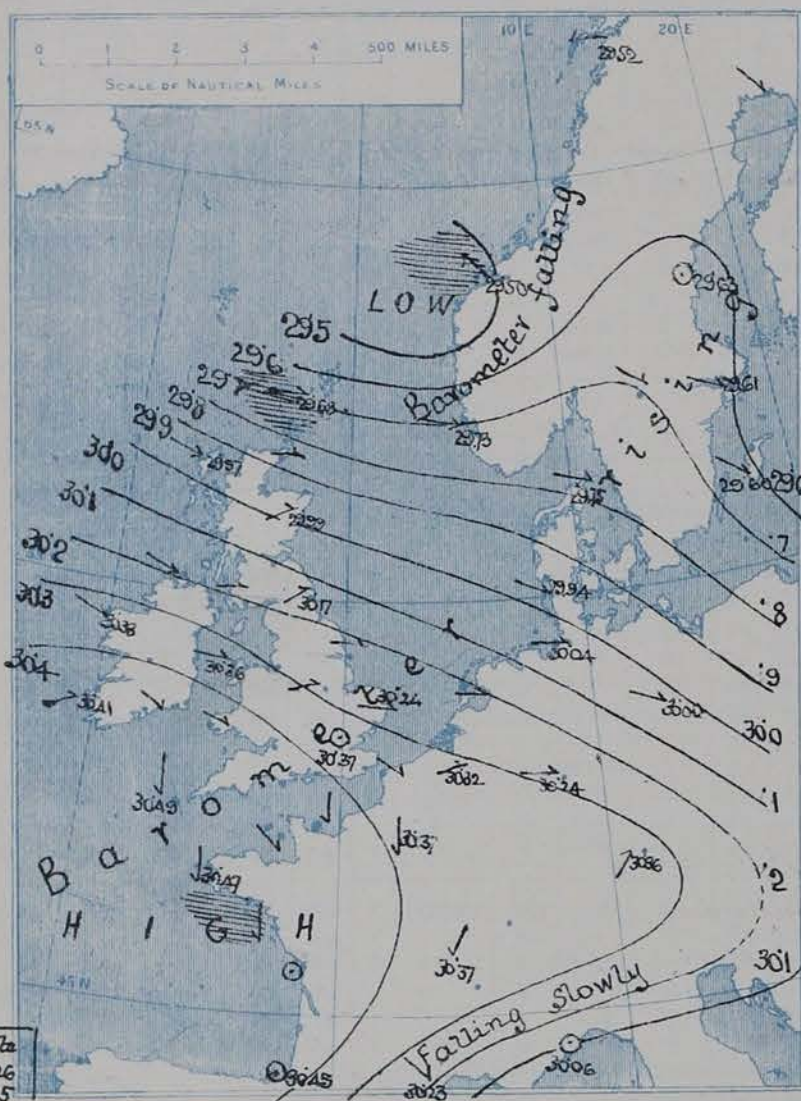

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ☉
Force 8 to 10 → Force 1 to 4 →

SEA.—Rough High

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE.—Isotherms are drawn for each 10°.

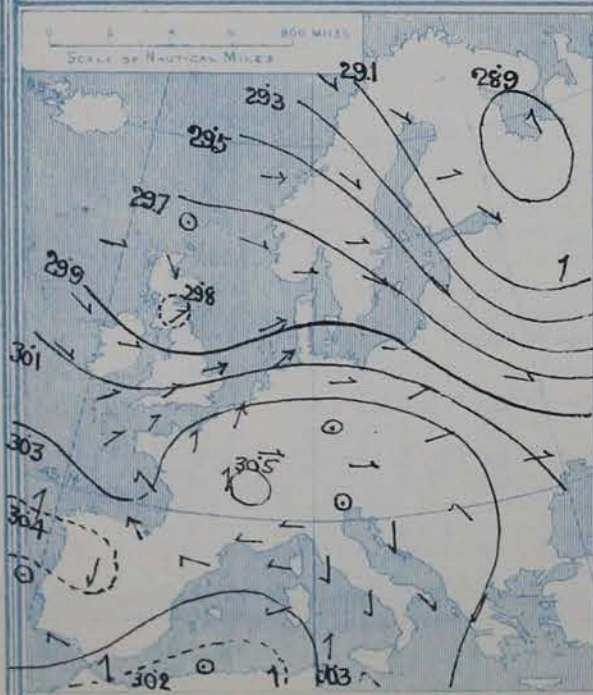

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. EXTREMES OF TEMPERATURE

recorded

in various districts of the United Kingdom during the week ended Sat. 27TH JAN.

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period

JANUARY — FEBRUARY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

A large anticyclone has extended from the Atlantic over a considerable portion of these Islands and the Continent, the region of highest pressure, 30.4 ins and upwards, being at present found over the Bay of Biscay, the west of France, and all the more south-western parts of the United Kingdom. The lowest pressures, 29.5 ins and less, are reported in a small depression lying off the west of Norway, in which region the barometer is falling. In all other parts of our area the mercury continues to rise.

WIND

Light to moderate winds from the Westward or North-westward are blowing over these Islands and the countries to the eastward of the North Sea, but on the upper portions of the Norwegian coast there is a moderate current from the Eastward. Calms are reported in the south of France. Temperature has risen a little in Scotland and also in South Germany and Central France, but has fallen in all other parts of our area. The readings in our Islands range from a trifle above 45° on our extreme west and south-west coasts to a little below 40° in Caithness and the Shetlands, and to 35° or rather less in the extreme south-east of England. Hard frost prevails in Scandinavia, the lowest morning temperatures reported being 6° at Haparanda and 13° at Hernösand. The weather is fair or fine over Western Europe as a whole, but is dull round our own extreme western and northern coasts, with hail and sleet showers in the north of Scotland. An overcast sky is reported also in the south-west of France. The sea is slight or smooth generally, but rough off the Shetlands and the west of Norway.

TEMPERATURE

WEATHER

AND

SEA

During yesterday the thermometer rose to 50° or slightly above it at most of the English stations, as well as in the neighbouring parts of Ireland; in the north of Scotland it did not reach 45°. The amount of bright sunshine was generally small; on many parts of our south and east coasts there was none. Rain has fallen over a considerable portion of North-western Europe, but the quantity has been, as a rule, small.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

Over the southern portions of the United Kingdom the weather is likely to remain for the present under the influence of the large anticyclone which has spread in from the south-westward. In the extreme north and north-west the conditions will be affected by depressions travelling along at some distance from our northern coasts, and occasioning increasing winds from the Westward, with some rain or sleet.

FORECASTS*

For the 24 hours ending at NOON on 3rd January

1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	W ^{ly} winds, increasing in force; squally, with some hail or sleet showers.
1	SCOTLAND EAST	W ^{ly} winds, freshening, fair at first, some hail or sleet showers later.
2	ENGLAND N.E.	
3	ENGLAND EAST	
4	MIDLAND COUNTIES	W ^{ly} and NW ^{ly} winds, light; fair, cold, frosty at night.
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as No. 0.
7	ENGLAND N.W.	W ^{ly} and NW ^{ly} winds, moderate, fair, cold.
8	ENGLAND S.W.	NW ^{ly} winds, light; fair, cold, frost inland at night.
9	IRELAND NORTH	Same as No. 0.
10	IRELAND SOUTH	Same as No. 7.

WARNINGS

None issued

Note. The South Cone, point downwards (∩), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (∪), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.

" Weekly " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post.

W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

WEATHER CHARTS

DAILY WEATHER REPORT

FOR Wednesday, 31st January, 1906.

I. BAROMETER, WIND AND SEA. This Morning.

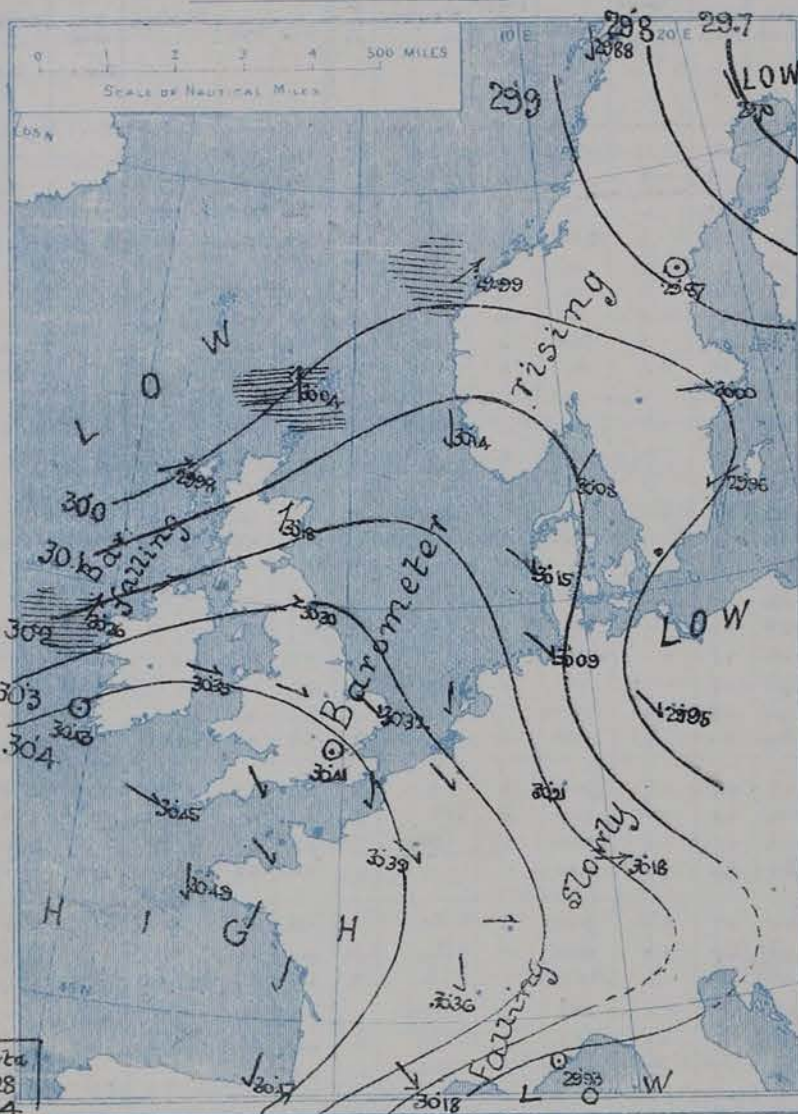

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Direction and Force, flying with the wind.

Force above 10 → Force 5 to 7 → Force 3 to 4 → Calm ☉

Force 8 to 10 → Force 1 to 4 →

SEA.—Rough High

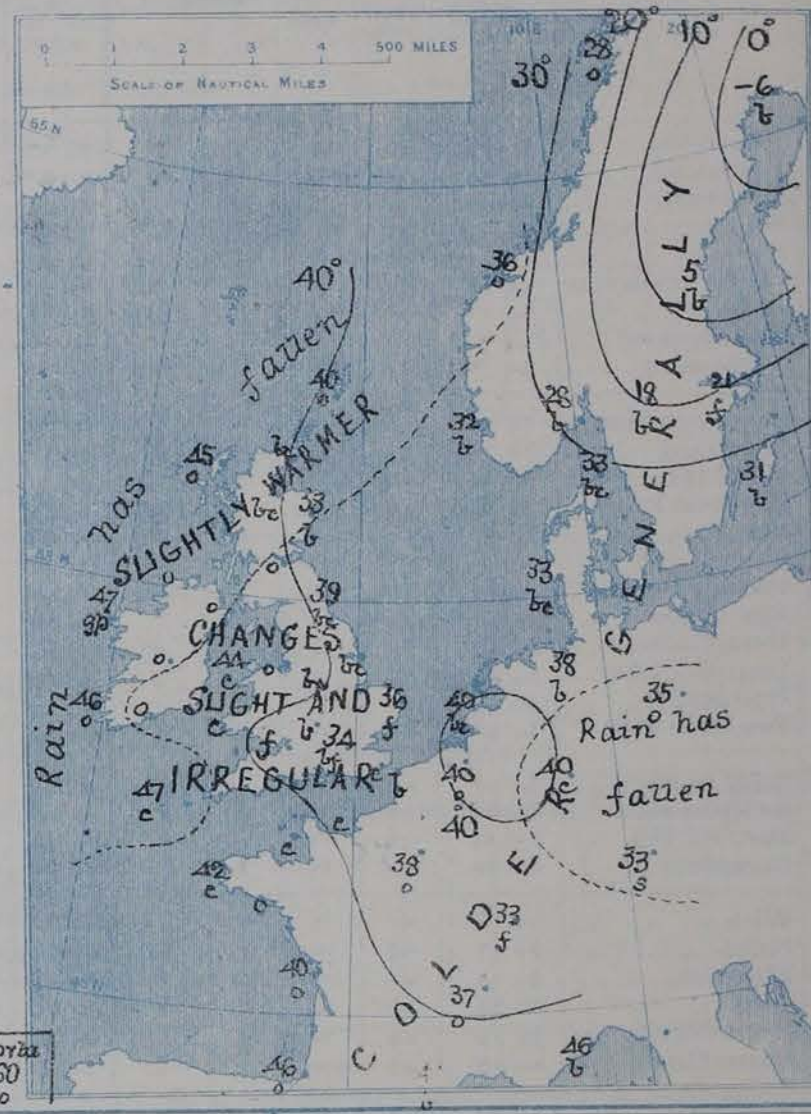

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half

an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. LAST WEEK'S RAINFALL.

Amount recorded in various districts of the United Kingdom during the week ended Sat. 27th JAN. with the percentage of the average amount for the corresponding week.

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period

JANUARY — FEBRUARY

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

REPORTS FOR YESTERDAY

PRESSURE

Over all the more southern portions of our area the weather remains under the influence of an anticyclone, the highest pressures, 30.4 ins and upwards, being found over our own southern and south-western districts and the north and west of France. The lowest readings, 29.7 ins and less, are reported over Lapland, but the barometer is below 30.0 ins in a depression which is approaching Scotland from the westward. This disturbance is occasioning a fall of the barometer on our north and north-west coasts, with an increasing gradient for south-westerly winds.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind has backed to the South-westward over the whole of Ireland and Scotland, and has increased to a strong breeze at Blackhead Point. Over England, the Netherlands and North Germany light North-westerly breezes are reported, while in the west of France the wind draws into North or North-east. Temperature has changed rather irregularly in these Islands, but under the influence of the South-westerly wind it is now rising slightly in Ireland and Scotland. The morning readings range from a trifle above 45° on our extreme west and south-west coasts to 34° in London and 33° at Bath. At the Continental stations a rather general fall is reported, but readings below the freezing point are found only in Scandinavia; at Haparanda the thermometer stands 6° below zero. Dull weather is reported over France, on our own extreme western and northern coasts (with showers in the west of Ireland) and along the west coasts of Norway. In most other parts of our area the weather is fine, but with local fogs over England. Snow is falling at Munich. The sea is slight or smooth generally, but is rather rough off the north-west of Ireland and between the Shetlands and the Norwegian coast.

During yesterday the thermometer rose to 45° and upwards in most parts of the British Kingdom, and to 50° or slightly above it at some of our south coast stations, where the amount of bright sunshine was large. On the coasts of Kent and Sussex the duration exceeded 6 hours, and at Jersey it amounted to 7½ hours. Slight rain has fallen in Ireland and the west of Scotland. A lunar halo was seen last night at Stornoway.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The depression which is approaching Scotland will probably occasion a considerable increase of wind from the South-westward and Westward on our north and north-west coasts, with some rain or sleet. The unsettled weather will spread southwards in the course of to-morrow but it is not likely that our extreme southern districts will be materially affected within the ensuing 24 hours.

FORECASTS*

For the 24 hours ending at NOON on 1st February

1906.

DISTRICTS.

FORECASTS.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	{ SW ^{ly} to W ^{ly} or NW ^{ly} winds, increasing to a gale; unsettled, some cold rain or sleet.
1	SCOTLAND EAST	{ SW ^{ly} to W ^{ly} winds, freshening; fair at first, some cold rain or sleet later.
2	ENGLAND N.E.	
3	ENGLAND EAST	
4	MIDLAND COUNTIES	{ NW ^{ly} to W ^{ly} winds, light or moderate, fair generally, milder.
5	ENGLAND SOUTH	

6	SCOTLAND WEST	Same as No. 0.
7	ENGLAND N.W.	{ SW ^{ly} and W ^{ly} winds, freshening; cloudy, some rain, rather milder.
8	ENGLAND S.W.	{ W ^{ly} winds, moderate, fair to-day, some rain to-morrow.
9	IRELAND NORTH	Same as No. 0.
10	IRELAND SOUTH	Same as No. 7.
WARNINGS		{ At 9.45 am. to-day to districts 0, 6, and parts of 1 and 9 "HOIST SOUTH CONE".

Note.—The South Cone, point downwards (⌵), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌴), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegrams. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post.
W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.
